ANNUAL REPORT of the ADMINISTRATION of the BOMBAY PRESIDENCY, for the Year 1861-62.

JUDICIAL.

LEGISLATIVE.

1. THE following Acts applicable to the Mofussil Courts were passed during the year 1861-62 by the Government of India:—

1861.

Act XI.—An Act to amend Act XIV. of 1859 (to provide for the Limitation of Suits).

Act XII.—An Act to amend Act XLII. of 1860 (for the establishment of Courts of Small Causes beyond the jurisdiction of the Supreme Courts of Judicature established by Royal Charter).

Act XXII.—An Act to amend Act III. of 1857 (relating to Trespasses by Cattle); since partially repealed by Act XVII. of 1862.

Act XXIII.—An Act to amend Act VIII. of 1859 (for simplifying the procedure of the Courts of Civil Judicature not established by Royal Charter).

Act XXV.—An Act for simplifying the procedure of the Courts of Criminal Judicature not established by Royal Charter.

Act XXXII.—An Act to postpone the operation of a portion of Clause 8, Section I. of Act XIV. of 1859 (to provide for the Limitation of Suits).

Act XXXIII.—An Act to amend the Schedule annexed to the Code of Criminal Procedure.

1862.

Act X.—An Act to consolidate and amend the Law relating to Stamp Duties.

Act XIV.—An Act to amend Act XIV. of 1859 (to provide for the Limitation of Suits).

Act XV.—An Act to amend the Code of Criminal Procedure.

2. The following Acts were discussed and passed by the Government of Bombay during the year, and have received the assent of the Government of India :—

1862.

Act I.—An Act for bringing under the Regulations and Acts certain lands ceded by His Highness the Guicowar for Railway Purposes.

Act II.—An Act for extending the powers of Municipal Commissioners appointed under Act XXVI. of 1850.

Act III.—An Act to amend Act X. of 1843.

Act IV.—An Act for the preservation of the Bhagdaree and Nurwadaree Tenures.

Act V.—An Act for regulating the establishment of Markets and Fairs.

Act VI.—An Act for the amelioration of the condition of Talookdars in the Ahmedabad Collectorate, and for their relief from Debt.

3. Several projects of law have been under consideration by Government during the year. Besides the six Acts of the Local Legislature, the objects of which are sufficiently apparent from their titles, the important Bill for the Registration of Assurances (in its original shape, and in the form it assumed in Committee) has formed the subject of anxious consideration. The opinions of the chief judicial and administrative authorities have been gathered, and will be laid before the Council of the Governor General. Bills for the reconstitution of the civil and criminal courts have been discussed. A Bill has been prepared for consolidating and amending the laws of this Presidency in relation to the Police; an Insolvent Law for the Mofussil is under consideration; by another it is proposed to extend the jurisdiction of the Small Cause Court of Bombay; and a Bill will be proposed for bringing Sattara and other non-regulation districts, exclusive of Sind, under the operation of the ordinary laws of the Presidency.

4. The Code of Civil Procedure has now been in operation sufficiently long to enable Government to express a decided opinion on its generally beneficial effects. The Judges of the Sudder Court, in a special report on the working of the Code, state "that many and substantial improvements have been introduced by the provisions of the Code of Civil Procedure; and that the tendency of the Code has undoubtedly been to diminish litigation, and to facilitate the satisfactory disposal of such suits as come before the Courts." A number of rules for carrying out more effectually the provisions of the Code have from time to time been published by the Sudder Court. The scale of fees for the service of process has been reduced, and the rate of batta for witnesses raised. An entirely new set of forms for accounts and for recording the business of the courts has been successfully introduced. An effective scrutiny of the accounts has been secured, and, concurrently with these improvements, the ordinary work of the courts has advanced at a greatly accelerated pace, as will be evident from the Returns of Civil Business in the Appendix.

5. All has been done that could have been done to fulfil the hope expressed by the Secretary of State for India, in his Despatch No. 45, of 15th November 1861. The provisions of the Code have both been "diligently examined," and their application "carefully superintended." The only great obstacle remaining to the utmost success attainable by the Code consists in the fact that here, as in other parts of India, "the subordinate agents required to carry it out are not ready." All, from the highest to the lowest, have much to unlearn as well as to learn when a new Code is introduced; though the difficulty has, perhaps, been rendered less in this Presidency, in consequence of the training afforded by the system of civil justice established by the Elphinstone Code of 1827. It is hoped that the difficulty will be entirely overcome by the rules for the examination of pleaders and moonsiffs, drawn up upon the basis of those already in operation, in accordance with the wishes of the Secretary of State, expressed in Despatch No. 22, of 16th May 1861, and published, with the concurrence of Government, at the close of 1861.

6. A Digest of Hindoo and Mahomedan Law, as gathered from the replies of the Law Officers of each denomintaion for several years past, has been in preparation during the year. It is not yet completed; but in anticipation of that event, which will furnish the courts with a sufficient body of the law for all ordinary cases, Government intend shortly to

to introduce a Bill into the Local Legislative Council for reducing the number of the law officers of the subordinate courts, which will effect a considerable saving of expense.

7. The first establishment in this Presidency of a small-cause court in the Mofussil, under the provisions of Act XLII. of 1860 and Act XII. of 1861, took place on the 1st of July 1861, at Ahmednuggur. Some months later, a second court was opened at Poona. In consequence of the law preventing the transfer of suits from the moonsiff's file to that of the Small Cause Court, and of the Limitation Act having overwhelmed the moonsiffs' courts with suits very shortly before the establishment of the new courts, there were at first very few suits filed in the Small Cause Courts. Their procedure appears well adapted to the wants of the country; their establishment has greatly relieved the moonsiffs' courts, and it is proposed to extend the system to some of the principal towns of this Presidency.

8. In the department of Criminal Judicature, the Penal Code and the Code of Criminal Procedure came into operation simultaneously on the 1st January 1862. The form of procedure prescribed by Act XXV. of 1861 being in many respects different from that formerly in use in this Presidency, its introduction has, like that of the Code of Civil Procedure, been attended with difficulties; but Government trust they will soon be overcome.

9. The Code of Civil Procedure and the Penal Code were introduced into the non-regulation provinces of Sind and Sattara on the 1st January 1862, and it is the intention of Government to introduce shortly the Code of Criminal Procedure into these two provinces.

CIVIL JUSTICE.

10. Detailed Returns of the administration of Civil Justice during the year will be found in the Appendix. In the following Table the chief results are collected and compared with those of the preceding year:—

Original Suits.	For Adjudication during the year.				Decided on Merits.				Arrears.			
	1860.	1861.	Increase.	Decrease.	1860.	1861.	Increase.	Decrease.	1860.	1861.	Increase.	Decrease.
Civil Courts -	136,660	333,848	197,188	–	85,174	122,371	37,197	–	21,768	152,565	130,797	–
Agency Court -	564	2,136	1,572	–	252	631	397	–	180	1,175	995	–
Revenue Courts	2,533	4,310	1,777	–	1,374	1,660	286	–	458	1,420	962	–
TOTAL -	139,757	340,294	200,537	–	86,800	124,662	37,862	–	22,406	155,160	132,754	–

11. From this it will be seen that there was a vast increase in the business before the courts in 1861, as compared with 1860. This was owing to the introduction of the Limitation Act (XIV. of 1859), which led, in May and December, to the filing of an unprecedented number of suits, by creditors who feared losing all legal rights to their debts under the operation of the new law. It thus happened that, though 60 per cent. more suits were disposed of in 1861 than in 1860, the arrears at the close of 1861 had increased to no less than 150,000 suits; the disposal of which would, at the ordinary rate of working, occupy the whole time of the judicial officers of the Presidency for a year. The institution of small-cause courts at some of the principal stations will prevent suits being filed in the moonsiffs' courts, and will leave the Moonsiffs and Ameens in those places free to devote all, or nearly all, their time to the disposal of these arrears, while in other places additional aid will be given to clear off arrears. A larger proportion than usual of the claims will probably be admitted without contest, and thus it may be hoped that, in spite of the extraordinary pressure put upon the courts just at the moment when they were but freeing themselves from the embarrassment of an unfamiliar procedure, the close of the present year will present a very great diminution of the mass of arrears. It will be observed that the increase of business disposed of extended to the courts of every class.

12. This last circumstance will explain how it was that, notwithstanding the increase in the number of suits disposed of, the average duration of suits was longer by at least a month in 1861 than in 1860. The actual duration in each year is presented in the following Table:—

No. 10.—Average Duration of Suits in Revenue Courts.

	1857.			1858.			1859.			1860.			1861.		
	Years.	Months.	Days.	Years.	Months.	Days.	Years.	Months.	Days.	Years.	Months.	Days.	Years.	Months.	Days.
Sudder Dewanee Adawlut - - - -	1	10	15	–	5	11	–	3	22	–	8	2	–	10	27
Collector - - - - - - -	–	9	10	–	7	17	–	9	11	–	7	3	–	6	25
Assistant Collectors - - - -	–	4	1	4	–	24	–	5	28	–	9	28	–	7	11
Mamlutdars - - - - - -	–	4	22	–	3	25	–	3	6	–	3	1	–	2	25

Average Duration of Suits in the Civil Courts.

	1857.			1858.			1859.			1860.			1861.		
	Years.	Months.	Days.	Years.	Months.	Days.	Years.	Months.	Days.	Years.	Months.	Days.	Years.	Months.	Days.
Sudder Dewanee Adawlut - - -	2	1	20	–	5	16	–	5	27	–	7	29	–	8	14
District and City Judges - - -	1	2	20	1	–	17	–	6	27	–	7	6	–	8	24
Subordinate and Additional Judges - -	–	–	–	–	10	29	1	8	19	3	–	12	–	–	–
Assistant Judges - - - - -	1	6	–	–	9	24	–	6	10	–	11	2	–	11	25
Principal Sudder Ameens - - -	–	4	6	–	3	10	–	3	24	–	4	9	–	4	9
Sudder Ameens - - - - -	–	3	16	–	2	26	–	3	12	–	3	5	–	4	4
Moonsiffs - - - - - -	–	3	9	–	2	23	–	2	19	–	2	24	–	4	2

13. Any great decrease in the average duration is hardly to be looked for in the Returns of the present year; but with the additional aid provided and to be provided by Government, it is hoped that all delays, beyond what are quite inevitable, will be avoided, and that the country will in another year reap the full benefit of the simple and speedy procedure provided by Act VIII. of 1859.

SMALL CAUSE COURTS.

14. The Small Cause Court of Ahmednuggur was established on the 1st July 1861, and up to the 30th April 1862 it had received 2,151 suits, and disposed of 1,772—an average of 177 a month, and leaving a balance of 379 suits undisposed of at the date last mentioned. This number of suits hardly equals the number filed in an ordinary Moonsiff's Court; but the circumstances are exceptional, as shown in paragraph 7.

15. The forms of the annual returns of civil and criminal justice require entire alteration, in order to adapt them to the new codes. The High Courts of Judicature will have their attention directed to this important point.

BOMBAY.

16. The subjoined Statement shows the results of the operation of the Presidency Court of Small Causes in 1861–62 :—

YEARS.	Number of Suits instituted.	Amount litigated.	Fees carried to the Credit of Government.	Number of Judgments given.	Amount received in Cases decreed and compromised.	Amount paid to Suitors in Cases decreed and compromised.
		Rs. a. p.	*Rs. a. p.*		*Rs. a. p.*	*Rs. a. p.*
1861–62 - -	20,003	11,42,246 10 2	1,29,349 8 2	12,541	2,08,093 – 3	2,06,843 7 7
1860–61 - -	17,673	8,59,179 2 7	1,15,061 8 10	10,377	1,61,590 3 1	1,60,757 6 11
Increase in 1861–62	2,330	2,83,067 7 7	14,287 15 4	2,264	46,502 13 2	46,086 – 8

17. From this it will be seen that the number of suits increased by about 14 per cent., and the fees carried to the credit of Government by 14,287 rupees. The total expenses of the court during the year were *Rs.* 84,013. 12. 9., the receipts *Rs.* 1,29,531. 4. 2., leaving a balance of *Rs.* 45,517. 7. 5. to be carried to the reserve fund of the court.

18. This favourable financial result was attained notwithstanding a reduction of 25 per cent. in the institution fee; and Government now has under its consideration a proposition for still further reducing the fees on the issue of process, &c., and for extending the jurisdiction of the court to suits of 1,000 rupees value.

CIVIL JUSTICE.

SIND.

19. A court of small causes has been established at Kurrachee. It is composed of two judges, the judicial deputy magistrate and the moonsiff, each of whom performs the work thus devolving on him in addition to his other duties. The number of suits disposed of from August to April (inclusive) was 1,228, or an average of 136⅔ a month.

20. The

20. The business disposed of in the other civil courts of original jurisdiction in Sind is exhibited in the subjoined Table :—

ZILLAH.	Filed and Arrears.		Decided.		Balance.	
	1860.	1861.	1860.	1861.	1860.	1861.
Kurrachee - - - - -	4,691	4,850	4,569	4,761	122	89
Hydrabad - - - - -	3,642	3,846	3,579	3,791	63	55
Shikarpoor - - - - -	3,202	2,743	3,067	2,635	135	108
Frontier - - - - -	317	311	300	305	17	6
Thurr and Parkur - - - -	213	189	207	174	6	15
TOTAL - - -	12,065	11,939	11,722	11,666	343	273

From this it appears that the number of suits filed, as well as of those decided, was somewhat smaller in 1861 than the previous year. The balance of suits at the close of the year was less by 70 than in 1860.

The subjoined Summary shows a falling-off in the number of appeals filed greater than in that of the appeals disposed of; so that the arrears at the close of the year had sunk from 151 in 1860 to 64 in 1861. The Limitation Act was also extended to this province, by a notification dated the 1st April 1862, and will, therefore, take effect from the 1st April 1864:—

ZILLAH.	Filed and Arrears.		Decided.		Balance.	
	1860.	1861.	1860.	1861.	1860.	1861.
Kurrachee - - - - -	188	132	167	130	21	2
Hydrabad - - - - -	86	57	73	43	13	14
Shirkarpoor - - - - -	241	250	124	202	117	48
Frontier - - - - -	–	1	–	1	–	–
Thurr and Parkur - - - -	–	–	–	–	–	–
TOTAL - - -	515	440	364	376	151	64

CRIMINAL JUSTICE.

21. The Criminal Returns for 1861, which will be found in the Appendices, exhibit a decrease in the number of offenders apprehended and brought to trial during the year. The number of convictions was also less than in the previous year, but in a smaller proportion, as will be seen from the subjoined Table :—

	Offenders Apprehended and brought to Trial.	Convicted and Sentenced to					Acquitted.	Confined as Insane.	Died before Trial.
		Flogging, Fine, &c.	Imprisonment.	Transportation.	Death.	TOTAL.			
1860 - - - - - -	50,068	32,058	5,829	53	28	37,968	12,099	1	–
1861 - - - - - -	48,238	30,242	6,056	55	29	36,382	11,854	2	–
Increase - - - - -	–	–	227	2	1	–	–	1	–
Decrease - - - - -	1,830	1,816	–	–	–	1,586	245	–	–

22. The number of prisoners in gaol at the close of the year was less by 274 than in 1860, a diminution spread pretty evenly over long and short-term prisoners in proportion to their total numbers.

Sind.

23. From the two Returns which are appended, it will be seen that there has been a decrease in the number of convictions of offenders of 660, and in the number of acquittals of 576 in 1861 as compared with 1860. It hence appears that 1,236 fewer offenders were apprehended and brought to trial in 1861 than in the previous year. As Government have no reason to suppose that the police has become less efficient in apprehending offenders, this result is satisfactory, as showing a progressive decrease of crime; and a further examination will show that this is particularly the case with respect to crimes of violence.

24. The large number of persons confined, though acquitted of any specific offence, in default of finding security, last year attracted the attention of Government. It had already, however, been inquired into by the late Commissioner in Sind (Honourable J. D. Inverarity), who had issued instructions under which the number of persons thus confined has declined from 661 in 1860 to 275 in 1861.

Sattara.

25. The Criminal Returns will be found in the Appendices. They show a considerable decrease in the total number of convictions, and a decline also in the number of those brought to trial. The large and increasing number of persons discharged without trial, and the growing proportion of acquittals to convictions attracted the notice of Government; as these facts seemed to indicate either an ill-regulated severity on the part of the police, or else a lax discharge of their duty by the judicial officers. The magistrate was called on for a report upon this subject, which has still to be submitted.

Rewa Kanta and Punch Mahals.

26. The Punch Mahals came under the British Government on the 1st May 1861. They are placed under the Political Agent, Rewa Kanta, and the Criminal Returns of both will be found in the Appendices. They indicate a decline in the number of offences in Rewa Kanta, from 1632 to 1193. No means exist for comparing the state of crime in the Punch Mahals with that of the previous year. The large number of cases left undisposed of at the close of the year attracted the notice of Government, and the Political Agent was called on for an explanation, which he submitted, and which proved satisfactory to Government.

Island of Bombay.

27. The Returns of Crimes in the Town and Island of Bombay will be found amongst the Appendices. They show an increase in the number of offences of 177, or 1·3 per cent., and a decrease in the number of offenders apprehended, which has been satisfactorily shown to have arisen from a corresponding decrease in the number of persons implicated in the offences committed. The proportion of convictions rose from 71 to 75 per cent. A decrease in the value of property recovered was fully accounted for, and notwithstanding a slight increase in the total number of offences (much less in proportion than the probable growth of the population), Government consider the result as, upon the whole, satisfactory.

Aden.

28. The Returns will be found in the Appendices. It will be seen from them that the number of offenders brought to trial declined from 739 in 1860 to 545 in 1861. Of the latter number, no less than 520 were convicted and sentenced, a result which Government regard as highly satisfactory.

POLICE.

29. The Police Establishments of this Presidency have been subjected to a thorough revision in the course of the year. The reform of the police system, which was introduced in 1852, had been proved by every available test to have greatly increased the security of life and property. Serious gang-robberies had become extremely rare. The total amount of property stolen had decreased 48 per cent., while the proportion of that recovered had risen from 11·5 to 28·5 per cent. The average number of prisoners confined had sunk from about 6,000 to less than 4,000. These facts proved the efficiency of the police for its ordinary duties; while the apprehension of the Chief of Nurgoond, of the Sawunts, the operations against the Bheels in Ahmednuggur and Khandeish, and many other excellent services of the same kind, showed that it was prepared, on occasion, to cope even with extraordinary emergencies.

30. In the presence of this proved success of the police system, it seemed needless and unadvisable to venture on wholly new experiments in organization; and all that Government proposed to itself was the removal of some defects and anomalies of detail which interfered with the completion of certain portions of the reform, as originally proposed, and with this improvement to combine as great a reduction of expense as circumstances should permit.

31. The

31. The police of Sind was that first taken in hand. Its organization was left unchanged; but, by a thorough financial revision, its cost to Government was reduced from 7,31,147 to 4,99,968 rupees. The police of the remainder of the Presidency had been up to 1860 under the control of a commissioner, who combined with this function that of Inspector-general of Prisons. Upon the retirement of Mr. Bettington, in 1860, it was thought advisable to separate the offices, and the police duties of the former Police Commissioner have been divided, for their respective provinces, between the Revenue Commissioners of the Northern and Southern Divisions. This arrangement, while it effects a considerable saving of expenditure, has been found hitherto to work satisfactorily in other respects, while the employment of a separate officer as inspector of prisons has contributed materially to the progress of gaol reform.

32. The relations of the Commissioners of Police to Government, to the superintendents of police, and to the magistrates, and of the two latter classes of officers to each other, were not altered. The superintendent of police has in this Presidency been regarded as the magistrate's assistant for that particular purpose, and entirely subordinated to the magistrate in relation to the ends to be attained by the force, though in practice the discipline of the force has been left in his hands. This has ever been viewed as a radical principle of the Bombay system, and the alterations which have been effected have been in conformity with these principles. The position and pay of the class of foujdars, or subordinate police officers, was greatly improved, as experience had shown the necessity of attaching men of higher character and intelligence to that branch of the service. The relation of the foujdar to the subordinate magistrates is analogous to that which the superintendent bears to the magistrate. The means for affording a higher remuneration to the subordinate police officers were found in a redistribution and reduction of the force, and a careful paring away of every useless expense. While the efficiency of the police has been promoted, the total cost of the force to Government has been diminished from about 28 lacs, at which it stood on the 1st May 1860, to about 22 lacs of rupees. Including the Sind police, the reductions amount to upwards of 8 lacs.

33. This saving has not, of course, been secured without a considerable diminution of the total police force employed. Including Sind, this diminution amounts to about 7,000 men for the whole Presidency; but by a more careful and even distribution of the force, the wants of every district have, it is thought, been adequately provided for. The numbers, after all reductions, stand as one policeman to every 4·7 square miles and to every 553 inhabitants, or, including Sind, to 6·3 square miles and 549 inhabitants.

34. The village police, which had gradually decayed up to the time of the reforms of 1852, had, under the rules then laid down, recovered some portion of its proper efficiency. The revival of the system, however, had not made the satisfactory progress that Government had a right to expect, and instructions were issued for a more energetic prosecution of this branch of the general reform. Further details on this and other subjects connected with the police will be found in Sir George Clerk's minute of the 11th October 1861, in the Government Selections (Police Department), No. 3, which has been already made public.

35. The condition of the Presidency throughout the year has been one of almost unbroken tranquillity. There was some little excitement on the northern frontier of Khandeish, owing to a plundering irruption of the Bheels of the district of Burwanee in Nimar, which is under the control of the agent for the Governor General in Central India: but this has been entirely suppressed. Highway robbery, which was formerly prevalent in the Ahmedabad Zillah, is reported to be on the decrease; and throughout the Presidency the police have fully sustained their character for efficiency, with the single and, it is hoped, casual exception of the city of Poona. There has been no increase of any particular class of crimes to such an extent as to arrest attention. Some slight indications, it is reported, have lately appeared, that the efforts of treasonable emissaries have not wholly ceased; but no success appears to have attended them, nor do they occasion any serious uneasiness.

36. In Sind there has been a decrease in the number of offences and of offenders, an increase in the value of the property stolen, and a decrease in the value of that recovered. The differences, however, are not of great importance, or such as to indicate any marked falling-off of the police as detectives. The number of murders has decreased, and Dacoity and Thuggee have, apparently, been extirpated from the province.

GAOLS.

37. The number of criminals, which was reported last year as having diminished, has again decreased during the year under report; the total average daily numbers having been 3,435 in 1860, and 3,286 in 1861.

38. The recommittals were 14 less than in 1860. The juvenile committals, on the other hand, were greater by 68 than in the previous year. These committals, as will be seen from the accompanying report of the Inspector-general of Prisons, have been very unevenly distributed, and Government has directed an inquiry to be made into the subject.

39. The health of the prisoners has not been so good as in 1860. The gaol at Dharwar suffered a severe visitation of cholera; and the general ratio of deaths to strength rose

from 5·1 per cent., in 1860, to 5·6 per cent. in 1861, or, excluding those from cholera, from 2·8 to 3·9 per cent. The difference is not of an alarming character, and is due probably, in a great measure, to causes which the experience of the year will enable the medical officers and gaol authorities to provide against in future.

40. The experiment of out-door labour has been vigorously prosecuted during the year under report. The results have not yet been placed before Government in a form which enables it to pronounce decisively for or against the system; but thus much has been ascertained, that a large amount of useful work, in localities where free labour was hardly procurable, has been accomplished, and that the prisoners employed on the roads have been subjected to genuine punitive discipline.

41. The cost of guarding the gaols has been reduced by *Rs.* 30,490. 0. 11. per annum in the course of the year, and further reductions are still in progress. The cost of gaol establishments, which had been greatly diminished in 1860, has been further diminished by a sum of 4,426 rupees in 1861. Reductions have also been made in the cost of food and clothing, and in the outlay upon petty repairs.

42. Three gaols have been abolished during the year, at a saving of 2,700 rupees per annum. The effect on the prisoners' health has been reported as unfavourable; but it is hoped that the injurious effects brought to the notice of Government will either disappear in future years, or may be remedied by judicious transfers of the prisoners from one gaol to another.

43. A great deal of attention has been directed during the year, not only to the reduction of expenses, but to the improvement of gaol discipline. Considerable progress in this department has actually been made, and experience gained which points out the way to further improvements, by which it is hoped that the whole system will be placed on a sounder basis and rendered more effective.

REVENUE.

LAND REVENUE.

Northern Division.

IN the Northern Division the monsoon is reported to have been very variable. The fall of rain was as plentiful as could be desired in Tanna and Khandeish, but in Ahmedabad and Kaira it was scanty. In Surat the fall seems to have been moderate.

1860-61 - - - -	*Rs.* 1,07,08,613
1861-62 - - - -	1,06,52,132
Decrease in 1861-62 - -	*Rs.* 56,481

The land revenue in Kaira, Tanna, and Khandeish, had increased; in Ahmedabad and Surat there was a decrease. The total realisations in the division amounted to 1,06,52,132 rupees, being less than those of the previous year by 56,481 rupees.

The total realisations on account of sayer revenue amounted to 11,03,790 rupees, being an increase of 89,182 rupees over the amount collected during the preceding year.

1861-62 - - - -	*Rs.* 11,03,790
1860-61 - - - -	10,14,608
Increase in 1861-62 - -	*Rs.* 89,182

The arrangements mentioned in the preceding year's Administration Report* for transferring to the Government of Bombay certain villages belonging to their Highnesses the Maharajahs Scindia and Holkar, outlying in the British territories of this Presidency, in exchange for lands in Central India, situated nearer their own capitals, have since been nearly completed.

* Page 11.

Southern Division.

In the Southern Division the season is reported to have been, for the most part, a favourable one, and the prospects of agriculture to have been generally good. The land revenue had increased in all the collectorates of this division, except Rutnagherry, where there was a decrease, owing mainly to the low rates at which the Government grain revenue of the year was commuted—a result stated to be invariably attendant in this collectorate on a favourable fall of rain, in consequence of the anomalous mode of settlement, which awaits correction by the operations of the Revenue Survey now in progress in the collectorate.

The increase in the other collectorates is ascribable chiefly to extended cultivation, and the application of the summary settlement to unadjudicated Inam holdings. In Ahmednuggur, the increase is stated to be due also, in some measure, to the transfer of his Highness Scindia's villages to the British Government. The total realisable revenue in the division exceeded that of the previous year by 3,57,500 rupees.

1861-62 - - - -	*Rs.* 97,99,416
1860-61 - - - -	94,41,916
Increase in 1861-62 - -	*Rs.* 3,57,500

In the sayer revenues there was also an increase of 3,21,534 rupees. This increase is attributable, principally, to the operation of the Income-tax and Stamp Acts, as well as to the effect upon the latter of the new law for the limitation of suits.

1861-62 - - - -	*Rs.* 28,83,489*
1860-61 - - - -	25,61,955*
Increase in 1861-62 - -	*Rs.* 3,21,534

* Including collections on account of Income-tax and Stamp Revenue.

Towards the close of the year under report, the Collectorate of North Canara, with the exception of the district of Condapoor, was transferred to the Bombay Presidency, and now forms one of the collectorates under the supervision of the Revenue Commissioner, Southern Division.

A statement

A statement furnished by the Collector of North Canara, showing the collection of the revenues for the years 1860–61 and 1861–62, is appended (Appendix A).

The land revenue of the island of Bombay for 1861–62 amounted to 77,466 rupees, being 360 rupees more than the revenue of the preceding year.

Island of Bombay.

1861–62	Rs. 77,46
1860–61	77,10
Increase in 1861–62	Rs. 36

The abkaree revenue amounted to 1,62,298 rupees: this is the largest sum which has ever been realised under this head in the island, being an increase on the amount realised during the preceding year of 43,266 rupees. The increase is due to Act XVII. of 1859.

1861–62	Rs. 1,62,29
1860–61	1,19,03
Increase in 1861–62	Rs. 43,26

The duties of the Collector of Stamp Revenue were transferred, in July 1861, to the Superintendent of Stamps. The Stamp Revenue realised in the office of the Collector of Bombay previous to this transfer amounted to 2,345 rupees.

The total land revenue for collection in the several collectorates and divisions of Sind, during the year 1860–61, was stated approximately only in the Administration Report* for that year. The Commissioner in Sind has since shown the totals of land revenue for collection in the province during that year and 1861–62 to have been as follows:—

* Sind, page 12.

	1860–61.	1861–62.
	Rs.	*Rs.*
Kurrachee	5,03,093	5,44,000
Hydrabad	9,56,047	9,92,273
Shikarpoor	12,77,554	15,42,316
Frontier of Upper Sind	99,879	1,16,945
Thurr and Parkur	1,09,592	1,55,026
TOTAL	29,46,165	33,50,560
		29,46,165
Increase in 1861–62 *Rs.*		4,04,395

The above increase is stated to be owing partly to the improved condition of the canals, but mainly to the season having been more favourable than the previous season.

The inundation, on which the land revenue is chiefly dependent, was, on the whole, very favourable. The river rose rather late, but it remained steady during the season. A remarkable flood crossed the northern portion of the Shikarpoor districts, seriously damaging the high road between Jacobabad and Shikarpoor; the rubbee crops, however, benefited by this inundation, and a great portion of the excess of revenue shown against Shikarpoor and the frontier districts is to be attributed to it.

The winter of 1861 is stated to have been one of the coldest on record: severe frost occurred in many places, which blighted a large proportion of the wheat crops, and snow is reported to have fallen on the hills west of Larkhana.

The sayer revenues of the province for 1861–62 are reported to have amounted to 10,99,751 rupees. This includes, besides the receipts from abkaree and opium and other items, collections on account of the income-tax and stamps. The sayer revenues from the same sources for the preceding year are stated to have amounted to 9,26,522 rupees.

ALIENATED REVENUES.

Southern Division.

During the year under report the attention of the Revenue Commissioner, Southern Division, and of the revenue and alienation officers under his control, was directed to the carrying out of the measures which had been sanctioned by Government, at the close of the preceding year, for a summary settlement, by way of compromise, of claims to exemption from the payment of land revenue in the districts* subject to Act XI. of 1852. The settlement operations were commenced at the beginning of the year, and before its close had been nearly completed in all the collectorates, except one (Belgaum), in which difficulties arose, which have, for the most part, been recently removed. From the returns submitted by the Collectors, it appears that during the year under report 37,238 unadjudicated claims were finally settled, and that at the close of the year the number remaining for settlement was only 1,091,† or a little less than 3 per cent. of the settled claims. The terms of the settlement were refused by only 19 persons, possessing 35 holdings, who elected for a regular adjudication of their titles.

† Notices served, but period allowed for answer not yet expired - - 30
Notices not yet served - - 78
Total - - - 1,09

The financial result of the settlement, so far as it was completed on the 30th April last, is a permanent addition to the annual public revenues of 2,68,976 rupees, arising from the levy of quarter assessment and annual nuzzerana (amounting in all to 5 annas on each rupee of what would be the full Government assessment) on unadjudicated holdings, which will

* In the Southern Division:—Sattara Collectorate, Poona Collectorate, Ahmednuggur Collectorate, Dharwar Collectorate, Belgaum Collectorate, Sholapoor Collectorate.
In the Northern Division:—Khandeish Collectorate, Colaba Sub-Collectorate.

will henceforth be continued permanently, either as private property or as endowments to temples, and suchlike public institutions. To the above sum may be added the receipts, amounting to about 21,520 rupees, which may be expected to accrue from the levy of annual nuzzerana on 1845 adjudicated hereditary Inams. These, under the old rules, were neither transferable nor heritable by adopted sons, or by the collateral heirs of the grantee; but under the summary settlement they will be continuable as the private property of the holders, without any restrictions whatever. In all cases in which the annual nuzzerana amounts to 10 rupees or upwards, the option of paying in lieu thereof a sum equal to one year's assessment of the holding on the occasion of each succession, and two years' assessment on the occasion of transfers, was offered to each holder; but only 49 have elected to pay the nuzzerana occasionally, instead of annually. The total annual value of these is 42,305 rupees, and the average annual income which will probably accrue to Government from them may be estimated at 3,000 rupees. The total annual profit to the State from the settlement, completed up to the 30th April last, may therefore be estimated at about 2,93,000 rupees.

The result of the settlement operations in each collectorate is shown in the annexed Appendices B, C, D.

The special alienation officers took no active part in carrying out the summary settlement, which was left to the Collectors, and the European and native officers under their control; they were, however, constantly referred to by the Collectors and by the Revenue Commissioner in doubtful cases.

Owing to the introduction of the summary settlement, no decisions were passed under Act. XI. of 1852 during the year under report. Those cases which had already been decided, but were under appeal, were admitted to the settlement, except in those instances in which there was proof of fraud, or in which there were special reasons for withholding the indulgence.

Three hundred and ninety-nine claims to cash allowances, of the annual value of 21,550 rupees, were decided during the year under report—248, valued at 20,231 rupees, in the Deccan Division; and 151, valued at 1,319 rupees, in the Southern Mahratta country.

The results of the adjudication of claims to cash allowances in the Southern Division, since the organization of the Alienation Department, are as follow:—

		No.	VALUE.
			Rs.
Declared permanent	Deccan Division	203	39,526
	Southern Mahratta Country Division	109	11,113
Declared hereditary	Deccan Division	159	13,483
	Southern Mahratta Country Division	511	14,001
Declared continuable for two or more lives	Deccan Division	47	14,259
	Southern Mahratta Country Division	43	3,665
Declared continuable for life only	Deccan Division	176	28,919
	Southern Mahratta Country Division	255	14,171
At once discontinued	Deccan Division	292	46,099
	Southern Mahratta Country Division	581	18,472
Struck off under the deduction rules	Deccan Division	393	2,149
	Southern Mahratta Country Division	362	1,373
	TOTAL	3,131	2,07,235

And the following figures show the total amount of alienated revenue which has been recovered through the operations of the Alienation Department up to the 30th April last, the total expenditure on account of the department up to the same date having amounted to 14,77,520 rupees*:—

Deccan Division - - *Rs.* 5,52,068
S. M. C. Division - - 9,25,452
Total - - - *Rs.* 14,77,520

The

The amount expended on account of establishment and other charges in the Deccan and Southern Mahratta country, in connexion with the Alienation Department during the past year, was 49,088 rupees. The recoveries during the same period amounted to 6,178 rupees (*a*) of immediate annual revenue, 3,079 rupees (*b*) of prospective annual revenue, and 13,434 rupees (*c*) in the shape of arrears.

		Rs.
(*a*)	Deccan Division	3,240
	S. M. C. Division	2,938
		Rs. 6,178
(*b*)	Deccan Division	2,760
	S. M. C. Division	319
		Rs. 3,079
(*c*)	Deccan Division	12,466
	S. M. C. Division	968
		Rs. 13,434

The establishments of the two Alienation Offices, which had been considerably reduced during the preceding year, were further reduced during the past year, so as to effect an additional saving of 15,462 rupees* per annum.

Claims to 818 cash allowances of the annual value of 25,587 rupees in Guzerat, and to 70 of the annual value of 4,345 rupees in the Northern Concan, making a total of 888 allowances, amounting to 29,932 rupees per annum, were disposed of. Besides these, 156 allowances in Guzerat were, after preliminary inquiry, continued provisionally, pending a final settlement of general questions.

Northern Division.

The following Table shows the nature of the decisions passed :—

	Number.	Annual Value.
Guzerat:		Rs. a. p.
Continued permanently	20	2,871 12 3
Ditto - hereditarily	135	15,322 2 10
Ditto - for life	41	2,850 14 3
Ditto - provisionally	156	3,477 13 11
Discontinued at once	613	4,113 13 9
Ditto - by commutation	9	109 14 1
TOTAL	974	29,064 10 –

Continued permanently	50	2,002 3 3
Ditto - hereditarily	7	218 14 –
Ditto - for one or more lives	6	548 6 6
Discontinued at once	7	1,575 13 5
TOTAL	70	4,345 5 2

The expenditure during the year under report on account of the alienation inquiry, in the Northern Division, was 27,680 rupees. Against this there may be set off an immediate and prospective recovery of allowances, amounting to 9,497 rupees per annum, and upwards of 9,720 rupees of arrears, which have been struck off the books.

Immediate	Rs. 6,098
Prospective	3,399
Total	Rs. 9,497

The following Table shows the result and cost of litigation regarding alienated revenue in the Northern Division, during the year 1861-62 :—

Number of Suits finally decided.	Nature of Decision.	Value of Suits.	Cost incurred by Government.
		Rs. a. p.	Rs. a. p.
11	Decided in favour of Government on trial	6,810 6 10	3 8 –
3	Withdrawn, or struck off the file	138 – 10	8 13 9
2	Compromised	5,071 3 6	—
9	Decided against Government	427 10 –	22 4 9
25	TOTAL Rs.	12,447 5 2	34 10 6

Sixteen bonds of the value of 14,336 rupees, granted to individuals as compensation for claims to abolished duties and cesses, were redeemed in the division during the year under report.

Pending the decision of Government on the question of the applicability or otherwise to Guzerat and the Northern Concan of the summary settlement of claims to exemption from the payment of the land revenue, on the terms on which it has been effected in the Deccan and Southern Mahratta country, nothing has been done in the Northern Division, during the year

* A portion of this amount is the salary (1,200 rupees per annum) of a sub-assistant transferred to the Revenue Commissioner's Office to take the place of the head-clerk, whose appointment has been temporarily reduced. The net saving effected by this transfer is 720 rupees per annum.

year under report, in regard to alienated lands, except in Khandeish and Colaba, which, as above shown, have always been classed in matters connected with the treatment of alienated revenue with the Deccan provinces, and where the claims to exemption have been brought under the summary settlement by the Revenue Commissioner, Southern Division.

INCOME TAX.

The provisions of Act XXI.* of 1861 were made applicable to the whole of the Bombay Presidency and Sind, except in the town and island of Bombay; and the assessments made in the first year of the Income-tax Act were, with the above exceptions, confirmed for the second year, commencing on the 31st July 1861.

As stated, it was only in the town and island of Bombay that fresh assessments were made. There the number of special notices issued amounted to 63,144, and the number of returns received to 57,435, of which 55,506 were assessed. The number of surcharges authorised by the Income-tax Commissioners was 18,525, of which 17,600 were confirmed, either in whole or in part, and 357 withdrawn. The number of charges made under Section 48 of the Income-tax Act was 1064; of these, 873 were confirmed, and 28 withdrawn.

The total of the income-tax collections made throughout the whole Presidency, from 1st August 1861 to 31st July 1862, amounts to 39,31,185 rupees, as shown in the margin. This is exclusive of 1,35,655 rupees realised at Bhundara, Chunda, Chundwarah, Nagpore, and Raipoor, between 1st August 1861 and 30th April 1862. The addition of the latter sum gives a total of 40,66,840 rupees, being an increase of 4,66,840 rupees over the collections of the preceding year.

One per cent.	Rs. 7,69,880
Two per cent.	9,33,786
Three per cent.	22,27,519
	Rs. 39,31,185
1861–62	Rs. 40,66,840
1860–61	36,00,000
	Rs. 4,66,840

STAMPS.

The Stamp Duties realised during 1861–62 were levied under Act XXXVI. of 1860. From the statement given below, it will be seen that the duties collected amounted to 31,03,947 rupees, or 7,12,808 rupees more than in the previous year. In reference to this increase it must, however, be remembered that the Act was in operation only for seven months of the year 1860–61. The demand for stamped paper has been fully met everywhere.—

1861:	Rs.	1862:	Rs.
May	4,61,384	January	2,72,884
June	2,21,973	February	1,97,994

October	2,06,823	Total	Rs. 31,03,947
November	2,25,153	Amount for 1860–61	23,91,139
December	5,42,765		
		Increase	Rs. 7,12,808

CUSTOMS, SALT, AND OPIUM.

BOMBAY.

Customs. Import Customs, Export Customs, Frontier Duties.

The chief items of revenue under this head are those noted in the margin. The following is a contrasted statement of the sums realised during the past as compared with the preceding year, and shows a total decrease, in the year under review, of 6,01,088 rupees:—

No.	Items.	Collections. 1860–61.	1861–62.	Decrease.
1	2	3.	4.	5.
		Rs.	Rs.	Rs.
1	Import Customs	90,56,651	86,65,420	3,91,231
2	Export Customs	7,48,985	5,44,618	2,04,367
3	Frontier Duties	65,017	59,527	5,490
			Rs.	6,01,088

The

* "An Act for limiting in certain cases, for the year commencing from the 31st day of July 1861, the amount of Assessment to the duties chargeable under the Income Tax Acts, Nos. 32 and 39 of 1860."

	Rs.
The decrease on the receipt from imports is chiefly to be accounted for, firstly, by a falling-off in the item of tobacco, the sum realised on that article in the year 1860-61 having been	1,32,104
Whereas in 1861-62 it only amounted to	17,089
Showing a decrease of	Rs. 1,15,015

This falling-off in the tobacco trade is to be attributed to the high rate of duty which was imposed, but which has since been reduced, by Act XI. of 1862.

Secondly, the decrease may be accounted for by the reduction of the rate of duty on twist, which was levied at 10 per cent. up to 29th April 1861, but reduced to 5 per cent. after that date, as also by the reduction of duty on other articles by Act. XI. of 1862, which came into operation on the 23d April 1862.

Among the exports there has been a great decrease in the amount of the duty realised on saltpetre, to the extent of 88,258 rupees, as follows:—

	Indian Maunds.	Duty.
		Rs.
1860-61	98,402¼	1,96,710
1861-62	54,529¼	1,08,452
Decrease	43,873	88,258

The following is a statement of the sums collected at the Bombay Custom House on account of Exports and Imports during each of the months of the past and preceding years:—

No.	Months.	1860-61.	1861-62.
1.	2.	3.	4.
		Rs.	Rs.
1	May	7,33,296	8,61,761
2	June	8,59,939	5,84,768
3	July	6,78,216	6,77,246
4	August	5,22,452	6,76,092
5	September	6,11,863	6,51,375
6	October	6,02,151	7,38,549
7	November	9,97,791	6,33,986
8	December	6,39,617	6,67,528
9	January	9,24,547	8,70,448
10	February	5,62,443	7,81,476
11	March	9,73,993	8,97,099
12	April	10,33,996	5,70,798

The amount collected under the head of Salt Revenue during the past and preceding years is as follows:— Salt.

	1860-61.	1861-62.
	Rs.	Rs.
Excise Duty on Salt removed from Salt Pans	30,12,855	34,27,122
Duty on Salt imported by Sea	35,088	28,928
Duty on Salt imported by Land	1,42,966	1,96,516
Produce of the Government Salt Pans	68,245	63,963
Sale proceeds of smuggled Salt	961	2,481
	32,60,115	37,19,010
		32,60,115
Increase	Rs.	4,58,895

CHAP. XI. Bombay.

This increase in revenue is to be accounted for by the increase in the rate of excise from 1 rupee to *R.* 1. 4. during the year; for there was actually a decrease in the quantity of salt removed for consumption on payment of full duty, the quantity removed in the year 1860–61 having been - - Indian maunds 31,53,867
and in the year 1861–62 - - - - - - - - „ 29,31,901

Showing a decrease in 1861–62 - - - „ 2,21,966

Opium.

The amount realised on pass-fees on Opium, during the year under report and the preceding year, is as follows:—

	Rs.
1861–62 - - - - - - -	2,44,41,400
1860–61 - - - - - - -	2,44,00,600
Showing an increase in 1861–62 of - - -	*Rs.* 40,800

Notwithstanding that, there was a decrease in the number of chests on which the fees were levied—

1861–62 - - - - - - -	Chests 38,667
1860–61 - - - - - - -	„ 45,072
Decrease - - -	6,405

The passes were charged for at the rate of 600 rupees per chest up to the 1st October last, and at 700 rupees per chest since that date. The number of chests
passed at the rate of 600 rupees was - - - - - - - - - 26,255
and at the rate of 700 rupees - - - - - - - - - 12,412

Total - - - 38,667

This latter rate is to be again reduced, from the 1st October next, to 600 rupees. It might, perhaps, be supposed that many of the merchants would have kept back their opium to take advantage of this reduction; but the Officiating Deputy Agent in Malwa, in a letter dated the 12th March last, states—"I do not think there are more than one or two who can afford to act thus."

The number of chests of opium on which pass-fees have been paid, from the year 1852–53, is as follows:—

Years.	*No. of Chests.*	*Years.*	*No. of Chests.*
1852–53 - - -	27,896	1857–58 - - -	40,405½
1853–54 - - -	24,005	1858–59 - - -	36,111¾
1854–55 - - -	27,491	1859–60 - - -	32,506½
1855–56 - - -	25,141	1860–61 - - -	45,072
1856–57 - - -	28,913½	1861–62 - - -	38,667

The aggregate realisations under the head of Customs, Salt, and Opium (including miscellaneous items), during the year 1861–62, amounted to 3,78,97,037 rupees; while during the preceding year, the amount realised was 3,79,89,192 rupees, showing a decrease of 92,155 rupees in the year under report:—

	Rs.	*Rs.*
1860–61.		
Customs - - - - - - -	1,02,63,999	
Salt - - - - - - - -	32,82,995	
Opium - - - - - - -	2,44,42,198	
		3,79,89,192
1861–62.		
Customs - - - - - - -	96,83,212	
Salt - - - - - - - -	37,38,274	
Opium - - - - - - -	2,44,75,551	
		3,78,97,037
Decrease - - - *Rs.*		92,155

NORTH CANARA.

Customs.

In the Sea and Land Customs collections, there is an increase of 259 and 5,102 rupees respectively, attributable partly to the increased duty levied on the imports of salt, and partly to the introduction of the new tariff. The sums realised during the year under report, from duties on imports and exports, were 5,216 and 14,704 rupees respectively.

SIND.

Customs.

The value of the sea-borne trade during the year has been 2,96,65,543 rupees, being an increase on that of the preceding year by 28,29,044 rupees, or nearly 10¾ per cent. This is exclusive of Government stores.

1860-61	*Rs.* 2,68,36,499
1861-62	2,96,65,543
	Rs. 28,29,044

The value of the import trade has decreased by 1,85,507 rupees, or 1½ per cent. on the value of the imports of 1860-61. The imports of cotton piece goods, from England, shows an increase of 4,21,112 rupees; coals and coke, 1,49,224 rupees; raw and manufactured metals, 78,417 rupees.

1860-61	*Rs.* 1,56,83,052
1861-62	1,54,97,545

In the export trade there has been an increase of 34,03,774 rupees, or 33 per cent., on the trade of the preceding year. The articles in which this increase has chiefly taken place are salt, wood, cotton, indigo and hides. Cotton appears now for the second time as an article for export from Sind. The indigo trade has made great advances during the past year, there having been an increase of no less than 206 per cent. in the exports of this article. From Khyrpoor a superior indigo has during the year been imported, which has been valued at 10 rupees a maund more than the best Mooltan indigo. It is stated to closely resemble good Bengal indigo, and possesses the metallic hue which characterises that description. As indigo is indigenous both to Sind and the Punjaub, it might, it is stated, be exported to any extent from these provinces. The past has been the first year in which it has been exported from either of them to England.

1860-61	*Rs.* 1,02,13,468
1861-62	1,36,17,242

Wool again appears as the chief staple of export. It is brought chiefly from Beloochistan and Affghanistan. The value of this article exported during the past year was 51,71,025 rupees, being an increase over 1860-61 of 18,96,023 rupees, or of 58 per cent.

An increase in the exports to Great Britain has taken place in the following items:—

	1861-62.	1860-61.	Increase.
	Rs.	*Rs.*	*Rs.*
Indigo	1,72,499	- -	1,72,499
Cotton	3,84,272	81,560	3,02,712
Wool	1,00,760	70,242	30,518
Hides and skins	41,864	4,495	37,369

The Customs receipts during the past year have amounted to 4,03,433 rupees on imports, and 1,10,455 rupees on exports, showing an increase in the former of 59,010 rupees, but a decrease in the latter of 60,974 rupees. This decrease is owing chiefly to diminished exports of grain to Cutch, Muscat and Kattyawar, and of grain and oil seeds to England.

Under the head of salt excise there has been an increase during the year under report, amounting to *Rs.* 73,893. 15. 4. The total quantity of salt exported was 5,83,848 Indian maunds; of this 3,77,364 Indian maunds were exported free; the rest, 2,03,562 maunds, paid 12 annas a maund, and the remainder *Rs.* 1. 4. a maund.

1860-61	*Rs.* 42,984 13 -
1861-62	1,16,878 12 4

In addition to the above items there are some of a miscellaneous nature, which are usually included in the Customs revenue, but which rather concern the Harbour Department than the Customs. These are as follows:—

	Rs.	*a.*	*p.*
Harbour craft licenses	1,559	15	-
Miscellaneous receipts	3,000	6	9
Confiscated goods	45	12	-
Pilotage	2,890	12	-
Port Dues	20,799	12	3
Towing charges	12,621	13	6
Fines, fees, &c.	10,774	3	-
TOTAL *Rs.*	51,692	10	6

Abkaree.

The Abkaree revenues were during the year managed, as in 1860-61, by a system of licenses.

Opium and Drugs.

The revenue derived from the sale of opium and poisonous drugs also continues to be managed under the license system introduced in 1860-61. It amounted to 1,58,705 rupees. Permission to export from the Punjab *viâ* Kurrachee to Bombay, under a system of passes, has been granted, but no exports had up to the 30th April been made.

ADEN.

The following is a statement of the external trade of Aden during 1861-62, contrasted with that of the previous year:—

	Imports			Exports.		
	Amount.	Increase.	Decrease.	Amount.	Increase.	Decrease.
	Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*
Goods - - -	37,29,327	3,18,852	23,84,088	21,74,273	5,58,395	1,99,808
Treasure - - -	12,38,978	- -	1,35,488	11,16,978	1,06,703	- -
TOTAL - - *Rs.*	49,68,305	3,18,852	25,19,576	32,91,251	6,65,098	1,99,808
			3,18,852		1,99,808	
		Decrease	22,00,724	Increase.	4,65,290	

The decrease in imports, amounting to 22,00,724 rupees, is mainly attributable to a less quantity of coal having been imported during the year under report, owing partly to the unusually large stock which remained in the depôt of the Peninsular and Oriental Company at the close of the preceding season, and partly to the fact that by means of the Egyptian Railway, coal can now be delivered at Suez so cheaply that the demand for it at Aden has very much declined. Formerly steamers took in little or no coal at Suez, whereas now nearly as much is taken there as at Aden.

Excluding coal (which can hardly be regarded as an article of regular commerce at Aden) from the account, the gross value of the imports and exports at Aden was 75,05,420 rupees, being an increase over the previous year of 3,58,225 rupees.

The value of goods passed into the interior during the year amounted to 13,20,252 rupees, showing a decrease, as compared with the previous year, of 13,164 rupees. Excepting as regards cotton and dates, there has, however, been an increase in the amount of every article of merchandise imported into the interior.

Of goods brought from the interior into Aden there were 1,47,285 camel-loads, the estimated value of which was 16,35,756 rupees, or 5½ lakhs more than during the previous year.

The following is a summary of the External and Internal Trade:—

	Rs.	*Rs.*
Imports by sea - - - - - - -	49,68,305	
Exports by sea - - - - - - -	32,91,251	
		82,59,556
Imports by land - - - - - - -	16,35,756	
Exports by land - - - - - - -	13,20,252	
		29,56,008
TOTAL - - - *Rs.*		1,12,15,564

This shows a decrease of 11,96,065 rupees, as compared with the previous year; but deducting the item of coal, which, as above observed, cannot be regarded as an article of regular commerce at Aden, the regular trade of the place during the year under review has increased by 8,97,594 rupees.

FINANCIAL.

Cash Balances.

THE amount of Cash Balances at the commencement and close of the year under report were as follows:—

	Balance on the 1st May 1861.	Balance on the 30th April 1862.
	Rs.	*Rs.*
Bombay - - - - - - - - - -	*2,73,81,907	2,54,99,154
Sind - - - - - - - - - -	26,64,412	24,95,437
Aden - - - - - - - - - -	2,82,871	2,36,565
Bushire - - - - - - - - - -	1,60,745	1,67,272
TOTAL - - -	*3,04,89,935	2,83,98,428
Nagpore - - - - - - - - - -	16,58,019	18,23,559
Indore and Nimar - - - - - - -	54,892	9,38,079
Baroda - - - - - - - - - -	52,384	3,33,006
GRAND TOTAL - - *Rs.*	*3,22,55,230	3,14,93,072

The amount of balance on the 1st May 1861, entered opposite "Bombay," includes Mint bullion for which certificates were outstanding on that date to the extent of 77,69,285 rupees, while the balance on the 30th April 1862, is exclusive of such bullion, which is now treated, under the Paper Currency Act, as a deposit of the Currency Department paid for in Currency Notes.

Receipts and Expenditure.

The four statements appended to this Report show the receipts and charges of the past official year (so far as the information on this point at present extends) of the Bombay Presidency proper, Sind, Nagpoor,† and the Government Treasuries at Indore, Aden, Baroda, Nimar, Bushire, Muscat, and Zanzibar, the accounts of which are prepared by the Deputy Auditor and Accountant General of this Presidency. It will be seen from these statements, that no extraneous aid was required to meet the charges of this Government during the past year; on the contrary, the Bombay Treasury was drawn upon by Her Majesty's Principal Secretary of State for India to the extent of 30 lakhs of rupees.

Reduction of Expenditure.

The reduction of expenditure actually carried out during the year in every branch of the Civil Administration amounts to 4,80,957 rupees per annum.

In Appendix E will be found a statement showing the operations of the Bombay Mint for the year 1861-62.

Mint operations.

The amounts of certificates issued during the last five years on account of silver bullion received for coinage are as follows:—

Silver bullion.

	Rs.
1857–58 - - - - - - -	3,67,62,500
1858–59 - - - - - - -	2,02,11,700
1859–60 - - - - - - -	2,21,31,500
1860–61 - - - - - - -	1,71,50,475
1861–62 - - - - - - -	5,15,43,035

Silver coinage.

The silver coin made over to the general treasury by the Mint during the year amounted to 4,05,88,000 rupees, or more than double the amount coined during the previous year. The entire time of the Mint having been taken up in working off the unprecedentedly large amount of silver bullion tendered for coinage, no small silver coin or copper coin could be struck during the year, and consequently the issue of the former at the Presidency has had to be restricted. This restriction will shortly be removed on receipt of a supply of that coin to the extent of eight lakhs, which has been applied for and promised from Madras. There will, however, be no occasion for extraneous assistance in this respect when the arrival of the new machinery expected from England shall have increased the working power of the Mint.

Small silver coin and copper coin.

Considerable

* Includes Mint certificates amounting to 77,69,285 rupees.

† The accounts of this province have, however, been removed from the control of the Deputy Auditor and Accountant General of this Presidency from the 30th April 1862.

CHAP. XI. Bombay.

Circulation of copper coin.

Considerable attention has been bestowed on the subject of increasing the circulation of Government copper currency previous to and since the receipt of the recent orders from the Government of India permitting the sale of this coin at a discount, and reports from the district officers show that the copper coin is now to be had at par throughout the Presidency, and in some places at a slight discount. The Deputy Auditor and Accountant General estimates the amount of the new Government copper coin in circulation at the close of the year at 42,41,071 rupees, to which should be added the old dumpy pice still extant, estimated at about 16 lacs of rupees.

Amount in circulation.

Transfer of the business of the General Treasury to the Bank of Bombay.

Agency of issue and payment of Government Currency Notes.

Pursuant to the provisions of Acts XIX and XXIV of 1861, an agreement was entered into with the Bank of Bombay on the 28th February 1862, whereby the balance and business of Her Majesty's General Treasury at the Presidency were transferred to the Bank, who at the same time undertook an agency for the issue and payment of the Government Paper Currency Notes at the Presidency. This agreement came into operation from the 1st March 1862, and is to continue for five years, renewable at the expiration of that period with or without modification, as may be agreed between the Government and the Bank.

The amount of Government Currency Notes in circulation on the 30th April 1862, was 150 lacs of rupees, and a corresponding amount* in silver coin and bullion was in reserve with the Department of Issue on the same date.

POLITICAL.

THE attention of Government has been directed during the past year towards ensuring to the Principalities and Chiefships under their political supervision a greater freedom of administrative action in pursuance of the now acknowledged policy of Her Majesty's Government. This policy, so happily inaugurated by the late lamented Viceroy, has already exercised a beneficial influence on the relations of Government with the various chieftains and feudatories of this Presidency. The restoration to his Highness the Raja of Kolapoor, of a share in the administration of his principality, the actual grant of authority to two of his principal Jagheerdars, and the diminution of the direct interference of Government in other States, have contributed to inspire a strong sentiment of attachment to Her Majesty's rule—a sentiment which the recent recognition of the principle of adoption cannot fail to render stronger and more enduring.

KOLAPOOR.

The present Raja of Kolapoor succeeded to the principality on the death of his father in 1837. He was then an infant, and the administration was assumed by a Council of Regency, headed by the Raja's aunt, a lady called the Dewan Saheb, to the exclusion of the Raja's mother. To avoid all interference in the affairs of Kolapoor, the British Government approved the Dewan's ministry, but the misrule and general mismanagement which prevailed under it, compelled the Government in 1843, after an attempt to reorganise the ministry had failed, to appoint an officer of their own as Minister of the State. This measure was met by open rebellion, and after a contest which lasted for several months, order was at length restored, the Dewan and her faction were banished, and the entire administration of the State was undertaken by Government. Under British superintendence the system of administration was altogether remodelled, the social condition of the State gradually improved, the revenues steadily increased, and a large reduction was effected in the debts due to the British Government on account of insurrectionary charges.

During the disturbances at Kolapoor and in the Southern Muratha Country in 1857-58, the Raja adhered with the utmost constancy to the British cause, while the influence of his half-brother, Chimma Saheb, was thrown into the opposite scale. The loyalty thus displayed by the Raja, his mature age, and the promise afforded by his abilities and disposition, were circumstances which gave him strong claims to be intrusted with the administration of his principality. Deeming therefore that, after a brief period of probation, the Raja would be competent to undertake the duties and responsibilities of his position, measures were adopted during the past year, with the sanction of Her Majesty's Government, for gradually transferring the administration to the Raja, without unduly sacrificing other important interests. In accordance with this determination, a formal agreement was concluded with the Raja, having the object of securing the financial claims of Government upon the State, and of preserving, in a modified form, the system of administration which has proved so beneficial to the Raja himself. On the 13th October last, the date of the Dussera festival, the first public step was taken towards the transfer of the administration to the Raja, by the public correspondence being conducted in his Highness' name, and he has since been occupied in making arrangements for his new establishment, in selecting a Kharbaree, to be approved by Government, and in acquiring

---

* Coin rupees 28 lacs, and bullion rupees 122 lacs.

acquiring experience of his new duties under the guidance of the Political Agent, prior to the final inauguration of his authority.*

Vishalgur and Bowra.—One of the terms of the agreement with the Raja of Kolapoor provides for the retention by the British Government of the supervision which they have hitherto exercised over the principal Jagheerdars of the Kolapoor State. The relations of the Political Agent with them will, in future, be conducted, as far as possible, in co-operation with the Raja's Government, without in any way infringing the seignorial rights of the Raja, the object of the arrangement being merely to secure good government, and to prevent intestine disputes, which formerly were the frequent cause of disturbance and bloodshed. During the past year, two of these Jagheerdars were invested with the management of their estates under the most favourable auspices. One of them, the Chief of Vishalgur and Punt Prithineedee, or Vicegerent of the Raja, succeeded to his estate by adoption, under the sanction of the British Government in 1844. The estate was then heavily encumbered with debt, and suffered still more by a forfeiture of territory on account of the decided part taken by the late Chief in the intrigues which led to the Kolapoor rebellion. During the minority of the present Chief, the estate was successfully managed by Government Agency, and has now been made over to him free from all liabilities, and with a large cash balance in the Treasury, under a stipulation that he shall contribute 5,000 rupees per annum towards the expenses of the Military Establishments at Kolapoor, and that he shall yield all claim to certain Ghat tolls, which will be formed into a fund for the improvement of the Ghat roads and adjacent communications.

The chief of Bowra also succeeded to his estate by adoption in 1851. On the introduction of British superintendence, this estate, like that of Vishalgur, was found to be heavily in debt. Its management was undertaken by Government during the minority of the chief, and was transferred to him in March last freed from a load of liabilities, upon condidition of his paying an annual contribution of 3,420 rupees towards the Military Establishment of Kolapoor, in commutation of service.

SAWUNT WAREE.

The condition and prospects of this small estate engaged the attention of Government during the past year. The inability of the chief, or Sur Dessaee, as he is more commonly called, to deal with his more turbulent feudatories, compelled the British Government in 1838, with the Sur Dessaee's consent, to assume the management of the State. A desperate effort was made in the following year, and again in 1844, by some of these feudatories, to free themselves from the restraint imposed upon their excesses by the British Government. In the insurrection of 1844, the chief's eldest son, Ana Saheb, then in his 14th year, joined his relative, Phond Sawunt, who headed the rebel party. On the suppression of the insurrection, the Government declared that the State would be held at their disposal on the death of the chief. The conspicuous loyalty displayed by the Waree State in 1857-58, and the good conduct of Ana Saheb during that period, and since the insurrection of 1844, led the Government, in the early part of the year, to recommend to Her Majesty's Government, the propriety of granting a full pardon to Ana Saheb for his youthful error, and of recognising him as the heir apparent of the Sur Dessaee. To this recommendation Her Majesty's Government acceded as an act of grace, upon condition that he should only be allowed to succeed to the management of the State on the liquidation of the entire debt due to the British Government on account of insurrectionary charges, and then only on payment of a suitable Nuzzerana, and on his entering into an agreement which would guarantee the protection of his people and the continued maintenance of a British agency.

Since the recognition of Ana Saheb as heir apparent, the balance of the charges due by the Waree State to the British Government, which, on their imposition in 1851, amounted to 4,72,710 rupees, has been entirely liquidated, a result which may be chiefly ascribed to the improved condition of the revenues of the State under the efficient management of successive political superintendents.

SOUTHERN MURATHA COUNTRY.

The Chief of Meeruj, Gungadhur Rao Bala Saheb, died after a lingering illness in December last. He had been permitted in 1859, with the sanction of Her Majesty's Government, to adopt a son in failure of heirs, as a mark of favour for his meritorious conduct during the late disturbances. In order to free the estate from debt before the young chief closes his minority, the management of its affairs has been placed under the direct control and supervision of the political agent. Arrangements have also been made for the education of the young chief, who is now pursuing his studies at Belgaum.

Moodhole.—The Chief of Moodhole, whose accession to his ancient estate, under the very favourable circumstances noticed in the report of the previous year, died in March last, from an attack of fever, leaving an only son, a child of about a year old. The untimely death of this young chief, while earnestly engaged in projects for the moral and material improvement

* The selection of Ram Rao Nursew, late Dufterdar to the Revenue Commissioner, Southern Division, as the Kharbaree under the new administration, with the approval of Government, has received the approbation of Her Majesty's Secretary of State, and the further proceedings which may shortly be adopted for completing the transfer of the administration to the Raja will be noticed in the next Administration Report.

improvement of his estate, is much to be regretted, as he promised to furnish to the chiefs of the Southern Muratha Country a laudable example of the benefits accruing from early training and education. The arrangements for the future management of the State are now under consideration.

KHANDESH.

Allusion was made in the previous year's report to measures devised by the Bombay Government, in concert with the Governor General's agent in Central India, for restraining the future depredations of the Bheels in the Burwanee districts bordering on Khandesh. Experience had shown that these marauders, when pressed by our police from the North and South, invariably escaped to a fastness called the Toorun Mull,* one of the highest hills of the Satpura range, situated about 20 miles north of Sooltanpoor. Its height is a little more than 3,300 feet; it is of comparatively easy ascent, is well wooded, and has the advantage of water on its summit, there being an extensive artificial lake about 200 feet below its highest point. This lake, with the remains of some temples, fortified walls, and a rock excavation bearing Jain inscriptions, afford evidence of its former religious importance. Arrangements were made to station two British officers, with a suitable escort, in the country about this hill during the dry season. Lieutenants Hanson and Hall, of the Bombay Army, were selected for the duty, and proceeded to the Toorun Mull for the first time in January 1861. They remained at their post until the setting in of the monsoon, acquiring a knowledge of the surrounding country, and conciliating the wild tribes with whom they came in contact. The success which attended this experiment led to the same officers being again deputed to the Toorun Mull on the opening of the season (1861–62). They had scarcely returned to their post when the Bheels to the west and south-west of Burwanee showed symptoms of turbulence, and attacked a detachment of the Malwa Bheel Corps stationed in the hills, burned their lines, and succeeded in killing three men and wounding 13 others. Active measures were immediately adopted by Major Keatinge, the political agent in Nimar, for inflicting a signal retribution on the tribes by whom this unprovoked attack was made. Several expeditions were organised against them under Lieutenants Hanson and Hall, assisted by Lieutenant Cadell, assistant political agent, with a company of the 19th Bombay Native Infantry. The energetic character of their operations, coupled with a scarcity which then prevailed in the Burwanee districts, exposed the Bheels to the severest privations and sufferings. Many of their followers and cattle were cut off, their families dispersed, and their distress eventually became so extreme that they were fain to sue for pardon. Their principal leader, Shamjee Naik, fled to the camp of Lieutenant Probyn, the Bheel agent in Khandesh, and sought his intercession, stating
March 1862. that he was solely influenced by the "Peishwa" in the late attack. Lieutenant Probyn declined to give any guarantee; but, acting under that officer's advice, Shamjee surrendered himself unconditionally to Lieutenant Cadell immediately afterwards. An amnesty was then offered to the common followers of the Naik, which speedily led to their submission and the restoration of order.

It is satisfactory to record here that within the Bheel districts of Khandesh order and tranquillity have continued uninterrupted during the past year, under the successful exertions of the officers entrusted with the reclamation and control of these predatory tribes.

While the occurrences above described were in progress, the Naikras, a cognate tribe in the Jhund Hills, bordering the Rewa Kanta, assembled in large numbers under their leaders, apparently with hostile intent, instigated by the same agency which influenced the rising in Burwanee. The judicious measures taken by the political agent soon had the effect of checking the movement. It then assumed a more subdued form, as one for the settlement of private grievances, which were carefully decided by arbitration with the consent of the leading Naikras, after they had tendered their submission.

These movements on our north-east frontier were somewhat similar in character to those described in the previous year's report, and, like them, were instigated by a Brahmin styling himself the agent of the Peishwa. This man, with some of his followers, was captured near Ali Rajpoor by the political authorities in Nimar soon after the rising of the Burwanee Bheels, and evidence is now being collected to bring him to trial.

THE DANGS.

A disturbance, which was entirely local in its causes and consequences, took place in January last in the Dangs, a forest tract situated at the foot of the Syhadree range, between the British district of Nowapoor and his Highness the Guicowar's district of Loangur. This tract is inhabited by a very wild tribe of Bheels, divided under five principal and two minor chiefships. Their ferocious character, and the natural strength and unhealthiness of their fastnesses, have long enabled them to preserve a rude independence. The country derives its chief value from its extensive teak forests, in which the British and Guicowar Governments enjoy mutual rights. The increasing importance of this forest tract led the Government in 1852 to vest the Bheel Agent in Khandesh with political authority over its petty chiefs, in subordination to the magistrate of the province. This authority is now exercised by an officer of the Forest Department as being the nearest British officer to the spot. The interposition of Government has, however, been hitherto limited to the punishment of flagitious cases of crime and oppression.

On

* A name derived from the Zizyphus Albigensis, the Sancrit Toorun, which abounds on the hill.

On the death of Shreeput, the principal Chief of the Dangs, and of his eldest son, who survived him but a short time, Deveesing, the next heir, was opposed by his younger brother in his succession to the Gadee. They eventually agreed to resign their claims in favour of their uncle, Oodeysing, on whose death his son, Keeralsing, succeeded. In the meantime (1854) Deveesing grossly misconducted himself, and having wounded two men, he was apprehended and sentenced to two years' imprisonment in the Castle of Surat. Soon after, he showed symptoms of insanity, and was in consequence removed to the Lunatic Asylum at Colaba. In April 1860, Deveesing effected his escape from the asylum, and succeeded in reaching the Dangs. After his return, he resumed his former lawless habits, and having been joined by some followers, they attacked and plundered several villages, which their inhabitants were compelled to abandon for security. On the commencement of these raids, Deveesing sent a warning to Keerulsing, the Chief of Garvee, to the effect that one of them must die, and he carried out his threat by seizing Keerulsing in his own house, and shortly after took part in his murder.

On these occurrences being reported to Government, the party of the Bheel Corps was immediately despatched into the Dangs in pursuit of Deveesing, and a reward was offered for his capture. Being closely pressed, he gave himself up to the magistrate of Khandesh on the 5th of February last, and several of his followers, including his brothers, Dowlutsing and Roopder, were shortly afterwards captured. The magistrate of Khandesh is now about to bring the prisoners to trial, and measures are in progress for ensuring the future peace of the Dangs, and for otherwise improving the condition of this remote Bheel *habitat*.

GUZERAT.

His Highness the Guicowar was invested by the Resident at Baroda, with much ceremony, on the 1st of November last with the insignia of the Most Exalted Order of the Star of India. In receiving the insignia from the Resident, his Highness expressed his deep gratitude for this signal mark of distinction bestowed upon him by Her Majesty.

His Highness has been engaged during the past year in carrying out some important reforms in the several departments of his administration. His efforts in this direction may be regarded as a new trait in the history of his family, whose rigid adherence to Mahratta tenets and traditions have long proved detrimental to the social and administrative improvement of his dominions.

Among the measures of reform carried out by his Highness may be noticed the re-organisation of his police, with the separation of the police from the Revenue Departments; the reform of his revenue system by the substitution of a money rent in lieu of the various items which hitherto made up the revenue; the restriction of the power of district officers in inflicting penalties; the reform of 300 of his contingent of horse; and lastly, the execution of some works of public utility, the most important of which may be instanced, the tramway uniting the town of Dubhoee to the railway.

Umreilly and Okhamundel.—In December and January last, his Highness, accompanied by the Resident, Colonel Wallace, made a tour of his districts in Kattywar, with the happiest results. These districts had until lately been invariably farmed, and the effect of this system of management led to numerous abuses of the Revenue and Police Departments, as shown in the degradation of the agricultural classes, the discontent of petty landholders, and in the decay of public works of all kinds. The successive insurrections of the Wagheers of Okhamundel during the past three or four years, and their inroads into the adjoining states of Kattywar, had occasioned serious grounds of complaint against the maladministration of his Highness' districts in this quarter. To remedy these evils his Highness agreed, in February 1861, to the supervision of affairs in his Kattywar possessions being vested in two British officers under the general authority of the Resident. One of these officers, it was arranged, would be employed in raising a corps of about 300 men from the Wagheer and other cognate tribes for the defence and police of Okhamundel. This important measure was briefly adverted to in the report of the previous year, and it is gratifying to notice that the beneficial results anticipated from it have, under the judicious management and fostering care of Major Johnstone, been in a great degree realised. On the arrival of his Highness at Korinar, a full company of the new corps was paraded for his inspection by Major Johnstone, and, at the same time, several of the Wagheer leaders paid their respects to his Highness, and were received by him in a very flattering manner. This company was found by the Resident to be a very fair sample of the whole corps, whose equipment and soldier-like appearance so much pleased his Highness that he requested the number might be increased to the full complement of a corps of the line.

The principal measure instituted by his Highness on the occasion of his visit to his Kattywar possessions was the abolition of the old land revenue system, and the substitution of a moderate money rent, in assimilation to the measure introduced into his other districts. He instituted at the same time a land survey, and an establishment of surveyors has been at work since the beginning of January in Umreilly, defining village boundaries, measuring holdings, and preparing maps. His Highness has also sanctioned the formation of an efficient body of police for the Umreilly district, which Major Anderson, the officer in charge, is to organise. He has, moreover, sanctioned the construction of several works of public utility, the principal of which is a fair-weather road through the "Gheer," a tract of forest land separating the pergunna of Korinar from the rest of his Highness' possessions in Kattywar, and certain improvements of the harbour of Korinar itself.

KATTYWAR.

The general tranquillity of this province continued undisturbed during the past year, but its social and political condition has continued almost stationary, while the returns of crime show little or no diminution as compared with former years. The petty states of this province are so intermixed with each other, and their rights of jurisdiction and property so divided, that frequent boundary and territorial disputes occur from mutual aggression and encroachment. During the past year, six cases of this description were reported, attended with a loss of eight lives and seven persons wounded. Another remarkable feature of crime in this province is presented by the excesses committed by Bahirwuttais, or outlaws, who, smarting under oppression, or real or imaginary wrongs, seek satisfaction for their grievances by recourse to a life of brigandage. The number of separate jurisdictions into which the province is split up, affords great facilities for the commission of this offence, while the state of public feeling in the province operates very much as an encouragement to it. In the British districts of Guzerat this offence has wholly disappeared before a regular form of Government, while in the districts under our political supervision—the province of Kattywar excepted—it is steadily decreasing. In view of these facts, the Government deemed it necessary during the past year to take some decisive action for the repression of the crime in Kattywar; and, as a preliminary step, issued in May last, in consultation with the political agent, a proclamation offering an amnesty to all Bahirwuttais in the province who had committed no heinous offences, provided they returned to the protection of the British Government, and stated their complaints and grievances in two months. Further measures are now under consideration for effectually dealing with this serious evil.

REWA KANTA.

The Punch Mahal districts, situated on the common frontier between Guzerat and Malwa, became British by exchange with the Maharaja Scindia on the 1st May 1861. These districts had been transferred to the management of the Governor General's Agent for Central India in 1853 under a lease of 10 years, and were, during this period, freed from many disorganising influences. The possession of these districts consolidates the Presidency as regards Eastern Guzerat, the frontier now running in an unbroken line from the Upper Mahee to the Nerbudda.

SURAT AGENCY.

The Raja of Bansda, Maharawul Shree Umeer Sing, died on the 16th June last, without male heirs. His widows sought permission to adopt a son, but Government, after duly considering the customs and practice prevailing among Rajpoots as regards succession in such cases, declined to comply with their request, and conferred the chiefship on Goolabsinjee, a collateral relative and nearest of kin of the late Raja. He was placed on the Gadee with all due honours on the 7th January last. A liberal provision has been made for the widows.

KUTCH.

This province has in a great measure recovered from the effects of the famine of the year 1860, notwithstanding that the fall of rain during the past year was little more than half the average quantity. This assurance is strengthened by the reported return to their homes of a large number of persons who left the province during the famine year.

The state of crime in the province is remarkably low. No case of highway or gang robbery occurred during the year.

His Highness the Rao has carried out several works of public utility since his accession, among which may be instanced a new hospital and a jail, and is otherwise evincing a zealous interest for the welfare and improvement of his province.

ADEN.

The administration of this settlement during the past year forms the subject of an interesting report, which is appended in *extenso* (Appendix A). It is gratifying to notice, from the political occurrences recorded, that the relations of Government with the Arab tribes in the neighbourhood of Aden have been satisfactorily maintained, and that the measures concerted by the political authorities have been successful in preventing the exportation of slaves from the Somalie ports to the markets on the Arabian coasts outside the straits of Bab-el-Mandeb. On the other hand, the extension by the Ottoman Government of their possessions on the African coast of the Red Sea has given a fresh impetus to the slave trade carried on in that quarter. Our cruisers unfortunately do not possess the right of seizing slavers sailing under Turkish colours, and the traffic must continue to be carried on with impunity until this right is ceded by the Porte. The subject is engaging the attention of Her Majesty's Government.

MUSCAT AND ZANZIBAR.

The relations of the Bombay Government with the chiefs of the Persian Gulf and the rulers of Muscat and Zanzibar assumed during the past two years an unusual importance, in

in connexion with events in those quarters affecting our maritime and commercial interests.

The late Imaum of Muscat, Syud Saeed, succeeded his father, with the suffrages of the principal tribes of Oman, in 1807. He early directed his efforts towards extending and consolidating the possessions acquired by his father on the East coast of Africa. During his reign, which lasted over a period of 50 years, the general condition of these possessions underwent a remarkable change. Large numbers of Arabs from Oman settled on the African mainland and the adjacent islands of Zanzibar, Mombassa, and Pemba; agriculture and commerce were rapidly promoted, and Zanzibar, which was described in 1834 as having but an insignificant trade, possessed in 1859 a trade estimated at 1,664,577 *l.* sterling. The rising importance of his African possession led Syud Saeed to remove the permanent seat of his Government to Zanzibar in 1840, committing the subordinate rule of Muscat and other provinces in Oman to his sons or relatives. In July 1844 the Imaum addressed a letter to the Earl of Aberdeen, Her Majesty's Principal Secretary of State for Foreign Affairs, announcing his intention of appointing his two elder sons, Khaled and Thowenee, to succeed in the Government of his African and Arabian possessions respectively, and, in accordance with this intention, he vested both these sons with authority to carry on the administration as his deputies in the provinces assigned to them. Prince Khalid died in 1854, and a younger son, Majid, was appointed by the Imaum to be his successor. On the Imaum's death, each son assumed, with the consent of the principal chiefs and tribes included within the limits of their rule, the government which he administered as his father's deputy.

Syud Thowenee being thus elected Sovereign of Muscat, put forward claims as the *de jure* Sovereign of Zanzibar, and sought by negotiation to obtain some recognition of his claims in that character. An agent was deputed by Syud Thowenee to Zanzibar for this purpose, and an agreement was negotiated, in virtue of which Syud Majid was to be left in possession of his father's African possessions on payment to the ruler of Muscat of an annual sum of 40,000 crowns, but whether as tribute or subsidy implying no inferiority on the part of the donor, was afterwards disputed. By one party it was contended that the payment was a gift, charged with certain obligations, and by the other, that it was a tribute to be paid absolutely as such, unfettered by any conditions. Both parties, there was reason to believe had been deceived by the agent who had negotiated the transaction. Syud Thowenee prepared to assert his claims by an appeal to arms, and equipped an imposing force in the early part of 1860, a part of which had actually sailed for Zanzibar when the British Government deemed it expedient to interpose. At Lord Elphinstone's solicitation Syud Thowenee agreed to abandon the expedition, and to refer his claims to the arbitration of the Governor General of India. Syud Majid, at Zanzibar, consented, through the British Agent there, to abide in like manner by the Viceroy's decision. A Commission, presided over by Brigadier Coghlan, the Political Resident at Aden, was accordingly appointed to inquire into the merits of the dispute between the contending parties. After visiting Muscat and Zanzibar, and collecting a large body of valuable evidence, showing the exact rights of the one party in relation to the other, by religious law, family custom, the force of circumstance, &c., the Commission submitted their final Report on the 4th December, 1860. The result of these inquiries showed that in the Imaum's family, succession depended on election; that on the death of the late Syud Saeed, his son, Majid, was elected by the people of Zanzibar and its African dependencies to be their ruler; that the altered circumstances and condition of those dependencies during the last half century fully entitled them to that privilege, and that they would have been justified in resisting any attempt made by Syud Thowenee, the ruler of the parent State, to coerce them into submission. On all these grounds, the Commission arrived at the conclusion that Syud Majid's claim to sovereignty over Zanzibar and its dependencies was superior to any which could be adduced in favour of Syud Thowenee. The Government, while concurring in this conclusion, considered the facts that Syud Thowenee was prepared to assert his claim by force of arms, and that he relinquished his purpose only in deference to the British Government, as investing him with a claim to compromise when contesting a title which was principally derived from force. In seeking for a basis of compromise, attention was naturally directed to the terms on which Syud Thowenee had consented to resign his claims on his father's African possessions, viz., on payment of an indemnity of 40,000 crowns per annum by Zanzibar to Muscat. The various questions at issue having been submitted to the Government of India, the Viceroy declared the following as the terms of his decision:—

1. That his Highness Syud Majid be declared ruler of Zanzibar and the African dominions of his late Highness Syud Saeed.
2. That the ruler of Zanzibar pay annually to the ruler of Muscat a subsidy of 40,000 crowns.
3. That his Highness Syud Majid pay to his Highness Syud Thowenee the arrears of subsidy for two years, or 80,000 crowns.

This annual payment was not to be understood as a recognition of the dependence of Zanzibar upon Muscat, neither was it to be considered merely personal, but should extend to successors, and be held as a final and permanent arrangement, compensating the ruler of Muscat for the abandonment of all claims upon Zanzibar, and adjusting the inequality between the two inheritances.

The terms of the Viceroy's arbitration were formally communicated to the rival parties in the early part of the year of report, and it is satisfactory to record that they were accepted

in a cordial spirit by the rulers themselves, as well as by the principal chiefs and tribes concerned.

When Syud Thowenee prepared to contest the sovereignty of Zanzibar, he resorted to every stratagem to attain his ends, and succeeded in winning over a party at Zanzibar, chiefly among the El-harth tribe. After the return of his expedition to Muscat, this tribe rose in support of Syud Burgash, one of the younger surviving sons of the late Imaum, but were promptly coerced, with the assistance of a party of British seamen. He was then expelled from Zanzibar, and sought an asylum at Bombay, where he remained for more than a year, a pensioner on the bounty of Government. Having made an abject submission in writing to his offended brother, and afforded strong assurances of amendment for the future, he was permitted, at the recommendation of Government, to return to Zanzibar in August last.

Syud Majid was equally active in fomenting intrigues in Oman to thwart the schemes of his brother and antagonist. Syud Toorkee, another of the late Imaum's sons, Governor of a petty dependency of Muscat, instigated by Syud Majid's agents, made several attempts to form a coalition in Oman with the view of undermining the sovereign authority, and establishing his own independence. These attempts more than once led to the suspension of the stipend which he received from the Treasury at Muscat. In the meantime serious complaints of misrule at Sohar, attended in some instances by the oppression of British subjects there, reached the Acting British agent at Muscat, and advice and admonition freely tendered by him to Syud Toorkee proved of no avail in remedying these evils. On the recognition of Syud Thowenee by the Government of India as the paramount Sovereign of Oman, it was deemed expedient that his recognition in that character should be formally announced to Syud Toorkee, with a friendly injunction that, by timely submission, he would avert mischief to himself, and secure the good-will of his Sovereign. The British Agent at Muscat was, at the same time, instructed to employ his best offices in effecting a reconciliation between the brothers. These pacific endeavours having proved futile, and fresh complaints having been daily received by the Sultan of the continued misgovernment at Sohar, he determined to proceed to extremities, and, by force of arms, to reduce his brother to submission. Lieutenant Pengelley, the British Agent, sought, by mediation and advice, to prevent a resort to hostilities, which would involve the tribes of Oman in a civil war, and eventually obtained the consent of the Sultan to an interview with his brother. It was arranged that the meeting would take place at Seeb, a town on the coast, about 25 miles from Muscat. Syud Toorkee had agreed to meet his brother at this place under an "aman," or pledge of security for his safe return to Sohar. This aman was granted by Lieutenant Pengelley in the following words:—"The British Agent agreed to be responsible for the safe custody of his Highness Syud Toorkee from Sohar to Seeb, and during such time as might be necessary in attending a conference with the British Agent." The Sultan promised to treat this pledge with the same respect as if emanating from himself. Syud Toorkee accordingly proceeded to Seeb in a native vessel, and presented himself to the British Agent. He had nothing to say in extenuation of his conduct, and begged that the British Government would recommend him to the clemency of his brother. In returning on board, Syud Toorkee promised to be present when required by Lieutenant Pengelley to meet his brother. On the following day, the Sultan arrived at Seeb, escorted by a force of cavalry and artillery; but at the hour appointed for the proposed conference, Syud Toorkee failed to make his appearance, excusing himself on the score of indisposition. Lieutenant Pengelley having ascertained that Syud Toorkee designed sailing for Sohar during the night, sent him a message to the effect that his duty as a mediator had terminated. The Sultan having been at the same time informed that the "aman" no longer protected his brother, took immediate steps for arresting him, and removing him to Muscat. The Britsh Agent's proceedings in this matter were severely condemned by the Government of India, who regarded them as involving a breach of faith, and deemed it necessary, for the vindication of the British name, that Lieutenant Pengelley should be removed from his appointment, and that immediate steps should be taken to effect Syud Toorkee' release, with a guarantee for a suitable allowance towards his future maintenance, so long as he remained quiet.

Syud Toorkee's arrest had been followed by an insurrection among the tribes on the coast of Batinah, near Muscat, and the disturbances threatened to extend to the neighbouring tribes of the Persian Gulf.

These conjectures, viewed in connection with the growing importance of our trade with Oman, and the prospect of a line of telegraph being shortly carried through the Sultan's possessions, impressed on Government the necessity of appointing an officer who would adequately represent British interests at Muscat. With this view, the status of the agency at Muscat was raised to an equality with that of Zanzibar, and Major Malcolm Green, an officer whose valuable services on the frontiers of Sind had given him strong claims on the consideration of Government, was selected for the appointment in December last. Major M. Green arrived at Muscat on the 11th February following, and took an early opportunity of communicating to the Sultan the views of the Government of India regarding Syud Toorkee. His Highness at first evinced some hesitation to the course proposed to him, but the remonstrances of Major Green speedily had the effect of obtaining from His Highness a full compliance with the demands of the British Government. The affairs of Oman are now in a fair way of pacification.

PERSIAN GULF.

For a series of years past the Island of Bahrein, in the Persian Gulf, has been the centre of intrigues, which have occasioned various maritime irregularities in the gulf.

This state of things had its origin in the expulsion of a ruling branch of the Uttobee tribe some twenty years ago from Bahrein. A representative of this branch has, since the death of his father, Abdoolah bin Ahmed, been a persistent claimant to the chieftainship of the island, supported throughout by the Wahabee ruler of Kejd.

On every occasion that Bahrein has been threatened by this pretender, the British Government have tendered their friendly advice and mediation; but these temporising measures proving of no avail, Government resorted in 1860 to the severe expedient of expelling him from his asylum in the neighbouring port of Demaum.

The ruling Chief of Bahrein, Mahomed bin Kaleefa, has, however, evinced very little appreciation of the efforts of the British Government to preserve his possessions from maritime disorder, and has been guilty of repeated acts of tyranny towards British subjects residing at Bahrein. He has also been guilty of late years of several acts of maritime aggression on tribes under British protection. His want of principle and stability of character has been unmistakeably manifested during the past two years by his behaviour in receiving the overtures of foreign powers, and even going so far as to declare his dependence first on Persia and then on Turkey. These proceedings elicited from Her Majesty's Government in 1860-61 the declaration that Bahrein should be regarded as independent, and subject neither to Persia nor to Turkey. Notwithstanding this decision, and the repeated warnings of the Resident in the Persian Gulf, Mahomed bin Kaleefa at the beginning of the present year of report blockaded the Wahabee ports in contravention of his treaty engagements. The Resident, therefore, found it necessary in May last to make a demonstration with the Persian Gulf Squadron before Bahrein. On arrival at the island, the Chief was invited to a friendly meeting for the purpose of adjusting differences, but he neglected even to send a reply. The squadron, without firing a shot, then took possession of two of Sheik Mahomed's finest war vessels. This proceeding immediately re-called the Chief to a sense of his rashness, and he pleaded for pardon, and subsequently at the Resident's request, recalled the blockading vessels from the Wahabee ports. As a security against future agression, the Resident entered into a provisional treaty with the Chief of Bahrein "having for its object the advancement of trade and the security of all classes of people navigating or residing upon the coast of this sea."

This convention was approved by the Government of India, and ratified by the Government of Bombay on the 25th February last.

SIND.

His Highness the Khan of Khelat continues to testify an earnest desire to act in accordance with the wishes of the British Government. He deputed a confidential servant to accompany Major Goldsmid while that officer was surveying the proposed line of electric telegraph along the Mekran coast; and both the Khan and his feudatories, the Jam of Beyla and the Naib of Kedge, whose territories include the proposed route from the Hubb river to Gwader, have undertaken to use every means in their power to further the construction and maintenance of the line of telegraph.

The caravan route through the Khan's territory to Shikarpoor has been well protected throughout the year.

The Murree and Bhoogtee tribes have become somewhat restless. The Sind frontier has been untouched; but two raids are reported to have been committed near Asnee, on the Punjaub frontier, at the end of February. The Murrees, by whom the outrage was committed, are nominally the subjects of the Khan of Khelat; but they care little or nothing for his authority, and it is to be feared that he has no power to assert it. For the present we must trust to our own vigilance to guard us against the predatory incursions of these wild tribes; in process of time it may be hoped that they will be won over to more peaceful pursuits. A good augury is afforded by the progress of the Belooch colonies within our own border; not 20 years ago they were as savage as any of the frontier tribes at the present time; the Political Superintendent now speaks of them in the following terms:—

"The progress of these colonies has been satisfactory. As their means increase, they add to their landed property, which binds them to the place. Near this out-post, whence this Report is dated, the Jakranees and Doombkees lately took up several thousand beegas of land on long leases. These they watered by canals 10 or 12 miles in length, excavated last year by themselves, and taken from the new canal, Muksaedawah, near Kusmore. This morning we passed through several miles of Jowaree cultivation, which six years ago was a thing almost unknown in these parts, and nearly the whole of it the work of these reclaimed marauders. Such a state of things cannot fail to have an excellent effect on the generation coming on, as also on the neighbouring tribes beyond the border. A few of these latter, as it is, come over, assist the Jakranees and Doombkees in cultivation, and going back to the hills with the proceeds of their labour, take away not only food, but ideas and tales of peace and plenty, which must influence their hearers for good, and make them wish for equal benefits."

The survey of the boundary line between Sind and Khelat has been completed by Captain Macauley, of the Sind Horse, who has performed a duty attended with no

ordinary difficulties, in a manner which has earned for him the acknowledgments of Government.

His Highness Meer Ali Morad has remained during the year within his own territories. He has evinced his wish to promote the health of his subjects by agreeing to place hakeems or native physicians for instruction under Dr. Martin, the vaccinator in Sind. He has also expressed his readiness to co-operate in the systems of river conservancy organised during the past year.

In October last, two rebels, named Mogul Beg and Gooljar accused of complicity in the atrocities committed at Delhi in May 1857, were apprehended at Khyrpoor, in his Highness Meer Ali Morad's territory, and, having been identified by an approver, were sent to Delhi, where Mogul Beg was convicted and executed.

The definition of the Southern boundary of his Highness Meer Ali Morad's territory has been completed.

Mahomed Khawajee, Envoy from the Ruler of Kokan, with his son and three attendants, arrived in Kurrachee in November last *en route* to Constantinople. He was hospitably entertained at the expense of the Government during his stay of a fortnight, and was provided with a free passage to Bombay.

PUBLIC WORKS DEPARTMENT.

THE Bombay Public Works Budgets for 1861–62 was submitted to the Government of India in February 1861, in the six following parts:—

Part I.—Original works, the Estimates for, which required either the approval of the Government of India or the Secretary of State, amount to 5,30,000 rupees.

Part II., Section A.—New original works, the Estimates, for which were sanctioned by the Local Government, amount to 4,39,859 rupees.

Part II., Section B.—Projects previously sanctioned by all authorities, and which were in course of execution, amount to 16,13,679 rupees.

Part III.—Original works on general or approximate Estimates, amount to 2,40,000 rupees.

Part IV.—Repairs on approximate Estimate, amount to 15,52,388 rupees.

Part V.—Estimated charges for Establishments and Contingencies amount to 11,67,088 rupees.

Part VI.—General abstract of the five preceding parts, amount to 55,43,014 rupees.

In passing orders on the Budget, the Government of India observed that there was a very great preponderance of military demand over works of other descriptions; the proposed expenditure in construction on the former amounted to 15,55,332 rupees irrespective of the amount required for military repairs. They therefore ordered a reduction of 10,89,994 rupees on military works and repairs; this reduction included the family quarters at Kirkee and subsidiary buildings for the Khundalla Barracks, which were subsequently sanctioned in consequence of their urgency. A reduction of 24,368 rupees was, at the same time, ordered in Civil Expenditure. The Budget thus re-cast amounted to 44,28,652 rupees. This amount was increased by the Government of India by the following allotments to works of Public Improvement:—

	Rs.
Additional amount for the Agra-road - - - -	70,000
Ditto ditto Mittrow Canal - - -	60,000
Roads in Dharwar or elsewhere, as the Government of Bombay might select - - - - - - - -	1,50,000
TOTAL -	*Rs.* 2,80,000

The Reserve Fund was raised from 2,40,000 rupees to 2,91,348 rupees. Thus the total Budget allotment for the Bombay Presidency, including Sind, amounted to 50 lacs.

On the representations of the Government of Bombay pointing out the inadequacy of the means placed at their disposal for expenditure on public works during 1861–62, and previous years, the Government of India in Secretary Lieutenant Colonel Yule's letter, No. 3122, of the 29th August 1861, made an additional grant of 2½ lacs of rupees. This was distributed in the following manner:—

Military

	Rs.
Military Works at Aden	75,000
Portion of the Hooblee and Sedashewghur-road	14,668
Malligaum and Munmar-road	12,000
Gogo and Ahmedabad-road	25,000
Khandesh Division of the Bombay and Agra-road	50,000
Kondabharee Ghaut-road	10,000
Purchase of Land at Kotree	12,000
Burial Ground at Khundalla	2,000
Alterations and Additions to the military buildings at Ahmednuggur	5,600
Repairs to the Cathedral, Bombay	5,000
Postal road from Nassick to Bulsar	14,122
Repairs generally	24,610
TOTAL	*Rs.* 2,50,000

Subsequently, in the month of October 1861, the Government of India announced their intention of assigning a further grant of 3¼ lacs of rupees to be chiefly devoted to increasing the facilities for the export trade of the country, and more especially for the export of cotton; and called for a brief statement of the objects on which this Government proposed to extend the extra grant. The statement was accordingly submitted with Government letter No. 5980, of the 4th of November 1861. All the proposals therein enumerated were approved of, except that for reclaiming a portion of Apollo Bay, for expenditure on which, a sum of 50,000 rupees was proposed; and on a further representation that was also sanctioned, to be defrayed from the one per cent. Income Tax.

Thus the total sum of Imperial assignment for expenditure on Public Works during 1861–62, amounted to 55,25,000 rupees.

The sanctioned conveyed in the Government of India's Circular No. 5, of 18th January 1862, to an expenditure of eight lacs, on account of the proceeds of the one per cent. income-tax was received too late in the official year under report, to admit of any considerable expenditure being incurred; detailed returns of this expenditure have not yet been submitted. The accompanying classified abstract of expenditure shows an outlay of 52,80,781 rupees, in 1861–62, debitable to Imperial assignments, against 55¼ lacs of rupees sanctioned. The fact of 2,44,219 rupees less than the amount sanctioned having been expended, it is to be accounted for, principally, by the inability of Executive officers to expend the amounts placed at their disposal, from deficiency of labour or other local causes, and also in a great measure to their not having brought the same to notice in sufficient time to admit of transfers to works in other districts where labour was comparatively abundant; the low rates upon which estimates are framed by the Public Works Department, and the stringent orders to keep within sanctioned estimates, preclude officers from attempting to import labour to any great extent. In this year, however, when a larger annual expenditure than heretofore on public works has been sanctioned, measures have been taken by relaxing the existing contract rules, and by impressing upon Executive officers the necessity of profitably expending the amounts placed at their disposal, even at the expense of exceeding estimates and temporarily increasing the rates of labour; and it is hoped that by these means the expenditure of 1862–63 will be more nearly commensurate with the sum sanctioned for that year.

The cost of establishment in 1861–62, excluding "direction," is equivalent to 22·4 per cent. of the expenditure on Imperial assignments; returns of expenditure, including local funds, private contributions, and proceeds from income-tax, have not been yet received.

PUBLIC WORKS.

ADMINISTRATION REPORT, 1861-62.

A 1.—*Fortifications.*

THE following extracts from the Annual Report of Lieutenant Colonel De Lisle, the Superintendent of the Bombay Harbour Defences, show the progress which has been made in those works in the year under report:—

Oyster Rock Battery.

The masonry has been brought up to a level 6·2 feet below high-water mark all round; at the north-east and south-west angles it stands about a foot higher. The filling in is up to the same level, except at the south-west angle, where, owing to the scarcity of workmen at Cross Island, we could not deliver a sufficient quantity of rubble. A large quantity of dressed stone is ready for next season's work.

Cross Island Battery.

The removal of the upper portion of the rock for the platform of the battery was nearly finished on the 1st May last.

The battery at Malabar Point is complete and in good order with its armament. It requires very little attention.

CHAP. XI. Bombay.

*Reclamation.**

This has been completed, and tramways have been laid to facilitate the removal of heavy stones. A pier has been commenced into deeper water to enable the barges to load at all tides, both neaps and springs. The sea-walls of drystone have suffered during the heavy gale at the setting in of this monsoon; but no serious damage has been done.

Boats.

Another wooden barge was received from the dockyard, and has been very useful. Two iron barges, of about 48 tons each, were purchased from Messrs. Bates and Company. No hired boats have been employed this year, owing to want of funds and the high rates demanded during the last two months of the season.

Middle Ground Battery.

Two iron saddle-back barges were ordered down from Kurrachee to commence this work, but were lost at sea, and nothing has been done in consequence.

The expenditure for the year has been on—

	Rs.	*a.*	*p.*
Oyster Rock Battery - - - -	1,48,846	9	9
Cross Island Battery - - - -	31,588	11	9
Malabar Point Battery - - - -	3,034	15	9

TOTAL - -	*Rs.* 2,28,256	12	3

A 3.—*Accommodation for Troops.*

Bombay and Khundalla. Staff Sergeants' Quarters at Khundalla completed. Expended in the year, 9,954 rupees. Additions and alterations have been made to European Hospital at Colaba. Expended in the year, 8,025 rupees.

The Officers' Quarters in the Town Barracks, Bombay, have been altered, to adapt them for Government Offices. Expended, 6,413 rupees.

Military buildings in Fort George, Bombay, adapted for temporary use as European General Hospital, at a cost of 6,065 rupees.

Aden. Accommodation at Front Bay for two companies of European Infantry, with Hospital Family Quarters, &c., provided. Expended in the year, 20,591 rupees.

Hospital for Native Infantry, Artillery, and Sappers in progress. Expended in the year, 35,594 rupees.

A sum of 5,898 rupees expended on the barracks on Ras Tarshyne.

Additions and alterations, costing 10,789 rupees, to the European General Hospital, Steamer Point.

Rs. 22,735 expended upon the Artillery Barracks in Front Bay.

Belgaum. A plunge-bath and well for European regiments completed and now in use. Expended in the year, 1,953 rupees.

Permanent privies for Native Infantry, without roofs, completed.

These privies are stated to be of a very substantial nature, and afford accommodation for 60 males and 32 females. Expended, 4,082 rupees.

Sattara. Four permanent barracks for European Infantry, to accommodate 25 men each, completed. Expended in the year, 4,161 rupees.

Poona cantonment. Six permanent upper-storied barracks, at Wanowree, were completed prior to 1st May 1861. A sum of 24,738 rupees has been expended in 1861-62, on account of final payments to contractors, and for timber.

Kirkee cantonment. Of the five new ranges of Family Quarters, the first range was completed in July 1861, the second in December 1861, and the third and fourth are now (June 1862) under construction. Expended, 20,890 rupees.

Poona cantonment. Three inexpensive detached urinal-sheds constructed at the Ghorepoorie Barracks as an experiment. Expended, 161 rupees.

Poorundhur. A reading-room for soldiers commenced. Expended, 439 rupees.

Two solitary cells nearly completed. Expended 925 rupees.

Improvement to the roof of, and additions and alterations in, the Hospital completed. Expended, 11,563 rupees.

Ahmednuggur. The enlargement of the female ward of the Cavalry Hospital, commenced in 1860-61, has been completed. Expended, 1,378 rupees.

Mhow. Three of the temporary barracks in the south lines were re-roofed and made ready for the troops by the rains of 1861; the cost of this work amounted to 3,485 rupees; finished on the 27th August 1861.

An hospital at Mahidpoor for the use of the Native troops, constructed from the ruins of

* The reclamation was indispensable to afford space for cutting and storing the stones for the Oyster Rock Battery and the pier to allow of the convenient shipment of the same; the space reclaimed will be fully worth the money expended, which will be credited to the harbour defences on the conclusion of the work.

of one of the bungalows burnt by the mutineers in 1857, cost 4,360 rupees, and was ready for occupation on the 19th June 1861.

Barracks, for a complete regiment of Infantry, were wholly completed on the 30th April 1862, they were sufficiently so to allow the regiment to occupy them before the rains of 1860 61; these barracks were designed to fit the iron-work sent from England for Bengal, and transferred to the Bombay Presidency: the cost has amounted to 4,20,942 rupees, exclusive of the iron framing for the floors, stairs, and roofs.

The temporary barracks were prepared at a cost of 1,037 rupees, for the accomodation of a regiment of Dragoons ordered to Mhow, in the month of December. Completed on the 31st March last.

An expenditure of 4,246 rupees was incurred during the year in completing the Native Infantry lines, finished on the 30th June 1861; total cost, 15,015 rupees. These lines are stated to be of a very superior description. Augur.

Subsidiary buildings for the detachment of Artillery at Indore, completed on the 30th April last, cost 7,915 rupees. The buildings comprise gun-shed for carriages, shed for shoeing horses, for stores, a magazine, cells, quarter-guard, dry-room, and harness-room. Indore.

Two barracks have been erected, the wood work of which was originally intended for barracks for Europeans in Persia. They accommodate 100 men each, and are commodious, lofty, and well ventilated; cost 54,984 rupees for both; commenced in April 1861, and completed in March 1862. Ahmedabad.

Two large and two markers' butts for rifle practice constructed. Expended 1,191 rupees. Deesa.*

A washhouse, privy, with covered passage, to the European Artillery Hospital, completed. Expended 1,821 rupees. Nusseerabad.

Plunge baths and wells for the European Infantry and Artillery, completed. Expended in the year, 1,425 rupees. Neemuch.

Solitary cells for European Infantry, completed. Expended 6,324 rupees.

A. 4.—*Ordnance.*

The following works at the Gun-carriage Manufactory completed:— Bombay.

(1.) Upper-storied store-room. Expended 18,150 rupees.
(2.) Six skylights in the roof of the turners' shed. Expended 1,031 rupees.
(3.) Wooden beams, cast-iron columns, and teak wood transverse beams in the new turners' shed, to support the driving shaft. Expended 1,218 rupees.

The following works at the Gun-carriage Factory were nearly completed at the close of the official year:—

(1.) New turners' and smiths' shed. Expended 8,324 rupees.
(2.) Foundation for steam-engine, and also for steam-hammer, flues for 28 forges. Expended 4,835 rupees.

A second story to the laboratory in the Grand Arsenal, completed. Expended in the year, 5,164 rupees.

Laying on Vehar water to the Gunpowder Works at Mazagon. Expended 2,180 rupees.

The additions and alterations to the Belgaum Arsenal, commenced in 1858-59, were completed at the commencement of the official year. Expended in the year 302 rupees. Belgaum.

A. 5.—*Commissariat.*

The condensers at Isthmus and Steamer Point were completed in 1860–61, but the accounts of the work were not closed till after 1st May 1861. Expended in the year, 5,604 rupees. Aden.

The conversion of a porter shed in the Commissariat-yard, Poona, into a range for ovens, commenced in February 1862. Expended in the year, 850 rupees. Poona.

A. 7.—*Staff.*

Additions and alterations to the Staff-buildings, to adapt them as public offices, completed. Expended in the year, 6,877 rupees. The same to the south wing, and centre of the Town Barracks for the same purpose. Expended 30,096 rupees.

Additions and alterations to the north wing of the same barracks, are in progress. Expended, 5,000 rupees.

B.—*Naval.*

The Naval Hospital at Butcher's Island half completed. Expended in the year, 17,990 rupees. Bombay.

C. 5.—

* This should not be a Public Works charge, although the sandy nature of the soil threw the construction on the Public Works Department.

C. 5.—*Post Office.*

Belgaum. A new Post-office, constructed on the standard plan for a district Post-office. Expended in the year, 2,431 rupees.

Sholapoor. A Post-office and residence for postmaster, under one roof, constructed. Expended in the year, 2,525 rupees.

Neemuch. A Post-office built at Neemuch. Expended, 2,422 rupees.

D. 1.—*Government Houses and Residences.*

Aden. The roof of the Residency at Aden reconstructed, cost 1,980 rupees.

D. 4.—*Charitable Institution.*

Ahmedabad. A lunatic asylum commenced. Design, a centre upper-storied room with four radiating wings. Expended in the year, 6,301 rupees.

Surat. A sum of 26,594 rupees expended upon the Hospital at Surat, building by the Public Works Department, on funds supplied by Cowasjee Jehangheer, Esq.

D. 6.—*Miscellaneous.*

Bombay. The enlargement of the Mint in progress, and two-thirds completed. Expended in the year, 29,998 rupees.

E.—*Churches and other Buildings.*

Bombay. Repairs to St. Thomas's Cathedral, effected at a cost of 5,170 rupees in the year.

Indore. St. Anne's Church at Indore re-roofed at a cost of 2,556 rupees, of which amount 2,039 rupees were expended during the year 1861–62. The roof is of cut teak wood king-post trusses, to replace the collar beam truss roof which failed, completed on the 30th October 1861.

G. 3.—*Jails.*

Bombay. The Hospital, House of Correction, enlarged. Privy accommodation improved. Expended 3,411 rupees.

An upper-storied building for the turnkeys completed, in the County Jail. Expended 6,877 rupees.

H. 5.—*Water Supply.*

Aden. Captain Pym, Executive Engineer, Aden, reports concerning the tanks in the Taweela Valley:—

"Coghlan Tank completed; masonry pool below Coghlan Tank finished.
"No. 1.—Shield Bund plastered on water side, pipe and cocks fixed.
"No. 2.—Shield Bund ditto do. do.
"No. 3.—Shield Bund nearly finished last year; completed.
"Nos. 4, 5, and 6.—Bunds commenced and completed this year. The shoot below Coghlan Tank, to prevent damage to the watercourse by waste water flowing over pool below Coghlan Tank, completed. The works are now complete as far as pool below Coghlan Tank."

I. 1.—*Harbours and Navigation.*

Bombay. Widening the Apollo Pier to double its former width, nearly completed. Expended, 64,189 rupees.

A portion of Apollo Bay reclaimed. Expended, 10,050 rupees.

Aden. A new quay has been built at Steamer Point, cost 8,383 rupees.

Vingorla. A new sea-wall, to replace the old one destroyed, commenced. 2,474 rupees expended in the year under report.

Southern Concan. A wharf-wall at Gowul Kote, the terminus of the extension of the road from the Khoombharlee Ghaut to Chiploon, commenced. Expended, 10,091 rupees.

Surat. A hard at Randier, in the Surat Collectorate, constructed. Expended in the year, 1,821 rupees.

Kurrachee Harbour Works. The works at the Quarries at Hands Hill were in a sufficiently forward state to supply stone by rail, to the works at the end of July, when one train consisting of (56) fifty-six tons was daily sent down. The arrangements for commencing the Keamaree Groin were completed, and a branch line of rail laid down to it by the end of November, since which time the groin has made good progress. For some time past the quarries have furnished three

three train loads daily, each containing (107) one hundred and seven tons of stone. The length of the groin on 30th April 1862 was (1,759) one thousand seven hundred and fifty-nine feet, nearly one-fourth of its proposed length, and contained (22,299) twenty-two thousand two hundred and ninety-nine tons of stone from the Hands Hill Quarries, and (1,908) one thousand nine hundred and eight from Munora. Convict labour has been tried at the Quarries, and has proved satisfactory; (150) one hundred and fifty men have been employed, and it is now proposed to increase the number to (500) five hundred. Some progress has been made in opening a quarry at Munora.

The screwing in of the piles for the Napier Mole Bridge was commenced in the middle of July 1861, and up to 30th April (36) thirty-six piles had been screwed to the proper depth. This has been a laborious and tedious operation, and the failure of the capstans sent from England, which proved unfit for the purpose, caused much delay.

The great delay in the receipt of the Deodar timber from the Punjaub, which, though applied for in August 1860, reached Kotree only on the 30th April last, has prevented any effective progress in the construction of the masonry abutments of the bridge, and the southern face of the Native Jetty.

About (1,100) one thousand one hundred feet of wharf-wall have been built, one-half of which, near the Napier Obelisk, has been an useful addition to the accommodation for native boats.

The new channel has been excavated to the proper level for (4,000) four thousand feet in length, and (150) one hundred and fifty in width, and a further length of (1,500) one thousand five hundred feet is about half finished. The work has been chiefly done by the steam dredges. It was found impracticable to tow the mud boats outside the harbour as originally intended, and nearly the whole of the spoil has been landed on Keamaree, and deposited in low ground adjoining the dockyard; the ground thus filled in will prove very valuable. About (52,800) fifty-two thousand eight hundred tons of mud have thus been removed.

The two 150-ton saddle-back barges received from England, for depositing stone on the site of the groin, were put together during the year. They were quite unsuited for the use for which they were intended, as they drew too much water; and orders were received for their transfer to the harbour defences at Bombay. Both vessels foundered at sea, when being towed by Her Majesty's steamers, "Auckland" and "Berenice."

The two small locomotive engines have been put together, and one has been brought into use on the groin. The workshop, engine, and machinery, including mortar mills, have been completed.

There were five fatal accidents on the works during the year.

I. 2.—*Light Houses and Beacons.*

A light beacon, constructed at Oomersaree, at the mouth of the Par river. Expended 345 rupees. — Surat.

A large quantity of material collected, and a part of Beitkul Cove reclaimed, prior to the construction of a pier and wharfage at Beitkul. Expended in the year 22,008 rupees. — North Canara.

K. 1.—*Irrigation Canals.*

Captain Playfair, the Executive Engineer, reports concerning the irrigation canal at Misreecote:—"The dam, a good piece of masonry, has been finished; its length of overfall is 256 feet, and extreme height 15 feet, flanked by substantial masonry towers: a regulating sluice lets the water into the canal at a depth of 3½ below the crest of the dam; this sluice is nearly ready. The canal runs in cutting at an extreme depth of 17′, and average of about 10′, until it comes out on the surface of the country about 1½ miles from the head; on this course it is carried over a masonry aqueduct of some height, necessitated by a nullah which crosses the line; two rough road bridges are also in progress. It is expected that the water may be let out on the lands to be irrigated by the 20th June, after which there will only remain the continuation of the canal, and the building irrigating sluices." — Dharwar.

Several small bundaras have been in progress. A masonry dam has been built across the river Ban Gunga, at a cost of 8,639 rupees. The other irrigational works in the Nassick Collectorate, are of minor importance. — Nassick.

No irrigational works of importance have been undertaken, or in progress during the year. — Khandesh.

Improvements to the irrigation from the Kharee river commenced; the river deepened; and sluices constructed at four adjacent villages. Expended in the year 11,455 rupees. — Ahmedabad.

This work has been extended from the 29th to the 42d mile. No means having been adopted to regulate the use of the water by the cultivators during the last Khurreef season, much waste took place, especially on the first 10 miles of the canal. — Mittrow Canal, Sind.

The canal clearance expenditure for the year amounts to three lacs, eighty-five thousand, six hundred and fifty-three (3,85,653) rupees. — Canal Clearances, Sind.

CHAP. XI.

Bombay.

K. 2.—*Tanks.*

Dharwar. The Executive Engineer, Captain Playfair, reports on the restoration of the Mudduck Tank:—"The tunnel below the old native sluice is well advanced, out of 870 feet, a little more than 100 feet only remains to be finished; this portion is in hard rock, and sad delay is caused by the difficulty of cutting it. As blasting, owing to the fear of the old native work above coming down, cannot be resorted to, I hope that by the end of August the water can be let off, when the difficulties of the scheme will be at an end, and irrigation, after the lapse of centuries, that the tank has been idle, recommenced."

Kaira. A tank at Torna has been deepened, and a retaining wall 540 feet in length built. Expended 2,532 rupees.

K. 3.—*Dykes.*

Dharwar. A dam at Dumul has been commenced. The Executive Engineer, Captain Playfair, reports:—"This is a new work, but on the site of an old native weir, that failed from faults of execution; the old masonry has been removed, and the new dam is rising, and will probably stand well, as its predecessor's errors of bad foundation and too great height have been avoided, the one, by carrying all down to a hard bed, never minding the depth of excavation consequent thereon; the other, by inserting planks for the upper two feet, which can be removed, and afford a freer passage for floods."

Northern Concan. Extensive repairs to the Government Khar, at Bhainder, in the Tanna Collectorate, undertaken; earthen embankment to the length of six miles re-erected, and new sluice gates provided. Expended in the year 3,555 rupees.

L. 1.—*Metalled Roads.*

Dharwar. A sum of 14,400 rupees has been expended on the Tenai Ghaut road; the work has been suspended in consequence of a difficulty raised by the Goanese Government, about the boundary of Portuguese and British territory.

Belgaum. The new road from Belgaum to Vingorla, *viâ* the Parpoolee Ghaut, which was suspended soon after its commencement in 1857, was resumed in the year under report, and a sum of 36,344 rupees has been expended.

The following, taken from the report of Captain Merriman, Executive Engineer, shows the present state of the work:—"A considerable amount of work has been executed on the ghaut portion; most of the earth work is completed, and as much of the rock as could possibly be taken in hand has been got out. The present state of the ghaut is as follows:—Upwards of $4\frac{1}{2}$ miles is out to its full breadth of 25 feet, about $1\frac{1}{4}$ miles to 18 feet, $2\frac{1}{4}$ miles to 16 feet, and about 3 miles to 10 feet. There has been a bullock track down this ghaut for some years past, following the gauge path generally, except along the scarps and difficult places, where it was cut into the hill-side, without reference to gradient, to effect an immediate communication. Little or no masonry has been attempted this year. About $2\frac{3}{4}$ miles of the Belgaum approach, near Ambolee and Kanoor have been constructed. A great portion of this is embanked road over rice land, and was constructed in order that it might get the benefit of the approaching monsoon."

Sattara. The work of embanking and laying moorum on the road from Sattara to the Warna river has been nearly completed. The only streams between Sattara and Kurrar, a distance of 29 miles, the bridging of which has not been completed, are those at Oomoororee and Tarla; the portion of road between Kurrar and the Warna river is not so far advanced as that north of Kurrar, but is progressing rapidly. Expended in the year on road work 49,203 rupees.

Sholapoor. A road from Barsee to the Barsee Road Railway Station has been commenced, and $1\frac{3}{4}$ miles of the earthwork were completed to a width of 12 feet, on the 30th April; the necessity of reference for permission to proceed with that portion of the road which lies in the territory of his Highness the Nizam, is the cause of this work being delayed. No reply has yet been received from the Political Department.

Belgaum. A new line over the Bhugawaree Ghaut, on the high road between Belgaum and Dharwar, commenced. This is a small work, estimated to cost 5,695 rupees, of which 1,245 rupees have been expended in the year.

Ahmednuggur. A sum of 14,554 rupees has been expended in the year in breaking and collecting metal for the road from Ahmednuggur to the foot of the Imampoor Ghaut.

Northern Concan. A causeway from Chemboor to Kerole, in the Tanna Collectorate, is being constructed by the Public Works Department, at the cost of the widow of the late Dhunjeebhoy Nusserwanjee Cama; the causeway is 8,600 feet in length, and 20 feet broad. Expended in the year 8,915 rupees.

Nassick. A metalled road from Deolalee (railway station) to Nassick, $4\frac{5}{8}$ miles in length, nearly completed. Expended in the year 11,544 rupees. This is a portion of Poona and Nassick Road.

A quantity

A quantity of metal for the road between Gogo and Vertej, stacked. Convicts have been employed embanking that part of the Gogo and Ahmedabad Road which lies near Chumardee. Expended on the road, including 11 bridges, in the year, 40,680 rupees. Ahmedabad.

A portion of the road between Ahmedabad and Surkej, five miles in length, raised about four feet above its former level, and additional cross drains provided. Expended 10,194 rupees.

A sum of 36,660 rupees expended in the year on the Kyga Ghaut Road, which has been opened to 12 feet to Kourypett, on the bank of the Kalee Nudee. North Canara.

L. 2.—*Unmetalled Roads.*

The following extracts from the Report of Captain Playfair, Executive Engineer, shows the progress which has been made in the Dharwar Districts in constructing unmetalled roads :— Dharwar.

" The great work of the year has been the Hooblee and Sedashewghur Road as far as it lies in the Dharwar Districts, 28 miles; it was commenced on the 2d May, and is finished (drained and gravelled complete), with the exception of three bridges not included in the original programme of work. The road will be ready for the earliest traffic after the monsoon, and carts get along very well now partly on the old, partly on the new road. Expended in the year, including bridges, 1,43,313 rupees.

" *The Hooblee and Anigeri Road.*—This is a continuation of the Sedashewghur Road into the cotton plains; it runs entirely through black soil, and therefore requires embanking all the way. The rough embankment is completed, and several drains have been built; others are in progress; the top of the bank is being brought to a proper barrel, and the gravelling to the surface has been commenced. Strenuous endeavours will be made to have it open by the end of the Christian year 1862.

" *Betigery to Kittoor.*—This is merely a roughly cleared line; it was commenced many years ago, and then stopped; it has now been finished. Expended in the year 4,226 rupees.

" *Dharwar to Lingunmutt.*—With a small sanction, rough drains have been executed for the whole distance of 21 miles.

" *Goonjee to Inglepeit.*—This was one of the roads ordered to be made some years ago, principally for military communication in the country about the ghauts and Goa frontier at the time a party of outlaws were in arms against Government": it has been completed.

Road from Bunkapoor to Moondagode.—This will be a first class, gravelled road to unite the important cotton mart of Bunkapoor with Sedashewghur; the earthworks and many of the drains are completed; the gravelling will now be taken in hand, and it is to be hoped that it will be open to traffic this year.

Road from Kode to Hurrihur.—A roughly cleared line to connect the system of roads in North Canara with those in the Madras Presidency, terminating at Hurrihur; it has been cleared throughout its whole length, and the balance of the sanction is being expended in embanking bad places, gravelling the surface, and making a few drains.

Road from Guduck to Hesroor is divided into nearly equal parts by the town of Dumbul; the line between Guduck and Dumbul only has been undertaken for the present; it has been cleared throughout, and a great many substantial masonry drains built. This part of the line runs principally in black soil, and the grant of 300 rupees a mile has been found so insufficient, that a proposal (which will doubtless be acceded to) has been made to confine the whole grant to the aforesaid division, and not to attempt that part lying between Dumbul and Hesroor (which does not present much difficulty to traffic) until a further sum is available.

The improvement of the road between Kurar and Beejapoor, commenced in 1860-61, completed in the year under report, during which a sum of 3,354 rupees has been expended. Belgaum.

A new road from Baramuttee, *viâ* Deeksal (railway station) to the Bheema river, 21½ miles in length, has been commenced. Expended in the year 3,569 rupees. Poona District.

A fair-weather road from Ahmednuggur to Patus (railway station), 40 miles, has been nearly completed by convict labour. Expended 14,340 rupees. Ahmednuggur.

A fair-weather road, from the foot of the Imampoor Ghaut to Pyton, 38½ miles, has been completed. Expended in the year 8,366 rupees.

A sum of 13,332 rupees has been expended in constructing a moorum road from Baboolsur to Yeola, which forms part of the Ahmednuggur and Malligaum Road.

The approaches to the Godavery river at Toka have been improved. Expended in the year 2,894 rupees.

CHAP. XI.
Bombay.

Khandeish.

Of that portion of the Bombay and Agra Road which lies in the Khandeish Collectorate, the piece between Nildana and the River Taptee, five miles in length, has been completed, and is open for traffic. In consequence of an unusually unhealthy season, the portion north of the Taptee has not progressed very rapidly; but a width of 12 feet will, it is hoped, be available for traffic during the rains of 1862.

On account of sickness, the work at the Kondabharee Ghaut, on the road from Dhoolia to Surat, has not progressed rapidly. The road from Malligaum to Munmar (railway station), 24 miles in length, has been under construction by convict labour. The executive engineer reports that this measure has led to a saving of about 10,000 rupees.

Total expenditure on unmetalled roads in the Khandeish Collectorate in the year, 1,05,355 rupees.

Mhow Division, Bombay and Agra Road.

The whole length of the section between Indore and Dewas boundary, with the exception of about two miles, including two deviations in all, has now been embanked to 30 in width, besides several heavy fillings made for approaches to bridges, culverts, &c.; 290,434 cubic feet of moorum have been spread, and 5,55,050 cubic feet stacked. Three bridges of 15 span nearly completed; 26 culverts and slab drains completed, 8 in progress, and 5 have been commenced. Actual expenditure *Rs.* 52,182. 13. 7.

Of the section between Bhoreghur and Mhow, 55½ miles, completed by clearing out old gutters, or excavating fresh ones, as required; spreading a new coating of moorum 2½ thickness; 2¾ miles remain without moorum; the gutters having been completed, several heavy cuttings and fillings, the latter more particularly, for approaches to culverts and drains, have been made; 15,27,198 cubic feet moorum have been excavated, carted, and stacked; 77 culverts and drains from 10′ to 1′ span built, 9 in progress, and 3 commenced. Actual expenditure *Rs.* 68,367. 12.

Dewas and Beaura division, Bombay and Agra Road.

This section of road, 82 miles in length, has, during the year under report, been made a separate executive charge. A sum of 19,404 rupees expended almost entirely upon embanking and excavation of moorum. This section, which has been liberally provided for in the Budget 1862-63, is being pushed on with vigour.

Surat.

A sum of 11,684 rupees has been expended in constructing a road from Bulda Pardee to Cheerwul.

A road from the cotton factory to the railway station at Broach has been undertaken, and 4,550 rupees, obtained from local funds and grants by the municipality, expended in the year.

L. 2.—*Unmetalled Roads.*

Ahmedabad.

A line of road from Tintolee to Neriad (railway station) has been partly laid out at a cost in the year of 965 rupees.

North Canara.

The Hullial and Unshy road, opened to 12 feet throughout, with the exception of two miles on the Unshy Ghaut. Expended in the year 28,091 rupees.

L. 3.—*Bridges.*

Dharwar.

A bridge of one centre arch, 50 feet span, and two side arches 30 feet span; also one of 2·20 feet arches, and one of 1·20 feet arch, all on the Hooblee and Sedashewghur, have been built up to the level of the arch springings.

Two timber bridges, the one of 15 openings, the other of 12, each 16 feet span, are in progress over the Benihal Nullah, at Nowlgoond, and its tributary, the Tapree Nullah, near Nurgoond; they are being built partly by subscription, partly from the proceeds of the one per cent. income tax. The Nowlgoond bridge is nearly completed; that near Nurgoond has been only recently commenced; some of the piers are ready, and the rest in rapid progress; both bridges, it is stated, will be finished during the present rains.

Sattara.

Five of eight large bridges on the road from Sattara to the Warna river have been completed; the remaining three are in progress. Expended in the year 69,553 rupees.

A bridge causeway across the Wasishtree river, at Chiploon, commenced, and 4,537 rupees expended on it in the year.

Sholapoor.

Two bridges on the road from Sholapoor to Hydrabad (Deccan) have been undertaken; one across the Hurnee stream at Tantolwaree, consisting of eight arches of 30 feet span, on piers 20 feet high, the other at Boramunee, consisting of nine arches of 15 feet span, on piers seven feet high; three piers of the former were nine feet high on the 30th April, and the latter work was carried up to within nine inches of the springing on the same date.

Ahmednuggur.

Bridges at Nimbgaum and Wuddala, on the Poona and Aurungabad Road, nearly completed; they are built on the same design, five arches of 30 feet span. Expended in the year 7,681 rupees.

Nassick.

At Waghary, on the Bombay and Agra Road, a bridge of 58 feet span has been substituted

substituted for one of three arches of 25 feet. Expended, 3,999 rupees, the waterway having been found insufficient.

Two bridges at Kotumbee and Kurumjalee, on the Nassick and Peint and the Nassick and Bulsar Road respectively, have been nearly completed; they each consist of two elliptical arches, 30 feet span and eight feet rise. Expended in the year, 5,172 rupees.

Two bridges at Munglia and Tillowlee, on this portion of the Agra Road, have been nearly completed. Expended in the year, 6,476 rupees. Mhow Division, Agra Road.

Twelve bridges, on the road between Gogo and Dundookha, commenced; the largest nine arches, of 30 feet span each, and the smallest one arch of 20 feet span.

3,789 rupees expended on bridges on the Gairsoppa Ghaut, which are in progress. North Canara.

L. 4.—*Boat Bridges and Ferries.*

Two boats for the ferry at Hingungaum, on the Poona and Sholapoor Road, completed. Expended in the year, 1,028 rupees. Poona Collectorate.

A new raft for the ferry at Koregaum, on the Poona and Ahmednuggur Road, built at Tanna, has been completed. Expended, 2,127 rupees.

A flying-bridge constructed across the Godavery at Kopergaum, on the Ahmednuggur and Malligaum Road, and the boat formerly in use at Seroor transferred to Kopergaum. Expended in the year, 4,192 rupees. Ahmednuggur.

Two pontoons, one for the Gorebunder and one for the Datewra Ferry, constructed. Expended in the year, 4,230 rupees. Northern Concan.

L. 7.—*Accommodation for Travellers.*

Travellers' Bungalows at Beitkul, Pallah, and Gairsoppa Ghaut commenced; the foundations of the first laid, the second nearly finished, and the third only commenced on the 30th April 1862. Expended in the year, 1,331 rupees. North Canara.

Walter Scott, Major General,
Secretary to Government.

Bombay Castle, 1 August 1862.

PUBLIC WORKS—RAILWAY.

GREAT INDIAN PENINSULA RAILWAY.

Operations for 1861–62.

1. THE additional length of the Great Indian Peninsula Railway opened for public traffic during the year under report was 87 miles, all on the North-Eastern Line, making a total of 438 miles of open line.

2. Of this total, the portion between Bombay and Callian Junction, 33¼ miles, is common to each of the lines of this Company.

3. From Callian Junction, the South-Eastern Line (intended eventually to meet the Madras Railway, and thereby connect Bombay with Madras) has been completed to Sholapoor, a distance of 276¼ miles from Bombay. The further progress of this line is at present suspended, owing to delays in the extension of the Madras Railway.

4. Her Majesty's Secretary of State has authorised surveys being made by the Great Indian Peninsula Railway Company, with a view to carrying the extension of the line beyond Sholapoor considerably to the east of the line formerly selected; as it is believed that a more favourable junction can thus be formed with the Madras Railway, at the same time that the rich district adjoining Hyderabad would furnish a local traffic to an extent which could not be expected from the country traversed by the line originally contemplated.

5. The only unfinished portion of the line between Bombay and Sholapoor is the Bhore Ghaut Incline, situated about 68 miles from Bombay; and this, it is hoped, may be opened for traffic towards the commencement of 1863. Of the works on this incline, the viaducts are completed, headings have been driven through all the tunnels, while many of the tunnels have been cleared out to their full width and height; rails have been laid along nearly one-half of the incline, and the execution of the remaining work is in active progress. In fact, it is only the forced suspension of most of the works during the

the approaching monsoon which prevents an earlier opening of this incline than that already assigned as the probable date—viz., the commencement of 1863.

6. Some idea of the vigour with which the works on this incline of 13 miles have been carried on may be formed from the fact of the average daily number of labourers employed having been 24,000, of whom a large proportion were skilled artisans; while the total value of work completed during the past 12 months has amounted to nearly 25 lacs of rupees.

7. The North-Eastern Line, leaving Callian Junction, is intended to meet the East Indian Railway at Jubbulpoor, and thereby connect Bombay with the Valley of the Ganges.

8. With the exception of an unfinished portion of 9½ miles at the Thull Ghaut Incline, this North-Eastern Line is now completed to Chalisgaum, a distance of 193½ miles from Bombay; while the expected opening, in August next, of a further length of 57 miles will complete about 5-12ths of the entire distance between Bombay and Jubbulpoor.

9. On the remaining portions of this main line a large amount of work has been completed, and the arrangements of the contractors for accelerating their progress are such as to satisfy the Acting Chief Resident Engineer. The value of work executed during the past year has been only 6 lacs of rupees, but the ratio of progress will increase rapidly as the preliminary arrangements of the contractors (which in all large works occupy much time, and make but little show) begin to bear their fruits.

10. At Bhosawul, a point on the North-Eastern Line, distant 274½ miles from Bombay, a branch is thrown off in a direction nearly due east, to traverse the cotton district of Berar, and connect Nagpoor with the main line. The works on the portions next Bhosawul are so far advanced as to render probable the early completion of several sections there. On the other portions also good progress has been made; while along the entire length the works are being carried on satisfactorily, with the exception of the masonry in certain sections, where the alleged difficulty of procuring stone or making bricks has induced the Company's Chief Resident Engineer to urge a revision of the contract rates, so as to assist the contractors in their difficulties.

11. The total value of work executed on the Nagpoor Branch during the past year has been nearly 21 lacs of rupees.

12. Returning to the break on the North-Eastern Line caused by the unfinished state of the Thull Ghaut Incline, it is satisfactory to know that the works of this incline have made, and continue to make, rapid progress.

13. On an average, 15,000 labourers are daily employed on it, while the value of work executed during the past year has amounted to upwards of 11 lacs of rupees. This incline may possibly be completed towards the commencement of 1864.

14. The works intended to replace the viaduct over the Goolbun Ravine, immediately on the Bombay side of the Thull Ghaut Incline (which gave way in July last) have progressed so far as to warrant a probability of their being soon available for traffic, which has in the meanwhile been worked over the break by bullock-carts.

15. Her Majesty's Secretary of State has recently arranged for the immediate construction of the portion of the East India Railway between Allahabad and the terminus of the Great Indian Peninsula Railway at Jubbulpoor. The importance of the completion of this link in the railway communication between the east and west sides of India is great to Government, to the public, and both the railway companies. The benefits to be derived from this communication have been fully set forth by those to whom the merits of its conception are due.

16. The experience already derived from such portions of the Great Indian Peninsula Railway as have been opened for traffic—and these, too, subject to interruptions at the ghauts—warrants a belief in those benefits being realised to the fullest extent.

17. For the goods terminus of the Great Indian Peninsula Railway at Bombay, a large and convenient space of ground is now being reclaimed from the sea, on the harbour side of the island.

18. The reclamation is being effected by a company, who, in recompense, have obtained from Government concessions enabling them to reclaim other adjoining portions of the shore.

19. The necessity for a commodious station-ground becomes daily more apparent, especially during the season when consignments of cotton continue to pour along the line to Bombay. The value of land, and the difficulty of procuring storage room in the island, tend to keep the terminus choked with goods, the consignees of which prefer paying demurrage fees to taking immediate delivery, when such may be inconvenient to them.

20. By the Great Indian Peninsula Railway 32,748 tons of cotton have been brought to Bombay for shipment during the past 12 months.

21. This quantity, moreover, does not represent the entire amount offered for conveyance, but simply the amount for which the Company could engage to provide transport over the breaks of communication at the Bhore and Thull Ghauts. The limited amount and enormous cost of animal transport procurable at these ghauts prevent the lines being worked to their fullest extent.

22. So long as the inclines by which these ghauts are to be surmounted remain unfinished, any additional section of line opened for traffic causes the ratio of impediment and cost arising from working the breaks by animal power to be increased.

23. The amount expended in India on the capital account of the Great Indian Peninsula Railway, during the year ending 30th April 1862, was 1,275,477 *l.* sterling.

24. The total expenditure on this line up to 15th April 1862, as collected from available statistics, was 8,274,368 *l.* sterling.

25. The

25. The extent of the traffic operations of this line during the past year has been satisfactory, considering the breaks in the through communication already referred to.

26. The gross receipts per mile open were 7,333 rupees during the calendar year ending 31st December 1861, which is selected as the period best suited for examination.

27. The working expenses, however, were exceedingly high, forming a proportion of 74 per cent. of gross receipts for the first six months, and of 78·11 per cent. for the last six months of that period. Much of this high cost of working expenses is due to the breaks at the ghauts. It is, however, necessary that every effort should be used by the Company to reduce the present rate of expenditure.

28. The dividend on the capital expended on the open portions of line was, for the first six months, 2*l.* 2*s.* 8*d.* per cent. per annum, and for the last six months, 1*l.* 5*s.* 6*d.* per cent. per annum.

29. The total number of passengers of all classes conveyed by the Great Indian Peninsula Railway during the year was 2,399,673, of which the various classes contributed the following proportions:—

1st	Class	·88 per cent.
2nd	„	6·73 „
3rd and 4th	„ . . .	92·39 „

The 3rd and 4th classes, having been amalgamated, are here treated of together.

30. 211,189 tons of merchandise and 50,690 tons of railway material were conveyed during that period.

31. The gross earnings of the line during the year were 26,78,872 rupees.

BOMBAY, BARODA, AND CENTRAL INDIA RAILWAY.

Operations for 1861–62.

1. DURING the official year 1861-62, considerable progress has been made towards the completion of the Bombay, Baroda, and Central India Railway, between Bombay and Ahmedabad, 310 miles in length. At the commencement of that year 99½ miles, from Sucheen (9½ miles south of Surat) to Dhoolia (90¼ miles north of Surat), were open to traffic. The Nerbudda Viaduct was opened on the 22d June 1861. On the 20th May, 9½ miles, from Sucheen to Nowsaree (18½ miles south of Surat), and on the 2d September a further portion of 22½ miles, from Nowsaree to Bulsar (42½ miles south of Surat), were opened; so that on the 30th April 1862 132¾ miles, from Bulsar to Dhoolia, were open to traffic.

2. Starting from Bombay, no progress is visible until we reach Mahim (157 miles from Surat), a distance of nine miles. Here a causeway of stone across the Mahim Creek—3,500 feet in length, in which are two iron bridges, one of three and the other of four 60-feet spans, commenced during the monsoon of 1860—was nearly completed.

3. Between Mahim and Bassein (136 miles from Surat), a distance of 21 miles, the earthworks have been nearly completed. Ballast and permanent-way have also been laid down on about six miles of this length, on which there are no works of importance.

4. Over the Bassein Creek two important iron screw-pile bridges were in course of construction during the past year—that over the south channel having 66 spans, and that over the north 25 spans of 60 feet each (Warren's patent girders). The first pile was screwed in on the 26th May 1861, and on the 30th April 1862, 38 spans were completed in the south, and 17 spans in the north channels, for one line of rails, in addition to which 10 other piers had been screwed in for the two bridges. The Bassein Viaduct, which is the longest, is also one of the most difficult on the line, owing to the depth of water in the creek, which rendered necessary the erection of temporary staging, 50 feet in height, at the deepest part. This important work appears to have progressed without mishap and in the most satisfactory manner.

5. Between Bassein and the Vyturnee river (122 miles from Surat), a distance of 14 miles, good progress has been made. The greater portion by far of the earthwork, now almost finished, has been thrown up in the past year. The masonry works do not appear to have been touched; however, they are unimportant, and can be speedily executed.

6. Over the south and north channels of the Vyturnee River, hollow screw-pile bridges of 20 and 23 sixty-feet spans (Warren's patent girders), respectively, are in course of construction. Altogether 15 spans have been completed for a single track, and piles for 18 others have been screwed in, showing good progress.

7. From Vyturnee river to Capasee (117½ miles from Surat), a distance of 4½ miles, the earthworks, in which but little progress had been made in former years, were nearly completed; the masonry bridges, which are small works, can also show considerable progress.

8. Between Capasee and Dahnoo (90 miles from Surat), a distance of 27½ miles, but little progress has been made. The earthworks have been carried forward and some small masonry bridges built. It is most important that the embankment over the Dahnoo Swamp and all the remaining earthworks on the line should be completed before the monsoon of 1863, in order that at its close they may be found well consolidated by the rain and ready for use.

9. From the Dahnoo to the Damaun river (60 miles from Surat), a distance of 30 miles, the earth and masonry works are in a forward state. About 10 miles of rails have been delivered on this portion. A large quantity of dressed stone has also been prepared for the masonry piers and abutments of the Damaun Bridge, of 14 spans of 60 feet each.

10. From the Damaun to the Par river (48 miles from Surat), a distance of 12 miles, the permanent-way is linked in, except at the Koluck Bridge, which is completed, with the exception of the longitudinal stringers—the timber provided for which, of Kauri pine, is altogether unsuitable. The fencing on this portion, of teakwood posts and rails, is finished, and some progress has been made with the ballasting.

11. The Par river bridge, of 10 sixty-feet spans, which was in progress during the year 1860-61, is a most difficult work, owing to the depth of water and mud lying over the rock, which has to be cut into to admit the piles; but still some progress was effected during the past year, as at present only two piers are wanting for the completion of the bridge.

12. Between the Par river and Bulsar (42½ miles from Surat), a distance of 5½ miles, the earthworks, fencing, and permanent-way have been completed, but a large amount of ballasting has still to be done. The line between Bulsar and Damaun, 18 miles, may be opened before the monsoon of 1863, if the difficulties at the Par river can be overcome.

13. We now reach the open line, 132¾ miles in length, from Bulsar to Dhoolia, which has been maintained in fair order during the past year. Between Broach and Baroda, where the line might have been raised with advantage higher over the black-soil plains, ballast is still required; and many of the small brick bridges, to the building of which sufficient attention was not originally paid, require constant repairs and watchfulness.

14. The line from Dhoolia to Mehmoodabad, 35 miles in length, may be opened for traffic as soon as the improvements ordered to be effected in the Mhye Bridge are completed. This portion of the road has been brought into very good order during the past year, and especially is the work done in the Mhye Viaduct worthy of notice. This is the loftiest viaduct on the line, consisting of 27 spans of 60 feet each, the rails being as much as 83 feet above the sandy bed of the river. Very little indeed was executed until after the monsoon of 1861; and yet on the 28th April 1862, it was tested with two heavy 40-ton engines, showing the great rapidity with which iron screw bridges may be erected by energetic engineers. The work done is most satisfactory, and the bridge, when strengthened as proposed, will be a very fine specimen of its class.

15. Between Mehmoodabad and Ahmedabad, a distance of 17 miles, the earthworks are completed, and a large quantity of ballast laid down. To the bridges, of 10 spans and 7 spans respectively, over the Watruck and Meswo rivers, little was done during the past year; but these works can without any difficulty, now that material is available, be speedily finished. There is reason to hope that the line into Ahmedabad may be opened for traffic soon after the monsoon of 1862.

16. The permanent workshops which are to be erected at Bulsar have not yet been commenced. It is to be hoped that the plans for these buildings will soon be received. Permanent station-buildings are in course of erection at Surat, and plans are being prepared for similar buildings at Baroda, Ahmedabad, and other stations on the line.

17. To sum up the account of the line and its prospects—

Bombay Extension.	132¾	miles	are likely to be open in June 1863 for traffic.
	18	„	from Bulsar to Damaun are likely to be open in June 1863.
	107	„	„ Damaun to Bombay—date of completion uncertain.
Ahmedabad Line.	35	„	„ Dhoolia to Mehmoodabad—likely to be open in September 1862.
	17	„	„ Mehmoodabad to Ahmedabad—likely to be open in November 1862.

18. The Indian expenditure on capital account during the past year has been 60,52,650 rupees. During the present year, probably, an equal sum will be required if the line into Bombay be carried on; but until the location of this line is decided, any estimate for this and future years must necessarily be vague. Since the commencement to the 1st May 1,726,576*l.* have been spent in India, and 1,460,130*l.* in England up to the same date. Payments, however, in shares, have only amounted to 2,247,452*l.*, Government having advanced the remainder.

19. A Return of the rolling-stock is appended. Considerable additions have been made during the year, but as yet it is insufficient to carry a large trade.

20. Return of the traffic receipts is also appended. More favourable results may be confidently anticipated when the line is opened to Ahmedabad, as it will be after the monsoon; for Guzerat will then be placed in easy communication with the ports of Broach and Surat, considered by some as the natural outlets for its trade. Much might be done to promote the prosperity of the railway, by clearing roads through the country to the stations, and thus giving every facility to the inhabitants of this province for availing themselves of the advantages offered by the railway.

SIND RAILWAY.

Operations for 1861-62.

1. The Sind Railway was opened for public traffic on the 13th May 1861. The length of the main line, from Kurrachee Station to Kotree, is 105 miles; of the Ghizree branch three miles, and of the Bunder-head branch one mile. With the exception of interruptions in July and August of that year, caused by the action of heavy floods on embankments which had not been consolidated owing to the scanty rainfall of previous years, and the unfinished state of the drainage arrangements, the line has been worked in a satisfactory manner ever since.

2. The opening of the line being an object of importance was sanctioned as early as the works absolutely required for immediate purposes were ready.

3. After the opening and during the past year side drains, extra ballasting, the planking of girder bridges, the provision of additional station accommodation, and works of minor importance have been carried out.

4. The arrangements for drainage require great attention, as the flatness of the surface in some districts prevents the natural drainage from being well defined, at the same time that the flood waters rapidly cut away the soft, friable soil which there prevails.

5. At Kotree an extensive system of sidings, carried along the rivetted bank of the Indus, enables the interchange of traffic between the river and the railway to be effected with great facility.

6. On the up-stream side of the Company's station ground at Kotree, works have been constructed for protecting the bank from the effects of the annual floods of the Indus.

7. At Kurrachee the construction of the causeway, intended to carry the line from the main land to the Port of Keeamaree, remains suspended. Portions of the iron bridge work, designed to afford waterway through the causeway, for which the progress of the work was delayed, have lately been received.

8. The short branch line constructed by the Company from a point near Kurrachee to Guizree—a port on one of the creeks connecting the sea with one of the mouths of the Indus—has not yet been brought into use.

9. Station buildings of a rough but serviceable description have been erected at the terminus as described in the last Report; at Joongshai Station, in the middle of the line, good accommodation for the public as well as the Company's servants is being provided; at other minor stations platforms and ticket offices have been furnished, and are sufficient for the local traffic.

10. The total estimated expenditure on the Sind Railway up to the 15th April 1862 was 125,242 *l.* sterling; so that, when station buildings to the full extent that may hereafter be required have been provided, and the causeway to Keeamaree and other minor works completed, the cost per mile, including branches and Steam Ferry at Kotree, is likely to be somewhat less than 14,000 *l.* sterling.

11. In examining the traffic operations of the Sind Railway, it must be borne in mind that the original object of the line, viz., that of securing for itself the through traffic between the sea and the Punjaub by superseding the inconvenient navigation at the mouths of the Indus, could only be attained by the river borne traffic being stopped at Kotree. As this traffic was carried on in boats belonging to the upper Indus and the Punjaub, it was natural that some time should elapse before the old course of trade could be diverted.

12. In fact, the project could never be throughly realised until a special river service were established in connexion with the railway, having Kotree as the down stream limit of its operations.

13. This service it is the purpose of the Indus Steam Flotilla Company to furnish, but hitherto their operations have been too limited to feed the Sind Railway with any considerable amount of traffic; although the steamers lately obtained by the flotilla company are likely to be the source of future profit to the railway.

14. In the meantime, the number of native boats from the upper Indus which stop at Kotree on their down stream voyages and use it as a point of departure on their return trips, continues to increase, and consequently, the traffic of the Sind railway.

15. During the month of May, June, July, and August, the mouths of the Indus are closed as regards navigation, and this forces the railway to be employed, and its merits to be made known.

16. The interruptions of communication which were caused by the heavy rains of July and August for the time, weakened the confidence of native traders in the Sind Railway, and injuriously affected its traffic.

17. To this disturbing cause may be added others, most of which have since been removed but which for long influenced the traffic to a serious extent, viz., a deficiency of rolling stock, an absence of arrangements for facilitating the interchange of rail and river traffic to Kotree, and a want of a competent establishment to work and develop both the through traffic and the local traffic.

18. The want of that establishment and subsequent death of the company's agent have hitherto

hitherto prevented accounts of the revenue operations being prepared with reliable accuracy.

19. There seems, however, reason to believe that, after effecting certain adjustments on account of materials of the Company's Engineer's Departments conveyed by the line, the receipts from traffic for the half year ending 31st December 1861, will as nearly as possible balance the working expenses for that period.

20. If this result be obtained, as will shortly be proved when the corrected accounts have been rendered, it must be regarded as satisfactory under the circumstances already mentioned.

21. The gross earnings from traffic have been steadily swelling, and now average about 10,000 rupees per week; those for goods showing a four-fold increase compared with those of the corresponding week of last year, and a three-fold increase over those of six months ago. That this rate of increase will continue is probable, seeing the extent of country whose trade must seek the Indus as its outlet.

22. The quantity of seeds conveyed by the Sind Railway is large, and promises of itself to form an extensive down trade.

23. The late demand for cotton has been the means of bringing 2,000 tons on to the Sind Railway within the last six months.

24. For the up-trade, in addition to articles of import, such as piece goods, &c., the annual supplies of porter and other stores forwarded on account of Government to the Punjaub, afford a considerable amount of traffic, to which must be added the materials imported for the use of the Punjaub Railway. The materials for the proposed line from Lahore to Delhi also will probably be conveyed by this route.

25. The Sind Railway, as already mentioned, depends on through traffic between the sea and the districts of the upper Indus; and, as will be apparent from its position, this must be almost entirely confined to goods. The passenger traffic is chiefly a through one as regards the Railway, but is local in so far that third-class passengers, who represent the section of travellers most profitable to Indian Railways, are principally residents of Hydrabad and Kurrachee, or the neighbouring districts.

26. The average number of all classes conveyed each week is rather less than 2,000.

INDUS STEAM FLOTILLA COMPANY.

Operations for 1861–62.

1. At the present time the Indus Steam Flotilla Company have four passenger steamers on the line between Kotree and Mooltan; a fifth, now undergoing some slight repairs, will be ready in the middle of June.

2. Of the above number, four have been transferred to the Company from Her Majesty's Indus Flotilla. These are good vessels.

3. The remaining one, the "Stanley," after extensive modifications and renewals of various parts of the original design, is pronounced a serviceable boat, although in no way answering the expectations originally formed of her. She has made two trips over the line.

4. Twenty-one barges, of various sizes, are also available for traffic.

5. Of six passenger steamers to be provided by the Company's contractors, Messrs. Richardson and Duck, one is completed as regards construction, but has hitherto failed to meet the obligations of the contract, viz., of proving a good and efficient vessel, suitable in every way for the navigation of the Indus.

6. Her defects, which are numerous, are at present the subject of a discussion between the Company's Agent in India and the Contractors, the former of whom urges that the original contract specification has not been adhered to, while the latter plead that such deviations as have been undertaken were authorised by the Company's Engineer in England. The matter has been referred for the disposal of the London Board, acting under the authority of Her Majesty's Secretary of State.

7. It may be well to mention that the most serious defect in this vessel of the Contractors, and consequently of the remaining five which are now nearly completed on a precisely similar model, is the arrangement of the boilers, which, even fired with coal fuel, are unable to feed the engines adequately with steam. If wood, the only fuel procurable on the future course of these vessels, were burned, and the steamer made to contend against the rapid but shallow stream of the Indus, instead of in the still deep and more buoyant waters of Kurrachee Harbour, where previous trials have been made, the results would be still more unsatisfactory than those already obtained.

8. It can only be hoped that some means may yet be devised to render these steamers serviceable.

9. Of six small Tug Steamers sent out in pieces from England for re-erection in India, two have been put together; one on the original design, which proved a failure, and one on a modified design recommended by the Company's Engineer, which was also a failure. Neither of these have ever plied on the proper line of the Company between Kotree and Mooltan. Such work as they have been engaged upon has been confined to towing barges and

and materials between Kurrachee and Kotree, and points on the intervening creeks at the mouth of the Indus.

10. Latterly one of them has been used as a Ferry Boat between Kotree and the opposite bank of the Indus, with a prospect of success in a commercial point of view, and certainly with advantage to the interests of the local public.

11. The erection of the other Tug Steamers has been suspended in consequence of the failure of those above-mentioned.

12. This class of boats is built of weak material, rivetted together on a bad principle, upon a model quite unsuited for the Indus. These vessels possess neither strength, speed, power, nor good steering qualities; while they entail an expenditure for crews and engineers, and a consumption of fuel utterly disproportionate to their dimensions.

13. The traffic operations of the Company have hitherto been so limited, that no reliable results can be deduced therefrom. A statement of the first trip of the steamer "Stanley" will be found in an Appendix, which shows that the receipts from traffic exceeded the actual expenses of the vessel during that trip by about 10 per cent.; this result, however, is independent of interest on outlay, proportion of shore expenses, and many other important and considerable items chargeable against receipts.

14. The vessels available for traffic, now possessed by the Company, will enable that traffic to be worked on a somewhat larger scale, but it is doubtful whether their present limited number be sufficient to keep up a bi-monthly service between Kotree and Mooltan in connexion with the arrivals at, and departures from, Kurrachee, of the steamers communicating at Bombay with the English mail packets. The contingencies attending the navigation of the Indus entail frequent repairs on the vessels there employed, which, for the time, have to be taken off the line. In calculating for such a service, it is therefore prudent to assume that a certain proportion will probably be at all times under repairs.

15. The amount of traffic pouring along the Indus is already large, and continues to increase. That a large portion of this traffic can be induced to adopt a somewhat more expensive but more rapid and safe transport afforded by steamers compared with native boats has been established by the results of the late operations of Her Majesty's Indus Flotilla carried on under a system suggested by the long experience and appreciation of the requirements of the traffic possessed by its commander, Captain Balfour, of Her Majesty's Indian Navy.

16. The only question to be determined is whether a commercial undertaking, in whose balance sheet no considerations beyond those or actual money receipts can be taken into account, can work profitably a traffic requiring vessels of so exceptional and expensive a description as those necessary for the Indus,—requiring, too, large and highly paid establishments, and involving heavy charges for working expenses, and frequent repairs and renewals. In a Government undertaking, such as that of Her Majesty's Indus Flotilla, the importance of the communication afforded in a military and political point of view, would naturally be regarded as a set-off against a large proportion of its annual cost.

17. The larger the scale within reasonable limits, on which the Flotilla Company's operations are carried out, the less heavy will certain charges fall on each trip of each vessel, and the greater will be the prospect of success. At the same time, it is by no means advisable that any proposals to provide additional vessels from England should be entertained, until some experience has been obtained of these now available, nor should any orders be given for constructing such vessels until the proposed design shall have been submitted for the opinion of the Company's officers in India who have a practical acquaintance with the navigation of the Indus. A similar precaution would have prevented the occurrence of the glaring defects visible in every vessel which the Company have yet sent out from England.

MILITARY DEPARTMENT.

THE Report of last year mentioned that the transport train between Bombay and Mhow had been reduced to a small establishment. That establishment has since been discontinued, involving the entire abolition of the Transport Train.

Measures have been adopted with the view to improve the quality of the gunpowder manufactured at this Presidency, by the introduction of improved machinery. In furtherance of this object, Mr. Rustomjee Merwanjee, the head powder-maker, was deputed to England to acquire a knowledge of the mode of manufacture carried on at Waltham Abbey. The completion of the introduction of new machinery is, however, deferred, it being in contemplation to remove the manufactory to the Deccan.

In furtherance of the measures adopted to furnish the European soldiers with suitable recreation and employment, the Bombay Government issued a general order, on the 16th of August 1861, sanctioning the issue of gardening tools for the use of barrack and regimental gardens, and the supply of a certain quantity of seed.

This Government has also adopted the scheme introduced under the Bengal Presidency

for the establishment of workshops in her Majesty's regiments to enable European soldiers to carry on, in their leisure hours, the trades and occupations by which they gained their living before enlisting, and to afford opportunities to soldiers and their children to acquire a knowledge of such trades.

The European force under this Presidency has been reduced by sending to England three Batteries, viz., the 5th, 6th, and 7th of the 13th Brigade Royal Artillery. These left Bombay in 1862.

During the past year the question as to the expediency of removing the ramparts on the landward side of the Fort of Bombay, was considered and discussed at length, but a final decision was not arrived at until after the close of the official year. The subject, therefore, falls to be noticed in the year 1862-63.

For the same reason, the subject of the re-organization of the Cavalry is left to be taken up in the Report of the year 1862-63.

Much has been done by the Bombay Government during the past year to diminish military expenditure. The measures adopted to this end, and their effects, are best shown in a tabulated form. This information is given in the annexed statement.

The strength of the Bombay army of all ranks, except European commissioned Officers, and excluding troops in China, was—

		On 1st May 1861.		On 1st May 1862.	
Artillery	European	2,560		1,749	
	Native	1,604		1,544	
			4,164		3,293
Cavalry	European	1,349		1,252	
	Native	4,672		4,600	
			6,021		5,852
Sappers	European	50		88	
	Native	566		580	
			616		668
Infantry	European	8,773		8,820	
	Native	25,349		21,631	
			34,122		30,451
			44,923		40,264

EDUCATION.

THE points chiefly noticeable in the results of the educational administration for the year 1861–62, in the Bombay Presidency, are the following:—

1. Progress of the Bombay University and the institutions connected with it.
2. Introduction of the budget system into the educational department, and the drawing up of the first educational budget.
3. Extension of vernacular education.
4. Successful introduction of an increased school fee in the central division.
5. Progress of education in Sind.

The University.

The Bombay University may be said now for the first time to have come into full working. It has held during the past official year six examinations, namely, one first examination in arts (or Little-go) for under-graduates who matriculated in 1859; one examination for the degree of bachelor of arts for those under-graduates who passed the above examination; one first examination in arts for under-graduates who matriculated in 1860; one matriculation examination; one first examination for the degree of licentiate of medicine; and one final examination for the same degree.

The University, at a convocation held on the 28th April 1862, conferred degrees for the first time, viz., four degrees of bachelor of arts, and four degrees of licentiate of medicine, upon under-graduates who had been successful in their respective final examinations.

The

The following is a synopsis of the numbers who passed and failed at the several University Examinations:

	Passed.	Failed.	TOTAL.
First Examination in Arts for Under-graduates who matriculated in 1859:			
Candidates from Elphinstone College	6	4	10
Ditto - Poona College	0	3	3
Who had studied in both the above	1	0	1
Who had studied privately	0	1	1
	7	8	15
Examination for the Degree of Bachelor of Arts for Under-graduates who had passed the above:			
Candidates from Elphinstone College	3	2	5
Ditto - Elpinstone and Poona Colleges	1	0	1
	4	2	6
First Examination in Arts for Under-graduates who matriculated in 1860 or 1859:			
Candidates from Elpinstone College	5	3	8
Candidates who had studied privately	0	1	1
	5	4	9
Matriculation Examination held in March 1862:			
Candidates from the Elphinstone College	15	24	39
Ditto - - Poona College	6	21	27
Ditto - - Grant Medical College	2	3	5
Ditto - - Elphinstone School	3	25	28
Ditto - - Kurrachee and Elphinstone Schools	1	0	1
Ditto - - Hydrabad and Elphinstone Schools	1	1	2
Ditto - - Parsee High School at Bombay	1	5	6
Ditto - - Private School, Poona	1	0	1
Ditto - - Poona College School	0	9	9
Ditto - - Poona Enineering School	0	2	2
Ditto - - Free General Assembly's Institution, Bombay.	0	4	4
Ditto - - Free General Assembly's Institution, Poona.	0	2	2
Ditto - - Fort Proprietary School, Bombay	0	4	4
Ditto - - Robert Money School, Bombay	0	2	2
Ditto - - Sirdar's School, Belgaum	0	1	1
Ditto - - Anglo-Vernacnlar School, Dhoolia	0	1	1
	30	104	134
First Examination for Licentiate of Medicine, March 1862:			
Candidates from the Grant Medical College	3	4	7
Final Examination for L. M. Degree of Students who had passed the First Examination in 1861:			
Candidates from the Grant Medical College	4	0	4

The above tables (especially those relating to the Arts Examinations) are alone sufficient

to show the value of the University as furnishing an independent test of the Colleges and English Schools throughout the Presidency. It is to be noted that of all Educational Establishments the Elphinstone College alone has succeeded in bringing up students to the standard of the higher University Examinations, and that while there is evidently a widespread desire among the scholars of Anglo-Vernacular Schools to pass the matriculation examination, the teachers have almost universally failed in bringing their pupils up to the mark. The large failure of matriculation candidates in the recent examination appears to have resulted from inability to answer the paper on English grammar and idiom with sufficient correctness. There is no reason to believe that the University matriculation standard is too high. The condition of the higher schools has been repeatedly said to be the weak point of the department, and until by renewed exertions these schools are improved, the colleges must continue to be placed at a disadvantage for want of qualified pupils.

Among other operations, the University, during the past year, has affiliated the Free General Assembly's Institution of Bombay, though it will be observed that this institution has not succeeded this year in bringing any of its pupils up to the matriculation standard.

Other previously affiliated colleges are the Elphinstone College, the Poona College, and the Grant Medical College.

Elphinstone College.

On the 30th April 1862, the number of students on the rolls was 69, this being an increase of six upon the numbers as they stood on the 30th April 1861. Of these 69, during the past year, three have passed the University examination for the degree of Bachelor of Arts, 11 have passed the little-go, and 15 the matriculation examination. In point of quality, the work of the students has been creditable. One student, Mr. Mahadeo Govind Ranaday, attracted marked attention from the University examiners. The numbers of the college are still too low, but for an increase we must be entirely dependent on an improved condition of the English schools. The college has recently been moved into a large and suitable house, and arrangements have been made for affording lodgings to students. Towards the necessary expenses, four native gentlemen have liberally contributed. On the 29th April the Principal, Dr. Harkness, retired after 22 years' service. He was succeeded by Sir A. Grant.

Poona College.

The number of students in this college has been increased from 40 to 60 by the admission of a number of Mofussil students, who were, it is true, for the most part below the college standard, but who appear to have made fair progress since their admission. Of the members of the college, six have during the past year passed the matriculation examination, and one, not a student, but a Dukshina Fellow and tutor of the college, has passed the B. A. examination. The Sanscrit studies under Dr. Haug continue to prosper, and the interest shown in them is even pleaded as an excuse for the comparative neglect of English and the consequent failure of students to pass the University matriculation test. Probably greater diligence on the part of the professors might have obviated this result. A complete change will now take place in the staff of the college authorities owing to the promotion of Mr. Russell, late Principal, to be Inspector Central Division (*vice* Mr. Cooke retired), and owing to the superannuation of Mr. M'Dougall, late Professor of Mathematics. The new Principal is Mr. Wordsworth (B. A. of Oxford, First Class in Modern History). The mathematical chair will be filled by Professor Draper, and it is expected that much aid will be given by two assistant professors (natives) who have passed the B. A. degree.

Grant Medical College.

The number of students of all classes stands as follows:

Students	35
Student-apprentices	43
Vernacular class	10
TOTAL	88

The most noticeable feature of the year consists in the substitution of University examinations for those formerly held in the college. The results of the University examinations for the degree of Licentiate of Medicine have been mentioned above. Entrance examinations to the Grant Medical College are now abolished, and none but matriculated students of the University are henceforth to be admitted.

English Schools.

The remarks on the University examinations will have shown sufficiently that the high schools of the Presidency have a good deal of work before them. The appointment of four superior schoolmasters having been sanctioned by the Secretary of State for India, the Elphinstone Central School has already received a Principal. Mr. Baker, late Deputy Inspector in the Southern Division, has been appointed head master of the high school at Belgaum

Belgaum, but was obliged to absent himself on sick leave immediately after his appointment. Two qualified persons have arrived from England for the schools of Poona and Rutnagherry. The statistics of the numbers under English education as compared with the previous year, are as follows:—

English Schools.

	1860-61.		1861-62.		Increase.		Decrease.	
	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.
Central Division -	9	1,737	9	1,854	- -	117	—	—
Northern ditto - -	7	984	7	1,088	- -	104	—	—
Southern ditto - -	5	434	5	478	- -	44	—	—
Sind ditto - -	5	307	5	293	- -	- -	- -	14
TOTAL - -	26	3,462	26	3,713	- -	265	- -	14

The Educational Budget.

It is needless to dwell upon the advantages which this innovation will confer. It will give a definiteness hitherto wanting with regard to the ends to be aimed at, and the means to be used in all educational operations. The budget was ably drawn up by the combined labours of the gentlemen named in the margin. *

* Mr. T. C. Hope, Private Secretary to his Excellency Sir G. Clerk; Mr. H. Coke, M.A., Educational Inspector, Central Division; and Mr. J. Christie, First Assistant, Accountant General's Office.

It may be remarked here that the arrangements sanctioned by Government in March 1860, for the re-distribution of funds have been carried forward with advantage during the past year, and it is expected that they will soon be completed.

Extension of Vernacular Education.

A large increase of the pupils in Government vernacular schools (amounting to no less than 5,895), took place in the year 1860-61. It has now to be reported, that in the year 1861-62, without any additional expenditure, an increase, amounting to 5,554, has taken place. This increase is distributed as follows among the several educational divisions:—

Central Division - - - - - - - - -	1,615
Northern ditto - - - - - - - - -	1,967
Southern ditto - - - - - - - - -	1,611
Sind - ditto - - - - - - - - -	351
TOTAL - - -	5,544

During the previous year there was a falling off in Sind, and the numbers in Guzerat were stationary; but now there has been a recovery in Sind, and a marked increase in Guzerat.

The following table shows the general progress of vernacular education in this Presidency:—

Vernacular Schools.

	1860-61.		1861-62.		Increase.		Decrease.	
	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.
Central Division -	239	11,087	247	12,702	8	1,615	—	—
Northern ditto - -	139	8,514	144	10,481	5	1,967	—	—
Southern ditto - -	197	11,080	198	12,691	1	1,611	—	—
Sind - ditto - -	56	1,841	57	2,192	1	351	—	—
TOTAL - -	631	32,522	646	38,066	15	5,544	—	—

General Progress of Education.

The above results show an increase of English and vernacular schools and scholars taken together as follows:—

Increase of schools { English - - / Vernacular 15 } 15.

Ditto of scholars { English - 251 / Vernacular 5,544 } 5,795.

School Fees.

Nothing is more noticeable among recent educational events than the successful imposition of a higher school fee in the Central Division. This measure was adopted by the acting Director of Public Instruction in the month of August last. Mr. Coke, finding that it was difficult to collect money from the people in the shape of voluntary contributions, abolished the "partially self-supporting system," and doubled the fees in all vernacular schools. A fee of two annas was universally imposed; and instead of the number of scholars being diminished, it was found that they were considerably increased under the new system. Mr. Coke's experiment appears to bear out his opinion (in which Mr. Curtis, Inspector of the Northern Division, coincides), that a tolerably high school fee is the method of levying "the people's contribution" most acceptable to the people themselves.

Progress of Education in Sind.

The most encouraging facts with regard to education in Sind are—

(1.) Ready and valuable assistance rendered to Major Goldsmid, the zealous officiating inspector, by persons holding influential positions under Government, especially Captains Lionel Dunsterville and Widdicombe, Mr. Middleton, Captain Phillips, and Mr. Worthington.

(2.) Raising of a fund independent of Government or municipal aid, to support Sindee pupils desirous of matriculating in the Bombay University. Five Sindee students have in the past year come down to Bombay for this purpose, of whom two had been successful in passing the matriculation examination.

(3.) Foundation and maintenance of an English school by the community of Sukkur, without any assistance whatever from Government.

School Book Department.

In every respect the operations of this branch of the educational department have been much extended. In the first place, there has been an increase of subordinate book depôts to the number of 158 beyond those previously established; secondly, there has been a considerable increase in the sale of books. In consequence of the non-receipt of annual returns from the subordinate depôt keepers, it is not yet possible to state the total number of books sold during the year. But the following is a statement of the actual amounts received in the Central Depôt on account of sales effected in 1859-60, 1860-61, and 1861-62:—

Years.	Amount received.		
	Rs.	*a.*	*p.*
1859-60 - - - - -	39,651	3	–
1860-61 - - - - -	38,743	2	1
1861-62 - - - - -	51,136	10	7

The number of volumes printed for the department and of those purchased either in India or in England during the past year, with their cost, is as follows:

	Volumes.	Cost.		
		Rs.	*a.*	*p.*
Books of various kinds printed - -	251,650	64,963	3	5
Books purchased in India - - -	58,198	19,832	–	3
Books purchased in England - - -	21,085	14,282	13	11
TOTAL - - -	330,933	99,077	1	7

Amongst

Among works printed for the department may be specially noticed an edition of Milton's "Samson Agonistes," with notes, adapted for native students, by Professor Hughlings, and maps of the Tanna and Poona Collectorates, drawn creditably by P. Woomajee Lingojee, under the superintendence of Mr. Coke.

Educational Periodicals.

During the past year the "Elphinstone School Paper," having been edited by Professor Hughlings, has quite changed its character, and has become very useful and popular. It is now taken in at the principal schools, and is made a medium for issuing orders to school-masters.

W. H. Havelock, Acting Secretary.

MEDICAL DEPARTMENT.

LITTLE change has taken place in the Medical Institutions of the Bombay Presidency during the past year. No new dispensary or civil hospital has been opened. A dispensary, however, is about to be opened at Allyar-ka-Tanda, in Sind, and an excellent building has been erected by the Municipality of Kurrachee for the dispensary which has been in existence there for some time. A lunatic asylum, capable of containing 90 patients, has also been opened at Larkhana, and another is being erected at Ahmedabad. A new civil hospital, and a hospital for native troops at Aden, as well as substantial outhouses for the accommodation of the second-class servants attached to the European General Hospital at that station, are also being erected.

2. The barracks at Poona are approaching completion, while those at Sattara have been finished and occupied for some months. Two excellent barracks, to accommodate 50 men in each, were commenced at Asseerghur: one has been completed and is occupied, but the building of the second was suspended in consequence of the financial embarrassments of the State.

3. Several improvements have been made in some of the hospitals in different parts of the Presidency, as regards urinals and latrines. In the House of Correction in Bombay, Vehar water has been introduced into the building, which is not only a great boon to the inmates, but is important in a sanitary point of view, as the drains can now be flushed and kept clean.

4. The number of patients treated in the civil, police, and gaol hospitals, and in the dispensaries, during the past year, is as follows:—

	Hospitals.	Dispensaries.	Total.
Presidency Division - - - - - -	9,240	34,081	43,321
Poona „ - - - - - -	4,226	24,942	29,168
Northern „ - - - - - -	5,867	34,058	39,925
Southern „ - - - - - -	3,642	14,809	18,451
Sind „ - - - - - -	7,695	24,271	31,966
Aden - - - - - - - -	1,024	- - -	1,024
Total - - -	31,694	1,32,161	1,63,855

This shows a decrease of 2,720 in hospital cases, and an increase of 12,002 in dispensary patients. There is an increase in the total number treated of 9,282.

Civil Hospitals.

The following Table shows the number of admissions and deaths in the civil hospitals of the Presidency:—

	Remained.	Admitted.	TOTAL.	Discharged.	Died.	Remaining.	TOTAL.	Ratio per Cent. of Deaths to Treated.
Presidency Division - -	32	881	913	843	22	48	913	2·4
Poona ,, - -	100	1,447	1,547	1,288	180	79	1,547	11·6
Northern ,, - -	146	2,362	1,508	1,286	100	122	1,508	6·6
Southern ,, - -	36	554	590	534	33	23	590	5·5
Sind ,, - -	108	3,625	3,733	3,396	185	152	3,733	4·9
Aden - - - - -	32	757	789	693	30	66	789	3·8
TOTAL - - -	454	9,626	9,080	8,040	550	490	9,080	6·0
Jamsetjee Jejeebhoy Hospital	239	5,057	5,296	4,121	941	234	5,296	17·7
European General Hospital, Bombay.	104	1,378	1,482	1,267	104	111	1,482	7·0
TOTAL - - -	797	16,061	15,858	13,428	1,595	835	15,858	10·0

The percentage of deaths to treated was 8·2 in 1860–61, and 10·0 in 1861–62. During the past year there were fewer cases treated in the Bombay European General Hospital than in the year 1860–61; while in the Jamsetjee Jejeebhoy Hospital the number treated was 505 greater in the latter than in the former year.

Police Hospitals.

	Strength.	Remained.	Admitted.	TOTAL.	Discharged.	Died.	Remaining.	TOTAL.	Ratio per Cent.		
									Treated to Strength.	Deaths to Strength.	Deaths to Treated.
Presidency Division -	2,791	14	678	692	672	12	8	692	24·7	0·4	1·7
Poona ,, -	3,424	50	1,056	1,106	1,049	14	43	1,106	32·3	0·4	1·2
Northern ,, -	3,295	94	2,888	2,982	2,904	18	60	2,982	90·5	0·5	0·6
Southern ,, -	2,527	16	1,190	1,206	1,162	5	39	1,206	47·7	0·2	0·4
Sind ,, -	3,284	59	1,851	1,910	1,847	27	36	1,910	58·1	0·8	1·4
Aden - - - -	144	1	41	42	41	–	1	42	29·1	–	–
TOTAL - - -	15,465	234	7,704	7,938	7,675	76	187	7,938	51·3	0·4	0·9

The strength of the police is upwards of 4,000 less than last year: there is a decrease of nearly 3,000 in the number of cases treated. In 1860–61 the percentage of deaths to treated was 0·8, while in 1861–62 it was 0·9.

Gaol Hospitals.

	Strength.	Remained.	Admitted.	TOTAL.	Discharged.	Died.	Remaining.	TOTAL.	Ratio per Cent.		
									Treated to Strength.	Deaths to Strength.	Deaths to Treated.
Presidency Division -	803	24	833	857	801	27	29	857	106·7	3·3	3·1

This Table, as compared with that in last year's report, shows an increase in the number of patients treated at the dispensaries of 11,993. The number of deaths in 1860-61 was 454, while this year, amongst almost 12,000 more cases, the deaths were 30 less.

Vaccination.

The following Table shows the number vaccinated during the year, and the results:—

	Sex.		Caste.					Age.		Result.			
	Males.	Females.	Christians.	Hindoos.	Mussulmen.	Parsees.	Other Castes.	Under one year.	Above one year.	Successful.	Unsuccessful.	Doubtful.	TOTAL.

CONSERVANCY.

THE municipal management of the town of Belgaum was placed in the hands of a more efficient body of Commissioners, selected in lieu of the former non-official body; the removal of all of whom, except one, by Government from the Commission was found to be indispensably necessary, owing to their utter indifference to, and neglect of, the sanitary requirements of their town.

The Municipal Act has, during the year, been introduced into the 12 towns in Sind noted in the margin, and is now in force in 39 towns in that province. The affairs of the Kurrachee Municipality continue in a satisfactory state. The resolution of the Municipal Commissioners, referred to in the Administration Report of 1860-61, to devote two-fifths of their income to improvements in the cantonment of Kurrachee, in consideration of the share contributed by the inhabitants of the camp towards the municipal revenues, has worked well, and has proved of great benefit to the camp.

Arazi, Dadoo, Mahjunda, Kundiara, Nowshera, Tarooshah, Beeria, Mora, Raja Khonani, New Sukkur, Kumbar, Rutta Dhera.

During the year, the Municipal Act was introduced in the towns of Kippra, Deepla, and Veerawow, in the Thurr and Parkur Districts.

Vehar Waterworks.—The experience of 1860 was conclusive as to the insufficiency as well as inefficiency for public supply of the stand-pipes sent out from England, and fixed at different

Presidency town.

different stations in the street; and it became evident that, apart from the special defects in the stand-pipes, dipping-wells or shallow reservoirs, from which a number of persons at a time could fill their vessels for domestic use, were much better suited to the local habits and requirements of the people.

The 25 dipping wells constructed during 1860 were in constant use during the year 1861, and further experience confirms their advantages in comparison with stand-pipes. The dipping-wells are chiefly old wells, adapted to receive Vehar water, and are liable to no exceptional causes of stoppage or accident. Several of them, however, owing to original defective construction, leak considerably, and cause a serious waste, which, in the aggregate, must have a very prejudicial effect on the general discharging power (for house supply, &c.) of the mains, which are already found to be too small for their purpose.

The extension of Vehar water for house service during the year has been very considerable. Against 177 connections made up to the 1st January 1861, there were 850 connections on the 31st December, showing an increase of 673. The water-rates due during the year amount to *Rs.* 20,855. 6. 8., but this amount is far from fairly representing the money which should have been received on account of water-supply by the Municipal Fund. Many, perhaps most of the more important connections have been made to houses having extensive stables, large gardens, or perhaps one or more fountains; and there can be no doubt that, practically, however much the practice may be denied, large quantities of water are, in these cases, used for irrigation, ornamental fountains, and other purposes; and that the assessment rated on the rental, although fair enough when applied to the strictly domestic consumption of a house, is far from representing the value of the water used by a large number of the consumers.

To utilize the Vehar water for the working of the public roads in the island, 40 watering posts were erected in different parts of the town, at a total cost (including all charges) of *Rs.* 6,791. 2. The work was performed by the waterworks officer, and the charges were defrayed from the Municipal Fund. These posts have answered the purpose for which they were intended.

Towards the end of the year, Vehar water was freely used for flushing the open gutters in the Dhobee Talao and Camatteepoora districts, as well as to a less degree in other parts of the town. During the severe attack of epidemic cholera in December 1861, the work was carried on without intermission, and with good effect.

Scavenging and Watering the Roads.—Reforms have been effected in the scavenging and watering of the public roads, whereby 81,858 rupees were saved during the year, as compared with the expenditure of the previous year, by the adoption of a departmental system of carrying out these operations, strictly supervised by selected members of the police force.

Public Markets and Slaughterhouses.—The supervision, cleansing, and repairs of the public markets form a considerable annual charge on the funds of the municipality. In 1861, the Municipal Commissioners, therefore, determined to endeavour to make these markets, &c. pay their own expenses, by levying an occupation fee on each stall in each market, and a capitation fee on every animal slaughtered; but having found considerable resistance to the levy of the market-fees from the various occupants, they deemed it expedient not to press their demand of them in the case of the older markets. Notwithstanding this difficulty, the Commissioners considered that certain improvements which they had projected in the various markets should still be carried out, and accordingly caused the whole of the markets to be fitted with proper stalls, reserving accommodation for the free and unobstructed passage of purchasers. These arrangements have proved of great convenience, both to the tradesmen and the general public.

Working of the Building Clauses of Act XIV. of 1856.—In 1861, the defective state of the Building Clauses of the Act was strongly forced on the notice of the Commissioners, in consequence of which they came to the determination of forwarding to Government, for submission to the Legislative Council of India, Draft of a Building Act, but other important matters have prevented them from carrying out their intention. The Commissioners, however, propose to take up the subject again shortly.

Annual Repairs.—The annual repairs to roads were of the usual description, and cost *Rs.* 1,09,795. 12. 10.

Annual Accounts.—Appendix A. contains the annual account of the Municipal Fund, from 1st January to 31st December 1861.

New Works executed.—The following are the more important of the new works which have been executed during the year:—

Renewal of the gates and gate-frames to the outfall sluice at Worlee, cost 5,948 rupees.

Making certain improvements to Pallow-street, in the New Town, cost 2,895 rupees.

Paving an open passage called Rope Walk-lane, cost 5,250 rupees.

A new slaughterhouse and cattle-pen at Mahim, cost 1,958 rupees.

Making certain improvements in Camatteepoora, Centre-street, cost 5,402 rupees.

Making certain improvements in Camatteepoora, Bazar-street, cost 4,720 rupees.

Making

Making certain improvements to the open unmade gutter or drain on the south side of the Bellasis-road, cost 4,063 rupees.

Rebuilding the slope at the Sonapoor public necessary, cost 3,127 rupeees.

Certain improvements in Punchayet Wady-lane, cost 3,340 rupees.

SURVEY.

REVENUE.

THE revenue survey operations have progressed satisfactorily. Northern Division.

In Guzerat, the superintendent of the survey was engaged during the season in the completion of the settlement of Ahmedabad before commencing the revision of assessment in the Kaira Collectorate, and in the rectification of errors in the work carried on during the incumbency of his predecessor.

In Tanna, the new rates were introduced into two more districts, and the measurements in this collectorate have been entirely completed. Nizampoor and Basscin.

In Khandesh, two districts were also brought under the revised assessment. Nundoorbar and Songier.

Revised rates of assessment have been introduced into 297 villages of the Sattara Collectorate. Southern Division.

In the Kurrachee Collectorate, field measurements in 14 villages, and boundary suveys in 46 villages, have been completed. The classification of the Kotree Talooka has also been brought to a close. Sind.

The progress of the survey operations in the Hydrabad Collectorate is shown in a statement furnished by the Commissioner in Sind, and which forms Appendix A. Appendix A.

In the Shikarpoor Collectorate the operations were carried on simultaneously on both banks of the Indus, in the Roree and Mehur Deputy Collectorates. Boundary surveys have been completed in 162 villages, and boundary pillars erected in 237 villages. The field survey of 65 villages has also been completed, and an extensive tract of waste land in the Larkhana district, measuring 1,22,850 beegas, has been surveyed and plotted, in view to being brought under cultivation. The prevalence of cholera is stated to have materially interfered with the progress of survey operations in the Roree district.

TOPOGRAPHICAL SURVEY.

There were two parties engaged during the year in the topographical survey of the province of Sind, one on the right and the other on the left bank of the Indus. The second party was organised during the previous year. The operations of this survey appear to be efficiently carried on, but it is estimated that it will yet occupy four or five years to complete it.

FORESTS.

Bombay Presidency.

THE aggregate receipts and disbursements on account of the Forest Department, excluding Sind, during the year 1861-62, are as follows :—

		Receipts.			Disbursements.			
		Rs.	*a.*	*p.*	*Rs.*	*a.*	*p.*	
Not including supplies sent to Bombay Depôt.	By the Conservator of Forests - - - -	2,15,183	11	9	49,082	3	8	
	By the Deputy Conservator, Calicut - - - -	38,461	7	5	64,351	7	–	Including purchase of timber.
	By the First Assistant, Guzerat - - - -	44,225	11	7	28,377	3	4	Including rent of Dangs.
	By the First Assistant, Bombay - - - -	1,04,454	1	6	11,660	15	–	
	TOTAL - - - *Rs.*	4,02,325	–	3	1,53,471	13	–	

The expenses of the timber agencies and depôts having been found to exceed their receipts, a committee was appointed to consider and report upon the question of the supply of timber

to the public departments, and the agencies and depôts have, at their recommendation, been abolished.

The transfer of the district of North Canara to this Presidency has added to it an important tract of forests.

Sind.

The revenues of the Sind forests during the past year show, after deducting all expenses on account of establishment, a net surplus of *Rs.* 61,243. 12. 11, being *Rs.* 1,836. 2. 1. in excess of the profit shown during the preceding year.

This surplus would have been larger but for a decrease (3,832 rupees) in the revenue derived from the grazing fees. This is attributable to the unusual deficiency in the rainfall during the past three or four years, in consequence of which those portions of the older forests which are on ground too high to be flooded by the ordinary inundations have been left dry. Owing to this continued drought, many of the older trees on the high lands referred to are also said to have died, or to have suffered very much.

The claims of landholders and zemindars in the Shikarpoor Collectorate, to compensation for land included within the forest limits in 1854–55, were finally inquired into and settled.

By this settlement a large amount of arable land has been restored to cultivation.

Similar claims in the Hydrabad Collectorate are in course of settlement by the forest ranger and collector.

MISCELLANEOUS.

THE population in Khandesh is so sparse, that proposals have from time to time been submitted for attracting settlers to the province; and although favourable terms were offered to the over crowded population of the Rutnagherry districts in 1853 to migrate to it, none were found willing to accept the terms.

The reduction in the Native Army, which took place during the year, was, however, considered to offer a good opportunity of attracting settlers, by holding out to the discharged and pensioned sepoys inducements to colonize in Khandesh, by allowing them to take up land for cultivation on easy terms for a period of years, and by granting them other facilities for establishing themselves as agriculturists in the province.

The result was, that about 100 families of pensioned sepoys agreed to settle, and have been formed into a small colony, under the superintendence of Captain P. Dodds.

The locality selected is in the vicinity of the railway station at Challisgaum; and it has both good soil and is well supplied with water.

The colony is reported to be thriving, and promises to do well.

During the year, the territorial division of several talookas in the Northern Division was revised, and the whole of the district establishments were reorganised and placed on an efficient footing. This revision resulted in a net saving to the State of about 90,000 rupees per annum.

The Hoozoor establishments of the several collectors of the Southern Division (excepting Sattara) were also reorganised during the year, the result of which was a further saving of 13,395 rupees per annum.

Poona, Ahmednuggur, Sholapoor, Belgaum, Dharwar, and Sattara.

A revision of the district stipendiary establishments of the collectorates of the Southern Division named in the margin has, in addition, been effected and sanctioned by Government; the results of which, when fully carried out, will effect a still further saving to the public of about 43,000 rupees per annum.

Stationery.

During the year a committee was appointed to inquire whether the stationery charges of this Presidency were not capable of reduction; the result of their proceedings was, that by substituting in some cases less expensive materials, and by revising the existing standard allowances of stationery of public offices, a saving of 35,000 rupees per annum might, it was estimated, be effected.

Agriculture.

Rewards were offered by Government during the year for improvements in the cultivation of cotton, the results of which will be noticed in the next year's report. The attention of Government was also directed to the clearing of fair-weather roads for the purpose of facilitating the transport of this staple to the seaboard.

In the Hydrabad Collectorate, the experiments in the cultivation of imphee were continued during the year with success; the quantity sown was, however, small. The collector states:—"The Nowshera Zemindars are not disposed to continue the cultivation of it. Captain Cowpar's reports on it were very flourishing, but the Zemindars say that the extraction of the goor does not pay, and that the jowaree already grown in the districts is equal, if not superior, to imphee. In the latter opinion I am much inclined to coincide, for I never

I never saw such fine jowaree anywhere. The Nowshera Zemindars are men of intelligence; they have capital at command, and they would not throw away a chance of making money. Their opinion as to imphee must, therefore, be of considerable weight."

The cultivation of indigo in Upper Sind is described as likely to prove successful. The area under cultivation in 1861–62 is shown at 6,600 beegahs, against 6,459 during the previous year; the selling price of the manufactured article being from 70 to 80 rupees per maund. A beegah is reported to produce from 15 to 18 seers of indigo. The Collector of Shikarpoor, Captain Phillips, is of opinion that this branch of agriculture might, with some capital and enterprise, be developed to a very great extent in his districts.

The returns of cotton cultivation for the past year show a decrease in cultivation of 4,915 beegahs, as compared with 1860–61. The gross extent of land cultivated with this staple during the year was 85,576 beegahs.

Emigration.

The following Statement shows the ships which have been despatched with Emigrants from Bombay to Mauritius, from 1st May 1861 to 30th April 1862:—

Name of Vessels.	Name of Masters or Commanders.	Date of Departure.	Total Number of Adults.	Total Number of Souls.

A.—The difference between these numbers is thus explained by the Judge of Ahmedabad :—"The 368 appeals shown as undisposed of on the 31st December 1857, in last year's statement, are correct in number, but a mistake appears to have crept into the number inserted in the inner columns. Instead of 66 appeals which appear against the name of the Principal Sudder Ameen, there were 65 appeals undisposed of on the 31st December 1857; and instead of 97 appeals against the decision of the Sudder Ameen, inserted as being undisposed of, there were 95; and instead of 200 appeals against the decisions of the Moonsiffs, inserted as being undisposed of, there were 203. These mistakes have therefore been rectified in the present Statement."

Depending 31st December	484	351	671 A	457	1,407

A.—The difference of one between these numbers is thus explained by the Collector of Kaira:—"In the Return for 1859, 38 suits are shown as depending on 31st December 1859. This is owing to a suit which was re-admitted on the file in that year, having inadvertently not been taken into account. The error is now rectified."

No. 3.—ASSISTANT COLLECTORS.

A.—The Colaba Sub-Collector's Return for 1859 was closed with 14 appeals in arrears, and instead of the Return for 1860 being opened with that number, it commences with 15; and he explains the cause of the difference to have arisen from an error in entering the number instituted during the former year, which should have been 38, not 37.

The statement includes the work of the Sub-Collectors of Colaba and Broach, and the number of appeals disposed of by the Assistant Collectors of Tanna, Rutnagherry, and Ahmednuggur.

Under trial on 31st December -	148	50	74	88	80

(*a*) Of these, one died before trial.
(*b*) These include 209 discharged on security.

No. 3.—PRINCIPAL SUDDER AMEENS, Sudder Ameens, and LAW OFFICERS.

	1857.	1858.	1859.	1860.	1861.
Under trial on 1st January - -	—	—	—	—	—
Referred during the year - -	—	—	—	—	—
TOTAL - - -	—	—	—	—	—
Discharged without trial - -	—	—	—	—	—
Acquitted - - - - - -	—	—	—	—	—
Convicted - - - - - -	—	—	—	—	—
Referred to Magistrates or Session Judges.	16	11	15	30	68
Otherwise disposed of - - -	—	—	—	—	—
Under trial on 31st December -	—	—	—	—	—

No. 4.—DEPUTY MAGISTRATES.

	1857.	1858.	1859.	1860.	1861.
Under trial on 1st January - -	33	41	55 (*a*)	23	86
Apprehended or referred during the year.	4,543	4,214	3,858	3,843	4,742
TOTAL - - -	4,576	4,255	3,913	3,866	4,828
Discharged without trial - -	314	230	296	261	375
Acquitted - - - - - -	771	755	634	596	828
Convicted - - - - - -	2,905	2,658	2,535	2,492	3,075
Referred to Magistrates or Session Judges.	410	480	332	374 (*b*)	420
Otherwise disposed of - - -	135	79	93	57	74 (*c*)
Under trial on 31st December -	41	53	23	86	56

(*a*) These include four prisoners transferred by the magistrate of Sholapoor, for disposal by the deputy magistrate, and exclude two acquitted by the joint magistrate of Colaba, who ordered their names to be erased from the register.

(*b*) Of these, one prisoner was twice committed to the sessions by the deputy magistrate of Rutnagherry.

(*c*) The whole of these were discharged on security.

No. 5.—MAGISTRATES, JOINT MAGISTRATES, and ASSISTANT MAGISTRATES.

	1857.	1858.	1859.	1860.	1861.
Under trial on 1st January - -	46	159	113 (*a*)	129	124
Apprehended during the year - -	470	641	578	569	434
Received by transfer - - -	5,195	6,688	5,782	5,895	5,647
TOTAL - - -	5,711	7,488	6,473	6,593	6,205
Discharged without trial - -	637	861	692	745	795
Acquitted - - - - - -	1,590	1,486	1,426	1,577	1,385
Convicted - - - - - -	2,117	3,754	3,040	2,947	2,666
Committed to Session Judges -	1,112	1,120	1,048	1,034	1,098
Otherwise disposed of - - -	96	151	138	166	131 (*b*)
Under trial on 31st December -	159	116	129	124	130

(*a*) These exclude four transferred to the file of the deputy magistrate of Sholapoor (*vide* note (*a.*) to Statement No. 4), and include one on the file of the magistrate of Bhownuggur, which was erroneously omitted.

(*b*) Of these, 128 were discharged on security, one died before trial, and two surrendered to the Gaikwar's Government.

No. 6.—SESSION JUDGES.

	1857.	1858.	1859.	1860.	1861.
Under trial on 1st January - -	46	153	48	61	94
Committed during the year - -	1,549 (*a*)	1,555	1,403	1,446 (*c*)	1,586
Received by transfer - - -	1	3	- -	4	5
TOTAL - - -	1,596	1,711	1,451	1,511	1,685
Discharged without trial - -	5	7	8	12	4
Acquitted - - - - - -	510	626	562	609	634
Convicted - - - - - -	762 (*b*)	863	733	665 (*d*)	811
Referred to Nizamut or Foujdaree Court.	150	127	72	125	127
Otherwise disposed of - - -	16	40	15	6	15 (*e*)
Under trial 31st December - -	153	48	61	94	94

(*a*) These include 11 persons committed in 1856.

(*b*) Against two of these prisoners there were two separate cases, in which they were convicted and sentenced separately; they therefore appear twice in No. 10, and twice in No. 13.

(*c*) These do not show one prisoner twice committed to the Sessions Court by the Deputy Magistrate of Rutnagherry, (*vide* note (*b*) to Statement No. 4), but include one prisoner committed by the Session Judge of Khandesh, and eight by the Assistant Magistrate and Superintendent of the Dhoolia Gaol.

(*d*) Against one of these prisoners there were three separate cases: he was sentenced in two and acquitted in one; he therefore appears twice in Nos. 10 and 13.

(*e*) Of these, seven were discharged on security, and eight having absconded and not having made their appearance within 12 months of the receipt of their cases, the cases are struck off the files, under instructions from the Sudder Foujdaree Adawlut.

No. 7.—NIZAMUT or FOUJDAREE ADAWLUT.

	1857.	1858.	1859.	1860.	1861.
Under trial on 1st January - -	57	44	29	16	33
Committed or referred during the year.	150	127	72	125	137 (*a*)
Proceeding called for - - -	152	148	158	249	376
TOTAL - - -	359	319	259	390	546
Released unconditionally - -	56	58	64	106	226 (*b*)
Released on security - - -	- -	- -	1	2	—
Convicted - - - - -	231	231	176	247	304 (*c*)
Otherwise disposed of - - -	1	1	2	2	2 (*d*)
Depending on 31st December -	44	29	16	33	14

(*a*) Of these, 10 were referred by the Commissioner appointed by Government under date the 7th May 1861 (No. 1749), to try a case of treason, and the remaining 127 by Session judges.

(*b*) Of these, 30 are from cases referred during the year, and are included in Statement 13, under the column "Acquitted."

(*c*) Of these, 121 are from cases referred, and are included in Statement No. 13 as "Convicted."

(*d*) These are insane, and have been transferred to the lunatic asylum at Colaba. They are shown in Statement 13.

(Nos. 8 and 9 are omitted as inapplicable to the Bombay Presidency.)

Bombay, Sudder Foujdaree Adawlut, 25 February 1862.

Robert Hill Pinhey, Acting Registrar.

Mr. Keays having obtained privilege leave of absence for two months, left the Court on the 2d October 1861, and rejoined on the 29th November 1861; and having obtained a furlough to England from the 12th December 1861, again left the Court on that date.

Mr. Hart having been appointed Officiating Revenue Commissioner, left the Court on the 20th March 1861, and Mr. Newton, who was appointed to act for him, took his seat on the 22d idem.

Bombay, Sudder Foujdaree Adawlut, 5 March 1862.

Robert Hill Pinhey, Acting Registrar.

(No. 1601 of 1862.)

JUDICIAL DEPARTMENT.

To the Acting Registrar of the Sudder Foujdaree Adawlut.

Sir, Bombay Castle, 13 May 1862.

I AM directed to acknowledge the receipt of your letter, dated the 5th March last, No. 539, submitting Returns of Crime for the year 1861.

2. These Returns do not call for any particular remark. Contrasted with the preceding year, they show a decrease in the aggregate number of offenders for trial before all the authorities during the year 1861.

3. The subjoined is a comparative statement framed from the Returns, and shows how all the prisoners for trial, during the year reported on, were disposed of:—

	Offenders Apprehended and Brought to Trial.	CONVICTED					Acquitted.	Confined as Insane.	Died before Trial.
		And Sentenced to				TOTAL.			
		Flogging, Fine, &c.	Imprisonment.	Transportation.	Death.				
1860 - - - - -	50,068	32,058	5,829	53	28	37,968	12,099	1	–
1861 - - - - -	48,238	30,242	6,056	55	29	36,382	11,854	2	–
Increase - - - - -	–	–	227	2	1	–	–	1	–
Decrease - - - - -	1,830	1,816	–	–	–	1,586	245	–	–

4. The following Table shows how the several authorities disposed separately of the offenders they had for trial before them:—

	Village Police Officers.				District Police Officers.				Deputy Magistrates.				Magistrates, Joint Magistrates, and Assistant Magistrates.				Session Judges.			
	1860.	1861.	Increase.	Decrease.	1860.	1861.	Increase.	Decrease.	1860.	1861.	Increase.	Decrease.	1860.	1861.	Increase.	Decrease.	1860.	1861.	Increase.	Decrease.
For trial during the year.	1,591	1,103	–	488	52,969	51,394	–	1,574	3,866	4,828	962	–	6,593	6,205	–	388	1,511	1,685	174	–
Discharged without trial.	359	305	–	54	4,664	4,660	–	4	261	375	114	–	745	795	50	–	12	4	–	8

APPENDIX (F.)

ANNUAL POLICE RETURN showing the State of CRIME in the Town and Island of Bombay, during the year 1861.

No. 74 of 1862.—Judicial Department.

To *M. J. Shaw Stewart,* Esq., Acting Secretary to Government.

Sir,

I HAVE now the honour to forward, for the information of the Honourable the Governor in Council, the accompanying annual police returns, numbered 1 to 6, showing the state of crime in the town and island of Bombay during the year 1861.

2. The Return No. 1 is in the usual form, showing at one view the whole amount of crime brought to notice during the past year, classified according to the several descriptions of offence; also showing the amount of property stolen or fraudulently obtained and recovered, the castes of persons charged with the commission of crime, and at the foot a comparison of the crime committed last year with that of the preceding year. The Return No. 2 shows the increase or decrease of each separate description of crime in the Return No. 1, as compared with the year 1860.

3. Four

3. Four cases of murder were reported to the police during the past year. The first was that of a woman of the name of Gunga, who was arraigned before the Supreme Court at the sessions held in March last, and convicted of wilful murder, in the previous January, of a female child named Premabaee. The prisoner was sentenced to death by his Lordship the Chief Justice, and she was executed in April last. In the second case, a Mussulman of the name of Noor Mahomed was arraigned for the murder of his wife. He was convicted of manslaughter, and transported for the term of seven years. Murders.

4. In the third case, a man of the name of Balcrustna Omedsing was tried, at the sessions held in March last, for the murder of his servant Rama. The prisoner was, however, pronounced to be insane. In the fourth case, a woman named Jainabaee was charged with murdering her own infant, but she was also acquitted on the ground of insanity.

5. It will be seen that there is a decrease in the crime of murder as compared with the previous year: five cases have been reported in 1860, and four cases in 1861, in which four persons were concerned, all of whom were apprehended and brought to trial:—

Murder.

Years.	Offences.	Prisoners.
1861 - - - -	4	4
1860 - - - -	5	5
Decrease - - -	1	1

6. Six cases of manslaughter were reported to the police during the year 1861. Four cases were sent for trial before the Supreme Court, one was dismissed by the magistrate for want of evidence, and one remained undisposed of at the close of the year 1861. Manslaughter.

7. In the first case, one Meer Asgur Ally Razof Ally was committed for trial at the sessions on a charge of manslaughter. While the person above mentioned was riding through Ghogaree-street, in the Native Town, his horse came in contact with a Mahomedan woman, named Massoombee, who was knocked down and so severely injured that she died six days after the accident occurred. The bill preferred against Meer Asgur Ally was thrown out by the Grand Jury at the sessions held in March last.

8. The second case was that of a seaman, named William Cahill, against whom an indictment was preferred for the manslaughter of the boatswain of the ship "City of Agra," whose death was caused by a stab inflicted on him with a sheath-knife by Cahill. He was tried at the special sessions held in June last, and sentenced to 18 months' imprisonment with hard labour.

9. Jamsetjee Burjorjee, a Parsee contractor, was committed, in June last, to take his trial at the sessions on a charge of manslaughter. Five persons lost their lives while digging the foundation for a cotton-mill at Tardeo Hill. The accused was the contractor and director of the works; and as it appeared that the death of the persons referred to had been caused by a want of due caution on the part of the contractor, he was indicted for manslaughter. The bill was ignored by the Grand Jury.

10. In the other cases, four persons were charged with causing the death of three persons by furious driving; in one of these cases, two persons were convicted of manslaughter, and sentenced to 12 months' imprisonment with hard labour. One case was dismissed by the magistrate for want of evidence, and the prisoner in the other case was acquitted at the sessions held in March last. One case remained undisposed of at the close of the year 1861.

11. It will be seen that there is an increase of four cases and five prisoners in the manslaughter cases during the past year:—

Manslaughter.

Years.	Offences.	Prisoners.
1861 - - - -	6	7
1862 - - - -	2	2
Increase - - -	4	5

12. From

12. From the statement given below, it will be observed that there is a decrease in the offences referred to. Four cases of administering poison, stabbing, &c., in which five persons were concerned, were before the magistrates in the last year. Two cases and three prisoners were dismissed for want of evidence. In the other cases, which were sent for trial before the Supreme Court, the two prisoners (Hindoos) were convicted and sentenced to transportation, one for 14 years, and the other for five years. A European seaman of the name of Thomas Roberts, belonging to Her Majesty's steamer "Victoria," was committed for trial for cutting and wounding his shipmate Thomas Johnson while on shore. Roberts was convicted and sentenced in March last to six months' imprisonment with hard labour. One prisoner (a Portuguese) was implicated in three cases of cutting and wounding with intent to maim, &c. He was, however, acquitted by the Supreme Court. In all the other cases under this head, convictions were obtained (except in one case—that of a prisoner who was convicted in another case) in the Supreme Court, and the prisoners sentenced to various terms of imprisonment :—

Administering Poison, Stabbing, Cutting or Wounding, with intent to Murder.			Shooting at, Stabbing, Cutting or Wounding, with intent to Maim.		
Years.	Offences.	Prisoners.	Years.	Offences.	Prisoners.
1861 - -	4	5	1861 - -	10	11
1860 - -	8	13	1860 - -	10	16
Decrease - -	4	8	Decrease - -	- -	5

13. From the statement given below, His Excellency the Governor in Council will perceive that there has been a further decrease during the past year in the crime of abduction, but in the other offences alluded to there has been an increase. There is, however, a decrease of 289 in the number of prisoners brought before the magistrate in 1861 for assault, forcible entry, or injury to the person; and also a decrease of 21 in the number of prisoners brought up for assaults on police officers :—

	Years.	Offences.	Prisoners.
Abduction - - -	1861 - - -	4	5
	1860 - - -	6	6
	Decrease - - -	2	1
Assault on Police Officers, &c.	1861 - - -	196	291
	1860 - - -	192	312
	Increase - - -	4	—
	Decrease - - -	- -	21
Assault, forcible entry, or injuring person - -	1861 - - -	2,675	3,985
	1860 - - -	2,653	4,274
	Increase - - -	22	—
	Decrease - - -	- -	289

14. On referring to the class of crime designated "Offences against property, burglaries, &c.," it will be found that there is an increase of one case and two prisoners as compared with the previous year. Three of the parties accused of this crime were convicted and sentenced, one to 12 months', and the other to 18 months' imprisonment with hard labour :—

Burglary.

Years.	Offences.	Prisoners.
1861 - - - -	4	6
1860 - - - -	3	4
Increase - - -	1	2

15. The

15. The following statement shows that there has been an increase of 226 offences and 174 prisoners in the crime of robbery not exceeding 50 rupees, and a decrease of 11 offences; and 39 prisoners in the offence of robbery exceeding 50 rupees. There is also an increase of 19 cases and 16 prisoners under the heading "receiving stolen goods, &c.," but there is a decrease of 17 cases and 21 prisoners in the number of cases of embezzlement and breach of trust.

Robbery exceeding 50 Rupees.

Years.	Offences.	Prisoners.
1861 - -	134	154
1860 - -	145	193
Decrease - -	11	39

Robbery not exceeding 50 Rupees.

Years.	Offences.	Prisoners.
1861 - -	1,552	1,777
1860 - -	1,326	1,603
Increase - -	226	174

Receiving Stolen Goods, knowing them to be stolen.

1861 - -	64	76
1860 - -	45	60
Increase - -	19	16

Embezzlement and Breach of Trust.

1861 - -	63	66
1860 - -	80	87
Decrease - -	17	21

16. There is also an increase in the other offences noticed under the head of obtaining money or goods by false pretences, and being in possession of property suspected to be stolen. One hundred and two cases and 117 prisoners were before the magistrates for the first-mentioned offence during the past year, and there were 500 cases of the latter offence (that of being in possession of property suspected to be stolen), in which 610 persons were concerned, before the police courts during the year 1861.

Obtaining Money or Goods by false pretences.

Years.	Offences.	Prisoners.
1861 - -	102	117
1860 - -	93	113
Increase - -	9	4

In possession of Property suspected to be stolen.

Years.	Offences.	Prisoners.
1861 - -	500	610
1860 - -	490	585
Increase - -	10	25

17. Eight cases of forgery were brought before the magistrates last year. In two cases the prisoners concerned were Europeans, both of whom were convicted before the Supreme Court. Serjeant William Alfred Woodman was sentenced to two years' imprisonment with hard labour for forging a cheque for 163 rupees on the Oriental Bank, in the name of Major Bacon, then brigade major at Bombay. The other European, a seaman, John Rooney, who had lately left the Indian navy, was sentenced to four years' penal servitude for forging an order for 200 rupees (on John Smith, a gunner in the dockyard) in the name of a seaman James Lewis, belonging to Her Majesty's steamer "Ferooz." A Portuguese was implicated in two cases, and two Hindoos, one Mussulman, and one Parsee, were concerned in the other cases. The Portuguese who was indicted for forging an order in the name of Lieutenant M'Rae on Messrs. Watson & Co. and J. Burn, tailors, &c., Bombay, was acquitted in one case, but convicted in the other, and sentenced to 18 months' imprisonment with hard labour. A Parsee of the name of Pestonjee Merwanjee was charged with forging a bill of exchange, and obtaining money by false pretences. He was sentenced to transportation for five years. In the other case, one Hindoo was acquitted by the Supreme Court; and two other prisoners, one Mussulman and one Hindoo, were sentenced, the latter to 18 months and the former to 12 months' imprisonment. From the return it will be seen that there is an increase in the number of forgeries of one case and one prisoner as compared with the previous year.

Forgery.

Years.	Offences.	Prisoners.
1861 - -	8	8
1860 - -	7	7
Increase -	1	1

18. Six cases of perjury, in which eight prisoners were concerned, came before the magistrates during the past year. One case only, in which two persons were implicated, was sent before the Supreme Court. The prisoners in this case were sentenced by His Lordship, the Puisne Justice, at the Sessions held in July last to one month's imprisonment. Five cases, in which six persons were charged with this crime, were dismissed by the magistrates for want of evidence.

1861 - -	6	8
1860 - -	7	15
Decrease -	1	7

19. Four

19. Four cases of conspiracy, in which 20 persons were concerned, came before the police courts last year. In two cases the prisoners were acquitted by Her Majesty's Supreme Court. In another case (the Bhatia case), Goculdass Lilladhur and eight others were committed for trial at the sessions held in December last on a charge of conspiring to obstruct and defeat the course of public justice by attempting to intimidate and dissuade certain witnesses from giving evidence in a cause pending on the Civil Side of the Supreme Court. The first and second defendants were fined in the sum of 1,000 rupees each, and the others were fined 500 rupees each. One case was dismissed by the magistrate. Six persons were charged with conspiracy to defraud a person of the name of Ibrahim Wydeena of the sum of 1,200 rupees, by a pretended sale of pearls, but the prisoners were acquitted in this case.

1861 - -	4	20
1860 - -	4	13
Increase -	- - -	7

20. The present year's returns exhibit an increase in the number of offences against the Coinage Laws brought to the notice of the magistrates. Three cases and three persons were committed for trial at the Supreme Court, and four cases, in which five persons were charged with this crime, were dismissed by the magistrate for want of proof. Convictions were only obtained in two of the cases committed to the sessions, and the prisoners sentenced in each case to six months' imprisonment, with hard labour.

Years.	Offences.	Prisoners.
1861 - -	7	8
1860 - -	5	7
Increase -	2	1

21. In the other offences noticed under the head of miscellaneous offences, it will be seen that there is a considerable decrease in the number of prisoners brought up for riotous conduct in the public streets. And in the number of persons put before the Court for a breach of the Conservancy Act, under the latter heading, there is a decrease of 1,274 cases, and 2,614 in the number of persons charged with that offence during the year 1861. In 1860 there were 2,129 cases, and 3,788 persons before the Court for a breach of the Conservancy Act. During the past year there were only 855 cases, in which 1,174 persons were brought up.

Riotous conduct on the Public Road.			Furious or Careless Driving, &c.

Increase -	27	36	Decrease -	1,274	2,614

22. His Excellency the Governor in Council will perceive from the statement given below, that 21,647 persons were brought before the police magistrates for trial during the year 1861, including the cases which remained undisposed of at the close of the year 1860. During the past year 96 prisoners were convicted by the Supreme Court and 63 acquitted, 15,941 were convicted, fined, imprisoned, and bound over to be of good behaviour, &c., and 5,498 were acquitted by the magistrates; 26 were convicted, and 17 acquitted before the Court of Petty Sessions, and six prisoners were remanded. It will thus be seen that there is a decrease of 259 prisoners as compared with the year 1860.

For Disposal in 1861, 21,647.

	Convicted.	Acquitted.
Supreme Court - - -	96	63

Remanded - - - -	6	
Total - -	21,647	
1860 - -	21,906	
Decrease - -	259	

23. The

23. The proportion of convictions in the Supreme Court was about 60 per cent. In the Police Court the summary convictions by the magistrates amount to about 73 per cent., and in the Court of Petty Sessions about 60 per cent.

Punishments.

24. On referring to the columns under the head of "sentence" in the Return No. 1, it will be seen that of the persons convicted one was executed, nine transported, 1,712 imprisoned, 13,999 were fined. Two hundred and thirty-one persons were bound over to keep the peace, and to be of good behaviour, and 111 suffered corporal punishment.

25. The following Statement shows the castes of the different offenders brought before the magistrates during the year 1861 :—

CASTE.

—	Europeans.		Indo-Briton and Native Christians.		Hindoos.		Mahomedans.		Parsees.		Others and Unknown Castes.		Total.	
Years.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.
1861 - -	1,203	12	943	84	11,726	1,037	5,291	321	754	5	254	17	20,171	1,476
1860 - -	924	10	885	77	12,044	1,130	5,175	468	960	23	209	1	20,197	1,709

Decrease -	- -	- -	- -	- -	318	93	- -	147	206	18	- -	- -	26	233

As compared with the previous year, the statement shows an increase of 279 males and two females in the number of Europeans brought up in 1861. It will be seen from the returns that this class of the community have been concerned in nearly all of the offences noticed. In the complaints between masters of ships and seamen there is an increase of 216 persons brought before the court in 1861. There is also an increase in the number of Indo-Britons and native Christians brought before the police during the past year. In the other castes referred to, there is (with the exception of unknown castes) a decrease, more especially in the number of the prisoners from the Parsee community.

Drunkenness.

Years.	Offences.	Prisoners.
1861 - -	1,665	2,293
1860 - -	1,251	1,679
Increase -	414	614

Coroners' Inquests and Court of Petty Sessions.

26. The Return, No. 3, is the usual statement of inquests held by the coroner during the past year, which shows an increase of 42 cases compared with the year 1860. The Return, No. 4, is a statement of the cases disposed of by the Court of Petty Sessions in 1861; from which it will be observed that the cases which came before that tribunal show an increase of 20 cases and 30 prisoners, 16 of whom were convicted and 14 acquitted.

Juvenile offenders.

27. The Statement, No. 5, shows the number of juvenile offenders of the age of 14 years and under, brought before the magistrates during the year 1861, and the offences with which they were charged. There were 526 persons belonging to this class of criminals brought before the magistrates in 1861. Three hundred and forty-one of these offenders were convicted, and 185 discharged; of those convicted 25 were transferred to the David Sassoon Industrial and Reformatory Institution, where they will no doubt be trained to habits of industry, and taught trades, by which they will hereafter be enabled to maintain themselves honestly.

28. The amount of property believed to have been stolen during the year 1861 was *Rs.* 1,39,409. 10 *a.* 7 *p.*, being a decrease of *Rs.* 38,798. 0 *a.* 10 *p.* as compared with the preceding year. Of this amount the sum of *Rs.* 47,412. 0 *a.* 9 *p.* was recovered by the police. It will, however, be observed that the amount set down as stolen includes the large sum of *Rs.* 44,208. 9 *a.* 2 *p.*, which is said to have been embezzled by servants employed by merchants, native bankers, traders, and others. In one of these cases, two persons, named Kavuldass Javerdass and Manunckchund Mooteechund, were charged with embezzling the sum of 35,100 rupees, the property of Virjlall Motteechund, a native banker, but the case was dismissed by the magistrate, and the prosecutor was directed to pay 50 rupees to the accused for loss of time and expenses incurred by them in defending themselves against what was believed to be a false and vexatious charge.

Amount of Property Stolen.

	Rs.	a.	p.
Year 1861 - - -	1,39,409	10	7
Year 1860 - - -	1,78,207	11	5
Decrease - -	38,798	–	10

Recovered.

	Rs.	a.	p.
Year 1861 - - -	47,412	–	9
Year 1860 - - -	75,367	15	9
Decrease - -	27,955	15	–

29. In the cases of robbery exceeding 50 rupees the property believed to have been stolen is estimated at *Rs.* 63,000. 7 *a.* 7 *p.* Of this amount *Rs.* 21,454. 12 *a.* 7 *p.* were recovered

recovered by the police. In the other cases next noticed (those of robbery not exceeding 50 rupees) the property believed to have been stolen is set down at *Rs.* 12,055. 9 *a.* 11 *p.*; of this sum *Rs.* 9,731. 15 *a.* 3 *p.* were recovered by the police. Excluding the case noticed in the preceding paragraph, which was dismissed by the magistrate, and in which property amounting to 35,000 rupees was alleged to have been embezzled, it will be seen that nearly one-half of the property set down as stolen has been recovered by the police. Under all the circumstances I do not think that these results can be regarded as unfavourable to the executive police, who have, I believe done their duty under their able and zealous superintendent.

Mortality.
Increase in the rate of, during the year 1861.

30. The Return, No. 6, shows the mortality among all classes of the inhabitants of Bombay during the year 1861. The total number of deaths from all causes amounts to 15,377, showing an increase of 615 as compared with the previous year, but it will be observed that there is a decrease of 684 cases under the heading "epidemic disease." In 1850 the number of the deaths among all classes of the community was 15,492, and in 1855, 15,128; and, considering that the population, both European and native, is increasing yearly, I do not think that the rate of mortality among the inhabitants of this island can be regarded as very high; and the large decrease under the heading "epidemic" seems to me to be very satisfactory.

Fires.

31. Twenty-four fires occurred in the town and island during the past year, and property of the estimated value of *Rs.* 59,799. 8 *a.* is said to have been destroyed, A fire occurred in May last among the cotton at Colaba, in which cotton valued at 25,000 rupees was destroyed. Another fire lately took place in December last in the native town Bhundarwaddee Vuddacheegadee, on which occasion a large house and other property of the estimated value of 23,000 rupees was destroyed, and I regret to state that on this occasion a native man lost his life.

32. In February last a house was burnt down in Balloo Sarung street, and property of the value of 7,100 rupees was destroyed. On this occasion also an old woman perished. The other fires were of a trifling character. All these fires are said to have been accidental.

33. The present returns do not seem to call for any further remarks from me. I have only to add, in conclusion, that my colleagues in the magistracy have applied themselves assiduously to the adjudication of the numerous cases which have come before them during the past year.

I have, &c.

(signed) *W. Crawford,*
Senior Magistrate and Commissioner of Police.

Bombay, Police Office,
30 January 1862.

No. 1.—RETURN of the Number of OFFENCES committed within the Town and Island of *Bombay* which came under the cognizance of the Police, and of the OFFENDERS Apprehended; distinguishing the Nature of the Offences, and the Result of the Accusation; together with the Amount of PROPERTY Stolen and Recovered, in the Year 1861.

Bombay Police Office,
30 January 1862.

(signed) *W. Crawford*
Senior Magistrate and Commissioner of Police.

(No. 1129 of 1862.)

Judicial Department.

To *W. Crawford*, Esq., Senior Magistrate of Police, Bombay.

Sir,

I am directed to acknowledge the receipt of your letter of the 30th January last, No. 74, submitting Annual Police Returns showing the state of crime in the town and island of Bombay during the year 1861.

2. In reply, I am desired to inform you that the Honourable the Governor in Council observes from these Returns that there has been an increase of 180 (or 1·3 per cent.) in the number of offences reported, but a decrease of 259 (or 1·2 per cent.) in the number of offenders apprehended. It does not appear to what extent this is due to the failure of the police to apprehend parties charged with offences. On this point your opinion should be submitted.

3. Out of the cases which were brought to trial in 1860, 71 per cent. were attended with convictions, and 29 per cent. with acquittals. His Excellency in Council is glad to observe that in 1861 75 per cent. of the cases resulted in conviction, and only 25 per cent. in acquittal.

4. The value put upon the property stolen and embezzled during 1861 is less than that for 1860, but the Governor in Council also observes that the quantity recovered is considerably less. The explanation given in the 28th and 29th paragraphs of your letter is, however, satisfactory.

5. His Excellency the Governor in Council is pleased to observe the decrease of 23 per cent. in the number of Parsees apprehended during the year under report.

6 In conclusion, I am desired to observe that there are some slight discrepancies in the totals of the Returns submitted by you, but the general result is shown with sufficient accuracy in the annexed comparative statement, prepared in this office.

I have, &c.,
(signed) *M. J. Shaw Stewart*,
Acting Secretary to Government.

Bombay Castle,
5th April 1862.

COMPARATIVE STATEMENT (framed from the RETURNS submitted by the SENIOR MAGISTRATE of POLICE, *Bombay*), showing the State of Crime and the Efficiency of the Police in the Years 1860 and 1861.

APPENDIX (G).

(No. 30 of 1862.)

No. 9 of 1862.—JUDICIAL DEPARTMENT.

To Captain *R. L. Playfair*, Assistant Political Resident, in charge of Residency, *Aden*; to *M. J. Shaw Stewart*, Esq., Acting Secretary to Government, *Bombay*.

Sir, Aden, 18 January 1862.

I TRANSMIT, for the information of Government, the usual Judicial and Conservancy Returns of Aden for the year 1861, as per margin. (A.)—5. 6. 10. 12. 13. (B.) (C.) (D.)

2. In last report I showed that during the past four years there had been a constant and steady decrease in the number of cases tried; now I am happy to say that the decrease is still more marked, the total number being 545, or 194 less than last year, and 441 less than in 1857. 1857, No. 986. 1858, „ 769. 1859, „ 749. 1860, „ 739. 1861, „ 545.

3. The first class—"offences against the person"—calls for no special remark: deducting the cases of "petty assault," the number of more aggravated offences is the same in the last two years.

4. There was only one offence committed against the person accompanied by violence, and this did not occur within my jurisdiction. Two biggaries belonging to the Engineer Department were charged with having bound, robbed, and otherwise illtreated one of their comrades, and the case was sent by the military authorities to the Civil Court for trial. As there was no evidence forthcoming, the prisoners were acquitted.

5. The

5. The Tabular Statement, No. 13 (A), attached, is sufficiently explanatory regarding the other offences tried.

6. In Table 10 (A) no offences are recorded as having been tried by the Political Resident. In explanation of this, it must be borne in mind that I acted both as Resident and First Assistant for the greater part of the year under review.

7. The following is an abstract of the prisoners in gaol during 1860, compared with the previous year:—

	1860.	1861.
Aggregate of the average daily number of all classes	63,107	52,903
Daily average	172	145
Number remaining in gaol on the 31st December 1859 and 1860	164	178
Number admitted during the year	357	207
Number released	340	247
Ditto escaped	-	1
Ditto died	3	4
Ditto executed	-	-
Remaining 31st December 1860 and 1861	178	133

8. The Convicts' Casualty Report is attached, marked C. Of the four convicts whose deaths are therein detailed, one died from sheer old age and debility; another, one of the state-prisoners lately sent from Sind, was upwards of 70 years of age; and the other two, though only 40 and 43 years of age respectively, had been 16 and 13 years in confinement.

9. Remunerative in-door labour progresses satisfactorily; attached, marked B, is a summary of the receipts and expenditure on this account, and the following abstract exhibits the net profit derived from each branch of industrial art during the past three years:—

	1859.	1860.	1861.
	Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*
Net profit of printing-press	998 2 2	1,382 14 7	1,334 7 10
Type purchased during the year	397 2 3	—	—
Bookbinding plant purchased during the year	189 – –	130 14 –	—
Net profit on bookbinding	-	335 15 6	460 9 –
Miscellaneous manufactures	931 2 7	1,082 5 8	760 6 –
Realised by sale of vegetables grown in gaol garden.	74 11 6	112 3 –	66 12 6
Realised by grinding wheat	-	257 13 –	307 11 –
Actually received from proceeds of outdoor convict labour.	-	1,090 10 –	784 14 –
Miscellaneous receipts	18 8 3	58 11 3	17 11 3
Saving actually effected by substitution of convict for hired menial labour.	-	150 – –	150 – –
TOTAL *Rs.*	2,608 10 9	4,601 7 –	3,882 7 7
Deduct Bookbinder's wages (as instructor)	17 8 1	462 – –	—
Actual Net Profit *Rs.*	2,591 2 8	4,139 7 –	3,882 7 7

10. Although the actual amount realised during the present year falls short of that of 1860, nevertheless, there has been a decided advance in reality. In 1860 there was a daily average of 172 prisoners, who yielded a net profit of 4,139 rupees; in 1861, 145 prisoners yielded 3,882 rupees; the present year's income, if calculated according to last year's rate, would be 172 : 145 : : 4,139 : 3,489—which is 393 rupees less than has really been realised.

11. The

11. The value of convict labour not actually charged for (gaol servants not included) was *Rs.* 943. 2., of which sum *Rs.* 500. 14. represents labour expended in repairing the gaol buildings, and making a paper manufactory; the remainder was on account of various petty repairs, for the execution of which there were no local funds available.

12. The paper manufactory had not commenced to yield any return before the end of the year. It is now, however, in tolerably good working order. I do not anticipate much direct profit from this work, but the indirect gain will be considerable, as it enables me to employ a number of prisoners within the gaol, and, as a consequence, to dispense with some of the Sebundee guard. Without making any allowance for the value of paper and pasteboard which may be sold or used, I estimate that during the present year at least 500 rupees will be saved by reducing the Gaol Guard.

13. The following table shows the various descriptions of work on which the prisoners were engaged during the past two years. From this it will be seen that the average daily number of prisoners employed outside the gaol has been reduced from 426 to 297 :—

DESCRIPTION OF LABOUR.		1860.		1861.	
		Aggregate Number.	Average daily Number.	Aggregate Number.	Average daily Number.
1. Hard labour outside gaol.	Masons	1,452	3·967	1,350	3·699

3. Gaol servants	Cooks	4,057	11·085	3,419	9·367
	Sweepers	1,602	4·377	1,460	4·000
	Gardeners	366	1·000	365	1·000
	Mussals	732	2·000	730	2·000
	Monitors	1,098	3·000	1,095	3·000
	Storekeepers	366	1·000	365	1·000
	Barbers	366	1·000	365	1·000
	TOTAL	8,587	23·462	7,799	21·367
4. Without hard labour.	Light labour	155	0·423	–	–
	Debtors	2,194	5·995	1,906	5·222
	Sick and excused	3,399	9·287	2,912	7·978
	Attending sick	804	2·197	674	1·847
	Temporarily detained	2,743	7·495	974	2·668
	Miscellaneous	1,241	3·390	1,532	4·197
	Excused on account of holiday	5,966	16·300	5,031	13·784
	TOTAL	16,502	45·087	13,029	35·696
	GRAND TOTAL of Prisoners	63,107	172·483	52,903	144·940

14. The average earning of each prisoner was *Rs.* 26. 12. 4., being an increase of *Rs.* 2. 1. 9., as compared with 1860.

15. The following table shows the cost of each prisoner per annum for the three last years:—

HEADS OF EXPENDITURE.	ADEN GAOL. 158 Prisoners in 1859. 172 ,, 1860. 145 ,, 1861.		
	1859.	1860.	1861.

Rations	8,564 14 8	8,184 5 4	6,785 – –
Money allowance	—	—	—
TOTAL	8,564 14 8	8,184 5 4	6,785 – –
Cost per prisoner	54 3 4	47 9 4	46 12 8
Fixed establishment	2,727 2 4	1,981 9 4	1,872 – –
Cost per prisoner	17 4 2	11 8 4	12 14 6
Extra establishment	4,599 4 6	4,161 4 –	3,586 2 –
Cost per prisoner	29 1 9	25 15 –	24 11 8
TOTAL	7,326 6 10	6,142 13 4	5,458 2 –
Cost per prisoner	46 5 11	37 7 4	37 10 2
Hospital Establishment:			
European medicines	—	—	—
Cost per prisoner	—	—	—
Bazaar medicines, &c.	475 10 4	592 2 4	163 6 –
Cost per prisoner	3 – 2	3 7 1	1 2 –
Sick diet	—	—	—
Cost per prisoner	—	—	—
Furniture, bedding, and extra blankets	—	—	—
Cost per prisoner	—	—	—
TOTAL	475 10 4	592 2 4	163 6 –
Cost per prisoner	3 – 2	3 7 1	1 2 –
Clothing, including blanket and bedding	-	-	111 13 –
Cost per prisoner	-	-	– 12 4
Contingencies	308 9 6	279 8 –	164 9 9
Cost per prisoner	1 15 3	1 10 –	1 2 2
Additions, alterations, and repairs	-	1,733 7 –	989 10 7
Cost per prisoner	-	10 1 3	6 13 2
Gross cost of maintenance	16,675 9 4	16,932 4 –	13,072 9 4
Gross cost per prisoner	105 8 8	100 3 –	94 4 6

16. Deducting the value of the prisoner's earning, the actual cost of each would be as follows:—

	1859.	1860.	1861.
	Rs. a. p.	Rs. a. p.	Rs. a. p.
Gross cost per prisoner	105 8 8	100 3 –	94 4 6
Average earnings	16 6 5	24 10 7	26 12 4
ACTUAL COST	89 2 3	75 8 5	67 8 2

which shows a very considerable progressive decrease in the expenses of the gaol.

17. Here I may appropriately acknowledge the receipt of Mr. Secretary Kinloch Forbes' letter No. 4201, dated 23d ultimo, in which he observes that there appears to be great room for economy in the Aden gaol. I trust that the foregoing remarks will prove that this subject has ever received my anxious consideration. The year regarding which the above quoted observation was made has been followed by two others, in both of which there

there has been a marked decrease of expense, and I am confident that in that now commenced there will be a further diminution.

18. The high price of provisions at Aden must always raise the rate of each prisoner's subsistence above that of other gaols, and the necessity of maintaining a considerable guard to watch the prisoners in the present temporary building, as well as the perishable nature of the buildings themselves, which constantly require extensive repairs, tend to swell the gross expense.

19. But I think that the comparison exhibited between the gaol at Aden and those of other places is hardly a fair one; certainly it is not complete. It matters less that the expense is high if the earnings of the prisoners are in due proportion.

20. I have no means of knowing what amount is earned by prisoners in other gaols in the Bombay Presidency, and I do not allege that, in this respect, the Aden Gaol is superior to them; but I have before me the Report of the Inspector General of Gaols in the Lower Provinces of Bengal for 1859-60, and I find that out of the 54 gaols under his superintendence there is not one in which the prisoners' earnings approach the average of the Aden Gaol, and only one in which they exceed the half.

21. Nevertheless, making all due allowances for earnings, I am aware that the maintenance of prisoners in Aden must always be attended with considerably greater expense than elsewhere, owing mainly to the high price of provisions.

22. The following scale of prices charged by the Commissariat Department and by the gaol contractor will show how much higher both are than the Indian rates. I may mention that the Commissariat rates are lower this year than they have ever been before:—

	Per	Commissariat Rate.	Gaol Rate.
Curry stuff	28 lbs.	3 – –	3 – –
Dhall	,,	1 11 6	1 8 –
Flour, second sort	,,	1 14 3	1 8 –
Ghee, first sort	,,	6 10 –	5 – –
Oil, cocoanut	,,	6 7 –	4 – –
Salt	,,	– 3 –	– 4 –
Tamarind	,,	2 – –	1 12 –
Vegetables	,,	– – 6	– 1 6
Wood	784 lbs.	2 14 –	2 3 –
Cost of each prisoner per diem { Hard labour	– –	– 2 4·10	– 2 1·86
Cost of each prisoner per diem { Light labour	– –	– 1 11·32	– 1 –·10

23. Attached, marked D, is an account current of the municipal fund during the past year, and the following shows the receipts of the fund during each year since its institution in 1854:—

Years.	Receipts.			Years.	Receipts.		
	Rs.	*a.*	*p.*		*Rs.*	*a.*	*p.*
1854	8,564	3	2	1858	20,430	7	1
1855	13,529	5	4	1859	31,705	5	1
1856	23,334	1	8	1860	31,169	4	5
1857	23,053	8	2	1861	38,012	9	9

24. The aggregate of the receipt side during 1861 is *Rs.* 38,012. 9. 9., but from this the sum of *Rs.* 6,144. 1. 6. should be deducted, as that amount is an unusual item of receipt, being subscriptions realised on account of the new Civil hospital; with this deduction the amount exceeds that of last year by *Rs.* 699. 3. 10.

25. The new Civil hospital is ready for occupation: only one wing, however, with the out-houses, dispensary, and waiting hall, are finished: the remainder will be gradually completed as funds are available for that purpose.

26. A fine ancient reservoir above the Roman Catholic chapel has been cleaned out and repaired at an expense of *Rs.* 1,381. 7. 3.; this is quite unconnected with the system of tanks in the Taweela Valley.

27. The other items of disbursement require no explanation.

28. It is my pleasing duty to record that all the subordinates in the various departments under my control have discharged their duties entirely to my satisfaction.

I have, &c.

(Errors excepted.)

2 January 1862.

R. L. Playfair, Assistant Political Resident.

No. 1210 of 1862.—Judicial Department.

To the Political Resident at Aden.

Sir,

I AM directed by the Honourable the Governor in Council to acknowledge the receipt of Captain Playfair's letter of the 18th January last, No. 9, forwarding Judicial and Conservancy Returns of Aden for the year 1861, and to transmit to you copy of the Resolution passed by Government on the subject.

RESOLUTION.

His Excellency the Governor in Council finds some difficulty in reviewing these returns from a certain vagueness in the expressions used by Captain Playfair. In the 2d paragraph, for example, he refers to 545 cases tried during the year 1861, and in Statement A., No. 5, he gives 545 as the number apprehended during the year, referring apparently to the number of prisoners. In future reports the Political Resident should be requested to show, in the first place, the number of offences committed, or registered as having been committed during the year, dealing in a separate statement with the number of individuals apprehended, and the proportion of them acquitted or convicted.

A copy of the Report of the Commissioner of Police in the Southern Division, for the year 1860, together with the resolution passed on it, should be sent for the information and guidance of the Resident, as indicating the manner in which the information required by Government should be prepared.

The Honourable the Governor in Council highly approves of the Municipal Administration of Aden during the year.

Extracts from this Report of the paragraphs bearing on the prison discipline should be sent to the Inspector General of Prisons, with a request that he will favour Government with his opinion on the subject.

These proceedings should be reported to Her Majesty's Secretary of State for India in Council.

I have, &c.
(signed) *M. J. Shaw Stewart*,
Acting Secretary to Government.

Bombay Castle,
11 April 1862.

APPENDIX (H.)

GENERAL REPORT on the PRISONS of the BOMBAY PRESIDENCY for 1861.

(No. 691 of 1862.)

From the Inspector General of Prisons to the Acting Secretary to Government, Judicial Department, Bombay.

Sir,

IN submitting to Government the Annual Report of the gaols under the control of this office for the year ending on the 31st December 1861, I have the honour to state, in explanation of its meagre details, that I received charge of the duties of this office at a date subsequent to that with which the present report closes.

2. From the want of personal knowledge of the working of the department during the period under report, and in the absence of any recorded data from my immediate predecessor on the subject, I regret that it is not in my power to furnish more than the statistical information contained in the annexed Tabular Statements, together with extract copies of Reports from the Session Judges on the administration of the gaols under their charges, as well as from the Civil Surgeon's Sanitary Reports.

3. I consider that several of these Reports, especially those noted in the margin, are so able and display so much zeal and interest in the numerous subjects treated, that they would lose much of their value by being presented in the form of condensed summaries.

Poona.
Session Judge.
Civil Surgeon.

Dhoolia.
Session Judge.
Gaol Superintendent.
Civil Surgeon.

Ahmednuggur.
Assistant Session Judge.
Civil Surgeon.

Ahmedabad.
Session Judge.
Civil Surgeon.

Dharwar.
Civil Surgeon.

4. For future guidance, however, I await the instructions of Government on this point.

5. I have also appended to this Report an unfinished Memorandum styled in the Report for 1860 as Appendix J. This, I believe, was the last official document prepared by the late Dr. Ogilvie; it is for this reason, as well as for the valuable information it contains, that I have considered it advisable that it should not be omitted.

6. The death of the late Inspector General of Prisons would under ordinary circumstances have been a sad and serious blow to the department, to which he had devoted with so much zeal his rare talents and energies, but occurring at a time when he was gradually and against serious difficulties, but at the same time successfully, reforming the whole gaol administration of this Presidency, and bringing it into a condition of improved health, order and economy, the loss is doubly to be lamented.

 7. In

7. In carrying out the principle originated by this able officer, it will be my endeavour to complete, as far as in my power, the system which he advocated, and which it was his untiring purpose to bring to perfection.

8. The instructions laid down in Despatch No. 50, of the 24th December 1861, from the Right Honourable the Secretary of State for India, and received with your letter No. 622, of 18th February 1862, will be strictly followed out in the report for the current year, which it shall be my endeavour to submit with punctuality, the delay in the present instance having been caused by circumstances which shall in future be avoided.

9. Since receiving charge of this office on the 4th February last, I have had an opportunity of inspecting the gaols at Tanna, Poona, Dharwar, with the subsidiary gaol at Devekope and Rutnagherry; the latter and the Dharwar gaol not having been visited since 1857.

10. I need not at present enter into further details which legitimately belong to the report for the current year, but merely state that considerable reduction has since the beginning of the year been effected in gaol guards. At Tanna a reduction of three sentries, at Poona of three, at Dharwar of one, and at Rutnagherry two, have been recommended to be reduced.

11. There exists at the latter gaol the expensive anomaly of a gaol guard over 150 prisoners, being numerically the same as was before considered sufficient for the safe custody of 460 convicts.

12. In reference to paragraphs 36 and 37 of the Report for 1860, by the late Dr. Ogilvie, and the concluding paragraph of the Government resolution thereon, I have the honour respectfully to request that Government will be pleased to issue such instructions on the subject therein mooted as may clearly define the position of Civil Surgeons in relation to the Inspector General of Prisons.

I have, &c.
(signed) *C. G. Wiehe*, M.D.,
Inspector General of Prisons.

Inspector General of Prisons Office,
Camp Rutnagherry, 30 April 1862.

GENERAL REPORT.

THE total average criminal population distributed over the gaols of this Presidency, exclusive of those of Sind, the Political Agencies, Independent States, Jagheerdars, &c., during the year ending on the 31st December 1861, amounted to 3,286, the details of which are given in the subjoined table:—

No.	GAOLS.	Average Strength in 1860.	Average Strength in 1861.	Increase.	Decrease.
1	Poona	394	278	—	116
2	Ahmednuggur	231	240	9	—
3	Sholapoor	171	174	3	—
4	Dharwar	425	488	63	—
5	Rutnagherry	130	176	46	—
6	Sattara	288	169	—	119
7	Mahableshwur	24	10	—	14
8	Dholia	331	476	145	—
9	Tanna	648	431	—	217
10	Surat	101	136	35	—
11	Broach	69	51	—	18
12	Kaira	153	172	19	—
13	Ahmedabad	470	485	15	—
	TOTAL	3,435	3,286	335	484

2. These figures would appear to indicate a diminution of crime, the decrease in the number of prisoners being 149, as compared with the year 1860. But it must be borne in mind that, in addition to the exceptions specified in paragraph 1, the prisoners convicted by Mamlutdars, Foujdars, Mahalkuries, and undergoing sentence in district prisons or lock-ups, are not included in the above table.

3. Until the gaols indicated above be placed in relation with, and under the control of, this office, as is, I believe, the case in the divisions of the Presidency of Fort William, it is impossible that the statistical information furnished can be otherwise than partial and incomplete.

4. It would appear from Appendix A. that there has been an increase of juvenile committals to the number of 68, as compared with 1860. There is, however, a decrease of re-committals, as shown in Appendix B., the contrasted number being 14. This still leaves an increase of 54 under these two heads; but deducting this number from the total decrease for the year, there remains 95, which shows the real decrease in the number of prisoners in our goals during 1861.

5. The

5. The Poona and Ahmedabad Gaols exhibit the maximum of juvenile committals, as also of recommittals; while Dhoolia and Sholapoor are equally distinguished for the absence of either.

Sanitary Condition of the Gaols during 1861.

6. In Appendix C. are given in a tabulated form all admissions and deaths, during the year 1861, which have occurred in hospital. Cholera prevailed epidemically in but one of the gaols, viz. Dharwar: there were 116 cases, of which 60 proved fatal.

7. The disease, which had for some time been prevalent in the neighbourhood of the station, made its appearance on the 10th of June among the convicts from Rutnagherry, who had arrived the previous day, exhausted by exposure, fatigue, and irregular diet, as described by Dr. Mills, the Civil Surgeon, in his Gaol Sanitary Report, extracts from which are subjoined. The disease, which was of a virulent type, continued till the 5th of July—two cases only having occurred subsequently.

8. The total number of deaths in the gaols from all diseases amounts to 204, being a ratio to strength of 5·6, and, exclusive of cholera, of 3·9.—(*Vide* Note to Appendix C.)

9. These figures show a slightly increased ratio over that which obtained in 1860: if, however, we exclude 5 deaths from old age, 2 from leprosy, and 1 from gunshot wound (which occurred at Kaira, in a prisoner who attempted to escape), we have a rather more favourable result—viz., 5·3; exclusive of cholera, 3·7.

10. In order to show to what extent such diseases as atrophy, scurvy, diarrhœa, and dysentery prevail in our gaols—diseases which cripple our efforts at improvement, swell to a large extent the annual mortality, and considerably enhance the expenditure by the supply of extra rations, or the substitution of more expensive ones, and by the use of costly remedies in their treatment—I have subjoined a table as a supplement to Appendix C.

11. This table is useful, as showing at a glance in which particular gaol, and in what numbers, any of these dreaded diseases prevail. The Surat and Ahmednuggur Gaols stand at the head of the list, followed by Sholapoor, Tanna, Kaira, Ahmedabad, Dhoolia, Sattara, Dharwar, Poona, and Rutnagherry; the latter being, in respect to these particular diseases, the healthiest of the gaols, although it stands third on the list in Appendix C.—Sattara and Ahmedabad showing, inclusive of all diseases, the smallest rate of mortality.

12. The Surat Gaol exhibits the highest rate of mortality, exclusive of cholera, during the year, being an average of 14·0. The improved conservancy arrangements now in operation should have tended to a more favourable result; these, however, do not appear to have been at all neglected. The unhealthy nature of the season, and causes operating from without, viz., the locality in which the gaol stands, together with the unfavourable effect the transfer of the prisoners from the Broach Gaol seems to have produced on their health, are the chief causes of this large rate of mortality.

13. Next on the list in regard to high rate of mortality stands Dharwar, showing a ratio of 5·8, exclusive of cholera, and of 13·8, if we include the deaths from this disease, which showed itself in none of the other gaols. In this gaol were received many hopeless cases from the subsidiary gaol at Devekope up to the end of September last, which tended greatly to swell the mortality rates.

14. As the subsidiary gaols established at Devekope, Munmar, Patus-road, and Gogo are under experiment, it would have been very desirable to have supplied Government with a tabular statement similar to Appendix C. and its supplement; but I regret that, from the hospital returns from the two former gaols having been incorporated in the returns of the Dharwar and Dhoolia gaol hospitals up to October 1861, I am only enabled to supply the information for Devekope and Munmar from October to December inclusive.

15. The returns from the Patus-road and Gogo Field Gaols do not appear to have been forwarded to this office at all, nor does any record exist of their having been incorporated in other gaol returns. In order, however, to enable me to supply the information required for the current year, I would request that copies of the monthly and annual hospital returns from the Gogo and Patus-road gangs be directed to be regularly furnished to this office.

16. The only table, therefore, I am able to submit is one to include the admissions and deaths in the hospital of the Devekope and Munmar gangs—in the former from 1st October, and in the latter from the 15th September to 31st December 1861.

17. Although the mortality at Devekope from June to September last was excessive, 27 deaths having taken place, the majority from diarrhœa, yet it is satisfactory to note that during the three last months of the year not a single fatal case occurred.

18. Not so, however, at Munmar; six deaths occurred, five being from diarrhœa and dysentery, during the same period. The deaths antecedent to this cannot be ascertained from the Civil Surgeon's annual returns. In neither of these gaols has atrophy occurred, although scurvy has prevailed to some extent at Devekope, and diarrhœa at Munmar.

 19. The

19. The excessive mortality at Devekope previous to October last is, no doubt, attributable to the extremely ill-selected spot on which the prisoners' huts were erected. A small open space, fringed by jungle and surrounded on parts of three sides by hills, and faced by a large muddy or rapidly-drying tank, the advanced season of the year, the insufficient clothing, damp floors, malplacement of the prisoners at night, and constant exposure to rain and cold, were certainly a conglomeration of fertile sources of disease, such as are, happily, very seldom met with, and against the recurrence of which every possible measure of precaution should be adopted.

Cost of Gaol Guards.

20. The total cost of guarding our gaols during 1861 has been *Rs.* 98,278. 15. 1., against 1,28,769 rupees for 1860, showing a saving of *Rs.* 30,490. 0. 11. per annum, which is a rather more favourable result than anticipated by Dr. Ogilvie in the General Report for 1860.

21. Since the close of the year, however, still further reductions have taken place, and others are in contemplation, which will no doubt, in my next report, exhibit still further improvement in this hitherto extravagant item of gaol expenditure.

22. That more extended reductions are necessary, a reference to Appendix D. will clearly show. The gaols at Sattara, Rutnagherry, and Kaira there exhibit a remarkable, but very unfavourable, contrast to those of Dhoolia and Ahmedabad.

Cost of Gaol Establishment.

23. Equally with our gaol-guards did the gaol establishments call for heavy reductions. From *Rs.* 60,810. 6. at the beginning of the year 1860, they were reduced, by unremitting perseverance on the part of Dr. Ogilvie, and by willing co-operation on the part of the judges, during the same year, to *Rs.* 39,259. 6.; being an average cost per head of *Rs.* 17. 10. 1. at the commencement, and of *Rs.* 11. 6. 10. at the close of 1860.

24. The total cost during the period under report has amounted to *Rs.* 34,833. 3. 5., being a reduction of *Rs.* 25,977. 2. 7. since the beginning of 1860, and of *Rs.* 4,426. 2. 7. during the past year. This has chiefly been effected by the discharge of superfluous peons, and the substitution of convict labour for that of hired blacksmiths, barbers, methers, &c.

25. To render our establishments, however, thoroughly efficient—to put a stop to peculation, fraud, and breaches of gaol discipline—to ensure, if possible, the honesty and goodwill of our gaol-servants, it is absolutely necessary to give them a higher scale of pay, to place them more on an equality with the increased efficiency which will be exacted from them, as well as on a footing similar to other departments of the State.

26. A revised scale of salary, as directed by Government in their letter No. 838, of 8th March last, will shortly be submitted for gaolers, which it is intended shall also include all subordinate servants.

27. The "revised schemes" referred to in Dr. Ogilvie's last report are not, I regret to say, on the records of the office. The reasons adduced in paragraph 28 for delay in the re-organization of our gaol establishments appear to me to postpone the subject to so indefinite a period that I cannot concur in the views therein expressed.

28. The Judges are loud and earnest in their representations on the subject, and, in my opinion, the underpaid and inefficient condition generally of our gaol establishments, and gaol peons especially, call for an early remedy, and altogether without reference to the time when the Public Works Department of our gaols may be perfectly or permanently organized.

Provisioning.

29. The price of provisions having considerably increased during the last five, and especially during the last two years, we are prepared to find a corresponding increase in the cost of provisioning the convicts in our gaols. With strict economy, however, during the period under report, it will be seen from Appendix F. that there has been a slight decrease in the general average per head; but, owing no doubt to local circumstances, the Ahmednuggur, Ahmedabad, and Surat Gaols show a slight increase: the average for 1860 was *Rs.* 23. 9. 9., and that for 1861 *Rs.* 22. 3. 10. per head.

30. I have little doubt that, by uniform and rigid economy (as, for instance, in the quantity of fuel, which is included in the above charges, being decreased, in consequence of most of the prisoners' food being cooked in messes of not less than 25, and not more than 30, by the plan successfully adopted by Dr. James at Dhoolia, and described in his interesting report), as also by strict adherence to the system of giving hard-labour prisoners hard-labour rations only on the days when actually employed on such labour, that considerable reduction may still be effected.

31. By adopting also a graduated scale of hospital diet, which will afford no temptation to a prisoner to malinger, as is, I am afraid, now too often the case, the end in view may still further be obtained.

32. A uniform standard of diet for all the gaols will shortly be submitted for sanction, which, I trust, will be found to embrace all the points above alluded to.

33. The question of the merits of the contract and departmental systems of provisioning is still undecided, as far as this Presidency is concerned. This subject will demand fuller notice in a future report, when all the information which has been called for from the other Presidencies has been collected, and compared with that which has been supplied from our own gaols.

34. Those

34. Those noted in the margin adopt the departmental system, and deduce results from it favourable to Government; while the remainder uphold the contract system, as being more economical, and less open to peculation. Dhoolia. Sattara. Dharwar. Kaira. Sholapoor.

35. Local circumstances, and probably interests, affect materially the question at issue, and render cautious interference the more necessary.

36. The contingent charges for 1861 show a slight decrease as contrasted with those for the previous year, but the average is still not so low as in 1859. If we exclude, however, from the gross amount of *Rs.* 8,170. 14. 1., the sum expended on expensive articles which were indispensable, but the necessity for which is not periodical, and which in one gaol alone amounted to upwards of 400 rupees, the average is reduced from *Rs.* 2. 8. 6. in 1860 to *Rs.* 2. 1. 5. in 1861. Contingent Charges.

37. The average cost (*vide* Appendix H.) of clothing each prisoner during the last year was *Rs.* 2. 2.; this shows a difference over the previous year of 4 annas and 3 pies per head in favour of 1861, and is the lowest charge that has been recorded since 1857. Clothing Charges.

38. In some gaols, as Poona, Dhoolia, and Sholapoor, the average cost has been very small, and in the two former especially has it been so. In Poona each prisoner has not cost the State more than the very trifling sum of 9 annas and 4 pies, and in Dhoolia *Rs.* 1. 1. This saving has been entirely effected, as reported by the Judges, by abandoning, on the recommendations of Dr. Ogilvie, the old system of periodical supplies of clothing, and by substituting one of occasional distribution.

39. This mode will, I trust, now be introduced in all the gaols; and although it will entail more rigid attention and supervision on the part of the Judges and their subordinates, still I have no doubt that they will adopt it in a spirit of hearty co-operation.

40. I propose, with the sanction of Government, already solicited, to substitute a blanket-coat, at the commencement of the rains, for the cotton one in use—made so loose as not to hamper the movements of the shoulders and arms, and of such materials as I have no doubt will prove ultimately a great saving to Government, besides having the advantage of protecting those important viscera which are so prone to disease during the rains and cold season. By the adoption of this plan the second blanket supplied to some gaols will be dispensed with.

41. Appendix I. shows the amount of charges on account of petty repairs for the last five years. A considerable decrease is apparent for the past year, the charge per head being 5 annas 1 pie, against 10 annas and 6 pies during 1860, being a reduction of 5 annas and 5 pies per head—a result far more favourable than was anticipated by Dr. Ogilvie in his last report. Petty Repairs.

42. In consequence of regular Returns not having been supplied to this office during 1861, I am unable to give even an approximation to the actual charges incurred on account of gaol hospitals. Medical Charges.

43. It were better to exclude these charges altogether than create confusion by supplying inaccurate and untrustworthy data.

44. That these charges are amenable to considerable reductions there can be no question; and I trust that, during the current year, the civil surgeons will lend themselves earnestly to the work, and extend to me their earnest assistance and co-operation with this object.

45. I would beg to bring to the favourable notice of Government the services of the superintendent of the Dhoolia Gaol, Dr. James (the only civil surgeon who holds such an appointment), and to point out that by his exertions, aided by the sound advice and experience of Mr. Richardson, the session judge, the expenses of the Dhoolia Gaol have been reduced almost to a minimum, and great improvements introduced and successfully carried out in the various departments of the gaol.

46. Three gaols have been abolished during the year—viz., the Broach, Mahableshwur, and the Town Gaol of Tanna. The financial results of this measure have been very satisfactory, but the transfer of the prisoners from Broach to Surat has been attended with increase of sickness among the Broach prisoners.

47. Be the cause of this sickness what it may—the brackish water of Surat, or other causes yet, I believe, undecided—the transfer of these prisoners to the Ahmedabad or Rutnagherry Gaol becomes very advisable.

48. In connexion with the subsidiary gaol at Munmar, I am enabled to submit, in Appendix K., a summary of expenditure incurred during September, October, November, and December, in connexion with this gaol. I am indebted for this interesting information to Mr. Richardson, the Judge of Khandesh.

49. From this it will be seen that each prisoner costs Government 4 annas and 3 pies per diem. This appears to be exclusive of the salary of the superintending officer and the guard of the Bheel Corps. Were these items included, the average would probably be raised to 5 annas.

50. Computing the daily work performed by each convict at 2¾ annas, which is a maximum valuation, and in excess of the Government scale of two-thirds of the price of free-labour, there would still remain a debit of three annas per diem.

51. This subject will, however, be further illustrated when submitting the reports on the working of these subsidiary gaols, called for by Government after the lapse of one year from their organization.

52. As the dates on which these field-gangs were formed all vary, and as it will be necessary to fix a date for report, so as to include in it the results of the working of all the gaols, it is my intention, should Government so sanction, to submit a report on the 1st August, including all returns from the four gaols up to 11th May, the date corresponding with that on which the Patus gang was formed in 1861, and by which time the Devekope gang will have been transferred to the frontier.

53. This arrangement would give one year to the Patus, nearly eleven months to the Devekope, about eight months to the Munmar, and four months to the Gogo gang.

C. G. Wiehe, M.D., Inspector General of Prisons.

EXTRACT from REPORT of the Session Judge of Poona for the year 1861.

WITH reference to your Circular letter No. $\frac{1908}{141}$, dated the 6th December last, calling for a condensed history of the gaol under my charge for the year 1861, I have the honour to append herewith Returns, marginally noted, which I trust will supply the necessary information on the points enumerated in the list which accompanied your letter under reply.

1. Return of cost of provisions, &c.
2. Return of convict labour and of Gaol manufactures.
3. Ditto of juveniles.
4. Ditto of re-committals.
5. Ditto of average number of Prisoners in the Gaol.
6. Ditto of admissions in the Gaol.

The subjoined letter from the Civil Surgeon, No. 6, of the 17th ultimo, and its accompaniments, give details of sufficient prominence on all that relates to the important subject,—the health of the convicts during the year.

General Management and Discipline.

The number of cases in which punishments were inflicted for breach of prison discipline during the year 1861 was 77, whereas the number of similar cases in 1860 was only 45.

This result is recorded notwithstanding the removal from this gaol of most of the Chinese and Malay prisoners, who are comparatively difficult to manage, and it is ascribed, probably with some reason, to repeated changes in the office of gaoler during the year under review, arising from the difficulty of finding a person with the requisite qualifications for the office on account of the smallness of the salary.

Reduction of Expenditure.

Agreeably to the suggestions made by the late Inspector General of Prisons, a large saving has been effected in the various branches, such as maintenance, management, and custody of the gaol, the provisioning and clothing prisoners, and establishment, as will be seen from the figures stated below:—

	Rs. a. p.
Saving effected by permanent reduction in the number of gaol peons and of other menial servants - - - - - - - - - - - [A further reduction in the number of peons is practicable, but it cannot be carried out with safety until the isolation by railings of each of the radial wards, alluded to in my letter, No. 1305, dated 26th October 1861, is effected].	2,303 – 1
In 1860 the cost of guarding the prisoners amounted to *Rs.* 9,765, but in consequence of reduction in the number of sentries in 1861 the expenditure on this head was *Rs.* 7,524. 1. 2.; thus a saving has been effected under this head of - - - - - - - - - - -	2,240 14 10

The

	Rs.	a.	p.
The cost on account of the hospital establishment in 1860 was *Rs.* 612, whereas in the year under report it amounted to only *Rs.* 360. This diminution of charges arises from reductions in the establishment, and amounts to - - - - - - - - - - - - -	252	–	–
The charge on account of Contingencies in 1860 amounted to *Rs.* 1,321. 5. 9., while that of 1861 was *Rs.* 1,249. 13. 6., which shows a reduction in the latter year of - - - - - - - - - - - - -	71	8	3
TOTAL - - - *Rs.*	4,867	7	2

This reduced item is still susceptible of a further reduction for the following reasons:—

	Rs.	a.	p.
Expenses incurred on account of prisoners temporarily located in the Government Garden at Dapooree - - - - - - - - -	4	2	–
Ditto at Patus - - - - - - - - -	–	12	–
Value of Padlocks - - - - - - - - - - - -	422	–	–
Ditto of Dark Lanterns, and other articles of dead stock - - -	95	5	6
Rs.	522	3	6

As these charges are not of yearly occurrence, it is but fair to eliminate them from the item of *Rs.* 1,249. 13. 6., and when this is done the result would undoubtedly appear far more favourable, and would give an average of *Rs.* 2. 3. 8. per man, which is less by *Rs.* 1. 1. 11., as compared with the cost per man on this account in 1860.

Had not the cost of medicine, which used to be supplied up to 1860, and paid for by the Commissariat Department, been disbursed by the gaol in 1861, an actual saving of *Rs.* 107. 7. 3. would have been shown in the gaol contingencies, and a further reduction in the average cost per man.

The diminution in the Contingent charges in the year 1861 is, without regard to the new charge on account of medicine, mainly attributable to the following economical arrangements:—

The prohibition of lighting lamps in the gaol during moonlight nights.

The practice of providing prisoners with earthen pots (when broken through their negligence) from portions of their authorised rations, instead of charging them in a contingent bill, as before.

The strictest economy exercised in the prices paid for, and in the expenditure of, stationery.

Provisions.

The total expenditure on account of provisioning the prisoners in the Poona gaol in 1860 was *Rs.* 9,856. 11., and that in 1861 was *Rs.* 6,075. 7. 7. The average cost per man in 1860 was *Rs.* 25. 0. 3., and in 1861 *Rs.* 21. 3. 7. These averages show an apparent decrease, but, in fact, such was not the case. This decrease was caused by the transference of most of the Chinese and Malay prisoners, who are usually allowed, in greater or less proportions, opium, tobacco and mutton.

The charges on account of clothing purchased for prisoners in 1860 was *Rs.* 1,334. 1. 4., and the charge on the same account in 1861 was only *Rs.* 163. 6. 9. The great decrease perceptible under this head is chiefly attributable to two causes, viz.:—

I.—In 1860 a large number of kumlees was purchased to meet the demands of the whole of that year, but many of the prisoners having subsequently been transferred to other places, a large number of these articles remained on hand, and were utilized in 1861.

II.—The late Inspector General of Prisons, Dr. Ogilvie, prohibited the practice of supplying clothing to prisoners twice a year regularly, and restricted the issue of it to those prisoners only who absolutely required it, without reference to length of time.

The introduction of this system of supplying clothing has caused a considerable saving to the State without any inconvenience.

Petty Repairs.

The expense on this account in 1860 was *Rs.* 168. 6. 10., and that in 1861 was *Rs.* 17. 2. 3. The latter difference arises mainly from the expense of making eight doors for the store and cook rooms in the gaols in 1860.

The cost of ordinary repairs in the year 1860 was *Rs.* 379. 3. 2., and in the year just closed 665 rupees. The repairs during the former year were made departmentally, while in the latter they were executed by the Public Works Department.

Extract from the Sanitary Report of Dr. *J. G. Fraser*, Civil Surgeon of *Poona*, for the year 1861.

During the past year the average number of prisoners has been 270, and the number admitted into hospital 248; the number remaining in hospital at the end of last year was 12, making the total number under treatment during the year 260; of whom 238 have been discharged, three have been liberated, nine have died, and 10 remain in hospital.

The mortality has amounted to nine casualties from the following diseases:—Asthma, 1; enteritis, 2; acute dysentery, 2; chronic dysentery, 1; diarrhœa, 1; ulcers, 1; senectus, 1.

Of the diseases which have prevailed during the year, the most numerous have been guinea-worm, 43 cases having been under treatment, of which 40 were discharged, two were liberated, and one remain in hospital. This disease has been chiefly confined to new prisoners, but has not occurred among those who have been for any length of time in gaol. Although the cases were numerous, none of them presented any remarkable feature of peculiarity.

The next most numerous class of disease after guinea-worm has been fevers, of which there have been 35 cases of the intermittent quotidian type under treatment, and one case of remittent fever.

The cases of intermittent fever were most common during the wet monsoon season, and during the cold weather they were generally treated with quinine and other tonics, and readily yielded to the treatment adopted.

After fever the next most prevalent disease was diarrhœa, of which 31 cases have been treated in the hospital. This disease was almost entirely confined to the monsoon season—from June to October. The great fall of rain during last monsoon, being 26 inches and 60 cents. in excess of the average of previous years, may be presumed to have been the principal cause of the prevalence of this disease. One case terminated fatally.

Following the diseases in the frequency of their occurrence, we next come to dysentery, of which there have been 15 acute cases, and two chronic; two cases of acute and one of chronic dysentery have terminated fatally. The same remark regarding the excessive fall of rain, and the prolongation of the monsoon into the month of October, may be taken as a cause of the great prevalence of this disease. Several of those who have suffered from this disease had previously been under treatment for diarrhœa and fever.

Of diseases of the lungs and pleura, there have been 13 cases, seven of acute catairhus, five of asthma, and one of acute bronchitis; one case of asthma terminated fatally.

There have been a few cases of syphilis, rheumatism, and ophthalmia, and none of these diseases have prevailed to any great extent.

There have been 28 cases of phlegmœn and abscesses, and 20 cases of contusio, but they are all slight cases, the majority being cases of abrasion of the skin, in consequence of the rubbing of their fetters round the ankles.

It is satisfactory to observe the absence of scurvy and atrophia, or any of those diseases which are usually met with in ill-ventilated, badly drained, and over-crowded gaols.

The average number of daily sick has been 12·0, 10 males and two females:—

Per centage of treated to strength	96·3
Ditto - deaths to strength	3·3
Ditto - deaths to treated	3·4

Of the nine deaths which occurred, two were cases (one of dysentery and one of diarrhœa) which had been sent in from the gang detachment at Patus; and if these two cases are deducted from the number of deaths, the proportion will be—

Per centage of deaths to strength	2·5
Ditto - of deaths to treated	2·6

The greatest number of prisoners admitted into hospital, according to their duration of imprisonment, has been among those of less than three months imprisonment, but the greatest proportionate number according to their strength, has been among those of under 12 months.

The proportion of towns-people and others of sedentary habits who have been admitted into hospital has been more than double the proportion of those of jungle and wandering tribes. This is quite the reverse of what usually occurs when jungle or wandering tribes are committed to gaol, but the numbers of jungle tribes committed to the Poona Gaol during the past year are too few for the purpose of attaching value to the result of the proportion of their admissions into hospital, as compared with towns-people.

The greatest number of admissions according to the age of prisoners has been of those under 30 years, but the greatest proportionate number according to their strength has been of those under 20 years of age.

It is satisfactory to observe that there has been no case of cholera in the Poona Gaol during the year, and only one case of varicella, and one case of rubeola.

The vaccination of all unprotected prisoners has been carefully attended to on their first admission into the gaol.

Although only one case of scurvy appears as having been admitted into hospital, the disease has manifested itself in several instances in sponginess of the gums, &c., but these cases were immediately treated with extra vegetables and scorbutic mixture, without rendering their admission into hospital necessary, and the symptoms of the disease very soon disappeared.

The

The average strength of prisoners in the gaol during the past year has been considerably less than during many previous years. This is in consequence of the change in the mode of employing convicts introduced by the present Government, all able-bodied prisoners being employed under European officers as superintendents to construct roads throughout the Presidency.

Their employment in this way is an experiment, the result of which will, after a fair trial, be pronounced to be either a success or a failure in a financial point of view. On this point it does not form any part of my duty to express an opinion; but as regards the health of the prisoners employed on the construction of the roads, as compared with the health of those employed within the gaol, the experiment has been a failure, the sickness among the Patus gang having been much greater than among the prisoners in the Poona Gaol.

EXTRACT from REPORT of the Session Judge of Dhoolia for the year 1861.

In conformity with the request conveyed in your letter No. $\frac{1}{8}\frac{8}{2}\frac{1}{6}$, of the 6th December 1861, I have the honour to forward an original report from Dr. James, the superintendent of the gaol at Dhoolia, with accompaniments, and beg to add the following remarks:—

Sanitary Condition.

2. I beg to draw your attention to the improved sanitary condition of the gaol, contrasted with the Mortuary Returns for former years, which have been regularly reported to your predecessors. Omitting the leprous convict, who cannot be strictly termed a patient under treatment, and whose disease can be taken as a sequel of imprisonment, 12 convicts under treatment have died in the gaol during 1861, making the average number of deaths to the population of the gaol less than 2 per cent. Four convicts from the gang working at Munmar, died at Dhoolia between September and 31st December 1861, but they were all men from other gaols. Three other convicts died at Munmar who were neither under treatment by the civil surgeon of Dhoolia, nor under under his direct charge as superintendent. It is a fact much to be lamented that rather a heavy mortality, compared with the population, has marked the progress of the subsidiary gaol, and that in almost every instance the fatal cases have been among those not natives of Khandesh. I shall, however, leave the superintendent in some future report to explain the causes connected with the deaths among the convicts in the subsidiary gaol after the twelve months have elapsed, upon which the Secretary of State has called for reports. I shall remark elsewhere on the occupation of the convicts in the gaol at Dhoolia, and merely request your attention to the superintendent's remarks on the first heading of the report, and to observe that, prior to the detachment of 150 convicts from this gaol in September last, the superintendent had been in the habit of allowing the convicts employed in the industrial occupations of the factory to work for two hours every morning without the walls of the gaol; they were then conducted to the river to bathe, and on returning were allowed their principal morning meal at 11 a.m., between which hour and 1 p.m., I have invariably, since I have had charge of this gaol, directed that the convicts be allowed perfect rest and leisure; work being resumed at 1 p.m. till 4 p.m. in the short days, and till 5 p.m. from 1st February to 31st October. To forward the wishes of his Excellency Sir George Clerk, all the convicts have, during this year, been exercised for a few minutes before returning to work at 1 p.m., in "the extension movements," and in a few rounds in the largest ward at "the double," under the observation of overseers appointed from their own number.

Population of the gaol, 652.
Deaths from 1 Jan. to 31 Dec. 1861:
Daily average in hospital, 13.
Died, 7, from the gang at Munmar.
Total deaths, 20.
Population of the subsidiary gaol, from 1 September to 31 December 1861 407; and deaths, 7.

General Management and Discipline.

3. Since the introduction by Dr. Pelly in 1852 of industrial occupations, the silent system, to a certain degree, has been the rule of the establishment; and though I regret to observe that Dr. James appears to accept some relaxation of the rule as the necessary accompaniment of working in gangs, I can assure you that written orders to observe strict silence among the convicts at all hours, and to report any departure from the rule, are among the standing orders of the gaol, which are displayed on a board at the outer gateway and in the factory, and are read every Sunday morning to the convicts by the Nazir of the Court; and that, however Dr. James may be disposed to dispense with the silent system, I invariably punish either the peon or guard, or the convicts whenever I am aware that talking or disputing, or other breach of discipline, has been committed, and the peon has omitted immediately to inform the gaoler. I do not wish you to understand that the silent and separate system as observed at Winchester Gaol, or at Bridewell, or other reformatory criminal establishments in England, is either practicable or desirable at Dhoolia. The convicts' sleeping wards are not calculated to carry out the system, neither are the convicts of so refractory a temperament as to require such discipline. They are simply directed to abstain from talking among themselves or with the guard, and generally from speaking on any subject at all times; and the warders are directed to report any convict transgressing the rule. I have now had charge of the gaol for nearly eight years, and did not experience, even during the crisis of 1857, the slightest difficulty with any of the classes of offenders under my charge, nor on any occasion was any of them severely punished for breach of discipline, though, as the returns forwarded quarterly to you will

show, there were trivial punishments awarded for breach of the rule of silence; but by far the greater number are punished for neglect of task work, a system of tasks being assigned to every occupation in the indoor or outdoor employment, for the due completion of which by each convict the peon on guard over him is held responsible, and on his reporting the deficiency the convict is called on to explain or to suffer some slight punishment for neglect of duty; but I beg to be distinctly understood that no man is punished without being allowed to dictate his own explanation, and without a written order for the punishment, which, if that of stripes, is not executed till the civil surgeon has ascertained that the convict is in a state of health and able to undergo punishment of that description.

4. On the occasion of Dr. Ogilvie's visit, during December 1860, he remarked that the surface drainage was imperfect, and that covered drains should be converted into open water-courses, and that cisterns for the reception of the surface drainage and for the surplus washings at the wells, &c., &c., should be formed on three sides of the gaol. He suggested a variety of alterations in the precincts of the gaol, and, upon his recommendation, Government sanctioned a grant of 1,000 rupees, in a Letter No. 585, of 23d February 1861, for the purpose of carrying out the "dry method of disposing of the filth" of the gaol, &c. &c. This system has necessitated the building of four new *lieux d'aisance*, with roads of hard concrete material to conduct carts to the external orifices, under which iron vessels, half filled with fresh earth, are deposited twice a day by the conservancy gang; and I believe I can assure you that, except the blue washing of the out-walls of the gaol, all the suggestions of the Inspector General have been fully carried out entirely by convict labour, with the assistance of a hired bricklayer from the 2d to the 31st December 1861. The cisterns have been excavated, but not lined with masonry, from the want of funds and of skilled labour.

Provisioning Prisoners.

The contract system has been abolished in this gaol since 1st August 1856, and provisioning of the convicts is carried on departmentally. Former reports and returns made by me to your predecessors will show that the latter is the more advantageous to the State. I had instructed the Deputy Nazir in charge of the Subsidiary Gaol at Munmar in September, to continue the same system as obtains in the gaol, but I find that, under instructions from Captain Greig, the engineer officer, recourse was had to a contractor, and the result has been the heavy bills and high charges, which have been laid before you, for the last four months of the year under review, for which I trust you will not hold this department responsible, because, although the check exercised by the superintendent and myself is general, yet there are some times over which a special check is almost impossible, when the distance from Dhoolia to the Subsidiary Gaol is considered, and also that neither the Civil Surgeon nor the Session Judge have any assistant to whom their duties might be delegated during an occasional visit or residence near the Subsidiary Gaol. The practice of appending a price current for the month will, to some extent, obviate the temptation to overcharge, but nothing but continued and unexpected supervision can counteract the temptation to diminish the rations served out, but to maintain the prescribed quantity in the accounts. The convicts, when I visited them in November, complained loudly of the rations being insufficient; and, on a subsequent visit, Dr. James, having satisfied himself of the necessity for it, ordered parched gram to be given to the convicts during the hours preceding their 11 A.M. meal. I must acknowledge I was struck with the altered appearance of many of the convicts, with whose usually healthy and robust figures their long residence in the gaol had made me acquainted. All long term convicts had, till September, been occupied in the factory, and the Civil Surgeon, after a visit or two, agreed with me that the hard work, or deficiency of diet, had reduced the condition of almost all the convicts at Munmar. Subsequently Dr. James, after a recent visit, expressed himself satisfied with the result of the increased diet. I regret that Dr. James has not alluded to the Subsidiary Gaol, which is as much under his management, as Civil Surgeon, as under mine as Session Judge.

Munmar road, average cost per convict during four months, *Rs.*32. 6. 9.
Dhoolia gaol, average cost per convict during four months, *Rs.*18. 7. 3.

Vide Letter from Mr. Forbes, dated 1 October 1861.

Reduction of Expenditure.

6. With regard to the reduction of expenditure during the past year, the result on paper has rather a paradoxical appearance. There has been a very considerable reduction in military guards and in the gaol establishment, so that the State has been charged only 68 rupees to every 100 it was called to pay during 1860; but the number of convicts has decreased, as may be seen by the Tabular Statement in Appendix (C.) of the superintendent's report, so that for every 100 convicts guarded, clothed, and fed, during 1860, there were but 66 persons to maintain during 1861. The cost of all articles of food, and that of the chief breadstuffs, has increased from 35½ per cent., especially during 1861, upon the prices paid during 1860, so that we must accept with the advance of the day that each convict was dieted during 1859 for eight pies per diem, and cost the State, during 1860, nine pies; but during 1861 the State paid for each convict's board some trifling fraction below 11 pies per diem, and that sum is exclusive of medical charges, and the cost of attendance during sickness; and thus admit that the superintendent has effected a saving to the State in provisioning. The superintendent's report also shows that one man in every 50 passed one day in the hospital under treatment, the cost of which varied with his disease, and of the cost of which no other returns are on the record of this department,

During August 1860:—Rank and file, 42 per diem.
During December 1860:—Rank and file, 30 per diem,
During January 1861:—Rank and file, 30 per diem.
During December 1861:—Rank and file, 15 per diem.
During March 1862:—Rank and file. 12 per diem.
Increase in prices, more than one-third.
Increase in total cost of dieting each convict, less than one-fourth.

department, except the pay of the two medical attendants; and charges which, I perceive, have been debited to the Factory Accounts, in monthly sums vary from *Rs.* 1. 10. 10. in October to *Rs.* 8. 15. 4. in January 1861, and these expenses alone will add somewhat to the charges Dr. James has omitted in his Statement C., to Note Medical Charges and Petty Repairs. I am aware that during 1859 these petty repairs were, at the requisition of the Acting Judge, Mr. Forbes, made by the Engineer's Department, whose subordinates were, I am informed by a report from the Nazir, occupied from April to December 1859, at a cost estimated at *Rs.* 2,309. 14. 1., while during the year under review, exclusive of the amount of bills (contingent) from time to time submitted for audit upon charges made for the introduction of all the amendments directed by the late Dr. Ogilvie, there has been a small charge of *Rs.* 70. 14. for blue-washing the interior of the gaol during December 1861, which must be included in the year's expenditure, and therefore, though the cost of establishment and of guards has been reduced, as shown in the margin, each convict has cost the State *Rs.* 55. 5. 11. per annum, and the total charges amount to *Rs.* 12,239. 8. 9. for 1861. The expenditure has been, therefore, reduced 22 per cent. by substituting 12 rank and file for 42, and by allowing 20 peons instead of 36, the number allotted to the gaol establishment in September 1849 (Government Letter No. 3478, dated 5th September 1849), but owing to the increased prices of all articles of food and clothing, the cost of a convict has been increased from *Rs.* 44. 9. 8. during 1860 to *Rs.* 49. 15.* during 1861. How much the cost to the State has been decreased by earnings of convict labour will be shown under the appropriate heading.

GAOL ESTABLISHMENT.

1860.	*Rs.*	*a.*	*p.*	1861.	*Rs.*	*a.*	*p.*
1 Gaoler - -	45	0	0	1 Gaoler - -	45	0	0
2 Jemedars -	19	0	0	1 Jemedar -	9	8	0

MILITARY GUARD.

1860. Rank and File, *Rs.* 42 - 1861, Rank and File, *Rs.* 12.

Total gross charges for 1861, *Rs.* 12,239. 8. 9.

Total gross charges for 1860, *Rs.* 15,804. 10. 5.

* Or *Rs.* 55. 5. 11., including the Superintendent's pay.

Gaol Guard and its Cost.

7. There has been a marked decrease in the cost of this branch, not only in the number of sentries, but native officers have been diminished, and I have since January last, directed that convicts under sentence of solitary confinement shall be locked into the solitary cells without the hitherto observed precaution of indenting on the officer commanding at Dhoolia for an addition of three rank and file to guard the cell. If the cells cannot be rendered sufficiently secure to resist all efforts of the convict to effect his escape from within them, the construction of the gaol must be far more faulty than my experience leads me to believe.

8. The cost of the guard was, during 1860, 3,929 rupees, and has been reduced to 2,406 rupees during 1861, a saving to the State of six rupees per cent., the strength of the relative guards being noted in the margin.

Decreased cost of the Military Guard, *Rs.* 1,521 per annum.
Savings, 61¼ per cent.
Strength of the guard in March 1861, 12 rank and file.

During 1860:—In August, 42 rank and file per diem; and in December, Officers 3, rank and file 30, total 33.
During 1861:—Officers 3, rank and file 15, total 18.
During March 1862:—Rank and file 12.

Gaol Establishment.

9. During the last 12 months under review the establishment was reduced from 36 peons to 20 men; but the complement of four havildars and two jemadars was retained as absolutely required for the superintendence of the convicts, and for the maintenance of discipline, and for the various other duties in the gaol and garden; thus one jemadar superintends the provisioning and clothing departments, and has the stores kept in perfectly clear order, weighs out and distributes the daily rations as required; the other, until September, was engaged in the garden; one havildar is over the factory, and one over the conservancy gang and over the door, and the fourth directed the working of every gang engaged on the extramural improvements directed by your predecessor in the neighbourhood of the gaol.

From 1849 to 1860, inclusive:
1 Gaoler, 2 Barbers,
2 Jemadars, 2 Sweepers,
4 Havildars, 1 Smith.
36 Peons,

During 1860:
1 Gaoler, 20 Peons,
2 Jemadars, 2 Sweepers.
4 Havildars,

From September to 31 December 1861:
1 Gaoler, 10 Peons,
1 Jemadar, 2 Sweepers.
4 Havildars,

10. On the detachment of convicts being ordered, under Dr. Ogilvie's letter No. $\frac{1388}{61}$, of 17th August 1861, to be sent to the Munmar-road, I reduced the number of peons in the gaol to 10 men, 2 havildars, and 1 jemadar; and 2 sweepers are still retained, the monthly expenditure for gaol establishment being 119 rupees since September against 192 for the preceding eight months. On the permanent establishment, as sanctioned in 1849, a smith was allowed. He has been dispensed with since August 1860, and the two barbers were entertained among the 20 peons from the commencement of 1861, but when they refused to wear belts, or to employ themselves as peons, inasmuch as convicts had been by that time taught to perform the duty of barbers, and the occupation of the gaol servants was no longer required, I discharged them. The sweepers are absolutely necessary, or guards would be required to conduct the convicts, who compose the conservancy gang, to the filth pits on occasions when the gaol sweepers perform the duties required. The saving to Government on the gaol establishment during 1861 has been 49·85 decimals per cent. on the cost of the same establishment during 1860.

From January to August 1861, inclusive, 192 rupees per mensem.
From September to December, inclusive, 119 rupees per mensem.
Sweepers are indispensable for the hospital, and for night work.
Saving on permanent gaol establishment nearly 50 per cent. during 1861.

11. While I was absent in England during 1858, Government allowed an extra peon establishment of the strength noted in the margin for one year, and renewed the sanction in 1859 for another year; but I was enabled on my return (finding the inmates of the gaol diminished) to dispense with that establishment in 1859.

1 Jemadar *Rs.* 9
2 Havildars - 13
20 Peons - - 85
Rs. 107

12. Though I am aware of the necessity for reduction in every way, I trust you will admit that, if his Excellency the Governor is of opinion that 60 rupees per mensem should be allowed for the deputy gaoler, the pay of the gaoler at Dhoolia should be at least as much, or somewhat better than that of a deputy gaoler. The pay of the gaoler is only 45 rupees. I have been fortunate to secure the services of Mr. T. Bird, a man of some mechanical knowledge, who has had experience in the India Navy and on the railroad, and whose skill finds suitable employment in bringing forward every branch of the industrial occupations of the convicts, and to whose care and attention I am, to some extent, indebted for the extreme cleanliness and order which characterises the whole of the gaol establishment. You will, I trust, when you have inspected the gaol, coincide with the views I expressed in my letters No. $\frac{999}{102}$, dated 31st December 1861, and No. 195, dated 1st March 1862, and use your influence to obtain a revision of the rules of pay for the gaol establishment. Such increased pay upon a decreased strength, as I have shown, will effect a saving in the sum allowed to the gaol establishment at Dhoolia by the Secretary to Government's Letter of 5th September 1849, No. 3478.

Provisioning.

14. On this head, I have nothing to add to the superintendent's remarks, and his Appendix (C.), in columns 9 and 11, shows that the provisioning of the convicts has been at a higher rate during the past year than during any preceding period, but the annexed Table No. III. will show the rates at which the prices of the chief articles of food have risen. The provisioning is carried on departmentally, and has been found, from returns forwarded to your predecessors, to be attended with peculiar advantages in the cleanliness of the provisions, and, in some degree, in obtaining the due quantities at more favourable terms than under the contract system. The number of gaol servants among the able-bodied male convicts has been decreased, and the food is better prepared since Dr. James introduced the system of cooking by the females only. Two ovens have been built in the female ward. The diet table is appended to the superintendent's report, as (B).

Average per-centage of gaol servants during 1861, 10. 45 dec.

Clothing.

15. During the past year, the convicts have been supplied with warm clothing, &c., only renewed when the first issue was fairly worn out, instead of at stated periods, as formerly, by which, although each convict has a felt carpet to sleep on in addition to the native blankets, and a coarse cloth jacket during the cold weather, column 15 of the Superintendent's Appendix (C.) shows that a saving on each convict's clothes of a small fraction over 7 per cent. has been effected.

21. The extra mural labour has employed most of the convicts, and of these the labour of a daily average of 13·297 convicts has produced a net profit to the State of *Rs.* 1,102. 6. 1. to *Rs.* 84. 12. 9. per man. The result I calculate from the Tabular Statement I., in which it is shown that columns 8 and 9 represent the result of convict labour, after the deduction of all costs or outlay in column 4. I should add that this sum is made up of the value received from sales of produce, but that the cotton grown on the farm during the last season has been saw-ginned in the gaol at the rate of 250 lbs. per diem by five men's labour, and has been sent to Bombay to the care of Messrs. Nicol & Co., in order that those gentlemen may obtain the opinion of the Chamber of Commerce on the value of the staple, and then submit the quantity, 1,130 lbs., to sale, paying the sum realised into the Government treasury on account of the Dhoolia Gaol Convict Labour Fund, and, therefore, the value of that cotton has not been realised, and has been entered in Appendix (I.) by estimate. I may add that the quantity of cleaned cotton, though contrasting not unfavourably with the relative productive powers of land cultivated with indigenous cotton in Broach, Dharwar, or Khandesh, is still not a superior yield. The land is only third-class, and has been assessed at one uniform rate of 8 annas per beegha over the whole area. The statement in information contained in Table VII. will show the whole of the agricultural experiment by convict labour. You will observe the revenue authorities differ from Mr. Gray's survey as to the size of the area.

Gaol Manufacture.

Gross cost per convict, *Rs.* 49. 15. 0. exclusive of the Superintendent's salary. Inclusive of the Superintendent's salary, *Rs.* 55. 5. 11.

Gross cost to the State for 1861, *Rs.* 12,239. 9. 7.

Deduct the results of convict labour, &c., *Rs.* 7,009. 6. 3.

Net cost to the State of the gaol at Dhoolia, *Rs.* 5,230. 3. 4.

Net cost, per man, *Rs.* 23. 10. 7.

22. The superintendent's report shows that the result of convict labour in the gaol has been highly successful, as the net earnings of each man so employed averages 52 rupees and 11 pies per annum, to which the Table II. contrasts the cost of guarding, feeding, clothing, medical attendance, contingent bills, petty repairs to the gaol, on account of each man confined, amount, during 1861, to *Rs.* 49. 15.; and if the whole value of convict labour of every description, after deducting all outlay for materials, tools, and instruments, be deducted from the cost of guarding, feeding, &c. for the year under review, it will be seen that the cost of each convict in the Dhoolia gaol during 1861 has not exceeded the average of *Rs.* 23. 10. 7 per

per head; a rate which I trust you will be able to explain for the satisfaction of the Secretary of State for India, with reference to his letter No. 50 (Judicial), dated 24th December 1861, is a sum considerably less than *Rs.* 77. 15. 6, the average annual cost of convicts in the Bombay Presidency, but one which will bear comparison with the Bengal rate of 32 rupees 11 pies. I further request your attention to the printed returns of the gaols in the North Western Provinces, and to that of Jubbulpoor or Lullutpore, which shows the greatest amount of profit for the convict labour.

23. Contrasted with the returns for last year, the profits obtained from the convict labour show a higher productive power, though the result is not so favourable to the State. The sums are accurately reported by the Superintendent in his report. In 1860 the receipts exceeded the expenditure by *Rs.* 3,642. 12. 2., and the year had commenced with a cash balance of *Rs.* 170. 9. 2: while the year 1861 commenced with a cash balance of *Rs.* 3,812. 4. 6., the receipts only exceeded the expenditure by *Rs.* 157. 9. 10.; so that if the debits in the accounts of the gaol factory were correctly those for which the factory is liable, the true cash balance should have been *Rs.* 2,716. 2. The cash balance shown on 1st January 1862 was *Rs.* 3,960. 14. 4., from which it must be remembered that as much as *Rs.* 3,812. 4. 6. were in hand on 1st January 1861, and that amount was paid into the collector's treasury on 31st January 1862 on account of 1860; and therefore the net balance, *Rs.* 148. 9. 10. only was in hand on the 1st January 1862 for the transactions of 1861.

Vide App. VIII.

24. The manufactory has been extraordinarily active. Dr. James has, I am persuaded, given every branch his very vigilant attention, and the result from a daily average number of so few convicts as 67 men is evidently good. I believe from the official returns for 1859, the result of Dr. James' efforts in the factory will bear comparison with the best gaols in the North Western Provinces, Bengal, or the Saugor territories; and I trust that the decrease in the establishments, which has not been accompanied by one single escape, or attempted escape, during the 12 months under review, will meet with your approval.

EXTRACT from REPORT of Dr. *James*, Superintendent of the Gaol of *Dhoolia*, for the Year 1861.

I HAVE the honour to submit the followiug remarks on the working of the gaol and gaol factory during the past year, and trust the result will be considered satisfactory.

I would beg to bring to your recollection that by the transfer of all long-timed prisoners to work on the Munmar and Malligaum road during the latter end of September, the factory has been virtually stopped since that time, so that the returns of the factory itself, though they are considered to be for 12 months, are really only for eight, and even for these eight months the prisoners engaged in the factory were taken from their labour for two hours each day, and employed in out-door, as recommended by the late Inspector General of Prisons. These have been serious drawbacks; yet, notwithstanding all these, I am happy to say that the average earnings of each prisoner in the gaol factory and Government garden included, after paying all expenses, have been *Rs.* 52. 0. 10.—*Vide* Tabular Statement (A).—On referring to the returns of the gaol, North Western Provinces, for the year 1860, the last issued, I observe the gaol factory at Jubbulpoor is the only one that shows a large return of actual profits.

In this report I shall attempt to follow the instructions issued by the Acting Inspector General of Prisons, and comprise my remarks under the following heads:—

1. Sanitary condition of the gaol.
2. General management and discipline.
3. Reduction of expenditure.
4. Gaol guard and its cost.
5. Cost of establishment.
6. Contingent expenses.
7. Provisioning charges.
8. Clothing charges.
9. Petty repairs.
10. Medical charges.
11. Convict labour.
12. Gaol manufacture.

There will, however, be a difficulty in ascertaining No. 10, medical charges; for the only accurate information on this point can be obtained from the Principal Inspector General Medical Department, who must be applied to on the subject. As all my petty supplies, medical comforts, &c. are obtained directly through the nazir of the gaol, the cost can be at once determined, and will be included by me under this head:

Sanitary Condition of the Gaol.

There has been a decided improvement in the general health of the prisoners during the last year. There have been 339 admissions into hospital, and 13 deaths, out of a total population of 652. Of these 13 deaths, 12 occurred in hospital, and one suddenly at night, out of hospital. The prisoner, a leper, was sentenced to six months' imprisonment, with hard labour, but, owing to the nature of his disease, he never did a single day's hard work, and was supplied with a most liberal and generous diet. He died, as I have said, suddenly, just 10 days before his period of release.

The daily average of sick during the year was 13. This high rate was kept up by the numerous admissions from phlegmon and ulcers caused by the friction of the fetters. Every

 precaution

precaution was used, by softening the leather anklets in oil, to mitigate the evil, but the prisoners were frequently found to be without the anklets when at work, no doubt with the intention of causing sores, so as to enable them to gain admittance into hospital. No epidemic, I am glad to say, occurred amongst the prisoners.

General Management and Discipline.

The dry system of conservancy is now regularly introduced into this gaol; and, as the new *lieux d'aisance* are all completed and in working order, the slightest disagreeable odour is not to be perceived at any hour of the night or day.

The usual classification of the prisoners according to crime is rigorously attended to, and in each sleeping ward the best conducted prisoner has been selected as muccadum of the ward, and made answerable for its cleanliness, and any breach of prison discipline occurring amongst his associates is reported by him. His reward is simply removal of one or both fetters, and an extra allowance of either milk or mutton. Over these muccadums, again, I have two life-prisoners, Malays, who I have found, after long observation and trial, to be trustworthy. This system I have observed to answer most admirably; and as proof of its satisfactory working I have only to bring forward the fact, that, during the year, there has not been a single escape, or even an attempt at one. It is also more economical than a parcel of discontented, wretched, ill-paid peons.

From the construction of the gaol, and from the prisoners generally working in masses, the silent system, in its general acceptance of the word, cannot be strictly carried out, but any loud talking, singing, or quarrelling, is immediately checked by punishment.

The diet table used in this gaol is given in Appendix (B), and is in every way ample and sufficient: the quality of the food has also been good throughout the year, and I have never once been obliged to find fault with it. From the frequent complaints made by the prisoners of short allowance, which, after due investigation, was invariably traced to peculation by the cooks of messes, I devised a plan of cooking the food in an oven, and have eventually succeeded in getting the women to prepare all the food for the prisoners. This is appreciated by all, and there has not been the slightest objection made by any of them. Of course, the high-caste men are still permitted to cook for themselves, but the proportion is so small as hardly to be credited. The food, after being cooked by the females, is carried away by the peons in charge, and distributed to the male prisoners, and, consequently, I never now have a single complaint of short allowance on the score of economy. Also, I think that it is a plan that ought to be introduced in all gaols, as I find that the consumption of firewood is much less. Another indirect saving is in the number of cooks. Under the old system the allowance was, one man to every 25 or 50 prisoners, so that out of a strength of 330 prisoners there were 11 cooks. Calculating the value of labour of these at two annas each per diem, the cooking cost *Rs.* 1. 6. per diem, or *Rs.* 502. 4. per annum. For a similar number of prisoners by the oven and women cooking plan, three women are sufficient, and calculating the labour at the same price as a male, viz., two annas per diem it only costs *Rs.* 137. 4., thus showing a difference of 365 rupees. The construction of the oven is most original and simple, being only two sheets of iron, and cost about 5 rupees.

The prisoners are worked by task work, and I do not consider the amount fixed as likely to endanger their health or constitution.

Reduction of Expenditure.

In comparison with 1860, the expenditure on account of the keep of the prisoners during 1861 is most satisfactory, and only amounts to *Rs.* 9,920.10. 5., whilst, during 1860, it was *Rs.* 14,519. 10. The greatest reduction has been effected by diminishing the military guard and gaol establishment, as far as could safely be done.

The last year's expenditure includes the sum of 2,100 rupees, superintendent's pay 21 months, an allowance only last year sanctioned by Government. Appendix (C.) gives a tabular statement of the total expenditure under several heads, and the cost of each prisoner per annum.

The gaol guard, military, consisted at the beginning of the year of—

1 Jemadar.	3 Naiques.
2 Havildars.	27 Privates.

It has been gradually reduced to its present strength, viz.:—

1 Jemadar.	3 Naiques.
2 Havildars.	12 Privates.

at the cost of 2,406 rupees. The reduction in this guard was effected irrespective of the transfer of 150 of our convicts to Captain Greig's gang.

Permanent Gaol Establishment.

This cost during the past year 1,933 rupees, whilst for 1860 it was *Rs.* 3,898. 13. 2., thus showing a saving of *Rs.* 2,045. 13. 2., or more than the one-half. We have only two hired servants (sweepers) employed in this gaol at a cost of 102 rupees per annum, and I hardly think it possible to dispense with their services, as we seldom have any of this peculiar class of people in confinement as prisoners. Their pay, however, is included in that of the gaol establishment.

Contingent

Contingent Charges.

Owing to the high price of all bazaar supplies, the contingent charges show an increase of *Rs.* 34. –. 1. over 1860; for in 1860 there was expended on this account *Rs.* 684. 1. 6., whilst in 1861 it was *Rs.* 718. 1. 7. Every endeavour has been made to keep the expenditure of the several items as low as possible.

Provisioning Charges.

The total number of prisoners provisioned during the year was 652, at a cost of *Rs.* 4,612. 1. 5., being at the rate of 11 pies per head per diem, or *Rs.* 20. 14. 7. per head per annum, whilst during 1860 there were prisoners at a cost of *Rs.* 5,623. 15. 10., being at the rate of nine pies per head per diem, or *Rs.* 17. 1. 9. This increase must be attributed to the increase in the price of all articles of consumption, the difference ranging from 50 to 100 per cent. more this year than the last. The famine did not last year extend to the province of Khandesh, yet it was remarked by travellers from the North West Provinces who had to pass through Dhoolia on their way to Bombay, that the price they had to pay here for the necessaries of life was a very little less than they had to pay in the midst of the famine districts. Though surprising, it was nevertheless too true.

Clothing Charges.

There has been a decided decrease in the cost per prisoner; for during 1860 the sum expended on this item was *Rs.* 405. 11. 11., being at the rate of *Rs.* 1. 3. 6. per head per annum, whilst during 1861 it was only *Rs.* 250. 13. 11., or at the rate of *Rs.* 1. 2. 5. per head per annum. This great saving was effected by very simple means; viz., supplying the prisoners with new clothing only when the old ones were worn out by fair wear and tear. Previously new clothing was issued to every prisoner twice a year, irrespective of the condition of their clothes; and the prisoners knowing this would not take any trouble to make their clothes last any longer than the six months. An even greater saving than the above, I am sure, might be effected by distributing clothing made of stouter material, which will last two or even three seasons. The first cost will no doubt be slightly greater, but the greater length of time they may be supposed and would last would amply repay the first cost, and eventually prove more economical. During the last year warm woollen jackets made out of old blankets were distributed to each prisoner at the beginning of the rains, at the cost only of thread and convict labour in making up.

Petty Repairs.

None were executed during the past year.

Medical Charges.

As I have already remarked, the cost of the Europe medicines expended during the year in the treatment of the sick in hospital must be obtained from the Principal Inspector General Medical Department. The petty supplies and medical comforts cost during the year *Rs.* 111. 9. 3., being at the rate of eight annas three pies per annum. From January to July a first hospital assistant, at 30 rupees per mensem, was attached to the gaol, but since August there has been only a second hospital assistant, at 20 rupees per mensem. This gives a saving of 50 rupees for the five months, or 120 rupees for 12.

Convict Labour.

No out-door labour was allowed during the year, except that immediately connected with gaol matters. In June the land surrounding the gaol was made over to us by the collector, and steps were immediately taken to enclose the same, and the improvements and alterations suggested by the late Inspector General of Prisons, viz., surrounding the gaol with a 20 feet ditch, were commenced and carried on till September, when the prisoners were transferred to the Munmar and Malligaum road. On this same out-door work for the time being all short-termed prisoners were daily engaged.

Gaol Manufacture.

Appendix (D) is a tabular statement of the different kinds of manufactures undertaken in this gaol, the actual profit derived from each (after deducting the value of the raw material), and the amount gained by each prisoner per diem. This table will also show the returns in the factory for the years 1859, 1860, and 1861. During last year the average number of prisoners daily employed in the factory and Government garden was 80, or 36 per cent. of the total number in confinement in gaol, and they produced an actual profit of *Rs.* 3,487. 7. 3., or *Rs.* 52. –. 10. per head per annum. This must be acknowledged as satisfactory.

I must draw your attention to our having recommended the lithographic press, especially as the work has been undertaken by me without any extra-mural assistance, and shows a profit of *Rs.* 327. 11. 4., even after deducting 80 rupees, a sum paid on account of a debt outstanding against the press.

Garden.

The new garden made over to us by the collector, in June, contains 71 acres 39 rods; of which 23 acres, 17 rods, 12 poles, were planted in cotton; 13 acres, 39 rods, 8 poles, in grain; 3 acres, 1 rod, 8 poles, in tillee; and the remainder we were unable to bring under cultivation this year, owing to the season having been pretty far advanced before an operation could be commenced. The quality of the land was examined and classified by the Superintendent Revenue Survey, West Berar, who was in this station during the rains. His opinion was, that it was mostly third-class land. The only portion considered by him to be second-class, was a small bit of the triangle in front of the gaol. This was sown with wheat, but as no rain fell after the seed was in the ground, it never came up. Taking then all the land in the old and new gardens, 24 acres, 28 rods, and 4 poles, were planted in cotton. The produce was 4,008 lbs. of cotton in the seed. This will yield nearly 336 lbs. of wool, calculating, as is done in the bazaar, 13 wool, two-thirds seed. The real value of this has not as yet been realised, for we intend sending it to Bombay for sale, but it might be valued at *Rs.* 200. 10. 4. Altogether, 3 acres, 1 rod, 8 poles, were sown with tillee, and the amount realised from the sale of the produce, 202 seers, was *Rs.* 25. 4. 19 acres, 28 rods, 14½ poles, were sown with grain. The crop was sold in the ground, and realised by public auction 100 rupees.

The cost of enclosing the new gardens with their fences was *Rs.* 163. 4. 7., but as they are of a perishable nature, we intend gradually to substitute a cactus hedge.

The ground surrounding the collector's bungalow, was lent to us during the past year for cultivation, and from this we derived a sum of 75 rupees by the sale by public auction of the produce, jowaree.

The old Government garden has throughout the greater part of the year supplied the gaol with all the vegetables required for the use of the prisoners, except during the month of May and part of June, when all our labour and crops were lost from the failing of the water in the Paât. Even with this drawback we have been able to realise the sum of 4 annas 3 pies per prisoner per diem, or a total sum of *Rs.* 112. 6. 1.

EXTRACT from the SANITARY REPORT of Dr. *James*, M.D., Civil Surgeon of *Dhoolia*, for the Year 1861.

THE return for the last year will, I am sure, contrast favourably with that of 1860, and show a decided improvement in the general health of the prisoners.

During September, and since that period, all able-bodied convicts sentenced to three months' imprisonment and upwards, were ordered to be sent to work on the road between Munmar and Malligaum. This sudden exodus of nearly 150 has diminished the general average of convicts throughout the year, but it has in no way tended to diminish the number of our sick, for all the weak and sickly men were retained, and all bad cases have periodically been sent in here for further treatment; consequently, to judge this year of the health of the prisoners by the per-centage of treated to strength would not only lead to an erroneous conclusion, but would be altogether unjust. This, I think, will be easily rendered apparent, for the total number of prisoners admitted into gaol during the year has been 909, whilst the daily average has been 220, consequently, calculating the total number treated 35·3 by these two separately, there will be a difference of as 38·8 is to 160·4, a truly perceptible difference.

The health of the prisoners on admission into gaol, as recorded in the general register kept by me, shows a very great number to have been in a low cachectic state. This must be attributed to the prevalence of famine in the North West Provinces. Though the province of Khandesh itself was not visited by this scourge, yet the effects were felt here to an extent hardly to be credited, and the grain dealers raised their prices accordingly, under the impression that the famine would extend to this quarter, or that Government would be obliged to furnish supplies from here. The only alterations made in the gaol have been in the "*lieux d'aisance.*" These were formerly four in number—two on the east and two on the west side. The alvine and urine discharges passed through the wall to the outside down at an angle of 45 into a brick and mortar trench about 3½ feet deep. These trenches were emptied every morning by the semi-fluid contents being bailed out into pans, and carried to a dry nullah at a distance of 700 yards to the north-east of the gaol. From the construction of these trenches, it was impossible to clean them out thoroughly, and consequently a small quantity of decomposing matter was sure to be left, thus creating a most noxious smell, even immediately after the cleaning process; besides this, these having been in use since this gaol was originally built, the mortar has become so surcharged and impregnated with ammonia, that it was utterly impossible to eradicate the smell.

These have now altogether been removed, and the earth found to be contaminated for six feet beyond the trenches has been excavated; a platform of stone five feet nine inches has been raised on the outside; the seats in the inside have been similarly raised, and the evacuations are now received in iron pans, three-fourths filled with dry earth, placed on the outside platform. These are carried away every morning into the garden, and emptied into

into pits dug for the reception. Another alteration, or addition I should call it, has been effected in the sleeping wards. To the front of each, and extending half way up the iron railings, a strong taut curtain has been fixed; these are let down during the night, after the prisoners have been locked up, and rolled up during the day, so as not to impede free ventilation. This alteration might appear insignificant, and hardly worth notice in this report, but I attribute the very small number of admissions into hospital from rheumatic affections to this circumstance alone. With a due regard to the proper surveillance of the prisoners at night in their sleeping wards by the guards, prison architecture renders it requisite that the whole of the front part (or that part facing the centre guard-room) of the sleeping wards should be so constructed as to enable the sentry on duty at a glance to see every prisoner, and immediately detect any attempt at escape. To this end, strong iron railings are used: this necessarily exposes the occupants to draughts, and during the monsoon to damp by the beating of the rain, and they must and do suffer from diseases traced to and excited by these causes—inflammations, bowel complaints, rheumatism, &c. The simple addition then of these curtains, though they in no way interfere with the proper safety of the prisoners, adds materially to their comfort, and prevents all undue exposure to the changes of the season.

Since the alterations in the hospital and its privy, effected in the latter end of 1860, I have never been able to detect the slightest bad smell in it. It is always swept and clean. I think it, however, a duty I owe to my sick, to press earnestly upon you, for its due presentation to Government, the faulty position of the hospital, and the desirableness of having a new one built, more suited to our advanced ideas of the requirements of such a place, viz., its accommodation for males and females, proper ventilation, facility of removing effete matters, removal from all noise and excitement of the sick, &c.

There has been no alteration in the dieting of the prisoners. The system of alteration of wheat, bajree, and jowaree, as recommended by me, is still pursued, and I think with decided beneficial results. The women now cook for all the prisoners. I was induced to introduce this system not only on the score of economy, but on account of the careless way in which the men were in the habit of cooking the bread, and the frequent complaints made to me by the prisoners of the short weight of their rations. I have said careless way of cooking the food. This arose from ignorance, for how few natives, accustomed as they have been from earliest infancy to look to their women for the preparation of their food, can have any idea of how long a cake takes to bake, or able to judge of its being properly done, except by tasting it. Again, the good understanding often detected of one or two men in a mess with their cook ensures them a larger than by right supply, at the expense not of the cook himself but of the other members. No such underhand understanding can possibly take place with the women, for they have no intercourse with the male prisoners. The food when ready is taken away by the peons under a havildar, and distributed to the male prisoners. The food is also now properly cooked at two-thirds of the expense for firewood, and I never now hear even a murmur of light bread.

EXTRACT from REPORT of the Assistant Session Judge of *Ahmednuggur* for the Year 1861.

IN the absence of the judge on circuit, I have the honour to acknowledge the receipt of your predecessor's letter No. $\frac{1909}{85}$, of the 6th December last, and, in accordance with it, to submit as follows a condensed history of the Nuggur gaol during the past year:—

	Males.	Females.	Total.
The total number of prisoners tried and untried remaining on the 31st December 1860 in this gaol was - - -	214	25	239
Admitted during 1861 - - - - - - - -	376	35	411
Total number in confinement during 1861 - - - -	590	60	650
Discharged, died, executed, transferred, &c. - - -	495	37	532
Remaining on the 31st December 1861 - - - -	95	23	118

A great quantity of chunam was formerly required for whitewashing the gaol. This item of expense has been almost done away with by the substitution of white earth for chunam.

At present the ceilings only are whitewashed with chunam. No expense is incurred on account of the earth, as the prisoners are employed in getting it. The white earth answers in most respects the purpose of chunam. Similarly, the gaol privies and drains are whitewashed with the earth.

In accordance with the late Dr. Ogilvie's recommendation, earth naunds, filled with earth and ashes, for urinary requirements and for cook-room refuse, as well as wheeled

trucks with iron vessels for removing the filth of the gaol to the garden, have been provided since December 1860.

The removal of the piece of wall which joined the end of the farthest of the new barracks to the wall of the gaol, and of the privy in the solitary cell yards, which was never used even if there were prisoners in the solitary cells, has admitted more light and fresh air, and has given the sentries a clear view, which before was intercepted. It has also much added to the cleanliness of the yard.

Much improvement has been made in the management of the gaol by the introduction from the 1st July last of the following books, kept in accordance with the late Inspector General of Prisons' letter, No. $\frac{753}{32}$, of the 20th May last:—

1. A General Visitor's Book.
2. An Official Visitor's Book.
3. A Gaol Minute Book.
4. A Contingent Expenditure Sanction Book.
5. Book of Indents for Articles required by the Civil Surgeon.
6. Punishment Book.

General Management and Discipline.

In accordance with the Chief Secretary's letter, No. 943, of 14th March 1861, to the Inspector General of Prisons, a copy of which was forwarded to the judge, the convicts have been employed on public works out of doors. The result of this has been that the silent system cannot on such work be carried out as rigidly as in the case of in-door and sedentary occupations. On the other hand, the convicts, as recommended in the above letter, receive benefit from exposure to the fresh air, of which they were before deprived by in-door occupation; and the labour exacted from them being more severe than the in-door work, is better calculated to impress them with a salutary dread of the hardship of prison life, and to deter them from incurring it again by fresh offences. On the whole the practice is, I think, decidedly advantageous.

The practice of giving rice once a week has since (except in the case of those prisoners who have before entering the gaol been accustomed to it) been discontinued, and has effected a saving to Government of 200 rupees per annum.

The services of the following members of the stipendiary staff of the gaol have been dispensed with, and in their stead the prisoners are now employed:—

1 Barber, from 1st June 1861.
1 Mussal, from 1st June 1861.
1 Blacksmith, from 1st May 1861.
4 Sweepers, from 1st July 1861.
1 Deputy Gaoler, from 1st June 1861.

In consequence of the abolition of the deputy gaoler's place, the present gaoler is obliged to be always present in the gaol. It might be much better and more convenient if Government were to supply him with a lodging near the gaol, as is the practice in other zillahs.

The sentry behind the hospital was taken off on the 5th May 1860, and the platform and the sentry-box removed to the corner of the work-shed yard. Formerly there were 11 guards, three of which were, after consultation with the Superintendent of Police, reduced on the dates noted in the margin, effecting a saving to Government without detriment to the security of the gaol.

29 June and 16 July 1861.

The giving of oil from Government for the hair of the female convicts was discontinued from 6th May 1861 with advantage, and they are allowed to get it in exchange for some articles of their food.

The extra allowance to Chinese convicts, such as opium, tobacco, fish, and mutton, has encouraged them in performing their conservancy duties, and also the garden work, satisfactorily.

The system of appointing "lumberdars" has been introduced in this zillah since 24th July last, and it has answered well with regard to the internal regulation of the gaol. These lumberdars are selected from among long-term convicts. They wear distinctive striped marks on their right arms. Their fetters are knocked off, the ankle ring only being retained. This method of selecting overseers from among the convicts has contributed much to the general management of the gaol, and rendered it an object with the convicts to obtain by good conduct the position of "lumberdar."

The instructions contained in the late Inspector General of Prisons, letter, No. $\frac{1383}{514}$, dated 9th August 1861, directing the prisoners to be regularly marched about their wards and put through the extension movements, have been fully carried out. This practice is undoubtedly highly conducive to the health of the prisoners.

The night soil and the cook-room refuse were formerly thrown away out of the city, but are now removed to the garden as manure.

A reduction has been effected in the cost of clothing supplied to the prisoner, since dhoturs and punchas have been disallowed from 4th June 1861 to the higher caste prisoners.

An item in the funeral expenses of prisoners of furnishing a new piece of cloth to cover the corpse of a prisoner dying in the gaol has been reduced since 9th September 1861, and in its stead an old useless piece of cloth is provided for the purpose.

The

The room over the gaol gate, formerly occupied by the guard, is now used as a fetter godown; the fetters not in use being cleaned, greased, and hanged upon the walls. A room has been erected outside the gaol for the guard.

By reverting to the old system of provisioning the convicts by contract, much unnecessary time and trouble have been saved.

The system of suspending black net bags, filled with charcoal, has also been introduced since November last.

Reduction of Expenditure.

The following is a List of Reduction of Expenditure effected in this Gaol, viz. :—

No.	Description.	Monthly Expenditure.	
		Rs. a. p.	*Rs. a. p.*
1	Deputy gaoler	26 – –	
1	By the transfer of the first hospital assistant employed on the gaol hospital	10 – –	
1	Blacksmith	15 – –	
1	Mussaul	4 4 –	
1	Barber	4 4 –	
2	Sweepers, each at *Rs.* 4. 4. per month	8 8 –	
2	Sweepers, at 4 rupees per month	8 – –	
1	Karkhana carkoon	13 – –	
18	Peons, sepoys from the gaol guard, each at *Rs.* 6. 8. per month	117 – –	
	TOTAL *Rs.*	206 – –	
	Or, per Annum		2,472 – –
	On account of the following items being disallowed, there will be a saving per annum to the extent of—		
	Cocoa-nut oil	25 – –	
	Chunam	84 – –	
	Dhoturs and punchas	36 – –	
	Cloth for covering the dead bodies of prisoners	5 – –	
	Rice	200 – –	
			350 – –
	TOTAL Amount of Savings effected per Annum *Rs.*		2,822 – –
	Cost of establishment during the last year (exclusive of that of the gaol guard) was	2,066 8 –	
	Contingent charges	462 10 1	
	Provisioning charges	5,042 – 2	
	Clothing charges	563 3 6	
	Petty repairs	194 – 10	
	Convict labour	2,367 9 8	
	Gaol manufacture	2,886 13 11	

Sanitary Report.

The annual sanitary report of the criminal gaol and gaol hospital for last year, furnished by the Acting Civil Surgeon, will shortly be submitted, having been detained by the Session Judge for the purpose of making a minute on it. On its arrival, I would beg to draw your attention especially to the remarks made by the Acting Civil Surgeon in paragraph 5 (clothing), and to his account of the outbreak of dysentery. It will be seen that he attributes the prevalence of this complaint in great part to the insufficient supply of clothing for the prisoners, and the consequent effect of the damp weather on them.

In December last, the gaol was visited by Dr. Stovell, Deputy Inspector General of Hospitals, who recorded his opinion in the official visitor's book that the Acting Civil Surgeon was right in attributing the amount of zymotic diseases during the monsoon months (which were unusually wet in 1861) to the want of sufficient clothing during that period, and added a suggestion that a more ample supply of clothing should be issued next monsoon.

The insufficiency of the prisoners' clothing was brought under my own notice when in charge of the Tanna gaol a few months ago, and is likely to be more strongly felt here, where, although the annual rainfall, and consequent damp, is much less, the change is more marked, from the extreme dryness of the fair months above, and so far from, the Ghauts.

The Acting Civil Surgeon states that he addressed the late Dr. Ogilvie on the subject, who informed him that, although he had on several occasions urged on Government the importance of additional clothing for the prisoners, no sanction had as yet been obtained, or any further allowance.

I would therefore suggest that the attention of Government should again be drawn to the subject, on the score of economy as much as that of humanity, that there may be time for providing an effectual remedy before next rainy season, as the supply of old and partially worn blankets, described by the Acting Civil Surgeon in the conclusion of his 5th paragraph, is obviously only a temporary and inadequate expedient.

I beg to annex an extract from the statement received from the Superintendent of Police, showing the detail and cost of the police guards over the gaol, viz:—

Gaol Guard.

	Per Month.			Per Annum.		
	Rs.	*a.*	*p.*	*Rs.*	*a.*	*p.*
2 Subedars, at 30 rupees each	60	–	–	720	–	–
4 Havildars, at 10 rupees each	40	–	–	480	–	–
6 Naiques, at 8 rupees each	48	–	–	576	–	–
29 Sepoys, at 6½ rupees each	188	8	–	2,262	–	–
29 Sepoys, at 5½ rupees each	159	8	–	1,914	–	–
2 Drummers, at 6½ rupees each	13	–	–	156	–	–
2 Bheestees, at 7 rupees each	14	–	–	168	–	–
TOTAL Cost - - - *Rs.*	523	–	–	6,276	–	–

1 Punishment awarded for breaches of prison discipline.
1 Return of juveniles.
1 Return showing the number of prisoners re-committed to the gaol.
1 Annual return of employment of convicts.
1 Statement showing the provisioning, contingent, clothing, and other charges.
1 Statement showing the sick prisoners in the gaol.

The usual statements noted in the margin are also herewith forwarded. No fines were inflicted on the gaol establishment during the year under report.

EXTRACT from the SANITARY REPORT of Dr. *H. Cook*, M.D., Civil Surgeon of *Ahmednuggur*, for the Year 1861.

The heads of the following report are arranged in the order specified in Medical Board's Circular, No. 1,760, of 1856, thus:—

1. Topography, nature of the climate, &c.
2. Position of gaol.
3. Diet.
4. Employment.
5. Clothing.
6. Transfer.
7. Remarks as to the principal classes of diseases, &c.

The topographical description of the station has been fully dwelt on in former reports. As the gaol, however, is situated within the walls of the town, and the health of the two are thus intimately connected, I shall briefly describe the present condition of the town and the character of the sanitary improvements which have been and are now being carried out.

The

The town (situated in latitude 19° 6 N., longitude 74° 46'E.) lies in a broad valley, between two low ranges of hills of trap rock, and on the trunk road which runs from Poona to Aurungabad, Mhow, and the north-east. It is thus in the direct route of the cotton traffic, and thousands of carts pass through and round it annually. They halt for the night, to the extent of several hundreds in the height of the season, outside the southern gate of the city, thus adding a floating population of considerable amount to that set down in the census.

A branch of the river, the Sina, runs round the south-west side, which is the lowest quarter of the town, and that in which the gaol is situated. During the cold weather, and the cold nights of the wet season, a fog very commonly rises and covers this portion of the city. During the hot season the river is usually dry. The town is walled in, and has nine gates. By four of these only is grain allowed to be brought in, and at these peons are stationed to collect the municipal tax. The south-west and south-east quarters are thickly studded with the ruins of old Mahomedan buildings, mosques, and caravansaries, which do not increase the salubrity of the district. It is said that there are, or were a few years ago, upwards of 300 of these ruins. The city is most plentifully supplied with water of the purest character from a series of fountains and tanks, said to be 365 in number. The water is brought in from the neighbouring hills by aqueducts, the bountiful provision of the past Mahomedan rulers of the country.

The Municipal Commission has been established for seven years, and has already done much good. This has been chiefly effected in laying down and keeping in thorough repair first-rate roads in every direction through the city, and in commencing a system of drainage, the principal lines of which are now just being brought to a close. On the occasion of building any new houses, oatas, walls, necessaries, &c., the inhabitants are obliged to refer the matter to the Municipal Commission, who take advantage of the opportunity to widen thoroughfares, improve drainage, and insist on a properly substantial style of building.

The improvements I am hopeful of carrying out (as a member of the Commission) are the following:—

More exactitude in the cleanliness of compounds, lanes, and public places; the establishment of a series of "necessary places" in the vicinity of the market, and in other crowded spots; the paving of the bottom of drains, carrying off waste water from the multitudinous washing places; the extension of the system of drainage to lanes and courts, and eventually to the reformation of the market-place.

The city of Ahmednuggur is estimated to contain about 35,000 inhabitants. In the past year 874 deaths have taken place, irrespective of those registered in the various hospitals. Of these, 235 were adult males, 168 adult females, 204 girls, and 267 boys. The majority of these deaths were due to zymotic disease, and therefore, in all probability, capable of being to a very great extent averted by sanitary measures on a proper scale. The return from which I have obtained these data is formed by the foujdar; but as a large proportion of the names of the diseases are put down by guess, and are not under medical surveillance, there is, of course, no very great exactitude.

Amongst the deaths not attributable to zymotic influence are the following:—

Old age 92, labour 13, miscarriage 1, suicide 2, drowning 1.

The proportion of deaths per thousand is thus about 24·10, that of England being 21·73, and the estimated death-rate of the Fort of Bombay being, I believe, 14 per 1,000.

The gaol is immediately surrounded by streets, but towards the west-south-west the quarter is more open, and a large space is filled up by the gaol gardens. These gardens were established by Mr. Woodcock, a late judge, and in his time attained a high degree of culture, but have since fallen into decay. Mr. Harrison (the present, judge) has, however, lately handed them over to me; and I am hopeful that in a short time they will be brought again into a proper state of order, and prove of much advantage to the inhabitants of the gaol in affording a full supply of the best vegetable food, and tending to purify the air in the neighbourhood, as all belts of trees and well cultivated foliage undoubtedly tend to do.

The climatic character of the year, though resembling of course more or less exactly that of every year, presents in its variations and peculiarities matter for explanation of the unusually heavy amount of sickness and death-rate of the past year. A thorough know ledge of climate lies at the basis of all study of the laws of Hygiene. I have therefore, while preserving the necessarily meagre meteorological registers kept at the various hospitals, prepared tables of the register kept by myself with a larger (though, unfortunately, not yet large enough) set of meteorological instruments. These tables I now subjoin. As they were only commenced in May, soon after my taking charge, they are of course incomplete, but they still embrace the most sickly, and therefore most important period of the year.—*Vide* Tables, Nos. 1 and 2.

Scale of Ozone, from 1—10. Scale of Sunshine, 1—10.

No. 3.

THE following is the METEOROLOGICAL REGISTER kept at the Gaol Hospital:—

Months.	Diseases Prevailing.	Maximum.	Medium.	Minimum.	Inches.	Cents.	Wind.
January -	Fevers - - - -	83·	64·	46·	–	96	N. and NE.
February -	Ditto - - - -	96·	74·	53·	–	—	Do. do.
March -	Ditto - - - -	100·	76·	53·	–	5	Do. do.
April -	Ditto - - - -	109·	90·	71·	–	2	Do. do.
May -	Ditto - - - -	100·	87·	74·	3	83	W. and SW.
June -	Ditto and bowel affections	89·	80·	72·	7	79	Milder than last.
July -	Ditto - ditto - -	86·	79·	73·	4	40	S. and SW.
August -	Ditto - ditto - -	92·	82·	73·	8	4	Do. do.
September	Ditto - ditto - -	89·	81·	72·	7	67	N. and NW.
October -	Ditto - ditto - -	89·	80·	71·	3	70	NW and W.
November	Ditto - ditto - -	87·	70·	53·	–	—	N. and NE.
December	Fevers - - -	86·	67·	49·	–	—	NNW., NE.
	Mean - - -	92·	77·	63·	36 Total	46	

From this it will be seen that the thermometer ranges from 109° maximum in the month of April, to 46° minimum in the month of January; the average mean temperature throughout the year being 77°, the average maximum 92°, and average minimum 63°.

The total fall of rain was 36 inches 46 cents, or about 11 inches (about 60 per cent.) above the average of the past 14 years; and in this, I feel assured, lies the exciting cause of the great amount of sickness and the high death-rate of the year. In support of this statement, I have had the following table drawn up, showing the percentage of deaths to strength, and the fall of rain for the past 11 years, during the six months when the bulk of the rainfall occurs, omitting the occasional showers falling at other periods, which do not influence the humidity of the atmosphere to a sufficient extent to cause any effect on health:—

	1851.	1852.	1853.	1854.	1855.	1856.	1857.	1858.	1859.	1860.	1861.
Percentage of deaths to strength.	6·3	3·	2·3	3·	2·3	3·8	8·3	3·5	5·6	3·4	6·6
Fall of rain during the months from May to October, inclusive.	28·5	32·4	11·5	16·1	14·5	17·6	32·4	27·8	24·1	27·5	35·5

Thus it is seen that in the years 1851, 1857, and 1861, there was the heaviest fall of rain, and the greatest amount of humidity of atmosphere; and in these years the death-rate preponderated. Then, again, in the years 1853, 1854, 1855, and 1856, occurred the lightest fall of rain and the least death-rate.

It is true there are some exceptions in the table. The year 1852 is an especially marked one, and those of 1858 and 1860 are exceptions to the rule to a certain extent; still I believe, had I time or means more fully to investigate the climatic character of these years, these apparent contradictions could be cleared away. They depend, probably, on some unusual extent of deficiency or excess in ozone or sunshine. I would now draw attention to my tables of meteorology (Nos. 1 and 2), and especially to the weekly summary; and as the two subjects are so closely connected, I shall also, at the same time, contrast the amount of sickness which has occurred during the year, and call attention to the principal classes of diseases which has occasioned it. In thus departing somewhat from the exact order laid down in the Board's circular quoted at the commencement of this report, I hope that the close connexion of the two subjects will be a sufficient excuse.

The great preponderance of sickness and deaths during the year has been occasioned by zymotic diseases, and of these especially dysentery and diarrhœa. Now, zymotic agency is excited and fostered in two ways—from without and from within: in the first place from vitiation of the air by overcrowding, bad ventilation, and bad drainage, and from bad water, bad food, and insufficient clothing; and in the second place from the repression or non-removal of various excretions, and particularly those of the skin, whereby certain noxious excreta seeking elimination are thrown back into the circulation, and it is in this latter instance that the influence of atmospheric causes comes into play. Whenever, as in the present instance, no great fault can be found with the arrangements which supply good air, good food, and clothing, we must necessarily look to the one other and more universal cause. In the table before us, besides the usual registration (which is carried on in all hospitals) of the variations of temperature, I have sought to point out the changes in the amount of moisture, ozone, and sunshine. Electricity, unfortunately, I have had no means of measuring. These five influences together make the character of climate.

In the month of June and the four following ones, these, either in excess or defect, were the most prominent, and during this period nine-tenths of the deaths from zymotic disease took place.

In May the atmosphere was very dry, but becoming less so towards its close:—3·83 inches of rain fell; there was an average of 2·12 of ozone, and 5·6 of sunshine; no death from zymotic disease. In June the atmosphere had become damp, there being only from 4 to 8 degrees of mean difference between the dry and wet-bulb thermometers: 7·79 of rain fell; ozone averaged 2·9, and sunshine 2·5. In July the atmosphere was very damp, 3° between the wet and dry bulbs being the greatest mean difference: ozone averaged 4·1, and sunshine 0·7; there were four deaths. August had the same extreme humidity, with an average of 2·9 of ozone and 1·0 of sunshine: eight inches of rain fell; there were three deaths. In September there was an improvement, in there being less moisture and more sunshine, with an increase of ozone over the previous month: 7·67 of rain fell, and there were two deaths. In October the improvement continued; there was an average of from 4′ to 6′ between the means of dry and wet bulbs: 3·70 only of rain fell; ozone increased to 3·4 and sunshine to 4·6; there were two deaths. During November and December the atmosphere regained its dryness, and there was a full amount of sunshine. There was one death in each month: both cases had suffered severely in the earlier months.

Ozone.—This is not, perhaps, the place to discuss fully the nature and importance of this element. I fear my register is the only one kept on this side of India, and from a solitary instance

instance but little definite good can be obtained, or trustworthy data compiled. I would, however, earnestly recommend that every civil station should be supplied with an ozonometer, and a series of observations instituted. Its phenomena are yet unsolved problems in Europe, and surely no country in the world can afford so wide and varied a field of observation as India! In a paper published in the Medical and Physical Transactions for 1859, I advanced a theory that ozone in a concentrated form was the active agent of the simoom. This, I believe, has been generally received, or at least has not been combated. That it is without doubt Nature's universal disinfectant, and purifier of the atmosphere, is considered a settled question. That by ascertaining its amount in the atmosphere a measure of the relative purity of the air can be obtained, is probably one of the most useful of the facts connected with it. In a short series of observations which I have made in this direction, I have arrived at the following data:—

In the large hospital ward, upper-storied and well ventilated, when from the fewness of patients 5,000 cubic feet of air was allowed to each, there was hardly a perceptible loss of ozone.

In a ward occupied only at night, and freely ventilated during the day, with an allowance of 1,800 cubic feet to each occupant, there was a loss of 25 per cent.; and

In a ward under the same conditions, with an allowance of only 500 cubic feet of air to each occupant, there was a loss of 50 per cent.

One curious fact in relation to ozone occurred in the history of the year. On the day and night of the 15th of July a sudden increase in the amount of ozone from 4 to 7 took place, and on visiting the hospital on the morning of the 16th I observed a marked change in the condition of the patients suffering from dysentery: those who previously had been passing six or eight dejections in the day had passed only one or two, and all described themselves as feeling better. There was no sudden change in the direction of the wind, dampness of the air, amount of sunshine, or electric disturbance to cause this; and I have no means of accounting for the phenomenon, which occurred once again in the same manner on the 27th of October. As, however, at that time there was no great amount of bowel affection under treatment, I did not observe any corresponding improvement in these cases. The assistant-surgeon in charge of the force stationed at British Columbia, in North America, mentions one or two similarly sudden increases of ozone in the year, but was unable to mark any other atmospheric change that would account for it. It is an established fact, that, during the prevalence of cholera, ozone is found either not at all or in very minute quantity. At Kurrachee, in October of last year, whilst cholera was prevalent in the town and camp, I could detect for many days together no trace of ozone, which, however, returned as the epidemic cleared off. I have unfortunately lost the register, and cannot therefore give the dates or amounts.

Sunshine, as an essential element in the constitution of climate (apart from the heat-ray, which accompanies the compound ray of light), demands a place in every meteorological register. Botanists have already proved how essential it is to the wellbeing of plants, and that without its influence the chemical essences peculiar to the plant cannot be produced in its tissues. Physiologists have also pointed out how baneful is the want of sunshine in the dark alleys and crowded corners of large towns, and how decidedly it tends to shorten the life of the miner. The table before us shows a most intimate connexion between the ratio of sunshine and the loss of life from zymotic disease; and although only one influence amongst others, I feel assured that it was by no means a trivial one. Sunshine has a decided action on the nervous (especially ganglionic) and circulatory systems, and on the functions of assimilation and excretion. Without this stimulus the animal life of the native of India is diminished; the functions of his system are carried on sluggishly, more particularly the functions of the skin; his viscera become congested, his vital energy depressed, his blood impure; and, the poisonous excreta which should have been got rid of being retained, the effects of zymotic disease are speedily shown in some form or other, and most probably in that of affections of the bowels.

Position of the Gaol.

As I have already devoted so much space to the all-important point of meteorology, and as the description of the gaol, with full particulars of the accommodation afforded, size and number of the wards, &c., &c., has been previously repeatedly given in annual reports, I shall confine myself to very briefly pointing out the few improvements that have taken place. A portion of the hospital cooking-shed has been walled up, and windows and doors affixed, forming a convenient storeroom for the cumbrous articles which heretofore lumbered the dispensary-room. A series of charcoal frames, like those in use in the Poona Gaol, have been made and put up in the hospital sleeping-wards. They are formed of a wooden framework six feet long, nine inches deep, and three-and-a-half feet broad, filled with charcoal, which it retained in its place by a netting. They are very efficient deodorisers and purifiers, and their general use in hospitals and gaols should be recommended.

The iron urinal pans placed in each sleeping-ward, and which are connected with the drain by pipes, have been fitted with wicker covers, containing a layer of charcoal an inch deep. By this means, the offensive effluvia has been much diminished.

The windows of the hospital dispensary room have been fitted with glass, a great improvement, as during the wet and dusty seasons it was often found necessary to close the wooden shutters, and thus exclude all light.

With regard to the accommodation afforded, I should mention that whenever, as it has happened during two months of the past year, the strength averages more than 280, there is an injurious amount of crowding, only 450 cubic feet of air being allowed in the sleeping wards. This, however, is not likely to occur again whilst the plan for sending the men to work on the roads is in operation.

Diet.

The scale of diet for the prisoners is liberal and well arranged, and is in accordance with the following Table:—

	Flour.		Dhall.	Vegetable.	Salt.	*Condiments.	Kokum, or Tamarind.	Firewood.
	lb.	*oz.*	*oz.*	*oz.*	*dr.*	*dr.*	*dr.*	*lb.*
Prisoners at hard labour { Hard labour	1	8	4	4	8	8	8	½
Prisoners at hard labour { Light ditto	1	3	3	4	8	8	8	½
Prisoners without hard labour -	1	3	3	4	8	8	8	½
Prisoners, female - - -	1	3	3	4	8	8	8	½

* Including Chilli, 4 drs.; Turmeric, 1 dr.; Coriander, 1 dr.; and Garlic, 2 drs.

Hard-labour diet is only allowed to those actually engaged in hard work, as grinding, brickmaking, roadmaking, garden-work, &c. The medical officer has the power of ordering any extra diet, or the issue of full diet, to prisoners who may not be capable of hard labour, but whom he considers requiring the higher scale. Patients suffering from scurvy, or under observation for scorbutic taint, are allowed an extra amount of vegetables to the extent of eight ounces. During the late prevalence of bowel affection, the Inspector General of Prisons sanctioned an increase in condiments, and at my suggestion,a drachm of cloves was issued to each man. It was found, however, that this was more than was required, and it was afterwards reduced to half a drachm. This, however, is not intended to be permanent. The various articles of diet were issued alternately, according to the following Table:—

Days.	Description of Grain.	Description of Dhall.
Sunday - - - - -	Bajree - - - - -	Toor.
Monday - - - - -	Wheat - - - - -	ditto.
Tuesday - - - - -	Jowaree - - - - -	ditto.
Wednesday - - - -	Bajree - - - - -	ditto.
Thursday - - - - -	Bajree - - - - -	ditto.
Friday - - - - -	Wheat - - - - -	ditto.
Saturday - - - - -	Jowaree - - - - -	ditto.

By a recent order of the Session Judge, however, rice is only given to those natives who were in the habit of getting it previous to incarceration, and to those for whom the Civil Surgeon may consider it beneficial. Mutton, eggs, milk, &c., under the head of extra rations, are also ordered by the Civil Surgeon in cases which he considers requiring them. From the low type of disease during the past year, and the prevalence of anemic and scorbutic taint, the charges for these extras have been somewhat unusually heavy.

The hours appointed for meals are 10 a.m. and 4 p.m. In accordance with the instructions received from the late Inspector General of Prisons, a system of exercise was instituted in August, in the hope of counteracting the ill effect of sedentary employment. The prisoners are marched about and put through "extension movements" for a quarter of an hour on first turning out in the morning, again before the morning and evening meals, and lastly, before being locked up for the night. I believe the plan calculated to stimulate the vital energy, obviate congestion of the viscera, and promote a more healthy digestion and assimilation of food. The cooks are changed every 14 days, and men are chosen for this office who are weakly or convalescent.

The prisoners bathe twice a-day in the hot season, or before the morning and evening meals, and once in the cold season, at 10 a.m.

The system of exchanges, so much condemned by the late Inspector General, is not allowed in the gaol.

Employment.

The prisoners are divided into two classes—"with hard labour," and "without labour." It is much to be deplored, that the latter system is allowed in any gaol, or at least to any appreciable extent. It fosters idleness and evil habits, and increases greatly the expense of the institution, which is no way benefited by the presence of such drones.

Hard-labour prisoners are employed in weaving, in cleaning cotton-wool, preparing horse-jhools, &c., rattan work, ropemaking, brickmaking, and grinding. A certain number also are told off to form a conservancy gang, who in the early morning clean the roads and compounds, carrying the refuse matter to the Government brick kilns outside the town, and during the rest of the day are employed in the gaol gardens. The labour carried on is not prejudicial to the health of the prisoners. In July the system of employing a set of Chinese prisoners as scavengers was brought into use. Twelve Chinese were sent by the Inspector General of Prisons for this purpose; they all for a time refused to do the work, but ultimately all but one gave their acquiescence to the plan.

Clothing.

On admission, the prisoners are furnished with two loose cotton jackets, two breeches, and two caps; at the same time two new and one old cumblee are served out to them. This clothing is all that is required in the hot and dry seasons, but in the wet I cannot but think that it is quite insufficient. The past season being so unusually damp, the evil effect of insufficient clothing has been the more apparent. A representation of this was made by the Judge and by myself to the Inspector General of Prisons, who in return stated: "I have on several occasions urged on Government the importance, even as regards economy, of providing adequate clothing for their prisoners, but as yet no sanction has been obtained for any addition to the present allowance." Dr. Ogilvie then went on to point out that by a more rigidly economical use of the old and partially worn blankets of discharged prisoners, a supply might be collected, which could be reissued on urgent occasions. The Judge gave instructions that an overcoat of cumblee should be formed of partially worn blankets, and supplied to men whose sentences exceeded a certain time. This plan has been accordingly carried out, and a makeshift for the present emergency found.

Transfer.

Twenty-six prisoners have been sent to Tanna, and five gangs of men, numbering altogether 162, have been sent to join the gang working on the Munmar roads. Captain Fife has reported to me that they have arrived in orderly and good condition, notwithstanding the length of the march (90 miles), but that he considered the men, as a rule, somewhat wanting in vigorous health as compared with other gangs—a fact explained by the sickness which has been so prevalent amongst the men in gaol. 15 prisoners have been received from Poona.

Remarks on the Diseases by which Sickness and Mortality have been occasioned.

The diseases which have proved most fatal during the year (as before noted) have been dysentery and diarrhœa. Six fatal cases from the former, and four from the latter, disease have occurred; and besides these, one from cholera, one from hematemesis, one from ophthalmia, one from atrophy, and one from scorbutus. The total number of cases admitted with dysenteria amounted to 58, one only being chronic. Of these, 52 were discharged cured.

In conclusion, I submit a table showing the number of prisoners who have gained weight, of those that have lost weight, and of those that have remained stationary, during the period of their incarceration. The table includes all the men who have been discharged during the year; and for the better understanding of the subject, I have arranged them according to length of time of imprisonment:—

Table of the Weights of 258 *Men discharged from the Gaol during the Year* 1861.

	Six Months and under.		One Year and under.		Three Years and under.		Five Years and under.		Ten Years and under.	
	Men.	lbs.	Men.	lbs.	Men.	lbs.	Men.	lbs.	Men.	lbs.
Increase - -	60	295	21	104	10	48	1	4	1	–
Decrease - -	68	439	36	184	16	159	3	38	1	–
Stationary - -	33	–	5	–	4	–	–	–	–	–

EXTRACT from REPORT of the SESSION JUDGE of *Ahmedabad*, for the Year 1861.

With reference to your circular, No. $\frac{1919}{82}$, of the 6th ultimo, requesting me to furnish you with a condensed history of the gaol under my control during the past year, I have the honour to report as follows:—

Sanitary Condition of the Gaol during 1861.

2. The Civil Surgeon's annual report, dated 1st January 1862, will furnish you with full particulars regarding the sanitary condition of the gaol under my control during the past year.

General Management and Discipline.

3. Regarding the discipline enforced inside the gaol, it seems as good as can be expected. Considering the small amount of remuneration received by the gaol peons, they have become, I think, more careless since they have learnt that the pay of the revenue peons has been increased. The gaol peons have been decreased in number like the revenue peons, but have had no increase of pay like the latter; and the pay is so small that it is not to be wondered at that they succumb to bribes offered by the prisoners, many of whom have wealthy relations in or about Ahmedabad. Since I have been here I think the punishment adjudged to peons have equalled those adjudged to prisoners for breach of prison discipline, but it does not appear to have had a salutary effect; if any, it gives good and useful men a distaste for the service. I would earnestly call your attention to this subject. Until the peons serving in the gaol are better paid, I fear the gaol discipline cannot be much improved. The number of punishments for breach of prison discipline may be considered about equal with that of 1860, considering the average number of prisoners in the gaol in 1860-61. The faults were principally of a light nature, such as leaving the worksheds and sitting in the cookroom, and idleness, &c. These would probably not have occurred had the peons been more vigilant. On the whole, the general management during 1861 is creditable to the Nazir and his subordinates, though there is plenty of room for improvement.

Reduction of Expenditure.

4. The reductions that have been effected are as follows:—

	Saving per Mensem.			Saving per Annum.		
	Rs.	*a.*	*p.*	*Rs.*	*a.*	*p.*
2 Blacksmiths, at 7½ rupees each per mensem	15	–	–	180	–	–
1 Carpenter	12	–	–	144	–	–
These situations have been permanently abolished from the 1st February 1861, according to the instructions of your predecessor.						
10 Peons, at 4½ rupees each per mensem	42	8	–	510	–	–
10 Hallalkores, at 4 rupees each per mensem	40	–	–	480	–	–
Of the 10 peons nine were discharged on the 21st, and one on the 25th May 1861.						
Of the 10 hallalkores eight were discharged on the 15th June, and two on the 1st August 1861.						
1 Daroga	33	–	–	396	–	–
3 Carkoons, at 8½ rupees each per mensem	25	8	–	306	–	–
1 Jemadar	8	–	–	96	–	–
1 Havildar	6	8	–	78	–	–
2 Peons, at 4¼ rupees each per mensem	8	8	–	102	–	–
Their names, as well as the names of those who have been transferred to the factory, and whose pay is disbursed from the "Labour Profit Fund," are retained in the monthly abstract, and their pay drawn as usual, but refunded into the treasury at the close of each month, pending the re-organization of the Gaol Establishment.						
By the discontinuance of one naique and three sepoys who were attached to the gaol hospital from April 1861, there is a saving per annum of	24	8	–	294	–	–
1 Dispensary servant has been dispensed with from 22nd July 1861	5	–	–	60	–	–
Carried forward *Rs.*	218	8	–	2,646	–	–

	Saving per Mensem.			Saving per Annum.		
	Rs.	*a.*	*p.*	*Rs.*	*a.*	*p.*
Brought forward - - - £.	220	8	–	2,646	–	–
1 Extra Bhungy attached to the Gaol Hospital, and by the Commissariat Department, has been dispensed with from July 1861 - - - - - - - - - - - -	5	–	–	60	–	–
Extra charge usually made for steaming clothes has been put a stop to from the 1st July 1861, fuel required for that purpose being supplied by taking one piece of wood from each mess, which measure has effected a saving of - - -	2	5	4	28	–	–
The practice of allowing oil for the hair of the female prisoners has been discontinued, and saves - - - - - -	–	10	8	8	–	–
TOTAL - - - *Rs.*	228	8	–	2,742	–	–

5. The prisoners are supplied with vegetables from the gaol garden, from the 27th August last. The Nazir reports that there is a saving of 600 rupees to Government, the contract of vegetables being dispensed with altogether. I have not as yet been able to test the said saving, but have no doubt that it will prove considerable.

6. Since July last the Commissariat Department has ceased to supply articles required for the use of the gaol hospital, and the articles that are indispensably necessary are now supplied every month by this department, on the requisition of the civil surgeon, so that some saving will probably accrue.

7. A leechman was formerly attached to the gaol hospital, and paid by the Commissariat Department, at *Rs.* 9. 8. per month, but at the suggestion of the civil surgeon, as mentioned in his letter forwarded with my letter, No. $9\frac{7}{71}$, of the 7th November 1861, the services of the leechman have been dispensed with. The leeches are now purchased from the bazar at six annas per dozen, by which arrangement the expense on that account does not exceed five rupees per month, whereby there is a saving of *Rs.* 4. 8. to Government per mensem.

Gaol Guard and its Cost.

8. During the greater part of the year under report, the gaol was guarded by the men of the Kolie Police Corps. The strength and cost of the guard will be furnished as soon as the necessary information is received from the Commandant of the Kolie Police Corps. The military guard consisted of one native officer, two havildars, four naiques, 30 privates, one drummer, and one bhistee; and the cost incurred from 14th November 1861, the date on which the men of the line mounted guard at the gaol, up to the 31st December 1861, is about *Rs.* 579. 2. 2.

Cost of Establishment.

9. The following is the strength and cost of the gaol establishment during the year 1861:—

	Rs.	*a.*	*p.*
1 Gaoler, at 43 rupees per mensem - - - - - - - - -	516	–	–
1 Deputy Gaoler, at 17 rupees per mensem - - - - - - - -	204	–	–
1 Daroga, at 33 rupees per mensem - - } Transferred to the Factory, and their pay disbursed from the "Labour Profit Fund," from 26th May 1861 - - - -	158	9	10
2 Carkoons, at 8½ rupees each per mensem - }	121	5	10
2 Blacksmiths, at 7½ rupees each per mensem - } Discharged on the 1st February 1861 - - -	15	–	–
1 Carpenter, at 12 rupees per mensem - - }	12	–	–
3 Jemadars, at eight rupees each per mensem, of whom transferred to the Factory, from 26th May 1861 - - - - - - - - -	230	7	3
5 Havildars, at *Rs.* 6. 8. each per mensem, of whom one transferred to the Factory, from 26th May 1861 - - - - - - - - -	343	3	10
4 Naiques, at 5¼ rupees each per mensem - - - - - - - -	252	–	–
3 Turnkeys, at *Rs.* 5. 12. each per mensem - - - - - - - -	207	–	–
75 Peons, at 4¼ rupees each per mensem, of whom nine were discharged on the 21st, and one on the 25th May 1861, and two transferred to the Factory, from 22d May 1861 - - - - - - - - -	3,451	15	5
10 Hullalkores, at four rupees each per mensem, eight discharged on the 15th June, and two on the 1st August 1861 - - - - - - - -	232	–	–
1 Executioner, at *Rs.* 5. 4. per mensem - - - - - - - -	63	–	–
TOTAL - - - *Rs.*	5,806	10	2

Deducting from this total the sum of *Rs.* 14. 14. 7. on account of saving and other forfeitures, the balance *Rs.* 7,591. 11. 7. is the actual cost of gaol establishment during the year 1861.

Contingent and other Charges.

10. The contingent and other charges are as follows:—

	Rs.	*a.*	*p.*
Contingent charges	1,005	3	1
Provisioning charges	13,689	5	8
Clothing charges	1,477	10	11
Petty repairs, &c., charges	859	–	3
TOTAL *Rs.*	17,031	3	11

of which the following are the items recovered from the Native States on account of the political prisoners confined in the gaol:—

	Rs.	*a.*	*p.*
Contingent charges	192	14	1
Provisioning charges	3,448	5	6
Clothing charges	314	–	–
TOTAL *Rs.*	3,955	3	7

Medical Charges.

11. A memorandum furnished by the civil surgeon, showing the medical charges incurred in the gaol hospital at Ahmedabad for the past year, together with his letter in original, dated 12th instant, No. 2, is herewith forwarded.

Convict Labour and Gaol Manufacture.

12. The accompanying statement (A), showing in detail the amount realised by convict labour and gaol manufacture, will furnish you with all the information you require under this head.

13. The prisoners in this gaol have been up till now allowed to retain their private clothes for bathing and other purposes, but this practice will be discontinued from the time the first supply of clothing for the current year is distributed, and each prisoner will be supplied with two "lungotees," or loin cloths, in accordance with the sanction of Government, conveyed in Mr. Secretary Forbes' letter, dated 15th November 1861, No. 3762.

14. The practice of recovering from the prisoners' rations the value of earthen vessels broken by them through carelessness, and making the female prisoners grind their own grain, was introduced in this gaol during the last year at the suggestion of your predecessor.

15. In the month of June last the gaol hospital gate, and the gate of the female ward opening on the public road, were built up; and this arrangement, whilst it has added to the security of the gaol, has also decreased the expense, a naique and three privates having been reduced from the hospital, and two peons from the gate of the female ward.

16. I may mention that by the Chinese convicts taking the scavenging duties of the gaol, which were before performed by the hullalkores borne on the establishment, the cleanliness of the privies and urinaries has been well preserved in 1861. The nazir wishes to have five or six more Chinamen, in case of any of those at present here falling sick. If this arrangement is to be continued, I trust five or six more Chinamen may be despatched here as quickly as possible, but I think it is worth while considering whether the arrangement should be continued. It seems to me a rather invidious proceeding singling out any particular class of prisoners for the performance of duties which only the lowest classes can perform in this country. The Chinamen feel this themselves. It was with the greatest difficulty they could be induced to perform the duty of sweepers, and they explained to me that one reason why they objected was, that the other natives in the gaol would look down on them, and refuse them water. If all the prisoners could be used indiscriminately on this duty, I consider the plan would be excellent, but I doubt whether it is just or expedient to force any particular class of prisoners to perform such disagreeable duties, and I think it must eventually tell on the health of the prisoners so employed. It may be worth while also to consider the effect this arrangement may produce on the minds of foreigners. It can hardly be satisfactory to Chinamen to hear that any of their countrymen transported to Indian dominions of Her Majesty are made, as a rule, to perform the duties which in India can only be performed by the lowest and most degraded caste.

17. In

17. In conclusion, I beg to bring to your notice that my duties as regards the gaol are made much lighter than they would otherwise be by the zeal and attention of Mr. Bazunjee Framjee, the Nazir. The services of this officer have been brought to the notice of your predecessor by Mr. Warden, the late Judge of Ahmedabad, and I believe Dr. Ogilvie had intended bringing them to the notice of Government. I trust you will find the present report such as to induce you to endorse any opinion that may have been recorded in your office by Dr. Ogilvie respecting Mr. Bazunjee Framjee.

EXTRACT from the SANITARY REPORT of Dr. *D. Wyllie*, Civil Surgeon of Ahmedabad, for the Year 1861.

THERE were in all 612 sick treated, of whom 578 were discharged, including five liberated, nine dead, and 25 remain under treatment at this date. These figures indicate a marked improvement in the usually obtaining state of health, and, compared with ordinary experience, the result must be regarded as satisfactory.

YEARS.	Average Strength.	Total Treated.	Average Daily Number of Sick.	Deaths.	Ratio Per cent. treated to Strength.	Ratio Per cent. of Deaths to Strength.
1856	484·3	892	23·8	20	184·2	4·1
1857	479·0	731	26·5	8	152·6	1·7
1858	527·6	781	27·5	42	148·0	7·9
1859	500·0	808	31·6	37	161·6	7·4
1860	465·6	663	27·2	19	143·0	4·1
1861	486·0	612	26·8	9	126·0	1·9

2. The most obvious cause contributing towards bringing about this improvement, was undoubtedly the partial employment of the prisoners at out-door labour, a system that had been entirely suspended since the summer of 1856. But, apart from this, the past year was unusually healthy, as I have elsewhere had occasion to note; and in this respect it resembled the exceptional season of 1857.

As regards the treated, not only was the number smaller than ordinary, but the cases, as a general rule, were less severe. Still, however, there was the usual tedious convalescence to contend against, with ever and again instances where recuperative power was so far exhausted that prostration gave place to a condition of cachexia. It was noticeable, as heretofore, that this last result was invariably coincident with undue crowding; and it was found impracticable to guard against it when the strength exceeded 500, even with the relief afforded by employing in rotation 150 prisoners daily at out-door labour.

The deaths were unusually few, and, so far as the past history of the hospital is known to me, the year stands next to 1857 in its exceptionally low rate of mortality.

There is no need for me now, as on former occasions, to indicate defects, or to urge ameliorations, inasmuch as a measure has recently been introduced which will effectually relieve the gaol from overcrowding, and thus, as I believe, remove the chief sources of disease and mortality. I allude to the formation of a subsidiary gaol on the Gogo-road, to join which a body of 159 prisoners left on the 20th ultimo. Whether this scheme may prove a pecuniary saving, is a question that time must determine. But, at least, it has the merit of utilizing the labour of the men, of providing a rational mode of punishment and discipline without undue risk of health, such as confinement too often implies; while as regards the prisoners in this gaol the measure is undoubtedly calculated to lessen the loss of life, and is thus one of humanity.

EXTRACT from the SANITARY REPORT of Dr. *Mills*, Civil Surgeon of Dharwar for the Year 1861.

THE report for the year just past must, I regret to state, present a very marked contrast to those of the two preceding years: in both of them small sickness and mortality was recorded; in that under review both have been excessive for 1860. From an average strength of 392, there were 346 admissions or 80·3 per cent., and six deaths, or 1·4 per cent. of strength, and 1·7 of treated; in 1861, from an average strength of 558, there were 943 admissions or 169 per cent., and 104 deaths; 18·6 per cent. to strength, and 11·02 to treated.

These numbers will not be found to correspond with those shown by the annual return, because up to the end of September the monthly returns from Devekope were included

with those of Dharwar, but from the 1st of October they were sent in separately; consequently, in order that the annual returns may correspond with the monthly, they have been framed to embrace the Devekope returns up to the 30th of September, and a separate return for Devekope for the three months, October, November, and December, is forwarded, but to put in a clear light the proportion of admissions and deaths due to the gaol hospital and to Devekope respectively, the accompanying abstract return is inserted, from which it will be seen that among the prisoners in Dharwar Gaol the proportion of treated to strength was 97·3, deaths to strength 17·2, deaths to treated 17·6, but, excluding cholera, the proportions were treated to strength 71·4, deaths to strength 3·8, deaths to treated 5·3, while among the prisoners at and sent from Devekope the proportions of treated to strength was 199·5, deaths to strength 10·6, deaths to treated 5·3.

Average strength Dharwar Gaols 448, with Devekope 558. Devekope for 8 months 254.	Dharwar.				Devekope.		Total.		Transferred from Devekope to the Gaol.

The great increase of sickness and mortality during 1861 may be attributed to three causes—1st, the transfer of a large number of prisoners from the Concan, many of whom arrived at the worst possible season: 2d, a violent outbreak of epidemic cholera in June followed by severe diarrhœa: 3d, the great number of cases of scorbutic diarrhœa which occurred among the prisoners employed on the road works at Devekope, occasioned principally by the damp state of the huts in which they lived during the rainy season.

I shall now give a history of the events of the year as connected with the health of the prisoners. On the 31st of December 1860, only three cases remained in hospital, and the general health of the prisoners was particularly good; it remained so during the months of January, February, March, and the greatest part of April. The monthly admissions for the four months averaged 19, and the daily number of sick 6·5. At this time almost all the prisoners were employed in various ways within the gaol premises. From the 25th of March, in accordance with the orders of Government, almost all the able-bodied prisoners were sent to out-door labour on tanks, roads, &c. Shortly after this change there was a marked increase in the amount of sickness. On the 25th April, 50 prisoners were sent to Devekope (27 miles from Dharwar) to prepare huts for a large gang to be employed on the Sudashewghur road. On the 13th of May 119 prisoners, among whom were 60 Chinese and Malays, arrived from Vingorla, principally from Tanna Gaol. These men were generally in very good health, and on the 18th of May the greatest part of them were sent with 35 Dharwar prisoners to Devekope. On the 20th, the day of their arrival there, there was a violent outbreak on the part of the Chinese and Malays, many of whom were severely wounded. The whole of them were brought back to the gaol, and 12 were admitted into hospital for hurts and bruises; among them three had received severe sword wounds. As early as the beginning of May, reports of cholera had been received from the southern portions of the collectorate, and it was soon apparent that it was advancing slowly northward from the Mysoor country. At the end of May it appeared in some of the villages round Dharwar. On the 9th of June 201 prisoners (of whom 59 were Chinese and Malays), chiefly from Rutnagherry Gaol, arrived from Vingola. These men were in a very bad state. Just before they reached the Ramghât, heavy rain

set

set in, much of their carriage broke down, and many of the tents provided for their shelter were left behind. They brought here only five small rowties to protect 200 prisoners and a large party of peons, and in consequence they arrived with most of their clothing wet, or having worn damp clothes for several days, and very much exhausted by exposure, fatigue, and irregular diet. That they should have reached Dharwar in such a state was most unfortunate, for it doubtless rendered them particularly liable to the disease which was hovering round the station. On the 10th one of the newly arrived prisoners was brought to hospital with slight symptoms of cholera, which at once yielded to treatment, but on the following day a Dharwar prisoner employed at outside work was seized with undoubted cholera, and on the 12th one of the new arrivals was attacked. After this, disease became daily more virulent until the 17th, when it reached its climax; on the 16th I moved 114 men, occupying the three worst ventilated wards in the gaol, into tents with good effect. The disease continued among the prisoners until 5th July, when it ceased as an epidemic. Two isolated cases occurred during the remainder of the month. The direase was most virulent in character; for several days medicine had little or no effect upon it, and there were none of the mild cases with which outbreaks of cholera so frequently subside, and which so materially help to diminish the proportion of deaths to treated. As will be seen by the returns, the rate of mortality was high, being 60 out of 116, or nearly 52 per cent. Very fortunately cholera did not appear among the prisoners at Devekope (although in many of the villages at no great distance), and throughout the months of June and July the health of the gang continued tolerably good. In August there was very much sickness both in Dharwar Gaol and at Devekope. In the former diarrhœa, such as generally follows epidemic cholera, and dracunculus, swelled the sick list; and at Devekope intermittent fever, diarrhœa, and scurvy prevailed. Serious cases (35 in number) were sent into the gaol hospital for treatment, and among them three deaths occurred from diarrhœa, besides one from fever, at Devekope itself. In September the state of health was worse than in August. Diarrhœa continued in the gaol, and, together with scurvy, prevailed extensively at Devekope. There were altogether 183 admissions, and 15 deaths: 45 cases were sent in from Devekope to the gaol hospital. The numbers hitherto quoted comprehend the sick treated both at the gaol and Devekope. From 1st October separate returns were kept and sent in. During October the health of the prisoners at both places materially improved; at the gaol there were 29 admissions, including 13 received from Devekope, where 50 were admitted into hospital, chiefly for fever. Diarrhœa and scurvy had much diminished; 10 deaths occurred. Of these, eight were among prisoners received from Devekope during the two preceding months. During October I twice visited and carefully inspected the whole of the prisoners at Devekope. In November the number of admissions did not diminish, but the cases were of a much less serious character. At the gaol hospital 23, and at Devekope 52 were admitted, chiefly for intermittent fever at both places. Three cases were sent from Devekope. Four deaths occurred in the gaol; of these, two cases were received from Devekope in September. In December fever cases continued numerous, though generally mild in character. There were 19 admissions at the gaol, of which nine were intermittent fever, and 57 at Devekope, of which 29 were intermittent and 12 ephemeral fever. Only one case was sent from Devekope, and two deaths occurred in the gaol hospital. The year closed leaving nine cases under treatment at Dharwar, and 18 at Devekope.

Transfer of Prisoners.

DURING the year 333 prisoners were received from other gaols, chiefly from Rutnagherry and Tanna, a few from Poona, Sattara, and Sholapoor. Of these, 66 have died. Twenty-four prisoners, under sentence of transportation, have been transferred to Tanna. The health of those prisoners who arrived from the Concan in June has suffered very much, and I would strongly recommend that for the future prisoners should never, if it can be avoided, be transferred from Concan gaols to Dharwar so late in the year. The best time for the change would, in my opinion, be the month of March, when the weather is warm, the nights have ceased to be chilly, and there would be time for the men to become in some degree acclimatised before the setting in of the rains. I cannot but think that some part of the mortality of the past year is due to the late season at which the Rutnagherry gang was sent to the Deccan.

Employment of Prisoners.

UP to the 25th of March they were employed, as much as possible, within the gaol compound. Since that time all of the able-bodied prisoners who have not been sent to Devekope have been employed upon out-door work. As far as two years' experience in this gaol will enable me to form an opinion, I should say that employment within the gaol premises is most conducive to the health of prisoners; weaving, paper-making, pottery, &c., are occupations which accord with the former habits of many, and sufficient out-of-door employment can be found for those who require it in the gaol garden, repairs, and conservancy arrangements.

CHAP. XI. Bombay.

Diet, Clothing, &c.

SOME changes have been made in the diet of the prisoners received from this part of the country. Up to the beginning of April all prisoners had received one-third of their daily allowance of grain in rice. In consequence of the great scarcity of rice this year this has been stopped, and an equal weight of wheat or jowaree substituted, except for those who come from rice-growing districts; they receive two-sevenths of their allowance in rice. I do not find that this change has been in any way detrimental to health; the rice was, indeed a luxury, to which very few of those from non-rice-growing districts had ever been accustomed. Those prisoners who were received from other gaols continued to get, as nearly as possible, the same diet as they had been used to. The clothing is sufficient, and kept clean.

Devekope.

THE cause of such great sickness at Devekope has already been referred to, and the several diseases occurring there have been mentioned. In my Report No. 90, of 3rd October 1861, I stated that "the position of the building is excellent during westerly and south-westerly, but this referred only to the time of my visit, when the rainy season was at an end. Having had further opportunities of examining the site, I think that during the rains the building must necessarily be very damp, both from position and construction, and I am decidedly of opinion that should the prisoners be required to remain on the road works during another monsoon, their huts should be rebuilt where better drainage can be obtained, and on a different plan. Moreover, it is absolutely essential for the health of those who are to occupy them, that the huts should be finished before the rains begin, so that both the ground on which they stand may be thoroughly dry, and that the floors may be raised several inches above the surface, with a thick layer of dry earth or sand. This latter measure was recommended by me on the 15th of May last, but it was not carried into effect, because dry earth could not be procured for the purpose.

The table contained in paragraph 1, will show the amount of sickness that occurred at Devekope, and the deaths due to it. I am of opinion that such sickness might be in a very great degree prevented on any future occasion, by adopting the precautions above mentioned, by strict attention to the state of the prisoners' clothing, so as to preclude the possibility of their sleeping in wet clothes, or on damp mats or cumblees, and by such arrangements as would secure a constant supply of fresh vegetables.

(True extracts.)

C. G. Wiehe, M. D.,
Inspector General of Prisons.

APPENDIX (J).

Giving detailed Information respecting the several Gaols, alphabetically arranged.

Ahmedabad.

THE Ahmedabad Gaol has long enjoyed a high reputation amongst the gaols of this Presidency for the excellence of its management; and the impressions which my inspection of it left on my mind is described in the following extracts of a letter which I addressed to the judge, Mr. Warden, on the 30th of March last:—

"I would premise by stating that, whether as regards the cleanliness and neatness of the gaol itself, its yards, wards, and cells, the cleanliness of the prisoners, their quiet, respectful, and orderly demeanour, or the method and excellent workmanship exhibited in the Factory Department, I believe that the Ahmedabad Gaol is surpassed by none, and rivalled by few gaols in India.

"And I have the more satisfaction in making this declaration, inasmuch as I visited the gaol in a hypercritical spirit, having been prejudiced against it by the laudatory notices that have appeared in the newspapers. * * * * * * *
But the laudations of the Ahmedabad Gaol that have appeared in print are most fully merited."

2. When I mention, that though Mr. Warden's residence was at a distance of more than two miles from the gaol, a day rarely elapsed without his visiting it; that his visits were prolonged ones, in the course of which he thoroughly investigated at least one department, and passed all, more or less, under review; and that he never issued an order without seeing it carried out, the cause of this satisfactory state of matters will at once be apparent. But I should, I know, distress Mr. Warden, and do injustice to a very valuable public servant, were I not to add, that in his nazir, Mr. Bazonjee Framjee, Mr. Warden had a most zealous, energetic, and efficient collaborateur. Mr. Bazonjee's services as a gaol reformer date from 1853; since then he has uninterruptedly devoted himself to the work, and were the gaol his private property, and the money expended on it derived from his own resources, he could hardly be more zealous in the promotion of its welfare or the reduction of its cost.

3. But

3. But admirably kept as is the gaol, it labours under grievous defects in a sanitary point of view.

4. It as, as Government is aware, an old college, and though its cloister rooms were well suited, as originally constructed, for the occupation of students, they are but ill-suited to the purposes of convict dormitories. The open fronts are necessarily doored and barred. Anything like adequate ventilation is at present impossible, and the result is that a cachectic tendency prevails amongst the prisoners; that disease is apt to assume a low type, and that those conditions of extreme maluntrition, to which the term "Atrophy" has been given, are prevalent. To apply an adequate remedy is most difficult, for the walls are of enormous thickness; but something has been done, and more will still be done.

5. There are some of the dormitories for which doors are unnecessary, facing as they do open balconies, from or over which escape is impossible, and the doors of these have been unhinged. In other dormitories ventilatory shafts are to be carried through the whole thickness of the walls, a work of time and difficulty, but one reported by the engineers to be quite feasible, and in no way likely to prove injurious to the building. In other instances open galleries, secure on all sides but one, are on the insecure side to be furnished with railings, or with the doors removed from the cells where they are no longer required, and this converted into admirable dormitories. The present doors, which afford a minimum of ventilation, will be rendered more suitable for their purposes.

6. When these changes are effected, and when a Public Works gang for Guzerat is organized, the Ahmedabad Gaol will, I hope, suffice for the accommodation of the Ahmedabad and Kaira prisoners, and prove satisfactorily healthy.

7. Under Government sanction a garden has been added to the gaol, which will not only furnish healthy out-door occupation for a portion of the prisoners, but enable the gaol to grow for itself the vegetables which now cost it 600 rupees per annum; and I was in hopes that, by the introduction of the "dry system" of conservancy, the garden might have been made conducive to an immense saving in the present heavy scavenging charges of the gaol; but practical difficulties have been raised by the civil surgeon, who, on theoretical grounds, assumes that to inhume the gaol filth in pits "within the city" would create a nuisance, and lead to pestilence. Technically, indeed, the gaol garden is within the city, but only technically. It lies along the banks of the river, beyond which is open ground, and even were it not so, we know, from ample experience, that, properly carried out, the system of disposing of ordure by inhumation is perfectly inoffensive; but in this, as in all other matters, success depends on the manner in which a principle is carried out, and I did not choose to have the reputation to what I believe to be the only sound system of oriental conservancy imperilled by pressing its adoption contrary to the representation of the civil surgeon, while I could exercise no personal control over details, and therefore the present offensive system remains in force, by which the prisoners' ordure falls into troughs, where it becomes fluidised by the water with which the privies are sluiced, and whence it is baled out and carried away in carts to a distance, diffusing its odours in its transit, and liable to be plashed about at every jerk of the cart.

8. Considerable reductions have been made in the guards and establishments of the Ahmedabad Gaol. My own opinion is, that these are susceptible of still greater reductions. But Mr. Warden differed from me as to the extent to which reductions were judicious, as, though I adhere to my original views, I felt I had no right to press measures against the conviction of the gentleman who was responsible for the gaol, he being one who had so greatly signalised himself by his knowledge and zeal in gaol economies, and one who had so cordially co-operated with me; but even Mr. Warden considers that in course of time, as the prisoners become habituated to the reductions already effected, others may be ventured on; and our latest correspondence before he left Ahmedabad was in reference to a re-organised establishment. But, as I have stated in the body of my report, it is not desirable to submit to the Government of India the programme of a re-organised gaol establishment, of which the creation of a permanent Public Works gang will necessitate the early modification.

9. The reductions effected have been not only not weakened, but have, in at least some instances, added to the strength of the gaol, and improved its efficiency. Thus the unseemly usage obtained of two peons placed over the female ward—an arrangement rendered necessary by the door of that ward opening on the public road. The door has been built up, an opening to the female ward has been effected through the interior of the gaol, and the peons have been discharged.

10. By the substitution of convict for hired mehturs, 480 rupees will be saved per annum; and it is needless to say that every stipendiary servant dispensed with in a gaol implies a reduction *pro tanto* in the facilities enjoyed by the prisoners for illicit communications with their friends outside. To Mr. Cameron, the present acting judge, is due the credit of having compelled the Chinese convicts to act as mehturs. For long they held out, and affected a horror of duties to which it is well known they have no aversion in their own country; but Mr. Cameron's judicious firmness prevailed, and now the

convicts carry out their work efficiently and cheerly, and "more harmoniously than the paid Hallalcores did."

11. Reduction of the guards was facilitated by building up a very mischievously placed gate, which, leading direct from the hospital to the public road, necessarily afforded facilities for irregularities. It is a maxim of gaol architecture, that a gaol should have only one gateway; and of all parts of a gaol the hospital, where discipline is necessarily lax, is that to which a superfluous gateway is most objectionable.

12. Since Mr. Warden's departure, his successor, Mr. Cameron, has zealously and successfully carried out his system: and I am under very deep obligations to him for the earnestness with which he has endeavoured, and is endeavouring, to give effect to my wishes, involving though this does an immense amount of personal inspection, and frequent consultations with the civil surgeons, executive engineer, collector, &c. I hope, ere long, to submit the result of some of these labours in the form of an application for the improvement of the immediate neighbourhood of the gaol, which, owing to the crowding up to the very gaol walls of filthy huts, is decidedly objectionable when viewed in respect of security, discipline, or health.

Ahmednuggur.

13. The Ahmednuggur Gaol has had the advantage of being superintended by a succession of judges who have taken a very deep interest in its welfare, and, as a consequence, it has enjoyed a high and well-merited reputation, which has been most effectually maintained by the present judge, Mr. Harrison. To this gentleman my obligations are very great indeed, not only for the extreme care he bestows on the conduct and accounts of the gaol, but for the cordial promptitude with which he has carried out all my suggestions, and applied their spirit to other matters not specifically mentioned.

14. Nothing could be more satisfactory than the condition of the gaol in every department. It not only possesses the cardinal virtue of cleanliness, but that neatness which never exists where European surveillance is not unremittingly exercised. Neither the Nuggur prisoners nor the Nuggur peons are, I presume, above the average of their fellows' antecedents or personal characters, but there was a greater degree of decorum amongst the convicts than I had seen elsewhere. The peons gave me the idea of being better trained than many but the Ahmedabad Gaol. There was no sudden display of zeal on my arrival; no turning round; no superfluous servile "salaaming."

15. I had not the advantage of going round the goal with Mr. Harrison, who was then on circuit, and with whom I had the pleasure of conversing on gaol matters in camp at Kuppurgaon; but from Mr. Gonne, his then assistant, and very zealous collaborateur in goal reform, I received all the information and assistance I could desire.

16. There was little scope during 1860 for any such improvements within the goal itself as has been effected in some other goals. Extensive additions and repairs having been recently effected, the administrative excellence of its previous arrangements left little to be effected; the moderateness of its establishment rendered extensive reductions in that department impracticable; and the unfortunate position of the gaol in the midst of a large city, some of the houses of which approach within five feet of its walls, rendered any considerable diminution in the strength of the guard unadvisable. But three sentries have been dispensed with, representing, with reliefs, a permanent reduction in the police force, which supplies them, of 22 men; and the cost of the establishment (as elsewhere shown) has been reduced to the extent of 1,935 rupees per annum. But for Mr. Harrison's firmness and the cordial co-operation of his civil surgeon, the Chinese convicts would have successively resisted his orders to carry out the scavenging duties of the gaol. But Mr. Harrison would not recede from his point, nor would he allow them to make martyrs of themselves; and the civil surgeon carefully abstained from that mistaken humanity which often prompts medical men to weaken the hands of authority by unnecessary professional interference. The men's stubbornness gave way, and so in other gaols they work well and efficiently.

17. In all the departments of this gaol Mr. Harrison has laboured to effect economy; and he has cordially entered into all my views in respect of diet.

Broach.

18. The gaol of Broach maintained during 1860 its recently alleged reputation for healthiness; no deaths having occurred, except those arising from cholera, which was epidemic in the town. I found it clean and neat. Its recent abolition renders it unnecessary to occupy space with details regarding it, which have now ceased to possess any practical interest. The history of the transfer of its prisoners to Surat will be given in the Report for 1861.

Dhoolia.

19. Very important reforms have been carried out in the Dhoolia Gaol by the Superintendent, Dr. James, under the personal direction of the judge, Mr. Richardson.

20. The nuisances in connexion with the gaol hospital, which formed the subject of much correspondence in the latter end of 1860, have been so effectually abolished, that Dr. Scott, Inspector General of Hospitals, reported at his last inspection that whereas he had "never seen anything so bad" as the Dhoolia Gaol Hospital of former days, he could now state that he had rarely seen anything so perfect.

21. The

21. The floors of the sleeping wards which had fallen into disrepair have been dug up; the old material being carted away, and replaced by new sloping platforms (similar to those in guard-rooms), and formed of well-rammed earth, have been substituted for the objectionable "bunks" that formerly existed; and 16 of the wards have been furnished with curtains of taut or sacking cloth, 4½ feet broad, which, stretched at night along the open railing that constitutes the front wall of the cells, protect the bodies of the sleeping prisoners from those currents of cold air to which I attribute much of the pulmonary and rheumatic disease that formerly existed in the Dhoolia Gaol, but in no wise interfere with inspection, or the proper ventilation.

22. Formerly the night-wants of the prisoners were provided for by plaster pissoirs in the corners of the wards, from which the urine passed by tin pipes into iron vessels placed outside. This arrangement was, in all respects, most objectionable. The urinal and the adjacent ground became foully contaminated not only with urine, but occasionally with ordure, rendering the atmosphere of the cells offensive; and it was impossible to remove the iron pans without spilling their contents over the gaol yards. In lieu of these pissoirs small iron tubs, two-thirds full of dry sand, are placed in the centre of each ward on mounds of dry earth. The urine voided into them becomes absorbed, solidified, and in a great measure deodorized. If by any accident the tubs are overturned, little damage is done; and any urine accidentally sprinkled over the edge of the tub in the act of voidance is at once absorbed by the earth on which the tub rests. The pans are removed in the morning, and their contents (a solid mass) conveyed to a distance to be inhumed. The result of these changes has been altogether satisfactory.

23. Great difficulty was formerly experienced in keeping the gaol yards in order during the rains; and though every effort had been made by Mr. Richardson to overcome the difficulty, by an elaborate system of surface drainage, and covering the ground with a thick coating of river gravel, the result was most satisfactory; and gravel is objectionable in a gaol, by rendering it impossible to have the yards thoroughly swept every day, and the swept-up matter removed.

24. To obviate these inconveniences, the yards attached to the sleeping wards have been dug up to a depth of one foot, and the excavated earth replaced by finely broken road metal, well rammed down, and thickly coated with moorum. The surfaces of the yards have been made to slope towards open stone water drains, so as to carry off the rain as fast as it falls; and so successful has been the operation, that, though in the beginning of June four inches of rain fell in seven hours, none of it lodged in the yards thus treated. Neither time nor labour has as yet sufficed for carrying out these improvements in the cooking yards and factory yard.

25. As Government has already been informed, the drainage system of the Dhoolia Gaol was entirely vicious.

26. And, as a result, the soil in and around the gaol was in many parts horribly polluted, and to a considerable depth. The polluted earth, to the extent of many hundreds of cart-loads, has been dug up, removed, and replaced by new materials. By the adoption of the "dry system" of conservancy all drains have been abolished, save those necessary for the removal of rain-water, bathing-water, and the water spilt at the wells.

27. The deficiency of artisan labour in the gaol has prevented full effect being given to the whole of the conservancy arrangements sanctioned by Government. But though many of the details of construction necessary to give full and successful effect to the system of dry conservancy are unaccomplished, that system is in operation. The fœcal discharges of the prisoners fall unto receptacles half filled with earth, which partially deodorizes them, and with which they are more intimately mixed by the mehters before removal. Thus mixed, they are as nearly inodorous as possible, and they are carried away without the slightest risk of polluting the ground over which they are conveyed to pits, in which they remain buried for six or eight months: when passing into a condition of "*poudre animale*," they become highly valuable for agricultural purposes.

28. The daily bathing of the patients is conducted in a systematic and orderly manner, that equally prevents its evasion by those who are strong enough to bear it, its indiscriminate enforcement on all, irrespective of their strength, and the frolicking which so often in gaols is indulged in under plea of bathing. In the hot weather the bathing takes place when the prisoners leave their wards. In the cold weather Dr. James wisely defers it till just before the forenoon meal, when the sun has warmed the air; and care is taken that a healthy re-action is set up by a sufficiency of active exercise after the bath.

29. Nor have the sanitary reforms of the Dhoolia Gaol been limited to its interior. Large quantities of soil outside the gaol which had been polluted by the overflowings of the old drains had been removed, all hollows have been filled up, and the surface drainage of the surrounding area, much of which found its way to the immediate neighbourhood of the gaol walls, has been diverted into other channels.

30. The reductions effected in the guards of the Dhoolia Gaol since last report represent an annual saving of *Rs.* 823. 7. 5.; those in the establishment a further saving of *Rs.* 2,310; and I would solicit attention to the fact that the Dhoolia Gaol was the first

CHAP. XI. Bombay.

in which stipendiary mehters were dispensed with. By judicious arrangements the amount of contingent charges are being reduced by at least 50 per cent.; and, long before I had visited Dhoolia, Dr. James had instituted arrangements which tend to reduce the cost of the hospital department at least one-half, without, in the least degree, interfering with the welfare or comforts of the sick; and while the cost of the gaol is thus diminished, its discipline has been greatly improved. An admirable code of gaol rules has been prepared. Every gaol servant has his definite duties. The prisoners, in passing out of their wards, are formed into orderly lines, and marched to the respective departments. At labour they are divided into gangs, each having its convict foreman, who, exercising no authority over his brother convicts, is held responsible for the amount and accuracy of the work done by his gang, the interposition of a gaol officer being invoked whenever, through the misconduct of an individual, the reputation of the gang is in danger. And I learn from Dr. James that this plan, which combines the good effect of the Lumberdar system, while avoiding any delegation of power to criminals over their comrades, or any exemption of them from their own fair share of work, has been found in practice to succeed admirably. The waste of time and agency involved in sending messages is avoided by the adoption of certain signals given by means of a railway whistle, or the gong. A recognised signal indicates that meal hours having arrived, work is to be suspended; the prisoners, forming into ranks corresponding with their messes, stand at "attention"; and on a second signal they pass in an orderly manner into the cook-room yard, where each mess takes up position by itself. When the time has come for the resumption of work, another signal is given; and again the prisoners, formed into lines, are marched back to their duties. On giving over work for the day, the same orderly procedure is adopted; and the prisoners afterwards, ranging themselves in their gangs of night association, are marched to their wards, searched, and one by one take up their places for the night.

31. I have deemed it my duty to notice at length some of the improvements that have taken place in the Dhoolia Gaol, because I think it only fair to Dr. James, who last year had the misfortune to incur the serious displeasure of Government, to bring to favourable notice the indefatigable zeal, the untiring industry, the intelligence and remarkable success, with which he has exerted himself.

32. I would, with all confidence, solicit a comparison between the Dhoolia Gaol and the best gaol in any part of India; and though to Mr. Richardson the credit of this is in the first instance due, that gentleman acknowledges with grateful warmth the assistance he has derived from Dr. James, who has been described to me by a recent visitor to Dhoolia as never "out of the gaol grounds." To Mr. Richardson himself my obligations are greater than I well know how to express, without using terms which might appear exaggerated. He was the first of the judges to enter into my views, and to carry out my recommendations; and he has in not a few cases carried out my views when they were in opposition to his own, with as much determination to give my measures every chance of a successful result, as though the success at which he aimed had been intended to support, instead of to counteract, his individual opinions. With no judge have I had such material differences of opinion; for there is perhaps no judge who, having devoted so much time to the study of gaol discipline, both as a science and an art, had so thoroughly based his gaol managements on principles, and so thoroughly identified himself with the details of the application of these principles. But our differences have been solely in matters of opinion. They have been urged on both sides as became friends co-operating together in the public interests; and on not a few occasions have I felt grateful to Mr. Richardson for his correction of my too hasty generalizations, and for his thoughtful suggestions of difficulties I had overlooked.

Poona.

33. In my letter, No. 924 B, of 22d December 1860, I had occasion to give a very disheartening account of the Poona Gaol. Since then, however, I rejoice to say that great improvements have been effected. The walls indeed still remain, as they were then described to be, "in rapid process of dilapidation," from the want of timely repairs; and the structural arrangements of the gaol are as little calculated as they then were to enable the authorities to enforce obedience to their orders without the risk of serious collisions, which, if they did not result in the convict getting the mastery, would probably involve bloodshed. But the persistence of this state of matters is unavoidable; the Chief Engineer and Secretary to Government Public Works Department having declared the utter inability of Government, from absolute want of funds, to pass the estimates which the Executive Engineer had prepared, though that officer and the superintending engineer of the circle concurred in describing the proposed repairs as urgently required. But, in so far as the defects noticed in my letter above quoted were removable by the means and agencies at the judge's command, most gratifying improvements are conspicuous.

34. Cleanliness characterises every department of the gaol. Those disgraceful huts and awnings of old blankets which, as I then reported, made the cooking yards "resemble rather a calmuc encampment than the interior of a gaol," have been swept away. The sites of those foul pissoirs which polluted the sleeping wards, and rendered their atmosphere intolerable, have been dug up; the floors have been renewed, raised, and brought into a condition that would do credit to the best gaol in India; the yards have been levelled, repaired, and, so far as was practicable, furnished with the slopes necessary to carry off at once the rain-fall; and at my last visit I walked dry-shod after a heavy rain over spots where,

where, after a moderate shower, mud pools of water used invariably to be found. The conservancy arrangements are very greatly improved. The persons and the clothing of the prisoners exhibit a very marked contrast as regards cleanliness to their condition at the date of my last report, and in their demeanour a decided improvement, though this must be, in a great measure, attributed to their reduced numbers, which admit of their being kept more effectually within observation and under control.

35. To the same cause must, to a certain extent, be attributed the fact, that the visitor to the gaol is no longer shocked by the sight of piles of arms within a few yards of a crowd of prisoners, and imperfectly protected from seizure by a few sauntering sentries and a number of sleeping sepoys; for should the gaol be again crowded, as it was when I last wrote, it will be very difficult altogether to prevent a recurrence of the same risks.

36. The necessary system is in full force. The accumulations of food, therefore, which formerly took place, cannot again occur; and thus one facility which the prisoners enjoyed for the procural of illicit indulgences is cut off.

37. The godowns are in good order, as is the prisoners' property-room.

38. Economy has been introduced into every department of the gaol. The guards and establishments have been reduced, as shown in former Appendices, and with greater detail in the schedules which accompanied my letter, No. 1229 of 1861. The contingent bills have been reduced to an extent (latterly) of fully 40 per cent. over the former averages. The clothing department has been subjected to new and judicious regulations; and stringent measures have been adopted to prevent fraud or waste in the provisioning department.

39. When reporting the previous condition of the Poona Gaol, I pointed out, and Government has recognized, that for the defects brought to notice no blame was attributable to Mr. Loughnan; but I hope I shall not be considered as exceeding my legitimate functions if I venture to affirm that the credit of removing them is entirely his, and to express the very grateful sense I entertain of the time-consuming and trouble-imposing efforts he has made not only to comply with, but to exceed the letter of, my requisitions and suggestions, and that, too, often when sickness and the heavy duties that more strictly appertain to his office would have afforded very valid excuse for limiting his exertions to the mere issue of orders.

40. So far as the engineers can advantageously employ the convicts on public works, they are thus employed. The rest are engaged in the ordinary in-door gaol operations. But I regret to say that the most profitable of the gaol labours have been brought to a conclusion—the Post Office having withdrawn its contract for carts, disappointed, I regret to say, with the work turned out—an incident much to be deplored, and far from creditable to the late marshal of the gaol, but one which, of course, the judge could in no wise have prevented.

(True copy.)

C. G. Wiehe, M. D.,
Inspector General of Prisons.

APPENDIX TO REVENUE REPORT.

Appendix (A.)

COMPARATIVE STATEMENT showing the Collections of Revenue for the Official Years 1860-61 and 1861-62, in the District of North Canara, from 1st May to 30th April of each Year.

APPENDIX TO POLITICAL REPORT.

Appendix (A).

(No. 228 of 1862.)

No. 55 of 1862.—Political Department.

From Major General *R. W. Honner*, C.B., Acting Political Resident, Aden, to the Secretary to Government in the Political Department, Bombay.

Sir,

I have the honour to forward, for the information of the Honourable the Governor in Council, the Annual Administration Report of Aden for the official year 1861-62, ending 30th April.

I have, &c.

R. W. Honner, Major General,
Acting Political Resident, Aden.

Aden, 20 May 1862.

Administration Report of Aden for the Year 1861-62.

During the past year the civil duties of Aden have been administered by the undermentioned officers:—

By Captain Playfair	during	7¾ months.
By Brigadier Coghlan	„	1¼ „
By Brigadier Robertson	„	2¼ „
And by General Honner	„	¾ „

Judicial.

Civil Justice.

2. The following statement exhibits the number of civil suits decided during the year 1861, as compared with those of the two previous years:—

By whom Decided.	1859.		1860.		1861.	
	Number of Suits.	Aggregate of Awards.	Number of Suits.	Aggregate of Awards.	Number of Suits.	Aggregate of Awards.
		Rs.		*Rs.*		*Rs.*
Captain Playfair	246	13,724	1,222	81,559	132	19,802
Mr. Rassam	822	28,604	158	3,590	23	2,352
The Cazee	27	130	31	- -	2,861	47,126
Arbitration	18	4,545	40	5,135	53	3,804
Settled out of Court	394	10,281	- -	- -	556	5,624
Total	1,507	57,284	1,451	90,284	3,625	78,708

3. The system now introduced for the first time, of giving the Cazee civil jurisdiction in suits not exceeding 200 rupees, has worked admirably. It is apparent that many suitors have gone to him who would not have brought their cases before the regular court, as, although the amount of awards passed during last year is (excluding the cases settled out of court) less than the previous year by 18,200 rupees, the number of suits are more than double those decided in 1860.

4. The Cazee is remunerated by fees; he is allowed four annas on each award under 50 rupees, and four annas more for each 50 rupees above that sum; the amount he has thus received is 264 rupees 12 annas.

Criminal Justice.

5. In last year's Administration Report it was shown that there had been a steady decrease in crime since 1857. In the year now under review the decrease is very decided, the total number of offenders being 545, or 194 less than last year, and 441 less than in 1857.

6. The following table exhibits the number of each class of offences during the past five years:

NATURE of OFFENCES.	1857.		1858.		1859.		1860.		1861.	
	Convicted.	Acquitted.	Convicted.	Acquitted.	Convicted.	Acquitted.	Convicted.	Acquitted.	Convicted.	Acquitted.
I. Offences against the Person - -	99	9	104	1	90	7	102	8	119	2
II. Offences against the Property, attended with Violence.	1	–	–	–	–	–	–	–	–	2
III. Offences against the Property, without Violence.	140	6	132	4	143	2	99	8	94	10
IV. Malicious Offences against Property -	1	–	–	2	–	–	–	–	–	–
V. Forgery and Offences against Currency	1	–	2	–	1	1	1	1	–	1
VI. Miscellaneous - - - - -	708	21	510	14	503	2	492	29	307	10
TOTAL - - -	950	36	748	21	737	12	694	45	520	25
TOTAL Convicted and Acquitted - -	986		769		749		739		545	

7. The first class, "Offences against the Person," calls for no special remark.

8. There was only one instance of offence against property accompanied by violence, and this did not occur within civil jurisdiction. Two workmen of the Engineer Department were charged with having bound, robbed, and otherwise ill-treated one of their comrades. The case was sent by the military authorities to the Civil Court for trial, but as no evidence was forthcoming, the prisoners were acquitted.

9. The class Miscellaneous is composed of the following items:—

	Convicted.	Acquitted.
Returning after Expulsion - - - - - -	30	—
Refusal of Duty by Seamen - - - - -	20	—
Rescue - - - - - - - - - -	2	—
Other Offences not otherwise specified - - - -	255	10
TOTAL - - -	307	10

10. The

10. The following sentences were passed:

	Dismissed from Office.	Fined.	Flogged.	Imprisonment not exceeding one month.	Imprisonment not exceeding six months.	Imprisonment not exceeding one year.	Imprisonment not exceeding two years.	Expelled.	TOTAL.
By Captain Playfair	1	231	15	70	51	5	1	22	396
By Mr. Rassam	–	73	2	42	5	–	–	2	124
TOTAL	1	304	17	112	56	5	1	24	520

11. No alteration has taken place in the police establishments during the year under review, except that the pay of the Subedar has been increased from 40 to 50 rupees per mensem; the increasement was recommended last year when a reduction took place, but the sanction was not obtained for it till the present year. Police.

12. The present sanctioned strength is as follows:—

DETAIL.	Number.	Amount.	Total.
MUNICIPAL POLICE:		*Rs.*	*Rs.*
Subedar	1	50	
Jemadar	1	30	
Havildars	4	56	
Naiques	4	48	
Sepoys, 1st class	75	750	
Ditto, 2d ditto	25	200	
TOTAL	110	1,134	1,134
SEEBUNDEES:			
Havildar	1	15	
Naiques	2	24	
Sepoys, 1st class	17	170	
Ditto, 2d ditto	10	80	
TOTAL	30	289	289
Mounted Orderlies	5	150	150
GRAND TOTAL	145	–	1,573

13. The following is an abstract of the prisoners in gaol during 1861, compared with the previous year:— Gaol.

	1860.	1861.
Aggregate of the average daily number of all classes	63,107	52,903
Daily average	172	145
Number remaining in gaol on the 31st December 1859 and 1860	164	178
Number admitted during the year	357	207
Number released	340	247
Ditto escaped	–	1
Ditto died	3	4
Ditto executed	—	—
Remaining 31st December 1860 and 1861	178	133

14. The health of the prisoners continues satisfactory, as will be seen from the subjoined Table:—

Year.	Cholera.	Atrophia.	Intermittent Fever.	Remittent Fever.	Dysentery.	Diarrhœa.	Ophthalmia.	Chest Affections.	Rheumatism.	Scurvy.	Various other Diseases.	Total Admitted.	Died.	Nature of Disease producing Death.	Accidental Death.	Average Strength of Prisoners.	Per-centage of Death to Strength.
1857	–	–	47	–	3	2	1	3	2	6	1	65	3	Small-pox – Ascetis – Beriberi –	–	152	1·9
1858	1	–	58	1	5	9	4	11	12	10	10	120	6	Remittent Fever – Bronchitis (2) – Cholera – Heart Disease – Scurvy –	–	161	3·7
1859	–	15	–	10	7	2	6	4	9	8	–	61	1	Dropsy –	–	158	0·63
1860	–	1	31	1	4	3	2	2	2	48	51	145	2	Intermittent Fever – Scurvy –	–	172	1·7
1861	–	–	86	–	6	9	3	9	16	9	63	201	2	Scurvy – Abscess –	–	145	1·37

15. Of the four prisoners whose deaths are detailed, one died of sheer old age and debility; another, one of the State prisoners sent from Sind, was upwards of 70 years of age; and the remaining two, though only 40 and 43 years of age respectively, had been 16 and 13 years in confinement.

16. Remunerative in-door labour progresses satisfactorily. The following is a summary of realisations from each branch of industrial art during the three past years:—

	1859.			1860.			1861.		
	Rs.	*a.*	*p.*	*Rs.*	*a.*	*p.*	*Rs.*	*a.*	*d.*
Net profit of printing press	998	2	2	1,382	14	7	1,334	–	10
Type purchased during the year	397	2	3	—			—		
Bookbinding plant purchased during the year	189	–	–	130	14	–	—		
Net profit on bookbinding	–		–	335	15	6	460	9	–
Miscellaneous manufacture	931	2	7	1,082	5	8	760	6	–
Realised by sale of vegetables grown in gaol garden	74	11	6	112	3	–	66	12	6
Realised by grinding wheat	–		–	257	13	–	307	11	–
Actually received from proceeds of outdoor convict labour.	–		–	1,090	10	–	784	14	–
Miscellaneous receipts	18	8	3	58	11	3	17	11	3
Saving actually effected by substitution of convicts for hired menial labour.	–		–	150	–	–	150	–	–
TOTAL *Rs.*	2,608	10	9	4,601	7	–	3,882	7	7
Deduct— Bookbinder's wages (as instructor)	17	8	1	462	–	–	—		
Actual Net Profit *Rs.*	2,591	2	8	4,139	7	–	3,882	7	7

17. Although the actual amount realised during the present year falls short of that of 1860, there has been an advance in reality. In 1860 there was a daily average of 172 prisoners, who yielded a net profit of 4,139 rupees; during 1861, 145 prisoners yielded 3,882 rupees. The present year's income, calculated according to last year's rate, would have been—

172 : 145 : : 4,139 : 3,489,

which result is less by 393 rupees than has been realised.

18. The value of convict labour not actually charged for (gaol servants excluded) was *Rs.* 943. 2., of which sum, *Rs.* 500. 14. represents labour expended in repairing the gaol buildings and making a paper manufactory; the remainder was on account of various petty repairs for the execution of which no local funds were available.

19. The paper manufactory had not commenced to yield any return before the end of the year. It is now, however, in full work. Much *direct* profit cannot be expected from this source, but the indirect gain will be considerable, as it enables a number of prisoners to be employed inside the gaol, and a proportionate reduction will be effected in the Seebundee guard.

20. The following Table exhibits the description of work on which the prisoners were employed :—

Description of Labour.		1860.		1861.	
		Aggregate Number.	Average Daily Number.	Aggregate Number.	Average Daily Number.
1. Hard Labour outside Gaol.	Masons	1,452	3·967	1,350	3·699
	Carpenters	51	0·139	219	0·600
	Labourers	7,089	19·369	4,700	12·877

GRAND TOTAL — *Rs.*	49,68,305	3,18,852	2,51,95,763	32,91,251	6,65,098	1,99,808

25. From the above there appears to be a decrease in imports, as compared with the previous year, of 22,00,724 rupees, but it will be seen at a glance that this is mainly owing to the small quantity of coal imported, which was less by nearly 21 lacs of rupees than during 1860-61.

26. The cause of this is partly the unusually large stock which remained in the depôt of the Peninsula and Oriental Company at the close of last season, and partly that, owing to the Egyptian Railway coal can be delivered at Suez so cheaply, the demand for it here has very much declined. Formerly steamers took in little or none there; now nearly as much is used as at Aden.

27. Nevertheless, deducting the item "Coal," there still remains a decrease in imports amounting to 1,07,065 rupees, principally in the following articles :—

Cotton	*Rs.* 74,920	Tobacco	*Rs.* 33,785
Grains	27,070	Wines	12,414
Live Stock	53,507	Wood	16,019
Sundries	21,245	Treasure	1,35,488
Sugar	18,398		

28. The most marked items of increase are :—

Coffee	*Rs.* 1,13,525	Oil	*Rs.* 17,191
Dates	11,513	Piece Goods	92,887
Ivory	18,961	Silk	12,135
Metals	14,121	Spices	26,243

29. In exports there has been a decided advance, amounting to 4,65,290 rupees, principally in the following articles:—

Coffee	*Rs.* 4,19,309	Piece Goods	*Rs.* 70,042
Drugs	16,938	Spices	15,557
Metals	12,521		

30. While the items in which the greatest decrease is apparent are:—

Cotton	*Rs.* 62,605	Ivory	*Rs.* 41,803
Ghee	14,023	Sundries	18,615
Hides	31,269	Weerrus	14,079

31. Adding the amount of exports and imports, exclusive of coal, which can hardly be regarded as an article of regular commerce here, we find that the gross value of external trade was 75,05,420 rupees, being an increase over the previous year of 3,58,225 rupees.

32. The following Table shows the distribution of trade:—

	Amount.	Comparison with 1860–61.	
		Increase.	Decrease.
IMPORTS from—	*Rs.*	*Rs.*	*Rs.*
United Kingdom	7,78,519	-	21,31,389

GRAND TOTAL *Rs.*	32,91,251	7,03,848	2,38,558

33. The

33. The falling off in imports from the United Kingdom, as has been already explained, is owing in a great measure to the decrease in coal. There has also been a great decline in the imports from Bengal and the African coast; the former are always uncertain; the latter have been injuriously affected by the feuds which prevailed between the two rival tribes at Berbera, and which threatened at one time to put a stop to the annual fair altogether.

34. On the other hand, there is a steady annual increase in the trade with Bombay and subordinate ports. Last year the increase in imports was more than 2½ lacs, while there was a small decrease in exports. This year there is an increase of about 1½ lac in each.

35. There is also a large increase both in imports from, and exports to, the Red Sea America, France, and Genoa.

36. There has been a decrease of 13,164 rupees in the value of goods passed into the interior, the aggregate of which is 13,20,252 rupees. With the exception of cotton and dates, however, there has been an increase in every article of merchandise. The decrease in dates is only 2,063 rupees, while, owing to the increased market for cotton in Bombay, consequent on the American war, the quantity passed into the interior is less than last year by more than 3¼ lacs.

37. There has been a striking increase in the value of tobacco taken into the interior, amounting to 2,15,333 rupees.

38. Of goods brought into Aden from the interior, there were 147,285 camel-loads, the estimated value of which was 16,35,756 rupees, or 1½ lacs more than during last year.

39. The following is a summary of the external and internal trade:—

	Rs.	*Rs.*
Imports by sea	49,68,305	
Exports by sea	32,91,251	
		82,59,556
Imports by land	16,35,756	
Exports by land	13,20,252	
		29,56,008
TOTAL - - - *Rs.*		1,12,15,564

40. This is 11,96,065 rupees less than last year; but deducting the items of coal, it may be safely asserted that during the year now under review, the regular trade of Aden has increased by nearly 9 lacs of rupees (the exact figure is 8,97,594 rupees).

41. The number of assessments on account of income-tax up to the end of May was 712, of which the following is the result:— Income Tax.

	Rs.	*a.*	*p.*	*Rs.*	*a.*	*p.*
SCHEDULES I. AND II.						
Imperial, at 3 per cent.	6,469	8	–			
Ditto, at 2 per cent.	2,217	8	–			
Local, at 1 per cent.	2,181	3	–			
				10,868	3	–
SCHEDULE III.						
Imperial, at 3 per cent.	—					
Ditto, at 2 per cent.	—					
Local, at 1 per cent.	—					
				—		
SCHEDULE IV.—(Civil Salaries only.)						
Imperial, at 3 per cent.	3,410	3	–			
Ditto, at 2 per cent.	481	10	–			
Local, at 1 per cent.	1,132	5	–			
				5,024	2	–
Penal assessments	8	–	–			
Fines	—					
				8	–	–
TOTAL - - - *Rs.*				15,900	5	–

 42. The

CHAP. XI Bombay.

42. The above, compared with the past year, is as follows:—

	Amount.		
	Rs.	*a.*	*p.*
1860–61 - - - - - - -	17,045	14	–
1861–62 - - - - - - -	15,900	5	–
Decrease - - - *Rs.*	1,145	9	–

A decrease was to be expected, as those whose profits during the present year exceeded last year naturally preferred to accept that year's assessment, while those whose profits were less demanded a new assessment. The number of new assessments was 53.

43. Of the above assessments, all have been collected save *Rs.* 653. 9.

License Tax.

44. The number of assessments made, and the amount collected under the Trades' License Act previous to the receipt of orders for its discontinuance, was as follows:—

	No.	*Rs.*
Class I. - - - - - - - - -	426	1,254
Class II. - - - - - - - - -	332	658
Class III. - - - - - - - - -	765	740
Penal assessments - - - - - - - -	—	—
Fines - - - - - - - - - -	17	38
TOTAL - - -	1,540	2,690

45. The whole of this has been refunded, except 110 rupees, which has not yet been claimed.

46. The only establishment entertained for collecting the income tax and trades' license duty was a clerk, on 40 rupees per mensem. In addition to this, printing expenses, stationery, &c., amounted to 59 rupees.

Stamp Duty.

47. The Governor General in Council has exempted the Courts at Aden from the payment of the stamp duty specified in Schedule B. of the Stamp Act.

48. The following is a statement of the amount of Government stamps sold during the past two years, deducting discount:

Years.	Amount.		
	Rs.	*a.*	*p.*
1860–61 - - - - - - -	445	10	–
1861–62 - - - - - - -	3,437	3	–
Increase - - - *Rs.*	2,991	9	–

PUBLIC WORKS.

Fortifications.

49. In Ras Morbut wall-battery, the embrasures which were arched and built of rubble masonry were so defective, that they had to be opened and relieved with massive cut-stone work; three of these have been completed, but the stone used is of so soft a nature that it has already commenced to flake away.

Barracks, &c.

50. The European infantry barracks in Front Bay have been completed, and the Ball Court erected.

Ras Tarshaque Barracks.

51. The new barracks on Ras Tarshaque at Steamer Point have, after an interval of several years, been again put in hand, and once more suspended, pending a reference as to the comparative cost of iron and stone buildings.

Isthmus Barracks.

52. The roof of one of the Isthmus barracks was destroyed by fire, and has been rebuilt.

Artillery Barracks.

53. The sea-wall in front of the site on which the artillery barracks in Front Bay are to be built has been finished, and the barracks themselves have been put in hand.

54. The

54. The new Civil hospital, in course of erection from the proceeds of the municipal fund, has been noticed elsewhere. Hospital, Civil.

55. A new hospital for the accommodation of native infantry, golundauze, and sappers and miners, is in course of erection. All the out-houses and the compound-wall have been completed; the main building is nearly so, and is in course of being roofed in. Hospital, Native Military.

56. Apothecary and servants' quarters, privies, store-room, and a compound-wall are being added to the European General Hospital at Steamer Point; the work is not yet complete. Hospital, European General.

57. The timbers of the Residency roof were entirely decayed, and it leaked so much that the building was not habitable during rain. It has been renewed. Residency.

58. The Treasury roof, owing to the original faulty construction, leaked as much, and was likewise rebuilt. Treasury.

59. The new passenger-pier at Steamer Point has been completed at a great expense; but it is not well adapted to the purpose for which it is required: only two boats can come alongside at once, and when there is much swell in the harbour it is hardly approachable. The native boatmen cannot be induced to use it, and prefer landing their passengers on the beach. Harbour.

60. The great work of the year has been the completion of the Tawella reservoirs as far as Coghlan Tank at a cost of 3,34,028 rupees. Water Supply.

61. Independently of several tanks outside the Tawella Valley, which have been cleared out and repaired at the expense of the municipal fund, the following have been restored by the Department for Public Works:—

Upper tank - - - - - -	Capacity	1,255,424 gallons.
Pool below tank - - - - -	„	64,881 „
Tank in aqueduct - - - - -	„	135,919 „
Side tank to the right of aqueduct - -	„	467,908 „
„ to the left of „ - -	„	181,998 „
Coghlan tank - - - - -	„	4,645,273 „
TOTAL - - -		6,751,403 „

62. There now only remains Playfair Tank to complete the series; it is the finest of all, and will contain 5,000,000 gallons. The Executive engineer is engaged in preparing an estimate for this work.

63. The water collected during the fall of rain in October 1860 lasted till the beginning of the present year. When the hot season approached, the tanks were absolutely empty; and the Arabs of the interior supplied themselves with extra camels, water-skins, &c., and anticipated a rich harvest from us during the approaching hot season. One camel-load of water was brought in and sold for 3 rupees, being at the rate of 6 rupees per 100 gallons.

64. Fortunately on the 3d, and again on the 15th of April, we were blessed with showers of rain, which, although they did not fill all the tanks, gave us sufficient water to meet the requirements of Aden for a year.

65. The effect of Captain Fuller's bunds was fairly tested. No débris reached the upper tank, and a large body of water was retained, which continued to flow for several days.

66. The upper tank is quite full; the side tanks are nearly so. Coghlan tank has about five feet of water in it, and there is a large quantity of water in the detached reservoirs; in all about 3,000,000 gallons has been collected.

67. The realisations from the reservoirs up to the end of April amount to *Rs.* 56,254. 3. 3.

68. A new church is in course of erection at Steamer Point; the masonry is nearly finished. It is being built by private subscription, aided by a grant of 10,000 rupees from Government. We have already collected 14,543 rupees, which, with the grant above-mentioned, will suffice to complete the shell of the building, and we trust that a further sum sufficient to fit it up and build a bell gable will be collected before it is required. Ecclesiastical.

69. The Red Sea telegraphic cable has been repaired from Jubal Island, at the entrance of the Gulf of Suez, to Suez, and the steamer "Sir James Duke" has left Aden for the purpose of examining, and, if possible, repairing the line to the eastward. The engineer in charge of the operation, however, has little hope of the line being in working order during the present year. Electric Telegraph.

70. During the past year 158 square-rigged vessels and steamers entered the port of Aden, the aggregate burden of which amounted to 152,479 tons, being a decrease of 103 in the number, and 84,113 tons in the burden, as compared with 1860-61. Marine.

CHAP. XI. Bombay.

71. The following table exhibits the nationality of the various ships:—

Under what Colours.	Number of Vessels.	Number of Tons.
British Colours	150	147,584
American „	4	3,316
French „	2	724
Italian „	1	280
Arab „	1	575
TOTAL	158	152,479

72. During the same period 950 country crafts, the aggregate burden of which was 37,857 tons, arrived at Aden; the number has declined by 20, but there is an increase of 794 tons in the burden over the number registered last year.

73. The total amount of tonnage which entered the port was—

Steamers and ships	152,479 tons.
Country crafts	37,857 „
TOTAL	190,336 „

FINANCIAL.

74. The following is a statement of receipts and disbursements at the Treasury during the past official year:—

RECEIPTS.	Amount.	DISBURSEMENTS.	Amount.
	Rs.		*Rs.*
Abkaree	8,441	Allowances, refunds, and drawback	2,708
Income tax	16,471	Assessed taxes	1,214
License tax	2,653	Customs	2,797
Fines tax	69	Stamps	224
Stamps	3,604	Allowances and assignments under treaties and engagements.	17,214
Law and justice	2,432	Salaries and expenses of public departments.	11,919

Military Opium and Ganza license.	2,500 - -	2,516 10 8	2,410 - -	2,153 5 4
TOTAL - - - *Rs.*	25,464 2 8	25,911 10 8	25,351 10 8	20,916 10 8

77. In addition to the above, the duty on kaât realised 2,676 rupees, being 543 rupees more than during 1860-61.

78. The quantity of opium sold was 132 Indian seers, the value of which was 3,131 rupees.

79. The records of our relations with the Arab tribes in the vicinity of Aden during the past year has been happily almost a blank; the most profound peace has prevailed between us and our neighbours, and, until the last few weeks, between our neighbours themselves. One or two plunders and murders have lately occurred on the roads, but this is too much the normal condition of society in Arabia to be seriously regarded; the disturbances were devoid of any political importance, and are in a fair way of being amicably settled. POLITICAL. Occurrences in, and relations with neighbouring States.

80. In the Turkish provinces of Yemen, Ahmed Pasha has again been at war with his Arab neighbours. Not long since he made an incursion into the district of Melhan with a force composed of a few Turkish soldiers, a large number of Arab and Somalie mercenaries, and a few pieces of artillery. He destroyed the coffee and fruit plantations of Melhan; but eventually a number of his mercenaries were killed by the enemy; the rest deserted—the Arabs to their homes, and the Somalies to Aden; his guns were captured, and he himself was closely invested with a few followers in a hill-fort where he still remains.

81. At Mokha there has been an outbreak of the old feud between the Mushlahi and the people of Moza, in which a number have been killed on both sides; it still continues unabated.

82. From Abyssinia there is no news of importance. King Theodorus still maintains peace in his extensive kingdom, and appears engaged in the work of consolidating his authority.

83. On the coast, the Turks are extending their possessions; they have already occupied "Disseh" and "Adoolis," and it is rumoured that they intend planting military colonies along the frontiers of Abyssinia. There is no doubt that the occupation of "Disseh" by a power which would hardly use it to our disadvantage, is a most fortunate circumstance, as far as British interests are concerned; but it is equally true that in proportion as the Turkish power becomes established along the African shore of the Red Sea, so the slave trade will be extended, and the efforts of Theodorus for its suppression will be paralysed.

84. During the past year we have succeeded in preventing the exportation of slaves from the Somalie coast to the various markets on the Arabian coast outside the Straits of Babel-Mandeb; but it is vain to suppose that this has been any material check to the slave trade. Instead of bringing slaves to Berbera as heretofore, the Hurren merchants take them to Tajourra, whence, in spite of orders from the Turkish Government to the contrary, they are sent to Yemen and the Hejaz. Boats do not indeed enter the principal harbours, such as Mokha and Hodeida, but there are numberless points on the coast, removed from the surveillance of the Turkish authorities, where they can be and are landed in security. SLAVE TRADE.

85. Until we obtain the right by treaty of capturing slaves under Turkish colours and of watching Turkish ports, our endeavours to stop the trade may be partially successful, but to a great extent the effect will be to enrich the merchants in Turkish ports who gain their livelihood thereby at the expense of such as have bound themselves to us by treaty not to engage in it.

86. The strength of the garrison on the 30th April was as follows :—

CORPS.	European Commanding Officers.	Native Commanding Officers.	Serjeants or Havildars.	Buglers, Drummers, &c.	Rank and File.
Her Majesty's 6th Battery, 21st Brigade Royal Artillery	3	—	5	2	89
,, Gun-Lascars attached	—	—	2	30	—

Staff Surgeon, Deputy Medical Storekeeper, and in charge of Native General Hospital.	220 — —	220 — —	
Barrack-master	105 — —	85 — —	Pay and allowance of a serjeant.

(1) In addition to full pay and allowances of rank.

(*a*) 90 rupees for office establishment.

(2) Draws 30 rupees office rent.

89. The following is a statement of the receipts and expenditure of the Municipal Fund for the year 1861:—

RECEIPTS.	Rs.	a.	p.	EXPENDITURE.	Rs.	a.	p.
Balance on hand 31st December 1860 -	3,668	8	6	Establishment of police court - - -	4,542	–	–
Received on account of fines - - -	2,538	15	–	Expenditure on account of police - - -	1,235	10	–
Ditto - ditto of poundage - -	185	5	9	Ditto - ditto of conservancy of town - - - - - - -	3,502	2	–
Ditto - ditto of summons - -	1,965	1	–	Expense of drawing water from wells and tanks - - - - - - -	5,504	1	9
Ditto - ditto of taxes on animals -	725	4	–	Constructing new civil hospital - - -	14,586	9	6
Ditto - ditto on boats - - -	1,082	–	–	Constructing cutch-house for residency gig's crew - - - - - - - -	99	8	–
Assessment for sweeping and watering streets	3,104	–	–	Planting and watering trees - - -	665	7	–
Ditto on coal depôts - - -	323	1	10	Repairs to ancient reservoirs - - -	1,381	7	3
Fees on notarial and other documents - -	2,460	1	9	Ditto to Banian well - - - -	160	1	4
Realisation from Banian well - - -	4,188	8	–	Ditto to police station - - - -	148	5	9
Ditto Tawella well - - -	1,890	8	6	Ditto to Cazee's court - - - -	45	1	–
Realised from sale of water from reservoirs -	5,670	8	–	Ditto to police court at Steamer Point -	285	1	–
Ditto by levy of quit-rent - - -	2,517	4	–	Ditto to Small-pox Hospital - - -	13	14	5
Received by subscription for civil hospital -	6,144	1	6	Expense of collecting taxes - - - -	269	12	5
Miscellaneous receipts - - - -	1,549	5	11	Subsistence of patients in the Civil Hospital -	296	9	–
				Ditto - ditto in Small-pox Hospital -	34	6	–
				Contingencies - - - - - - -	1,130	3	6
				TOTAL Expenditure - - - *Rs.*	33,900	4	5
				Balance on hand - - - - - *Rs.*	4,112	5	4
TOTAL Receipts - - - *Rs.*	38,012	9	9	GRAND TOTAL - - - - - *Rs.*	38,012	9	9

90. The following is a statement of the progressive increase in this fund since its institution in 1854:—

YEARS.	Receipts.			YEARS.	Receipts.		
	Rs.	*a.*	*p.*		*Rs.*	*a.*	*p.*
1854 - - - - - -	8,564	3	2	1858 - - - - -	20,430	7	1
1855 - - - - - -	13,529	5	4	1859 - - - - -	31,705	5	1
1856 - - - - - -	23,334	1	8	1860 - - - - -	31,169	4	5
1857 - - - - - -	23,053	8	2	1861 - - - - -	38,012	9	9

91. The aggregate of the receipt side during the year under review was *Rs.* 38,012 9. 9., but from this the sum of *Rs.* 6,414 1. 6. should be deducted, that being an extraordinary item of receipt, viz., subscription given by the inhabitants of the town to assist in building a new civil hospital. With this deduction, the amount exceeds that of the previous year by *Rs.* 699 3. 10.

92. One wing of this hospital, with the necessary outhouses, has been completed and occupied; the other wing will soon be ready.

93. A fine ancient reservoir above the Roman Catholic Chapel has been cleared out and repaired at a cost of *Rs.* 1,381 7. 3.; this is quite unconnected with the system in the Tawella Valley.

94. As usual, the current expenses of the police court, conservancy establishment, wells, tanks, &c., have been borne by the municipal fund, and a number of public works executed, which are detailed in the statement of expenditure.

95. The following Table shows the extent to which vaccination has been carried on during the past year:— Vaccination.

1861–62.	May 1861.	June.	July.	August.	September.	October.	November.	December.	January 1862.	February.	March.	April.	TOTAL.
Number operated on	75	60	63	68	83	96	98	91	103	82	89	98	1,006
Of these, successful -	51	25	48	44	72	81	84	59	69	49	51	64	697

96. There have been no cases of small-pox under treatment in the civil hospital, and, as far as I am aware, the disease has not occurred in the settlement during the past year. During the preceding four years the average number of cases treated annually (in the civil hospital) was 52 of which 31 per cent. proved fatal. Small-pox.

Civil Hospital.

97. The following table shows the number of cases treated at the Civil Hospital during 1861-62 :—

CLASSES OF DISEASES.	Town People.					Police.				
	Remained, 1860-61.	Admitted, 1861-62.	Total.	Deaths.	Ratio per Cent. of Death to Sick.	Remaining.	Admitted.	Total.	Death.	Ratio per Cent.

APPENDIX TO SURVEY REPORT.

APPENDIX (A.)

STATEMENT showing the Amount of Survey work done from 1st April 1861 to 31st March 1862, in the Hydrabad Collectorate.

Number.	Deputy Collectorate.	Talooka.	Villages. No.	Villages. Completed during the Year.	REMARKS.
1.	2.	3.	4.	5.	6.
		HUDHUST, or demarcation of Village Boundaries.			
		Buddeena - -	485	243	The work in this Talooka is now being revised; the number of Dehs will be fixed also, not done hitherto.
		Baga-ka-Tanda -	97	62	In one Tuppa the work is being revised; elsewhere it is completed.
		Dhera Mobhut - -	63	13	
		Sahitee - - -	114	13	
		Kundiara - - -	63	4	
		Mora - - -	79	26	The work of demarcation in the Dehs not entered in column 5 was completed in these Talookas prior to the 1st April 1861.
		Sukkrund - -	104	56	
		Halla - - -	109	72	
		Shadadpoor - -	72	59	
		Allyar-ka-Tanda -	75	45	
		Meerpoor - -	26	17	
		Hydrabad - -	65	6	

Note.—The boundary between the Talookas of Meerpoor, Allyar-ka-Tanda, and Mobhut Dehra, in the Hydrabad Collectorate, and the Political Superintendency, Thurr and Parkur, is to be settled at the close of the current month; until then some boundary demarcation remains incomplete.

		THAKBUST, or Village Boundary Survey.			
		Sahitee - - -	114	11	The other Dehs in this district were thakbusted prior to the 1st April 1861.
		Kundiara - -	63	4	
		Mora - - -	79	21	
		Sukkrund - -	104	104	This work has all been done between 1st April and 31st March 1862.
		Halla - - -	109	109	
		Shadadpoor - -	72	72	
		Meerpoor - -	26	26	
		Allyar-ka-Tanda -	75	75	
		Mohbut Dhera - -	63	14	46 Dehs were thakbusted in 1860; three Dehs now remaining to be completed.
		Baga-ka-Tanda -	97	8	53 Dehs were thakbusted in 1860; 36 Dehs now remaining to be completed.
		Buddeena - -	485	8	The work was commenced here in March 1862.
		Hydrabad - -	65	6	59 Dehs were thakbusted in 1857. The work in this Talooka, and in part of Goonee, will be revised during the next two months.

KHISTWAR, or Field Survey.

Goone - - - Beegahs 1,73,676. The field survey was suspended in Goone and transferred to the Hydrabad Talooka at the end of March 1862.

CHAPTER XII.

NORTH WESTERN PROVINCES.

TABLE OF CONTENTS.

SECTION I.—JUDICIAL.

CIVIL JUSTICE.

PARAS.

Statement of the number of Regular Suits and Appeals instituted, decided, and pending at the close of 1861 - 1
Manner in which the additional Business has been disposed of, creditable to the Judicial Officers - 2
Cases pending above one Year - 3
Percentage of the different Classes under which Cases have been disposed of - 4
State of the Miscellaneous Files - 5
Execution of Decrees - 6
Cases decided under Act X. of 1859 - 7
Results of Prosecutions for false Verification of Plaints - 8
Average duration of Suits - 9
Statement showing the number of Days during which parties were kept in Attendance - 10
Working of Sections 243 and 244, Act VIII. of 1859 - 11, 12
Number of Judgment Debtors Imprisoned - 13
Relative proportion of Suits instituted for real Property, and for Bond Debt - 14
Working of the syetem of employing Muzkooree Peons on fixed Salaries, successful - 15
Value of Stamps filed in Subordinate Courts - 16
Value and costs of all Suits disposed of - 17
Institution and working of Courts of Small Causes under Act XLII. of 1860 - 18-24
State of the Files of the Sudder Court - 25
Reduction in Ministerial Establishments effected during the Year - 26
Reductions effected in the Judiciary - 27
Administration of Civil Justice in Jhansie - 28

CRIMINAL JUSTICE.

General results of the Criminal Administration - 31-37
Results of Appeals from Magistrates to Sessions Judges - 38
Results of Commitments - 39
Amount of Criminal Business disposed of and pending - 40
Number of Witnesses examined, and period of their Detention - 41
Average duration of Cases disposed of with and without Police Agency - 42
Punishments inflicted by the Magistrates - 43
Operation of Act XVI. of 1850 - 44
Operation of Article 5, Schedule B, Act XXXVI. of 1860 - 45
Punishments inflicted by the Sessions Judges - 46
Number of Cases referred to the Nizamut Adawlut and called for an Appeal - 47
Cases disposed of by the Court of Nizamut Adawlut - 48
Probable decrease in the amount of Business - 49
Sentences passed by the Court - 50
Results of Criminal Administration in the Districts of Ajmere and Mhairwara - 51
Criminal Administration of the Terai Pergunnahs. —*Vide* Appendix, No. II. - 52

SECTION III.—GAOLS.

Comparative number of Prisoners confined during the Year - 53
Rates of Expenditure - 54, 55
Manufactures - 56, 57
Mortality - 58
Escapes - 59
Prison Burkundazes - 60
Rules for good-conduct Marks and Gratuities - 61, 62
Success of the Central Prison System - 63
Progress of Education in the Gaols - 64
Conduct of time-expired Convicts - 65

PARAS.

Probable satisfactory Results of the new system of placing the District Gaols under the entire charge of the Civil Assistant Surgeons - 66, 67

[*N.B.*—It will be seen that there is an omission of five numbers in the numbering of paragraphs between the close of the above and the commencement of the following Section; this omission is strictly in accordance with the original.—*Printer.*]

SECTION IV.—POLICE.

Formation of the Constabulary Police - 73
Number of each Grade and strength of entire Force as provisionally sanctioned and finally revised - 74
Gross cost of the Police as provisionally sanctioned and finally Revised - 75
Difficulties which attended the Introduction of the New Police system - 76-78
Their removal [with Appendix, No. 1] - 79
Adverse circumstance which added to the difficulties - 80
Comparative Tabular Statements showing general results [Appendices, Nos. II. and IIA.] - 81
Results in the Meerut Division - 82
Results in the Agra Division - 83
Results in the Rohilkund Division - 84
Results in the Allahabad Division - 85
Results in the Benares Division - 86
Concealment of Crime - 87
Cattle theft - 88
Female Infanticide - 89
Statistics of Crime in the North Western Provinces 90
Statistics of Crime in the North Western Provinces as effected by famine - 91
Dacoits; assisted by the People - 92
The Remedy - 93
Summary of the Law relative to Responsibility of Landholders [Appendix No. III.] - 94
Theft by the Administration of Poisonous Drugs - 95
Approver System recommended - 96
The New Police system - 97
Results in the Divisions of Jhansie, Kumaon and Ajmere - 98-100
Final dissolution of the Military Police - 101

SECTION V.—REVENUE.

Introductory - 102
Season - 103-107
Land Revenue - 108-120
Abkaree Revenue - 121
Stamp Revenue - 122
Sayer Revenue - 123
Sale of Confiscated Estates - 124
Total Revenue - 125
Divisional Statement of Work - 126, 127
Survey and Settlement, Dehra Doon - 128
Survey and Settlement, Jhansie Division - 129
Survey and Settlement, District of Goruckpore - 130
Opium cultivation in District of Goruckpore - 131

Sugar Cultivation in District of Goruckpore - 133
Trade in District of Goruckpore - 134, 135
Transfers to Maharajah Scindiah - 136
District of Ajmere - 137
Separate Revenue Customs - 138-142
Customs collections in Ajmere and Mhairwarra 144, 145
Working of Act XXXI. of 1861 - 146-148
Working of the Income Tax - 149-152

SECTION VI.—EDUCATION.

Improvement in the Working of all Schools - 153
The Upper Educational Institutions - 154-156
The Calcutta University Examinations - 157
The Boarding House at Bareilly - 158

PARAS.

Lower Educational Schools - - - - - - 159
Increased Attendance - - - - - - - 160
Cost of Education - - - - - - - 161
Inspection - - - - - - - - - 162
School Accommodation - - - - - - 163
The Normal Schools - - - - - - - 164
Female Schools - - - - - - - - 165
Grants-in-aid - - - - - - - - 166
Sale of Books in the Department of Public Instruction - - - - - - - - - 167
Aspersion of the Christian Vernacular Education Society on these Books - - - - - - 168
General Results - - - - - - - - 169
Thomason College, Roorkee - - - - - 170

SECTION VII.—PUBLIC WORKS.

Re-organization of Circles of Superintendence - 171
Special Works of Progress under Construction or Completed - - - - - - - - 172
Monuments at Cawnpore and Jhansie - - - 173
Accidents by Flood and Fire - - - - - 174
Bridges of Boats - - - - - - - - 175
Abstract expenditure as Compared with Budget allotments - - - - - - - - 176
Divisions of the Irrigation Department - - 177
Expenditure on the Ganges Canal - - - 178
Expenditure on the other Canals in these Provinces, 179
Amount of Revenue derived from the Canals during the Year - - - - - - - - - 180

SECTION VIII.—FINANCIAL.

General Financial Statement - - - - - 181
Reductions in the Judiciary and Revenue Establishments - - - - - - - - - 182
Reductions in the Secretariat - - - - - 183
Reductions in the Punkah and Tattie Establishments - - - - - - - - - - 184
Formation of a Standing Committee for the Revision of Contingent Expenditure - - - - - 185
Treasury Business at Benares and Mirzapore transferred to the Bank of Bengal - - - - - 186

SECTION IX.—ELECTRIC TELEGRAPH.

Line from Meerut to Mussorie sanctioned by the Government of India - - - - - - 187
Construction of an Office at Cawnpore - - - 188
Piers for carrying the Wire across the Ganges at Gurmooktesur - - - - - - - 189

SECTION X.—POST OFFICE.

Post Office - - - - - - - - - - 190

SECTION XI.—INLAND NAVIGATION.

No operations of Importance in either Department 191

SECTION XII.—ECCLESIASTICAL.

A Roman Catholic Chapel built at Cawnpore, and another in progress at Meerut - - - - - 192
Churches at Bareilly and Futtehghur nearly finished; enlargement of that at Mussoorie - - - 193

SECTION XIII.—POLITICAL AND MILITARY.

Volunteer Rifles - - - - - - - - 194
Honorary Magistrates - - - - - - - 195
Native Presses - - - - - - - - - 196
Rules for the administration of the Terai District - 197
Important Lines of Communication - - - 198
Roorkee and Dehra Road - - - - - - 199
Cawnpore and Malthone Road - - - - - 200
Rohilkund Imperial Road - - - - - - 201
Road from Gurmooktesur Ghât to Ghazeeooddeennugger - - - - - - - - - - 202
Agra and Bombay Road - - - - - - 203
Construction of a Cotton Press - - - - - 204
Area under Cotton Cultivation during the year - 205
Estimated out-turn of Clean Cotton - - - 205

SECTION XIV.—POPULATION AND AGRICULTURE.

PARAS.

Working of the Government Tea Plantations - 207
Out-turn of Tea - - - - - - - - 208
Financial Results - - - - - - - - 209
The Botanical Gardens at Seharunpoor in a high state of efficiency - - - - - - - - 210

SECTION XV.—FORESTS.

Period over which Operations extended - - 211
Forests within the jurisdiction of the North Western Provinces - - - - - - - - - 212
Saugor and Nerbudda Forests - - - - - 213
Appointment of a Superintendent of Forests - - 214
Results of his inspection - - - - 215–218
Instructions given to the Superintendent - 219, 220
Receipts from the Forest - - - - - - 221
Sums sanctioned for Roads in the Forest Districts 222
Bungalows built for the use of the Forest Department - - - - - - - - - - 223
Establishment for the Conservation of the Forests - 224
Notification to the Inhabitants - - - - 225
Provisional set of Rules - - - - 226, 227
Tabular Statement showing the Ghurwal and Kumaon Forests - - - - - - - - - 228
Churwal Forests - - - - - - - - 229
Kumaon Forests - - - - - - - - 230
100,000 to 150,000 saul sleepers available annually. Saul the only Wood fit for Sleepers - - - 231
Saul so abundant that is unnecessary to plant it - 232
System of Cutting - - - - - - - 233
Financial Results - - - - - - - 234
Establishment sanctioned for Conservation - - 235
Trees which produce Timber - - - - - 236
Dehra Dhoon Forests - - - - - - - 237

Nerbudda Coal and Iron Company - - - 238
Iron Mines of Shahghur and Heerapoor - - 239
Results of enquiries regarding Coal Fields in Rewah - - - - - - - - 240–253
North of Indian Kumahon Iron Works Company, Limited - - - - - - - - - - 254

SECTION XVII.—SURVEYS.

Completion of Survey of Jhansie Division and organization of a party to survey certain Forest Tracts in Rohilkund - - - - - - 255

SECTION XVIII.—HOSPITALS AND DISPENSARIES.

Results of the Administration of the Medical School at Agra - - - - - - - - - 256–266
Dispensaries opened during the Year - - - 267

SECTION XIX.—VACCINATION.

Results of the Vaccine Operations in the Agra Division - - - - - - - - - 268
Results of the Operations in Rohilkund - - 269
Results in Kumaon and Ghurwal - - - - 270
Results contrasted with those in Rohilkund - - 271
Increase in the demand and supply of Hill Virus - 272

SECTION XX.—MISCELLANEOUS.

Operations of the Government Press at Allahabad, and the financial results - - - - - 273, 274
Introduction of a system of Meteorological Operations in the North Western Provinces - 275–277

SECTION XXI.—RAILWAYS.

Railways under construction - - - - 278
Operations on the main line, East India Railway - 279 —280
Present state of the three great Bridges - - 281
The Electric Telegraph - - - - - - 282
Financial Results - - - - - - 283–289
Collissions - - - - - - - - - 290
Fires - - - - - - - - - - 291
Total Accidents - - - - - - - - 292
Operations on the Jubbulpoor Extension Line 293–297

CHAPTER XII.

NORTH WESTERN PROVINCES.

REPORT ON THE ADMINISTRATION OF THE NORTH WESTERN PROVINCES, for the Year 1861-62.

SECTION I.—JUDICIAL.

CIVIL JUSTICE.

1. THE following Statement exhibits the total number of regular suits and appeals instituted, decided, and pending at the close of 1861:—

	Instituted		Disposed of				Pending on 1st January.			
			1860.		1861.		Above One Year.		Total Pending.	
	1860.	1861.	Decided on Trial.	Finally Disposed of.	Decided on Trial.	Finally Disposed of.	1861.	1862.	1861.	1862.
Total - - -	65,344	123,204	54,363	67,905	90,185	113,637	118	64	12,560	23,835
Increase - -	- -	57,860	- -	- -	45,822	45,732	- -	- -	- -	11,275
Decrease - -	- -	- -	- -	- -	- -	- -	- -	54	—	—

I.—Statement of the number of regular suits and appeals instituted, decided, and pending at the close of 1861.

These results are altogether extraordinary. The number of suits instituted has increased in the ratio of 95 per cent., that is, suits are within 5 per cent. of being double what they were in 1860. This is wholly attributable to the new Limitation Law (Act XIV. of 1859), which, after a two years' notice, was first intended by the Legislature to take effect from the 5th of May 1861; but the operation of which was, at the last moment, postponed to the 1st day of January 1862 by the enactment of Act XI. of 1861 on the 1st May 1861. The rush of suitors into the Courts of these Provinces, during the last days of April and the first days of May, was beyond expectation great. In some quarters the whole of the stamp paper procurable was used up, and suitors pressing to file their claims found no stamps left on which to engross them. When, after all this excitement, the new Act extended the term of limitation by nearly eight months, the Court, in a great measure, prevented a recurrence of a like rush of suitors, at the end of the year, by publishing a notification in every "Gazette," warning creditors to take timely steps for the renewal of their just claims. By these means a large mass of litigation has been kept out of Court.

II.—Manner in which the additional business has been disposed of, creditable to the judicial officers.

2. The manner in which this mass of additional business has been coped with is highly creditable to the judicial officers, European and Native, who have decided on trial a number of cases exceeding by 88 per cent. those so decided in the preceding year. The balance of pending cases on the files on the 1st of January 1862, though exceeding that of the preceding year, is in no wise excessive, except in some of the judges' Courts, the files of which are encumbered from exceptional causes.

CHAP. XII. North Western Provinces.

III.—Cases pending above one year.

3. The number of cases pending above one year on 1st January 1862 was 64, or less by almost one-half than the number pending at the commencement of 1861. If the return had not been spoiled by the exceptional number pending in one district, viz , 39, the total number of these cases in all the judgeships would have been only 25. This return appears generally dependent on the exceptional nature of files of one or two Courts.

IV.—Per-centage of the different classes under which cases have been disposed of.

4. *Ex parte* decisions are in the proportion of - - 15 per cent.

Decisions on confession	„	„	-	-	27 „
By arbitration -	„	„	-	-	3 „
Dismissal on default	„	„	-	-	4 „
Adjusted or withdrawn	„	„	-	-	16 „
Decided on merits -	„	„	-	-	35 „

The first class of decisions, or *ex parte* ones, attain to a higher proportion than is desirable. Admitting that many of these, especially in the year under review, may be fairly assumed to be equivalent to confessions, the defendant not having appeared to defend the suit because he knew that he would be cast, still the Court believe that not a few cases are included in which, from short notice, defective notice, or no notice at all, the defendant failed to make appearance. Some improvement is anticipated in this respect by increasing the pay of the Peons who are entrusted with the serving of processes.

The next class of decisions, those on confession, form a still larger proportion, exceeding one-fourth of the whole. All the zillah judges, however, bear concurrent testimony that confessions are really *bonâ fide*. The Court observe that, by a proper system of extended registration, a very large number of these confession cases would absolutely disappear. The remarks of the Court in this respect have been forwarded for the consideration of the Council for making laws and regulations.

The class of cases adjusted or withdrawn is proportionately higher in the returns of the past year, in consequence of the disturbing effects of the new limitation law. Suits were instituted to save limitation, and compromised where the defendant did not dispute the claim.

Thirty-five per cent. of the cases disposed of have been decided on merits, which, especially in so exceptional a year, is satisfactory. The differences shown in this respect by the returns of the different zillahs is striking, the ratio per cent. varying from 78 per cent. in one district; of cases decided on merits, to 21 per cent. in another. The chief cause of the difference is to be found in the different character of the prevailing litigation: the proportion of suits for bond debt being very high in those districts in which low averages of cases decided on merits are shown; and, *vice versâ*, the proportion of such suits being low where a high average of decisions on merits obtains.

V.—State of the miscellaneous files.

5. Particulars of the miscellaneous files are given in the following Table:—

	Instituted.		Decided.				Pending.			
			1860.		1861.		Above One Year.		Total Pending on 1st January.	
	1860.	1861.	Decided on Merits.	Finally Disposed of.	Decided on Merits.	Finally Disposed of.	On 1st January 1861.	On 1st January 1862.	1861.	1862.
Total - - -	108,216	137,867	71,447	113,846	82,248	141,968	22	10	16,439	22,097
Increase - -	- -	29,651	- -	- -	10,801	28,122	- -	- -	- -	5,658
Decrease - -	- -	- -	- -	- -	- -	- -	- -	12	-	-

The increase in this branch of civil business has been much less than in the number of regular suits, amounting to 25 per cent.; the increase in the number of such cases "finally disposed of" being in the ratio of 9 per cent. This result was to be expected, and it is presumable that the miscellaneous business of the current year will be a good deal increased by the proceedings necessary to give effect to the extraordinary amount of regular litigation of 1861. The pending miscellaneous files show some increase; but the number of miscellaneous cases that have been pending more than one year is satisfactorily small, viz., 10.

VI.—Execution of decrees.

6. Out of 75,589 applications for execution of decrees, 20,547 were completely executed. The ratio per cent. being 31 corresponds closely with that attained in 1860, which was 32 per cent. The character of the litigation, *i. e.* whether principally for bond debt or not, has very much to do with the execution results. Where that class of litigation prevails, it is often unnecessary to carry out execution completely, in consequence of the parties coming to some amicable arrangement, which is less possible in claims other than for

for bond debt. The results shown are sufficiently satisfactory. They are, indeed, in effect much more so than they appear to be, because it is obvious that, in the past year, many applications to execute must have been filed merely with the view of saving limitation, and not with any reasonable hope of complete success. The per-centage attained, therefore, as compared with 1860, is really better than it appears to be.

VII.—Cases decided under Act X. of 1859.

7. The total number of cases decided by the Revenue authorities, under Act X. of 1859, was no less than 37,200; while the number appealed to the Judge represents only seven per cent. Appeals vary according as the putwaree's papers and other documents are trustworthy, or otherwise; and, this being the case, the Lieutenant Governor regards this return as a most satisfactory testimony to the general accuracy of these papers throughout the districts of these Provinces.

VIII.—Results of prosecutions for false verification of plaints.

8. The results of prosecutions for false verification of plaints or written statements in each class of Court, in every district, show that 46 cases only have been prosecuted, and 69 persons committed, of whom 27 were convicted, 26 were acquitted, and the cases of 16 were still pending when the year closed. The Court believe that a large number of persons, who justly deserve the penalty of the law, escape unpunished. It is, indeed, altogether impossible, they observe, to arrive at any different conclusion, when it is considered that upwards of 127,000 suits and appeals were instituted during the past year; while 27 persons only were punished. These statements sufficiently betray the indifference with which the bearing of false witness is still regarded. The Court, however, are doing all in their power to stimulate the Judges, both European and Native, to grapple with this great evil. But its extirpation, especially in Courts presided over by Native Judges, who hesitate to incur the obloquy which would attend their energetic enforcement of the law, will necessarily be very gradual, and the work of much time.

IX.—Average duration of suits.

9. The following Table shows the average duration of suits in the Courts of the Judges, Principal Sudder Ameens, Sudder Ameens, and Moonsiffs, for each Zillah in 1861, as compared with 1860:—

COURTS.	1860.		1861.	
	Months.	Days.	Months.	Days.
Judges - - - - - - - -	5	8	5	11
Principal Sudder Ameens - - - -	3	29	3	11
Sudder Ameens - - - - - -	3	8	2	20
Moonsiffs - - - - - - - -	1	24	1	26

It appears that, while the average in the Courts of the Judges and Moonsiffs has remained little altered, some improvement has taken place in the average duration of cases in the Courts of the Principal Sudder Ameens and Sudder Ameens, notwithstanding the very large increase of business in the past year. This result cannot be regarded as other than satisfactory, especially when the vast influx of business which occurred during the year is taken into consideration.

X.—Statement showing the number of days during which parties were kept in attendance.

10. The results of the personal attendance of parties in the Superior and Moonsiffs' Courts are shown in the following Table:—

	Cases in which the Parties, or one of them, were before the Court voluntarily, or by Summons.				Cases of Non-attendance.	Total Number of Cases Decided.	Per-centage of Cases of Personal Attendance to Total Cases Decided.	
	In which Plaintiff was personally before the Court.	In which Defendant was personally before the Court.	In which both Parties were personally before the Court.	Total Cases of Personal Attendance.			Superior Courts.	Moonsiffs' Courts.
TOTAL - - -	16,564	21,263	36,810	74,637	30,439	105,076	64	70

And prove that the principle of bringing civil litigants personally before the courts has been generally accepted, and is gradually extending itself. The principle ought to lead to a progressive decrease in the duration of suits in those courts, in which it is steadily insisted on and carried into effect.

XI. and XII.—Working of sections 243 and 244, Act VIII. of 1859.

11. The following Table shows how far the provisions of Section 243 of Act VIII. of 1859, have been given effect to:—

COURT.	Total Number of Decrees Executed, or put in Execution, during the Year.	Number of Decrees Executed, or in Process of Execution, under Section 243, Act VIII. of 1859.					Number of Decrees Executed, or in Execution, under Section 248.	Number of Decrees Executed in other manner.	REMARKS.
		By Appointment of a Manager to Charge of Property.	By Mortgage of the Land attached.	By Lease of the Land attached.	By a Private Sale of a Portion of the Property.	TOTAL.			
TOTAL - - -	78,849	128	101	21	53	303	7,440	55,244	—

12. The following Statement exhibits the number of hereditary estates, entire and shares, which have been absolutely sold in execution during the year, contrasted with temporary alienations made at the instance of the Collector acting under section 244:—

	Number of Mouzahs and Shares of Mouzahs alienated in execution of Decrees of Civil Courts.								
	Temporary under Section 244, Act VIII. of 1859.		Permanent under Section 248.						REMARKS.
			Hereditary.		Other.		TOTAL.		
	Entire Mouzahs.	Shares of Mouzahs.	Entire Mouzahs.	Shares of Mouzahs.	Entire Mouzahs.	Shares of Mouzahs.	Entire Mouzahs.	Shares of Mouzahs.	
TOTAL - - -	5	141	28	1,973	12	314	43	2,359	—

These Returns are highly interesting. The total number of shares permanently alienated, viz., 2,359, seems large, especially when it is considered that no less than 1,973 of these were hereditary. The gradual results of the working of sections 243 and 244 of Act VIII. of 1859 will be carefully watched; the fact that the provisions of the former section have only been had recourse to by the judges in 303 cases, while the number of decrees executed by sale, under Section 248 of the Act, was 7,440, shows that those officers, as a body, are not yet sufficiently alive to the power which is vested in them by Section 243, of effecting an arrangement whereby the debtor may be able to meet the demand against him without having recourse to the extreme measure of compulsory sale of his landed property. It is evident, too, that collectors are still slow to avail themselves of the provisions of Section 244 of the Act.

XIII.—Number of judgment debtors imprisoned.

13. The number of judgment debtors imprisoned during the years 1860 and 1861 is shown in the following Memorandum:—

YEAR.	Number.	Amount of Debt.
		Rupees.
1860 - - - - - - - - -	703	1,84,471
1861 - - - - - - - - -	607	1,70,749
Decrease - - - - -	96	—

The fact that the number of judgment debtors imprisoned during the year is less by 96 than the number confined in 1860, is in itself a sufficient proof that the subordinate Courts have not exercised this power injudiciously.

14. The

14. The following Statement shows the proportion which obtained, during the past year, between suits for real property and for bond debt:—

XIV.—Relative proportion of suits instituted for real property and for bond debt.

Division.	Zillahs.	Number of Suits instituted for					Proportion of Suits for Real Property to Total Suits.	Proportion of Suits for Bond Debts to Total Suits.
		Land Rent.	Real Property.	Debts on Bond.	Other Suits.	TOTAL.		
1.	2.	3.	4.	5.	6.	7.	8.	9.
				Rs.				
TOTAL - - -		394	6,179	91,122	16,736	114,431	5	80

It appears that suits for bond debts average 80 per cent. of the total litigation. Last year the average was 71 per cent.

15. The results of the system introduced by the Court, of placing the Muzkooree peons on fixed salaries, are shown in the following Memorandum, and must be pronounced to be most satisfactory; the sum of *Rs.* 86,524. 14. having been credited to Government on account of surplus tulubana collections during the past year:—

XV.—Working of the system of employing Muzkooree Peons on fixed salaries successful.

Zillah.	Number of Peons.	Amount of Tulubana realised after payment of ¼ per Cent. to the Nazir of the Court.	Amount of Salary of Peons.	Surplus at Close of Year.	Deficit.	Net Surplus.
1.	2.	3.	4.	5.	6.	7.
		Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*
TOTAL - - -	3,390	2,51,915 11 8	1,65,390 13 8	86,524 14 –	- -	86,524 14 –
Average of each District -	178	13,232 6 6	8,704 12 6	4,553 15 –	- -	4,553 15 –

16. The following Table shows the value of stamps filed in the subordinate courts of the provinces, the Razeenamah refunds, cost of subordinate courts, and net gain to Government. The increase of litigation during the year has been the cause of a net gain to Government in the value of stamps filed of no less than 8,56,535 rupees, as compared with 1,76,023 rupees in 1860. This is due to exceptional causes, and cannot, of course, continue:—

XVI.—Value of stamps filed in subordinate courts.

Zillahs.	Aggregate Value of Stamps Filed.	Amount Ordered to be Refunded for Razenamah.	Net Total.	Cost of Subordinate Civil Judges' Salaries and Establishments, exclusive of the Zillah Judge.	Net Gain to Government.	Loss to Government.
	Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*
TOTAL -	13,04,521 15 3	1,11,355 12 –	11,93,166 3 3	3,37,798 14 7	8,56,535 – 8	1,067 12 –
Average -	68,650 – 9	5,860 13 3	62,798 3 6	17,778 14 2	45,080 4 2	56 3 1

17. The

XVII.—Value and costs of all suits disposed of.

17. The following Statement shows the total value and costs of all suits [original and appeal] disposed of in the Courts of the Judges, Principal Sudder Ameens, Sudder Ameens, and Moonsiffs, in the North Western Provinces, during the year 1861.

Zillah.	Total Number of Suits disposed of [Original and Appeal].	Total Value of Suits, omitting Fractions of a Rupee.	COST. Value of Stamps required. For Pleader and Appeal Memorandum	For all other Papers and Exhibits filed.	For Appointment of Pleaders.	Total Stamp Charges.	Pleader's Fees.	Talubana.	Diet of Witnesses.	Costs in adducing Proof.	Ameen's Fees.	Miscellaneous.	Total.	Average Value of each Suit.	Per-centage of Costs to Value.	Average Cost of Suit.	Per-centage of Columns 8 to 14.	Per-centage of all other Costs to Column 14.
1.	2.	3.	4.	5.	6.	7.	8.	9.	10.	11.	12.	13.	14.	15	16	17.	18.	19.
		Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*
Total - -	1,11,673	2,35,34,873	9,72,873	1,02,146	76,470	11,71,509	14,26,868	2,10,253	68,060	17,054	7,781	21,514	29,44,215	191	16	32	48	52

The classification shows that the two items of stamp charges and pleaders' fees make up 88 per cent. of the entire costs, and, as both of these are fixed by law, there remains but the small proportion of 12 per cent., which is liable to variation according to the various practice of the courts.

XVIII. to XXIV.—Institution and working of Courts of Small Causes under Act XLII. of 1860.

18. Three Small Cause Courts were established during the past year under Acts 42 of 1860, viz., at Allahabad, Benares, and Agra, presided over, the first by Mr. J. C. Robertson, of the Covenanted Civil Service; the second by Baboo Shama Churn, one of the Native Principal Sudder Ameens of most estimation in these provinces; and the third by Mr. W. Berkeley, an East Indian gentleman of the Uncovenanted Service, who had formerly discharged, with great efficiency, the duties of Principal Sudder Ameen. These judges were divided into two grades, one on 1,000 rupees per mensem, and the other two on 800 rupees each per mensem, while to each of the three officers an allowance of 250 rupees per mensem was assigned for establishment. The savings effected by the introduction of these three courts, and the consequent abolition of the Banda judgeship and its subordinate courts, as well as other courts subordinate to the judgeships of Allahabad, are shown in the following Statement:—

Former Scale.	*Rs.* *a.* *p.*	Present Scale.	*Rs.* *a.* *p.*
Abolition of the office of civil and sessions judge of Banda and establishment.	3,229 – –	Salaries of three Small Cause Court judges and their establishments in the districts of Allahabad, Agra, and Benares in the North-Western Provinces.	3,350 – –
Abolition of two moonsiffs and their establishments at Allahabad.	280 – –		
Abolition of two moonsiffs and their establishments at Agra.	280 – –		
Abolition of four moonsiffs and their establishments at Benares.	560 – –		
Total - - *Rs.*	4,349 – –	Total - - *Rs.*	3,350 – –

These courts were opened on the 15th July 1861, and had accordingly been at work for five and a half months at the close of the past year.

19. The

19. The subjoined description of the working of these courts is taken from the report of the Sudder Dewanny Adawlut. "The following Statement details the work proper to the Small Cause Courts performed by each during this period:

Small Cause Court of	Description of Suit.	Instituted from the 5th July to the 31st December 1861.	Disposed of from 15th July to the end of the Year 1861.							Pending at the Close of December 1861.
			Ex parte.	On Confession.	By Arbitration.	By Decision on Merits.	Dismissed on Default.	Adjusted or Withdrawn.	Total.	
1.	2.	3.	4.	5.	6.	7.	8.	9.	10.	11.

	TOTAL - - -	804	92	218	5	198	16	77	606	198
	GRAND TOTAL - - -	3,960	728	737	21	1,036	89	281	2,892	1,068

"The largest number of suits has been instituted at Benares, the next largest number at Allahabad, and a much smaller number at Agra. Of cases decided on merits and *ex parte*, Allahabad shows the largest number, followed by Benares, and Agra in much smaller numbers, as shown in the following Table:—

COURT.	Number of Cases Decided on Merits and *ex parte* during the Five Months of 1861.	Average Monthly Number of Decisions on Merits and *ex parte*.	Per-centage of Decisions on Merits to Total Cases Disposed of.
Allahabad - - - - - -	849	154	40
Benares - - - - - -	625	114	32
Agra - - - - - -	290	53	33

The Allahabad Court shows also the best proportion of cases decided on merits, viz., 40 per cent. The court are disposed to regard with jealousy the high proportion of cases decided

decided *ex parte*, which on an average of the three courts is 25 per cent., or one quarter of the whole cases disposed of, being for—

Allahabad as high as	29	per cent.
Benares „	26	„
Agra „	15	„

"Considering that the average of *ex parte* decisions in all the other civil courts is only 15 per cent., the *ex parte* proportion in courts of such summary inquiry is certainly too high in Benares and Allahabad, and the attention of the judges of these courts will be called thereto.

20. "Besides disposing of the above number of cases instituted under the Small Cause Court Act, a large share of the cases, pending on the files of the moonsiffs, whose courts were superseded, was transferred to the Small Cause Court Judges, and disposed of by them in the exercise of the powers of Principal Sudder Ameen, with which they were invested by Government. Altogether 1,566 have been so decided, the detail of which is noted in the margin. The amount of work got through by the new courts is altogether, therefore very great.

Benares	502 cases.
Allahabad	930 „
Agra	134 „
Total	1,566 cases.

21. "Reverting to the Small Cause Court business 'proper,' the following Memorandum shows the number of decrees executed in whole or in part:—

COURT.	Total Number of Decrees passed in favour of Plaintiffs from the 15th July to the 31st of December 1861.	Number of Decrees Executed.		Number of Decrees Executed.
		Wholly Executed.	Partially Executed.	
Benares	914	133	37	744
Allahabad	950	500	33	532
Agra	453	46	26	381
TOTAL	2,317	685	96	1,657

"The proportion of wholly executed decrees to total decrees in favour of plaintiffs is 30 per cent.

22. "The cost of the courts has, in the case of the Benares and Allahabad Courts, been more than covered by the value of stamps sold in them, leaving a net profit to Government of *Rs.*8,020. 4. 3. The cost of the Agra Court has exceeded the value of the stamps sold in it by *Rs.*1,242. 8. 0., but this will probably be remedied by the increased extent of jurisdiction which has been recently assigned to it.

"The following are the details:—

COURT.	Value of Stamps filed.	Deduct Refund on account of Razeenamahs.	Net Value Sold.	Cost of Small Cause Court, including Establishment.	NET.	
					Profit.	Loss.
	Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*
Benares	10,439	52	10,387	5,674	4,713	—
Allahabad	10,577	395	10,182	6,875	3,307	—
Agra	4,897	423	4,474	5,717	—	1,243
TOTAL *Rs.*	25,913	870	25,043	18,266	8,020	1,243

"So that although the court at Agra does not quite pay its own expenses, the proceeds of the sale of stamps at the other two courts, after meeting their own cost, and the loss which has been incurred at the court of Agra, leave a net profit to Government of 6,778 rupees.

23. "The Court are not prepared, after the short experience which has been made of the working of these courts, to express any decided opinion respecting them. So far as a judgment

judgment can at all be formed, they are disposed to regard them to be more peculiarly suited to stations in which European and East Indian residents are numerous, and therefore more particularly to Allahabad.

"The Court have permitted the judge of each court to apply the total sum of 250 rupees, allowed for ministerial establishment, in such manner as he thought best. Clerks of court have been accordingly appointed at Benares and Allahabad; but no such office has been wanted at Agra. Judging by the increasing number of causes instituted month after month, as shown in the marginal memorandum, it might be predicated that the courts were eminently popular. Such inference, however, must be qualified by the known action of the Limitation Law during the past year, under the influence of which civil litigation, generally, in these Provinces exceeded that of the preceding year by 95 per cent.; and the results of the first six months of the current year will have to be compared before any just conclusions can be drawn. Two of the judges, Messrs. Robertson and Berkeley, have already complained of slack work, and applied for extension of jurisdiction, which has been granted. It is difficult, the Court observe, to offer any decided opinion upon the goodness or otherwise of the decisions, or the satisfaction or dissatisfaction with which the action of each court is viewed generally by the people; because, as no decisions of these courts pass under the review of appeal, no actual data are available on which to base an opinion. On the one hand, they believe that the several judges who have presided in these courts are deserving of much commendation for their zealous and successful discharge of their duty. On the other hand, it must be confessed that, judging from the opinions still ordinarily expressed by natives, the action of these courts has not overcome their preference or prejudice in favour of courts whose decisions are subject to appeal. To enable the judges to form some opinion upon the mode of deciding the most doubtful description of suits, as those for money, which are wholly unsupported by any documentary evidence whatsoever, the court have called for the files of such cases, which will be subjected to some examination."

Cases instituted in Small Cause Courts.

Months.	Benares.	Allahabad.	Agra.	Total.
July - -	52	54	48	154
August - -	118	222	93	433
September -	145	241	80	466
October - -	98	171	54	323
November -	193	322	164	679
December -	1,148	392	365	1,905
TOTAL -	1,754	1,402	804	-

24. The Court have been required to submit a full and detailed report on the working of these courts on or before the 31st December next; and to state their opinion, at the same time, whether the Azimghur Judgeship can be reduced, and its jurisdiction added to that of the Judge of Jounpore, or to that of the Judge of Benares.

25. The state of the files of the Sudder Court is shown in the following memorandum:— XXV.—State of the files of the Sudder Court.

APPEALS.	Pending on 1st January		Admitted in		Disposed of in		Pending on 1st January	
	1860.	1861.	1860.	1861.	1860.	1861.	1861.	1862.
Regular - - -	150	127	82	143	105	122	121	142
Increase - - -	-	-	-	61	-	17	-	21
Decrease - - -	-	23	-	-	-	-	-	-
Special - - -	724	947	732	876	509	1,061	947	762
Increase - - -	-	223	-	144	-	552	-	-
Decrease - - -	-	-	-	-	-	-	-	185
Total Increase -	-	200	-	205	-	569	-	-
Total Decrease -	-	-	-	-	-	-	-	164

His Honour thinks it satisfactory that the Court are able to report that, although the regular appeals to the Court of Sudder Dewanny Adawlut in the past year exceeded those admitted in 1861 in the proportion of 76 per cent., the number disposed of exceeded that in 1860 by 17, and although the special appeals admitted have increased about 20 per cent., the decisions have exceeded those of 1860 in the ratio of 108 per cent., whereby the file of cases pending on 1st January 1862 has been reduced by 185 cases below the number pending on 1st January 1861.

CHAP. XII. North Western Provinces.

The following Table shows the manner in which these appeals have been disposed of:

APPEALS.	Dismissed on Default.		Adjusted or Withdrawn.		Confirmed.		Amended.		Reserved.		Remanded.	
	1860.	1861.	1860.	1861.	1860.	1861.	1860.	1861.	1860.	1861.	1860.	1861.
Regular - - - -	7	2	6	4	50	71	12	15	23	19	7	11
Special - - - -	36	55	2	8	365	733	18	34	98	98	70	133

The percentage of regular appeals modified or reversed, which was for 1860, 40 per cent., stands for the past year at 37 per cent., while, in special appeals, a greater improvement is observable; the proportion of cases in which the orders of the lower courts have been reversed or modified, having fallen from 36 per cent. in 1860, to 25 per cent. in the past year.

XXVI.—Reduction in ministerial establishments effected during the year.

26. The marginal note * shows the total amount formerly allowed by Government for the establishment of each court, the distribution of which varied much according to the views of each subordinate presiding judge. The Sudder Court, therefore, with the sanction of the Government, directed that, in future, one uniform scale of offices should obtain in each grade of court, as shown below:—

	Rs.	a.	p.
* Court of principal Sudder Ameen - - -	150	–	–
Court of Sudder Ameen -	80	–	–
Court of Moonsiff - -	40	–	–

Court of Principal Sudder Ameen.

	Rs.	a.	p.
One Sheristadar - - -	50	–	–
One Peishkar - - -	20	–	–†
One Nazir - - -	20	–	–
Four Mohurrirs, at 10 rupees each.	40	–	–
Stationery - - - -	15	–	–
Duftry - - - -	5	–	–
Total allowance sanctioned *Rs.*	150	–	–

† Plus "Meeran" fees.

Court of Sudder Ameen.

	Rs.	a.	p.
One Sheristadar - - -	30	–	–
Three Mohurrirs, at 10 rupees each.	30	–	–
One Nazir - - - -	10	–	–†
Stationery - - - -	10	–	–
TOTAL - - *Rs.*	80	–	–

Court of Moonsiff.

It was further determined that the Sheristadar of the Moonsiff's Court should also hold the office of Nazir, and enjoy the *Meeran* allowance, or one-fourth of the tulubana receipts assigned to the Nazir by section 14, Regulation XXVI. of 1814. He will be responsible for maintaining a separate mohurrir to keep up the several books of account and registers of the Nazir's office.

Establishment.

	Rs.	a.	p.
Sheristadar and Nazir - - - - - -	10	–	– ‡
Three Mohurrirs, at 8 rupees each - - - -	24	–	
Stationery - - - - - - - - -	6	–	–
TOTAL - - *Rs.*	40	–	–

‡ Plus the Nazir's "Meeran" fees, out of which he will maintain a separate mohurrir.

It was also arranged that where a Sudder Ameen is also a Moonsiff, the establishment of the former court should ordinarily discharge the duty of both courts. In this case, the Sheristadar of the Sudder Ameen's Court would also hold the office of Nazir of the Moonsiffee, under the same condition as has been above stated.

XXVII.—Reductions effected in the judiciary

27. During the past year, the entire judiciary establishment of these Provinces has been reviewed

reviewed by the court, and the result has been a net reduction of 1,140 rupees, as shown below :—

FORMER SCALE.						PRESENT SCALE.					
	Rs.	a.	p.	Rs.	a. p.		Rs.	a.	p.	Rs.	a. p.

Execution of Degrees.

1.	Pending on the 1st January 1862. 2.	Income. 3.	Total. 4.	Disposed of. Completely executed. 5.	Disposed of. Partially executed. 6.	Struck off on neglect of decree-holders. 7.	Transferred. 8.	Total. 9.	Pending at the close of 1861. 10.
Principal Sudder Ameen - -	12	17	29	3	–	7	6	16	13
Moonsiff of Mohoba - -	37	185	222	65	105	13	–	183	39
19 Adawlut Pergunnahs - -	442	1,465	1,907	372	705	400	54	1,531	376
TOTAL - - -	491	1,667	2,158	440	810	420	60	1,730	428

Numerically and in the aggregate the quantity of regular business to be disposed of was large, but the whole number of original suits and appeals (4,363) divided between the 22 courts barely gives an average of 198 to each, or, if the cases disposed of on merits (which exclude *ex parte* decisions and confessions of judgment) be taken as the standard, the average number of decisions in each court will have been 97 in the 12 months, or about eight per mensem. Suits decided on full trial are considerably fewer still.

Besides the above, there were in all 2,158 applications for execution of decrees to be disposed of; and at the close of the year about one-fifth of the number remained pending.

So large a number as 634 regular suits, and 428 applications for execution of decree, should not have been undisposed of at the end of the year. But a new system of civil administration has just been introduced, and great improvement in these respects during the year 1862 is expected under its action.

XXIX.—Successful working of Act VIII. of 1859, in the district of Ajmere.

29. Act VIII. of 1859 was introduced into the districts of Ajmere and Mhairwarra on the 1st May 1861. The following statement shows the number and average duration of suits in

in each court disposed of under the old and new laws separately, and exemplifies the great advantage of the change:—

NAME of COURT.	Total Number of Cases disposed of during the Year.	Average Duration calculated in the whole Number.		Average Duration of Cases disposed of under old Law.				Average Duration of Cases disposed of under Act VIII.			
				Cases.	Average.			Cases.	Average.

30. The rules which have been prescribed by the Lieutenant Governor for the civil administration of the Terai Pergunnahs, which were formed into a separate jurisdiction under the provisions of Act XIV. of 1861, will be found in Appendix No. 1.

XXX.—New system of civil administration in the Terai Pergunnahs.

SECTION II.—JUDICIAL.

CRIMINAL JUSTICE.

31. The following general statement exhibits the total number of persons under trial during the year under review, and the manner in which they were disposed of, as compared with the like returns for the previous year:—

XXXI. to XXXVII.—General results of the criminal administration.

	Total Number of Persons under Trial during the Year.			Total Number of Persons whose Cases were finally disposed of by the Magisterial Authorities.			Number of Persons under Trial at the close of the Year; as in Columns 18 and 19, Statement No. 1.			Number of Persons whose Cases have been pending above Three Months.	Number of Persons whose Cases were disposed of by the Magisterial Authorities.					
											Convicted, including Committed.			Acquitted.		
	Heinous.	Minor.	Total.	Heinous.	Minor.	Total.	Heinous.	Minor.	Total.		Heinous.	Minor.	Total.	Heinous.	Minor.	Total.
Grand Total - -	21,461	42,294	64,755	21,554	41,328	62,882	568	794	1,362	85	13,305	25,938	39,243	8,250	15,389	23,639
Grand Total for 1860	19,562	44,539	64,101	18,723	43,276	61,999	613	895	1,508	76	10,885	27,949	38,834	7,847	14,318	23,165
General average 1861, per district.	650	1,281	1,961	653	1,252	1,906	17	24	41	3	403	786	1,183	250	466	716
Average of 1860 -	593	1,349	1,942	567	1,311	1,878	18	27	45	2	329	847	1,176	237	434	671

It appears that there were 64,755 persons for trial during the year under report, as compared with 64,101 in 1860, being an increase of 654. In the districts visited by the famine, however, the increase alone amounted to 1,806; and the comparatively small total increase is attributed to the decrease of 1,157 in the number of persons for trial in the non-regulation

CHAP. XII. North Western Provinces.

districts of the Jhansie division, caused by the recent pacification of the outlying portions of the districts, and the cession of territory which has been made to Maha Rajah Scindiah.

32. Out of the 64,755 persons brought before the courts for trial during the year the cases of 62,882 were disposed of, leaving only 1,362 persons whose cases were pending at the close of the year, as compared with 1,508 in the previous year. The number of persons whose cases had been pending upwards of three months at the close of the year was 85, an unimportant increase as compared with the number pending at the close of 1860, viz. 75.

33. These facts bear honourable testimony to the conscientious and laborious manner in which the magisterial officers generally have applied themselves to the punctual discharge of their judicial business. All the officers were severally taxed in other departments of the administration, and the small number of criminal cases in arrear at the close of 1861, as well as the recent institution of the great majority of pending cases, is very creditable.

34. The proportion of persons convicted and committed to the sessions to those whose cases were finally disposed of was 62 per cent. In the year 1860 it was 63 per cent. The cause of this less satisfactory proportion of convictions and commitments compared with the number of persons tried is attributed, the court state, by the generality of the district officers "to the defective action of the new police, who are stated" * * "too often to arrest persons needlessly, for whose conviction no sufficient evidence is forthcoming."

35. The falling off in the percentage of convictions is so small, that it hardly affords ground for deductions unfavourable to the action of the new police; but, admitting for a moment that it does justify such inferences, there are two points to be considered on the other side. The first is, that the new police was not in operation for the whole year throughout the provinces, but in three of the regulation divisions only; while in the Jhansie and Kumaon divisions the old police remained. The police complained of was composed of new elements in a great measure, and was organised on a totally different system from that which previously obtained, and to which all the officers and men transferred from the old police were accustomed. The new system, it is known, did not meet with much favour in the eyes of many magistrates, and with less in the eyes of the native functionaries. It was no small difficulty to instruct unwilling learners, or new learners, in the principles and details of what the Lieutenant Governor believes to be a vastly improved system of police. Further, it was not until 20th May 1861 that a Law [Act XIII.] was passed for the guidance of the police, and necessarily some time passed before it was in the power either of the Government or the Inspector General to send forth detailed instructions, explanatory of the law's provisions, and indicative of the points to which the attention of the police officers should be chiefly directed. If some shortcomings are chargeable to the new police, working under these disadvantages, there is no room for astonishment.

36. But, in point of fact, his Honour holds that the decrease of only one per cent. in the proportion of convictions, if it can be taken as evidence of any thing, proves beyond a question that, notwithstanding the total inexperience of many of the police officers, there has been success in a degree which could not have been reasonably anticipated, in the organisation, instruction, and working of the new police; and his Honour is satisfied that, when these have had time to gain experience and knowledge of their duties, the results of the new system will not disappoint the expectations of those who have helped to frame it.

37. The next point is that the magistrates who write of the defective action of the new police condemn themselves. They are vested by section 4, Act V. of 1861, with a power of general direction and control over the police, and if arrests have been made "needlessly," it is their own fault that they have not commented upon such cases, and pointed out the errors committed for the guidance of the district superintendents of police. The duties of the "magistrates of districts" in relation to the police have, however, been brought to the notice of the court by the Inspector General of Police, and the court have enjoined the magistrates' attention to this part of their duty.

XXXVIII.—Results of appeals from magistrates to sessions judges.

38. The results of appeals from the orders of the magisterial authorities, preferred to the sessions judges, were as follows:—

	Total Number of Cases decided.	Number of Cases appealed.	Number of Appeals decided.	Regular Appeals.		Miscellaneous, *i. e.* Act IV. of 1840.		Percentage.		
				Appeals rejected and confirmed.	Reversed.	Appeals rejected and confirmed.	Reversed.	Of Appeals to decisions.	Of Reversals to Cases decided.	Of Reversals to Appeals decided.
TOTAL - - - - -	79,472	3,670	3,460	1,438	711	1,012	299	5	1	29

The

The percentage of reversals to appeals tried (29 per cent.), as a general result, is exceedingly favourable. But, as the court remark, the proportion of appeals to decisions, viz., 5 per cent., is a better test, though even that is in some degree fallacious. This fact is due a good deal to the distance of the sessions court, and to the character of the judge as well as of the people. One sessions judge may sit within half a dozen yards of the magistrate's court, and may be given to technical objections; and the people of the district may be notoriously bad and litigious. Another sessions judge or a Commissioner may ordinarily reside at a distance of 50 miles from the Sudder station of another district from which appeals to him will lie; and it may be that for three or four months of the year the road between the two stations may be hardly passable.

The latter officer may be one who is disinclined to sacrifice substantial justice to technical formality; and the lieutenant governor would be sorry to draw from this comparison inferences unfavourable to the judgment of the magistrate whose sittings are held under the shadow of the sessions court.

XXXIX.—Results of commitments.

39. The results of the commitments made to the sessions also correspond with those of last year. Of the committed persons tried, 1,595 were convicted; the cases of 361 referred for the orders of the Nizamut Adawlut; and 877, or 31 per cent., were acquitted; the commitments of 169 persons being cancelled, and 35 persons otherwise* disposed of.

* 24 Died.
9 Escaped.
2 Transferred.

The results which, on the whole, are very good, are seen in the following return, in which the percentage has been calculated on the total number of committed persons disposed of (including commitments cancelled, &c.):—

	Convicted.		Referred.		Acquitted.		Commitment Cancelled.		Died.		Escaped.		Transferred.		Percentage of Persons Convicted and referred to Total Number tried.
	Cases.	Persons.	Cases.	Persons.	Cases.	Persons.	Cases.	Persons.	Cases.	Persons.	Cases.	Persons.	Cases.	Persons.	
Total - - -	828	1,595	216	361	265	877	49	169	5	24	3	9	3	2	65
Average - -	23	48	7	11	8	27	2	5	–	–	–	–	–	–	65

XL.—Amount of criminal business disposed of and pending.

40. The following abstract shows the amount of criminal business, and of suits under Act IV. of 1840, disposed of, and pending in the year under review, and presents no feature of special interest. The pending files continue low, although the total number of cases has considerably increased. The number of miscellaneous cases has diminished from 2,15,747, which was the number last year, to 1,67,060, which is partly attributable to the transfer of police duties to a separate department, and partly to the court having taken measures to ensure greater accuracy in the Return.

Act IV. of 1840 has been repealed by Act XVII. of 1862, and a new nomenclature for cases of this kind will be needed:—

	Criminal Business disposed of, as detailed in Statement No. 6.				Cases under Act IV. of 1840.		
	Cases of heinous and Petty Offences and Appeals—Columns 1 to 6.		Miscellaneous Cases — Columns 7 to 10.		Disposed of.	Pending.	
	Disposed of.	Pending.	Disposed of.	Pending.		Above 3 Months.	Total pending.
	35,346	793	1,67,060	2,553	4,133	1	158
General average of each district -	1,071	24	5,062	77	125	–	5

XLI.—Number of witnesses examined, and period of their detention.

41. The following statement exhibits the number of witnesses examined in these provinces,

CHAP. XII. North Western Provinces.

vinces, with the periods of their attendance, and the proportion, per cent., of witnesses who were in attendance for one, two, three, or more days in each district :—

	Number of Witnesses who gave attendance in Court for				Percentage of Witnesses who gave attendance for			
	One Day.	Two Days.	Three Days.	More than Three Days.	One Day.	Two Days.	Three Days.	More than Three Days.
Total - - -	202,022	12,618	2,655	1,663	92	6	1	1
Total for 1860 -	194,060	15,928	5,209	2,628	89	8	2	1

Out of 202,022 witnesses who were examined during the year, no less than 92 per cent. were dismissed after one day's attendance. This is highly creditable, and it is gratifying to note that the unavoidable inconvenience which some people must suffer in attending court to give evidence is reduced to the lowest possible limit.

XLII.—Average duration of cases disposed of with and without police agency.

42. The average duration of cases disposed of with and without police agency during the year under review is shown in the following table :

	In which Thannah Agency was employed.		In which Thannah Agency was not employed.
	At Thannah.	In Magistrate's Court.	In Magistrate's Court.
	Days.	Days.	Days.
Average - - - - - - - - - - -	3	14	14
Average of 1860 - - - - - - - - -	2	13	12

These results are less favourable than those in 1860. But the court state their belief, and his Honour trusts their belief is correct, that this is owing to the different mode of calculation which they have introduced, and that in reality the decision of cases in the Magistrate's Court has been expedited in the year under review. Looking to the remarkable expedition with which witnesses were discharged, and to the small amount of business which remained undisposed of at the close of the year, the extended duration of cases cannot be ascribed, with any reason, to any want of exertion on the part of the magisterial officers.

The duration of the police inquiries, the average being no less than three days, has been brought to the notice of the inspector general of police by the court, and is also engaging the attention of Government.

The average duration of cases in the Magistrates' Courts, in which police agency was employed, was 14 days, or one day more than in 1860 ; the difference is slight. Where police were not employed, the average duration is the same as compared with 14 days during the previous year. But this is owing to a different mode of calculation prescribed by the court, viz., that the duration be calculated from the date of complaint, and not from the date of the defendant reaching the Magistrate's Court, and that all cases be entered, whether a prisoner be brought before the court or not. On the whole, the lieutenant governor considers the result not by any means unfavourable.

XLIII.—Punishments inflicted by the magistrates.

43. The punishments inflicted by the Magisterial Courts in these Provinces are shown in the following table :—

	Three Years.	From Six Months to above Two Years.	Not exceeding Six Months.	Fined.	Security.	Dismissed from Office.	Flogged.	TOTAL.
Total - - -	1,078	4,939	7,712	15,910	3,666	707	2,327	36,339

The large number of persons fined has attracted attention. His Honour believes the punishment to be a very good one, but some discretion is required in its application, and the court has been asked to ascertain, and state in future reports the amount of the fines imposed

imposed as a *sole* punishment, the amount realised, and a general classification of the offences for which this penalty is inflicted.

XLIV.—Operation of Act XVI. of 1850.

44. The following Statement exhibits the operation of Act XVI. of 1850 during the year under report:—

	Number of Persons Fined during the Year.	Amount of Fines Levied.	Amount of Fines Realised.	Per-centage of Sum Realised to Sum Imposed.
		Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*
Total - - - - - - - - - -	1,150	37,454 – 6	6,024 5 9	16 – –
Total for 1860 - - - - - - - - -	1,014	38,559 2 2	5,705 10 3	15 – –

The statement of fines realised shows little improvement,—only 16 per cent. of the fines imposed having been realised, as compared with 15 per cent. during the previous year; but that law has been abrogated, and the court have issued instructions* cautioning officers against the imposition of excessive fines, and calling their attention to the new practice introduced by the code of criminal procedure. The Lieutenant Governor has no doubt that these instructions will bring about an improved practice.

* Circular No. 9, dated 26th May 1862.

XLV.—Operation of Article 5, Schedule B, Act XXXVI. of 1860.

45. The majority of the magistrates of these Provinces have reported that no ill effects have resulted from the operation of Article 5, Schedule B, Act XXXVI. of 1860, whereby criminal petitions are now receivable on unstamped paper. As this provision has been again introduced into the new Stamp Act, the question may be considered as having been finally settled by the Legislature.

XLVI.—Punishments inflicted by the sessions judges.

46. A comparative detail of the punishments inflicted by the Sessions Courts of the North Western Provinces, Jhansie and Kumaon, is given below, and calls for no remark:—

	Security.	Dismissed.	Fined.	Flogged.	Imprisonment. Not exceeding 1 Month.	Above 1 and up to 6 Months.	Above 6 Months and up to 1 Year.	Above 1 and up to 2 Years.	Above 2 and up to 3 Years.	Above 3 and up to 4 Years.	Above 4 and up to 5 Years.	Above 5 and up to 6 Years.	Above 6 and up to 7 Years.	Above 7 and up to 8 Years.	Above 8 and up to 9 Years.	Above 9 and up to 10 Years.	Above 10 and up to 11 Years.	Above 11 and up to 12 Years.	Above 12 and up to 13 Years.	Above 13 and up to 14 Years.	Above 14 and up to 16 Years.	Above 16 and up to 21 Years.
Total - -	–	–	–	–	–	–	95	183	243	189	336	30	266	7	48	69	–	4	–	53	15	–
Total for 1860* -	–	–	12	–	7	–	96	115	125	147	181	182	94	176	16	52	27	6	9	32	14	2

* Jubbulpore Division excluded with a view to comparison.

XLVII.—Number of cases referred to the Nizamut Adawlut, and called for on appeal.

47. The following Return shows the total number of cases referred for the orders of the Nizamut Adawlut during the year, together with those whose proceedings were called for on appeal, or on review of the monthly statements, as compared with similar Returns for the previous year:

YEAR.	Cases referred for Orders of Nizamut Adawlut.	Cases whose Proceedings were called for.	Persons whose Cases were Disposed of by Nizamut Adawlut. Convicted.	Acquitted.	Otherwise Disposed of.	Cases Pending in Nizamut Adawlut at Close of Year.	REMARKS.
1861 - - -	379	349	381	82	300	22	* The Returns for the Jubbulpore Division for 1860 have been only included up to November, to admit of comparison with 1861.
1860* - -	248	169	331	118	273	20	

CHAP. XII. North Western Provinces.

The above statement is favourable to the judgment of the Sessions Judges generally; only 11 per cent. of the persons whose cases were disposed of by the court on reference of otherwise having been acquitted, as compared with 16 per cent. in 1860, and 24 per cent. in 1859.

XLVIII.—Cases disposed of by the Court of Nizamut Adawlut.

48. The Court disposed of the cases of 763 persons during the year, as contrasted with 723 in 1860; and notwithstanding the increased income of criminal work, the cases of only 22 persons remained pending trial at the close of the year.

XLIX.—Probable decrease in the amount of business.

49. There is reason to anticipate a considerable diminution of the criminal business of the Court during the current year, owing to the extended powers given to the Sessions Courts under the code of criminal procedure.

L.—Sentences passed by the court.

59. The sentences passed by the Nizamut Adawlut during the year under review, as compared with those passed by the Court in the year 1860, were the following, and do not call for special notice:—

PENALTIES.	1861.	1860.*	REMARKS.
Death	86	70	* Excluding Jubbulpore Division for December.
Transportation	158	106	
Imprisonment for life	4†	–	† These are prisoners convicted of being Dacoits by profession, and of having belonged to a gang of Dacoits.
Ditto above 12 and not exceeding 21 years	44	36	
Ditto ditto and not more than 12 years	40	41	
Ditto not exceeding 5 years	49	78	
TOTAL	381	331	

The number especially of extreme sentences is greater than in the previous year, a result which is dependent rather upon the state of crime and police in the period under review, than upon any specialty of judicial action.

LI.—Results of criminal administration in the districts of Ajmere and Mhairwarra.

51. The subjoined Statement shows the comparative number of persons tried, committed, convicted and acquitted in the Ajmere and Mhairwarra districts during the years 1860 and 1861:—

YEAR.	Persons brought to Trial.	Number referred to Higher Courts.	Number Convicted.	Number Acquitted.	Number Discharged without Trial.	Number otherwise Disposed of, as by Compromise, &c., &c.
1860	2,280	94	1,392	526	184	84
1861	2,402	158	1,565	444	108	127

The only point that calls for any notice in the criminal returns which have been submitted for these districts is the fact that the district officer has succeeded in securing the co-operation and hearty assistance of the head men of the villages in the detection and prevention of crime. The result has been, that out of 15 cases of highway robbery, 12 ended in the conviction of some of the parties concerned, and conviction also ensued in 26 out of 58 cases of burglary, and in 121 cases out of 145 cases of cattle-lifting. These are the best returns of cases of this description which have ever passed under the review of the Lieutenant Governor. The results in the common theft cases, viz. 145 convictions out of 300, are also extremely good and creditable to the administration of Major Lloyd, the district officer.

LII.—Criminal administration of the Terai pergunnahs.

52. The rules which have been laid down for the criminal administration of the Terai Pergunnahs will be found in Appendix No. II.

SECTION III.—GAOLS.

53. THE following Statement shows an increase of 2,925 prisoners over the daily average number in confinement during the previous year: LIII.—Comparative number of prisoners confined during the year.

	1860.	1861.
Number of prisoners remaining in confinement on the 1st January	14,546	16,055
Received during the year	45,974	47,892
TOTAL Population	60,520	63,947
Aggregate number during the year	5,293,143	6,348,334
Daily average	14,468	17,393

During the year, 37,512 convicts were released; 749 transported beyond seas; 124 escaped, of whom 71 were recaptured; 2,439 died; and 90 were executed.

54. The gross expenditure was in excess of that in the previous year, chiefly on account of the increase in the number of prisoners; but the cost per prisoner was less by *Rs.* 4. 9. 2½ per head, equivalent to a total saving on former rates of *Rs.* 73,570. 13. 6. LIV. and LV.—Rates of expenditure.

	1860.			1861.		
	Rs.	*a.*	*p.*	*Rs.*	*a.*	*p.*
The total expenditure, including all charges, was as follows.	7,01,275	14	6	7,45,783	10	8
Average cost of diet per prisoner per annum	17	11	–	17	10	3
Ditto, fixed establishment per ditto ditto	5	3	8¼	5	–	2½
Ditto, permanent guard per ditto ditto	11	12	10	8	1	7¾
Ditto, contingent guard per ditto ditto	5	11	11	5	4	8½
Ditto, clothing per ditto ditto	2	5	9¼	1	12	10¾
Total cost of hospital charges	18,903	11	11	12,442	11	9
Ditto, of Europe medicines	1,850	12	6	1,106	15	6
Ditto, of Bazar ditto	1,690	15	7	1,097	6	2
Ditto, of extra and sick diet	15,261	15	10	10,111	5	9
Average cost of hospital charges per head per annum	1	4	8½	–	11	7¼
Average cost per prisoner, including all charges	48	–	1¼	43	6	10¾

55. The cost of all articles of food remained at famine prices, over a great part of the country, for upwards of eight months, and continued very high throughout the rest of the year; so that the reduction shown above was effected almost entirely by improved economy in general management.

56. The transactions in the sale of manufactured goods have steadily increased, and the financial results of convict labour may, upon the whole, be considered very satisfactory. LVI. and LVII.—Manufactures.

	1860.	1861.
Daily average number of prisoners engaged in manufactures	2,766	3,332
Ditto, on gaol buildings	2,782	5,049
Ditto, on roads and other out-door labour	2,578	1,615
Ditto, in the menial services of the gaol	2,131	2,876
Ditto, inefficient from age and disease	1,920	1,968
TOTAL daily average Number of Prisoners under Sentence of Labour	12,177	14,840

CHAP. XII. North Western Provinces.

	1860.			1861.		
	Rs.	*a.*	*p.*	*Rs.*	*a.*	*p.*
Net profits realised by the sale of manufactured goods	46,108	5	4	60,365	3	10
Value of manufactured goods in store - - -	28,271	3	–	33,124	8	6
Estimated profit on clothing manufactured for prison use.	12,523	4	9	9,623	10	3
Total earnings of prisoners engaged in manufactures -	86,902	13	1	1,03,113	6	7
Average earning per prisoner engaged in manufactures	31	6	8¼	30	15	1¾
Estimated value of convict labour on gaol buildings -	1,05,065	14	4	1,55,742	9	4
Ditto, on roads and other out-door labour - -	44,107	15	6	27,631	10	3
Ditto, on the menial services of the gaol - -	76,716	–	–	1,03,536	–	–
Value of vegetables supplied from gaol gardens at Bazar rates.	-	-	-	9,702	12	6
Total estimated value of convict labour - - -	2,25,889	13	10	2,96,613	–	1
Average earnings per prisoner in the above estimated value of labour.	30	2	5¾	31	1	5½
Gross value of convict labour - - - - *Rs.*	3,12,792	10	11	3,99,726	6	8

57. If the amount of net profits realised by the sale of manufactured goods be deducted from the total expenditure, the actual cost of 17,393 prisoners will be 6,85,419 rupees, or *Rs.* 39. 5. 7. per head per annum.

LVIII.—Mortality.

58. Of the 2,439 deaths which occurred during the year, 669 were from fever, 369 from dysentery, 452 from diarrhœa, and 525 from cholera. This excessive mortality was confined chiefly to the districts where the famine was most severely felt; and, according to the testimony of the medical officers in immediate charge of the prisoners, and others specially deputed to inquire into the cause of the unusual sickness and mortality, it was due to the emaciated and worn-out state to which the prisoners had been reduced by exposure and want previous to incarceration. It has been calculated that 800 deaths were occasioned by the famine; and if these and the 525 fatal cases of cholera be deducted, the death-rate from ordinary causes will be only 6·35 per cent. on average strength, and 1·10 per cent. on population.

LIX.—Escapes.

59. Of the 124 escapes, 69 were from temporary places of confinement and gaols under construction; and, as usual, the connivance and culpable neglect of the Burkundazes of the contingent guard in allowing the prisoners entrusted to their care to escape were conspicuous.

LX.—Prisoner Burkundazes.

60. The system of prisoner Burkundazes continues to give great satisfaction. The officers in charge of the different central prisons have much more confidence in them than in the free men, and are anxious that a greater proportion of the intramural guard should be composed of well-behaved prisoners.

LXI. and LXII.—Rules for good-conduct marks and gratuities.

61. The following rules for good-conduct marks and gratuities were, with the sanction of this Government, introduced into all the central gaols in these Provinces in the month of November last:

I. "Every prisoner, on his first admission to the prison, shall have the following rules read over to him, and shall be made thoroughly to understand that his future prospects will depend on his good conduct and industry throughout the period of his imprisonment. A copy of these rules shall be suspended in each division of the prison, and in such other places occupied by the prisoners as may appear desirable.

"II. Every prisoner shall, at the expiration of six months after admission, be eligible for marks and gratuities at the discretion of the superintendent, according to the following scale, and all marks and gratuities shall be registered on the reverse of each deserving prisoner's labour ticket.

"III. Quiet and orderly conduct—1 mark.

"IV. Quiet and orderly conduct, with activity and ready obedience to the orders of the superintendent and gaol officials—2 marks.

"V. General good conduct, with increase of work on that usually prescribed by the superintendent—2 to 4 marks with gratuity.

"VI. General good conduct, with increase of and improved quality of work—3 to 6 marks, with gratuity.

"VII. Proficiency in education, to be determined every six months—6 to 30 marks, with a gratuity in books at the time of release.

"VIII. All

"VIII. All gratuities for extra quantity and quality of work, and proficiency in education, to be defrayed from the labour fund.

"IX. Assisting in the detection of forbidden articles—1 to 6 marks.

"X. Bringing to notice, and assisting in preventing breaches of prison rules and discipline—1 to 8 marks.

"XI. Assisting in preventing escapes—1 to 10 marks, with gratuity.

"XII. Assisting the superintendent and prison officials in maintaining and restoring order—1 to 20 marks, with gratuity.

"XIII. Gratuities for extra quantity and quality of work—1 to 8 annas per mensem, at the discretion of the superintendent.

"XIV. Gratuities under Rules XI. and XII. must have the sanction of the Inspector General of prisons.

"XV. Fifty marks shall entitle the holder to a ticket which will allow him to receive a visit from his friends, under the superintendent's order.

"XVI. One hundred marks shall entitle the holder to wear a good-conduct badge, such as a metal ticket suspended round the neck by a cord.

"XVII. One hundred and fifty marks shall entitle the holder to wear one coloured stripe on the sleeve of his coat, and render him eligible for a lumberdarship.

"XVIII. Two hundred and fifty marks shall entitle the holder to two coloured stripes, and render him eligible for a burkundauzship.

"XIX. Three hundred marks shall entitle the holder to three coloured stripes, and some additional allowance to the ordinary prison rations.

"XX. Five hundred marks shall entitle the holder to four coloured stripes, and, under special circumstances, render him fit for recommendation to Government for a reduction of a portion of his sentence, or release from prison altogether.

"XXI. No cash payments shall be made to prisoners until the time of release, but one-half of the sum at the credit of any prisoner may, if he wishes it, be sent to near relatives every six months.

"XXII. Prisoners of uniform good behaviour, who may have exhibited unusual signs of industry, and who may be likely to continue the trade acquired during incarceration, shall be entitled to a few tools at the time of release, in addition to any cash earned during the time of their imprisonment.

"XXIII. Any breach of prison rules or discipline shall, at the discretion of the Superintendent, entail forfeiture of a portion or the whole of the aforesaid marks, gratuities, and indulgencies."

62. The system has not been sufficiently long in force to test its practical results fully; but so far it is working well, and the officers who have to carry the scheme into effect consider it one of the most powerful instruments of discipline which could be placed in their hands.

LXIII.—Success of the central prison system.

63. Notwithstanding the still very incomplete state of the prison buildings, the Central Prison system now generally in force in these Provinces is succeeding admirably; and the management of the five Central Prisons at Agra, Meerut, Bareilly, Allahabad, and Benares, has been very satisfactory.

LXIV.—Progress of education in the gaols.

64. Education has advanced favourably during the year; all the boys whose term of imprisonment exceeds one year are taught English, and many of them have made very fair progress.

LXV.—Conduct of time-expired convicts.

65. The conduct of time-expired convicts has been ascertained to be, upon the whole, satisfactory. It is said that 70 per cent. of the number have ceased to follow a career of crime; but without some more decided means of surveillance over this class than that which exists at present, it is impossible to arrive at a correct estimate of the result of prison discipline on the criminal classes. The subject has been commended to the especial attention of the Inspector General of Prisons.

LXVI. and LXVII.—Probable satisfactory results of the new system of placing the district gaols under the entire charge of the civil assistant surgeons.

66. The system lately inaugurated, of placing all the district gaols under the entire charge of the civil surgeons at the respective civil stations, properly speaking, belongs to the transactions of the current year; but it may not be altogether out of place to observe here that the scheme carries with it the entire approval of every officer in these Provinces who has ever given the subject of gaol discipline and improvement the least consideration. Eventually, when all the buildings at the different central prisons shall have been completed, there will be accommodation for the great bulk of the worst heinous offenders; but the number of prisoners is increasing rapidly, and, as far as can be judged at present, there always must be a large number confined in the district gaols, subject to little or no discipline, and engaged in unremunerative labour as heretofore, unless kept under the supervision of officers who can, without prejudice to their other duties, devote a certain

a certain portion of their time daily to gaol economy,—time which the already over-worked district officers cannot afford.

67. The scheme of placing the district gaols in the hands of civil surgeons involved no change in gaol management, nor did it introduce any new principle, seeing that the employment of medical officers as superintendents of central prisons had been long recognised. In fact, the whole matter consisted in simply transferring a certain amount of duty from one class of officers, who were already overwhelmed with work, to another who had leisure and inclination to attend to details; and from the complete success which has attended the management of central prisons under the supervision of medical officers, it is not too much to expect equally favourable results under similar management in district gaols.

SECTION IV.—POLICE.

LXXIII.—Formation of the constabulary police.

73. The formation and allocation of the constabulary police, commenced in the Meerut Division at the beginning of the year, were brought to a close in the Rohilkund Division in May, and were made the subject of separate reports showing the considerations which had been regarded in determining the strength and composition of the force to be assigned to each district.

LXXIV.—Number of each grade and strength of entire force as provisionally sanctioned and finally revised.

74. The numbers of each grade and the strength of the whole force, as provisionally sanctioned in the five Regulation Divisions already mentioned, will be best seen in the following Table:—

NAME OF DIVISION.	Inspectors.	Chief Constables.	Head Constables.	Mounted Constables.	Constables.	Total Number.
Meerut - - -	71	158	529	216	4,187	5,161
Rohilkund - - -	61	121	362	180	3,387	4,111
Agra - - - -	82	164	504	181	3,955	4,886
Allahabad - - -	65	129	403	144	3,175	3,916
Benares - - -	82	163	471	236	3,970	4,922
TOTAL - -	361	735	2,269	957	18,674	22,996

And, contrasted with the above, are exhibited below the numbers of each grade and the strength of the whole force, as now revised and submitted for final sanction:—

NAME OF DIVISION.	Inspectors.	Chief Constables.	Head Constables.	Mounted Constables.	Constables.	Total Number.
Meerut - - -	67	151	523	220	4,531	5,492
Rohilkund - - -	60	122	383	188	3,642	4,395
Agra - - - -	73	157	490	186	4,100	5,006
Allahabad - - -	62	131	407	143	3,392	4,135
Benares - - -	77	164	474	236	4,115	5,066
TOTAL - - -	339	725	2,277	973	19,780	24,094
Difference between former and revised strength -	—22	—10	+8	+16	+1,106	+1,098

Of the force, as now revised, there will be engaged—

In protecting gaols - - - - - - - - -	1,220
In protecting treasuries - - - - - - - -	613
In reserve - - - - - - - - - -	3,614
	5,447
Leaving for proper police duty, including watch and ward of cities - - - - - - - - - - -	18,647
	24,094

This latter number of 18,647 gives one policeman to 3·3 square miles, and to 1,508 of the population, which the Lieutenant Governor feels confident will be regarded as very moderate. For the purposes of this calculation the gaol guards and treasury guards who take no police duty, and the reserves, who are employed as escorts for treasure remittances and for prisoners, as guards in the police lines, &c., have been excluded.

75. The

75. The following tabular Statement will exhibit the gross cost of the police as provisionally sanctioned and as now revised; the amount of contributions by cities, towns, and cantonments; the amount chargeable to the Gaol Department, and the net cost to Government, chargeable under the head of Police:—

LXXV.—Gross cost of the police as provisionally sanctioned and finally revised.

1. Name of Division.	2. Total Cost Provisionally sanctioned in 1861.	3. Contributions from Towns and Cantonments, as settled in 1861.	4. Net Cost to Government, after allowing for Contributions in Column 3.	5. Total Cost as Revised and now Reported.	6. Contributions from Towns and Cantonments, as Revised and now Reported.	7. Net Cost to Government after allowing for Contributions as in Column 6.	8. Difference between Columns 4 and 7.	9. Cost of Gaol Guards included in Column 7, but separately sanctioned by the Government of India.	10. Net Cost of Police Proper, as now Revised.
	Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*
Meerut - - -	5,48,868	1,16,834	4,32,034	5,69,496	1,31,412	4,38,084	+6,050	20,652	4,17,432
Rohilkund - - -	4,41,960	71,656	3,70,304	4,62,276	85,812	3,76,464	+6,160	17,736	3,58,728
Agra - - -	5,24,232	93,984	4,30,248	5,27,412	89,544	4,37,868	+7,620	21,204	4,16,664
Allahabad - - -	4,21,416	47,778	3,73,638	4,32,792	59,724	3,73,068	— 570	20,076	3,52,992
Benares - - -	5,44,440	67,860	4,76,580	5,51,052	70,176	4,81,476	+4,896	26,748	4,54,728
TOTAL - - *Rs.*	24,80,916	3,98,112	20,82,804	25,43,628	4,36,668	21,06,960	Net. +24,156	1,06,416	20,00,544
Add cost of European Officers attached to the entire force, inclusive of Jhansie Division and Ajmere District.				3,99,914	- -	3,99,914	- -	- -	3,99,914
				29,43,542	- -	25,06,874	- -	- -	24,00,458

It will be seen that the gross cost of the executive police, as now revised (Column 5), exceeds that of the force, as provisionally sanctioned (Column 2) by the sum of 62,712 rupees; but at the same time the assessments on cities, towns, &c. have been increased in the amount of 38,556 rupees, and the net increase of charge which will actually fall upon the Government amounts to no more than 24,156 per annum, as shown in Column 8 of the Table. The average cost of the police per square mile is *Rs.* 38. 5.; and one rupee to every 11·54 of the population.

LXVI. to LXXVII.—Difficulties which attended the introduction of the new police system.

76. It could not have been expected that the subversion of a police system which had existed for more than half a century, and the sudden substitution of another differing from it in principle and in detail, should have been unaccompanied with difficulty and partial disappointment. In spite, however, of intrinsic difficulties, aggravated by adverse circumstances, satisfactory progress in the organization and instruction of the force has been accomplished, and the general results which have been attained by its agency are, on the whole, creditable.

77. The principal difficulties against which Mr. Court has had to contend, are the following, described in his own words:—

"Firstly.—The revision of the several old establishments of police and the erection of the new constabulary was effected previous to the promulgation of Act V. of 1861; and it was not until late in the year that any law was passed regulating the procedure of the police enrolled under the Act quoted. During this time a new system was introduced and worked without law, and in ignorance of the exact nature of the promised law. This occasioned doubts and uncertainty, both amongst the police officers themselves and also amongst the magistrates. It occasioned much labour, much confusion, and diversity of practice, and impeded progress in many ways.

"Secondly.—The new constabulary was formed by incorporating the oldest or most deserving members of the former establishments. With a few exceptions, the military portion consisted of men who had done great service in the mutiny, and had proved themselves faithful and gallant soldiers; but they were nothing more than soldiers utterly illiterate, and from want of intelligence or want of training, almost useless as police, and entirely useless as detectives. The Civil police, on the other hand, had educated themselves, rather than been brought up in the quasi-judicial system of police under Regulation XX. of 1817. They were averse to the small amount of discipline and drill which is necessary in order to make the force effective for the maintenance of peace. They were averse to the duty falling upon them as watchers of property during night, which duty had been hitherto performed by an agency to which they thought themselves superior; and for these reasons, though the only men in the new force who were able to undertake detective duties, they were inefficient for the equally important duties required under the new system, and the best of them had to be taught to forget what they had learnt, as well

well as to be instructed in the duties hereafter to be performed. The military portion hated the civil duty. The civil portion had an equally strong aversion to the small amount of military discipline. In justice to past services, the older men, less capable of instruction, were chosen into the service, and greater difficulty has arisen from this necessary policy.

"Thirdly.—The officers selected as district superintendents and deputy inspectors-general, were unaccustomed to the duty, and had to learn before they could teach, and altogether the material of the constabulary force was most unpromising.

"Fourthly.—Besides these extraordinary difficulties, the new police had to work their way distrusted by the people of the country, who are constitutionally averse to change, and thwarted by the influence of the tehseeldars, who, deprived of authority as 'officers of police,' and unable to comprehend the severance of *police* from *justice*, considered themselves aggrieved and lowered in dignity of office by the new constitution of the police; thwarted, moreover, whenever opportunity offered, by the Umla of the Courts, who were deprived of the power and the indirect patronage they had previously enjoyed."

78. None of these difficulties were avoidable and none were imaginary; and the energy and perseverance with which they have been fairly encountered, and in a great measure overcome, reflect great credit on those to whom the formation and supervision of the force were entrusted, and fully justify the expectation of progressive improvement in the future.

LXXIX.—Their removal.

79. During the brief period even which has passed since the new police system was initiated, many of these hindrances to success have been removed, while others have been lessened. The Code of Criminal Procedure has provided a law at once simple and comprehensive in its provisions, and the police are no longer left in doubt or uncertainty as to their course of action in dealing with crime. An endeavour has been made in the Resolution No. 767A, dated 2d July 1861 (a copy of which will be found in Appendix No. I.) to supplement the provisions of the law on various points. Something has been done to improve the material of the force by removing those of the old civil police who have proved to be incompetent, and by securing the restoration to the native army of some who were drafted from it to the military police, and who, being illiterate, were wholly unqualified to perform the duties of a civil police. Discipline has been introduced, and the men have been taught to know that they must submit to it or leave the service, whatever their antecedents or their predilections may have been. The opposition of the native functionaries, powerful at first from the influence which they had acquired under the old system has, in a great measure, yielded to circumstances already, and will no doubt be eventually crushed; while the European officers of the force, in themselves intelligent and zealous, have gained, and are day by day gaining, the local knowledge, the familiarity with departmental rules, and the experience which will surely secure the desired efficiency.

LXXX.—Adverse circumstances which added to the difficulties.

80. Further, it may be hoped the adverse circumstances which added to the difficulties of this great undertaking will not readily recur. The chief of these, the famine, which in 1860-61 visited the whole of the Meerut Division, and half of the districts of the Agra and Rohilkund Divisions, has passed away, and with it the extraordinary temptation to crime has been removed; while it may be predicted with some confidence that before, in the ordinary cycle of years, drought shall again occur, the material improvement of the country will have been so largely advanced as to mitigate the severity of its consequences. And lastly, there is little or no reason to anticipate that the disbandment, on an extensive scale, of men bearing arms and having no other profession, which was imposed upon the Government by the events of 1857-58, and by financial necessity, will be repeated within any reasonable period.

Thus having regard to the removal of many difficulties which certainly stood in the way, and to the absence of those circumstances by which they were aggravated, the Lieutenant Governor considers that the prospects of the future are hopeful; and he entertains a belief that the sound principles of the new police system, and the growing efficiency of the agency employed to work it, will ensure results which shall not fall short of the expectations, however sanguine, of those who have helped to frame it. It is thought sufficient, in this review, to advert to the general results in each division, noticing in their order only the most remarkable incidents and the general questions which have been brought forward.

LXXXI.—Comparative tabular statement showing general results.

81. In the Appendices No. II. and No. II. A will be found two comparative tables, the one showing the number of crimes of all classes serious and petty, and of attempts committed during the past and two preceding years in the districts to which the new police was extended; and the number of persons convicted, the number of cases in which no apprehensions were effected, and other particulars relating to the year under report; the other giving a comparative view of the more heinous offences which occurred in 1861, as compared with the same in 1860. To these tables reference will be needed in connexion with the remarks which follow under each division.

LXXXII.—Results in the Meerut Division.

82. The first point which attracts attention is the large increase of crime which has been reported, and, in all probability, has been committed during the past year. Of all classes there were in this division 11,741 offences against 10,776 in 1860, and the increase

is

is found in the category of murders, highway robberies, burglaries, and other crimes against property, rather than in the classes of serious crime; and yet it cannot be fairly presumed that blame attaches to the police. Murders and homicides it is not usually in the power of the most efficient police to prevent. Many of the offences reported, as highway robberies, not only did not accord with the definition given in section 390 of the Penal Code, but were committed on village roads which the police, unaided by the people, cannot effectually protect. Crimes against property of the commoner kind, as burglaries and thefts and cattle thefts, were stimulated by want arising out of the severity of the famine, as clearly shewn by the fact that, as soon as the rains commenced, there was a marked diminution in the number of these offences; and it must be noted that the great majority of these are committed in villages which are guarded only by Chowkeedars who have not yet been brought under the influence of the new system, while the parties aggrieved seldom invoke the assistance of the police in discovering the perpetrators, and the people at large habitually refuse to co-operate with them.

But in the Meerut Division, over and above this indifference on the part of the people, or, as it may be probably called, this passive resistance to the efforts of the police, which is felt more or less in all quarters, the police have had to contend with the Goojurs, Mewatees and Aheers, who are not only abundant in numbers, but are possessed of large influence as proprietors of extensive landed estates, and are linked together in close association by the ties of fraternity, as well as by the common bond of their predatory profession and practice. Their character was signally exemplified in the great depredations which were committed throughout the districts of Boolundshuhur, Meerut, and Moozuffernuggur during the disturbances; and in no class of crime is the effect of their combination so apparent as in that of "cattle theft," which is not inaptly compared by the Inspector General of Police with the offence of dog-stealing in England. To break up a criminal combination so powerful and so extensive must be regarded as an achievement hardly possible; but it is expected, as it is believed, that the police will gradually make themselves acquainted with the leading communities of Goojurs and Mewatees, as well as with their most influential members, and with the means which are usually used by them in the prosecution and concealment of crime; and that, possessing this knowledge, they will be able to check the depredations of these tribes, and bring the principal offenders to justice.

The predatory character of the population must never be overlooked in judging of police administration in the Meerut Division, and this has without doubt had a large share in giving to it the pre-eminence over all other divisions in respect of the increase of crime.

No better evidence of the effect of the famine can be adduced than the contrast which the state of crime during the first six months of the year presents to that in the second half-year; but some share of this improvement may be fairly attributed to the increased efficiency of the police, who during the former period were almost entirely uninstructed, and were in uncertainty as to the law by which their authority should be limited and the practice should be guided.

The returns show that of 11,741 crimes committed in this division, there were 6,559 in respect of which no apprehensions were effected. At first sight this appears an unfavourable result; but its true bearing on the character of the police administration can be judged only by eliminating from this catalogue of offences those which are not primarily cognizable by the police; and for this the statements submitted do not contain the requisite data. This object will be in future secured by instructions which have been issued. Meanwhile, on the fair assumption that few of the 3,289 petty offences under heading 42 of the Criminal Statements were cognizable by the police; and that the majority of the 1,097 "attempts" to commit crime were not prosecuted; the proportion of cases in which there was a failure to apprehend will be reduced to about 25 per cent.

In the prosecution of criminals apprehended a fair success has been obtained in all the districts of the division; and, though the computed value of property plundered or stolen is greatly in excess* of that shown in the returns of 1860, there is at least a proportionate improvement in the value of that which has been recovered by the efforts of the police. It must be noted too, that, while the former has been accepted on the representation of the injured parties, which is uniformly exaggerated, the latter has been set down at the actual assessed valuation, and constitutes in point of fact a much larger proportion of the value of the property alleged to have been stolen than the figures represent. 58,450 rupees have been recovered against 3,685 rupees in 1860.

In regard to offences which have been classed as "highway robberies," and which in the Meerut Division are reported to have been 60 in number, as against 43 in 1860, it is necessary to anticipate an unfavourable verdict by observing that, while the majority of those were committed during the first half-year when the famine was at its height, many were unaccompanied by the circumstances which are required, according to the Penal Code, to convert theft into robbery. This want of care in the classification of crime tends to mislead the public, and to impress them with an exaggerated notion of the insecurity of the high roads, which, being assumed as a fact, naturally leads to conclusions unfavourable

* In 1860, 1,90,605 rupees; in 1861, 3,12,649 rupees. This latter sum has been raised by the sum of 89,000 rupees, being the value of property stolen at Goolasthee, of the Boolundshuhur District in a case of domestic robbery, for which the police cannot be blamed.

CHAP. XII. North Western Provinces.

favourable to the exertions and to the efficiency of the police. It will be only fair to the force that magistrates should scrutinize the circumstances attending each case which is brought before them under the designation of "highway robbery," and also of "dacoitee," and refrain from entering under those headings any other offences than those which correspond with the definitions given in sections 390 and 391 of these offences respectively. It may be noticed in passing that the paucity of "dacoities," whether "aggravated" or "unaggravated," is one of the most favourable features of the returns under notice.

LXXXIII.—Results in the Agra Division.

83. The returns from this division are on the whole satisfactory. Of 10,552 crimes reported to have occurred in the six districts of the division, 5,456 belong to the class of petty offences not generally cognizable by the police in the first instance, and to "attempts" which are seldom prosecuted. There remain of the more serious offences 5,096, and the number of cases in which no apprehension was effected is said to be 4,061. As remarked in a preceding paragraph, the offences cognizable by the police must be eliminated before their success or failure in the apprehending of offenders can be predicated; but a comparison of the last number (4,061) with that of petty offences beyond the primary cognizance of the police, and of attempts which would not be generally prosecuted, justifies the belief that the police have not been inactive in the pursuit and capture of the perpetrators of heinous crime.

Of 14,350 persons supposed to have been concerned in crime 7,775 have been *prosecuted to conviction*, and probably (for the returns do not show this) about 3,000 more may have been brought to trial, and discharged or acquitted for want of judicial proof; this general result cannot be thought unfavourable. On the other hand, the failure of the police to make any discovery in seven out of nine highway robberies in the Agra district; the discharge of the accused in the remaining two cases; the successful prosecution in only four out of 11 reported cases of murder; and the escape of all those charged with dacoitee, except in one case only in the same district, taken in connexion with the fact, that of 86 persons apprehended and brought to trial by the police in the Mynpoory district on charge of serious offences, only eight were convicted; certainly lead to the conclusion that the police have shewn themselves wanting in the detective faculty, as well as in discrimination. These, however, are qualities which will be developed by experience and instruction, and the Lieutenant Governor looks forward to improvement.

"Burglaries" and "thefts" have decreased in number generally, though in the districts of Furruckabad, Etawah and Etah, the numbers are slightly larger than in 1860 under both heads. Prosecution in such cases is optional with parties aggrieved; and it is believed that, excepting when the property stolen is large in amount, or when the plaintiff by his own exertions has obtained a clue to its recovery, the aid of the police is seldom demanded. And though the magistrate of the district is empowered by law to direct an investigation, he can never do so with much hope of a successful issue while the sympathies of the people are, as stated by the Inspector General of Police, "with the criminal rather than with the agent for procuring his punishment."

Of other offences than the above it appears that the fluctuations have been small; murders exceed by three, and unaggravated dacoities by six, the numbers reported in 1860; while in "homicides" and "aggravated dacoities" there has been a decrease. As might have been expected from the nature of the season, cattle thefts were more numerous in this as in all other divisions to which the influence of the famine extended; and it may be assumed that detection and punishment were not more frequent than elsewhere.

In the recovery of stolen property the results must be pronounced favourable. If property in the proportion of 23·50 per cent. of *assessed* value was recovered, it will be fair to assume, regard being had to the universal practice of exaggerating the value of property stolen, that little less than half of that stolen was recovered.

LXXXIV.—Results in the Rohilkund Division.

84. The number of offences of all classes reported to have occurred in this division is 15,956, and 19,537 persons are supposed to have been concerned in their commission. Both figures are larger than the returns of any other division exhibit, and at the same time the cases*, in which no apprehensions were effected, are more numerous, not only positively but relatively, than elsewhere. The proportion of persons prosecuted to conviction,† too, is smaller. These results appear to be somewhat unfavourable; but it must not be forgotten that the new police was not formed in this division until May, and that whatever contrasts the returns of the year under notice present to those of 1860, or to those of other divisions, whether good or bad, can be but very partially attributed to its action.

It is as well, however, to note the figures. Of 15,956 crimes, 5,544 were petty offences, the primary cognizance of which does not, for the most part, rest with the police, and 1,046 were attempts which are not commonly brought into court at all. There remain, as belonging to the classes of more serious crime, 9,366. The returns do not admit of a fair judgment being formed as to the degree in which the police have been enabled to bring the perpetrators to trial. But it is feared that there must have been a great failure of justice—

in

9,405 to 6,559 in Meerut.	† 5,157 to 8,034 in Meerut.
4,061 in Agra.	7,775 in Agra.
1,862 in Allahabad.	4,551 in Allahabad (*a*).
3,593 in Benares.	6,004 in Benares.

(*a*) Where only 6,193 crimes of all kinds are reported.

in that out of 19,537 persons supposed to have been concerned in crime, only 5,157 were prosecuted to conviction in 3,820 cases; a very large proportion of those engaged in the 9,366 cases, falling under headings 1 to 42, must have escaped with impunity.

The success of prosecution in the cases of murder, which appear on the returns of Bareilly and Shajehanpore, contrasts very favourably with the almost entire failure in the same class of offences in Bijnore and Moradabad, where the increase, also, in the number of these is most apparent, as might have been anticipated from the fact that the famine was more severe in these two than in the other districts of this division.

Except in the category of thefts, which have decreased generally (though Bijnore shows a slight increase), and in that of highway robberies, which correspond exactly with those in 1860, there has been an increase of crime, especially of "murders," which number 20 more than in 1860; and also in the Bijnore and Moradabad districts of "cattle theft." But it is remarkable, as showing the effect of the scarcity in crime, that the majority of the murders in Moradabad, and all the highway robberies in Bijnore, occurred during the first half of the year, when the famine was at its worst.

The value both of property stolen and of property recovered was less in 1861 than in the previous year. The great falling off in the latter item is traceable to the districts of Bijnore and Moradabad, where in 1861 the recoveries amounted to 4,301 rupees and 1,255 rupees respectively, as against 22,838 rupees and 10,692 rupees in 1860. The remarkable success in the last named year, if it was correctly reported, was probably due to exceptional causes.

LXXXV.—Results in the Allahabad Division.

85. This division was beyond the direct influence of the famine, though the prices of food were somewhat affected, and neither the statistics of crime nor the results of police action generally call for much remark. The point which chiefly calls for notice is the very small number of offences, and particularly of heinous offences, as compared with that in other divisions. According to the returns there were but 2,640 serious offences against 8,385 in Meerut, 5,095 in Agra, 9,366 in Rohilkund, and 4,985 in Benares. The Allahabad division has only four districts, but the territorial area and population are not so much below those of the other divisions as to account satisfactorily for the great difference in the extent of crime. Rohilkund, which is exceptional in respect of area by reason of the thinly inhabited forest and Terai tracts; and Benares, which is exceptional in respect both of population and area by reason of the dense population in the city of Benares, and by reason of the inclusion of Goruckpore with its 7,000 square miles, and of the hilly part of the Mirzapore district; these two divisions being put out of the comparison, the area and population of the remaining three pretty fairly correspond; thus:—

	Area in Square Miles.	Population.
Meerut Division- - - -	9,985	4,522,165
Agra „ - - - -	9,298	4,373,156
Allahabad* „ - - - -	9,730	3,978,003

* *N.B.*—Humeerpore excluded.

And, therefore, the small amount of crime, speaking comparatively, seems remarkable, and has been brought to the notice of the Inspector General of Police. Even petty crimes and "attempts" are much fewer than in the other divisions, excepting Meerut, where petty crimes number 3,289 against 3,406 in Allahabad, while "attempts" are, as elsewhere, more numerous.

It cannot be disputed that in the Cawnpore district there has been great failure in the prosecution of crime, at the same time that there has been a vast increase in the number of offences committed under every head from murder, excepting only highway robbery, to cattle theft, as well as in petty offences from 742 in 1860 to 1,140 in the year under report. Cawnpore may have suffered more—from exportation of food to the famine-stricken districts, facilitated by the immediate proximity both of the canal and the railway, and the consequent rise in the price of food—than other districts of this division; but this will not account for the enormous increase of crime, much less for the extensive failure of justice, as shown by the conviction of only 24 out of 99 persons charged with serious offences, and by the fact that in 449 cases of burglary no more than 49 persons were apprehended, and of these no more than 24 were convicted on trial before the magistrates. The police cannot be exempted from blame. The only favourable feature, speaking generally, is the improvement which has taken place in the proportion of stolen property recovered.

In the other districts the results which the returns exhibit are "not altogether unsatisfactory. Crime has been kept down to its usual average, notwithstanding the difficulties attending the introduction of a new system; and property, on the whole, has been better protected, and more property recovered than before by the police. Prosecution has been more successful, and a fair proportion of the persons engaged in crime have been brought to punishment."

CHAP. XII. North Western Provinces.

The following case deserves to be specially noticed:—

Neeamut Ashruff was second only to the Moulvee Leeakut Allee in the Allahabad mutinies. He served under the Moulvee as Kotwal of Allahabad, and was known to have instigated his principal to murder the Christians who fell into the hands of the rebels. He was a man of some note, and possessed considerable influence amongst the Mussulmen of the Chail Pergunnah, of which he was a resident. Chail is a mere village, but was the site of the old Tehseelee and a pukka building which was used as the police outpost under a head constable, and also the locality of a Pergunnah school. Neeamut Ashruff was known to be hiding in the Pergunnah, sheltered by his Mahomedan friends. The head constable obtained intelligence that he would be present at a gathering in Chail. Neeamut Ashruff was a notable wrestler, as was also the head constable, and the latter challenged him to a wrestling match in the Tehseelee, and having got him within the walls closed the doors and proclaimed him his prisoner. The rebel called out for assistance, and the Tehseelee was attacked by the assembled crowd. The head and two of the six constables held out, until the head constable was incapacitated by a blow of a club. The constable at the gate then went to his assistance. The village schoolmaster seeing the gate unguarded, opened it and let in the crowd. Neeamut Ashruff, mortally wounded, was rescued, but died shortly after, and his body was recovered by the head constable. The conduct of the head constable and of the policemen who stood by him in his endeavour to seize this notorious rebel, and in resisting the attack made by the assembled mob on the police post for his rescue, were fully and deservedly commended. But the discreditable fact which the case brought to light was the reticence of the population as to the presence among them of a rebel, second in notoriety only to the "Moulvee Leeakut Allee" himself, and, by direct inference, their disloyalty and abiding disaffection to the Government. Here was a man, celebrated as rebel Kotwal of Allahabad, not only harboured by his Mahomedan friends, but permitted by the people at large who were not his co-religionists to remain unmolested in the very neighbourhood of his crimes, and at last openly supported by them in resisting the authority of the law. It is difficult to conceive that there were not many, even of those who were under an obligation to give information, who could not, at any time during the four years that had intervened, have secured his apprehension. Extra police, under section 15, Act V. of 1861, were quartered in the neighbouring villages, and this measure will operate, it is to be hoped, as an example to all, no less than as a punishment to those who were implicated in this disloyal outrage.

Of the like kind, and equally creditable to the police, though perhaps less conspicuous, was an encounter of the police with Bikrum Singh's gang of dacoits, who had long infested the Cawnpore District, and had escaped, or, more probably, defied apprehension. The new police behaved with good courage and determination under the leading of Inspector Catania, and the expedition ended in the destruction of one of the leaders and the apprehension of most of his accomplices. The family of Doorga, constable, who was killed on this occasion in the execution of his duty, have been provided by the Government with a pension.

LXXXVI.—Results in the Benares Division.

86. It does not appear necessary to examine in any detail, the returns of crime in this division, which, like Allahabad, was free from the direct effect of the famine, and which exhibits no very marked fluctuations as compared with 1860, except it be, perhaps, the large decrease of the more serious crimes in the district of Goruckpore. This decrease is observed in every class of offences, and may be regarded with satisfaction.

Of 9,360 offences of all kinds there were but 3,593 in which no apprehensions were effected, and the fact being borne in mind that of the whole number 4,118 were petty offences and 257 attempts, it must be presumed that activity has not been wanting in the pursuit of the worst offenders. Except in Azimghur, there has been a great improvement in the prosecution of crime, especially in cases of heinous crime, while many notorious offenders against the law have been apprehended, and some security has thus been gained for the better protection in future of life and property. Measures, too, have been taken against the recurrence of river dacoities, which have long been the plague of the Ghazeepore district, and against the crime of cattle lifting by gangs of armed men in the Mirzapore district. So far these measures, it is gratifying to remark, have been successful.

The police have done well in the recovery of nearly one-third of all property stolen, even supposing that its value was not exaggerated by the aggrieved parties; and the one point which seems to be most unfavourable is that of 14,920 persons supposed to have been concerned in crime, less than half (6,004) have been brought to punishment.

LXXXVII.—Concealment of crime.

87. In the opinion of the Lieutenant Governor, the constabulary police cannot be reasonably charged with the concealment of crime, which has been imputed to them by some officers.

It is not only that the returns exhibit, generally, an increase of crime throughout the "general police district," but that the increase is most apparent in those parts of the country which were most severely afflicted by the famine, and in those very classes of offences which would arise out of distress and want caused by the famine, viz., offences against property. Muttra, and in a lesser degree Moradabad and Budaon, afford exceptions; but these cannot be taken to reverse the *primâ facie* conclusion that there can hardly have been wilful concealment of crime when the police returns not only indicate a remarkable increase in the number of offences, but also exhibit results which might have been

been predicted in the exceptional circumstances of the year under report. Further, it must in all fairness be held that, had there been reasonable ground for doing so, the several magistrates, who have recorded their opinion of the new police system and agency, would not have failed to bring forward the wilful concealment of crime as a great blot on the police administration.

LXXXVIII.—Cattle theft.

88. The Inspector General of Police has been instructed, with the agency at his disposal, in the persons of extra inspectors, to introduce experimentally a system for the prevention of cattle stealing, on the plan proposed by Mr. John Strachey, and printed in No. XXXIII of the selections from the records of the Government, North Western Provinces. That system briefly is to appoint an officer with a special detective establishment, with jurisdiction in all the districts in which the offence of cattle lifting is prevalent. Isolated efforts must be unavailing to check a crime which is carried on in the widest association. In the course of his own experience the Lieutenant Governor has known instances in which the Goojurs of the Paneeput and Soneput Khadir have driven herds of cattle across the shallows of the Jumna into Baghput of the Meerut district, and there, under the old system, all pursuit ceased, and all trace was lost.

LXXXIX.—Female infanticide.

89. The following remarks have been recorded by Mr. Court on the subject of female infanticide in the Seharunpore District:—

"I enter in the margin Mr. Agnew's sixth paragraph of his report relating to infanticide.*

"In reply, I have informed Mr. Agnew of the measures taken elsewhere, which have been successful in suppressing these atrocious murders.

"The measures recommended by me are as follows:—

"First. To have an accurate census taken of each family of the suspected tribe showing the number of males and of females, and a detail of those under two years of age, and above two under 12 years, and above 12 years.

"Secondly. To require from the head of each family and from the chowkeedar, and the village accoucheur, a report of each birth and of the sex of the babe born.

"Thirdly. That the body of every child dying under six months of age shall be immediately forwarded to the civil surgeon for examination, a report being immediately made to the police, and by the police, of the circumstances of its death.

"Fourthly. That a new census of the suspected villages be taken every year for the first five years at all events. Future returns being regulated by the data obtained during this period."

The prevalence of female infanticide in this district, in the degree now supposed, was not known to the Government. The measures which Mr. Court has suggested to the magistrate for suppressing this atrocious crime are judicious as far as they go, and, having been attended with some success elsewhere, should not fail in Seharunpore. But it would seem that a law is wanting to strengthen the hands of the magistrate, for in its absence no penalty can be imposed, or at any rate legally enforced, on "heads of families," "chowkeedars," and "accoucheurs," for neglecting to report to the police births and deaths, and the circumstances of the latter in the case of female children. Before the mutinies, correspondence took place on the subject of a proposed law directed to the suppression of this crime; but in the pressure of more urgent business, and with reference to the revision of Penal Laws then in progress, the project was laid aside. It will now be revived.

XC.—Statistics of crime in the North Western Provinces.

90. The returns of a single year cannot afford a reliable foundation for conclusions as to the statistics of crime in these provinces, and the Lieutenant Governor will abstain from the expression of any definite opinion upon the proportion which the criminal bears to the whole population; but accepting for the present the result of Mr. Court's computations, as shown in the margin,† and having regard to the considerations adverted to in his 301st

* "Para. 6. The District Superintendent has taken up the subject of female infanticide with much energy. He finds that it does exist to a larger degree than I was aware of, and he is prepared to carry out any measures that may be ordered by Government. As a preliminary, I think it would be well to record the number of female children now alive in the village where infanticide is suspected. In a few years a new census might be taken, and a comparison and inference drawn as to whether the crime has been at all checked by the steps that had been intermediately taken."

† "297. From the statement submitted, I obtain the following statistical data:

"Total number of offences committed	54,812
"Total number of persons supposed to have been concerned in offence	73,589
"Total number of persons convicted of offence	30,571
"Total value of property stolen	*Rs.* 8,33,424
"Total value of property recovered	„ 1,91,367
"Total net loss to public by criminals	*Rs.* 6,42,057

"298. The population of these five divisions is, in round numbers, 27,000,000. On this computation we find an average of one criminal to 4,000 persons, and the average loss of property by the criminal to amount to something less than four pie per head per annum.

"299. It is, however, probable, that the number of persons concerned in crime is under-estimated, that

301st paragraph, his Honour must admit that, even under ordinary circumstances, the calendar of crime would have appeared to him to be small.

XCI.—Statistics of crime in the North Western Provinces as affected by famine.

91. But when it is borne in mind that during this period, or at least for one-half of it, there was severe distress, amounting, in thousands of instances, to absolute destitution in 12 or 13 of the most populous districts of the North Western Provinces, and that this distress was reflected, in consequence of the general rise in the price of food, on other districts to which the direct influence of the famine did not extend, the reported increase of crime is very much less than might have been anticipated. Judged by the known occurrences of the last famine period, 1837–38, the effect upon crime of the calamity under notice has been surprisingly insignificant. The Ganges Canal was covered with boats and the Grand Trunk Roads with carts conveying grain to the distressed districts, and yet crimes of violence have been few; the highway robberies brought to light having been the majority "petty robberies from travellers, not on the imperial roads, but in village tracks on the occasion of returning from village markets;" while in the cases of others there has been strong reason, from the identity of the circumstances attending them, to suspect collusion on the part of the carriers, if not of the neighbouring villagers also. There has been an increase, likewise, of murders following on or accompanying the attempt to thieve from corn stacks, and of petty burglaries, thefts, and cattle thefts; in other words, of just such crimes as would have been stimulated by severe want. But there have been no grain riots; no violent and open attacks on grain stores; none of the great outrages which occurred in 1837–38, and which the employment of a strong extra police was required to suppress. It is a fact which deserves to be prominently noticed, that, though in anticipation of the possible necessity, the sanction of the Government of India was obtained to entertain a special police, not a single extra constable was employed. To whatever cause attributable, whether to the improved disposition of the people, or to the disarming operations carried out in 1859-60, or to the greater efficiency of the police, the comparatively small number of violent crimes during the famine period of 1860–61 may certainly be regarded with much satisfaction.

XCII.—Dacoits assisted by the people.

92. There is the strongest presumption, as shown in the marginal extract from the Inspector General's Annual Report,* that dacoits receive assistance, direct or indirect, from the people. It is quite certain that the efforts of the police to trace them are thwarted rather than seconded by the very classes who are most interested in the seizure and punishment of the offenders. This fact was singularly illustrated but recently in the case of a highway robbery on the Grand Trunk Road, near the populous town of Khoorjah, in which it was shown that the gang was traced unmistakeably through many villages (every resident of which professed entire ignorance of its passage), until at length the pursuit became so hot that a large proportion of the property acquired by the robbery was abandoned. No case could confirm more fully than this the truth of what is stated in the paragraphs under notice.

XCIII.—The remedy.

93. The only remedy for this discreditable state of things is the enforcement of the responsibility which the custom of the country and the law attach to the landholders and village communities. The Lieutenant Governor would be sorry to think that the magistrates of districts have relaxed in their endeavours to exact from the landholders the information and the assistance which they are bound to give in the discovery and apprehension of dacoits and highway robbers, owing merely to the introduction of a new police system. What is believed is, that in the great legislative changes which have lately taken place, the law in regard to the responsibility of landholders has become somewhat obscure, and

---

the more probable number of offenders will be 100,000, of whom one-fourth, or 25,000, are offenders against property or life, which will give one criminal to about 1,000 persons.

"300. I am quite alive to the fallacy of such computations on the returns of a single year, but I have made them, in order that they may be tested by the statistics of the future, and in the belief that the average taken on a number of years will hereafter be found useful.

"301. I believe these statistics of the North Western Provinces will compare favourably with those of any country in the world; and when the general poverty of the people, the great facilities of acquiring property by larceny, owing to the insecure way in which property is kept, and when the low state of the moral principle of the people are taken into consideration, it is surprising that the calendar of crime should be so small during a year of such distress as the one under review."

* Para. 313. It is undoubtedly true that the dacoits are assisted either directly or indirectly by the people. They assemble and pass through villages without attempt at hindrance, and on police inquiry being made, absolute ignorance of the movements of a large band of men is professed by all classes, which ignorance is nothing more or less than impossible. The narrative of the Ghazeepore dacoities record attacks made by bands of 100 and 150 men armed with matchlocks and with lighted torches, of whose route of advent and departure no information can be obtained. It is absurd to suppose that gangs can so assemble and move without the knowledge of the village communities, or that difficulty would be found in tracing such gangs, not only from the scene of their crimes to their homes, but also from their homes to the scene of the robbery, were the people willing to aid and support the police or the magistrate. This, however, they are not, partly, I believe, from fear, partly from an unwillingness to incur odium where they have no immediate personal interest; they will swear to a hundred lies rather than give any indication of the robbers; and unless under law, and the pressure of a magistrate able to enforce the penalties of law, no information is obtainable. The police working alone, unaided by the voluntary will of the people, and unsupported by the influence of the magistrate, will be found ineffective either for the prevention or detection of these offences, and the utmost they have succeeded in doing is to obtain proof against two or three out of the gang against whom they happened to obtain evidence, either through the plundered man, or by the finding of part of the plunder on them.

and that the magistrates of districts have been uncertain as to the degree in which they could legally bring their authority to bear upon the landholders.

The Lieutenant Governor fully believes that until the landholders can be compelled to use the influence and the power which they undoubtedly possess in support of good Government, no police that can be formed out of the material available in this country will be thoroughly effective for the prevention and detection of crime; and so far back as 1860, the Legislature were moved to pass a Bill on the principle of Act X. of 1858, in order to strengthen the hands of the magistrates in dealing with violent outrages; but two years and more have passed away without intimation of any result, and it must be assumed that the proposal has been negatived.

XCIV.—Summary of the law relative to responsibility of landholders.

94. In these circumstances it appeared to the Lieutenant Governor that the next best thing would be to draw out a summary of the law relating to the responsibility of land holders as it actually exists, and to circulate it for the information and guidance of magistrates of districts and police officers. The Inspector General was requested to undertake this task, and the memorandum which he has prepared, and which is believed by the Lieutenant Governor to exhibit correctly the actual statement of the law on this point, as it now stands, is entered *in extenso* in the Appendix No. III. It is hoped that all doubts being removed as to the extent of their authority, the magistrates of districts will in future compel landholders to do that for which they are held responsible by the law, and in default will impose the full legal penalty.

XCV.—Theft by the administration of poisonous drugs.

95. The crime of "theft by the administration of poisonous or stupifying drugs" has been the subject of correspondence during the year, and the result of it was the deputation of Captain Watson, the District Superintendent of Benares, to make detailed inquiries as to the supposed existence of an organised system and of gangs of professional poisoners. Captain Watson's final report has not been received; but the one important fact has been established beyond a doubt, that "a system of robbery by administration of poisonous drugs is practised throughout the country" by gangs who follow it as a profession, and who have their connexions and associations in all quarters.

No crime can be more hateful. It has not its origin in passion, jealousy, hatred, or revenge. It has for its object the unlawful acquisition of property by means which, though always endangering, and not infrequently destroying life, are used with a cold-blooded deliberation and indifference as to consequences, which distinguishes its perpetrators as among the very worst and most dangerous of criminals.

XCVI.—Approver system recommended.

96. It was in this view of the heinousness of the crime, as well as of the fact, regarded as proved that it is practised as a system, like thuggee, by bands widely connected and associated, that in June last an application formally made to the Government of India, at the instance of the Superintendent General Thuggee and Dacoitee, for the extension of the *approver* system to this class of crime, was revived, and reply is still awaited. It is the Lieutenant Governor's conviction that by no other measure will this organised crime be suppressed. It was fully successful in the case of thuggee when all other means had failed, and there is no crime which so closely resembles thuggee as this in all its chief features. The object of both is the same. Both are characterised by the same shocking disregard of human life. Both have professional followers. Both have ramifications in nearly all quarters of the country. The only difference is, that whereas in the one class the handkerchief was used, in the other a drug, which certainly endangers and may destroy life, is employed. The punishment prescribed by Section 328 of the Penal Code for the offence under consideration is imprisonment for 10 years, and is thought inadequate.

XCVII.—The new police system.

97. The Lieutenant Governor need hardly repeat here what he has often emphatically stated, that in his judgment the new system of police rests on the soundest principles, and that, when prejudices have been removed, misapprehensions rectified, experience acquired, and instruction more fully given to the force, the administration in this branch of the public service will be attended with a success which has been hitherto at no time achieved. It is gratifying, meanwhile, to note that whatever failures have occurred (and all these have been freely acknowledged by Mr. Court) the new police in the first year of their existence have, in several instances, when brought into armed conflict with the transgressors of the law, successfully maintained the authority of the Government; that they have distinguished themselves in the apprehension of many notorious offenders; and that they have rendered excellent service in relieving the troops from the duty of protecting the Government treasuries, and from escorts of every kind. The Deputy Auditor and Accountant General has recently reported that the treasure remittances in these provinces amount annually to about 225 lacs; and that this enormous sum should have been conveyed from district to district under the escort of the police without the loss of a rupee, is in itself a very creditable fact. The Lieutenant Governor is fully assured that the great work of reforming the police administration which has been commenced will be fully consummated before long.

The foregoing review relates to the operations of the constabulary police enrolled under Act V. of 1861, in the five regulation divisions of these provinces.

XCVIII. to C.—Results in the Divisions of Jhansie, Kumaon, and Ajmere.

98. In the four districts of the Jhansie division, and in the Ajmere district, the old police system and agency continued until the close of the year under report, when the Act referred to was extended to them also, and the constabulary force was organised. In the province

province of Kumaon and Gurhwal no change has been introduced, partly because the expense of the new police was found, on examination, to be much larger than the revenues of the province justified, and partly because it was thought by the Lieutenant Governor, after consulting local officers of the largest experience, to be inexpedient to disturb the ancient custom of the province, under which the landholders are held responsible for crime, and do, in point of fact, perform all police duty.

The returns of crime from the Jhansie Division are so incomplete and unreliable, that it is hardly worth while to enter them in this place.

The catalogue of crime reported to have occurred is infinitely below all reasonable calculations, regard being had to the area and the population of the districts composing the division. For instance, in the district of Jaloun, which has an area of 2,500 square miles, and a population of 300,000, the Government is asked to believe that no more than 63 simple burglaries, 67 simple thefts, and 35 cattle thefts were committed, and that altogether only 1,045 persons were concerned in the commission of crime. Again, in Humeerpore, which has an area of about 2,000 square miles, and a population of 548,000, the returns lead to the supposition that only 492 crimes of all kinds were committed, and that no more than 892 persons were concerned in them. But these are quite incredible, with reference not only to area and population merely, but also and more particularly to the number of considerable towns which these districts contain, as *e. g.*, Kalkee, Koonch, Jaloun, Poonch, Mahoba, Mowdha, Punwaree, and Humeerpore itself. The same remarks apply, though in lesser degree, to the district of Lullutpore, while in the district of Jhansie itself crime, it is believed, has been more faithfully reported. In all 977 offences are said to have been committed, and 1,743 persons to have been concerned in the Jhansie district. This even is probably below the truth, but it is to be remembered that a large portion of this district has been transferred to Scindia, and this fact will account for some decrease of crime which has been noticed by the local officers, and in the disturbance of establishments which it has caused, for some defective reporting of its occurrence.

Prosecution in the most common classes of crime, burglary, theft, cattle theft, receiving stolen property, &c., has been very unsuccessful. But few cases of the kind have been brought to trial, even of those reported; and the Lieutenant Governor is convinced not one-half of these which actually occurred have been reported.

In the Humeerpore District the police were active in the apprehension of persons supposed to have been concerned in the commission of murder, culpable homicide, highway robbery, theft with murder of a child for its ornaments; but as many of the committals were pending in the sessions court at the close of the year, the proportion of convictions in these cases is not ascertainable from the returns.

The following statement of apprehensions, convictions, and acquittals within the year, in the four districts of this division, as well as of the value of property said to have been stolen and recovered, is taken from the Commissioner's report. Its accuracy cannot be vouched for:—

	Jhansie.	Jaloun.	Humeerpore.	Chundeyree.	TOTAL.
Apprehended, including those remaining in confinement at the end of 1860.	1,361	867	757	360	3,345
Convicted and committed	900	251	357	278	1,786
Transferred	10	4	17	–	31
Escaped	–	1	7	–	8
Died	1	–	1	1	3
Under trial at the close of 1861	6	53	29	9	97
Acquitted	444	242	346	72	1,104
	Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*
Amount of property stolen	10,843 11 –	4,016 15 3	6,904 11 –	4,318 13 11	26,084 3 2
Recovered — By police	1,448 5 8	171 5 –	2,834 7 –	87 3 –	4,541 4 8
Recovered — By sufferers	359 2 9	396 7 3	659 3 –	401 9 –	1,816 6 –

99. With the introduction of the constabulary force from the beginning of 1862 the Military police ceased to exist. The force was one admirably suited to the emergency which called it into existence, and the attention given by the European officers to its organization and discipline has been amply rewarded by the beneficial effect which its vigorous action has produced on the country. In all parts of these provinces this was more or less the result. In the Jhansie Division, which was overrun by rebel gangs, and continued to be disturbed long after tranquillity had been restored elsewhere, the demands on the Military police were much more constant; the service on which they were engaged was much more hazardous; the labour, exposure and fatigue, which they had to undergo were

were much more trying. Now that with the cessation of disorder they have ceased to exist, it is but just to place on record the high sense which the Government entertains of their excellent service in the field, and their praiseworthy conduct in quarters, attributable, no doubt, in a great measure to the zealous and efficient control exercised by Major Davis, the Divisional Commandant, and the commandants of district battalions; but still highly honourable to the native officers and men who composed this, now defunct, body.

100. As stated above, the police arrangements of Kumaon are exceptional; crime, especially of the graver descriptions, is almost unknown, and the statements which have been received call for no particular remark.

CI.—Final dissolution of the military police.

101. The police returns from Ajmere have found a place in a former section (Criminal Justice) of this report. No *separate* report regarding *police* administration has been usually submitted by the local authorities of this district. The police have ever been numerically insufficient, and the presence within the limits of the district of Istumrardars exercising more or less authority in their respective estates has so interfered with police action, that it has been difficult to examine it apart from the subject of Criminal Justice. The constabulary force has now been introduced, and Ajmere has been brought within the "General Police District;" and, in future, the operations of the police will be fully and separately reported.

SECTION V.—REVENUE.

CII.—Introductory.

102. THE following paragraphs exhibit the result of the Revenue administration of the North Western Provinces for 1860-61, that is (according to the practice lately introduced with the sanction of the Government of India), for the revenue year beginning 1st October 1860 and ending 30th September 1861, and thus corresponding with the Fusly year 1268.

CIII. to CVII.—Season.

103. This period comprises the time during which the western portion of the provinces were afflicted by famine. The whole of the results of that calamity are combined in the returns now submitted, this will be found a real and great improvement over the former system of report, under which those results would have appeared partly in the returns for the official year 1860-61, and partly for that of 1861-62.

104. To the west of the limit of actual drought there was a margin of country in which the crops were very light, but even there wherever the produce, after supplying the personal wants of the cultivators and their cattle, afforded any material surplus, the extraordinary prices of all agricultural prices quadrupled the value it would previously have borne; the same remark applies to all those villages in the distressed tracts in which, either from lying low on the banks of the river, or being irrigated from canals or otherwise, the harvest was saved; in these the profits were beyond all precedent.

105. In the Allahabad Division the crops were, if anything, above the average, and those in Benares would have been so likewise had not there prevailed a strong westerly wind in January and February, which, in some measure, affected the weight and character of the corn. In the Jhansie Division, excepting the pergunnahs of Kurrara and Puchore, which suffered more or less from drought, the harvest was not much below the average, and here, as elsewhere, deficiency was in general more than compensated by the great rise in prices.

106. The season was one of great prosperity for the Jubbulpore Division, where the harvest was very favourable, and the demand for grain quickened by the drought to the northward.

107. The following Table shows the aggregate fall of rain in each district from the 1st June 1860 to 30th May 1861; these returns, however, exhibit such large variation in some instances that they cannot be wholly trusted; for instance, in Boolundshuhur the rainfall is said to have been little above one inch, while in the adjacent district of Allyghur it is recorded at 12; again, the returns from Bijnore contrast remarkably with those from Moradabad and Budaon, in which two latter, it is known, agricultural distress certainly did not prevail in the same degree as it did in Bijnore; again, the return from Mynpoory appears open to much doubt, as contrasted with those from Etah and Agra; similarly, the reported fall in Cawnpore (11 inches) is in remarkable contrast with that in the adjacent district of Futtehpore.

CHAP. XII. North Western Provinces.

Futtehpore. The Sudder Board of Revenue have been requested to use every endeavour to secure accuracy in these Returns:—

Average of Jubbulpore Division	31·4
TOTAL Average	22·8

CVIII. to CXX.— Land Revenue.

108. The aggregate demand under this head was 4,14,30,011 rupees as against 4,17,88,814 rupees in 1859–60. The main cause of decrease was the revision of assessment in Banda, where nearly three lakhs of rupees were struck off the rent-roll, and similar revision, though of a less radical character, in some other districts.

109. The sum collected on account of current revenue was 3,93,60,999 rupees, or about 95 per cent. of the demand. The balance stands at 20,69,012 rupees, which exceeds by little more than eight lakhs the balance of the preceding year. The increase is, of course, due exclusively to the drought.

110. The percentage of balance in each district and division is as follows :—

DIVISION.	DISTRICT.	Per-centage of Balances on Demand.		
		Real.	Nominal.	TOTAL.
Meerut	Dehra	3·47	·15	3·62
	Seharunpore	19·80	4·36	24·16

The above figures prove that, excepting in the districts affected by drought, the Government demand has been realised with very great punctuality.

CHAP. XII. North Western Provinces.

111. The demand, the sum collected, and the balance on account of the entire revenue for all the eleven districts chiefly affected by the famine is as follows :—

DISTRICT.	Land Revenue for 1860–61.	Collected.	Balance.	Portion of Balance Postponed.	
				Indefinitely.	For a Period.
	Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*
Sêharunpore - -	10,93,066	8,73,766	2,19,300	1,39,442	400
Mozuffernuggur - -	11,36,769	10,02,674	1,34,095	1,03,116	31,531
Meerut - - -	17,85,176	15,54,054	2,31,122	61,983	1,69,139
Boolundshuhur - -	11,35,602	10,21,867	1,13,735	84,094	—
Allyghur - - -	18,32,750	17,54,455	78,295	2,815	17,672
Muttra - - -	16,52,346	16,04,110	48,236	- -	16,336
Agra - - - -	16,16,502	14,46,892	1,69,610	1,22,595	—
Mynpoory - - -	11,30,853	10,24,432	1,06,421	64,458	3,097
Bijnour - - -	11,93,302	10,41,105	1,52,197	- -	1,30,336
Moradabad - -	13,14,059	12,71,877	42,182	2,155	6,253
Budaon - - -	9,23,579	8,94,471	29,108	- -	8,201
TOTAL - - -	1,48,14,004	1,34,89,703	13,24,301	5,80,658	3,82,965

112. Hence it appears that the entire demand for the year of distress in the 11 districts which suffered amounted to a little above 1,48,00,000 rupees, of which about 1,35,00,000 rupees have been collected, leaving a gross balance of little above 13,00,000 rupees, that is, less than nine per cent. on the demand. Of this amount, 67,784 rupees are nominal, being reductions of settlement, remissions for land occupied by Government, or other cause independent of the drought. The ordinary balance in these districts, in an average year, may be taken at about two lakhs of rupees in train of liquidation or adjustment; deducting, therefore, that amount from the gross year above indicated, something under 11 lakhs of rupees, or about six per cent., may be assigned as the net balance directly attributable to the failure of rain.

In 1858–59 it was 2,10,449 rupees. In 1859–60 it was 1,62,505 rupees.

113. Of these 11 lakhs, probably above one-half will be eventually recovered, and the remainder will be remitted. The Lieutenant Governor agrees with the Board that these results are a most convincing proof of the moderation of existing settlements; and that, in view of the distress that prevailed so extensively, they afford matter for much congratulation. This information enables the Government to estimate with some precision the expenditure which has been incurred in relieving the famine of 1860–61. In giving support to the starving poor, the Government was assisted by the munificent charity of the public; but it may be interesting to note the entire outlay on this account.

	Rs.
Expended in the distribution of food - - - - -	5,41,783
Ditto in advances for the purchase of seed and cattle -	3,40,113
Ditto in minor relief works - - - - - -	29,918
Ditto by Government only on public relief works - -	9,14,294
Possible remission of revenue - - - - - - -	11,00,000
TOTAL - - -	29,26,108

114. The moderation with which the collectors of the distressed districts have acted in pursuance of the instructions addressed to them by the Board, at an early period of the scarcity, is exceedingly praiseworthy, and has, no doubt, had its share in producing the extraordinary recovery of those parts of the country even which suffered most severely. There is abundant testimony to prove that, owing to the moderation of the Government demand, the good discretion of the district officers, the abundant rains mercifully vouchsafed in 1861, and possibly, in some measure, to the distribution in advances of about 3½ lakhs of rupees for the purchase of seed grain and farm stock, the traces of the famine have been almost entirely obliterated, and the provinces have been restored to a state of prosperity which could hardly have been expected by the most sanguine.

Measures for realizing the Land Revenue.

115. DUSTUCKS.—There has been a decrease on the aggregate number of dustucks issued of above 3,000. This result is satisfactory.

116. The

116. The following abstract statement exhibits the number of coercive processes resorted to during the year for the collection of the land revenue, as compared with the same in the previous year:—

DIVISION.	1860-61.				1859-60.			
	Sales.	Farms.	Transfers.	Sequestrations.	Sales.	Farms.	Transfers.	Sequestrations.
Meerut - -	3	4	4	1	–	1	2	–
Kumaon - -	–	–	–	–	–	–	–	–
Rohilkund -	–	15	2	1	–	10	1	54
Agra - -	1	4	19	5	2	11	10	3
Jhansie - -	5	7	5	1	23	11	20	4
Allahabad -	–	–	–	–	1	4	6	–
Goruckpore -	–	–	–	–	–	–	–	–
Benares - -	1	2	–	–	2	1	3	–
Jubbulpore -	1	15	4	17	4	59	10	52
TOTAL - -	11	47	34	25	32	97	52	113

117. The decrease in the number is very gratifying, and tends to show that measures of severity have been resorted to only on proof of extreme and unwarrantable default. There is no point in respect of which, so far as the Lieutenant Governor can judge, the revenue administration in these provinces has more markedly improved under the direction of the able officers who, from time to time, have constituted the Sudder Board of Revenue, than this diminished resort to sales, farms, and transfers.

CXVIII.—Suits for rents, &c., Act X. of 1859.

118. These have increased from 12,431 in the official year 1859-60 (or 24,435 in the revenue year) to no less than 45,220 in the year under report. The great proportion of cases (29,227) were for arrears of rent. The increased number (which now exceeds considerably the average under the old summary law) is attributed to the popularity of the collector's court under the new Act, and partly also to the rule which, instead of permitting a number of defaulting tenants to be included under one plaint, requires a separate suit to be instituted against each defaulter.

119. The Lieutenant Governor believes that the excess is due more to the necessity of instituting a separate suit against each defaulter than to the popularity of the Collector's Court under the new Act. The additional labour which would devolve upon collectors whenever the operation of this law should be developed, was foreseen by the Lieutenant Governor at an early period, and the appointment of the Tehseeldars to be deputy collectors for the trial of these suits was deferred only until the disability under which they laboured, according to section 164 of the Act, should be removed by the introduction of the new police system. The measure has now been carried out to the extent permitted by the qualifications of the Tehseeldars, and there is no doubt that it will relieve the collectors of much work, and the people from much expense and vexation. The Sudder Board of Revenue have, however, been informed that the Tehseeldars should be closely overlooked in the performance of the duty entrusted to them under Act X. of 1859.

120. While the number of suits has thus increased, the appeals have decreased from 179 to 115. As regards these appeals the Lieutenant Governor believes that their number depends in some measure on the character of the Putwarree's papers. In districts where these are trustworthy, the decisions can be passed in the courts of first instance with a confidence unknown under other circumstances, and little opening is left for appeal in the majority of the cases for which the Act provides. The attention of the Sudder Board of Revenue has been drawn to the great importance of securing the same reliable data in all districts.

CXXI.—Abkaree revenue.

121. The excise revenue fluctuates with the season. It rises with agricultural prosperity and declines with the prospect of scarcity. There has, therefore, been a large falling off in the divisions of Meerut, Rohilkund and Agra. This, however, has to a great extent, been compensated by a rise in the income of the other divisions. Upon the whole the net loss on the collections of the year has little exceeded 70,000 rupees. In the following year the Board expect that the revenue will resume its buoyancy, and its tendency to a yearly increase.

CHAP. XII. North Western Provinces.

increase. The following is an abstract of the demand and collections for all Departments of Excise, contrasted with those of the preceding season :—

	Demand.		Collected.	
	1859-60.	1860-61.	1859-60.	1860-61.
	Rs.	*Rs.*	*Rs.*	*Rs.*
Meerut	2,54,635	1,76,267	2,48,356	1,65,516
Kumaon	14,154	5,008	14,154	4,014
Rohilkund	3,60,400	3,26,968	3,11,444	2,62,147
Agra	3,61,733	3,00,409	3,54,050	2,48,478
Jhansie	82,055	87,992	81,454	76,119
Allahabad	5,39,330	5,68,838	5,33,777	5,62,271
Goruckpore	2,24,526	2,32,655	1,97,593	2,21,800
Benares	5,45,784	6,17,145	5,34,001	6,09,598
Jubbulpore	2,36,544	2,91,161	2,36,127	2,89,347
TOTAL	26,19,161	26,06,443	25,10,956	24,39,290

From the 1st January next the Oude system of management will be introduced, whereby the largest possible tax will be levied on the smallest consumption of liquor. Whether the revenue will be increased may be doubtful. But this is a consideration quite secondary to improved administration of the department, and the better check on consumption which must ensue.

CXXII.—Stamp revenue.

122. The stamp revenue has advanced by a rapid rise from 13,68,637 rupees to 24,34,671 rupees, showing an increase of 10,66,034 rupees, or about 80 per cent. The augmented receipts, as the Sudder Court have clearly shown in their report on the administration of civil justice for 1861, is due much more to the exceptional operation of Act XIV. of 1859, than to the additional imposts prescribed by Act XXXVI. of 1860. Now that the Government of India has been pleased to sanction the appointment of a commissioner of stamps, the Lieutenant Governor will look for a stricter enforcement of the stamp law, and larger realizations under Schedule A. of Act X. of 1862.

A divisional Abstract is subjoined.

DIVISION.	Stamp Revenue in		Per-centage of Increase.
	1859-60.	1860-61.	
	Rs.	*Rs.*	*Rs.*
Meerut	2,11,928	3,81,670	80
Kumaon	14,203	20,822	46
Rohilkund	2,40,652	4,34,782	80
Agra	2,54,893	4,46,567	75
Jhansie	25,026	40,446	61
Allahabad	1,57,361	3,17,104	101
Goruckpore	90,558	1,66,465	83
Benares	2,88,054	5,04,280	75
Jubbulpore	85,962	1,22,535	42
TOTAL	13,68,637	24,34,671	77

CXXIII.—Sayer revenue.

123. The Sayer revenue has considerably diminished, owing to the transfer of several tracts, which used to yield forest receipts in the Revenue Department, to the Department of Public Works. The net revenue amounts to 83,303 rupees. The Mirzapore stone mehal continues to maintain its ground, notwithstanding the fears entertained by the collector that the Allahabad and Banda quarries would supplant it. The receipts under this head in Jhansie are the proceeds of gardens and grass lands, the greater portion of which have since been transferred to Scindia.

124. During

124. During the year a sum of 2,52,071 rupees has been realized by the sale of confiscated lands. The statement is subjoined; and the prices realized, compared with the assessment, show how great is the competition for land in these provinces.

CXXIV.—Sale of confiscated estates.

	Total	5	1,306 - 2	23,343 14 -
	GRAND TOTAL	182	28,745 11 8	2,52,070 15 3

There is still, in different divisions, a large extent of confiscated land undisposed of, and the Board have been informed that it is the wish of the Lieutenant Governor that in eventually dealing with this property the importance of encouraging European settlers of respectability and intelligence should not be lost sight of.

125. The entire revenues collected for the year that has elapsed are as follows:—

CXXV.—Total revenue.

	Rs.
Land revenue	3,93,60,999
Ditto on the rent-roll	5,71,818
Outstanding balances	10,76,783
Surplus tulubanah	20,241
Abkaree	24,39,290
Stamp	24,34,671
Sayer revenue	83,303
Sale of confiscated lands	2,52,071
TOTAL	*Rs.* 4,62,39,181

CHAP. XII. North Western Provinces.

To this may be added 47,85,972 rupees in the Salt Department, and 16,27,446 rupees in the Income Tax Department, making a grand total of 5,26,52,599 rupees, realized from 1st October 1860 to 30th September 1861.

CXXVI. and CXXVII.—Divisional statement of works.

126. The following Abstract, by divisions, will show the comparative pressure of work in each division:—

1. DIVISION.	2. Area in Square Miles.	3. Mehals.	4. Population.	5. Land Revenue on Rent-roll.	6. Business. Cases. Disposed of.	6. Pending.	7. Letters. From Collector to Commissioner.	7. From Commissioner to Collector.	8. Expense of Collecting Revenue, exclusive of Heads of Offices and Sudder Establishments.	9. Per-centage of Expense on Column 5.

127. It will be observed that the business has very largely increased during the year under review, while the cost of collection has decreased.

	Cases disposed of.	Pending.	Letters.	Cost of Collection.	Per-centage.
				Rs.	*Rs. a. p.*
1859-60	306,546	44,176	28,687	13,42,189	3 6 5
1860-61	371,879	37,896	32,281	13,01,331	3 2 3

It should be noted that a heavy increase of correspondence has been occasioned in all the district offices, and in the Board's office for the Income Tax and License Tax Departments, which is, of course, not entered in these returns.

TEHSEELEE DIVISIONS.—During the last two or three years the Board have turned their attention to the subject of reducing the number of tehseelees where these appeared to be in excess of what was required. The following Table accordingly shows that 11 tehseelees have been abolished at an annual saving of 61,155 rupees for establishments, besides the cost of maintaining the buildings. The opportunity was taken for improving the boundaries, and rendering the tehseelee jurisdiction more compact, and also for placing the establishment on a more efficient footing. In the revision an additional tehseeldaree was found necessary in Mynpoory, and some increased expense in the constitution of the new district of Etah. This was effected at an annual cost of 4,287 rupees, so that the net saving on the whole operations has been 56,868 rupees.

DISTRICT.	Tehseelees. Former.	Tehseelees. Present.	Annual Saving.

TOTAL	63	52	64,155

128. During

CXXVIII.—Survey and settlement. Dehra Doon.

128. During the year under report, preliminary measures for the revision of the settlement of the Dehra Doon have been in progress. Out of 445 villages in the eastern and western Doon, 206 have been surveyed, and their shujras and khusrahs prepared, 144 khutteonees, terijes and jinswars are ready, and 23 more sets of these latter papers in a state of preparation, leaving the khutteonees, terijes, and jinswars of 39 surveyed villages still unprepared.

The total area mapped during the last season was 99,303 acres, at a cost of 3,994 rupees, giving an average of *Rs.*40. 3. per 1,000 acres.

CXXIX.—Jhansie Division.

129. In the Jhansie district, the settlement of pergunnah Pundwaho has been made by Mr. Daniell, and provisionally sanctioned. In the Lullutpore district the summary settlements of the confiscated Banpore state, of pergunnah Murrowra, a portion of the confiscated Shahghur state, and of the pergunnah of Balabehut have been made by Captain Corbett, and sanctioned. In the Jaloun district, the Jaloun pergunnah is ready for settlement, and the putwaree survey is in a very forward state in the Lullutpore district. The completion of the new settlement may be expected to do much towards imparting confidence to the people, stimulating their industry, and reclaiming them from the habits of lawlessness in which they have been wont to indulge.

CXXX.—District of Goruckpore.

130. The measurements for the re-settlements in the Goruckpore district have progressed very satisfactorily; the result is shown in the following Table:—

Officers.	1859-60.		1860-61.	
	Number of Acres Measured.	Cost.	Number of Acres Measured.	Cost.
		Rs.		*Rs.*
Mr. White - - -	191,707	13,966	305,159	4,846
Mr. Lumsden - - -	183,097	11,142	247,534	5,425
Mr. Wilson - - -	210,926	17,073	368,321	7,139
Baboo P. M. Banerjee -	226,295	18,850	311,841	5,914
Mr. Wynno - - -	- -	- -	219,109	6,069
TOTAL - - -	812,025	61,031	1,451,964	29,393

The cost per 1,000 acres in 1859-60 is *Rs.* 75. 16.; in 1860-61, *Rs.* 20. 26.; the reduced rate of this year is attributable to the experience gained by the ameens, and to the employment of many putwarees who have been instructed in surveying. The revised jummas of the pergunnahs shown in the margin* have been proclaimed, and durkhasts signed by the zemindars previous to November 1860.

CXXXI.—Opium cultivation in the district of Goruckpore.

131. The cultivation of opium has increased, and it is expected that, owing to the advanced prices, a much larger area will be this year under poppy cultivation than in the two previous years, 1859-60 and 1860-61, as will be seen from the annexed Table.

STATEMENT of Opium produced in Zillah Goruckpore, Western Division.

Seasons.	Standard Opium Grown.	Actual Cultivation.	Value Paid to the Cultivators.	Remarks.
	Maunds.	*Beegahs.*	*Rupees.*	
1859-60 -	2,735	37,326	3,87,305	Actual results.
1860-61 -	5,344	44,843	8,62,609	
1861-62 -	7,000	58,000	14,00,000	Expected at the enhanced rate at 5 rupees per seer on opium only.

There can be little doubt that 14 lakhs of rupees cannot circulate in the district of Goruckpore without adding immensely to its material wealth, and to the prosperity of the classes who undertake the cultivation.

CXXXII.—Cotton cultivation in the district of Goruckpore.

132. There is very little cotton grown in this district, and of inferior description. There are many thousand acres of land well adapted for it; but the expense of conveyance to Calcutta reduces the profit so much that the natives have little inducement to increase the cultivation. Carding machines, on improved principles, are much required, and several European gentlemen are making experiments to ascertain whether the American cotton seed will thrive there.

CHAP. XII. North Western Provinces.

CXXXIII.—Sugar in the district of Goruckpore.

133. The trade in sugar has decreased in consequence of the reduction of prices, arising from losses last year from our speculation of native merchants in Calcutta. The plant is chiefly grown in the eastern part of the district, but it is very inferior to that produced in Rohilkund. Indigo cultivation has considerably increased, and has succeeded very well. The price of all grain has risen very much, and though the last year's spring harvest was not very good, the high rate has been very remunerative to the traders, who export it in large quantities by water to Dinapore and Calcutta.

CXXXIV. and CXXXV.—Trade in the district of Goruckpore.

134. A tabular Statement is subjoined, showing the amount of exports and imports. The trade with Nepaul has not increased much lately.

No. I.

EXPORTS by Land Carriage from Goruckpore, chiefly to the Westward, to Mirzapore, &c.

135. The extent of the trade in Goruckpore is surprising. It amounts, exports and imports taken together, to 23,60,000 rupees. The exports exceed in value the imports by nearly 11 lakhs of rupees, and it would be interesting to know whether the difference is represented by silver, or how. It is very greatly to be regretted that this Government does not possess adequate means of extending and facilitating the communications with this flourishing district. The importation of 1½ lakhs of rupees worth of cotton goods may, perhaps, be viewed as evidence that the people are in pretty fair circumstances; but, on the other hand, it is difficult to understand why 80,000 rupees worth of "cotton" should have been imported (for local consumption, it is presumed), if, as the Commissioner says, "there are many thousand acres of land well adapted for its growth." Inquiry has been made on this point.

CXXXVI.—Transfers to Maharajah Scindia.

136. During the past year Kutchwaghur and Pergunnah Duboh, west of the Poohooj, in Zillah Jaloun, Northern Bhanderee, west of Poohooj, Pergunnah Jhansie, west of Poohooj and Pergunnahs Kurrara and Pechore, in Zillah Jhansie, and Pergunnah Chundeyree, in Zillah Lullutpore, have been transferred to Scindia. The details are as follows:—

1. Districts.	1. Pergunnahs.	2. Number of Villages.	3. Revenue paid to Government. Malgoozaree and Sewaee.	4. Resumed Rent-free Lands.	5. Total.	6. Nikassee of Rent-free Villages and Patches.	7. Remarks.

137. A considerable

CHAP. XII. North Western Provinces.

CXXXVII.—District of Ajmere.

137. A considerable reduction in the revenue establishment has been made in consequence. The demand for the Ajmere districts during the year was 3,51,477 rupees; of this a balance amounting to 23,214 rupees remained on 31st September, the greater portion of which has since been realised.

CXXXVIII. to CXLIII.—Separate revenue customs.

138. The following are the aggregate results of the Customs administration for the official year ending the 30th April 1862:—

DEPARTMENT.	NORTH WESTERN PROVINCES.	PUNJAB.	TOTAL.
	Rs.	*Rs.*	*Rs.*
Salt - - - - - - - -	59,49,844	34,87,091	94,36,935
Sugar - - - - - - - -	5,69,784	7,05,279	12,75,063
Miscellaneous - - - - -	31,582	10,194	41,776
TOTAL - - - *Rs.*	65,51,210	42,02,564	1,07,53,774
Add for Saltpetre Department - - - - - - - -			32,784
GRAND TOTAL - - - *Rs.*			1,07,86,558

139. It is shown that the departmental revenue realised on the frontier line has amounted to the unprecedented sum of 1,07,53,774 rupees, of which 65,51,210 rupees appertain to the North Western Provinces, and 42,02,564 rupees to the Punjab. Of the whole amount 94,36,935 rupees have been derived from the duty on salt; 12,75,063 rupees from the duty on sugar; and 41,776 rupees from miscellaneous sources.

140. The advance upon the income of the preceding year 1860-61 is represented by the sum of 18 lakhs; of these eight lakhs are due to increased trade in sugar, and 10 lakhs to increased duty on salt.

141. No results could be much more satisfactory. A revenue of more than a million sterling has been collected at a cost of *Rs.* 9. 7. 6. per cent. (being less by 12 *a.* 3 *p.* per cent. than in 1860-61,) and without any pressure upon the people. At the present rate of duty, and the accepted annual average consumption of six seers per head, the ordinary day labourer does not exceed more than $1\frac{1}{2}$ per cent. of his earnings in the purchase of salt; and in regard to sugar, the increase of $7\frac{1}{4}$ lakhs of maunds in the export (being $58\frac{3}{4}$ per cent.) as compared with the quantity exported in 1860-61, proves sufficiently that the doubling of the duty at the beginning of 1861 has not had the effect of checking the trade.

142. The Allahabad special line having been abolished in February 1861, the increased duty of 3 rupees per maund, to be levied on the frontier line, was operative throughout the year, and the importations having fallen off by 46,728 maunds, it is obvious that the large increase of 10 lakhs of rupees in the revenue derived from salt, as compared with that realised in 1860-61, is due entirely to the higher rate of duty. But it is satisfactory to note that there is in this no proof of repressed consumption. On the contrary, the comparison, as shown in the following table, of the importations in the two years of 1858-59 and 1859-60, with those of 1860-61 and 1861-62, proves clearly that in the latter period the quantity of salt which crossed the frontier line increased by nearly $4\frac{1}{2}$ lakhs of maunds, and that the apparent falling off in the year 1861-62 is attributable to the abnormal activity of the trade in the preceding year, and the consequent overstocked condition of the markets to the East.

DIVISION.	Quantity of Salt crossing the Frontier in			
	1858-59.	1859-60.	1860-61.	1861-62.
	Mds.	*Mds.*	*Mds.*	*Mds.*
North Western Provinces -	15,92,248	16,62,998	19,58,848	19,83,347
Punjab - - - -	12,01,707	10,12,472	12,36,904	11,65,677
TOTAL - - -	27,93,955	26,75,470	31,95,752	31,49,024

143. There is no apparent reason for questioning the representations of the traders that these increased importations during the past two years have been caused by the demand in Oude arising from the suppression of home manufacture, and by the wants of Goruckpore and the eastern districts, generally, due to the cessation of the supply from Oude. It is more than probable that Act XIX. of 1862, for extending to this Province the provisions of Act XIV. of 1843, Act XXXVI. of 1855, will have the effect of still further increasing the imports of western salts during the current year, and enlarging the revenue.

CXLIV. & CXLV.—Customs collections in Ajmere and Mhairwarra.

144. The Customs collections for the year in Ajmere and Mhairwarra aggregated *Rs.* 1,10,704. 5. 3. against *Rs.* 96,953. 12. 9. during the previous year, showing an increase of *Rs.* 13,750. 8. 6. which is the more satisfactory as export duties have been entirely abolished, and also all duty on the following important articles of trade :—

NAMES OF ARTICLES.

Bamboos.	Thread, coarse.	Wax.
Cotton seeds.	Betel-nut.	Mathee Dânâ.
Bau moonj.	Hemp and twine.	Indigo.
Taut puttee.	Soap.	Keerana, coarse.
Cloth of Europe.	Gond.	Ditto - fine.
Ivory.	Pepper.	Miscellaneous.
Jafran and mooshk.	Chillies.	

145. The duty on cotton cleaned and uncleaned amounted to 6,930 rupees. The levy of duty on the staple has now been abolished.

CXLVI. to CXLVII.—Working of Act XXXI. of 1861.

146. The orders of the Government of India, sanctioning the Establishments entertained for the purpose of giving effect to the provisions of Act XXXI. of 1861, reached the Deputy Commissioner only on the 20th of December last; and some time necessarily elapsed before these could be organised and distributed over the large area which they were intended to occupy, and before they could be furnished with instructions for their guidance. Again the native mind, hostile to sudden change, was disposed to suspect the motives which led to it, and obviously from this cause an impediment to the action of the Department arose; while the inexperience of the Establishment and want of local knowledge added to its difficulties.

147. Regard being had to these considerations, and especially to the depressed condition of the saltpetre trade, it could not have been expected that the revenue, realised by the Department, would be other than inconsiderable in amount; and there is no reason to be disappointed with the actual result, which is represented by the collection.

	Rs.
As license fees - - - - - - - - - -	20,628
As duty on salt - - - - - - - - - -	12,155
TOTAL - - - *Rs.*	32,783

The number of refineries licensed being 415, and of crude works, 8,636.

148. This at first sight appears to be a very inadequate compensation to the Government for the heavy cost of the establishment, viz., 16,479 rupees per mensem; but, as already noted, the period of the law's operation has been very short. There has been, in some quarters, a passive resistance to the new system, which will only work its way gradually; and the advantages to the Customs revenue, generally, which are derived from the action of this Department in checking the illicit manufacture of salt, whether at saltpetre works or elsewhere within the frontier line, are not demonstrable; although in the paucity of seizures there may be some ground for believing that such illicit manufacture has actually diminished in some degree. Before, however, any confident judgment can be pronounced on this, as well as most other points connected with the operation of the Act, further experience must be obtained.

SEPARATE REVENUE (ASSESSED TAXES).

CXLIX. to CLII.—Working of the income tax.

149. The following is a Table of the results of income tax assessments for 1861–62, compared with those of 1860–61, exclusive of those assessments made under Schedules III. and IV. by periodical deductions from salaries, &c.:—

1. Division.	2. District.	3. Assessment of 1860-61.		4. Assessment of 1861-62.		5. Difference in the present Year.		6. Rate at which Assessment of 1861–62 Falls.

		32,322	5,03,582	35,610	4,93,975	9,733	19,340	71	139
Goruckpore	Goruckpore	14,613	2,45,574	16,764	1,93,905	-	51,669	85	95
Benares	Azimghur	3,582	52,940	6,107	1,00,928	47,988	-	67	68
	Jounpore	5,276	93,240	6,145	95,660	2,420	-	76	96
	Mirzapore	13,564	2,91,429	14,994	2,74,261	-	17,168	326	248
	Benares	3,215	1,85,913	9,920	1,76,099	-	9,814	194	203
	Ghazeepore	11,314	1,51,942	11,104	1,42,375	-	9,567	93	89
		36,951	7,35,464	48,270	7,89,323	50,408	36,549	131	131
Ajmere	Ajmere	4,730	75,840	4,935	73,577	-	2,263	154	202
	GRAND TOTAL	1,68,485	29,07,192	1,98,535	29,32,136	1,67,489	1,42,545	74	111
					Deduct Decrease	1,42,545			
					Net Increase	24,944			

Upon the whole it will be seen that there is a net increase of 24,944 rupees.

150. The Sudder Board of Revenue consider the results satisfactory. The proceedings of the year, they observe, have tended to equalise the incidence of the tax, while there has been no loss, but a small gain upon the whole.

151. The effect of Act XXI. of 1861 has been of course to check justifiable increase of assessment, while it allowed decrease on proof of inadequate assets, and the result has thus been to make the gross income smaller than it would otherwise have been. But this result cannot be regretted, as it has secured in the greater part of the provinces immunity from further imposition. Under these circumstances it cannot but be regarded as satisfactory that there is this year an income tax revenue of 29,32,136 rupees as against 29,07,192 rupees of the past year, showing a net gain of 24,944 rupees.

152. The Board have been informed that the assessments seem generally to be fair and moderate, even in those districts where there has been considerable increase in the demand, as compared with that of 1860-61, as *e. g.*, in Moozuffernuggur, Azimghur, Jaloun and Humeerpore. Judging, however, by the general average, the District of Muttra seems to be an exception, and some relaxation of the demand may possibly be found necessary. It appears that the districts of the Rohilkund Division do not bear a full share of the burthen. The districts of Mynpoorie, Etah and Etawah are in the same category, and Agra seems to be inadequately assessed. On the other hand, there is reason to doubt the justice of the large increase in Futtehpore.

SECTION VI.—EDUCATION.

CLIII.—Improvement in the working of all schools.

153. A GENERAL improvement in the working of schools of all kinds has taken place during the year.

CLIV. to CLVI.—The upper educational institutions.

154. The state of the upper educational institutions at Agra, Ajmere, Bareilly, and Benares, is satisfactory. In the cases of Agra and Ajmere the number of students has somewhat fallen off, but improvement in management has taken place.

155. The Benares College has suffered from the interruption of regular work, consequent on the progress of repairs necessary to the college buildings, and on the unprecedented floods which debarred access to the college for some time. In the Sanscrit department of that college a re-organisation is being effected, by which it is hoped that a further utilisation of the studies in vogue may be brought about without injury to the popularity of the institution.

156. The college at Bareilly has taken the lead in most of those particulars which characterise the healthy working of an institution of this kind. Of 24 students from the above-named upper institutions who passed the Calcutta University entrance examination of 1861, the first is a student of the Bareilly College, and three out of the next four are his fellow students.

CLVII.—The Calcutta University examinations.

157. The proportion of students from the Government colleges in the North Western Provinces, who passed, to those who failed, is larger than the proportion, similarly calculated, for the Government institutions of Bengal. In the first examination in arts of the Calcutta University a student of the Agra College obtained the fifth place in a general list of 70 candidates.

CLVIII.—The boarding house at Bareilly.

158. The boarding-house attached to the Bareilly College has realised the Lieutenant Governor's expectations. It is now full. The municipal committee of the city have come forward to support the scheme. Not only have they voted the erection of the buildings required, but they have allowed a monthly sum for the maintenance of poor scholars who may come in from the districts surrounding. The usefulness of the college at Bareilly has been largely increased in consequence.

CLIX.—Lower educational schools.

159. Allowing for the disjunction of the Saugor Territory from the North Western Provinces, which involved the transfer of 745 inspected schools, with an attendance of 12,466 scholars, an increase in the average attendance at schools of all kinds, amounting to 14,536 boys, has taken place during the year.

CLX.—Increased attendance.

160. The annexed Table expresses this increase in a more detailed form :—

Character of Institutions.	Average Attendance.	
	1860-61.	1861-62.
Three colleges and one high school - -	1,049	1,038
Anglo-vernacular schools - - -	272	313
Tehseeli schools - - - - -	12,779	13,515
Hulkabundi schools - - - -	60,254	73,036
Indigenous schools - - - -	55,692	56,680
TOTAL - - -	130,046	144,582
	Increase -	14,536

CHAP. XII. North Western Provinces.

It is worthy of notice that, while the average attendance at the Government Vernacular Institutions, viz., the Tehseeli and Hulkabundi Schools, is 60 and 30 respectively, the average attendance at an indigenous, or private school, is 9 only.

CLXI.—Cost of education.

161. The subjoined Table presents a comparative estimate of the average annual cost per boy to the Government at each of the several class of schools:—

Character of Institutions.	Average Cost per Boy.	
	1860-61.	1861-62.
	Rs. a. p.	*Rs. a. p.*
Three colleges and one high school - -	121 - -	111 - -
Anglo-vernacular schools - - -	16 - -	14 - -
Tehseeli schools - - - - -	2 - -	3 - -
Hulkabundi schools - - - -	- 3 -	- 2 -

Consequently the average annual cost of any one boy, who may be said to be educated by the State, is 32 rupees, or three rupees less than for the year preceding.

CLXII.—Inspection.

162. Considering the area over which the duties of inspecting officers extend, and the dependence which, during the hot weather months, is of necessity placed on deputy inspectors, the Lieutenant Governor is of opinion that the system is not unsuccessful. Recent investigations into the home system have shown the existence of the same difficulties, the chief of which is one which must always exist where the population is agricultural, viz., the difficulty of securing regular attendance.

CLXIII.—School accommodation.

163. Instructions relative to the provision of school accommodation, a matter which has much to do with the advancement of education, have been issued. The principle of these is that the people should be encouraged to supply their own wants with the assurance of receiving support from the State proportionate to their contributions.

CLXIV.—The normal schools.

164. The Normal Schools of Agra, Benares, and Meerut have worked well. More than 700 teachers have received training during the year. The Normal School at Agra is the only one provided with suitable accommodation. The character of the instruction given is becoming more systematised. A plan is under consideration to render the temporary residence of the students less monotonous by the introduction of methodical out-door occupation, such as horticultural, &c. When this scheme has been elaborated, the usefulness of these schools will be largely increased. A Normal School for the Hill Circle of Kumaon and Ghurwal has been set on foot at Almorah.

CLXV.—Female schools.

165. Schools for females are progressing. Those in the neighbourhood of Agra are 17 in number, and are well attended. Other girl schools are to be found in the Etah, Mynpoory, and Shajehanpore Districts; added to this is the fact that many of the Government village schools are now attended by girls as well as boys. Local encouragement is the great requisite for the furtherance of female education.

CLXVI.—Grants-in-aid.

166. Grants-in-aid to the amount of 14,372 rupees were paid to eight Missionary and one Roman Catholic seminaries. The total number of children on the rolls of these institutions was 1,918. Increased allowances under this head have been entered in the Budget Estimates for 1862-63 to the amount of 25,000 rupees.

CLXVII.—Sale of books in the Department of Public Instruction.

167. One lakh and thirty-four thousand copies of books, chiefly in the vernacular, have, been sold during the year through the agency of the Department of Public Instruction, at a cost of 26,570 rupees.

CLXVIII.—Aspersion of the Christian Vernacular Education Society on these books.

168. This seems to be an appropriate place for the insertion of the following extract from Mr. Kempson's Report:—"In a Report of the Christian Vernacular Education Society for India, as read at a large meeting held at the Freemason's Hall, London, and attended by Church and other dignitaries, I read with surprise the disparaging remark made in allusion to the publications just described of this Government: 'Several useful books have been published by Government, but, being on the neutrality principle, most of them are unfit for Christian schools.' Yet these are books by the aid of which an enlightened Government is hoping gradually to civilise the mind of the people, that it may in time become suited to receive impressions to which it is now dead. These 'unfit' books are books every one of which, if rendered into English, would form excellent simple reading for a school of Christian boys and girls." The Lieutenant Governor feels convinced that the Government of India will share his surprise, and that of the Director of Public Instruction, that the Christian Vernacular Education Society for India should have taken it on themselves to stigmatise the useful and harmless works published by this Government for the use of schools as "unfit for Christian schools."

CLXIX.—General results.

169. Generally speaking, the Lieutenant Governor is of opinion that the progress of education during the year has been marked by satisfactory results. While on the one hand the upper institutions have competed with marked success in the Calcutta University Examinations,

Examinations, than which no mere general test of attainments is available, so, on the other hand, the working of the country schools has been pronounced more successful than hitherto; and there seems every reason to believe that popular education is beginning to gain a firm and appropriate footing. In proof of this statement the accompanying passage of Mr. Kempson's Report is subjoined.* The Lieutenant Governor regards this anecdote as very significant. There could, perhaps, be no more satisfactory and convincing proof of the sure, if slow, progress of education among the masses.

CLXX.—Thomason College, Roorkee.

170. There were during the year 108 students on the rolls of the College, viz.:—

Christians	46
Mahomedans	24
Hindoos	38

The senior department, out of four officers, sent out three as qualified for employment on public works.

Of Probationary Assistant Engineers (Civil) nominated in England, seven attended the college during the year from periods varying from 12 days to 6 months. It has been determined that in future officers of this class shall enter the Department Public Works at once on their arrival in this country.

The first department (English) contained 15 students, no less than eight other candidates having failed to pass the preliminary examination at the commencement of the year. This department is supplied chiefly by the schools at the Hills' Stations. The standard of the college examinations is considered by the principal to be above the qualifications of all but a few of the best pupils turned out by these schools; but he deprecates any attempt to lower it, considering, as the Lieutenant Governor believes quite correctly, that the schools should rather work up to that standard. The qualifications of the students in this department during the past year appear, indeed, to have been below the average of former years. Of the 15, 7 are students of the second session, and of these it is not expected that more than four will be reported as fit for the public service.

In the 1st Department (native) there were but three students during the year: one has withdrawn, and the remaining two will pass out as probationary assistant engineers at the close of the Session. This result is not encouraging; it is due no doubt to the fact that native lads, who have acquired sufficient knowledge of the English language to enable them to pass the college course, can obtain employment which satisfies their ambition, with far less exertion that that required to gain an appointment in the Public Works Department. For this the Lieutenant Governor considers that the only remedy is to be found in the spread of English education, and an increasing desire to earn higher salaries than 20 or 30 rupees per mensem. His honour has, meanwhile, sanctioned the proposal of the principal to reduce the stipends in this department, and increase their amount. These stipends have hitherto been 10 in number, of 30 rupees each; they will in future be six, of 50 rupees each.

The 2d Department (military) comprises 22 students, a very small number in proportion to the strength of the British Army in this Presidency: the greater portion of these will pass out at the close of the session.

In the 2d Department (native) there have been during the year only six students.

The 3d Department (vernacular) constitutes numerically the great strength of the college. The number of students during the year has been 53, which is, however, below the average, and of these 16 or 17 only will be reported qualified as sub-overseers or sub-surveyors.

It will then be seen that the supply of students competent to enter on public duties is likely to be less this year than that of past years. It happens fortunately that the demand also is less in consequence of reductions about to be effected in the Public Works Establishments. Indeed it will be a matter of difficulty for some time to provide for all who will pass out of college at the close of the session.

* "This officer (Mr. Cann) relates a circumstance which proves that the country people are opening their eyes to the value of education; and that though the numbers we have now succeeded in bringing under instruction may seem small, as compared to the population, yet, considered by way of contrast with the previous educational destitution of those provinces, the result is by no means discouraging. He says that in the progress of his tour, having occasion, at a certain place, to admonish some of the chief men, on the neglect they showed for their childrens' interests, and on the small number of children collected for instruction, he was thus answered:—'Ah, Sahib, it appears small to you, but I can look upon it as this out of nothing. I remember the time when we had to take a letter ten miles to get it read; now there is hardly a village in this pergunnah in which you will not find some one who is able to read.'"

SECTION VII.—PUBLIC WORKS.

CLXXI.—Re-organization of circles of superintendence.

171. THERE have been some changes during the year. The 3d Circle, with the exception of one division (the Jhansie Division), has been transferred to the Central Provinces; the Futtehghur Division has been abolished, and the Rohilkund Imperial Roads are no longer under a special or extra superintending engineer.

The 1st Circle of superintendence is now composed of the following Divisions:—

Agra Division Public Works.
Meerut Division Public Works.
Gwalior Division Public Works.
Agra and Bombay Road.
Roorkee and Dehra Road.
5th Division Grand Trunk Road.
6th Division Grand Trunk Road.

Within the 2d Circle of superintendence are the following Divisions, viz.:—

Allahabad Division Public Works.
Benares Division Public Works.
Cawnpore Division Public Works.
Jhansie Division Public Works.
Goruckpore Division Public Works.
Bareilly Division Public Works.
1st Division Rohilkund Imperial Roads.
2d Division Rohilkund Imperial Roads.
3d Division Grand Trunk Road.
4th Division Grand Trunk Road.

In addition to the above there was, during the year 1861-62 a separate and special road-charge, viz., the Cawnpore and Malthone Road, under the late Major General A. H. E. Boileau, who held the position of a superintending engineer.

CLXXII.—Special works of progress under construction or completed.

172. There are a few works which may be mentioned as standing out somewhat prominently from the list of works in progress, or completed during the year.

Two half-company barracks were completed at Morar, and two iron-framed barracks were put at Jhansie. The Memorial Church at Futtehghur has been well advanced, and it is expected that the building will be ready for use by Christmas 1862. The church at Bareilly is being roofed in, and will be opened for service about the same period. A new telegraph office has been completed at Cawnpore, and the extensive additions to the Roman-catholic chapel at Meerut will, it is believed, be finished in September 1862.

CLXXIII.—Monuments at Cawnpore and Jhansie.

173. The monuments at Cawnpore and Jhansie are progressing satisfactorily, the former under the superintendence of Mr. C. B. Thornhill, the Commissioner of the Allahabad Division. The monument for Jhansie has been completed at Agra under the supervision of Lieutenant Watts, of Engineers, and its several parts have been conveyed to its destination.

CLXXIV.—Accidents by flood and fire.

174. The year has been marked by accidents from floods and fire. The most serious accident occurred in the Mohun Pass on the Dehra and Roorkee Road; tremendous floods came down during the rain (in June), and carried away not only the causeway under construction, but many of the workmen employed on it.

By fire three barracks were destroyed at Allahabad, the same number at Agra, one at Muttra and one at Gwalior; a stud stable at Ghazeepore, and a bungalow (used as a mess-house) at Cawnpore.

CLXXV.—Bridges of boats.

175. The bridges of boats under charge of officers of the Public Works Department have been maintained at a cost of 1,82,471 rupees. The toll collections on the bridges have amounted to 1,21,488 rupees; the sum represents the *bonâ fide* cash receipts during the year. Nominal dues from the post office and other departments have not been taken into account.

CLXXVI.—Abstract expenditure as compared with budget allotments.

176. The following Table shows in abstract the expenditure during the year as compared with the budget allotments of the year:—

CLASS.	Sanctioned in Budget.			Expended.			REMARKS.
	Works.	Repairs.	TOTAL.	Works.	Repairs.	TOTAL.	
	Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	
Military - - -	7,64,428	3,88,653	11,53,081	6,17,247	4,68,455	10,85,702	
Civil Administration -	6,20,211	1,42,008	7,62,219	5,61,444	1,34,216	6,95,660	
Public Improvement -	23,37,053	9,15,086	32,52,139	19,12,514	7,96,193	27,08,707	Includes the Irrigation Department.
Establishment - -	- -	- -	12,07,446	- -	- -	12,07,193	
TOTAL - - -	- -	- -	63,74,885	- -	- -	56,97,262	

IRRIGATION.

177. The Irrigation Department, as at present constituted, comprises 14 Executive charges or Divisions, viz.:—

CLXXVII.—Divisions of Irrigation Department.

IN THE NORTH-WESTERN PROVINCES.

GANGES CANAL -
- Norther Division.
- Upper Central Division and the Futtehghur Branch (in progress).
- Lower Central Division.
- Cawnpore Terminal Division.
- Etawah Terminal Division.
- Boolundshuhur Branch (in progress).

Eastern Jumna Canal.
Doon Canals.
Rohilkund Canals.
Agra Irrigation Works.
Bundlekund Irrigation Works.
Roorkee Workshops.

IN THE PUNJAB.

Western Jumna Canals.
Delhi and Goorgaon Irrigation Works.

On the 1st May 1862 the Ganges Canal Divisions were, with the sanction of Government, remodelled, and from the same date the charge of the Bundlekund Irrigation Works was transferred to the district authorities.

178. The subjoined abstract will show at a glance the total expenditure on the Ganges Canal during the official year 1861-62:—

CLXXVIII.—Expenditure on the Ganges Canal.

	Original Works.	Rajbuhas.	Repairs and Plantations.	Establishment and Contingencies.	TOTAL.
	Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*
Northern Division - -	18,359 12 10	89,348 11 7	1,01,853 12 7	63,662 7 7	2,73,224 12 7
Upper Central Division, including Futtehghur Branch.	51,405 1 7	83,948 2 8	43,334 0 5	33,597 3 -	2,12,284 7 8
Lower Central Division -	6,758 5 1	1,86,842 8 5	26,971 11 5	52,453 10 11	2,74,643 7 -
New Allyghur Division -	- - -	- - -	- - -	617 3 2	
Cawnpore Terminal Division.	6,150 4 7	1,14,492 13 3	24,033 7 2	47,509 13 11	1,92,186 6 11
Etawah Terminal Division	5,311 10 10	91,168 15 11	25,296 8 5	56,336 11 -	1,78,113 14 2
Boolundshuhur Branch -	34,246 - 6	1,03,411 7 9	- - -	2,494 9 1	1,40,152 1 4
TOTAL - - - *Rs.*	1,22,231 3 5	6,69,212 11 7	2,21,489 8 -	2,57,671 10 8	12,70,605 1 8

In addition to the above, the following expenditure has been incurred during the year, and charged against the Famine Relief Grant:—

	Rs.	*a.*	*p.*
Futtehghur Branch - - - - - -	1,29,776	1	8
Boolundshuhur Branch - - - - - -	2,00,000	-	-

179. The following Table will show the outlay from imperial funds on the other canals in these Provinces:—

CLXXIX.—Expenditure on the other canals in these provinces.

	Original Works.	Repairs and Plantations.	Establishment and Contingencies.	TOTAL.
	Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*
Eastern Jumna Canal -	7,217 2 10	46,294 15 9	57,094 6 10	1,10,606 9 5
Doon Canals - - -	23,626 10 8	14,747 12 5	10,833 2 11	49,207 10 -
Rohilkund Canals - -	13,368 3 2	9,538 13 2	19,543 7 4	42,450 7 8
Agra Irrigation Works -	36,069 15 5	4,400 12 5	7,188 7 7	47,659 3 5
Bundlekund „	10,938 2 9	1,377 9 10	12,733 13 9	25,049 10 4
TOTAL - - -	91,220 2 10	76,359 15 7	1,07,393 6 5	2,74,973 8 10

In excess of the above *Rs.* 18,119. 1. 4. have been spent on the irrigation lines of the East Bygool in Rohilkund, and charged against the Famine Relief Fund.

180. The following statement exhibits the revenue derived from the Canals and Irrigation Works in the North-Western Provinces during 1861-62:—

CLXXX.—Amount of revenue derived from the canals during the year.

	Rs.	*a.*	*p.*
Ganges Canal - - - - - - -	7,05,800	9	3
Eastern Jumna Canal - - - - - -	2,50,531	11	1
Doon Canals - - - - - - -	16,011	4	8
Rohilkund Canals - - - - - - -	35,533	6	9
Agra Irrigation Works - - - - - -	12,698	9	-
Bundlekund Irrigation Works - - - -	2,228	2	4
TOTAL - - - *Rs.*	10,22,803	11	1

CHAP. XII. North Western Provinces.

SECTION VIII.—FINANCIAL.

CLXXXI.—General Financial Statement.

181. The General Financial Statement, prepared in the form laid down in the orders of the Government of India, in the Home Department, No. 3039, dated 19th June, is subjoined:—

RECEIPTS.

	Heads of Service.	Amount.	Remarks.
		Rs.	
I	Land Revenue — 1.—Land Revenue.	4,35,63,520	Includes anticipatory collections on account of 1862-63.
	Land Revenue — 2.—Sayer	1,97,750	Better than previous year.
	Land Revenue — 3.—Abkaree	24,71,794	
II	Assessed Taxes, Income Tax	31,79,964	Previous year's collections were for six months only, this for 12 months better in comparison.
III	Customs	5,70,083	About 5 lakhs increase.
IV	Salt Customs Duty, &c.	53,20,780	
VI	Stamps	24,81,777	Better than previous year by more than 5 lakhs.
X	Law and Justice	4,81,920	
XI	Police	5,25,300	Largesavings owing to reduction of police force.
XIII	Public Works	15,17,323	Contains canal collections and tolls from ferries connecting imperial lines of road.
XV	Miscellaneous, Civil	11,85,216	Increase of about 3 lakhs owing chiefly to transfers from deposits.
	Total	6,14,95,427	
XVI	Interest on Local Loans	6,885	
	GRAND TOTAL — *Rs.*	6,15,02,312	

DISBURSEMENTS.

	Heads of Service.	Amount.	Remarks.
		Rs.	
A	ALLOWANCES, REFUNDS, AND DRAWBACKS.	3,24,795	Large refunds of land revenue and stamp duty in Rajeenamah cases.
B	CHARGES AGAINST INCOME.		
	I—Revenue Departments:— 1—Land Revenue, Sayer and Abkaree.	38,06,133	No variations of any consequence.
	2—Assessed taxes	1,96,694	
	3—Customs		
	—Salt	5,74,016	
	6—Stamps	61,263	Large increase in commission owing to increased sales.
	Total	46,38,106	
	II—Allowances and Assignments under treatise and engagements.	12,17,600	
	III—Allowances to district and village officers.		
	IV—Miscellaneous	20,606	
	V—Contingencies special and temporary.	7,087	
	Total	12,45,293	Decrease of about 2½ lakhs.
E	WORKS OF INTERNAL IMPROVEMENT AND PUBLIC CONVENIENCE.	6,00,000	One per cent. Income Tax.
F	I—PUBLIC WORKS	48,60,547	This is the amount of letters of credit
	II—Salaries and expenses of Public Departments.	15,51,575	Increase of about 2 lakhs owing chiefly to Government Press charges.
	III—Law and justice	34,01,122	Decrease of about 1½ lakhs.
	IV—Police	38,63,499	Decrease of about 9 lakhs.
	V—Education, Science, and Art.	5,15,249	Decrease of about lakh.
	VI—Political agencies and other foreign services.	7,218	
	VII—Superannuation and retired allowances and gratuities for charitable and other purposes.	3,82,957	Includes gratuities to discharged police about 1¼ lakh and superannuation of Revenue Department about lakh.
	IX—Miscellaneous	1,66,405	Decrease of about lakhs.
	X—Civil contingencies special and temporary.	15,11,619	Decrease of about 45 lakhs, the previous year's charge having included compensation for losses sustained during the mutiny

	GRAND TOTAL	2,30,75,055	

CLXXXII.—Reductions in the Judiciary and Revenue Establishments.

182. From paragraph 27 of this Report it will have been seen that reductions were effected in the Judiciary Establishments during the year to the amount of 22,464 rupees per annum. Besides this there has been a net saving of 1,11,348 rupees per annum consequent on the reduction of Tehsilees, and on the reduction of revenue establishments consequent on

on the transfer of territory to Scindiah referred to in the 136th paragraph of this Report.

183. A reduction in the Secretariat Establishment was effected during the year amounting to 1,546 rupees per annum.

CLXXXIII.—Reductions in the Secretariat.

184. A further reduction of 7,866 rupees per annum was effected in the cost of Punkah and Tattie Establishments. So that the total amount of reductions effected in establishments during the year is 88,744 rupees as shown in the margin.

CLXXXIV.—Reductions in the Punkah and Tattie Establishments.

	Rs.
Judiciary - - - - -	22,464
Tehsilees - - - - -	1,11,348
Secretariat - - - -	1,546
Punkahs and Tatties - -	7,866
Rs.	1,43,224

185. A Standing Committee has been formed at Allahabad for the purpose of revising contingent expenditure to whom, year by year, the returns of contingent expenditure will be submitted.

CLXXXV.—Formation of a standing committee for the revision of contingent expenditure.

186. The business of the Treasuries at Benares and Mirzapore have been transferred to the agents of the Bank of Bengal.

CLXXXVI.—Treasury business at Benares and Mirzapore transferred to the Bank of Bengal.

SECTION IX.—ELECTRIC TELEGRAPH.

187. A line of electric telegraph along the Ganges Canal from Meerut *viâ* Roorkee to Hurdwar was sanctioned by the Government of India, which ordered the transfer of the execution of the work to the telegraph department. The line is being prolonged from Hurdwar through the Eastern Doon to Mussoorie *viâ* Dehra.

CLXXXVII.—Line from Meerut to Mussoorie sanctioned by the Government of India.

188. An electric telegraph office has been completed at Cawnpore.

CLXXXVIII.—Construction of an office at Cawnpore.

189. Telegraph piers for carrying the wire across the Ganges at Gurmooktesur were also built during the year; and certain wells which had been sunk experimentally in the bed of the Ramgunga, opposite Moradabad, by Mr. Hardy Wells, late chief engineer of the Rohilkund Railway, were transferred to the Electric Telegraph Department, for the purpose of carrying the wires across that river.

CLXXXIX.—Piers for carrying the wire across the Ganges at Gurmooktesur.

SECTION X.—POST OFFICE.

190.

SECTION XI.—INLAND NAVIGATION.

191. Nothing worthy of record in connexion with the above two sections has occurred during the year.

CXCI.—No operations of importance in either department.

SECTION XII.—ECCLESIASTICAL.

192. A Roman Catholic Chapel at Cawnpore has been completed, and another is in course of construction at Meerut.

CXCII.—A Roman-Catholic Chapel built at Cawnpore, and another in progress at Meerut.

193. The church at Bareilly, which was commenced in 1860, is nearly finished, as is that at Futtehghur. The Mussoorie Church has been enlarged at a cost of 3,627 rupees.

CXCIII.—Churches at Bareilly and Futtehghur nearly finished, —enlargement of that at Mussoorie.

SECTION XIII.—POLITICAL AND MILITARY.

194. The Allahabad Volunteer Rifle Corps continues in existence; and a new corps has been formed at Etawah under the designation of the Etawah Volunteer Rifles, the strength of which consists at present of 53 members.

CXCIV.—Volunteer Rifles.

195. The system of associating European and native gentlemen of consideration and influence with the officers of Government in the administration of justice, by investing them with magisterial powers, is working well; but it has been in operation for so short a time that all the officers who have been consulted state that they can do no more at present than testify to the promising auspices under which the experiment has been started.

CXCV.—Honorary Magistrates.

CHAP. XII North Western Provinces.

CXCVI.—Native Presses.

196. There are no less than 75 native presses at work in the several districts under the Government of these provinces. Government aid is not afforded to newspapers unless they have proved self-supporting for the period of one year. It has been represented to the Government of India that the supervision of the native press and the examination of publications issuing from it can be of very little practical utility, whether in the interest of Government policy or public morals, unless a legal power reside in the Local Government, or its officers, to inflict penalties in the withdrawal of license, or in the way of prosecution before a magistrate, for the publication of matter which, though not within the reach of the law as obscene or seditious, is still open to strong objection on other grounds.

CXCVII.—Rules for the administration of the Terai district.

197. The resolution recorded by the Lieutenant-Governor laying down rules for the administration in all departments of the Terai district, which was formed under Act XIV. of 1861, will be found in Appendix No. I. The district is composed of the Pergunnahs of Bazpore, Roodurpore, Kilpooree, Guddurpore, Nanukmultha, and Bilharee.

CXCVIII.—Important lines of communication.

198. In a political and military point of view, the following important lines of road were carried on during 1861-62:—

CXCIX.—Roorkee and Dehra road.

199. This line was commenced in December 1860, as a famine work, on a grant of 1,50,000 rupees. Further assignments, aggregating 1,25,000 rupees, were made, the total amount allotted from the famine relief grants being 2,75,000 rupees. In the budget of 1861-62 a further provision was made to the extent of 50,000 rupees for the construction bridges and culverts requiring skilled labour.

During the year the first 28 miles of the road (from Roorkee) were embanked, and one bridge of three arches and two culverts were completed, while six bridges and seven culverts were in an advanced state. From the 28th to the 35th mile through the Mohun Pass a causeway was nearly finished; but destroyed by the heavy floods of 1861. On the cessation of the rains the alignment of the road through the pass was altered, the road being kept, chiefly on the sides of the hills, out of reach of the torrent.

The estimated expenditure on this line, 42 miles in length, is 5,56,785 rupees.

In spite of the predictions of those supposed to be acquainted with the difficulties of the line through the Mohun Pass, and who yet assert that the line chosen is an impracticable one, the project seems to be now placed beyond risk of failure, and it may be anticipated that, by the hot season of 1864, carriage daks will run from Meerut through Roorkee all the way to Rajpore.

CC.—Cawnpore and Malthone road.

200. The Cawnpore and Malthone road was originally entered in the budget of 1861-62 as the Calpee and Saugor road. Its southern terminus was afterwards prolonged to Jubbulpore, and its northern terminus to Cawnpore. This line, besides being a most important one for military purposes, was intended to form a second outlet (the great Dekhen road being the first) for the produce, chiefly cotton, of the Central Provinces towards the Doab.

On these provinces being placed under a chief commissioner, the portion of the road between Malthone and Jubbulpore was removed from the control of the North Western Provinces.

The road now under this Government is designated the "Cawnpore and Malthone Road." Little work beyond surveying the line and drawing up estimates was executed during 1861-62; but the line is open to traffic as a fair weather road throughout its length, and at all times of the year, on the portions between Cawnpore and Calpee, already metalled, and between Jhansie and Malthone where the surface is composed chiefly of broken rock. The Jumna is crossed by a boat bridge; a similar bridge is maintained during the rains over the Betwa. The latter will ultimately be spanned by a permanent bridge, estimated to cost 4,77,000 rupees. With this exception, and a few other minor ones, the road is bridged between Calpee and Malthone. On the Calpee and Cawnpore section a bridge is in course of construction on the Pandoo River; and two others will be required on the Seyngur and Urrind Rivers.

The total estimate for this line from Cawnpore to Jubbulpore is 17,87,117 rupees, for a length of 371 miles; and 10,71,179 rupees from Cawnpore to Malthone, 223½ miles; in both cases inclusive of the Betwa bridge.

CCI.—Rohilkund imperial road.

201. This is intended as the main artery communication through Rohilkund, from Futtehghur *viâ* Bareilly to Moradabad, with a branch to Shajehanpore. Its eastern terminus is Furruckabad, from which communication is open by branches of the Grand Trunk Road with that, the great line of these provinces. The western terminus is intended to be on the Ganges in the neighbourhood of Nugeena or Nujeebabad, whence there will be a junction with Roorkee, Moradabad, which this imperial line will pass, is connected with Meerut by a metalled road *viâ* Gurmooktesur, the whole of which has been taken over as an imperial line. The portion between Furruckabad and Kutra, 43½ miles, runs over very low ground, requiring heavy embankments; of these 33½ miles have been under construction during the year, and five miles completed; the earthwork of the remainder was finished. Of the remaining ten miles, five miles were being surveyed. Between Kutra and a point seven miles west of Bareilly (about 66 miles) 36 miles were in course of construction, and 30 miles were being surveyed. Of the 36 miles, 16 miles were completely embanked, and 16 miles more well advanced. At present it is intended to complete the road to Moradabad only. Detailed estimates for the whole line in progress have not yet been received, but a grant of two lakhs was made in the budget, and 40,000 rupees more from the

the one-per-cent. income tax. Expenditure *Rs.* 2,38,237. 4 *a.* In connexion with this line, another from Hattras on the Grand Trunk Road *viâ* Secundra Rao, Kuchla Ghât on the Ganges, and Budaon to Bareilly, has been taken over as an imperial line. Grants to the amount of 59,000 rupees have been made. From Bareilly to Budaon the line has been metalled; at the other extremity, from Hattras to the border of the Etah district, the earthwork was well advanced and metalling in progress. This road will form the centre outlet for the traffic of Rohilkund; the eastern one being the line from Shajehanpore *viâ* Futtehghur to the Doab, and the western that from Moradabad *viâ* Gurmooktesur to Meerut.

CCII.—Road from Gurmooktesur Ghât to Ghazeeooddeennugger.

202. As part of the same system of communication as that to which the preceding two roads belong may be mentioned, the road from Gurmooktesur Ghât, *viâ* Haupper to Ghazeeooddeennugger, near Delhi, 38 miles. This was commenced as a famine relief work on a grant of 62,000 rupees; a further grant of 50,000 rupees has been made from the one-per-cent. duty. The total allotment, therefore, has been 1,12,000 rupees, and for this sum the road will be completed. It was very nearly so by the close of 1861-62.

CCIII.—Agra and Bombay Road.

203. Lastly, it may be mentioned that greater exertions have been made during the year than at any previous period, to push on the Agra and Bombay road. A grant of 40,000 rupees was assigned in addition to the annual allotment of 2½ lakhs. With the exception of the masonry bridges over the Kharee and Aotunghun rivers, it is expected that the whole line will be completed with a boat or pontoon bridge over the Chumbhul by the rains of 1863.

CCIV.—Construction of a cotton press.

204. A cotton press is in course of construction at the Roorkee workshops, which, when complete, will be placed on the falls of the Ganges Canal above Nanow, which is the Allyghur district, and as centrical a point as could be selected for the use of the large traders in cotton.

CCV.—Area under cotton cultivation during the year.

205. The entire area under cotton cultivation during the year in these provinces was 1,177,000 acres as against 965,000 in the previous year, or an increase of 22 per cent.

CCVI.—Estimated out-turn of clean cotton.

206. The estimated out-turn of clean cotton is, in maunds, about one million and-a-half (or 1,100,000 cwt.) as against one million and-a-quarter (or 800,000 cwt.) in the previous year, or an increase of 26¾ per cent.

SECTION XIV.—POPULATION AND AGRICULTURE.

CCVII.—Working of the Government tea plantations.

207. The following paragraphs are taken from the report of Doctor Jamieson, the superintendent of the Botanical Gardens at Seharunpore, on the working of the Government tea plantations during the year.

CCVIII.—Out-turn of tea.

208. "The out-turn of tea during the last season shows a decrease on that of the former year caused by the great drought during the cold weather, and the months of April and May. The grain crops throughout the upper part of the Doab were a failure. It ought not, therefore, to be a matter of surprise that the yield of tea shows a decrease, particularly as the chief or first crop of leaf almost entirely failed. Considering this the decrease may be considered small, and showing how admirably the plant is fitted for the Kohistan of the North Western Provinces and the Punjab.

"The quantity of tea prepared in the factories was as follows:—

Kowlagir Factory—Dehra Dhoon.

TOTAL Balance - - - *Rs.*	82,279 14 6

210. The management of the botanical gardens at Seharunpore is in a high state of efficiency. From Calcutta to Peshawur there is scarcely a horticultural or agricultural institution which has not more or less been benefited by the receipt of plants or seeds— 1,15,437 fruit trees, 58,058 timber trees and flowering shrubs, and 1,616 parcels of seeds were distributed to applicants during the season. Doctor Jameson's report on this subject has already found place in the supplement to the "Calcutta Gazette." CCX.—The Botanical Gardens at Seharunpore in a high state of efficiency.

SECTION XV.—FORESTS.

211. The reports herein noticed relate to the forest year commencing 1st October 1860, and ending 30th September 1861. CCXI.—Period over which operations extended.

212. The forests within the jurisdiction of the Government North Western Provinces at the commencement of the year were those under the Commissioner of the Jubbulpore Division in the Saugur and Nerbudda territories, and those under the Commissioner of Kumaon, in Kumaon, Ghurwal and the Dehra Dhoon. CCXII.—Forests within the jurisdiction of the North Western Provinces.

213. Saugor and Nerbudda Forests. The approximate extent and position of the forests in the Jubbulpore Division, together with the principal trees produced in each, are shown in the following Table:— CCXIII.—Saugor and Nerbudda Forests.

TABLE of the FORESTS in the *Saugor* and *Nerbudda* Territories, compiled from the Superintendent's Report of 1860–61.

DISTRICT.	Forests, with Elevation of Places in Feet above Sea level.	Situation.	Extent in Square Miles. Minimum given, in rough figures.	Principal Trees.	REMARKS.
JUBBULPORE - -	MAHANUDDEE, one of the chief sources of the Soane River. Beejoragoghur - - - 1,400 ft. Nadonne - - - - 1,350 „	Scattered in patches, from Kuttureea, 35 miles E.N.E. of Jubbulpore, along the Mahanuddee River, to the foot of the Kymore range. This forest forms a portion of the great belt of saul which stretches across Sohagpore, and here in places extends west of the Mahanuddee. The great block lies between Bandooghur and Beejoragoghur, along the rivers Omrar, Buddhye, and Poplye, all affluents of the Mahanuddee. This forest is within 50 miles of the Jubbulpore Extension Railway, and will be invaluable for sleepers.	West to East, 20 miles in length. 200 square miles in British territory. Area in Native States unknown.	A little young teak between the Mahanuddee and Koombee. There are 20,000 saul trees within the British territory. Numerous saj are mixed up with the saul, and are by themselves in the Butgaon ilaqua. Five old Kowah along the banks of streams. Some beejasal in a few places on the hills. A great deal of mowah, the older and less productive trees, may be obtained.	At Captain Pearson's suggestion, Mr. Nolan, of the Jubbulpore Extension Railway, was sent to look at this forest. He reports fine saul along the Omrar at Sootree, Burragaon, Tala, and Leleya, along the Doodur, a feeder of the Omrar at Kutowlee, between Chendia and Bandooghur. Along the Poplye, near Muchmocha, Permaun, and Kereylee. Great injury has been done by the Bygurs in their dhya cultivation, and by the raal extractors, who kill hundreds of trees unnecessarily in tapping them. Mr. Coles, the Political Agent at Rewah, has been informed of the state of the forest, and says he will endeavour to check the damage, and to have the forests preserved in the Native States.
	BURELLAH, in the pergunnah of that name, city of Jubbulpore 1,250 ft.	S.E. of Jubbulpore, in the bend which the Nerbudda forms between Mehindwaun, in Mundlah, and Jubbulpore.	100	All the large teak has been felled, but young trees still may be seen. Much fine saj and kowah are scattered over the ilaqua, with a little good ebony in places. The largest kowtah trees are on the affluents of the Nerbudda.	In Jubbulpore, teak is procurable, in small pieces, at 6 to 8 annas per cubic foot. Good beams are scarce, and fetch above 1 rupee per cubic foot.
	NARAINPORE - - - 1,900 ft.	East of Jubbulpore there are traces of jungle for many miles around the iron-producing district of Narainpore.	200	All timber has been cut by the charcoal-burners, and the hills are now only covered with a dense scrub.	——
MUNDLAH - -	NUKTAH PAHAR, and DULDULLA PAHAR along the Nerbudda River. Mundlah - - - - 1,550 ft. Ramghur - - - - 2,400 „	Near Gogra, in North Mundlah; near Singpore, in ditto, between Mundlah and Ramghur.	200	First-class teak may still be obtained. About 1,000 good trees remain, of four to five feet in girth, but in inaccessible localities. There is plenty of large and well-grown saj, hurdoo, tendoo, dhya, sissoo or tinsa in these hills.	Have suffered greatly of late years from the depredations of timber dealers.
	SOUTH MUNDLAH - - - On the Ghats - - - 2,800 ft. Below do. Bhemlat 1,900 „ Chuhutta - - - - 1,600 „	Along the valleys of the Bunjur and Halon Rivers, and stretching from Bhemlat to Mowye along the Ghat range, which separates this upland from the plains of Raipore.	West to East, 40 miles in length, and an average of 10 miles in depth. 400 square miles.	Estimated to contain 10 lakhs of saul trees. The finest trees are about Toplah head of the Halon River, and between Toplah and the Chilpee Ghat.	It will not pay to work these forests until the roads are opened out, and until the demand for timber becomes greater.
	UMMERKUNTUK. - - - Source of the Nerbudda 3,400 ft. Karinjiya, in the plains below - - - - 2,760 „	East of the Bormeyr to Ummerkuntuk: the hills were formerly covered with jungle.	1,000	Large tracts are covered with mowah; the country consists chiefly of broad grass plains, and the hills, which formerly had saul trees growing on them, have had them all destroyed by the untiring axes of the bhoomahs in the dhya cultivation, and are now covered by a dense scrub.	——

	GONDWARRA HILLS Doomah - - - - 1,160 ft. Nursingpore - - - 1,160 „	From Doomah, in Seonee, stretching westwards to Srinuggur, in Nursingpore, nearly 25 miles. Also on the hills called the Gonda Koel, east of Doomah.	500 square miles in Seonee, Nursingpore, and Chindwarra.	These hills are literally covered with teak trees, but of stunted growth, from which, however, wood in short pieces may be had, and is fit to cut. Large tracts of country along foot of hills in Seonee and Nursingpore are covered with mowah.	The trees do not grow straight here, and branch out within five or six feet of the ground, whether the jungle be very thick or open. This mowah is too valuable to the natives to be available for timber. A good tree is worth *Rs.* 2.3.0 to 4 per annum.
	WYNGUNGA - - - - - Source of this river - 2,200 ft.	Down the banks of this river in South Seonee.	100	There is a considerable amount of teak timber, young, but exceedingly fine, and will be cared for; saj also is found towards the south.	Price of teak in the Nagpore market is not under *Rs.* 1.8.0 per cubic foot for round logs.
SEONEE - -	DURASSEE DOONGURTAL - Seonee - - - - - 2,070 ft. Below Ghats - - - 1,200 „	Above and below the Ghat range in South Seonee, east of the Pench River.	300	These two forests contain many thousand fine young teak trees, especially near Tooria and Dahoda. In the higher and more inaccessible ravines along the range of ghats there are still many noble trees of saj, beejasal, and sheshum, especially in the south-east corner, near Sonamanee and Koonjaiee above Salburra. Gurraree is tolerably abundant in the southern portion of the district.	These have been preserved from felling for five or six years, and give promise of yielding a valuable supply of wood. The soil along foot of hills is sandy, and trees thrive there remarkably well.
	SATPOORA HILLS - - - Hoshungabad - - - 1,040 ft. Pissona on the Lower Deinwah - - - - 1,090 „ Mohur, junction of Towah and Deinwah - 1,090 „ Shahpore - - - - 1,270 „ Bowerghur Peak - - 2,750 „ Soalighur Peak - - 2,300 „ Asseer do. - - - - 2,450 „	A north line drawn from Patroda, near Hoshungabad, through Lokurtully to Mukrye, with a south line drawn parallel from Boree, at the foot of the Puchmurries, passing south of Shahpore through Chicolee to the Taptee River, and joined at both ends, will form a parallelogram enclosing, with the valleys of the Machna, the Towah, the Sonebudra, and the Deinwah, all the great teak-producing tract of the Nerbudda Valley.	1,500	Within these limits are few hills which do not contain more or less teak, but few trees are left now exceeding four feet in girth, or what in Burmah and Madras are counted as third-class trees, and never are allowed to be felled. There are, however, a few very large trees still to be found in the Sonebudra Valley, west of the Puchmurries, between Borah and Mulnee, which have escaped, owing to the extreme difficulty of getting them out. Saj grows to an immense size along the southern face of the Ghat range, and there are some good trees along the Deinwah. There is an abundance of saj, hurdoo, beejasal, kowah, and tendoo, almost in every portion of these hills. In Nimawur is found the unjun, and siris may be met beneath the Puchmurries.	This great teak forest has been systematically worked for more than 30 years by the Borahs from Indore and Oojein, through whom the wants of Western India in timber have been supplied. At Seonee the Indore Borahs sell teak at 1 rupee per cubic foot in rough squared logs; the closing of these forests is expected to raise the price, as soon as the timber stored has been consumed. The unjun is an extremely hard and heavy wood, of deep claret colour, which may prove valuable. There are very large kowah trees, 18 to 20 feet in girth, along the Towah and Machna Rivers in Baitool.
BAITOOL and HOSHUNGABAD	GURAKOTTAH, in the valley of the Sonar River.	There is a rumna, or small preserve, two miles N.W. of Gurakottah. A few outlying knolls in the Sonar Valley, and the foot and sides of the bounding ranges of hills, are clothed with jungle.	Four square miles at Gurakottah, six square miles at Menace, Jumunia, and Baleho.	There is some young teak growing at Gurakottah; also renjah, saj, tendoo, kurdai, with some fine kowah along the Sonar River. The hills are chiefly covered with scrub, but some mowah may be found along the base.	About 50,000 trees of sorts are said to have been cut out of this rumna. Nearly all the timber on these hills has been cut by the charcoal-burners.
	TEJGHUR, in the pergunnah of that name.	South-east of Dumoh, along the valley of the Burran River, and on the adjoining hills.	100 square miles in British territory, and about 100 square miles in Native States.	Teak is reported at Alloni, near Futtehpore, in the Pannah State. Kowah, saj, and the common timbers are plentiful along the burran between Kotah and Manghur.	About 50,000 good trees are said to be procurable from this forest.
	BUNDAIR HILLS - - -	South of Nagode on the range of hills between it and Jokohi, west of Myhere.	200 square miles in the Native States of Jusso, Adjyghur, and Punnah.	Teak is to be found at Kutureea; jumrassee, saul, saj, and beeja are very scarce, and nearly all timber has disappeared. Mowah abounds, and, it is believed, might here be purchased.	All the large trees have been felled in this accessible jungle. The iron-works near Uchara consume much charcoal. The timber at Nagode comes from Muckunpore, a town eight miles south of Rewah.

TABLE of the FORESTS in the *Saugor* and *Nerbudda* Territories, compiled from the Superintendent's Report of 1860-61—*continued*.

DISTRICT.	Forests, with Elevation of Places in Feet above Sea level.	Situation.	Extent in Square Miles. Minimum given, in rough figures.	Principal Trees.	REMARKS.
SAUGOR, DUMOH, and BUNDELA STATES —in vicinity.	MERIAHDO, in the pergunnah of that name. Under transfer from the Rajah of Chirkaree.	Along the Ghat range, between Kanoura and Kissenghur, both above and below the heights, and along the valley of the Burran River; also on the hills adjoining.	60 square miles in British Territory, and about the same in Native States.	Some young teak is growing in a rumna, or small preserve, at Meriahdo, also below the ghauts between Gogra and Kalkoa. Timber is scarce upon the heights, but below them salei, hurroa, beeja, and tendoo are plentiful, but of small size. There is some fine kowah along the banks of streams.	In the Native States nearly all the timber is said to have been cut by the charcoal-burners for the iron-smelting works at Koopee and Somaghur. In British territory the trees are young, and need preserving.
	BIJAWUR and BUSSOUR - - -	Along the range heights between Maharajgunge, Bijawur, and the Pundoah hills. Also in continuation along the Semree River, beneath the Pundoah Hill, and down the valley of the Keyn River, between Geree and Rajghur.	100 square miles, chiefly in Bijawur, Chutterpore, and Punnah.	This is said to be the best jungle left in the Bundela States. Large teak is reported at Bussour, Sclone, and Gungour, with saj, beeja, jamun, and jumrassie over the whole.	These forests are not preserved, and consequently all the accessible parts have but little timber left. What is described as forest is probably difficult to get at. The course of the Keyn River from its confluence with the source upwards to this forest should be explained.
	PUNNAH - - - - - -	Along the Ghat range, between the Keyn River and the meridian of Punnah. Also along the heights between Adjyghur and Punchumpore, and the Runj and Baghun Rivers.	40 square miles in Punnah. 30 square miles in ditto.	Salia, hurroa, gunja, beeja, and tendoo are found thinly scattered over this tract. All timber is said to have been cut, and only scrub is to be met.	——
CHINDWARRA -	DELAKURI - - - - - Chowraghur Peak, which overlooks the valley - - - - - 4,270 ft. Bawun, at the foot - 2,010 „ Omreah, in valley - 1,700 „	East end of the Puchmurri hills, in the valley of the Upper Deinwah.	50 square miles belong to independent jagheerdars.	There is some fine saul with young teak over this forest, and some unjun about Mohuljir.	Will be very valuable for sleepers, from its proximity to the Great Indian Peninsular Railway. The road from Delakuri, *vid* Mohuljir, Futtehpore, to Benkeri (on the Hoshungabad and Jubbulpore road) should be opened out.
	BUTKAGUR HILLS - - - Mohuljir - - - - 1,520 ft. Simreah - - - - 2,420 „	Between Mohuljir and Seonee, at the head of the Doobhye, Sitariwa, and Sakur Rivers.	150 square miles belong to independent jagheerdars,	These hills are covered with teak and sheshum, which, though difficult of access, might be got out if energy was used. There is also saj along the Doobhye.	Mr. Williams, contractor for sleepers, is supposed to have commenced working in these forests.
	CHINDWARRA - - - - Chindwarra - - - 2,150 ft. Motour, head of the Pench River - - 3,300 „ Omrait, below - - 2,500 „	South of Chindwarra, between Deoghur and Pandoorna, and west of the Pench River.	400 square miles.	Saj bounds on the southern face of the Ghat range, where it grows to an immense size.	——

214. A superintendent of forests was appointed to this division in October 1860, and immediately entered on his duties by making an inspection tour of the forests. The results of his examination may be briefly stated as follows:— CCXIV.—Appointment of a superintendent of forests.

215. The present condition of the forests generally is as bad as it practically can be. They have suffered greatly from indiscriminate felling, and from general neglect for a long time, but the greatest damage has been inflicted within the last two or three years; most exaggerated reports as to the enormous gains that would be reaped seem to have got abroad in 1857, when contracts to supply timber to the railway company was first made, and in consequence native capitalists advanced large sums of money to the Gonds to fell every teak tree they could lay their hands upon. CCXV. to CCXVIII.—Results of his inspection.

216. In Mundlah a single native merchant is said to have felled 40,000 teak trees, while in the same district a European contractor had a contract for 1,00,000 teak sleepers, most of which were certainly cut, though he has not got them out of the forests. In Baitool the Native capitalists have felled every teak tree of any size or value that they could get at. These two cases are brought forward to give some idea of the devastation that has been committed. The felling of teak has now been entirely stopped, and the superintendent does not propose in future letting it out of his own hands.

217. Another serious evil is the system of dhya cultivation, or the cutting and burning of the jungle to form fields, as practised by the Gonds and other barbarous tribes in these districts. This practice is especially injurious, as they are fond of selecting sites where the best timber grows. This is a difficult subject to deal with, as the practice could not be summarily stopped without entailing great hardships on a class of men whom it is our duty to civilise and improve. As yet orders have only been issued that in pre-firing their fields they should restrict their operations to spots where fields have been before, as in such places the jungle is merely a dense scrub. If cutting and burning the jungle to form fields had the effect of opening out the more dense forest tracts, nothing would have a better effect of the well-being and healthiness of the country; but in practice the same spot is never tilled for more than two years, and the underwood springs up more densely than ever in the abandoned clearings.

218. The cutting of teak being stopped for the present, eight other kinds of wood fit for sleepers are mentioned as being procurable from the forests. These are saul, kowah, saj, mowah, hurdoo, beejasal, siries, and semur. Salee, a white wood, which works up like deal, but is generally considered worthless, is brought forward by the superintendent, as he expects that if preserved by Dr. Boucherie's method of injecting sulphate of copper in the sap tubes, it would be most valuable.

219. The superintendent was informed that his intentions of conciliating the Gonds, and abstaining from summary measures in preventing dhya cultivation were judicious; but that the necessity for ultimately suppressing the practice must not be overlooked or neglected. He was urged to persevere in the course which he had adopted of giving advice to the Gonds on the subject of the preservation of the forests, and to endeavour to enlist the chief men among them as forest rangers by the continuance of some of their customary privileges or the prospect of a small reward. He was told to place himself in communication with the independent proprietors of the Chindwarra forests in which much valuable timber exists; to explain to them the evil consequences of indiscriminate felling in, and neglect of, the forests; and to give them good advice generally on the subject of forest preservation. The culture of the teak by natural reproduction was approved of, but orders were given that care should be taken to prevent the crowding of trees, from 30 to 50 trees per acre being the maximum. The superintendent was directed in the case of saul trees to try, as an experiment, the system adopted in the Scinde forests, by planting five saul saplings for every full grown tree cut down, and the system advocated by the Commissioner of Kumaon of merely leaving a few seed-bearing trees on each acre, and allowing the reproduction to take place in this manner. CCXIX. and CCXX.—Instructions given to the superintendent.

220. Captain Pearson was requested to try Dr. Boucherie's method, as well as any other chemical process with which he might be acquainted for preserving timber, and to report the result. He was directed to commence working the Mundlah forests so as to bring the fine saul timber of that district into the Jubbulpore market as soon as possible, and was invited at his leisure to examine and report on the Puchmurri hills, with a view to fixing a site for a sanatarium on them for the convenience of the residents of Jubbulpore, Seonee, Baitool, Hoshungabad and Saugor.

221. The receipts from the forests for the six months ending 31st April 1861 were *Rs.* 45,812. 4 *a.* 8 *p.*, while the expenditure for the eight months ending on the same date amounted to *Rs.* 17,284. 4 *a.* 10 *p.*, a result which was considered on the whole to be satisfactory. CCXXI.—Receipts from the forests.

CHAP. XII. North Western Provinces.

CCXXII.—Sums sanctioned for roads in the forest districts.

222. The following sums were sanctioned for making and improving roads in the forest districts:—

1,500 rupees for the improvement of the road between Saugor and Shahghur *viâ* Heerapore.

1,500 rupees for the improvement of the road from Saugor to Gurrakottah.

500 rupees for the road from Chicholee to Kheree, on the Ellichpore and Baitool road.

2,000 rupees for the road from Chicholee, through Lukurtullye to Seonee, in Hoshungabad.

2,000 rupees for the road from Boorlah to Seonee.

2,000 rupees for the improvement of the road from Katinjee to Deolahpore.

600 rupees for the Pukuree Ghât between Seonee and Kattinjee.

223. Bungalows for the use of the Forest Department were ordered to be built in each district, and 1,000 rupees was sanctioned for this purpose in each of the districts of Mundlah, Seonee, and Puchmurri; 500 rupees was also sanctioned for the repair of the Bungalow at Gurrakotta.

CCXXIV.—Establishment for the conservation of the forests.

224. An establishment as per margin* was sanctioned by the Government of India in November 1861, for the conservation of the Saugor and Nerbudda forests, amounting to *Rs.* 2,539. 4 *a.*

CCXXV.—Notification to the inhabitants.

225. It was notified to the people of the Saugor and Nerbudda that the British Government intended for the future to manage the forests in the Jubbulpore division itself by means of a forest agency. The reasons for this resolve were clearly set forth, and the inhabitants were called on to assist and co-operate with the superintendent.

CCXXVI and CCXXVII.—Provisional set of rules.

226. A provisional set of forest rules were framed and ordered to be published. These rules laid down the conditions under which the public would be allowed to cut certain species of woods in the forests, and stated what duties would be levied.

227. The principle on which the duty on the timber should be assessed was, that the sum obtainable from each tree should include the net proceeds which the land occupied by it might on the average have yielded under cultivation during the period of its growth, together with its due proportion of all expenses of management, with interest during the same period.

It was ordered that the forests were to be worked chiefly by the Forest Establishment, contractors of respectability only being admitted, under the rules, as an aid to the forest agency, who must in any case first undertake the girdling and marking the trees to be cut.

These forests were towards the close of the year made over to the Chief Commissioner Central Provinces, and copies of all documents connected with them were sent to that administration.

CCXXVIII.—Tabular statement showing the extent, &c., of the Ghurwal and Kumaon forests.

228. Ghurwal and Kumaon Forests. The number, position, and a rough approximation to the extent of the various forest tracts in these districts, together with a brief statement of

of their present condition, are shown in the subjoined Tabular Statement, compiled from the general Report submitted by the Commissioner of Kumaon :—

District.	Forest.	Extent (Approximate).	Situation.	Principal Trees.	REMARKS.
Ghurwal -	Forest above Chandee	500 square miles -	Between the eastern bank of Ganges, above Badasua, in Kaidwara.	Saul, Jamun, Huldoo, and Bamboos.	- - All the trees worth cutting have long since been removed; except for thinning, no trees should be cut for years. With rest the young trees will become most valuable. There is some felled timber lying between the Chandee hills and Kalowara, which will be removed next season. After this the forests should have rest. The lower parts of the forests between the Ganges and the Chandee hills belong to the Bijnore District. The upper part of the same is not likely to be of value, the soil and elevation not being favourable to the growth of saul.
Ditto -	Kotree - - -	50 square miles -	- - - - -	Saul - -	- - There is a large quantity of felled timber scattered over this Dhoon. All trees within reach of wheel carriage have been cut. Thousands of trees have been burned from being girdled and left standing for years. These half-burned standing trees, as well as those which are felled, are of little value, owing to their inaccessibility. It is intended to export as much of this timber as possible during the ensuing season. The valuable part of this Dhoon is destroyed.
Ditto -	Patlee - - -	200 square miles -	From Kotree Dhoon on west, to Kumaon on east, and north and south, from the range south of the Mundla Valley to the plains.	- - -	- - There are some good forests in this Dhoon; but all trees worth cutting on both banks of the Ramgunga River up the valley of the Sona, and on the hills between the Ramgunga and the plains, have been felled. The good timber which remains is on the north side of the Ramgunga. These forests have not yet been examined with a view to road-making, but they are supposed to be difficult of access.
Bijnore -	Bijnore, Bhabur -	320 square miles -	Between Kaidwara and the Phekanuddee, south of Kotree and Patlee Dhoons, in the Burraporra and Rehur Pergunnahs.	Saul - -	- - These forests belong to the District of Bijnore. There is much young saul in them, but more than half consists of shoots from old stumps, and the best of the saplings are not more than nine feet diameter.
Ghurwal -	Mundla Forests -	- - -	North of Kotree and Patlee Dhoons. They cover the hills through which the Mundla River passes, and extend up westward towards Scela.	Saul and Toon -	- - These forests are very good, but there is no road leading into them. The Commissioner considers they will bear the expense of a road; he has not examined the country sufficiently to recommend any particular line.
Kumaon -	Forests west of Duhka River.	160 square miles -	The low hills from the eastern limits of Ghurwal to the Duhka River.	Saul - -	- - These forests contain much good saul. All the fine trees near the roads have been cut, but there are forests of considerable extent in this tract which will bear the expense of opening out, as they contain a large supply of timber.
Ditto -	Forest transferred from Moradabad to Kumaon.	This belt extends some miles into the plains, with an average breadth of six miles.	Supposed to be the Chilkea tract on the banks of the Kosilla.	Saul - -	- - This forest consists of saul saplings. A large number of these consists of shoots from stumps. These should be thinned, and the wood sold, as they never will become good timber. There is a fair prospect of this forest becoming valuable, as the soil is favourable to the growth of saul. It will be closed, and carefully preserved.
Ditto -	Duhka to Bakra River	150	Slope of hills between Bakra and Bakra Rivers.	Saul - -	- - This forest has been assigned to the Kumaon Iron Company. It contains some square miles of saul timber.
Ditto -	Bakra to Gola - -	60	Slope of hills between Bakra and Gola Rivers.	Saul - -	- - No good saul timber. The lower range and ravines are covered with saul saplings, but this forest has been more exhausted than any other.
Ditto -	Gola to Deoba - -	120	Slope of hills between the Gola and Deoba Rivers.	Saul, Sissu, Jamun, and Huldoo.	- - There are some thousands of good saul trees on the banks of the Gola. The higher portions of this tract are covered with stunted sauls, which are old enough to be used. In the plains there are some miles covered with saul saplings, which are preserved. There is some sissu worth but little; a little jamun and much good huldoo.
Ditto -	Deoba to Sarda -	400	Slope of hills between the Deoba and Sarda Rivers.	Saul - -	- - The hills in this tract are generally steep. On the lower slopes are some promising young saul forests, and within the outer ranges is much good timber which will all be brought into use.
Ditto -	Eastern Bhabur -	400	A belt of forest in the plains south of the last-named forest.	Jamun, Huldoo, and young Saul.	- - These forests are very dense, and contain much good jamun and huldoo, as well as other trees. There are some belts of young saul on the banks of Sarda, but these do not appear to thrive well.

CCXXIX.—Ghurwal forests.

229. The Commissioner of Kumaon remarks that, although it would appear that except in the Mundla Valley and in the north part of Patlee Dhoon there are no forests, it is reasonable to suppose that in such extensive tracts there must be nooks and corners filled with timber. These, from their inaccessibility have hitherto escaped, and from their increasing value must now be brought into use. As a rule, it may be assumed, that the Ghurwal forests are nearly exhausted, and, though they may be worked to such an extent as to give a considerable profit annually, the chief object must be to restore the forest tracts to a prosperous state, and to economise them by supplying timber from those tracts considered hitherto inaccessible.

The Commissioner recommends a road down the valley of the ramgunga, at an easy and almost uniform gradient from the Patlee Dhoon to the plains. The difficulties of the present road over the Kalooshaheed Pass are so great that carts are with difficulty procurable to carry timber. He estimates the cost of the former road at 10,000 rupees.

CCXXX.—Kumaon forests.

230. Kumaon forests. The Commissioner is of opinion that the easily accessible forests have been too extensively cut, and that it is necessary to bring timber from more difficult ground so as to give rest to the exhausted parts. This will entail expense in making roads, and will necessitate an increase of establishment to superintend operations at different places and to protect a long line of forests. Still he thinks that the forest may be worked so as to give a yearly return without any danger of bringing into use all the good timber before the young trees are fit to take its place.

CCXXXI.—100,000 to 150,000 saul sleepers available annually. Saul the only wood fit for sleepers.

231. He considers that from 100,000 to 150,000 railway saul sleepers could be supplied annually, at about three rupees each at the depôts in the plains, and states his conviction that saul is the only wood in these forests fit for sleepers.

CCXXXII.—Saul so abundant that it is unnecessary to plant it.

232. He does not consider it necessary to plant saul, as the old trees shed seed so abundantly that in all parts where saul thrives, young saplings are as thick as possible. Many of these are destroyed by the annual fires in the forest; but it is probable that, if they were not so thinned, they would impede each other's growth. As fires cannot be prevented, the grass is ignited as soon as it will burn, so that the least possible injury may be done.

CCXXXIII.—System of cutting.

233. The system of cutting in the Kumaon forests is as follows:—Trees to be felled are marked by the Forest Department, and all the work is done by contract. A head sawyer takes an advance on good security to bring workmen. He is sent into the forest where the trees have been marked, and is fined 10 rupees for every unmarked tree cut by his party. A list of rates is given him, and this is so prepared that it pays him best to cut well the scantlings required of him. If he gives a description of timber not sufficiently good to be classed as second rate, it is taken by Government without any payment. During the season advances are given from time to time, care being taken that these never exceed the value of the work done. During the time that sawing is going on, buffaloes and coolies (all by contract) collect the sawn timber at safe spots beyond the risk of fire. Once a month the forest darogah examines the sawn timber and classifies it as 1st, 2d, and 3d class, stacking each class separately. It is afterwards examined by the assistant, who stamps it and gives a receipt to the head sawyer. The work of coolies and buffaloes is ascertained in the same way and generally at the same time. At the end of the season the receipts are compared with the advances made, and the balance is paid or the excess recovered from the security of the first advance. The total of the exports at the end of the work should correspond with the receipts, and the auction sales check the whole.

CCXXXIV.—Financial results.

234. The accounts from 1st May 1860 to the 30th of September 1861 exhibit the following results. The balance brought forward from 1859–60 was *Rs.* 74,495. 3. 2., and the receipts for the 17 months under review amount to *Rs.* 18,131. 3. 0. The disbursements for the same time amount to 1,37,966 rupees, showing a deficit of *Rs.* 45,339. 9. 10. against the Forest Department. But there was a large stock of timber at the different forest depôts at the date of closing the accounts as shown in the following statement, the value of which was far greater than the amount of the deficit:—

STATEMENT of WOOD in STORE in *Kumaon* and *Ghurwal*.

235. The

CCXXXV.—Establishment sanctioned for conservation.

235. The following Establishment was sanctioned by the Government of India for the conservation of these forests:—

For GHURWAL.	Rs.
1 Assistant Superintendent	400
1 Overseer	200
1 Native Accountant	40
2 Hindee Writers	30
1 Oordoo ditto	15
1 Treasurer	15
2 Native Overseers	50
1 Native Doctor	15
1 Carpenter	12
1 Storekeeper	10
2 Classees	10
1 Jemadar	8
1 Duffadar	6
12 Burkundazes	48
4 Chuprassees	20
2 Depôt Mohurrirs	30
TOTAL	909

For KUMAON.	Rs.
1 Assistant Superintendent	250
4 Darogahs	100
8 Chuprassees	40
1 Native Accountant	15
2 Depôt Mohurrirs	30
TOTAL	435

Commissioner's Establishment:

	Rs.
Accountant	150
Moonshee	40
2 Chuprassees	10
TOTAL	200

making a total charge against the forests of 1,544 rupees per mensem, and being a reduction of 1,181 rupees per mensem on the cost of establishment employed previously. A travelling allowance of 250 rupees per mensem for the Commissioner was afterwards sanctioned.

CCXXXVI.—Trees which produce timber.

236. A detailed list of the trees yielding timber in the Kumaon and Ghurwal Forests was given by the Commissioner. The best and most common trees are as follows:—Bale, Barree, Chelara, Gousum, Getu, Huldoo, Jamim, Khyra, Khyrmal, Khuneer, Oulah, Phuldoo, Phursa, Saj, Saul, Seesum, and Toon.

CCXXXVII.—Dehra Dhoon forests.

237. These were closed during the year. The management of all the forests in the Dhoon, whether belonging to Government or leased by Government from the Rajah of Terai, was transferred from the Commissioner of Kumaon, and placed under the control and supervision of the Commissioner of Meerut. The latter was requested to make a tour of the forest tracts, and to submit a detailed report on the subject with suggestions in regard to their future management. He was also directed to dispose of the old stock of timber at the Dhoon depôts in the most advantageous manner.

SECTION XVI.—MINING.

CCXXXVIII.—Nerbudda Coal and Iron Company.

238. The terms of the license to be granted to the Nerbudda Coal and Iron Company to mine and work the minerals found in the Mopani and Tendu Khera tracts of the Jubbulpore division continued to be discussed with much care and attention, with a view to protect the interests of the native miners in the existing mines; to secure the common usages of the people as regards the minerals of the tract from interference by the Company, and to render it obligatory on the latter to report to the nearest police authorities of the district all accidents involving loss of limb or life; to provide medical aid on the spot to the workmen employed on the mines or works; to keep the mines well ventilated, and to adopt all proper precautions for the public safety.

The officer in charge of the Revenue Survey, now under progress in the Jubbulpore Division, was instructed to have an accurate and detailed topographical survey made of the tract of country granted to the Nerbudda Coal and Iron Company within the limits originally defined by Mr. Oldham (*vide* Report of 1860-61).

The outline was to be clearly determined and entered on the map in order that the boundaries might be laid out in a permanent manner.

Mr. Blackwell, the manager of the Company, had commenced working the coal at Mopain, and was driving shafts in the vicinity of the out-crop to ascertain the extent of that field.

It was expected that a branch Railway would be made to connect the Great Indian

CHAP. XII. North Western Provinces.

Peninsula Railway with the coal mines at Mopain. Towards the close of the year the Saugor and Nerbudda territories were transferred to the Central Provinces.

CCXXXIX.—Iron mines of Shahghur and Heerapore.

239. The iron mines of Shahghur and Heerapore in Bundelkund, are the property of Government, and are at present farmed out to the workers of the ore for a sum of 1,346 rupees yearly. The Deputy Commissioner of Saugor, to whom the district was recently transferred, had never seen the mines, but reports the ore to be excellent, and the field to be large. Only one side of the hill is said to be worked; there is a scarcity of wood or fuel, and there are but five common native furnaces. He recommended the improvement of the roads from Shahghur to Heerapore, and of the Ghâts on the roads from Heerapore towards Saugor, and also towards Cawnpore.

An outlay of 1,500 rupees had been previously sanctioned for the repair of these roads on the application of the Superintendent of Forests.

CCXL. to CCLIII.—Results of inquiries regarding coal fields in Rewah.

240. In the beginning of 1860, the late Mr. C. B. Taylor was employed by the East Indian Railway Company to search for coal in the southern part of the Rewah territory. This gentleman unfortunately died on his return to Mirzapore from illness contracted by exposure during his explorations. His son, Mr. W. B. Taylor, who accompanied the party, reported the discovery of thick seams of coal at Keryle in Eastern Rewah, and at Emilia in Western Singrowlee, besides thin seams in other places, and he sent up samples of the two former to Allahabad, where they were tried on a locomotive engine, with a train of 190 tons weight, in the presence of the chief officers of the railway company; and the result showed that either specimen was suited for locomotive purposes. The Emilia coal gave the most favourable results, though in appearance the Keryle coal looked the most valuable.

241. Difficulties being anticipated in the way of obtaining a mining license from the Rewah Durbar, and it being also a question whether the railway company should undertake the working of these coal beds situated in native territory, if coal of good quality could be obtained from the proprietors of the neighbouring mines situated in British or Eastern Singrowlee, the latter were asked at what price they could deliver coal at Mirzapore if a cart road were made along the direct track, the southern portion of which passes through the Rewah State.

242. The Political Agent at Rewah was also asked whether the Maha Rajah would have any objection to the formation of this road, and whether he would contribute a moderate sum towards its construction.

243. Messrs. Hamilton, Brown and Company, the proprietors, replied that if the road were made they would supply coal at one-third per maund at Mirzapore.

244. The price of wood fuel at Allahabad was then under 12 annas for three maunds dried wood, the equivalent in effect to one maund of coal and wood was supposed to be procurable in the vicinity of Mirzapore at about the same rate.

245. The Political Agent at Rewah also wrote that he thought the Maha Rajah would not make the road to the British mines, as he had coal in his own territory, and would prefer making the road to his own coal fields, if ascertained to be worth working after examination by the geological survey.

246. As Messrs. Hamilton, Brown and Company's demand appeared exorbitant, and the Political Agent's reply about the road was unfavourable, there seemed no prospect at that time of securing a regular supply of coal from the British mines for the railways in the North Western Provinces.

247. The report and the facts ascertained by the Messrs. Taylor were then communicated to the superintendent of the geological survey, with a request that the coal beds recently discovered might receive early notice from the geologists engaged in the approaching survey of the Rewah country. His opinion on the quality and value of the coal was asked, and his advice sought in regard to the best means for procuring a constant supply of good coal at reasonable cost for the use of the railways in the North Western Provinces.

248. In June 1861, Mr. Oldham submitted a report to the following effect from Mr. Medlicott, who had inspected the Rewah coal field.

249. There is a considerable area stretching all across the southern part of the Rewah territory occupied by rocks of coal-bearing formation. This area has for its northern boundary a straight line, speaking in a general way, nearly parallel to the Kymore range, and about 15 to 20 miles south of it, along which occurs a geological fault; to the north of this fault there is no chance of finding coal, and as the dip of the coal strata is towards the north, the nearest beds will be found nearest to this line of fault, and the older and better beds as it is receded from, that is, the further south we go from the places to which we want to carry the coal. Coal has been found in some places in the south-west and south-east portions of this territory.

250. In the former six localities, where it had been found, were visited by Mr. Medlicott. Three of these on the Mahanuddee, two on the Johilla, one at Sohagpore. At the four first-mentioned there were mere streaks of coal among shale and lignite, the whole very pyritous, and the rocks in which it occurs are not those in which useful coal has ever been found.

found. At one of the places on the Johilla the true coal measures are found, but the seam discovered is 18 inches thick only, and very poor. At Sohagpore is a more promising seam, which it may at some future day be worth paying more attention to.

251. In the south-east portion of Rewah, 16 places, where coal has been found, were visited. Of these seven are not worthy of notice, five are somewhat better; at two, Emilia and Dudemia, there is good coal; but the best seam of all is at Keryle, where the coal is excellent, and should unquestionably be the first to be worked. Mr. Medlicott stated to Captain Hodgson that he had never seen coal so good in the Raneegunge field.

252. With regard to bringing the coal to market, Mr. Oldham stated that it might more easily be carried to the great Deccan road, south-west of Myhere, but that the market for it was no doubt Mirzapore, between which and Keryle lie the difficult passes of the Kymore range, the crossing of the Soane River, and the hilly and intricate country south.

253. The Political Agent at Rewah was then asked whether the Maha Rajah would be willing, after Mr. Medlicott's favourable report upon his coal field, to make the road through his territory to Keryle, provided the railway company made the necessary examination of the country, and furnished the agency for making the road, and showed that it could be made at reasonable cost. He was also asked at what rate it would be proposed to levy a seignorage upon coal mined in that territory.

CCLIV.—North of Indian Kumaon Iron Works Company, Limited.

254. The iron works of Messrs. Drummond & Co., and Rees, Davies & Co., were incorporated into one company to be in future styled the "North of Indian Kumaon Iron Works Company, Limited." Steps are being taken to make a survey of the several tracts of land assigned to this new company, and the deed of license is now under preparation, and will be executed shortly.

SECTION XVII.—SURVEYS.

CCLV.—Completion of survey of Jhansie Division, and organization of a party to survey certain forest tracts in Rohilkund.

255. THE survey and settlement operations which have been in progress in the Dehra Dhoon and in the Jhansie Division have already been detailed in paragraphs 128 and 129 of this report. The Surveyor General of India has reported the completion of the revenue survey of the whole of the Jhansie Division; and an application has been made to the Supreme Government for sanction to the cost of a small detached survey party to be employed, under the direction of Colonel D. C. Vanrenen, in surveying certain parts of the country in Rohilkund, which, either themselves bear forests, or border on the sub-montanic tracts, and were omitted from the survey conducted by that officer in the years 1852, 1853, and 1854.

SECTION XVIII.—HOSPITALS AND DISPENSARIES.

CCLVI. to CCLXVI.—Results of the administration of the Medical School at Agra.

256. The following paragraphs are taken from the report of the Superintendent of the Agra medical school for the year ending 31st March 1862:—

257. "The winter session closed on 31st March, and on the 1st April the annual examination commenced.

258. "Of the 16 senior students, candidates for the diploma of 1st class Native Doctor, ten passed a very good examination, one who had been very ill during the winter was remanded for three months, and five were wholly rejected.

259. "Of the junior students, numbering 68, 10 whose replies did not reach the required standard were dismissed.

260. "Several of these intend to continue their studies without receiving pay.

261. "Of candidates for admission as students there were 45.

262. "This seems a great falling off from the 70 who came forward in November 1861, but more in appearance than in fact.

263. "Of the 70 in November 30 belonged to Agra, and the superintendent is always suspicious that residents of Agra only present themselves for the sake of the monthly stipend; of the 45 applications this year only nine belonged to Agra, *i. e.*, there were 36 candidates from a distance against 40 in November last.

264. "The test for admission is a competent knowledge of reading and writing Oordoo, and the first four rules of arithmetic.

265. "In former years the boys were taught *materia medica* chiefly from written descriptions, and scarcely at all from seeing things done, now each boy at least once a week, with his own hands, assists in preparing the various compounds in use in our hospitals and from the raw materials procurable in the Agra bazar. They are also made to practise daily the art of prescribing, and the various signs and figures in use.

 266. "In

CHAP. XII. North Western Provinces.

266. "In the examinations, besides questions on the regular course of lectures, there were two sets of practical questions:—

"1st.—Practical Surgery.
"2nd.—Practical Pharmacy.

"Ten questions on each, value of each question 20 rupees, purposely made double the value of questions on other branches to show the importance placed on practical knowledge. The results in the examination of the 10 boys who have gained their diplomas are shown below:—

"TOTAL VALUE of each set of Questions.

Practical Surgery.	Rs.	*Practical Pharmacy.*	Rs.
Four gained	200	Three gained	200
Four „	180	Three „	180
One „	190	Two „	160
One „	130	Two „	140

"The results among the junior students were still more satisfactory."

CCLXVII.—Dispensaries opened during the year.

267. Dispensaries were opened during the year at the following places:—

Ghatumpore in zillah Cawnpore. | Koonch in zillah Jaloun.
Barrah in zillah Allahabad. | Calpee in ditto.

SECTION XIX.—VACCINATION.

CCLXVIII.—Results of the Vaccine operations in the Agra Division.

268. The vaccine operations in the Agra Division for 1861-62, were commenced in the beginning of November 1861, and closed at the end of March 1862.

TOTAL Result in the AGRA DIVISION:

MONTHS.	Successful.	Unsuccessful.	Doubtful.	Unknown.	TOTAL.
November 1861	286	390	37	60	773
December „	4,535	2,418	601	1,389	8,943
January 1862	4,406	1,917	553	3,691	10,567
February „	4,422	1,833	428	2,681	9,364
March „	3,506	1,301	245	1,938	6,990
TOTAL	17,155	7,859	1,864	9,769	36,637

SEX of those Vaccinated:

MALES.	FEMALES.	TOTAL.
17,172	19,465	36,637

AGES of those Vaccinated:

Six Months.	Six Months to One Year.	One Year to Two Years.	Two Years to Three Years.	Three Years to Four Years.	Four Years to Five Years.	Five Years to Ten Years.	TOTAL.
3,223	7,259	8,528	5,212	4,728	2,725	4,962	36,637

CASTES

CASTES or OCCUPATIONS of those Vaccinated:

Chamar	9,383	Nayee	546	Durzee	162
Thakoor	5,300	Tailee	480	Kayet	148
Brahmin	3,680	Goojur	394	Jogee	142
Jât	3,072	Dhobee	378	Chirimar	110
Mahomedan	2,138	Nudaff	324	Dhanook	94
Bukkal	1,719	Khutick	288	Cheepee	91
Kolee	1,390	Rajpoot	280	Bairagee	91
Kuhar	934	Lohar	259	Bhât	77
Kachee	871	Mullah	252	Munhar	66
Guddurya	842	Soonar	245	Mehtur	61
Koombar	728	Christian	179	Meena	51
Lotha	663	Mallee	176	Various castes in small number	196
Nujjar	652	Bhurjee	175		

The number of successful cases is below the average, which is due to the inexperience of certain of the vaccinators.

CCLXIX.—Results of the operations in Rohilkund.

269. The numbers vaccinated in the zillahs of Bijnore and Moradabad during the past season, are given in the Return below:—

Successful.	Unsuccessful.	Doubtful.	Result Unknown.	TOTAL.
17,761	7,274	2,969	3,859	31,863

The large per-centage of unsuccessful cases (nearly one-third), is a source of much regret to the energetic Superintendent; but one he fears not likely to be ever materially diminished, for the unpreventible (under present circumstances) exposure of the bare arms of the young naked urchins operated upon to the glare of the sun, dust, flies, and every other possible conceivable source of injury, contributes to this unfortunate result.

CCLXX.—Results in Kumaon and Ghurwal.

270. The numbers vaccinated in Kumaon and Ghurwal, are given in the Return below:—

Successful.	Unsuccessful.	Doubtful.	Result Unknown.	TOTAL.
12,907	1,447	692	331	15,377

CCLXXI.—Results contrasted with those in Rohilkund.

271. Comparing this return with that of Rohilkund, the Superintendent points out how great is the difference in the per-centage of successful cases, showing the favourable effect of the colder climate, not only upon the operation of the *virus* itself, but also in its necessitating the wearing of clothes, and so protecting the vesicle on the arm from the various injuries it is exposed to on subjects in the plains.

CCLXXII.—Increase in the demand and supply of Hill *virus*.

272. There has been a very material increase in the supplies of vaccine *virus* distributed from the Hill depôt during the past season, upwards of 12,000 crusts, besides points and glasses, having been sent to the North Western Provinces, Oude and Bengal. At no previous period have such constant demands been made upon it; every call has been abundantly responded to, and with a few exceptions, the *virus* sent has been acknowledged as of excellent quality and vigour.

SECTION XX.—MISCELLANEOUS.

CCLXXIII. and CCLXXIV.—Operations of the Government press at Allahabad, and the financial results.

273. From 1st September 1861 to 30th April 1862, work to the amount of *Rs.* 2,62,255. 13. 9. has been turned out from the Government press at Allahabad. Without entering into minute details, the amounts debited against the several Departments, for which work has been executed, is noted below :—

	AMOUNT.		
	Rs.	*a.*	*p.*
Government of Bengal - - - - - - -	3,089	2	9
„ of North Western Provinces - - -	1,29,191	7	8
„ of Oude - - - - - - -	2,964	4	9
„ of Punjab - - - - - - -	268	14	1
Financial Department, North Western Provinces -	9,529	2	6
Judicial „ „ -	44,237	15	2
Revenue „ „ -	53,397	9	8
Educational „ - - - - - - - -	15,242	9	2
Public Works „ - - - - - - - -	491	3	10
Police „ - - - - - - - -	2,108	7	5
Political Agencies - - - - - - - -	1	–	–
Miscellaneous sales - - - - - - -	1,734	–	9
GRAND TOTAL - - -	2,62,255	13	9

274. This out-turn has been effected at a cost of *Rs.* 2,38,561. 9. 5., exclusive of the sums debited as wear and tear of dead stock and house-rent of Superintendent. The former is calculated at 10 per cent. on furniture and 25 per cent. on types. This amount of depreciation is considered by the Superintendent much above what actually does take place; but as the error, if any, is on the safe side, he has retained it, and debited against the out-turn of the press a sum of *Rs.* 18,888. 4. 6., which, together with house-rent at 800 rupees for the eight months, deducted from the gross profit, gives a net profit of *Rs.* 4,005. 15. 10. The result admits of improvement.

CCLXXV. to CCLXXVII.—Introduction of a system of meteorological operations in the North Western Provinces.

275. It appeared to the Lieutenant Governor that many most interesting and valuable facts relative to the climate, &c., of these Provinces might be collected by a regular series of meteorological observations to be taken at certain selected places.

276. Accordingly the stations noted in the margin* were selected after consultation with the Principal of the Thomason College at Roorkee, and the duty of making the observations entrusted to the officers whose names are placed opposite each station, who, in each instance, consented to give their services to Government in aid of the above object.

277. A list of the instruments, and a copy of the instructions furnished to each officer, will be found in the Appendix, No. II., and the several sets of observations taken at each of the above Stations will be collected, compiled, and printed annually, together with a brief memoir under the direction of the Principal of the Thomason College at Roorkee, who has kindly undertaken the duty.

SECTION XXI.—RAILWAYS.

CCLXXVIII.—Railways under construction.

278. THE following statement relates to the year extending from 1st July 1861 to 30th June 1862, and not having been received in time for incorporation in the Public Works Section of this Report, is introduced in this place supplementarily.

There were two lines of Railway under construction in the North Western Provinces.

(I).—The main line of the East Indian Railway, which, when completed, will extend from the Kurrumnassa River, near Buxar, to the city of Delhi, a distance of 534½ miles. There will be three branches on this line,—one from Mogul Serai to the bank of the Ganges, opposite to the city of Benares, a distance of six miles; one from Cawnpore to the Ganges, a distance of 2½ miles; and the other from Toondla to the bank of the Jumna opposite to the city of Agra, a distance of 13¼ miles.

(II).—The Jubbulpore Extension, extending from Neinee, a point on the main line three miles east of Allahabad, Jumna Bridge, to Jubbulpore, a distance of about 220 miles.

279. *Main*

* *Roorkee.*—Principal, Thomason College.
Benares.—Dr. Dunbar, Deputy Inspector General of Hospitals.
Beawur.—Dr. Small, in medical charge of police corps.
Jhansee.—Dr. Annesley, Civil Assistant Surgeon.
Nynee Tal.—Dr. Moir, ditto.
Agra.—Dr. Plank, Superintendent Central Prison.

279. *Main Line, East Indian Railway.*—At the commencement of the year the line was open from Allahabad to Cawnpore, a distance of 123¼ miles. On the 1st of July 1861, the line was opened from Cawnpore to Etawah, a distance of 86¼ miles; on the 13th November 1861 it was opened from Etawah to Shekoabad, a distance of 34½ miles; and on the 1st of April 1862 it was opened from Shekoabad to the Agra terminus, a distance of 36 miles. Allahabad and Agra, the present and the former capitals of the North Western Provinces, are thus connected by a continuous line of railway 280 miles long.

CCLXXIX. and CCLXXX.—Operations on the main line, East Indian Railway.

280. On the remaining portion of the line, which is yet unopened, the state of the works at the end of the year may be briefly described as follows:—

Benares District.—From Karamnassa to Benares, 56¼ miles—Plate-laying has commenced, 28 miles are linked in, 26 miles completely laid, and 19 miles packed up—all the permanent way materials, except spikes, have been delivered. Stations are nearly complete with the exception of the Benares terminal station, for which complete designs had not been submitted to Government.

Mirzapore District.—Mogul Serai junction to Allahabad 92 miles.—Permanent way materials are being delivered, but plate-laying has not been commenced for want of sleepers. Stations are in progress, and girder bridges being erected.

Agra District.—Toondla junction to Allyghur, 44⅓ miles.—Plate-laying was commenced in April last, and 16 miles have been laid. The stations on this length are well advanced.

Delhi District.—Allyghur to Delhi, 82 miles—The whole of the brickwork in culverts, &c., is completed, and the road ready to receive the permanent way as far as Ghazeeooddeen Nuggur, a distance of 70 miles. In the Hindun bridge the whole of the piers and abutments are founded and carried up to the springing of the arches.

281. The present state of the three great iron bridges is as follows:—

CCLXXXI.—Present state of the three great bridges.

Tonse Bridge.—Seven spans of 150 feet.—Of the two abutments and six piers, one abutment and four piers have been built up to full height; one pier is built to half height, one abutment has the foundation wells sunk, and one pier is not completely founded.

One iron span has been erected and the staging removed, the deflection being only five-eighths of an inch.

Jumna Bridge.—Allahabad, 14 spans of 205 feet.—Of the two abutments one is completely founded and partly built up, and the other is half founded. Of the 13 piers, three piers are built up to full height, three piers are partly built, four are completely founded, one has to be sunk six feet, one has to be sunk 14 feet, and of the remaining pier half the wells have to be rectified. One iron span has been erected and the staging removed; the iron work for about eight spans has been received at the bridge site. The north approach to this bridge is a viaduct consisting of 24 spans of 30 feet. The arches of 13 of these are turned, and the remainder are in progress.

Jumna Bridge.—Delhi, 12 spans of 205 feet.—One abutment and three piers are built up to full height; two more piers are being built up, two more and part of east abutment are founded on rock, and the remaining four piers are not yet completely founded.

282. The Electric Telegraph is now in working order from the Karamnassa to Hatras station, a distance of 450 miles; on this distance 29 telegraphic stations are at work. The telegraph has worked satisfactorily.

CCLXXXII.—The electric telegraph.

283. The amount of capital expended on construction during the year amounted to 44,33,162 rupees, and the cost per mile of the entire line from Howrah to Delhi, according to the last estimate, may be assumed at 1,67,500 rupees.

CCLXXXIII. to CCLXXXIX.—Financial results.

284. The gross earnings on the open line during the year were *Rs.* 17,48,289. 2. 5., of which, *Rs.* 8,07,758. 6. 6. were expended on the maintenance and working of the line, and *Rs.* 9,40,530. 11. 11. were profits. The expenses and profits were thus 46·2 and 53·8 per cent. of the earnings.

285. The average length of the line open during the year was 240 miles, the cost of which, according to estimate as above would be 4,02,00,000 rupees, the opened portion of the line may thus be said to be paying at the rate of 2·34 per cent.

286. The receipts averaged 7,284 rupees per mile open. The cost of maintenance of the open line amounted to *Rs.* 94,246. 3. 2., or 772 rupees per mile open, and the other working charges to *Rs.* 6,86,513. 1. 10., or 2,860 rupees per mile open.

287. Three thousand eight hundred and seventy-four first class, 7,079 second class, and 331,982 third class passengers travelled during the year; the receipts from this traffic amounted to 6,71,705 rupees.

CHAP. XII. North Western Provinces.

288. Fifteen lakhs, eighty-eight thousand five hundred and seventy-nine maunds of goods were carried for the public during the year, and 14,98,412 maunds were carried for railway purposes; the receipts from this source amounted to 10,20,595 rupees.

289. The cost of working the telegraph was *Rs.* 26,999. 1. 6. during the year, while its earnings were *Rs.* 4,756. 7.

CCXC.—Collision

290. The accidents which have occurred during the year are as follows:—

Collisions.—A collision took place at Serathoo between the up and down goods-train caused by the driver of the up goods-train disregarding the station signal light which indicated danger. The guard of the down train was injured slightly.

A passenger-train ran into a truck at Burtua station, owing to the carelessness of the pointsman who turned the train into a siding.

A collision between a goods-train and a pilot-engine took place at Cawnpore station, owing to the carelessness of the pointsman. Some of the passengers were slightly injured.

A train came in contact with the gate of a level crossing, owing to the carelessness of the gate-keepers.

A train came in contact with a trolly on the line.

Trains running off the line.—Three cases occurred, caused by the carelessness of the pointsmen, and one case caused by the high speed at which an up passenger-train was driven into the Etawah station.

CCXCI.—Fires.

291. *Fires.*—Four fires took place in goods-train, caused by sparks from the ash-pan of the engine being blown up upon the train. Another fire was caused by a spark from the engine chimney, the gauze wire of which was defective, and one fire was caused by spontaneous combustion of a bale of blankets. The worst fire occurred on the 5th of April, when the goods in three trucks were more or less damaged; compensation was claimed to the extent of *Rs.* 28,420. 11. 3, and the spoilt goods were sold by public auction, and realised *Rs.* 12,337. 4. During the whole year 21,541 rupees was paid for compensation for losses sustained by the public on this railway.

CCXCII.—Total accidents.

292. *Total Accidents.*—Six natives were run over, and five of them died from the effects; one native greaser was crushed to death between the step of an engine on which he was riding, and a truck on a siding at Agra; one cooly was crushed to death at Allahabad station, between the buffers of two trucks.

CCXCIII. to CCXCVII.—Operations on the Jubbulpore Extension Line.

293. *Jubbulpore Extension.*—The remarks on this line must necessarily be brief.

All the land plans for the line have been completed, with the exception of about 13 miles in the Sleemanabad district, and 20 miles in the Entowah and Myhere districts. These surveys are now being made during the rains as a matter of urgency.

294. The extreme side widths have been set out, and the land officially taken over are all land under cultivation for the first 67 miles out of Allahabad, and from the 128th to the 154th miles (Myhere to Jokohai).

295. Orders have been given through the civil authorities to the cultivators to leave unsown a uniform width of 100 feet on each side of the centre line wherever the setting out has not yet been done. This will reduce to a minimum the damage likely to be done to the crops by the engineers employed on this during the next two months.

296. The final longitudinal section, with all requisite information as to waterways, rock, soil, bridge, foundation, &c., was sent to England in April last. Nine permanent bungalows have been constructed on the line, and the whole of the present staff of engineers and inspectors have been under shelter since May last.

297. The amount of expenditure on capital account during the year was 2,54,032 rupees.

(signed) *George Couper,*
Secretary to the Government of the
North Western Provinces.

APPENDICES to the REPORT on the Administration of the NORTH WESTERN PROVINCES, for the Year 1861-62.

APPENDIX I.

RULES for the Administration of Civil Justice in the *Terai District* of the *Rohilcund Division*, passed by Government, North Western Provinces, under Sections 2 and 3, Act XIV. of 1861.

Jurisdiction of the Courts.

Rule I. The superintendent of the Terai district shall have authority to try original suits, without limit of value, and regular appeals from the decision of the assistant superintendent in original suits.

Rule II. The assistant superintendent shall have authority to try original suits not exceeding 1,000 rupees in value.

Rule of limitation.

Rule III. No action shall be entertained unless it be instituted within the periods hereinafter mentioned from the time that the cause of action arose or accrued in each description of cases:—

Action respecting the succession or right to real and personal property, and respecting partnership.—Twelve years.

Action for debts on bond, or accounts not being partnership accounts, or accounts of retail purchases settled at short periods.—Three years.

Action for other debts and other accounts than the above, injuries to person or character, disputes regarding marriage, caste, or non-fulfilment of contract.—One year.

Provided that the time shall be excluded during which the plaintiff shall be under the disability of infancy, lunacy, idiotcy, or during which the plaintiff shall be precluded by law from suing the defendant, by reason of any disability whatever, either of the plaintiff or of the defendant.

Trial of original suits.

Rule IV., Clause 1. Every suit shall be commenced by a plaint, which shall be presented to the court by the plaintiff in person, or by his recognised agent.

Clause 2. Every suit shall be instituted in the court of the superintendent, who will either try such suit himself, or refer it for trial to the court of the assistant superintendent, provided that he be competent, in respect of the value of the suit, to try the same.

Clause 3. The term "recognised agent" is defined to mean a personal servant, partner, relation, or friend, whom the court may admit as a fit person to represent a party; persons carrying on business on behalf of bankers and traders, such as gomashtahs; managing agents of landholders, such as karindahs; nearest male relations of women, and persons *ex officio* authorised to act for Government.

Clause 4. No vakeels or mooktears are to be admitted in the civil courts of the Terai district.

Rule V. The plaint shall be distinctly written, either in Hindee or Oordoo, and shall contain the following particulars:—

1st. The name, description, and place of abode of the plaintiff.

2d. The name, description, and place of abode of the defendant, so far as they can be ascertained.

3d. The relief sought for, the subject of the action, the cause of action, and when it accrued.

Rule VI. Every plaint shall be engrossed on stamp paper of the value prescribed by Act XXXVI. of 1860, as modified in its application to non-regulation provinces by the Notifications of the Government of India, Nos. 1828 and 2095, dated respectively the 25th September and 26th October 1860.

Rule VII. If the plaintiff sue on any written document, or rely upon any such document as evidence in support of his claim, he shall produce the same in court when the plaint is presented, and at the same time deliver a copy of the document, to be filed with the plaint; if the document be an entry in a book, the plaintiff shall produce the book to the court, together with a copy of the entry on which he relies, to be filed with the plaint. And unless such document be so delivered in, or its non-production at the time be sufficiently excused, or unless the court may see fit to extend the time for producing the same, it shall not be admitted to proof in support of the claim.

Rule VIII. The court, on receiving a plaint, shall proceed to make inquiry by examination of the plaintiff or his recognised agent, upon oath or affirmation, as to the merits of the claim, and shall record the examination in full. If it should appear to the court that the plaintiff has no *primâ facie* cause of action; or that the defendant or matter of the suit is not within the jurisdiction of the court, or that the action is barred by lapse of time, the Court shall reject the plaint,

Rule IX. The court, upon rejecting a plaint, shall record its decision, which shall be reduced to writing in the vernacular language of the judge, together with the reasons upon which it is founded.

Rule X. If the plaint be admitted, it shall be entered, with all the particulars described in Rule V., in a book to be kept for the purpose, and to be called the Register of Civil Suits; and the entries shall be numbered, in every year, according to the order in which the plaint is presented. The Register shall be prepared in the Form A. appended to these Rules.

Rule XI. When the plaint has been registered, a summons, under the seal and signature of the court, shall be issued to the defendant to appear and answer the claim, on a day to be therein specified, in person, or by a recognised agent. The summons shall specify the name and residence of the plaintiff, and the amount, as well as the description of the claim.

Rule XII. The court shall determine, at the time of issuing the summons, whether it shall be for the settlement of issues only, or for the final disposal of the suit, and the summons shall contain a direction accordingly.

Rule XIII. The day to be specified in the summons shall be fixed with reference to the state of the file and the distance that the defendant may be, or supposed to be, at the time, from the place where the court is held; and the summons shall order the defendant to produce, on his appearance in court, any document in his possession of which the plaintiff demands inspection, or upon which the defendant intends to rely in support of his defence.

Rule XIV. The officer in charge of the summons shall endeavour to obtain the signature of the defendant in acknowledgment of service. In the event of the defendant's absence, the officer shall proceed to his residence, and acquaint his family or neighbours with the object of his mission, and shall obtain the signature of two credible witnesses to the summons, in proof of service. On his return the Nazir shall ascertain from him, and report in writing, the mode in which the summons has been served.

Rule XV., Clause 1. On the expiration of the period specified in the summons, if the defendant fail to attend the court, proclamation shall be issued for his attendance within a further period to be fixed according to local circumstances in the different parts of the Terai district.

Clause 2. If within the period fixed by the summons or proclamation, an application should be made to the court to permit the answer to the plaint to be filed through "a recognised" agent, or in writing, the court may, on special ground shown to its satisfaction, grant the application, provided that the prohibition contained in Clause 4, Rule IV., shall in every case be strictly observed.

Clause 3. If the defendant shall fail to attend, or shall not have been excused personal appearance under the preceding Clause, the court may, in its discretion, issue a warrant for the arrest of the defendant, who shall thereupon be taken into custody and brought before the court; but no defendant shall be so arrested who shall give to the party charged with the warrant a declaration in writing that he is willing that the case should be tried *ex parte*.

Rule XVI. On the appearance of the defendant in answer to the summons, or in arrest, or on the appearance of the defendant's "recognised agent," if personal attendance has been excused, the parties to the suit shall be confronted, and shall be interrogated on oath or solemn affirmation; and a written answer may also be received for the defendant, at the discretion of the court. The precise points at issue between them, which are material to the decision of the suit, shall be determined, or the suit shall be finally disposed of, according as may have been directed in the same summons. Either party may cross-examine the other, and any witnesses then present, or documentary proof adduced, may be examined. If an answer be allowed to be furnished in writing, it should be on stamped paper of the required value.

Rule XVII. If, after such interrogation and examination of evidence, a decree can be properly made without further inquiry, the court shall pronounce its judgment, and make its decree accordingly. The judgment shall be reduced to writing before it is delivered, in the vernacular language of the officer presiding in the court, and shall state the points to be decided, the decision thereon, and the reasons for the decision. It shall be signed by the said presiding officer, and dated on the day in which it is pronounced. The decree shall also state whether the amount of any sum adjudged is to be paid by instalments, and shall specify the dates and amounts for payment of instalments, together with the amount of costs; and, in case of divided costs, the portions chargeable to parties, as well as the amount of any damages awarded on the ground of a suit being found to have been groundless and vexatious.

Rule XVIII. But if it should be impracticable to pass a decree without further inquiry, that is to say, if any issue result from the interrogatories on which it is necessary to hear further evidence, the court shall call upon both parties to adjust the dispute amicably, within a fixed period, or to consent to arbitration, and to furnish a list of such documentary and oral evidence as each is able to tender, or desires to be called.

Rule XIX., Clause 1. If the parties to the suit will not adjust it privately, or agree to arbitration, the court shall procure the attendance of the witnesses, and require the production of the documentary evidence on a day fixed.

Clause 2. The court shall ascertain and record the names of the witnesses whom the parties intend to bring forward, and whether they will bring their own witnesses, or whether they, or either of them, require the assistance of the court to procure the attendance of a witness, either to give evidence or to produce a document. The court shall then fix a convenient day, not more than 10 days distant, for the examination of witnesses and the trial of the suit, and shall, if required to do so, subpœna the witness or witnesses of either party, or of both parties, to attend on the fixed day, and the trial shall take place on that day, unless there be sufficient reason for adjourning it, which reason shall be recorded by the court.

Rule XX., Clause 1. If either party should fail to produce his proof within the time allowed him, or to take out a subpœna for the attendance of any witness whose attendance he may require to be enforced, the suit shall be proceeded with and determined as if such party had declined to produce any proof.

Clause 2. If, on the day fixed for the trial, under Clause 2 of Rule XIX., the witnesses should appear, they shall be examined, and the evidence of each witness shall be recorded in writing, in a narrative form, in the presence and under the personal superintendence of the presiding officer, and in the presence of the parties or their "recognised agents," and each party may cross-examine any witness produced by the opposite party.

Clause 3. Exhibits produced in support either of the plaint or the defence must be engrossed on stamp paper prescribed by Act XXXVI. of 1860, as modified by the notifications from the Government of India, Nos. 1828 and 2095, dated respectively the 25th September and 26th October 1860. Exhibits shall not be admissible as valid evidence unless they be engrossed upon stamp paper as above directed.

Rule XXI. The court, after considering the arguments and evidence, shall pronounce its judgment in open court, and record its decree in the manner prescribed by Rule XVII.

Rule XXII., Clause 1. Whenever a suit may be referred to arbitrators, as provided for in Rule XVIII., a term shall be fixed for the award to be presented, and an officer of the court shall be required to attend for the purpose of calling the parties and their witnesses before the arbitrators. The arbitrators shall not be permitted to leave the precincts of the court until they shall have delivered their award.

Clause 2. When the arbitrators have arrived at a decision, their written award, together with any depositions of witnesses which they have taken in the case, shall be presented and acknowledged in open court, and in the presence of both parties to the suit.

Clause 3. Although every consideration should be given to the award of arbitrators, especially when they are unanimous, yet in no case shall the court be bound to accept such award, unless satisfied that it is a reasonable and just decision. If the court shall have clear and strong reasons to doubt the justice of the decision, it shall be competent to interrogate the arbitrators as to the grounds upon which they have formed their opinion, and the same shall be recorded on the back of the document itself, and thereafter the court may either return the proceedings to the arbitrators, and desire them to reconsider their award, and to record it with more clearness and precision, or it may direct a fresh arbitration, or it may proceed to try and dispose of the case itself.

Clause 4. The case having been completed by award of arbitrators accepted by the court, or by the court having determined on the merits, the court shall declare its judgment, and record its decree in the manner prescribed by Rule XVII.

Rule XXIII. Certified copies of the decree and judgment shall be furnished to the parties or their "recognised agents," on application to the court and on the production of the necessary stamp paper, where stamps are required for that purpose by any law for the time being in force. The application may be made either orally or by writing on unstamped paper. The date on which application for copy may be made; the date on which the necessary stamp paper for a copy may be presented; the date of the copy being completed, and of its actual delivery or tender, shall be endorsed on the original decision, and on the copy or copies also. If the applicant shall fail to attend, or shall refuse to receive the copies, the court shall certify the same on the back of the copies which shall then be filed with the record of the case.

Execution of decrees.

Rule XXIV. Execution of decree may be applied for by petition presented to the court which pronounced the decree.

Rule XXV., Clause 1. The petition shall set forth in tabular form the following particulars: viz., the number of the suit, the names of the parties, and the date of the decree; the subject of the decree; whether an appeal has been preferred or admitted from the decision; whether any and what adjustment of the matter in dispute has taken place since the date of the decree; the specific amount due to the petitioner under the decree, whether on account of costs of suit or otherwise, and the name of the individual against whom the enforcement of the decree is solicited.

Clause 2. An attested copy of the decree shall be presented with the application.

Rule XXVI. If the court shall have awarded payment of any sum of money by instalments, and default should be made in the payment of any instalment, as it falls due, execution shall issue upon the application of the decree-holder for the full amount of all the instalments remaining unpaid.

Rule XXVII. Execution on a judgment shall not issue against the heir or other representative of a deceased party without notice to such heir or other representative to appear and be heard.

Rule XXVIII. No process of execution shall issue to enforce any judgment or decree passed by the civil courts of the Terai district, unless some proceeding shall have been taken to enforce such judgment or decree, and to keep the same in force within one year next preceding the application for such execution.

Rule XXIX. Execution of decree, if applied for within the period prescribed by the preceding Rule, may be enforced at once, provided that if an appeal shall have been preferred and adequate security be tendered, or if, within the period of appeal, such security shall have been tendered, execution may be stayed until the appeal shall have been decided, or until the period of appeal shall have expired without institution of appeal.

Rule XXX. In pending cases, if the court shall be satisfied that the defendant is preparing to alienate his property, or to remove himself from the court's jurisdiction, security may be demanded, and, if not tendered, the court can arrest the person or attach the property of the defendant to an amount sufficient to satisfy the claim.

Rule XXXI. Execution may be enforced by delivery of possession of contested property, or by arrest of person, or by attachment and sale of property in satisfaction of the decree, and of costs of suit and of execution.

Rule XXXII. If the decree-holder should apply for execution by arrest of the defendant's person, he shall deposit in the court, at the time of the issue of the warrant, diet-money for one month of 30 days, after the rate of one anna per diem, unless the court for any special reason direct the deposit of diet-money at a higher rate, which shall in no case exceed four annas per diem.

Rule XXXIII. Diet-money at the same rate shall be made previous to the commencement of every succeeding month of the imprisonment, on failure of which the party confined shall be discharged.

Rule XXXIV. All diet-money spent in providing subsistence for any prisoner may be added to the costs in the suit, and any diet-money not so spent shall be returned to the party who deposited the same.

Rule XXXV., Clause 1. In executing a writ of execution against the property of any defendant, the court shall direct such portion of his moveable property to be attached as may appear sufficient to cover the amount due; and it will be only when the amount realised from such property shall fail to satisfy the decree, that the court will be competent to order the attachment of any immovable property.

Clause 2. In no case shall the tools and implements of the trade or occupation of the defendant be sold in execution of decree, nor shall land in which a proprietary right has been acquired, by whatever means, be sold in execution of a decree without the sanction of the Commissioner first obtained.

Clause 3. The attaching officer shall prepare an inventory of the articles distrained, and shall give them in charge of some respectable person from whom a receipt must be taken to be filed with the proceeding of the case.

Clause 4. As soon as the attachment has been effected, a proclamation in the current language of the country describing the property attached, and specifying the time and place of the proposed sale, shall be issued at least 30 days before the appointed day of sale, and a copy thereof shall be affixed to the defendant's dwelling house, and another to the building in which the court is held.

Clause 5. If within the period of the proclamation any claim shall be preferred to the property thus advertised for sale, or if any objection shall be raised against the proposed sale, it shall be competent to the court to inquire into such claim or objection summarily; and if satisfied as to its validity, to release the said property from attachment, or to postpone the sale; or, if the claim should appear to be frivolous, to dismiss it with all the costs incurred in the investigation, provided always that any decision passed on such claim shall be held conclusive only as between the parties who have been before the court.

Clause 6. If, pending the investigation of such a claim or objection, the sale be postponed, and the claim be disallowed, a second proclamation of a term of not less than 10 days shall be issued for the purpose solely of giving notice to intending purchasers. No other objectors will be heard.

Clause 7. On the day fixed for sale, the attached property shall be divided into convenient lots, and each lot shall be put up in succession until the amount of the decree be realised. When the decree is satisfied, the sale shall cease, and the property remaining unsold shall be released from attachment.

Clause 8. The entire sum bid for movable property must be paid up within 24 hours, and delivery of the property withheld until the money is paid. A deposit of 10 per cent.

cent. on the price will be required at the time of sale, and this deposit, unless redeemed within the period above prescribed, will be forfeited, and the property will be re-sold at the risk of the original purchaser.

Clause 9. In sales of immovable property the full amount of the purchase-money shall be paid within 15 days, in default of which the deposit of 10 per cent. required at the time of auction will be forfeited, and the property will be re-sold at the risk of the first purchaser.

Rule XXXVI. No compromise on a decree, or payment in satisfaction, shall be admitted unless notified to the court *vivâ voce* or by a writing, which may also be sent through the local tehseeldar; and no execution of decree, which has been relinquished by the decree-holder, shall revive, unless on good reason shown to the satisfaction of the court.

Rule XXXVII. The record of execution of decrees shall always be an annexure of the file of the original suit.

Penalties.

Rule XXXVIII. If any witness, on whom a subpœna shall have been duly served under Clause 2, Rule XIX., shall neglect to attend the court, or, being present in court, shall refuse to give evidence, or to subscribe his deposition, the court shall be authorised to issue an order in writing to the Nazir either to apprehend and bring the witness before the court, or, if he be present, to take him into custody; and the court may impose on such witness a fine, not exceeding 500 rupees, for his default or refusal, realisable by the attachment and sale of his property, and may commit him to close custody until he shall consent to give his evidence or to sign his deposition; provided that no fine imposed under this Rule shall exceed the amount of the property under litigation in the suit.

Rule XXXIX. If a witness, for whose attendance a subpœna shall have been issued as aforesaid, shall fail to attend, the court, upon proof that the evidence of such witness is material, and that the said witness is absconding or keeping out of the way to avoid attendance, may cause a proclamation, requiring the attendance of such person to give evidence at a time and place to be therein named, to be affixed, in the presence and with attestation of two householders, to his house; and if, nevertheless, such person should not attend at the time and place to be named, his property, real and personal, to such amount as the court shall deem reasonable, shall be liable under an order of the court to attachment and sale.

Rule XL., Clause 1. Insolent or disrespectful behaviour to the court while sitting, or any conduct tending to interrupt the due course of business, shall be deemed a contempt of the authority of the court, and shall be punishable by a fine not exceeding 100 rupees, commutable to imprisonment at the public expense in the civil gaol for a period not exceeding 30 days.

Clause 2. The order of the court shall in such case state the facts constituting the contempt, and such order shall be open to a summary appeal within 30 days.

Rule XLI., Clause 1. The civil courts of the Terai district are hereby empowered to hear and determine cases of resistance of their own processes, occurring within their own jurisdiction, provided they be unattended with personal violence; and on proof of the offence may adjudge the offender to pay a fine not exceeding 100 rupees, and in default of payment, to be imprisoned, for any period not exceeding 30 days, in the civil gaol at the public expense.

Clause 2. If the resistance of process be attended with personal violences, or other aggravation, the case shall be referred by the civil court to the Superintendent of the Terai district in his capacity of magistrate, and upon such reference, the Superintendent shall proceed under the "Rules for the administration of Criminal Justice in the Terai district."

Clause 3. The court, on the statement on oath or solemn affirmation of any peon or other officer resisted in the execution of any process, may summon the person accused to answer the charge, and, on failure of such person to attend, may issue a warrant for his apprehension.

Appeals.

Rule XLII., Clause 1. Every decision passed by the Superintendent of the Terai district in original suit shall be open to a regular appeal to the Commissioner of Rohilcund, whose decision shall be final; provided that, whenever the decision of the Superintendent and the Commissioner shall differ, it shall be in the option of the Government, on petition being presented, to refer the proceedings to the Sudder Court for their report and opinion, and thereafter to pass such orders as may appear proper.

Clause 2. From the decision of the Assistant Superintendent in original suits, a regular appeal shall lie to the Superintendent.

Clause 3. From the decision of the Superintendent in regular appeal, a sdecial appeal may be admitted by the Commissioner of Rohilcund, for good and sufficient reasons, to be set forth at length in the order for admission.

Rule XLIII. The petition of appeal shall be written on stamped paper of the value prescribed in Act XXXVI. of 1860, as modified by the notifications from the Government of India, Nos. 1828 and 2095, dated respectively the 25th September and 26th October 1861, according to the value of the property to which the appeal relates. The petition of appeal shall be accompanied by an authenticated copy of the decision or order appealed against.

Rule XLIV. An appeal from the decision of the Assistant Superintendent must be preferred within 30 days; and an appeal from the decision of the Superintendent, whether in original suits or in regular appeals, must be preferred within 60 days from the date of the order or decision appealed against; provided that the period which may intervene between the presentation of stamped paper for a copy, and the completion of the copy, shall not be included in the said terms of 30 and 60 days.

Rule XLV. The petition of appeal shall set forth concisely, and under distinct heads, the ground of objection to the decision appealed against, without any argument or narrative, and such grounds shall be numbered consecutively.

Rule XLVI., Clause 1. The petition of appeal shall be preferred by the appellant in person or by his recognised agent, and the Appellate Court shall give immediate notice to the respondent, and, if it think necessary, may summon the respondent.

Clause 2. The Appellate Court may take additional evidence in a case of appeal, or remand it for further investigation.

Clause 3. The Appellate Court may suspend the execution of a decree pending the decision of an appeal.

Rule XLVII. No order or decision shall be reversed or modified, and no case shall be remanded on account of any error, defect or irregularity, not productive of injury to either party.

Rule XLVIII. A register of regular appeals, and a register of special appeals, shall be kept in each Appellate Court in the Forms B and C appended to this Resolution.

Rule XLIX. A register of applications for execution of decree shall be kept in the court of the Superintendent and of the Assistant Superintendent, according to the form given in Appendix D.

By Order of the Honourable the Lieutenant Governor, North Western Provinces,

(signed) *G. Couper*,

Secy. to the Govt. North Western Provinces.

APPENDIX II.

RULES for the Administration of Criminal Justice in the *Terai District* of the *Rohilkund Division*, passed by Government, North Western Provinces, under Sections 2 & 3, Act XIV. of 1861.

ON JURISDICTION.—Section 1.

Number and description of functionaries to be employed in the administration of criminal justice.

Clause 1. There are to be four grades of functionaries employed in the administration of criminal justice in the Terai district, viz.:—

The Commissioner of Rohilkund.
The Superintendent of the Terai district.
The Assistant Superintendent of the Terai district.
The Tehseeldars.

Tehseeldars may be empowered to try cases referred to them, and to sentence to a fine of 50 rupees, or imprisonment for six months with or without labour.

Clause 2. The tehseeldars may be invested by the Government with powers to try criminal cases. When so invested their power will be restricted to the trial of cases referred to them by the superintendent, and to passing sentence of fine not exceeding 50 rupees, commutable to imprisonment with or without labour for six months, or of imprisonment only for that period. In all cases calling for a severer sentence they shall send up their proceedings to the superintendent.

Clause 3.

Clause 3. The ordinary powers of the assistant superintendent will be restricted to the trial of cases referred to him by his immediate superior, in which he is competent to pass sentence of fine not exceeding 100 rupees, commutable to imprisonment for a period not exceeding 12 months, or of imprisonment only not exceeding 12 months (in both instances with or without labour at his discretion), in cases of misdemeanor, assault, or other petty offences for which such punishment may appear adequate. The assistant superintendent may also be authorised by the Commissioner to receive petitions and complaints as provided for in Act X. of 1854, and to proceed thereupon according to these Rules.

Assistant superintendents empowered to try cases referred to them by their superior; and to pass sentence of fine of 100 rupees, or imprisonment for 12 months, or imprisonment alone for that period.

Clause 4. An appeal from all orders passed by the assistant superintendent or tehseeldars shall lie to the superintendent, if presented within one month from the date thereof.

Appeal from order of assistant superintendent to the superintendent.

Clause 5. The superintendent shall have the full powers of a magistrate of a district. He will have the general charge of the police, and will be entrusted with the trial in the first instance, or committal, of all persons charged with offences.

The superintendent vested with the charge of the police, and the trial in the first instance of all persons charged with offences.

Clause 6. In cases of burglary or theft, unattended with aggravated personal violence, in which the property stolen may not exceed in value the sum of 300 rupees, and also in cases of burkundazes, or others employed in guarding prisoners, who may be convicted of having wilfully permitted any prisoner under their custody to escape, the superintendent may pass sentence of imprisonment with labour for two years, or fine to the extent of 1,000 rupees, or both imprisonment and fine. In cases of bribery and extortion on the part of any native officer in the pay of Government, he may pass sentence of fine not exceeding 200 rupees, or of imprisonment not exceeding two years, with or without labour, whenever such sentence may appear to be adequate to the demands of justice. In cases of gross misconduct on the part of officers or police, as also in cases of burkundazes and others employed in guarding prisoners, who may be convicted of having by gross neglect permitted any prisoner under their custody to escape, the superintendent may pass sentence of imprisonment with or without labour for a period not exceeding 12 months.

The superintendent empowered in certain cases to pass sentence of imprisonment, with labour, for two years, or fine to the extent of 1,000 rupees, or both imprisonment and fine.

Clause 7. In all cases of affray or assaults unattended with serious wounding and loss of life, as also of unaggravated misdemeanors, including all miscellaneous offences detailed in the list published with the Circular Order of the Nizamut Adawlut, No. 398, dated 11th April 1850, the superintendent may pass sentence of fine not exceeding 200 rupees, commutable to imprisonment for a period not exceeding one year, or of imprisonment only for that period; in both instances with or with or without labour, at his discretion.

In cases of affrays, unaggravated misdemeanors and miscellaneous offences, the superintendent may pass sentence of fine not exceeding 200 rupees, or imprisonment for one year.

Clause 8. In all cases of a more aggravated nature, as also in cases of perjury and forgery, the superintendent shall refer his proceedings to the Commissioner, in the manner hereinafter provided.

Cases of a more aggravated nature to be referred by superintendent to the Commissioner.

Clause 9. An appeal from all original orders passed by the superintendent shall lie to the Commissioner, if presented within two months.

Appeal from superintendent lies to Commissioner.

Clause 10. The powers of the Commissioner shall extend to the trial of all cases referred to him by the superintendent, and to the revision of all proceedings which he may think fit to call for from any subordinate authority within the term of six months from the date on which a final order thereon may have been passed by such subordinate authority. It is not intended by this provision to limit the power of the Commissioner to call for any proceedings that he may require for inspection. Provided, however, that if, after the expiration of the term above indicated, he shall see cause for setting aside the decision of a subordinate authority, he shall report the particulars of the case in an English letter to the Government, and obtain its sanction for proceeding to the revision of the case.

Commissioner empowered to try all cases referred by superintendent, and to revise all proceedings of lower authorities within six months after sentence.

Clause 11. In all cases of theft, burglary, and dacoitee, unattended with murder, and of wounding with intent to commit murder, the Commissioner shall be competent to pass sentence of imprisonment with labour, in banishment or not at his discretion, for a term not exceeding 14 years. Trials for rape, in which the Commissioner may consider a period of imprisonment not exceeding 14 years to be sufficient punishment for the offence, are also placed within his competency.

In heinous offences, Commissioner may pass sentence of imprisonment for 14 years, with labour in irons in banishment.

Clause 12. In all cases of affrays, culpable homicide not amounting to murder, and other offences, which the Sessions Judges in the Regulation Provinces are competent to dispose of without reference to the Nizamut Adawlut, it shall be lawful for the Commissioner to pass a sentence of fine not exceeding 500 rupees, or of imprisonment, with or without labour, for a term not exceeding seven years. Provided, however, that in cases of perjury, forgery, knowingly uttering forged documents, forging counterfeit coin, or counterfeit stamps, or counterfeit public securities or bank notes, as also in cases of clipping, filing, drilling, or otherwise debasing the coin, it shall be competent to the Commissioner to pass sentence of imprisonment, or of imprisonment and fine, or of fine only, to an unlimited amount. Accessories to murder before and after the fact shall be similarly punishable by the Commissioner

In cases of affrays, and other offences, Commissioner may pass a sentence of fine of 500 rupees, or of imprisonment, with or without labour, for seven years.

CHAP. XII. North Western Provinces.

by imprisonment, or imprisonment and fine, or fine only, to an unlimited amount, whenever the case, as it regards the principals, may not be referred to the Nizamut Adawlut for confirmation of a capital sentence under section 4, Act XIV. of 1861.

In cases of murder, and other serious cases, Commissioner may pass sentence of death or transportation under certain conditions.

Clause 13. In cases of murder, and in all cases demanding a more severe sentence than imprisonment for 14 years, the Commissioner is competent to pass sentence of imprisonment for life in transportation beyond seas, or sentence of death, provided that before sentence of transportation shall be considered final, the proceedings on the trial shall be laid before the sessions judge, either of Bareilly or of Moradabad, as may be most convenient, when, if his judgment be concurrent, the sentence shall be carried out; if otherwise, the proceedings shall be laid before the Nizamut Adawlut for final sentence; provided further that, as required by section 4, Act XIV. of 1861, no sentence of death passed by the Commissioner shall be carried out until it be confirmed by the Nizamut Adawlut, to whom the proceedings on every trial, in which the Commissioner may pass sentence of death, shall be referred for that purpose.

Commissioner competent, during the absence of the superintendent, to invest the assistant with powers defined in Clauses 5, 6, 7 and 8.

Clause 14. It shall be competent to the Commissioner to invest the assistant superintendent, during the temporary absence either from the district or station of the superintendent, with the powers defined in Clauses 5, 6, 7 and 8 of this section.

Also to invest the assistant superintendent with the above powers when the state of business renders such measure expedient.

Clause 15. It shall also be competent to the Commissioner to invest the assistant superintendent with the powers defined in Clauses 5, 6, 7 and 8 of this section; whenever, from the state of the business in the district, he may deem such a measure expedient, and may consider the assistant superintendent to be duly qualified. Provided that an immediate report shall in every instance be made to the Government, who will either confirm or set aside the arrangement, as may be thought proper.

RULES OF PROCEDURE.—*Section* 2.

In cases where the superintendent is not competent to pass sentence, he shall refer his proceedings with English calendar to Commissioner.

Clause 1. In cases in which the superintendent is not competent to pass a final sentence, or which he may consider to demand a more severe sentence than he is competent to pass, he shall refer his proceedings, accompanied by an English calendar, to the Commissioner, who will proceed to the trial of the case in the manner provided for in the sequel.

Confessions in heinous cases to be taken before the superintendent or his assistant.

And to bear a certificate in the prescribed form.

Clause 2. Confessions which, in heinous cases, ought always to be taken before either the superintendent or his assistant, shall be certified and superscribed as follows, by the officer before whom they may be made, in his own handwriting:—

"I (A. B.), superintendent (or assistant superintendent, as the case may be), hereby certify upon honour that this confession of was made by the said , and taken down in writing before me, and in my presence on the between the hours of ; that to the best of my belief the confession was voluntary, and that no interference directly or indirectly, on the part of any person likely to influence or intimidate the prisoner, was permitted."

Commissioner to pass sentence on the record in certain cases.

Clause 3. Commitments within the final cognizance of the Commissioner, on which a sentence not exceeding seven years, or fine, or both imprisonment and fine, is legally awardable, may be tried, and sentence passed upon the proceedings of the committing officer, without the attendance of parties and witnesses in the Commissioner's Court.

When Commissioner must hold a regular trial.

Clause 4. In cases, within the competency of the Commissioner, requiring punishment above that specified in the preceding clause, a regular trial must be held by the Commissioner, whenever a plea of not guilty may have been entered before the committing officer.

All cases within Commissioner's competency, in which prisoners confess, can be tried on the record.

Clause 5. In all cases within the competency of the Commissioner to dispose of finally, in which the prisoners may have voluntarily confessed their guilt before the committing officer, the trial may be held by the Commissioner on the record of the Lower Court; and sentence may be passed without summoning the parties and witnesses.

Commissioner may acquit in all cases on a perusal of the record.

Clause 6. Whenever the Commissioner, from a perusal of the proceedings of the committing officer, may consider the prisoner entitled to his release, sentence of acquittal may be passed without summoning the parties and witnesses.

Commissioner may hold a regular trial when it seems to him advisable.

Clause 7. It will, of course, be in the discretion of the Commissioner to hold a regular trial in any case committed to his court, if he shall have reason for doing so.

Commissioner may always remand a case to the committing officer for further investigation.

Clause 8. It will also be in the power of the Commissioner, whenever, in his opinion, the investigation of a case committed to his court may be incomplete, to remand the case to the committing officer for further inquiry upon points to be specified, and to direct him to re-commit the case on completion of such inquiry.

Clause 9. In cases in which the Commissioner must, under the above rules, proceed to trial, he shall immediately appoint a time and place for the attendance of the witnesses and parties; provided, however, that the date appointed for the trial shall be not more than three months subsequent to the date of the order so appointing it. The Commissioner is authorised, if he thinks fit, to call in the assistance of a jury, to consist of not less than three members, or to associate three or more assessors with himself on the trial.

The decision of the case rests entirely with the Commissioner.

Clause 10. The decision of the case rests exclusively with the Commissioner, whether he concur in the verdict of the jury or the assessors or not. If the case be one in which he is competent to pass a final order, the Commissioner shall sentence or discharge the prisoner, as the case may be; but in cases beyond the ordinary competence of a Sessions Judge, he shall pass sentence, and proceed as directed in clause 13, section 1 of these rules.

Clause 11. In all petty criminal cases (namely, misdemeanors, theft to the amount of 50 rupees, and offences for which magistrates in the regulation provinces are empowered to pass sentence of imprisonment not exceeding six months), evidence may be taken *viva voce*, and the substance merely be recorded, either in the English or Hindee language, as the Commissioner may direct.

A register to be kept of trials held before the superintendent and his subordinates.

Clause 12. A register of all trials held before the superintendent and his subordinates shall be kept in such form as the Commissioner may direct.

Monthly returns of business shall be submitted to Government.

Clause 13. Monthly returns of cases instituted, disposed of, and pending before the superintendent of the Terai district and his subordinates, and monthly returns of trials referred to the Commissioner, and disposed of by him, shall be made to the Government, according to forms to be prescribed by the Commissioner.

An annual report on the administration of criminal justice shall be made to the Government.

Clause 14. An annual report on the administration of police and criminal justice, showing the crimes committed, the number of offenders apprehended, the aggregate number of trials held, and prisoners convicted and punished, or acquitted, and such other particulars as may be required, to show clearly the results of the administration in this department, shall be made to the Commissioner after the close of each calendar year, and will be submitted by him, with his own remarks, to the Government direct.

PERJURY AND FORGERY.

The magisterial authorities not to receive or act on charges of perjury or forgery preferred by private parties.

Section 3. The magisterial authorities and all officers of police are restricted from receiving or acting upon charges of perjury or subornation of perjury preferred by private parties. They are similarly forbidden to take cognizance of charges of forgery, or procuring forgery, or of fraudulently issuing forged deeds and papers, which may be preferred by parties to civil or criminal cases, in respect to deeds and papers offered in evidence in such cases. And it is hereby declared that no individual shall be liable to any prosecution of the above descriptions unless he shall be made over to the magisterial authorities by the officer presiding over the court or office in which the imputed offence may have been committed; and no such case shall be made over to the criminal authorities unless the civil case in which the alleged forged document was filed, or the alleged perjury committed, shall at the time be pending. The proceedings held in the court or office in which the offence is alleged to have been committed shall, in all such cases, be transmitted to the superintendent in his capacity of magistrate; and if, upon an inspection of the same, or after making such further inquiry as he may deem necessary, he shall be of opinion that the offence is proved, the superintendent shall commit the case for trial to the Commissioner.

In cases of perjury or forgery, when the offence is proved, case to be committed for trial to Commissioner.

POLICE.

Spirit of Regulation XX. of 1817 to be followed in matters of police.

Section 4. In matters of police the provisions of Regulation XX. of 1817, if they should be applicable, or the spirit of that law, should be followed by the superintendent and his subordinates.

The local authorities required to adhere to the spirit of the enactments specified in this section.

Section 5. In regard to all matters not specially provided for in the foregoing rules, the local authorities are required to adhere to the spirit of Act XLV. of 1860 (the Penal Code), and Act XXV. of 1861 (the Code of Criminal Procedure).

By Order of the Honourable the Lieutenant Governor, North Western Provinces.

(signed) *G. Couper*,
Secy. to the Govt. of N. W. Provinces.

Nynee Tal, 10 October 1861.

APPENDIX I. TO SECTION IV.—POLICE.

RESOLUTION by the Honourable the Lieutenant Governor of the North-Western Provinces, in the Police Department (No. 767 A), dated Nynee Tal, 2 July 1861.

READ Act V. of 1861, entitled "An Act for the Regulation of Police."

Read Act XIII. of 1861, entitled "An Act to regulate temporarily the Procedure of the Police enrolled under Act V. of 1861 (for the Regulation of Police)."

Read a notification of the Government of India, in the Home Department, No. 964, dated 14th May 1861, and published in the "Calcutta Gazette" of the 15th May, extending Act V. of 1861 to the provinces and districts within the Lieutenant Governorship of the North-Western Provinces.

Read a notification, No. 537 A, dated 28th May, by the Lieutenant Governor of the North-Western Provinces, published in the "Allahabad Government Gazette" of the 11th June, directing that the said Act V. of 1861 shall be enforced in the districts of the North-Western Provinces therein named.

1. The Honourable the Lieutenant Governor, under the authority conferred upon the Local Government by various sections of the Acts above cited, is pleased to prescribe the following rules for the due execution of the said Acts:—

Sections 5 and 6.

2. The several Deputy Inspectors General and District Superintendents of Police, in the North-Western Provinces, are hereby invested with the powers of "a magistrate," within all the districts comprising the division of the Revenue Commissioner, within which they are serving.

3. The powers thus conferred upon the above-named officers, and the powers of a magistrate throughout the General Police District, which, by section 5, are vested in the Inspector General of Police, shall be exercised only as far as may be necessary in the absence of any magistrate, for the preservation of peace, the prevention and detection of crime, or the pursuit and apprehension of offenders; or further, for the trial and adjudication of penalties, for neglect or misconduct under section 29, Act V. of 1861. Provided always, that whenever persons, not belonging to the police force, shall be amongst the parties concerned, as in the contemplated case of "unwarrantable personal violence" to any person in the custody of the police, the trial shall be held by a "magistrate."

Appointment, &c. of Police, Section 7.

4. The appointment, promotion, dismissal and punishment of inspectors, of all police officers below the rank of inspector, and of all constables, shall rest with the Inspector General, who is hereby empowered to delegate his authority to the Deputy Inspector General or to the District Superintendent, in such manner and subject to such limitations as may, from time to time, appear to him expedient. Provided always, that the appointment, promotion, dismissal and punishment of inspectors of police shall in every case be subject to the confirmation of the Inspector General.

Certificate of office, Section 8.

5. The certificate of appointment, to be given to police officers or constables under section 8, will be given under the seal and signature of the officer under whose authority the appointment is finally confirmed.

Police Superannuation Fund, Section 11.

6. The Police Superannuation Fund shall be formed:—

1st. By deductions at the following rates from monthly pay:—

Chief and head constables, 1 anna per rupee.

Constables mounted or foot, half anna per rupee; the deduction from pay of mounted constables being from one-third of the salary.

2d. By savings from the stoppages from pay of police officers during absence from sickness or authorized leave.

3d. By the amount of fines imposed as follows:—

(*a.*) Fines imposed for neglect or misconduct of police officers under sections 7 and 29 of Act V. of 1861.

(*b.*) Fines imposed by "magistrates" on drunken persons, or on persons convicted of assault upon police officers.

4th. By proceeds of sale of useless and worn out articles of clothing or equipment, provided for the use of the police by the State.

5th. By sale proceeds of unclaimed property, placed at the disposal of Government by section 27, Act V. of 1861.

6th. By proceeds of sale of moveable property of absconded offenders, whether process has been evaded or resisted.

7. The first source calls for no remark.

8. As

8. As regards the second item, it is necessary to remark that it will be only the surplus of stoppages which will be available. It will be frequently unavoidable to employ extra policemen in the absence of persons sick or on leave; and these substitutes will be paid from stoppages. The saving, after such payment, will be credited to the Superannuation Fund.

9. With regard to the third item, the Lieutenant Governor remarks, that it will be the duty of the Inspector General to watch closely the exercise of the power to fine, and to call for such returns as may satisfy him on this point, and to direct that no fines, imposed under section 7 of Act V. of 1861, shall be credited to the Superannuation Fund, until such have received his sanction.

10. With regard to other fines, mentioned under the third clause, the Lieutenant Governor is pleased to declare that it will be the duty of all "Magistrates of Districts," and they are hereby required to keep up a separate register of all fines imposed for the offences specified under this head; and at the close of each month to send an extract from the register to the District Superintendent of Police, together with the sum of the fines realised. The District Superintendent will give his receipt for the monies so transmitted, and will credit the same in his account of the Superannuation Fund.

11. Similarly the "Magistrate of each District," at the close of each month, will pay to the District Superintendent the net amount realised during the month by the sale of unclaimed property, and of the moveable property belonging to absconded offenders; it being understood that a commission of five per cent. shall be allowed to the person employed to conduct the sale, and that no other deductions than the said five per cent. commission shall be made.

12. The District Superintendent of Police will keep up a daily account of all monies, from whatever source realised, to the credit of the Superannuation Fund, and, on the 15th of the month following that to which the account relates, will remit the monies so realised in even sums to the office of the Inspector General of Police at Allahabad, with an extract from the account for the month.

13. The Inspector General of Police will keep a general account of all sums thus received from District Superintendents, and deposit the monies transmitted in any bank, until they shall amount to the sum of 5,000 rupees, when he will invest the same in Government securities, or in the purchase of shares in a chartered bank.

14. No grants or other payments from the Superannuation Fund may be made without the sanction, previously obtained, of the Lieutenant Governor. Rules as to the period of service, and other conditions required to entitle the several members of the force to pensions or gratuities therefrom, and as to the rates of pensions, &c., will be issued hereafter.

15. As soon after the close of each calendar year as possible, an abstract account, showing the receipts, expenditure, and the nature of the vested securities, will be published in the "Gazette" for the information of the police interested therein.

General Police Fund, Sections 16 and 41.

16. The General Police Fund will be composed of all sums paid or realised for extra or special police, under sections 13, 14, and 15 of Act V. of 1861, and under section 41 of the same Act, of "all sums paid for the service of process by police officers, and of all rewards, forfeitures and penalties, which by law are payable to informers," and which, "when the information is laid by the police," would be payable to members of the police force.

17. In the General Annual Budget for the North-Western Provinces it will be necessary to show the estimated receipts of the General Police Fund and the estimated expenditure therefrom. The strictest observance, therefore, of the following rules is enjoined upon Deputy Inspectors General and District Superintendents of Police, and upon "Magistrates of Districts."

Municipal and Cantonment Police.

18. It is expected that all cities and Mofussil towns, bazars, &c., to which Act XX. of 1856 may have been, or may hereafter be extended, or in which the system of town duties or "octroi" may have been, or may hereafter be introduced, shall defray the entire cost of the police, which has been allotted to them respectively. And it will be the duty of all "Magistrates of Districts" to provide adequately for this demand upon their Municipal Funds.

19. It will be understood, that only so much of the Municipal Fund, realised from each such city, town or bazar, will be claimable by the "General Police Fund," as shall suffice to cover the cost of the police.

20. The surplus will, as heretofore, be at the disposal of the "Magistrate of the District," for the purposes of lighting, paving and conservancy, and every such magistrate will be entitled to reserve a sum out of these funds sufficient to meet the charges of collection.

21. "Magistrates of Districts" will be furnished by the Inspector General of Police, under these instructions, with a statement, showing the strength, grades, and total cost of the police allotted to each such city, Mofussil town or bazar, &c.; and upon receipt thereof,

thereof, it will be the duty of the "Magistrate of the District" to supply the Inspector General with a statement in the following form:—

DISTRICT.	Name of City, Town or Bazar.	Number of Houses.	Population.	Amount of Municipal Funds per annum.	How levied, whether under Act XX. of 1856, or by Octroi.	Contribution to General Police Fund.	REMARKS.

22. The Inspector General of Police, whenever, on inspection of this statement, he may find that the cost of the Police, in any city, town, or bazar, is not covered by the contribution to the General Police Fund, will call on the "Magistrate of the District" to make up his contribution to the amount required, or if the municipal collections should not admit of this, then to increase the assessment in such degree as he may find practicable, without exceeding the limitations imposed by section 11, Act XX. of 1856.

23. "Magistrates of Districts" are hereby enjoined to take measures for the timely and punctual realisation of these Municipal Funds, and to pay over to the District Superintendent the cost of the city, town, or bazar police, within 30 days after the close of the month for which pay is due.

24. The foregoing instructions, *mutatis mutandis*, will guide the Cantonment Joint Magistrates in the realisation of the bazar and other Cantonment Funds, and in respect of the payments which they are required to make to the District Superintendent of Police.

Gaol guards.

25. The strength of the permanent gaol guards, to be entertained at each gaol of these Provinces, has been determined in concert with the Inspector General of Prisons, and the Inspector General of Police has been informed thereof.

26. This guard will be hereafter furnished with the police force by the District Superintendent, to whom payment of the cost thereof will be made by the magistrate or other officer in charge of the gaol, on or before the 10th of each month, for the month preceding.

27. Officers in charge of gaols having been specially authorised to draw advances from the Treasury to meet this and other gaol charges, subject to adjustment by audited bills, will have no excuse for deferred payment, and the District Superintendent will report to the Deputy Inspector General all instances in which delay may occur.

28. The District Superintendent, before distributing pay to the police, forming the gaol guard, will make the deductions on account of contribution to the Police Superannuation Fund, and will credit the same in his accounts of that fund.

29. The District Superintendent will include, in the Pay Abstract of the police force belonging to his district, the pay of the gaol guard, the object being to keep in view the entire strength of the police force attached to each district; but before submitting the abstract for audit, he will deduct, from the total amount thereof, the sum received from the officer in charge of the gaol, on account of the permanent guard.

30. Whenever extra or special guards are required on occasions of emergency, *e. g.*, for escort of prisoners under transportation, the officer in charge of the gaol will indent for such special police party, in the form prescribed by notification No. 589 A, dated 12th June 1861, paying in cash the cost of the police thus furnished.

Guards, escorts, and special police parties.

31. The Government of India have enjoined upon the Local Government the necessity of employing police instead of military guards to watch buildings or property of the Government, whether in cantonments or elsewhere. In connexion with this order, the Military Finance Commission have laid down, in the following terms, the conditions under which police parties shall be furnished to military authorities and other heads of departments indenting for such. These conditions, it is to be noted, have been approved and endorsed by the Governor General in Council, and section 13, Act V. of 1861 provides that "private individuals" taking police parties shall pay the cost of them. In like manner, therefore, all military authorities and heads of departments will be required to pay the cost of police provided on their indents.

The conditions proposed by the Military Finance Commission are as follows:—

"That the watching of military buildings and property, whether in cantonments or in movement, in tranquil times, is not military but civil duty.

"That

"That such civil duty ought to be performed by the civil constabulary, and that their services should be allowed by the civil authority to any military authority or head of department, in the same manner and on the same conditions as to other parties.

"That any military authority or department, requiring extra or special guards of the above description, should pay for it at the same rates as charged to private individuals.*

"That such military authority or department should specify to the civil authority the nature of the extra or special duty to be performed; the civil authority being held responsible for the due performance, and therefore fixing the number of men to be employed thereon."

* *See* Section 13, Act V. of 1861, above quoted.

(Extract paragraph 26 of Letter of Military Finance Commission, No. 2339, dated the 30th August 1860.)

32. In order to secure uniformity in the submission of indents for police parties, the following notification has been issued, under date the 12th June 1861, and no police will be furnished, except in accordance with the rules therein contained:—

No. 589 A.

The Lieutenant Governor is pleased to prescribe the following rules to be observed by all officers and others requiring special police parties for whatever purpose:—

1st. Requisitions for police parties shall be made in the form of indent annexed, which can be obtained from the superintendent of police of each district.

2d. The officer, department, or individual requiring police aid, will in the second column detail the duty to be performed.

3d. It will be the duty of the District Superintendent to furnish the police so required, and to determine the strength of the party to be provided, with reference to the nature of the duty to be performed.

4th. In column three of the indent will be noted, whether the guard required is for "permanent duty," as guard over store-room, treasure chest, or such like, or merely "temporary," as for protection of stores in transit from station to station. When the requirement is only for temporary purposes, the probable time of employment will be noted.

5th. On receiving the above indent, the District Superintendent will, on the reverse, enter the strength of the party to be furnished, together with the cost, including pay, authorised allowance for carriage and other charges.

6th. The indent thus endorsed will be returned by the District Superintendent to the applicant, and on receipt in cash of the cost detailed, the police will be furnished.

7th. The cost will be charged for the whole period of intended employment, when such employment is "temporary," or month by month, when "permanent."

8th. No police parties will be furnished except after receipt of cost in cash.

9th. The rules laid down by the Inspector General of Police, under section 3 of Circular, issued in December 1860, are to be observed.

10th. Heads of department under this Government will immediately report for sanction the expenditure incurred by them on account of police guards or escorts.

ON REVERSE OF INDENT.		FORM OF INDENTS FOR POLICE PARTY ON SUPERINTENDENT.			
Detail of Strength and Cost of Police Party required by, for Duty shown.					
Detail of Force to be furnished.	Cost of Party.	Officer, Firm, or Individual requiring Duty.	Detail of Duty to be performed.	Duration of Employment, whether "temporary" or "permanent."	Date from which required.

33. Private

CHAP. XII.
North-Western Provinces.

33. Private firms or individuals will be provided with the police they are willing to pay for. It will, however, be the duty of the District Superintendent to see that they are not employed on other duties than those attaching to police; that the duties to be performed are not out of proportion to the strength of the party indented for; and that during such employment police discipline and regulation shall be strictly maintained.

34. Deputy Inspectors General of Police are required to see that additional men are not employed on "temporary" special duties, for the performance of which constables in reserve are available.

35. To the inspector of the reserve, entrusted with the performance of duties belonging to the interior economy and discipline of the force, will be allotted the duty of keeping a register account of all receipts and expenditure authorised by the Deputy Inspector General; but the District Superintendent will be held responsible that the accounts are faithfully kept, and that no interpolations are permitted in the register.

Processes.

36. The establishment of the Nazir of the Magistrate's Court having been abolished, and his duties having been undertaken by the police, the service of "process," in petty cases not cognizable by the police, and usually instituted by petition, will devolve on the police. But it is to be understood that the fees usually charged under the existing laws and practice for service of such processes shall continue to be levied before issue thereof, and this must be provided for in the order which the "magistrate" will, as heretofore, pass upon petition of plaint.

37. There will be an Inspector of Police, with a party of police attached to the court of the "magistrate of the district," and an officer of police to each "magistrate's" court. To the inspector in attendance on the court of the "magistrate of the district" every complainant will be directed to pay the regulated amount of tulubana for the service of subpœna, summons, or other process; and on the inspector certifying, by indorsement on the petition, that the money has been paid, the process will be forthwith prepared in the magistrate's office in the usual form, and handed to the said inspector for service.

Appendix, No. 3.

38. The inspector, after entering the process in the Register of Processes (Form C, appended to rules for guidance of police officers, dated 26th December 1860), will forthwith cause the process to be directed to the officer in charge of the police station nearest to the residence of the parties cited to appear.

39. The amount of the fees received by the inspector for service of processes will be paid to the District Superintendent.

At the close of the week the District Superintendent will deposit in the Treasury, under "General Police Fund," all sums received during the week, and enter the amount in his account of the "General Police Fund."

Savings of establishment.

* Appendix, No. 7.

40. The Pay Abstract, forwarded to the Civil Paymaster, will include the pay of the whole sanctioned force. The statement* attached to the Pay Abstract provides for the separate exhibition of all savings of establishment. On return of the audited Pay Abstract, pay will be distributed to the force. The amount of "savings" will be reserved by the District Superintendent, and deposited by him in the Treasury, to the credit of Government, under "General Police Fund," and will also be entered in that officer's monthly account of the fund.

General Remarks.

41. The General Police Fund is the property of Government. The fund is constituted under Act V. of 1861, and is applicable, under "section 16, to the maintenance of the force, under such orders as the local Government shall pass."

42. The Lieutenant Governor accordingly resolves that this fund shall not be applicable to any other than the following purposes, without the express sanction of the Government:

1st. To the repayment to Government of the cost of all police, whether municipal, cantonment, or ferry, or forming gaol guards, whose cost, though included in the Pay Abstracts, will be provided for by special payments on the part of the "magistrate of the district," the cantonment joint magistrate, or the officer in charge of the gaol.

2dly. To the pay of special police parties, furnished under sections 13, 14, and 15 of Act V. of 1861, to public departments or officers, or to firms or individuals, in those instances in which such parties cannot be furnished from the reserve force.

43. In regard to the first, it has been pointed out above (paragraph 40) that the Pay Abstract, to be forwarded to the Civil Paymaster, will include the pay of the whole permanent police force, that is to say, it will include the police whose pay will be met from Municipal, Cantonment, or Ferry Funds, as well as the police whose pay will be met from the funds of the State. The punctual disbursement of pay is thus secured in the way of advance from the Government Treasury on account of the former, and by audited pay bill for the latter body. In repayment of the advances referred to, the District Superintendent will pay over to the Collector, to be credited to the Government, under the head of "Police," all payments that may be received on account of Municipal, Cantonment, or Ferry Funds. He will credit such payments in his accounts of the "General Police Fund,"

Fund," and debit himself per contra with a remittance of the same amount to the Collector. The remittance will be made in cash, with a memorandum, in the following form:—

FORM.

The District Superintendent of Police, in the District of , remits to the Collector the sum of rupees, to be credited to Government, in his "General Treasury Account," under the head of "Police," as follows, viz.:—

	Rs.	a.	p.
On account of Municipal Police of , for the month of - - - - -	0	0	0
On account of Cantonment Police of , for the month of - - - - -	0	0	0
TOTAL - - - Rs.	0	0	0

44. The Collector will give his receipt for the amount so remitted in a corresponding form.

45. Under the second heading, it will be sufficient to remark that the special police parties furnished, whether to public departments or to private individuals, will be charged for in full, according to the directions given in Notification No. 589A, dated 12th June (*vide* para. 32), whether such parties be composed of men specially entertained, with the sanction of the Deputy Inspector General, under clause 16 of Rules of Inspector General of Police, dated December 1860, or whether they be drawn from the force in reserve. The District Superintendent will defray all proper or authorised charges on account of such special police parties, and bring the same into the accounts of the General Police Fund.

Accounts of General Police Fund.

46. The accounts of the General Police Fund will be kept under the following headings:—

1. Municipal.
2. Cantonment.
3. Gaol.
4. Guards, escorts, and special police parties, under sections 13, 14, and 15, Act V. of 1861.
5. Processes, and rewards and forfeitures, under section 41, Act V. of 1861.
6. Savings of establishment.

47. A daily ledger account will be kept by District Superintendents. All sums received will be entered at the time of receipt, and all sums expended at the time of paying the same. A monthly account will be despatched by each District Superintendent to the Deputy Inspector General on the first day of each month (not being a Sunday), and a quarterly account will be furnished by each Deputy Inspector General to the Inspector General on the 10th day of August, November, February, and July, for the preceding quarters, ending the last day of July, October, January, and April.

48. Half-yearly accounts will be rendered by the Inspector General of Police to the Secretary to Government, for each half-year, ending with 31st October and 30th April.

49. The monthly accounts rendered by the District Superintendent will be in a full detail, showing every receipt and every disbursement under each heading of account, and the balance in deposit at the close of the month. (*Vide* Appendix, No. 9.)

50. The quarterly account of the Deputy Inspector General will give the total of receipt and expenditure under each heading of account for each district; and the half-yearly account of the Inspector General will exhibit the same totals for each Deputy Inspector General's circle.

51. The Inspector General of Police will direct, that at the close of each month each District Superintendent shall deposit in the Government Treasury the balance standing to the credit of the General Police Fund of his district.

52. In submitting the accounts of the General Police Fund of the six months ending on the 30th April, the Inspector General will take the orders of the Government as to the disposal of the aggregate balance standing to the credit of the fund of the entire "General Police District."

Duties of the police, Sections 23, 25, 30, and 31.

53. The general duties of the police are detailed in sections 23, 25, 30, and 31 of Act V. of 1861; and the police are not to be employed in any other duty, unless expressly permitted to do so in writing by the Inspector General, as laid down in section 10 of the Act named. These powers, the Lieutenant Governor observes, are very generally described in the sections referred to; but there are one or two points on which His Honor thinks remarks may be made with advantage.

Collection and communication of intelligence.

54. The first point that attracts attention is the injunction "to collect and communicate intelligence affecting the public peace." This is a duty which, it is believed, very few native police officers can appreciate in its whole extent, and it is one which has not formed a principal object of his attention. Still it must be obvious that a familiar acquaintance with all the events occurring within his division or his beat may frequently enable an intelligent police officer to determine the origin, to trace the progress, and put his finger upon the perpetrators of a particular crime. European officers, who are all more or less acquainted with the system of police in England, will readily recognise the truth of what has been above stated; but it is not to be doubted that, before natives can be made to appreciate fully the usefulness of general observation and to connect the results of that observation with the occurrence of particular crimes within their circle, a great deal of explanation and teaching on the part of the European officers of police will be requisite; for example, not to speak of an assembly of people in other than ordinary numbers, near wealthy towns, as indicating an evil purpose on their part, or of gipsy encampments, as likely to contain persons of bad character and predatory habits, or of other equally obvious and prominent objects of observation. It will possibly happen that a police officer on his beat may observe the occurrence of a personal quarrel between two or more parties, who separated on his interference, and were thus prevented from committing further violence. But it may happen that such a quarrel may lead, in the course of time, to a murder, attempt to murder, or other crime of violence, and the police officer having observed the personal quarrel and made himself acquainted with the parties, will be in a position to give a reasonable clue to the detection of the culprit; or, as a second illustration—

A stranger is seen in the house of, or in company with, a person of known bad character. An intelligent police officer would take note of this, would ascertain all particulars of such stranger; and should a theft occur, it is probable he will have, by such observation, obtained a clue which will lead to discovery of the offender.

55. The foregoing are intended to be only illustrations of the advantages to be derived from the observation of police officers, and it is to be understood that this observation may, and should, be carried on by the officer of police on whatever duties he may happen to be engaged away from the police station. If charged with service of process, he can still, as he passes on, take note of everything that comes within his view or hearing. Even if absent on leave, he is still, under section 22 of Act V. of 1861, considered to be on duty, and carries with him the powers of a police officer throughout the whole of the "General Police District," and must, therefore, be taught not to relax this important duty of "collecting and communicating intelligence affecting the public peace" under any circumstances.

Prevention of crime, &c.

56. The next point that attracts attention is the injunction to "prevent the commission of offences and public nuisances." This is a point to which the Lieutenant Governor believes the native police officers, under the old system, have never given sufficient consideration, and this partly because the observation insisted on in the preceding paragraph has never been practised. From unacquaintance with the general occurrences and state of feeling between different parties residing within their beat, and from the fact that a police officer has hitherto seldom left his post or station, except when called upon to inquire into a crime already committed, it has been out of his power to anticipate the commission of crime in any particular quarter, or consequently to take steps for its prevention.

57. The object of the Lieutenant Governor is, that the police should not restrict themselves to watching large assemblages of people, whether on occasion of a fair, or of a religious ceremony, or marriage procession, which are usually notorious; but that they should extend their vigilance and their observation to smaller every-day occurrences, and note particularly, and at the time, any such as may seem likely to result in a breach of the peace, or other offence within their primary cognizance. The prevention of public nuisances will be more particularly treated of in connexion with the Lieutenant Governor's remarks on sections 30, 31, 32 and 34 of Act V. of 1861.

58. The duty of police officers in the prevention of crime will be greatly facilitated by the power which is conferred upon them by sections 28, 29 and 30 of Act XIII. of 1861. The terms of section 28 make the exercise of this power permissive; but the Lieutenant Governor would remark that no police officer should hesitate to take upon himself the responsibility of acting with promptitude under these sections, whenever he may see reasonable cause to justify him in making an arrest which is warranted by law.

59. The Inspector General of Police will give his careful attention to the last clause of section 23 of Act V. of 1861, regarding the inspection of gaming shops, drinking houses, &c., to which bad characters are in the habit of resorting, and will issue such instructions on this point as he may think proper.

60. Sections 30 and 31 of Act V. of 1861 give a substantial legality to Acts which the magistrate and police officer, it is true, have hitherto performed under the obligation to preserve the peace and maintain the public safety, but which they have not been authorised to enforce by specific penalties.

61. This

61. This power, it appears to the Lieutenant Governor, may be exercised with very great advantage to the public comfort and the public safety, and his Honor would direct the especial attention of all police officers and magistrates to these sections.

62. It may be well left to the police officers, under the direction of the "Magistrate of the District," to provide for the peaceful conduct of all assemblies and processions, especially on occasions when a breach of the peace may, for any reason, be apprehended; but it seems necessary to call attention to the minor duties which are laid upon the police by section 31, and which, however unimportant they may appear, must not be overlooked. The assembly or stoppage of crowds on the public thoroughfares, the occurrence of disorderly conduct on such thoroughfares, and the encroachment upon such streets or thoroughfares, are hardly less public nuisances than those which are so specifically designated in section 34 of the Act, and it will be the duty of every police officer, under the control which is reserved by section 33 to the "Magistrate of the District," to give himself to their prevention and to their correction wherever observed.

63. Adverting to section 24 on the subject of public nuisances, and to the duty which is laid by section 23 upon every police officer to prevent them, the Lieutenant Governor has to point out that every police officer is empowered by the law to take into custody, without warrant, any person who may commit within his view any such public nuisance, provided that the above section shall have been extended to the town or other locality in which such offence may have been committed. It is certain that the prompt and judicious exercise of this authority will deter the people generally from the commission of such acts.

64. The provisions of section 34, Act V. of 1861, shall be extended to the following cities, towns and thoroughfares, and his Honor the Lieutenant Governor requires that the magistrates of the several districts, within which these several towns, &c., are situated, shall give local notice by proclamation of this extension to the provisions of the law :— Provisions of Section 34 extended to certain towns, &c.

Rewards, penalties, &c., Section 41.

65. Section 41, Act V. of 1861, seems to call for some explanation. By the term "rewards" are not intended rewards specially authorised by the Government or its officers for the apprehension of absconded offenders, escaped convicts, or for any special service. These will be payable to the parties performing such service. But they are the "rewards and forfeitures" contemplated by Regulation VII. of 1824, for information of infraction of Abkaree laws; for infraction of the opium laws under Regulation III. of 1816, and such like. To such rewards no police officer, giving the information referred to, will be entitled, because he is a paid servant of the Government, entertained for the enforcement of all laws. The whole of such rewards and forfeitures will, however, be claimed from the department authorised to award such, and will be credited to the General Police Fund.

Diaries to be kept, Section 44, Act V. of 1861.

66. As required by section 44, the Lieutenant Governor directs that every inspector of a division and every chief constable of a station shall keep a general diary, as laid down by the "rules for guidance of police officers," and a special diary of their proceedings, whenever engaged in any local inquiry, under section 62, Act XIII. of 1861.

67. The

67. The Lieutenant Governor directs, under section 45, Act V. of 1861, that the following periodical Returns and Statements shall be submitted, as shown below:—

Returns to be submitted, Section 45, Act V. of 1861.

No. of Appendix.	Designation of Return or Statement.	By whom to be submitted.	To whom to be submitted.	Date.

	ANNUAL RETURN:			
	Superannuation Fund Account	Inspector General	Secretary to Government, N. W. P.	31st Jan.
	Return of Crimes	District Superintendent	Deputy Inspector General	20th Jan., with Annual Report.

The forms of the above Returns are appended to this Resolution.

Annual Police Report.

68. An annual police report, showing the administration of the department throughout the "General Police District," will be submitted to Government by the Inspector General on or before the 1st of April. The materials for the annual police report will be obtained from the reports and annual police returns of the "Magistrate of the District," which will henceforth be submitted to the Inspector General of Police instead of to the Commissioner of the Division.

69. It will be in the discretion of the Inspector General to call for such further departmental reports as he may find necessary.

70. The change in the constitution of the police makes it necessary that certain modifications should be introduced in the Resolution of Government, dated 22d March 1855, which was circulated with circular No. 2, dated 16th April 1860.

71. Of the forms prescribed in paragraph 2 of that Resolution, Return No. 2 of "Distribution of Business," and Return No. 4 of Chowkeedaree assessment may be entirely discontinued; and as magistrates will not be at liberty to issue circular orders to the new police force, Return No. 3 will cease to be submitted by the magistrates of the districts. Return No. 1, being the "Triennial Comparative Statement," will accompany the report in the usual form.

72. Paragraphs 4, 5, 7, and 8 of the Resolution above referred to are cancelled; and in substitution of paragraph 5, the Lieutenant Governor directs that magistrates will, with the annual police statement, draw up, for submission to Government, through the Inspector General of Police, a report showing the result of police administration during the year, with such remarks on the working of the system, its merits, or defects, as may appear called for.

73. Circular No. 745 A, dated 25th May 1854, which was republished with the circular, dated 16th April 1860, is cancelled, in so far as the police department is concerned, because under section 4, Act V. of 1861, the "Magistrate of the District" is the only officer who is vested with the general control and direction over the administration of the police.

Authority of District Superintendent of Police over village police, Section 47.

74. The Lieutenant Governor is pleased, under the authority conveyed by section 47, Act V. of 1861, to declare that the authority hitherto exercised by "magistrates" over village watchmen for the purposes of police, shall be exercised, subject to the general control of the "Magistrate of the District," by District Superintendents of Police.

Act XIII. of 1861.

75. The Lieutenant Governor having in the preceding paragraphs recorded such observations and instructions relative to the provisions of Act V. of 1861 as have appeared to him to be called for, proceeds to direct attention to those parts of Act XIII. of 1861

CHAP. XII.
North-Western Provinces.

which have the most important bearing on the police administration, or which for any reason appear to require explanation.

Distinction to be observed between terms "magistrate" and "magistrate of the district."

76. The distinction between the "Magistrate of the District" and a "magistrate" runs through the whole Act, and must always be carefully borne in mind. The "Magistrate of the District" is the chief officer charged with the executive administration of a district. A "magistrate" includes all persons who exercise any of the powers of a magistrate; *e. g.* an assistant magistrate or a tehsildar, who is invested with magisterial powers, is, under these Acts, a "magistrate;" for instance, under section 3 of the Act, "a warrant issued by a magistrate" will ordinarily be executed within the jurisdiction of the "Magistrate of the District" in which it has issued. In other words, a warrant issued by a tehsildar and deputy magistrate in pergunnah B. is good, and will be ordinarily executed in any other pergunnah within the jurisdiction of C., the "Magistrate of the District," and may be executed beyond, is specially ordered, or under the circumstances and provisions of section 4, Act XIII. of 1861.

Warrant of arrest and search, and summons.

77. As provided by sections 2, 16 and 20 of the Act, every warrant of arrest, every summons, and every search warrant must be addressed either to the District Superintendent or the head officer of the police in attendance in the court of the "magistrate" issuing the warrant. If the officer, to whom the warrant, summons or search warrants may be addressed, should be unable to serve it himself, he may delegate the duty to any other police officer, but he must, in every such case, endorse the process to such other officer, the purpose of the law being that the name of the individual police officer, executing any such process, shall be apparent on the order itself.

78. In executing a warrant, every police officer must scrupulously observe the directions contained in sections 5 and 6 of the Act. These may appear of trivial importance, but in point of fact an arrest may become illegal by reason of their neglect, and inconvenience may arise.

79. In serving a summons, under the circumstances contemplated in section 18, a difficulty may arise, if the police officer, charged with the duty, should be illiterate. In any such case the serving officer must carry the summons to the nearest police station, and having obtained a copy, duly attested by the officer in charge of the station, he will proceed to serve the process according to the directions of the section cited.

80. The Lieutenant Governor is pleased to direct that, whenever a house or place is to be searched, either on the warrant of a magistrate under section 19, or by an officer in charge of a police station in person, under section 50, or upon the requisition of any officer in charge of any other police station under section 51, such search shall be made between the hours of sunrise and sunset, unless there be special reasons demanding immediate search, even during the hours of night. Whenever any such exception must be made to the rule, the reasons must be reported to the District Superintendent, for the information of the "magistrate" having jurisdiction.

81. A general search warrant, as contemplated in section 19, will be drawn up in the form No. 10, appended to Regulation XX. of 1817, copy of which, for facility of reference, is here given.

Form of Search Warrant.

"Whereas there is strong cause to suspect that plundered or stolen goods or effects are within the dwelling house or premises of [*name and caste of suspected person*], inhabitant of ——; you are hereby authorised and required, with necessary and proper assistance, to enter into the said dwelling house or premises of the said ——, and if any goods or effects shall be found therein which there may appear cause to suspect to have been plundered or stolen, you are required to bring the property so found, and also the person of the said ———— to the police station of ————."

82. But it may be noted that the search warrant, referred to in sections 50 and 51, is quite distinct, in its character and its purpose, from that authorised by section 19. The object of the latter is to recover plundered or stolen property, suspected to be concealed in the house to be searched. The object of the former is to discover any particular thing, not necessarily plundered or stolen, the production of which is considered by the police officer in charge of a station essential to the conduct of an inquiry into any offence within his primary cognizance. It follows, therefore, that in search warrants, issued under section 50 or 51, the particular thing which is wanted must be specified, and the form of a warrant will therefore be as follows:—

"Whereas it is essential to the investigation of a charge of [*name of offence*] brought by ———— against ———— that [*name of particular thing wanted*] which is believed to be within the dwelling house or premises of [*name and caste of occupant or owner*] should be produced, you are hereby authorised and required to enter into the said dwelling house or premises, and if the said [*name of particular thing*] shall be found therein, you are required to bring the said [*name of particular thing*], and also the person of the owner or occupant, to the police station of ————."

83. It will be noted that, under section 26, every search must be made in the presence of two or more respectable inhabitants of the place where the house searched is situate;

situate; and it will be proper to require such persons to attest, by their signature, the inventory of the property which may be found, lest it should become necessary to summon them to attend the magistrate's court as witnesses; and it should further be observed by all police officers, that the provisions relative to general search warrants, contained in sections 20 to 27 of the Act, are applicable to the warrants which may be issued under sections 50 and 51.

Arrest by police without warrant, Section 23.

84. Under section 28 of the Act, the several cases are specified in which a police officer may arrest without warrant of a "magistrate." The second clause of this section calls for explanation.

85. It will be the duty, under this section, of the police officer, when receiving complaints against any person named, to make immediate and summary oral inquiry from the person charging, and any other persons who may happen to be present; and with reference to the facts elicited by this interrogation, to judge whether the complaint is "reasonable" or not; and if "reasonable," whether there are grounds of "reasonable suspicion" against the party charged or not.

86. It will be in the exercise of a just discrimination on this and the like points, that the efficiency of a police officer will chiefly become apparent. It is obviously impossible to lay down any principles or rules by which the police officer shall be guided in forming his judgment; but it is important for him to bear in mind, that, while precipitation and hasty conclusions must be guarded against, as calculated to expose innocent persons to the unmerited degradation of arrest, a failing to exercise the powers of immediate arrest, from whatever cause arising, may favour the escape from justice of a great criminal.

87. If, in the judgment of the police officer, the complaint should not appear reasonable, or if reasonable in itself, there should be no grounds of reasonable suspicion against the person charged, the police officer will abstain from making arrest, and will proceed, under sections 46 and 47 of the Act, to report the substance of the complaint or information, for the orders of the "magistrate," in the sheet of charges refused. (Form No. 2 of Appendix.)

Enquiries to be made by police, Sections 44 and 45, &c.

88. Reading section 44 in connection with section 45 of Act XIII. of 1861, and having regard to the fact, that clause 2, section 2, Regulation II. of 1832, has not been specially rescinded, the Lieutenant Governor cannot think it to be the intention of the legislature to require, by section 44, that, whenever any of the offences, specified in the schedule of the Act shall be committed, the officer in charge of the police station shall either himself proceed, or depute a subordinate officer to proceed to the spot for the purpose of a local inquiry; but that such local inquiry shall be obligatory only on those occasions, when an offence, heinous in itself, and serious by reason of the circumstances attending it, and obscure owing to want of information as to the offender, shall have been perpetrated; or when a specific demand for inquiry shall have been made by the person considering himself to have been aggrieved. If any other interpretation than this were placed upon these sections, the officers in charge of police stations would never be at rest; and in order to avert constant visits and perquisitions of the police, no complaints would be preferred, and no informations would be lodged, and the result would be a most extensive and injurious concealment of crime.

89. It must be observed further upon this point, that some of the offences entered in the schedule to Act XIII. of 1861, however serious they may be in themselves as regard individuals, do not, in point of fact, threaten the disturbance of the peace, or injury to the police at large, *e. g.*, "aggravated assault," "exposure of infants," or "attempt to commit suicide," none of which it seems to the Lieutenant Governor is it the part of the police force to investigate *proprio motu*. If the parties, considering themselves injured, choose to demand the interposition of the police, then both the law and considerations of expediency require that the assistance should not be withheld; but it does not appear to be the intention of the law, and it is certainly not consistent with administrative policy to compel any private person to prosecute for an offence, which, while it does not affect the public peace or the public safety, or the public morality, the aggrieved party himself is prepared to condone.

90. It appears to have been, on this principle, that clause 2, section 2, Regulation II. of 1832, was framed to inhibit inquiry by the police into cases of burglary and of theft unattended with personal violence, excepting upon a written application from the party injured, and this principle should continue to be observed.

91. The Lieutenant Governor understands then, that the intention of section 44 is that whenever a complaint or information of any of the offences, specified in the schedule appended to Act XIII. of 1861, may be "preferred" to a police officer in charge of a station, a local investigation must be made in respect of every serious offence, affecting the public peace, the public safety, or the public morality, with a view to the discovery of the offenders; but that in certain classes of cases, such as simple theft, burglary or aggravated assault, in which prosecution should be optional, the police officer, unless specially called upon, shall merely record the substance of the complaint or information in his diary, for the information of the magistrate.

92. In the first class must be understood to be included "murder," "thuggee," "dacoitee," "highway robbery," "culpable homicide," "receiving stolen property," "arson," "affray," "rioting," "counterfeiting the Government coin or stamps," "administering poisonous drugs," and attempts to commit any of the above. In the second

second class will be included all other of the offences mentioned in the schedule, and it is hardly possible but that complaints of the commission of these or any of them, theft and burglary excepted, will be made against some person "by name;" and it is very probable that they will frequently be of no "serious nature;" and, therefore, in these cases it will be in the discretion of the police officer in charge of the station, under section 45, to make a local inquiry in person or by deputy, or not, as he may think fitting.

93. The Lieutenant Governor is pleased to direct that, whenever a charge is preferred before an officer in charge of a police station shall involve loss of property, a schedule of the property, said to have been lost, must be forthwith demanded and reduced into writing.

94. Instructions having been given above, as to arrests which should and should not be made, and as to the cases which should and which need not necessarily be made the subject of local investigation, it is proper to call the attention of police officers to sections 52 to 58 of Act XIII. of 1861, describing the manner in which the inquiries of the police officer should be conducted. It will be seen, that though contrary to the practice observed under the old law, no statements of evidence are to be recorded, and no confessions or admissions of guilt are to be excepted, the range of the police officer's inquiry is not limited. He may enforce the attendance of any person within the limits of his station, know, or supposed to be acquainted with the circumstances of the case under inquiry; he may examine them orally, he may take down in writing for his own use, though not for evidence, the statement of any person so examined; he may commit to writing any voluntary admission or confession of guilt made by a person accused of an offence, for his own information and guidance, and though such admission or confession, unless it be made in the immediate presence of a "magistrate," cannot be used as evidence against the person making it, it is important to note that if any fact be discovered by the police officer, in consequence of any information contained in such admission or confession of guilt, and be deposed to by the police officer, then such information may be received in evidence as laid down in section 58. For instance, A. accused of murder, voluntarily states that he committed the murder with which he is charged; but he also describes the weapon used, and the place in which, after murder was committed, it was deposited. If upon this the police officer should discover in the place pointed out, a weapon corresponding with that described by the accused, this would be a "fact" discovered in consequence of information given by the accused; and, consequently, if deposed to by the police officer, so much of the information given by the accused, as led to the discovery of the fact, would be receivable in evidence against them.

Again, B. is charged with a theft of property belonging to C., he makes a voluntary admission of guilt, which by itself would not be admissible in evidence against him. But he further describes minutely the premises and the means by which entry was made and the theft effected. The police officer, in consequence of this information, examines the premises and finds the description given of them to be quite correct. He also discovers a ladder mentioned by the accused, as the means by which entry was effected. These discoveries will, under the law, be "facts" to which the police officer will be able to depose; and consequently, so much of the information given by the accused as led to the discovery of these "facts" will be received in evidence against him.

95. The Lieutenant Governor has thought it proper to point out how far the admission or confession of guilt, made by an accused person, may be used in evidence against him; but his Honor must at the same time insist upon the strictest attention to the injunctions contained in sections 14 and 54 of the Act, that no police officer shall offer to a person arrested any inducment, whether by threats, promise, or otherwise, to make any disclosure or confession. The person under arrest need not be cautioned or warned in any way against making disclosures, but these must be left to be entirely spontaneous, and then they may be used in the manner above indicated.

96. It will have been understood that as the police officer, by section 28, is authorised to arrest, without warrant, any person against whom a reasonable suspicion of crime exists, so he must be authorised by the law to arrest any person against whom reasonable evidence of criminality may be elicited by the inquiry to be made by police officers under sections 44 and 45 of the Act.

97. The accused having been arrested, it becomes incumbent on the police officer to determine, within 24 hours from the period of arrest, whether "there are grounds for believing that the accusation is well-founded," or, in other words, whether the person arrested appears, from the information obtained within that period, to have committed the offence charged; that is, whether the "reasonable suspicion" that led to his arrest remains or has been removed. In the one case the accused must be forwarded to the "magistrate" at the close of the period stated, in the manner prescribed by section 60, whether the inquiry has been completed or not.

98. In the other case, that is to say, when the "reasonable suspicion" which led to the arrest of the accused has been removed, or sufficient evidence against him has not been obtained within 24 hours, the accused must be released on bail or on his own recognizances, pending the completion of the inquiry, and the orders of the "magistrate" on the report of the case.

99. The

99. The Lieutenant Governor assumes, that in the majority of cases contemplated by sections 44 and 45, the inquiry of the police officer will have been virtually completed before arrest of the accused party, and that in other cases in which arrest may have been made without warrant under clause 2, section 28, there will be little difficulty in bringing the inquiry to a close within 24 hours. In any case the prohibition of section 60 against the detention of an accused person in custody for a longer period than 24 hours, must be implicitly obeyed.

100. Whether parties arrested as above shall be sent into the Court of the "Magistrate" for trial under section 59, or whether they shall be released on bail, or on their own recognizances under section 61, the report of the police officer shall be drawn out in the form "Charges taken" (Appendix, No. 1, Form 1), which will exhibit all the particulars required by section 63. In the case of the former the police officer is expressly prohibited from expressing any opinion as to the guilt of the accused. In the case of the latter, the police officer will certify, on the back of the "charge sheet," the substance of the evidence obtained on the inquiry, or the absence of all evidence, and the amount of the bail or recognizance taken.

101. It only remains to the Lieutenant Governor to subjoin a few general remarks on the subject of the Acts prefixed to this Resolution.

102. The administration of the police, throughout the local jurisdiction of "the magistrate of the district," is, by section 4, Act V. of 1861, vested in the District Superintendent of Police, under the general control and direction of such magistrate. The District Superintendent is at the head of the police force employed in the district. He is responsible that the duties devolving upon them shall be properly and efficiently performed; that the discipline of the force shall be maintained; that orders of the judicial or other competent authority shall be promptly and correctly obeyed: and that the subordinate officers and constables shall be at their post. It follows that all communications between the "magistrate" and the police force must be conveyed through the District Superintendent, and that the subordinate police shall receive all instructions and orders from him, who is their immediate superior. The several reports, informations, and returns required to be made to the "magistrate," or the "magistrate of the district," under sections 40, 41, 46, 59, 60, 61, 63, and 68, will, therefore, be made by the subordinate police to their head, the District Superintendent; and all orders issued by the "magistrate" will be issued to the District Superintendent, or to the head officer of police in attendance in the court of the "magistrate."

103. It will be the duty of the District Superintendent to lay before the "magistrate of the district," or where ruled, the "magistrate" having jurisdiction, all informations, reports, or returns received from the district police, without delay and without omission.

104. The orders of the "magistrate" will be either in the shape of warrants, summons, subpœnas, or other process, or in the shape of specific instructions on special points.

105. All orders other than warrants, or other processes, will be entered in an "Order Book," to be kept for the purpose in each magistrate's court. Warrants or other processes will be entered in the Register (Form No. 3 in Appendix).

106. In communicating such orders to the district police, it is not necessary that separate orders or purwannahs should be addressed. Much unnecessary manual labour is incurred by this practice. In lieu, an extract from the "Order Book" should be sent to each chief constable or inspector, containing all orders applicable to him that have been issued during the day, in the manner shown in the following exemplar:—

Police Orders, dated

To Chief Constable of ——— Police Station.

Division A.

A. Prisoners Gunga and Ramdeeal released on bail, reported on "Charge Sheet" No. 13, to be discharged.

B. Inquiry to be made in complaint of aggravated assault reported in 14th entry of diary of 30th August. If proved, accused parties to be forwarded with customary "charge sheet."

C. Reports on "charge sheet" refused. Numbers 4 and 6, dated 29th August, approved.

D. Your refusal to arrest Sookha, charged with arson, on the ground of there being no reasonable ground of suspicion disapproved of. You are directed to enter into local inquiry, and after inquiry to act according to circumstances elicited.

107. These extracts, when received by the police officer to whom addressed, will be entered according to date of receipt in his station order book, and so soon as the orders

received have been carried out, the extract will be returned, endorsed with the report of he manner of execution, in following manner :—

Order A. Prisoners discharged 2d September.

B. After inquiry, Lala Brahman transmitted on bail with "Charge Sheet No. 21."

C. Reply entered on Station Check Report.

D. Sheet of "Charge refused." No. 9 sent in, showing reasons, after full inquiry, for not proceeding to arrest, pending orders.

Dated 4th September.

Chief Constable.

108. The following books and registers will be kept at each police station :—

		Appendix.
No. I.	Register of charges taken - - - - - - - -	Form 1.
No. II.	„ „ refused - - - - - - - -	Form 2.
No. III A.	„ „ warrants and other processes - - - -	Form 3.
No. XII.	„ „ crimes reported.	
No. XIII.	„ „ property stolen and recovered.

No. XVI.	Register of villages forming constables' walks in circle, with names of chowkeedars.	
	Station Diary Book - - Inspection Report Book - Station Order Book - - } Blank.	

109. The Honourable the Lieutenant Governor is pleased to direct, what whenever the trial of a person who is detained (pending the result of such trial), under custody of the police, shall for any reason be adjourned, a day shall be fixed by the magistrate for the re-hearing of the case, and it will be the duty of the District Superintendent to ensure the punctual attendance of the prisoner on the day fixed. By these means the inconvenient and unnecessary labour imposed upon the police of conveying and guarding day by day a number of prisoners to the magistrates' court, whose attendance is not required, will be avoided.

Ordered, That copies of this Resolution and Appendix be sent to—

Register, Nizamut Adawlut,
Deputy Auditor and Accountant General,
Civil Paymaster,
Commissioners of Divisions,
Magistrates of Districts,
Inspector General of Police,
Deputy Inspectors General of Police,
District Superintendents,
Assistant Inspectors General, and
Assistant District Superintendents, for information and guidance.

Ordered, That notifications to the effect of paragraphs 2 and 63 of the Resolution be issued and published in the Government Gazette.

(signed) *G. Couper*,
Secretary to Government, North-Western Provinces.

RESOLUTION by the Honourable the Lieutenant Governor, North Western Provinces, in the Police Department (No. 1306 A.); dated Camp Keylgaon, in the Lullutpore District, 31 December 1861.

READ again the Resolution in this Department (No. 767 A.), dated the 2d July 1861.

Read Act XXV. of 1861.

As Act XIII. of 1861 will cease to have effect from and after the 1st January 1862, and as in lieu thereof chapters IV. to IX. inclusive of Act XXV. of 1861, will come into force, the Honourable the Lieutenant Governor directs the following rectifications to be made in the Resolution above referred to, viz.:—

Para. 58, *for* "sections 28, 29, and 30 of Act XIII. of 1861," and *for* "terms of section 28," *read* "sections 100, 101, 102, and 104, chapter VI. of Act XXV. of 1861," and "the terms of section 100."

Para. 66, *for* "under section 62, Act XIII. of 1861," *read* "under section 154, chapter IX. of Act XXV. of 1861.

Para. 75, *for* "parts of Act XIII. of 1861," *read* "parts of Act XXV. of 1861."

Para. 76, *for* "under section 3 of the Act," *read* "under section 83, Act XXV. of 1861," and *for* "section 4, Act XIII. of 1861," *read* "section 84, chapter V., Act XXV. of 1861."

Para. 77, *for* "sections 2, 16, and 20 of the Act," *read* "section 80, chapter V.; section 70, chapter IV.; and section 116, chapter VIII. of the Act."

Para. 78, *for* "sections 5 and 6 of the Act," *read* "sections 90 and 91, chapter V. of Act XXV. of 1861."

Para. 79, *for* "section 18," *read* "section 72, chapter IV. of Act XXV. of 1861."

Para. 80, *for* "under section 19, or by an officer in charge of a police station in person, under section 50, or upon the requisition of any officer in charge of any other police station under section 51," *read* "under section 115, chapter VIII., or by an officer in charge of a police station in person under section 142, or upon the requisition of any officer in charge of any other police station under section 143, chapter IX. of Act XXV. of 1861."

Para. 81, *for* "section 19," *read* "section 115, chapter VIII. of Act XXV. of 1861."

Para. 82, *for* "sections 50 and 51 is quite distinct in its character and its purpose from that authorised by section 19," *read* "sections 142 and 143, chapter IX., is quite distinct in its character and its purpose from that authorised by section 114, chapter VIII. of Act XXV. of 1861."

Again, *for* "issued under section 50 or 51," *read* "issued under section 142 or 143, chapter IX. of Act XXV. of 1861."

Para. 84 and marginal reference, *for* "section 28," *read* "section 100, chapter VI. of Act XXV. of 1861."

Para. 87, *for* "under sections 46 and 47 of the Act," *read* "sections 137 and 139, chapter IX. of the Act No. XXV. of 1861."

Para. 88, *for* "section 44 in connexion with the section 45 of Act XIII. of 1861," *read* "section 135 in connexion with section 136, chapter IX. of Act XXV. of 1861;" and again, *for* "by section 44," *read* "section 135."

Para. 89, *for* "schedule to Act XIII. of 1861," *read* "column 3 of the schedule annexed to Act XXV., as offences in which police officers may arrest without warrant."

Para. 91, *for* "intention of section 44," *read* "intention of section 135;" and again, *for* "specified in the schedule appended to Act XIII. of 1861," *read* "specified in column 3 of the schedule appended to Act XXV. of 1861, as an offence for which police officers may arrest without warrant."

Para. 92, *for* "under section 45," *read* "under section 136, chapter IX. of Act XXV. of 1861."

Para.

Para. 94, *for* "sections 52 to 58 of Act XIII. of 1861," *read* "sections 144 to 150, chapter IX. of Act XXV. of 1861;" again, *for* "section 58," *read* "section 150."

Para. 95, *for* "sections 14 and 54 of the Act," *read* "section 98, chapter V., and section 146, chapter IX. of the Act."

Para. 96, *for* "section 28," *read* "section 100, chapter VI. of the Act XXV. of 1861;" and again, *for* "sections 44 and 45 of the Act," *read* "sections 135 and 136, chapter IX. of the Act.'

Para. 97, *for* "section 60," *read* "section 152, chapter IX."

Para. 99, *for* "sections 44 and 45," *read* "sections 135 and 136;" again, *for* "clause 2, section 28," *read* "clause 2, section 100, chapter VI.;" and again, *for* "section 60," *read* "section 152, chapter IX."

Para. 100, *for* "section 59," *read* "section 151, chapter IX.;" *for* "section 61," *read* "section 153," and *for* "section 63," *read* "section 155."

Para. 102, *for* "sections 40, 41, 46, 59, 60, 61, 63, and 68," *read* "sections 129 and 130, chapter VIII., and sections 137, 151, 152, 153, 155, and 160, chapter IX."

Ordered, That copies of this Resolution be sent to—

Register, Nizamut Adawlut, North Western Provinces,

Office of Inspector General of Police, North Western Provinces,
Dated, Nynee Tal, June 1862.

M. H. Court,
Inspector General of Police, North Western Provinces.

APPENDIX III. to SECTION IV.—POLICE.

MEMORANDUM on the existing laws regarding the responsibilities of Landholders for the commission of offences within the limits of their estates or farms, and for the early and punctual communication to magistrates and police officers of the commission of certain offences.

IN the province of Benares a permanent settlement was concluded with proprietors of land, the terms and conditions of which settlement were embodied in Regulation II. of 1795.

2. Amongst other conditions was the following, which is thus recorded in Clause 8, Section XIV. of the above quoted Regulation:

> "To be responsible, subordinately to the aumil, for the maintenance of the peace, and for apprehending all disturbers thereof in and throughout their respective estates and farms; not to harbour thieves or robbers, but to secure their persons and deliver them up for trial, as well as to recover, or in failure thereof to be answerable for, and to make good the value of, all property robbed or stolen within their respective limits."

3. This condition led to the enactment, in the same year, of Regulation XVII. of 1795, styled, "A Regulation for the establishment of an efficient Police in the province of Benares," which, so far as hereafter quoted, is still in force in the province, and by Regulation XXXV. of 1803, has been extended to the provinces ceded by the Nawab Vizier, and to the conquered provinces and Bundelkund by Regulation IX. of 1804, and is now, therefore, in force throughout the entire North-Western Provinces.

4. The 1st section of Regulation XVII. of 1795 is given entire, as it shows plainly the purport of the Regulation, and the extent of the responsibility of the village landholders. It is as follows:—

> "Section I.—The establishment of an efficient police in the province of Benares being as essential towards deterring people from committing crimes as the speedy and impartial trial of offenders when apprehended, a clause was inserted in the engagements entered into by the landholders and farmers with Government, rendering them responsible [subordinately to the tehseeldars heretofore termed aumils] for maintaining the peace, and for apprehending all disturbers of it in their respective estates and farms; and binding them not to harbour thieves or robbers, but to secure their persons and deliver them up for trial, as well as to recover, or in failure thereof to make good the value of, all property robbed or stolen within their respective boundaries, [and in like manner as each proprietor or farmer entered into such engagements as far as regarded the limits of his own estate or farm, so each tehseeldar executed similar engagements with Government for the entire pergunnah or other division with the charge of the police and the collection of revenue of which he was entrusted, containing, however, a provision entitling him to have recourse, for his own indemnification, to the landholder or farmer within whose limits a loss by theft or robbery might occur.] But the parties thus made responsible having represented that robberies and thefts committed on Beoparees and others were often perpetrated in consequence of their stopping and remaining during the night, with their cattle and goods, in the open fields or woods, instead of putting up in the villages and giving notice of their arrival, so as to admit of their security being duly attended to, it was provided by a general notification, issued by the resident on the 29th of January 1789, that no person should be entitled to restitution or indemnification by the [aumils] landholders or farmers for losses by theft or robbery committed at night in the open fields or woods, and that restitution or indemnification should be claimable only in cases in which the owners of the property had put up at some town or village and given notice of their arrival. But it having been subsequently considered that it was the duty of the [aumils] landholders and farmers to have information conveyed to them of the arrival of merchants and travellers within their respective limits, and to provide for their security and protection, and it having appeared improbable that travellers and merchants in general would be apprised of the requisition for the giving notice of their arrival at a town or village, it was deemed inconsistent with the principles of justice that any omission in this respect on their part should be allowed to exempt the [aumils] landholders or farmers from making good any losses they might sustain by theft or robbery. It accordingly became an established principle throughout the province that for night robberies in the open roads or woods the [tehseeldars] landholders and farmers were not to be held responsible, unless it should be proved that they had such knowledge of the circumstances as might reasonably have been expected to have enabled them to have prevented the theft or robbery; but that for thefts or robberies committed in inhabited places they were liable to be made responsible, whether notice of the arrival of the parties should have been given to them or not, if, under the circumstances of the case, the magistrate should be of opinion that the perpetration of the theft or robbery was committed with their

Rescinded by Section 2, Regulation XIV. of 1807.

In effect nullified by Regulation XIV. of 1807.

their connivance, or was ascribable to their want of due care and vigilance. In conformity to the above principles, and for the establishment of an efficient police in the city of Benares, and the towns of Mirzapore, Ghazeepore and Jounpore, the following rules have been enacted:—

5. By Section 2 the police of the country, subject to the control of the magistrates, is to be considered under the joint charge of the landholders and farmers of land, who are bound and responsible for the preservation of peace.

6. Section 3 declares as follows:—

"[Tehseeldars] landholders and farmers of land are in future to be considered responsible for robberies or thefts committed in their respective limits, estates or farms [the tehseeldar in the first instance, and the landholders and farmers to the tehseeldar], in the manner specified in Clause 8, Section XIV. [and XV.], Regulation II. of 1795; it being understood, however, that for night robberies in the open roads or woods the [tehseeldars] landholders or farmers are not to be held responsible, unless it shall be proved that they had such knowledge of the circumstances as might reasonably have been expected to have enabled them to have prevented the theft or robbery; but that for thefts or robberies in inhabited places they are considered as liable to be made responsible, whether notice of the arrival of the owners of the property shall have been given to them or not, if, under the circumstances of the case, the magistrate shall be of opinion that the theft or robbery was committed with their connivance, or that the perpetration of it was ascribable to their want of care or vigilance."

The several words between brackets are rescinded by Regulation XIV. of 1807.

7. By Regulation VIII. of 1797, prosecutions instituted for the recovery of losses sustained by theft or robbery were made cognizable in the Courts of Civil Judicature, and are so to the present day.

8. Up to this period the responsibility of zemindars was confined to that of making good losses by theft or robbery. The law, as quoted above, was extended by Regulation XXXV. of 1803 to the ceded provinces, and by Regulation IX. of 1804 to the conquered provinces. No part of the law has been repealed by Act XVII. of 1862, although other parts of the several Regulations have been rescinded.

9. The system of police was subsequently amended by Regulation XIV. of 1807. By Section 2, "so much of Regulation XVII. of 1795, or of any other Regulationas declares the police of the province of Benares to be under charge of the tehseeldars, or which relates to the duty or responsibility of the tehseeldars as officers of police, is rescinded;" and by Section 3, "so much of Regulation XXXV. of 1803 [extended to the conquered provinces and Bundelkund by the Regulation IX. of 1804], or of any other Regulation as declares the police of the provinces ceded by the Nawab Vizier, of the conquered provinces in the Doab, and on the right bank of the River Jumna, or of the ceded territory in Bundelkund, to be under the charge of the tehseeldars as officers of police, is hereby rescinded."

10. The constitution of the police was altered, defined, and placed under the sole control of the magistrates, but the responsibilities of the village landholders were not diminished, but, on the contrary, extended by Section XIX., which is as follows:—

"Clause 1.—Nothing in this Regulation shall be construed to affect the responsibility of the landholders and farmers in the province of Benares, and in the ceded and conquered provinces, for robberies or thefts committed within their respective estates and farms, as declared in Section 3, Regulation XVII. of 1795, and Clause 1 of Section 3, Regulation XXXV. of 1803, extended to the conquered provinces and Bundelkund by Regulation IX. of 1804.

"Clause 2.—They are further hereby declared responsible for the value of any stolen or plundered property proved to have been brought into their estates or farms with their knowledge or connivance, and which they may not have caused to be delivered up, or have given timely information respecting it, to the local police officer or to the magistrate.

"Clause 3.—All claims upon the landholders and farmers for the value of stolen or plundered property under this section are to be instituted, tried, and decided in the Civil Courts, subject to the general rules of appeal."

11. Thus far the Regulations quoted define the responsibilities of landholders to all persons for the prevention of thefts and robberies, and to indemnification of losses.

12. I will now notice the laws which imposed certain duties to be performed by officers of Government, and the penalties which attach to neglect of these duties.

13. By Section 2, Regulation II. of 1797, it is enacted that the landholders and farmers of land who, by Regulation XVII. of 1795, are entrusted with the police of their several estates and farms, are required, with the assistance of their pykes, chowkeedars, punshans, and other description of village watchmen, to give at all times their utmost care and vigilance to prevent affrays, assaults, and all other acts of violence and breaches of the peace within their respective estates and farms, as well as to deliver over any person who may be found in the act of committing a breach of the peace, or whom they may be required to apprehend in execution of the duties vested in them.

14. Clause 2, Section 35, Regulation XXXV. of 1803 imposes the same duty on landholders, &c., in the ceded provinces, and the law is extended by Regulation IX. of 1804 to the conquered provinces and Bundelkund.

15. By Section 2, Regulation VI. of 1810, it is enacted that all zemindars, talookdars, and other proprietors of land, whether malgoozaree or lakheraj, all sudder farmers and under-renters of land of every description, all dependent talookdars, all naibs and other local agents, all native officers employed in the collection of the revenues and rents of lands on the part of Government, or of the Court of Wards, are hereby declared especially acountable for the early and punctual communication to the magistrates and police darogahs, either publicly or secretly, as the informants may judge proper, of all intelligence which they may obtain respecting the resort to any place within the limits of the estate or farm held or managed by them, of any person or persons of the different classes of people ordinarily known by the appellation of dacoits, cozanks, thugs, or buddeeks, or of any other description of robbers.

16. By Section 10, Regulation I. of 1811, the same persons and officers are hereby declared accountable for the early communication to the magistrate, either secretly or publicly, of all information which they obtain respecting the residence of any notorious receiver or vendor of stolen property within the limits of the estate or farm held or managed by them.

17. The remainder of the section defines the penalty for neglect of this duty; but by Act XVII. of 1862 the whole regulation is repealed, excepting so much of Section 10 as declares landholders and others accountable for the early communication of information respecting receivers of stolen property.

18. Section 4, Regulation III. of 1812 provides as follows:—

"Clause 1st. Regulation VI. of 1810 defines the duty required from zemindars and others with respect to the resort of criminals within the limits of the estates or farms held or managed by them.

"Clause 2d. With the view of affording the magistrates more early and punctual information of public offences committed within the limits of their respective jurisdiction, all zemindars (and other persons as before detailed) are hereby declared especially accountable for the early and punctual communication, to the magistrates or police darogahs, of all information which they may obtain respecting the commission of robberies, and likewise regarding the offence of breaking into houses, tents, or boats, or other places of habitation, perpetrated within the limits of the estate or farm held or managed by them."

19. The remainder of the section, which provides a penalty for neglect, is rescinded by Act XVII. of 1862.

20. By Section 2, Regulation VIII. of 1814 the same duty is exacted "respecting the commission of murder, and likewise regarding the offences of arson and theft perpetrated within the limits of the estate or farm held or managed by them."

21. All of the old regulations which provided penalties for neglect of these several duties have been repealed, as the penal code (Act XLV. of 1860) provides punishment.

22. The sections applicable are as follows:—

"Sections 154, 155, 156 and 187 to breaches of duty imposed by Section 2, Regulation II. of 1797, or Clause 2, Section 2, Regulation XXXV. of 1803.

"Sections 176 and 202 to neglecting to give the information required by—

"Section 2, Regulation VI. of 1810.

"Section 10, Regulation I. of 1811.

"Section 4, Regulation III. of 1812.

"Section 2, Regulation VIII. of 1814."

23. It will be clearly seen that the responsibility attaching to landholders are of two distinct descriptions: first, to Government they are responsible under penalties for the communication of the resort of robbers or receivers of stolen property; of the commission of murder, arson, and all offences against property, as well as for all information they may obtain respecting the commission of these offences, and for the maintenance of the peace and suppression of riots or affrays.

Secondly. They are bound to prevent thefts and robberies, *i.e.*, bound to take such precautions as will prevent them, or in event of their occurring, they are personally and pecuniarily responsible to all persons for the value of property stolen or plundered within the limits of their estates, excepting for night thefts committed in the open woods or fields, the exception not holding good if it be proved that they had such knowledge of the circumstances as might reasonably have been expected to have enabled them to have prevented the theft or robbery.

Thirdly. That they are personally and pecuniarily responsible for the value of all property stolen or plundered which is proved to have been brought into their estates either with their knowledge or connivance, or which they may not cause to be delivered up, or of which they have not given timely information to the nearest police officer.

24. The

24. The law appears very complete, and if the responsibility were enforced, zemindars will and can prevent depredation, as they do in the province of Kumaon, where, the law being in practice, property is more secure than elsewhere, though a Government police is unknown.

25. I presume it is under Clause 2, Section 19, Regulation XIV. of 1807, that in certain districts (chiefly of the Delhi Province), cattle stolen and tracked from one village to another were claimed, or the value thereof demanded, from the village to which traces were found, and beyond which the track could not be discovered. The law certainly applies to such cases, and to all others where property can be clearly proved to have been brought into a village under such circumstances as preclude the supposition that it could have been brought without the knowledge of a landholder who takes such precautions as are necessary for the discharge of his duties.

26. The laws are not, to my belief, known to the landholders, the people, or even the officers of Government; and I believe there is an impression that the landholders have been relieved from all responsibility by the silence in Act XLV. of 1860 on the subject, and by the repeals effected by Act XVII. of 1862; I would, therefore, suggest that the laws bearing on this subject may be made known in every possible way, and especially to the zemindars, talookdars, mokuddums or farmers of villages in the North Western Provinces, either through the magistrates and police officers, or tehseeldars and village putwarees.

27. I would further recommend that the attention of magistrates be prominently directed to the extent of the responsibility of landholders, &c., to the prevention of thefts. The selection and appointment of the village police is given to them, and although not amenable to penalties should thefts occur, they are pecuniarily responsible to indemnify for losses that occur in inhabited places, if, in the opinion of the magistrate, the perpetration of the theft or robbery was ascribable to their want of care or vigilance.

It is not necessary that connivance be shown; indeed the landholder may be perfectly innocent of any complicity, or even absent from and non-resident in, the village; but this does not absolve him from the responsibility attaching to him, and in consequence of which he has the selection and appointment of the police of the village.

28. Enforcement of this responsibility is unfortunately dependent on the will of the plundered party; and it is probable that residents of the village will never take advantage of the law, and thereby expose themselves to retaliation by the landholder under whom they live. But cases are of frequent occurrence where the injured parties are travellers to whom the law affords easy redress, and where undoubtedly the landholder is, to say the least, culpable for not preventing the crime; for instance, nearly every robbery reported is committed on travellers returning from market villages to their homes and on village roads. These are invariably committed on nearing villages and in daylight. Such crimes are easy of prevention, and could not fail of being detected were the zemindars alive to their duty and to the responsibility attaching to them, "which is to secure the persons of all robbers and thieves, and to recover, or in failure thereof, to be answerable for, and to make good, the value of all property robbed or stolen within the limits of their respective estates; and in cases thus openly committed within short distances of villages, the parties plundered have a clear right, under the law, to be indemnified for their loss."

29. It appears, however, necessary that the magistrate should record his opinion whether the perpetration of the crime was ascribable to want of care or vigilance, or no. This appears necessary as the ground of action, and sufficient to carry decree of the civil judge, whose only task would be to determine the extent of the loss.

(signed) *M. H. Court,*
Inspector General of Police, North Western Provinces.

APPENDIX I. TO SECTION XIII.—POLITICAL AND MILITARY.

RESOLUTION, General Department.—No. 2664 A., dated Nynee Tal, 10 October 1861.

READ again, Proceedings of this Government in the Revenue Department, dated the 11th June 1860, Nos. 145 to 148.

Read again, Proceedings, Revenue Department, dated the 30th March 1861, Nos. 1 to 3.

Read an extract from the Proceedings of the Government of India, in the Financial Department, No. 3417, dated the 15th March 1861.

Read again, Proceedings, Revenue Department, Nos. 11 and 12, dated the 27th of April 1861.

Read Act No. XIV. of 1861, entitled, "An Act to remove certain Tracts of Country in the Rohilkund Division from the Jurisdiction of the Tribunals established under the General Regulations and Acts."

Read letter to Commissioner of Rohilkund, No. 637 A., dated the 21st of June 1861.

Read letter from Commissioner of Rohilkund, No. 42, dated the 11th of September 1861.

1. The Lieutenant Governor records the following observations and instructions:—

2. The Act above cited enacts that certain pergunnahs of the Bareilly and Moradabad districts, named in the schedule thereof, together with such portion of Pergunnah Kasheepore and Juspore as the Local Government may determine, shall be formed into a separate district, which shall not be subject to the jurisdiction of the courts of civil and criminal judicature, or to the control of the offices of revenue constituted by the regulations of the Bengal code, and by the Acts passed by the Governor General in Council and the Legislative Council, nor to the system of procedure prescribed for the said courts and offices. And the Act further directs that no Act hereafter passed relative to the constitution and procedure of the said courts and offices shall be deemed to extend to the tracts forming the Terai district, unless the same be specially named therein.

3. The Act was passed in pursuance of the representations contained in the proceedings of this Government, in the Revenue Department, above cited, No. 148, and in the extract from the proceedings of the Government of India, in the Financial Department, No. 3417, dated the 15th of March 1861, the scheme of administration proposed by this Government (as sketched briefly in the said extract), was sanctioned experimentally for three years.

4. But, in anticipation of the passing of the Act XIV. of 1861, on receipt of the orders of the Government of India, No. 1917, dated the 16th of February 1861, the Terai pergunnahs, then under the control of the Commissioner of Kumaon, were transferred to, and declared to be a part of, the Rohilkund division by notification, No. 228, dated the 26th of March 1861; and, by another notification of the same date, Mr. Elliot Colvin was appointed to be superintendent of the Terai district.

5. After inquiries, which have been attended with undesirable delay, the Lieutenant Governor has resolved that the entire pergunnahs of Kasheepore and Juspore remaining, as heretofore, attached to the district of Moradabad, the pergunnah of Bazpore, Roodurpore, Guddurpore, Kilpooree, Nanuk-Muttha and Bilharee, shall form the Terai district, and shall be in all departments of administration in the jurisdiction and under the control of the superintendent of the said district; subject to the instructions to be recorded in this resolution, and to the rules which it shall prescribe for the conduct of business in each department. As required by Section VII. of Act No. XIV. of 1861, a notification will be published in the Government "Gazette," declaring the said Act to be in force, within the limits above described, from and after the 1st of November next ensuing; and it will be the duty of the Commissioner of Rohilkund to cause a translation thereof to be published in the manner prescribed in the section cited, and, furthermore, at the tehsildaree stations of the Rohilkund division.

6. In like manner the superintendent of the Terai district will give publicity to the notification, by causing a translation of it to be stuck up at each tehsildaree and at all police posts within his jurisdiction; as well as at his own principal office, at the offices of the Commissioner and the senior Assistant Commissioner of Kumaon, and at all the tehsildarees or similar offices in the Bhabur.

7. The superintendent of the Terai district will have primary authority in all matters relating to the administration in all departments. He will have power to assign to the assistant superintendent such duties, executive, fiscal or judicial, within the limitations to be elsewhere described, as he may be deemed qualified to discharge.

8. It appears desirable to treat of each department separately.

REVENUE ADMINISTRATION.

9. The tract now called the "Terai district" has boundless resources in the natural richness of its soil and in the abundance of its water; and it requires only an industrious population, fair roads and skilful drainage, to convert what is now a pestilential prairie into a prosperous district.

10. The population is sparse and scattered, composed in great part of Tharoos and Baksas, the former in pergunnah Bilharee, Nanuk-Muttha and Kilpooree; the latter in Roodurpore, Guddurpore, and Bazpore. These tribes are migratory, and can never be depended on. An imaginary evil spirit, a quarrel, or any trifle, may disturb a whole village; and they leave houses and lands which they have occupied and cultivated for years without any apparent regret. They are, moreover, very improvident, and seldom or never accumulate property.

11. It cannot be hoped that the extensive wastes of the Terai will ever be brought under the plough and made productive by people of this character. They want the patient and trusting industry which distinguishes the agricultural population of Rohilkund and the Doab, and, though they are useful as pioneers, there can be no doubt that the Terai can only be reclaimed by immigration of settlers from the south. These must be attracted by low rates, and by the assurance of liberal treatment and of assistance when occasionally needed.

12. It seems certain that some years must elapse before the system of regular settlements for fixed terms of years can be introduced. Before this can be successfully done, villages must be established; the immigrants must acquire an abiding interest in the lands which they occupy, and an united community, having fixed and defined rights of occupancy at least, must be formed. A village settlement in proprietary right, with parties who have no common

mon interest, and who have not brought themselves to regard their new village as their home, and the land which they have redeemed from the waste as the inheritance of their children, would surely be a failure.

13. Settlements now existing need not be interfered with; but it is thought that the best hope of bringing the Terai into cultivation lies in a judicious Kham management, and in the appropriation of the proceeds, as sanctioned by the home authorities many years ago in respect of the Bhabur tract; to the drainage of swamps; to the construction of dams and channels of irrigation; to the opening up of communications; to the settling and hutting of immigrant cultivators, and generally to the improvement of the tract.

14. In this view there will be obvious advantage in regarding all the pergunnahs composing the Terai districts as one undivided estate, and in authorising the superintendent to regulate his expenditure without reference to the proportion of Kham collections from each pergunnah. Hitherto the officers in charge of these pergunnahs have been required to account for receipts and disbursements in respect of each. Under this system the expenditure is local, and so also is the improvement, and it has been impossible to undertake any extensive works of general utility, or to extend improvements to those parts which may most specially need it. The most backward pergunnahs, yielding the smallest revenue and needing the greatest care, have been at a stand still, and the general progress of the whole tract has been retarded.

15. There can be little doubt that every useful work which can be executed will be beneficial, in a greater or lesser degree, to every part of the tract. In the improvement of communications all the pergunnahs must be interested. From the drainage of swamps, the excavations of irrigation channels, and the extension of cultivation, advantages accrue to all, indirectly, in the improved salubrity of the surrounding country, which always follows clearances after the first two or three years.

16. The superintendent will, therefore, be guided, in his appropriation of Kham collections towards having for their object the improvement of the Terai, by a consideration of what will tend, in the largest degree, to benefit the whole tract. As heretofore, he must exhibit in his accounts the amount of revenue realised from each of the component pergunnahs; but his account of disbursements will be general for the entire district under his charge, showing of course the various works on which money may have been expended, but without any reference to locality.

17. It must be understood that the orders issued, and the arrangements made by the superintendent relative to the settlement of new assamees, the rates of rent to be paid by them, and all other details of Kham management, will be subject to no appeal; nor will his control over the water available for irrigation, or his directions regarding its distribution, or his orders as to removal of dams which cause swamps, and as to the course of new channels, be open to appeal; provided always that, on or before the 15th of October of each year, he shall submit to the Commissioner of Rohilkund, for transmission to the Board of Revenue, a full report of the revenue administration for the preceding revenue year;* and shall at the same time lay before the Commissioner, for submission direct to Government, a statement of the new works, as *e. g.*, roads, large bridges, dams, irrigating channels, which he proposes to undertake during the ensuing revenue year; with remarks, showing the object contemplated in each work, the probable cost of it, and the means which exist for meeting it. The Commissioner, in forwarding the latter report to the Government, will express his own opinion as to the propriety of the selections made; but it is to be understood that the superintendent shall, nevertheless, have power to incur any expense on account of tukkavee, hutting new assamees, clearing old village gools, repairing existing roads, and such like works, without prior reference to higher authority. The expenditure will appear in the superintendent's annual account of disbursements.

* "Revenue" year extends from the 18th of October to the 30th of September. "Agricultural" year extends from the 1st of July to the 30th of June.

18. The revenue of settled villages will be realised according to the Kistbundee, and credited, without any deductions, to Government. In case of necessity the usual coercive processes will be adopted at the discretion of the superintendent.

19. Reverting now to the 13th paragraph of this resolution, the Lieutenant Governor thinks it proper to entrust to the superintendent of the Terai the power, subject to the confirmation of the Sudder Board of Revenue, of conferring proprietary right in land on cultivators who may have formed villages in the Terai, and been settled upon the lands for a period not less than 10 years, and may have brought under cultivation not less than half the culturable area assigned to them.

20. But it is the opinion of some who are well acquainted with these tracts, and have had experience in the management of them, that it will not be advisable to confer these rights too freely or too early. It is apprehended that the cultivator while under Kham management feels that he will be treated liberally and assisted, would become alarmed at the responsibility which would accompany a fixed unvarying demand; that, if proprietary right were recognised and a fixed jumma assessed, as soon as a village or a fair portion of it were brought under cultivation, the village itself might prosper, but that progress elsewhere would be retarded by reduction of the surplus profits from Kham management held available for the general improvement of the Terai district; and it is thought that the object to be aimed at in giving proprietary right will be as surely attained in the end by holding out

hopes of such rights, at the next settlement, to those who had earned them by their industry; and of "Mourousee" rights to other having lesser pretensions, and more slender claims to favour.

21. The Lieutenant Governor, therefore, is unwilling to lay down any undeviating or imperative rule. The superintendent will use the authority conferred upon him in general accordance with the principle above indicated, and in the manner which he may see best fitted to produce the largest benefit to the Terai district generally.

22. It is hardly needful to observe that the utilization of the water, which, after its subterraneous passage through the forest, rises to the surface at the upper edge of the Terai, is a matter to which the constant attention of the superintendent will need to be directed. The extension of cultivation, the enhancement of the land revenue, the progress of the people towards a state of prosperity, and the improvement of the now deadly climate, all depend upon the proper application of the water to be drained from the swamps of the Terai. The Bhabur offers an example of what can be accomplished in these respects by very simple means, and with little professional assistance, and the Lieutenant Governor is sanguine, that the superintendent of the Terai district will before long bring about similar results in that tract by the like means. It is mainly, though not solely, to help the superintendent in utilizing the water of Terai, that the appointment of an assistant has been sanctioned.

23. No further remarks or instructions of a general kind seem to be called for. The superintendent will bear in mind that the object, with which all these pergunnahs have been formed into one district, and placed under his direct charge, is the reclamation of the Terai. The introduction of a simple and uniform administration, adapted to the rude nature, the social backwardness, and the primitive customs of those who form the greater part of the population, will assist the furtherance of this object, but success will depend chiefly on the temper, the discretion, and the energy of the superintendent; and the Lieutenant Governor is glad to think that in Mr. Elliot Colvin all these qualities are united, and that to him may be confidently entrusted the duty of carrying out the measures, which are looked to for the conversion of this pestilential and unproductive tract into a flourishing district, yielding its due contribution to the revenues of the State.

Rules for the guidance of Revenue Courts.

24. Rules for the guidance of Revenue Courts in summary and revenue suits are appended to this resolution.

Treasury.

25. All monetary transactions connected with the Terai district, will be conducted in the district treasury of Bareilly. Revenue realized from settled villages according to the Kistbundee, or from the sale of stamps, or from Abkaree, will be paid into that Treasury, and credited to Government in its accounts. Collection under Kham management from pasturage dues, or from miscellaneous forest produce, will be paid into the same Treasury, and held in deposit to the credit of the superintendent of the Terai district, who will draw upon it as he may require. The deputy auditor and accountant general will issue such further and detailed instructions as he may see fit.

Stamps.

26. Stamps will be supplied by the officer in charge of the Bareilly treasury to the superintendent of the Terai district on his indents, and will be accounted for by him in usual course.

Act No. XXXVI. of 1860 in force.

27. The Stamp Act, No. XXXVI. of 1860, as amended by subsequent enactments, and as modified in its application to the Non-regulation Provinces, by notifications of the Government of India, Nos. 1,828 and 2,095, dated respectively the 25th of September and the 26th of October 1860, is to be considered in force within the limits of the Terai district.

Abkaree.

28. A small revenue is derived from this source in the pergunnahs of the Terai district, and there is no reason why it should be relinquished. The management in this branch of the revenue department will be regulated by the instructions contained in the circular order of the Sudder Board of Revenue No. 1, dated the 1st of May 1857; and by such further orders as may have been, and may from time to time be, issued by the said authority.

29. Lastly, as incidentally mentioned above, all transactions with the cultivators will be regulated according to the "agricultural year," extending from the 1st of July to the 30th of June, and all revenue collections, balances, &c., will be accounted for to the superior revenue authorities according to the "revenue year," extending from the 1st of October to the 30th of September, as recently set on foot in the North Western Provinces generally. An annual report of the revenue administration must be submitted, showing demands, collections, and balances from settled villages, with accounts of Kham collections on account of each pergunnah, and accounts of disbursements from those collections as incurred for the benefit of the whole tract. This Report will be drawn up for the revenue year, and will be submitted in duplicate to the Commissioner, who will forward one copy to the Sudder Board of Revenue, and the other direct to Government, for the Lieutenant Governor's early information of what has been done during the year past.

30. Further, it will be necessary that, in connexion with the above Report, the superintendent should, as soon after the 1st of October as possible, submit to the Commissioner of Rohilkund, for transmission direct to Government with his remarks, a (*quasi*) budget statement* of the works, whether roads, irrigating channels, drainage lines, or others which he

* See paragraph 17.

he proposes to undertake during the ensuing year, taking care that, so far as possible, all the works shall be of a reproductive character, and that the amount of the funds available for their execution, as well as the approximate cost of completing each, shall be exhibited in the statement, or in the report accompanying.

POLICE AND ADMINISTRATION OF CRIMINAL JUSTICE.

Police.

31. In the thinly inhabited pergunnahs, which compose the Terai district, the normal crime is cattle theft. Property of other kind there is little to tempt the professional thief; crimes of violence are believed to be rare; affrays, from the very nature of the country, must be almost unknown.

32. Hitherto the tehsildars and their subordinates have been employed both in the Revenue Department, and in the performance of police duties. The system has not been unsuccessful.

33. After full consideration of the subject, in communication with the Inspector General of Police North Western Provinces, and other officers of local knowledge and experience, it has been resolved that the existing system shall not, for the present, at least, be disturbed. There are sufficient reasons of this determination,—First, in the fact that the cost of a constabulary police, organised and enrolled under Act V. of 1861, would be out of all proportion to the revenue of the Terai district, and the measure cannot, therefore, be justified in a financial point of view; second, in the consideration that the villages are so scattered, the population so small and so poor, and serious crime, comparatively speaking, so rare, that even if the financial difficulty did not intervene, the need of a constabulary police would still be more than doubtful; third, in the social status of the people, which is so backward that the refined system of procedure, which is prescribed for constabulary police organised under Act V. of 1861, by the Code of Criminal Procedure (Act XXV. of 1861), would be unacceptable to the people themselves; would weaken the hands of the superintendent and his subordinates, and would injuriously hinder their action. The police agency in the Terai district will remain unaltered. The officers, engaged in the performance of police duties, will continue to be guided by the spirit of Regulation XX. of 1817. And in respect of police management, as of all other branches of administration, the superintendent of the Terai district will be subject to the control of the commissioner of Rohilkund, who is hereby declared to be superintendent of police.

34. The rules in accordance with which the administration of criminal justice is to be conducted are appended to this resolution.

35. All offenders sentenced to imprisonment by the magisterial courts of the Terai district will be sent either to the central gaol at Bareilly, or to the district gaol at Moradabad, as may from time to time be most convenient.

ADMINISTRATION OF CIVIL JUSTICE.

36. By the rules, which have been above prescribed for the guidance of the Revenue Courts, the trial and dismissal of all regular suits, for proprietary and accessory rights in land, have been reserved to those courts, the jurisdiction of the Civil Courts being restricted to the disposal of regular suits for orchards, gardens, and wells appertaining thereto; or for houses or other buildings, the private property of individuals, with the land on which such houses or buildings are erected, and the enclosures around them. In addition to these, the Civil Courts will, of course, have cognisance of actions for debts or bond, or otherwise, respecting partnership, and accounts not being partnership accounts, injuries to person or character, &c.

37. The functionaries to be employed in the administration of Civil Justice will be—

The Commissioner of Rohilkund,
The Superintendent of Terai district,
The Assistant Superintendent,

each of whom will exercise the powers defined in the rules appended to this resolution, and will be guided in their procedure by the same rules.

38. No provision is made at present for investing tehsildars with authority to try civil suits,—first, because they are employed as police officers; second, because it is believed that the superintendent will not require their assistance in this branch of the administration; and third, because it is thought that the duties falling upon them in the department of revenue, police, and criminal justice, will be too onerous to admit of their being employed with advantage in the trial and disposal of civil suits. If this measure should appear, hereafter, to be desirable, it may be brought under consideration.

39. In the preparation of the rules, the exclusion of all needless technicalities has been kept in view. In order, however, to secure uniformity and order in the proceedings of the Civil Courts, it is necessary to lay down certain simple forms of procedure, and nothing more has been attempted. Whenever these rules may cease to be applicable to the state of things, and to the nature of ordinary transactions among the people in the Terai district, it will be easy to amend and enlarge them.

40. Monthly statements of business in this department, in the forms appended to this resolution (X and Z) will be submitted to the commissioner, who, after passing his own remarks and orders thereupon, will forward them to the Government, together with a statement,

ment, in a corresponding form, of regular and special appeals, and miscellaneous cases disposed of by himself during the month.

41. An annual report on the Administration of Civil Justice, with statements showing the number of suits instituted, disposed of and pending, the manner of their disposal, and the proportion disposed of in each Civil Court; the classes of suits brought, whether for real property or debts on bonds, or accounts, &c., and the number of appeals preferred and their results, together with any other particulars illustrative of the administration in this department, will be submitted by the superintendent of the Terai district as soon after the close of each calendar year as possible, to the commissioner of Rohilkund, who will forward the report, with his own remarks, direct to the Government.

Ordered, that a copy of this resolution, with copies of the rules for the administration of Criminal Justice, be sent to the Nizamut Adawlut for information and guidance. That copy of this resolution, with copies of the rules for the guidance of the Revenue Courts be sent to the Sudder Board of Revenue for information and guidance. That copy of this resolution, with copies of the rules for the administration of Civil Justice; of the rules for the administration of Criminal Justice; and of the rules for the guidance of the Revenue Courts, be sent for information and guidance to the following officers, viz.:—

The Commissioner of Rohilkund.
The Superintendent of the Terai district.
The Assistant Superintendent of the Terai district.

The magistrates and collectors of Bijnore, Moradabad, Bareilly, Shahjehanpore and Budaon; and for information to the Commissioner of Kumaon, and the senior and junior assistants of Kumaon.

Ordered further, that copy of the resolution only be sent to the Financial Department for communication to the deputy auditor and accountant general, and civil paymaster.

(signed) *George Couper*,
Secretary to Government of the
North Western Provinces.

Appendix II. to Section XX.—Miscellaneous.

List of the Instruments and Books supplied.

No.	Description.	Uses.	Number of Column of large Form in which to be Registered.
1	Barometer, marine, with lock and key.	Pressure of atmosphere - -	1, 30
1	Maximum thermometer - -	In air - - - - -	21
1	Ditto - ditto - -	Wet bulb - - - - -	24
1	Minimum ditto - -	In air - - - - -	22
1	Ditto - ditto - -	Wet bulb - - - - -	25
1	Standard ditto - -	For comparison.	
1	Ditto - ditto - -		
1	Black bulb ditto - -	Solar radiation - - - -	18
1	Ditto - ditto - -	Ditto ditto (spare).	
1	Minimum ditto - -	For terrestrial radiation (plain bulb or grass).	19
1	Ditto - ditto - -	For sky radiation (black bulb)* -	20
1	Wet and dry bulb hygrometer	Amount of evaporation, &c. -	6, 8, 35, 37
1	Ditto - ditto - -	Ditto - ditto (spare).	
1	Lind's anemometer - -	Direction and force of wind -	13, 14, 42, 43
1	Pithball electrometer - -	Intensity and kind of atmospheric electricity.	16, 17, 45, 46
1	Rain gauge - - - -	Rain-fall on ground - - -	27
1	Ditto - - - -	Ditto feet above ground -	28
6	Thermometers (japanned metal cases).	1 for temperature of earth 6″ below surface.	4 & 33

1	Introduction to Indian Meteorology.		

* A parabolic reflector requisite.

INSTRUCTIONS for taking METEOROLOGICAL OBSERVATIONS.

DAILY observations are to be taken regularly at 10 a.m. and 4 p.m.

The indications of the self-registering instruments are also to be taken at 10 a.m. (Double maxima and minima, when they occur, if remarkable, should be recorded seperately in a diary as supernumerary, and their accompanying circumstances should be notad.)

As these hours fall within the usual working hours of officers and of their assistants, all of whom may be instructed accurately to read and register the instruments, it is trusted that the observations at these hours will be made with great care and regularity; but it is hoped that many of the observers will take an interest in meteorological science, and make arrangements to have observations also taken at 7 a.m. and 7 p.m., for which a separate register is supplied.

Hourly observations should, if possible, be taken on the 21st March, 21st June, 21st September, and 21st December, commencing at 6 a.m. on those days unless they fall on a Sunday, in which case the observations should commence at 6 a.m. on the 22d. If this should be found so inconvenient as to be almost impracticable, the observations might be made every three hours—say at 1, 4, 7, 10 a.m. and p.m., on the four regular term days just mentioned.

The same form of register will answer for the hourly observations, using, for the hours of the day, 24 of the lines for the days of the month.

It would add greatly to the value of the observations of the station if the hourly observations are taken more frequently, and it is recommended to those who are desirous to furnish more exact information, to take hourly or three-hourly observations on the 21st of each month.

Occasional observations should be taken hourly, or even more frequently, say every 10 minutes, when any sudden great rise or fall in the barometer should seem to indicate great atmospheric changes, as well as during periods of hurricanes, or very severe gales of wind, or earthquakes.

Occasional remarks on the character of the weather, personal sensation, should be inserted in the column of "Remarks"; they will assist, in conjunction with the registered observations of the instruments, in determining the atmospheric conditions which are most favourable, or otherwise, to health.

Other points that may be noted with advantage are:—The depth of the surface of water in wells, and depth of water; depth of water in adjoining rivers, canals, or tanks. These are observations which it would be sufficient to record once a week, or twice a month. The time of ripening and cutting of certain crops is another matter to be noted in the general remarks, and along with these another periodical record would be important, if obtainable, viz.:—of the most prevalent forms of disease during each month,—the registers of the gaols and of the dispensaries, as well as of the military hospitals, would furnish much important information under this head; and possibly, nothing more general and equally reliable can be looked for at present, except in times of epidemics and well marked disease, nor means of obtaining correct local statistics of mortality.

A few remarks annually should be given on the physical topography of the place of observation and neighbourhood within a defined range, say a radius of three miles, including a detail of the cultivated area and nature of cultivation.

The Tables appended to the article "Meteorology" in the "Admiralty Manual of Scientific Inquiry" should be used in reducing and correcting the observations, and reference should be had to that article also for general information and guidance. The 2d vol. (old series) and 1st vol. (new series) of the Royal Engineers' Professional Papers, also contain memoranda, worth consulting on the subject, by Sir H. James, whose instructions are also published separately.

The spare instruments should be carefully put away, so as to be at once available in case of breakage or disarrangement of those in use; and to obviate any break in the continuity of the observations.

The observations might be furnished to the local papers weekly.

BAROMETER.

The barometer is the most important of all meteoroligical instruments. Its office is to measure the actual pressure of the atmosphere on a given horizontal surface at the time and place of observation. Its fluctuations are observed to have considerable relation to changes in the weather, and espeically of the wind; hence its use as a weather-glass.

A barometer should be examined, before setting it up, for air-bubbles in the tube, and for the existence of air above the mercury in the upper part of the tube: this is done by gently inclining the instrument either way from the horizontal position, a little up and down, when air bubbles, if large, will be seen to run to and fro, and must be evacuated by invert-

ing the instrument, and by gentle blows on it with the hand, driving them up into the cistern. If this cannot be done the instrument is useless. If air exists to an objectionable amount above the quicksilver, it will not tap sharp against the upper end of the tube when the barometer is inclined from a vertical position, so as to make the mercury rise to the top. If the blow is puffy and dead, or is not heard at all, the amount of air must be considerable, and may be expelled by inversion.

In fixing the barometer choose a good light near a window, but not exposed to sunshine, in a retired apartment, little liable to sudden changes of temperature or to drafts of wind: adjust the tube to a vertical position by a plumb-line, and fix it so as never to shift from that position. Before reading off give a few taps on the instrument, enough to make the upper end of the column of quicksilver shake visibly, as the mercury is apt to adhere to the glass, and give erroneous readings. In reading bring the index always opposite to one part. The correct part to choose is the summit of the convexity of the mercury, to which the index should be made a tangent; but if this be difficult to hit, either from the construction of the index or the want of a proper fall of light, the line of junction of the mercury and glass may be taken; in that case the tapping should never be omitted. Whichever mode of reading is once adopted should be stated, and always adhered to. A piece of white paper placed behind the upper part of the tube will generally enable any one to read off by the convexity of the quicksilver. In placing the index, notice whether it appears to shift a little up and down, as the eye is raised or depressed: this is called parallax, and is a source of uncertainty, to be avoided by placing the eye in reading always on the exact level of the top of the mercurial column.

Barometric observations require corrections of three kinds; and to render them available and comparable with others, it is necessary that their amount should be ascertained and distinctly stated. The first is called the zero correction; it includes several subordinate corrections arising from different sources, such as that originating in the faulty placing of the scale of inches, that due to the capillary depression of the mercury in the glass tube, and the constant part (which at a fixed station is nearly the whole) of the depression arising from the presence of air or vapour in the upper part of the tube.

To determine the zero correction the barometer must be compared with a standard instrument, such as that at the Royal Observatory for instance, or some other which has been compared with it, or with some standard of equal authority. (This has been done at Calcutta, and the comparison paper accompanies each barometer.) Such comparison ought never to be omitted before forwarding the barometer to its place of destination, nor should any opportunity be neglected of comparing it, when fixed in its place, with a good portable barometer. In making such comparisons all that is necessary is to record the readings of both the instruments, after at least an hour's quiet exposure, side by side, that they may have the same temperature. If compared by two observers, each should read off his own barometer in his usual manner, and each should take a mean of several readings, then each should verify the other's results; by this means the zero of one standard may be transported over all the world, and that of others compared with it ascertained.

The amount of the zero correction is often very large, as two or three tenths of an inch; but its influence on the mean results of recorded observations falls wholly on the determination of the heights of the station of observation above the mean level of the sea, and affects little, if at all, any conclusions of a meteorological nature which may be deduced from them: hence, if proper care be taken to preserve a barometer once set up, immovable, a long and regular series of observations with it has a value independent of any knowledge of this element; and it is fortunate that this is the case, as the zero correction is one extremely difficult to determine exactly *à priori*.

In transporting a compared barometer to its place of destination great care is necessary. It should always be carried upright, or considerably inclined, and inverted, and over all rough roads should be carried in the hand or on a small dooly. The inversion should be done with great care, and gently. In fact this instrument cannot be handled too delicately.

The next correction, and the most important of all, is that due to the temperature of the mercury in the barometer tube at the time of observation. To obtain this every barometer requires to have attached to, or fixed very near, it a thermometer, called the attached thermometer, which must be read and registered at each observation of the barometer. It is preferable in practice to read off this thermometer first, to avoid the error arising from breathing on, or standing long near it, while reading the barometer itself.

The third correction applicable to barometric observations arises from change of level of the mercurial surface in the cistern, owing to the transfer of a portion of its contents to or from the tube. In barometers with small cisterns, and where the lower level cannot be adjusted at each observation, its amount may be large; and its effect being always to make the apparent fluctuation less than the real, in a fixed proportion, it ought, if possible, to be ascertained. The data necessary to be known are, first, the internal and external diameters of the tube; secondly, that of the cistern containing the mercury, at the surface where the tube plunges into it. These particulars, as they must be known to the maker, ought to be engraved conspicuously on some part of the instrument.

As

As observers may not have been accustomed to instruments with verniers, the following directions may be found useful for reading them:—

Suppose the scale to be divided into inches, tenths of inches, and half-tenths, or ·05, and the vernier to be graduated to ·002, so that the observer can read to ·001, or the one-thousandth part of an inch by estimation.

For example, in reading such a number as 29·763, 29·750 will be read on the scale and ·013 on the vernier;

Total reading - 29·763

That is, the coincidence of the lines will not be exactly at ·012 or ·014, but would be intermediate between them.

A learner should set the bottom of the vernier exactly at 30 inches; then, slowly raising the vernier, mark the coincidence of the lines of the vernier and scale at 30·002, ·004, ·006, ·008, ·010, ·012, &c., to ·050, when he will see that the bottom of the vernier has also reached the ·05 on the scale, so that continuing to raise the vernier he commences to read again at the bottom of it, but adding the ·05, the readings become 30·052, ·054, ·056, ·058, ·060, ·062, &c., to ·098, ·100, ·102, &c. A very little practice will enable anybody to read off the instrument accurately and quickly; and it is important that the observations should be taken quickly, as the heat of the body and of the hands is very rapidly communicated to the instrument, and will affect the readings.

THERMOMETERS.

Maximum thermometers are of three patterns. In one kind the thread of mercury is simply broken, and the detached portion being pushed forward by any increase of temperature is left there, indicating the maximum temperature of the air or of evaporation during the period between which the observations are registered.

The thread of mercury in these thermometers is easily broken at any point required, by simply raising the bulb end and allowing the mercury to run into the open cell at the end, and, as it descends, detaching, with a slight jerk, as much of it as may be thought necessary, which would be an inch or an inch and a half.

In the second kind a small steel index is pushed forward by the mercury as it rises, and is left to indicate by its lower end the maximum temperature as it recedes. In the third kind a small piece of enamel is fixed in the tube near the bulb above which the mercury can freely rise; on a fall of temperature, the mercury in contracting detaches the portion in the tube above the enamel, which is left to indicate by its upper end the maximum temperature. After this is registered the detached column may be made to reunite with the rest of the mercury by depressing the bulb.

The minimum thermometers are filled with spirits of wine, and have a double-headed index in their tubes, like miniature "life preservers" or "dumb bells."

As the temperature decreases the spirit draws back the index with it, whilst on an increase of temperature the spirit flows round the index without disturbing its position; the upper end of the index, therefore, shows the minimum temperature of the air, or (if the bulb be wet) evaporation between the periods at which the observations are registered.

In travelling self-registering thermometers should never be carried with the mercury bulb downwards; if this should happen they are sure to arrive in a state unfit for use. When the steel index gets immersed in the mercury it cannot be moved by a magnet, and lets the mercury pass by its side, To correct this is tedious, and always hazards fracture; with great care, however, it may be done as follows:—First cool the bulb (by evaporation of ether, if necessary) till the mercury is either fairly drawn down below the index, or a separation takes place in the column, leaving the index with mercury above it; endeavour then by tapping, warming the tube, or by the magnet, to loosen the index ever so little; then apply heat to the bulb, and drive up the index, with its superabundant mercury, quite into the air vessel. This requires many trials and much patience. When there hold the instrument bulb downwards and suspend the index by a magnet at the top, allowing any globule of mercury to drop into the origin of the tube below; then heat the bulb cautiously over a very small clear flame of an oil lamp, till the mercury rises to the very top of the tube, and fairly unites with the globule there awaiting it. This must be done very gradually and watched very carefully, for if over-done the tube will be fractured. Let the bulb cool and the mercury will sink in one united column; if not, heat it again. When this is accomplished the index may be set loose by withdrawing the magnet, and restored to its proper position in the tube.

POSITION OF THE THERMOMETERS.—Observers who combine their observations should suspend their thermometers in positions and under circumstances as much as possible similar; the bulb of the dry thermometer should be four feet from the ground, and the temperature shown by it will be due to the stratum of air at that distance from the soil; it should be sheltered in every way, not only from the direct rays of the sun, but also be so far removed from walls and buildings as to be out of the way of the reflected heat,

or that derived from radiation; it must be protected from rain, but the air must be allowed an uninterrupted passage around it in every direction. All these advantages may be ensured by a stand of the following construction, in which should be suspended the dry bulb thermometers, and also the thermometers which register the greatest and least degrees of heat:—

The stand is doubly boarded on the east, west and south sides, the instruments facing the north without any screen; hence, when the sun shines on the outer covering, a stratum of air intervening, the inner case does not get heated by its rays: holes are bored in various parts of both the inner and outer case, with special care that they be not opposite to each other, lest the sun's rays should find admission to the thermometers; the air thus circulating freely is supposed to be of an equal temperature with that in the shade in any position, however sheltered from the sun; a pent-house, or sloping roof, also double, throws off the rain, and thus the thermometers are kept dry. The upright support of the stand is firmly fixed in the ground, and braced, to prevent agitation; the whole should be at least 12 or 15 feet from lateral walls, and 40 or 50 from walls directly south, which would reflect the sun's rays, and influence the instruments. The thermometers face the north, and are about four feet from the ground.

If not isolated in the manner just described, the thermometers may be suspended in an open verandah with a northern aspect, protected from driving rain, and on the flanks from the early morning or late evening rays of the sun, or from any direct radiation or reflection from buildings, water, &c., in the vicinity. If such a verandah be not available, a small thatched hut on posts may be erected, open all round, with the eaves projecting sufficiently to prevent the sun or rain getting at the instruments.

The max. and min. dry and wet thermometers should be placed horizontal. They should be attached to the frame, or stand somewhat as in the sketch. The black bulb thermometer for maximum in the sun's rays, and the minimum with plain bulb for terrestrial radiation, may be disposed as in the sketches, or the former may be placed in an open box on the ground, screened from lateral wind. The bulb may be blackened with a coat of Indian ink. The latter should be placed on grass, or wool, or hair, and may be either protected by a covering during the day or taken up and placed in a groove prepared for it on the frame, on which also the hygrometer should be conveniently placed. Should the hygrometer be not available from any cause, the readings (not the minimum readings shown by the indices) of the minimum (spirit) dry and wet bulb thermometers may be observed at the appointed hours of registration in lieu.

For observing the sky radiation, a minimum self-registering thermometer (if available) should be placed with its bulb, which should be blackened, in the focus of a parabolic reflector turned upwards to the sky, and screened from currents. (The reflectors may be supplied hereafter.)

After the observations are registered, the detached portion of mercury in the maximum thermometers should be all but reunited with the thread from the bulb; this is done by simply turning up the thermometer, and gently tapping it. If they have steel indices, a magnet should be used.

In like manner the index in the minimum thermometers should be allowed to slide down to the end of the thread of spirit. If in transit the index should be shaken out of the spirit, or the thread of spirit broken, the instrument can be put in order by holding it with the bulb down, and giving it a sharp swing, to send the index into the spirit; and to close the spaces in the thread of spirit after this is done, the instrument should be suspended with the bulb downwards for half an hour, and it will then be in perfect order for use.

The standard thermometers should be kept by themselves in a box in cotton, comparisons with those in use being made at intervals; such comparisons extending over the whole scale included in the range of the thermometer. For this purpose artificial means of reducing the temperature must be resorted to.

There are half a dozen common thermometers in metal cases supplied. Of these one may be placed with its bulb six inches below the surface of the ground, and recorded daily. Another as many feet below the surface as can be conveniently arranged and recorded at intervals (say) of 10 days, and noted with the depth in the column of remarks. The latter may be placed in a blanket, or pounded charcoal, or dry sand, in a drain tile or chatty. Others may be brought into use as may occur to the observer; one, for instance, might be placed some distance above the ground, so as to obtain the true temperature of the air; a point referred to in the following extract from the Philosophical Transactions, Part II., 1847:—

"Small heating Power of the Solar Rays on the Atmosphere.—Several thermometers, fully exposed to the sun's rays at different distances from the earth's surface, were read at short intervals during the day and night, and it was found that the reading of a thermometer 12 feet from the earth's surface was very nearly identical with the true temperature of the air. During the summer of 1844 and the year 1845, the reading of this thermometer was found always thus to agree. Hence there is no doubt that if a thermometer be freely suspended in the air, with its bulb at the height of 13 feet above the soil, its readings will represent the true temperature of the air at the time, and much more truly than those of any one placed near the ground, or within a few feet of walls and buildings."

Mason's Dry and Wet Bulb Hygrometer consists of two thermometers, the bulb of one of which is covered with fine muslin, and supplied with moisture by capillary action through

through cotton wick or floss silk, from a small vessel of water, which it is advisable to remove several inches from the bulbs, so that there may be no chance of incorrectness by its moistening the air around the dry bulb, and so affecting its reading. The temperature of the air and the temperature of evaporation are to be noted, beginning with the former.

The reduction of the observations to derive the elastic force of vapour at dew-point is effected by the formulæ of Dr. Apjohn:—

$$F = f - \frac{d}{88} \cdot \frac{h}{30} \cdot \ldots (a); \quad F = f - \frac{d}{96} \cdot \frac{h}{30} \cdot \ldots (b).$$

(a) to be used when the reading of the wet thermometer is above 32°, and (b) when below. In these, d is the hygrometric depression, or the difference between the readings of the dry and wet bulbs, h the height of the barometer, f the elastic force of vapour for the temperature shown by the wet thermometer, to be taken from Table III., Appendix to Meteorology, Admiralty Manual, and F the elastic force of vapour at the dew-point, which (all the other quantities being known) these formulæ enable us to calculate. With F so calculated enter the same table under the column of force of vapour, and the corresponding temperature is the dew-point.

The degree of humidity of the air is found by dividing the elastic force of vapour at the temperature of the dew-point (F), by the elastic force of vapour at the temperature of the air—the maximum saturation of air at any temperature being represented by unity.

The wind-gauge should be fixed in a position free from the influence of surrounding trees or buildings and a vane, if wanting, attached, so as to keep the mouth of the tube ever towards the direction of the wind. It may be made to register the extreme pressure exerted by the wind by fitting into the long tube of the syphon a piece of pith, which resting on the surface of the water shall be forced up by it and left as it falls owing to diminished pressure.

The amount of cloud and wind should be estimated respectively according to instructions in Admiralty Manual, pp. 146 and 154.

One of the rain gauges should be on the ground; one (say) 20 feet above it (on the roof of a building) the position of both being free from eddies of wind.

The phænomena of dew are of great interest. The amount collected by a given surface of any bibulous radiant, as cotton, &c., in clear nights, in exposures perfectly open to the sky, and on the level of the soil, should be registered. If accompanied with observations of the depression of the terrestrial radient thermometer, and also of the hygrometer, such observations would acquire additional value.

Whenever the electrometer is effected by atmospheric electricity, the pith-balls will diverge. In order to ascertain the kind of electricity, a rod of glass, excited positively (P) by being rubbed gently with dry silk, or a stick of lac or sealing wax, excited negatively (N) by being rubbed with a dry woollen cloth, should be presented to the cap of the instrument. If the balls be caused to diverge more, the electricity is the same as that of the excited glass, or stick used, and *vice versâ*.

The intensity or quantity will be measured by observing on the graduated arc the amount of divergence of the balls.

DIRECTIONS with Table for recording Observations on LUMINOUS METEORS.

1. Compare with magnitudes of stars, or diameter of moon.

2. State whether brightness increased or decreased during the appearance.

3. Distinguish the kind of streak or train, whether continuous, broken, or afterwards becoming curved; if stationary for many seconds, examine it with a telecope if possible.

4. If possible, state precise time of appearance and disappearance, especially if larger than Venus at her brightest.

5. Give the direction, as from one star to another; or the altitudes of appearance and disappearance; and when crossing the observer's zenith, or moving horizontally, to note especially from what point of the compass to another it moved; also length of path.

6. Note any unusual peculiarity, or whether it bursts.

7. In case of the bursting of very large meteors, listen attentively for any noise for some minutes, noting the intervening time.

8. In such cases make special inquiry in the neighbourhood as to whether anything has been seen to fall.

9. If many be seen on any one night, state general direction, average length of path, and note the radient point.

10. It is desirable to make special observations at, as uniform hours of the evening as may be convenient, say from 9 to 10 p.m. in winter, and 10 to 11 p.m. in summer; and if on any night large meteors should be found to be more than usually numerous between these hours, to extend the watch on that night somewhat longer.

11. The days in each month most favourable for seeing meteors may be stated to be as follows:—January 2d and 10th; February 6th; March 1st; April 19th; May 18th; June 6th and 20th; July 17th, 20th and 29th; August 3d, 7th to 13th; September 10th; October 1st and 23d; November 9th to 19th, 28th and 30th; December 8th to 14th, especially 11th; at which times it is very desirable to notice as accurately as possible their proper direction as compared with that of the earth, in accordance with the instructions noted in No. 5.

TABLE.

Date.	Hour.	Place of Observation.	Apparent Size.	Colour.	Duration.	Appearance; Train, if any, and its Duration.	Length of Path.	Direction; noting also whether Horizontal, Perpendicular, or Inclined.	Position or Altitude and Azimuth.	Remarks.	Observations.

OZONOMETER.

Faraday defines ozone as oxygen in an altered or allo-tropic condition.

Dr. Andrews, Professor of Chemistry in Queen's College, Belfast, says—"There can be no doubt of the formation of ozone from pure and dry oxygen by the action of the electric spark, and nothing is easier than to convert the whole of a given volume of oxygen into ozone in presence of a solution of iodide of potassium.

"Ozone is converted by heat into ordinary oxygen, and would, at the common temperature of the air, if preserved in an hermetically sealed glass tube, gradually change into common oxygen."

Dr. Moffat's ozonometer consists of slips of paper prepared with iodide of potassium and starch.

These papers are suspended so as to be exposed to the free access of air, but not to the direct rays of the sun, which may be managed by placing them in a large box, painted black inside, from which light is excluded, but which is perforated at the bottom for the admission of air.

These papers, when affected by ozone, are found tinged with various shades of brown, of which the intensity is measured by a scale of ten gradations. They should not be moistened; and if kept in the dark, or between the leaves of a book, may be retained for years.

The brown tinge of the ozonometer is produced by the decomposition of the iodide of potassium; the oxygen of the ozone combining with the potassium, and setting free the iodide, which now forms the iodide of starch.

These papers may be obtained from Casella, 23, Hatton Garden, London.

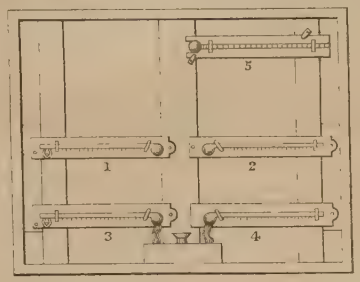
Dr. Moffat observes, that a current of air passing over a locality charged with the products of decomposition will be that of the minimum of ozone; and another proceeding from a locality in which these products are not in sufficient quantities to take up the ozonized air will be that of the maximum of ozone; and that in places where the air is stagnant, and during calms, ozone will be at its minimum.

It has been observed that in England ozone is more generally present in the atmosphere during the prevalence of the southerly winds than during the prevalence of the northerly winds; and that the presence of ozone is indicative of a pure atmosphere, and its absence of an impure and unhealthy atmosphere. It is desirable, therefore, that a note should be taken at least once a day of the indications of the ozonometer papers, and entered in the Meteorological Register.

Should test papers be prepared or obtained they will be distributed with a scale for comparison. Sketches of a suitable box for exposing the test papers are attached.

FRONT VIEW OF FRAME

FOR SUPPORTING SELF-REGISTERING THERMOMETERS.



N°1 is for the maximum temperature of the air in the previous 24 hours; and

N° 2 for the minimum temperature of the air during the same period.

N° 3 is for the maximum indications of the wet bulb-thermometer, and

N° 4 is for the minimum indications of the wet-bulb thermometer during the previous 24 hours.

N° 5 is the position of the minimum-on-grass thermometer during the day.

CHAPTER XIII.

CENTRAL PROVINCES.

CONTENTS.

CHAPTER I.—INTRODUCTION.

	Paras.
Administration formed for the Central Provinces	2
Their external boundaries	3
Their general shape	4
The Sautpoora Hills	6
Districts north of the Hills	7
The Nerbudda Valley	7
The districts in the Sautpoora Hills	9
The Valley of the Wurda	11
The valley of the Wyngunga	12
Lakes and tanks	12
The rice country	13
The Plateau of Chutteesghur	15
The Gurjat States	17
The Valley of the Mahanuddy	18
The Central Wilderness	21
The Bustar State	22
The Kalahundy State	22
The Godavery district	23
Physical features	24
Past history	25
Ancient Hindoo dynasties	26
The Gond tribe	27
The Gond Rajpoots	27
Their four kingdoms	28
Their remains	28
Dynasty of Wurungul in the Deccan	29
Mahomedan rulers	30
Misfortune of the Saugor and Nerbudda territories	30
The Great Bhonsla Kingdom	31
Its extent	31
The first and second Rughoojee	31
Cession of territory to the British Government and to the Nizam	31
Ultimate limits of the Nagpore Kingdom	32
It lapses to the British Government	32
Minor cessions	33
Dates of acquisition of territory	34
Mahratta rule and associations	35
Different languages used in the Central Provinces	35
Various tribes and castes of the population	36
The Gonds	37
The Mahomedans	37
The Brahmins	37
The Rajpoots	37
Mercantile classes	38

CHAPTER II.—JUDICIAL.

SECTION I.—CIVIL JUSTICE.

Defective returns	58
Previous system	59
New judicial establishments	61
Increase in the number of judges	61
Courts of small causes	63
Civil judges in military cantonments	64
Comparative tenacity of litigation	66
Petty character of the litigation	67
Status of limitation	68
Proportion of costs to value of suits	70
Improved mode of serving processes	70
Execution of decrees	71
Appeals	72
Delay in their disposal	73
Additional appellate officer	74
Arbitrators and assessors	75
Native pleaders and agents	76
To be discouraged as a profession	76
Recording of evidence by the hand of the judge	77
Language used in the courts	78
Admission of the Mahratta language into the courts of certain districts	78
Registration of deeds	79
The constituting of clerks of the courts	80
Existing defects and their causes	81

SECTION II.—CRIMINAL JUSTICE.

Abstract statement of crime	83
A slight increase of crime	84
Ratio of crime to the population	85
Prevailing motive of crime	86
Murders	87
Meriah sacrifice of children nearly ceased	88
Absence of secret infanticide	89
Suicides	90
Thuggee	91
Gang Robbery	92
Its causes and peculiarities	92
Robberies on the Saugor frontier	93
Highway Robbery	95
Paucity of affrays	96
Cattle stealing	97
Frequency of burglaries	98
Ordinary theft	99
Adultery cases, few	100
Perjury	101
Forgery and false coining	102
Despatch of criminal business	105
Prosecution of crime not quite successful on the whole	106
Attendance of witnesses	108
Sessions trials	109
Delay in their disposal	110
Tehseeldars vested with criminal powers	112

CHAPTER II.—JUDICIAL—*continued.*

Paras.

Classification of punishments - - - - - 113
Per-centage of value of property recovered to the aggregate value of property stolen - - - - 114
Investing native chiefs with judicial powers - - - 116
Various classes of chiefs in the Central Provinces - - 117
The middle class - - - - - - - - 118
Advantage of conferring powers on the native chiefs and gentry - - - - - - - - - 121
To the State - - - - - - - - - 121
To the people - - - - - - - - - 122
Nature of these powers - - - - - - 123

To the Bhonsla family - - - - - - 128

SECTION III.—POLICE.

Various kinds of police - - - - - - - 133
Police in the Nagpore Province - - - - 135
Proposal for its reduction - - - - - 136
Revision of the police in the Saugor and Nerbudda territories - - - - - - - - - 137
Limit of, prescribed by the Supreme Government for the Central Provinces - - - - - 138
Reductions recently carried out - - - - 139
Madras Native Infantry stationed at Raepore and Chanda 140
Police in Sumbulpore - - - - - - - 142
Police in Seroncha - - - - - - - 143
Final police charge for the Central Provinces - - 144
Amount of savings actually effected - - - - 145
Abstract of the present establishment - - - 146
Proportion of the police force to area and population - 148
Composition of the new constabulary - - - 151
The village police - - - - - - - 153
The carrying and possessing of arms - - - - 154

SECTION IV.—GAOLS.

Number of gaols and prisoners - - - - 157
Gaols of Saugor and Nerbudda territories - - - 158
Gaols in Nagpore Province - - - - - 158
Central Gaols - - - - - - - - 159
Average cost of prisoners - - - - - 160
The guarding of gaols - - - - - - 161
Indoor labour - - - - - - - - 162
Gaol manufactures - - - - - - 163
Solitary and separate confinement - - - - 164
Health of the prisoners - - - - - - 166
Civil surgeons in charge of gaols - - - - 167
Inspectorship of gaols - - - - - - 168

CHAPTER III.—REVENUE.

SECTION I.—LAND TAX.

Annual yield of land tax - - - - - 169
Its distribution over divisions and districts - - - 170
Its average rate per cultivated acre - - - - 171
Incidents of tax on different kinds of crops - - 172
Prices of agricultural produce - - - - - 173
Tenure of land - - - - - - - - 174
Origin of tenures - - - - - - - 175
In the Nagpore Province - - - - - 176
Their subsequent development - - - - - 176
Tenure in Saugor and Nerbudda territories - - 177
Tenure in Sumbulpore - - - - - - - 178
Prevailing system favourable to middle class in the Central Provinces - - - - - - - 180
Rather than to the lower class - - - - - 180

The Mohtoor sanatarium - - - - - 258
Present arrangements regarding it - - - - 259
Future plans for its establishment - - - - 260
Central situation of Mohtoor - - - - 261
Expenditure on military works - - - - 263

SECTION II.—CIVIL BUILDINGS.

Police buildings - - - - - - - - 266
Court houses - - - - - - - - 267
Staging bungalows - - - - - - - 268
Encamping grounds - - - - - - - 269
Caravanserais - - - - - - - - 269
Revenue offices - - - - - - - - 270

CHAPTER V.—PUBLIC WORKS—*continued.*

SECTION III.—COMMUNICATIONS, ROADS AND BRIDGES.

	Paras.
Summary of the principal lines of road	273
The Great Northern	274
Its objects and purposes	274
Section from Mirzapore to Jubbulpore	275
From Jubbulpore to Nagpore	275
The Southern Line	276
Its objects and purposes	276
Its present state	276
The Great Eastern Line	277
Its commercial importance	277
The plateau of Chutteesghur	278
Its natural advantages	278
To be conuected by road with the navigable head of the Mahanuddy	278
Disrepair of the old road	280
Progress with the new road	281
Its future prospects	281
The cotton road of the Wurda Valley	282
Its objects and purposes	282
No progress yet made	282
Raepore and Jubbulpore road	285
Its objects and purposes	285
Raepore and Seroncha road	286
Roads of primary and secondary importance	287
Minor roads	290
State expenditure on roads	291

SECTION IV.—RAILWAYS AND TRAMWAYS.

The Nerbudda Valley Railroad	293
The Berar and Nagpore Railroad	293
The Jubbulpore and Mirzapore Railroad	294
Total mileage of railways within the Central Provinces	295
Peculiar advantages of railways in the Central Provinces	296
Selection of localities for tramways	297
Tramways in the cotton districts of the Wurda Valley	298
Tramway to the navigable head of the Mahanuddy River	299
Tramway between Nagpore and Jubbulpore	300
Tramway from Nagpore to Kamptee	302
Probable cost of tramways per mile	303

SECTION V.—CANALS.

Absence of canals in the Central Provinces	305
Possible irrigation works in the Valley of the Wurda	305

SECTION VI.—MISCELLANEOUS.

Local committees formed in various districts	306
Various kinds of local funds	307
Heads of expenditure	310
Principal district roads	311
Caravanserais	312
Tanks and reservoirs	313
Conservancy in the cities of Saugor and Jubbulpore	314
Improvements in the city of Nagpore	314
Public gardens	315
Conclusion	316
Imperial expenditure on public works in the Central Provinces	316

CHAPTER VI.—POST OFFICE.

Postal lines	318
Horse carriage	319
Postmaster-General	320
Police postal service	321

CHAPTER VII.—ELECTRIC TELEGRAPH.

Telegraph lines	322
Direct line to Calcutta	324
Line to Saugor from Jubbulpore	324

CHAPTER IX.—FINANCIAL.

Heads of income	346
Revision of civil establishments	347
Saving effected thereby	348
Expense of surveys and settlements	351
Political Expenditure	353
Military Expenditure	354
Necessary for defence locally	355
Balance of income and expenditure	356
Central Provinces pay for their own administration and defence	357
But there is an actual deficit	357
Arising solely from material improvement	358

CHAPTER X.—ECCLESIASTICAL.

Number of chaplains serving in the Central Provinces	361
The need of a chaplain to reside at Seetabuldee	362
Diocesan jurisdiction	363

CHAPTER XI.—POLITICAL.

Annexation of the Nagpore kingdom	365
State property	366
Political pensions to family of the late rajah	367
The Banka Baee	367
Final pensions allotted	369
Provision for dependants of the late rajah	371
The Sumbulpore State	373
Origin of rebellion	373
Rebellion suppressed by the Bengal Government	374
The Gurjat States	376
Their powers and functions	377
The Bustar State	379
The founding of that kingdom	380
Now incorporated with Seroncha	381
Powers of the present rajah	382
Dispute between Jeypore and Bustar	383
Cessation of Meriah sacrifice	384
The Kalahundy State	385
Now incorporated in Sumbulpore	387
Dispute between the Thât and Pât rajahs	389

CHAPTER XII.—MILITARY.

Formation of the Nagpore Irregular Force	394
Its composition	395
Affair on the 13th June 1857	396
Field service of the force	398
State of affairs during 1857	399
Regular military operations	400
Force of regular troops in the Central Provinces	404
Its present distribution	405
Its proposed future distribution	406
Principal military stations	407
Actual reduction of force	408
Formation of volunteer corps	409

CHAPTER XIII.—MISCELLANEOUS.

SECTION I.—AGRICULTURE AND COTTON.

Formation of an agri-horticultural society	411
Cotton in the Central Provinces	413
Produce of the Wurda Valley	416
Average of cultivation and produce	418
Other products beside cotton	419
The cotton marts	421
Irrigation for cotton	422
Tenure of land affecting cultivation of cotton	423

CHAPTER XIII.—MISCELLANEOUS—*continued.*

	Paras.
Amount of exportation	424
Price of cotton	425
Cleaning and pressing	426
European agency in the production of cotton	427
Prospects of cotton in the Wurda Valley	430
Measures for its encouragement	430
Cotton in Chutteesghur	431
Waste land available for cotton	435
Measures for encouraging cotton in Chutteesghur	436

SECTION II.—EUROPEAN COLONIZATION.

Waste land in the Wurda Valley	442
In Chutteesghur and Sumbulpore	443
In the Sautpoora hill districts	444
In the Nerbudda Valley	445
In the Godavery district	446
Insalubrity of climate	447
Scarcity of labour	448
Want of communication	449
Suitable localities for grants	450
Importance of European settlement	451

SECTION III.—FORESTS.

Classification of forests	452
Principal kinds of trees	453
The teak forests	454
The saul tree	455
The saj tree	456
The bamboo	457
Department formed for conservation of forests	458

SECTION IV.—MINERAL RESOURCES.

Geological formation	461
North of the Nerbudda	462
Vindhyan strata	462
Formations south of the Nerbudda	463
Geological character of the Sautpoora range	464
Lower Damooda group of rocks	465
Mahadeva Rocks	467
The Trap Rocks	468
The iron ores	469
In the valley of the Wyngunga	469
The iron mines of Tendukhera, near the Nerbudda	470
Iron in the valley of the Wyngunga	472
Red ochre pigment	473
Manganese	474
Iron in the Seonee district	475
Coal in the Central Provinces	478
The Mopanee Coal Fields near the Nerbudda	478
Coal at Oomrait	478

SECTION V.—SURVEY.

Existing means of geographical information	479
Various surveys in progress	480
Geological survey	481

SECTION VI.—FAIRS.

	Paras.
Places where the principal fairs are now held	482
Mode of extending these institutions	482

SECTION VII.—CARRIAGE AND SUPPLIES.

Impressment of labour and carriage	483
Evils of that system	483
Police prohibited from interfering	486
Appointment of headmen and contractors	487

SECTION VIII.—POPULATION.

Absence of statistics at present	488
Mode of preparing such in future	488

SECTION IX.—TRADE STATISTICS.

Absence of statistics	489
Measures taken for their preparation in future	489

SECTION X.—HISTORICAL REMAINS.

Architectural ruins and buildings in the Central Provinces	490

SECTION XI.—HOSPITALS AND DISPENSARIES.

Civil Surgeons	491
Charitable Dispensaries	492
Their results	492
Vaccinators	495

CHAPTER XIV.—CONCLUSION.

Services of officers under the civil administration	498
Services of the officers in the late Nagpore Irregular Force	509
Services of officers in the department of Public Works	510
Concluding remarks	511

CHAPTER XIII.

CENTRAL PROVINCES.

ANNUAL REPORT on the ADMINISTRATION of the CENTRAL PROVINCES, for the Year 1861-62.

CHAPTER I.—INTRODUCTION.

I PROCEED to submit the Administration Report for the Central Provinces up to the 1st August 1862. As this Administration was constituted on the 2d November 1861, the present is the first Report. The affairs of one portion of the new Provinces (namely, the Saugor and Nerbudda territories) have indeed, from time to time, been reported upon in conjunction with those of the North-Western Provinces; and the affairs of another portion, namely, Sumbulpore and its dependencies, in conjunction with those of Bengal. But the affairs of one main portion, namely, the Nagpore Province, have never yet been reported to the Supreme Government.

Administration formed for the Central Provinces.

2. By the Government Resolution of 2d November 1861 the Province of Nagpore and its dependencies, and the Saugor and Nerbudda territories, were formed into the Central Provinces. By the Government Resolution of 30th April 1862, Sumbulpore and its dependencies were added thereto. In this Report it will be necessary to treat of these various Provinces as one whole under their joint appellation of the Central Provinces.

Their external boundaries.

3. These Provinces, then, are of great extent. They stretch from Bundlecund in the north to the Madras Presidency in the south; from the frontier of Bengal in the east to independent Malwa and to the Deccan in the west. Their extreme length from north to south may be computed at 510 miles, and their extreme breadth from east to west, at 550 miles. They extend from the 18th to 24th degree of north latitude, and from the 77th to 83d degree of east longitude. Their estimated area amounts to 150,000 square miles. Among the ancient divisions of India they comprise portions of Hindostan and Malwa, and the greater part of Gondwana; but in a strict sense they do not comprise any part of the Deccan. A glance at the map prefixed to this Report will show how the several frontiers are formed. It will suffice here to state that these Provinces are bounded on the north by the Independent States of Bundlecund, of which the principal are Tehree and Punnah; on the west and north-west by the British district of Chundeyree, Lullutpore (belonging to the North-West Provinces), by the Bhopaul State, by Scindia's dominions, by Berar, and by the Nizam's dominions; on the south and south-east by the Nizam's dominions and by the Madras district of Rajahmundry; on the east by the Jeypore State, under Madras jurisdiction; by those portions of Bengal known as the Tributary Mehals and the North-West Frontier Agency; and by the Rewa State.

Their general shape.

4. In general terms, then, the Central Provinces may be described as an extensive British territory, situated in the very heart and centre of the Indian Peninsula, dissociated, geographically and politically, from other British Provinces; and though occasionally touching upon neighbouring British districts, yet, for the most part, surrounded on all sides by foreign territory. But, on the other hand, they are compact within themselves; their jurisdiction, though expansive, is not straggling; their frontiers, though exhibiting some irregularities, run generally in regular lines, and their shape is that of a vast triangle.

5. The country, thus comprised, possesses physical and external features so numerous and varied, that to describe them all within the limits of this Report would be impossible. But I shall attempt such description as may convey a general idea of the main characteristics.

The Sautpoora Hills.

6. The first striking feature in the Central Provinces is their division into nearly two halves by the Sautpoora Hills. This range runs south of the River Nerbudda from east to west. Within itself it embraces considerable tracts of table land, which have been formed into

into several districts. It may be said, then, that there are three kinds of districts; first, those north of or above the Sautpoora Hill; second, those belonging to the hills; and third, those south of or below the hills. The districts in and above the Sautpoora Hills have the better climate, and are the more interesting. Those below the hills have a less desirable climate, but they are the greatest, and the most capable of development.

Districts north of the Hills.

7. The district north of or above the Sautpoora Hills, then, commence from where the table land of Bundlecund is supported or flanked by hills, which, with their scarped faces, their rugged bastions, their elongated horizontal summits, appear like the fortresses of Nature. The north-west portion of the tract, which is known as the Saugor and Dumoh territory, is an undulating or hilly country diversified by the off-shoots of the Vindya Range, and to the south resting upon the range itself. Though often either rugged or arid or overgrown with jungle, it has much scattered cultivation, and contains many spots of richness and beauty. Then to the south there comes the Vindya Hills, a comparatively low and irregular range overlooking the Valley of the Nerbudda River. This valley commences from the western limit of Hoshungabad district (not far from Mhow and Indore), passing through the Nursingpoor district on to Jubbulpore. It is bounded on the north, then, by the Vindyas, and reaches to the Sautpooras, which form its southern boundary. At Jubbulpore it is gradually cut off by the off-shoots of the Sautpoora Hills. Though deep it is, on the whole, broad, often having a breadth of 30 miles. Its extreme length may be more than 200 miles, watered by the Nerbudda from end to end. For the most part it is a sheet of excellent cultivation of sugar-cane, cotton, and wheat, and is one of the finest parts of the Central Provinces. In the cold season the prospect is remarkable, consisting in long plains waving with harvest, and bounded on either hand with ranges running almost parallel to each other, and stretching out in seemingly endless perspective.

The Nerbudda Valley.

8. Then from Jubbulpore running northwards towards Mirzapore, up to the frontier of the Rewa Agency, there is a tract which is really a branch of the Nerbudda Valley, though it is not permeated by any stream of note. It is about a 100 miles in length and of varying breadth. In fertility it is hardly inferior to the Nurbudda Valley. It is now traversed by the Trunk Road from Mirzapore to Jubbulpore. And the entire tract from the frontier of Rewa to Jubbulpore, and thence along the bank of the Nerbudda to the extremity of Hoshungabad, is to be traversed by a railway. Here, then, is to be found one of the principal arteries of wealth and traffic within these Provinces.

The Districts in the Sautpoora Hills.

9. The districts in the Sautpoora Range from the Hill Region of the Central Provinces, commence from the elevated Plateau of Umurkuntuk, where the River Nerbudda has its source. The plateau itself now belongs to the Raja of Rewa; but the cool and fertile, though wild valleys in its neighbourhood are British. As they approach the valley of the Nerbudda they become lower and less healthy. These several tracts are known as the Mundla District, once the seat of a mixed Gond and Rajpoot dynasty, sparsely peopled, scantily cultivated, rich in resources, poor in development, in parts fit for European settlements, in parts fit only for the habitation of tigers.

10. Due west there comes the Seonee district, generally wild and hilly, but with some rich valleys and plateau. This is traversed from end to end by the Trunk Road from Jubbulpore to Nagpore; westward again is the Chindwara district, once the seat of the principal Gond dynasty in these Provinces. It contains the Muthoor and the Puchmurree hills, important places, on which rest the hopes of establishing Sanataria for these Provinces, and on one of which it is proposed to establish an European convalescent depôt. Again, to the west is the Baitool district, possessing one extensive table land, where the river Taptee has its source, and one fine valley which produces the best opium in these Provinces. In this district there are situated the Khamlee Hills, where a possible, though not certain, project of a sanatarium has been formed.

11. The districts south of or below the Sautpoora range constitute, in the first place, the Province of Nagpore Proper. These are separated from Berar and the Nizam's dominions by the river Wurda, running from north to south. It is along the left bank of the river that there is situated the great cotton field of the Central Provinces. In the north, where the river debouches from the Sautpoora hills, the cotton cultivation consists of a rich but narrow strip along the bank. This strip widens as it proceeds southwards, till, owing to a semi-circular curve of the river, it attains a width of 50 miles at a point which may be marked by Hingunghat, the well known cotton mart. Here is the great plain of black loamy soil cultivated partly with cotton and partly with wheat and maize, but capable of being cultivated chiefly with cotton. The flat unvarying champagne of unbroken cultivation contrasts strangely with the stony, jungly, rugged, and undulating tracts around it. Then it gradually becomes narrower and narrower, still hugging the banks of the river, but more and more encroached upon by the brushwood and forest till it becomes lost a little below the old city of Chanda. At this point the desert and the garden are brought into juxtaposition. On one side of the city there is the black loam and the cotton crops; on the other side there is the barren unpropitious ground covered with low forest and brushwood, and tenanted by wild beasts. This black soil tract, then, cannot be less than 100 miles in length, while its breadth is varying. Its probable area may amount to 3,985 or 4,000 square miles; and this area one day may, and will, be cultivated chiefly with cotton.

The Valley of the Wurda.

12. The

12. The next great division is the valley of the Wyngunga, which flows nearly parallel to the Wurda from north to south. Towards the north, where the river debouches from the Sautpoora hills, the valley is broad, generally cultivated, and often rich. On the right bank, opposite the capital, Nagpore, the valley reaches out to a great breadth till it is separated only by some hilly country from the Valley of the Wurda. Here, then, is the great plain of Nagpore stretching from the capital to the River Wyngunga for 40 miles of flat unbroken cultivation of wheat and maize. On the opposite side of the river the country is more broken or undulating, and but partially cultivated, chiefly by means of irrigation from tanks. These tanks are so numerous, and some of them so large, being many miles in circumference, that this tract might almost be called the Lake Region of Nagpore. Here a tank is not a piece of water with regular banks, crowned with rows or avenues of trees, with an artificial dyke and sluices, and with fields around it. But it is an irregular expanse of water; its banks are formed by rugged hills covered with low forests that fringe the water where the wild beasts repair to drink; its dykes, mainly shaped out of spurs from the hills, are thrown athwart the hollows, a part only being formed by masonry; its sluices often consist of chasms or fissures in the rock; its broad surface is often, as the monsoon approaches, lashed into surging and crested waves.

The Valley of the Wyngunga.

Lakes and tanks.

13. Proceeding southward the valley of the Wyngunga becomes narrower but continues rich, abounding in rice cultivation, and highly irrigated, until at last it joins the Wurda (there called the Pranhita) below Chanda. Its feeders have also valleys of a similar character. But the cultivation is hemmed in by low forest or rank jungle; and even in the cultivated tracts the malaria is so prejudicial, that during the autumn and early winter no European could enter there and live. As, then, the Valley of the Wurda is the cotton field, so the lower valley of Wyngunga is the rice field of these Provinces.

The rice country.

14. Proceeding eastward the attention is arrested by the plateau of Chutteesghur. This tract is considered to be one of the finest and most promising portions of the Central Provinces.

15. After running in a comparatively straight line, west to east, from the banks of the Taptee, past the valleys of both Wurda and Wyngunga over a distance of nearly 300 miles, the Sautpoora Range culminates at Amurkuntuk, a celebrated spot, and already mentioned. After that the range turns abruptly and shapes its course northwards. Beneath and beyond the remarkable angle thus formed there lies the undulating table land of the plateau of Chutteesghur, now called (after the name of the principal station) the district of Raepore. The northern or upper portion has its surface broken up by a variety of small hills and ranges of irregular formation. It is not well cultivated nor thickly peopled. Its principal place is the old city of Ruttunpoor. Proceeding southwards the country becomes more open and better cultivated.

The plateau of Chutteesghur.

16. From the forest-clothed hills far down to the south there rise the Mahanuddy and the Sew Rivers. These run northwards almost parallel to each other, and both intersect the plains of Chutteesghur in the neighbourhood of Raepore. The extensive tracts, then, adjacent to or situate between these rivers possess remarkable productive powers. They produce wheat and rice in abundance. The ground is on a high level, stretching out in long and gentle undulations, presenting the sight of endless cultivation without any break or interruption for many miles. The harvests have increased of late, and will increase indefinitely until Chutteesghur becomes one of the great granaries of the country.

17. Eastward, beyond the valley of the Mahanuddy, there intervene the petty States, dependencies of Sumbulpore. A stream (one of the feeders of the Mahanuddy) named the Jank, forms the boundary between the Raepore District of the Nagpore Province and these States. Here, there appear various ranges of wild wooded hills generally running from north to south. In some places the hills rise to a considerable altitude, and the wilderness becomes a noble forest. These tracts are now poor and barbarous, yet possessing great capability of improvement, held by feudal chiefs, tributaries of the British Government. Thus the country continues for more than 50 miles, till the valley of the Mahanuddy once more meets the view. That river, having, as already mentioned, run its course northward, turns round and proceeds in a south-easterly direction in its progress towards the sea. In this neighbourhood its valley is sometimes shut in by hills, and sometimes opens out into a fine expanse. It is here that Sumbulpore and the British territory pertaining to it are situated. And, truly, in an economic point of view, the situation is a commanding one. For many miles above this point the Mahanuddy is navigable during the monsoon months only, though not during the greater part of the year; but a few miles below Sumbulpore the river becomes navigable all the year round, right down to the sea. It is to this point, then, the head of the Mahanuddy navigation, that we hope to carry by land transit the vast produce of Eastern Nagpore. Thence the passage to the seaport will be sufficiently easy.

The Gurjat States.

18. The Sumbulpore territory, then, consists in reality of the valley of the Mahanuddy and its feeder the Eebe, which traverse the whole district from one extremity to the other. The remainder of the district, though extensive in area, consists chiefly of hill and forest, with occasional valleys partially reclaimed. Even the valley of the Eebe is is rugged and narrow; but the valley of the Mahanuddy is in most parts open, and attains to a considerable width opposite Sumbulpore. It is but partially cultivated as yet; but its natural

The Valley of the Mahanuddy.

capabilities are supposed to be enormous. It produces cotton, sugar-cane, and rice. It possesses a complete system of tank irrigation, and an industrious, though scanty population. As already explained, the western valley of the Mahanuddy is bounded by wooded hills, some of which abut abruptly on the river itself. To the eastwards, again, there appear the hills and the forests; and about 40 miles to the north of Sumbulpore there is the frontier of the wild and almost unknown Hill States subordinate to the North-west Frontier Agency of the Bengal Government. In that direction, the hills rise higher and higher, step by step, till they flank the salubrious table land of Chota Nagpore. Again, about 40 miles to the east and south-east of Sumbulpore, there runs the frontier of the tributary States of Orissa, and of the Cuttack district.

19. The eastern confines of the Central Provinces having thus been reached, it remains only to notice the southern and south-eastern.

20. Thus the south-eastern portion of the Nagpore Province is a great wilderness. It stretches from the valley of the Wynegunga, and the plains of Chutteesghur, down to the Godavery on the south, and almost to the range of the Eastern Ghaut Mountains that overhang the littoral districts of Bengal and Madras. It is divided into two portions by the Indrawatty river, which, rising in the Eastern Ghauts, runs in a south-west course to join the Godavery.

The Central Wilderness.

21. With a few small and rare exceptions, the upper portion, north of the Indrawatty, is composed of outlying portions of the Chanda, Bhundara, and Raepore districts, and of Bustar State. It is entirely uncultivated and uninhabited; it is unsurveyed, and almost untrodden by man, except in one line traversed once or twice a year by the hardy Bunjarra traders with their long strings of laden bullocks. This track is the solitary mark of human occupation. The whole tract is believed to abound in hill and wood, and to be malarious, even deadly, in climate. In some places it is known to contain, or to have contained, valuable and extensive forests. In the hills to the north of it the River Mahanuddy has its source. In the south-west, nearer to the Godavery, there is the solitary mount of Soorjaghur, rising to a height of 4,000 feet, and said to be crowned with some Hindoo temples. On the whole, it is one of the wildest portions of the British dominions in the east, and is a blank in the map of India. In area it is as large as two or three districts in the settled Provinces. Yet its total revenues are under a few thousands of rupees, and its population under a few thousand souls.

22. The lower portion, south of the Indrawatty, if not quite so desolate as the portion just described, is still very wild. Its climate, if not deadly, is still malarious and unhealthy. The Indrawatty itself does not contribute much to agriculture, or to human habitation. There are but few villages (and those wretched) along its banks, and but scanty cultivation in its valley. In some places it is fringed with forests. It has some noble cascades, and often rushes over rapids. It is neither navigated nor navigable. On

The Bustar State.

the south bank is situated Jugdulpoor, in itself a village, but the capital of Bustar, a native State, under political control of British authority, with a large area, and a small half-civilized population. This part, also, has heretofore formed a blank in Indian geography. But recent inquiries have thrown some light on these dark regions. The country is described as an interminable and primeval forest, with a sprinkling here and there of small villages with patches of cultivation. There are various ranges of hills occasionally clothed with forests of saul and teak; and at one point near the Indrawatty there is a group of hills from 3,000 to 4,000 feet high, and having a cool climate. Beyond Bustar, stretching far to the north-east, close up to Sumbulpore, there is the outlying State of

The Kalahundy State.

Kharonde or Kalahundy, also a petty principality under the political control of British authority. This territory is somewhat similar in character to that of Bustar. But the country is more open and salubrious. Again, the eastern limits of Bustar touch upon the Jeypore State, which is under the political jurisdiction of the Madras Presidency. In the Eastern Ghauts, near to Jeypore, there rises the Selree River, which runs southwards to join the Godavery. In character it resembles the Indrawatty, though it is on a smaller scale. It is partially fringed with forest, and timber can sometimes be floated down. But it is not navigable. Its junction with the Godavery is near that great gorge where the Godavery bursts through the Eastern Ghauts in its course to the sea, and also near the boundary of the Rajahmundry, or Godavery district of the Madras Presidency.

The Godavery district.

23. There only remains the long strip of territory lying along the left bank of the Godavery, and between the southern boundary of the Bustar State and the river. There is a fringe of villages and cultivation along the river bank; but in the interior, beyond that margin, the country is the same as that already described. To the north of this strip there stands the new station of Sironcha, near the junction of the rivers Wurda, Wyngunga,* Indrawatty and Godavery. Lower down the river is Doomagoodum, the head quarters of the Godavery Navigation Department.

Physical features.

24. The various kinds of districts have now been described. Such briefly, then, in their external aspect, are the Central Provinces; vast in geographical area, infinitely varied in local and topographical details, sometimes flat and fertile, but generally wild and rugged abounding

* The combined rivers Wurda and Wyngunga form the Pranheeta.

abounding in hills, forests and brushwood, sparsely populated and scantily cultivated for the most part, but occasionally opening out into long and broad tracts covered with harvests and thickly inhabited; on the whole, poor and unproductive at present, but rich in various resources, and capable of indefinite development in the future.

Past history.

25. For the purposes of this report, it will suffice to touch only on those portions of the past history of this country which may have materially affected the condition of things as they appear at the present day.

Ancient Hindoo dynasties.

26. The earliest dynasties in this part of India, of which anything is now either recorded or remembered, are those of the Gond Rajpoots. But prior to these, and superior to them in civilization, there must have been several Hindoo dynasties, which are only now known by architectural remains; some at Jubbulpore, on the banks of the Nerbudda, some in the hilly part of Chutteesghur, and some at Bustar, in the heart of the wilderness.

The Gond tribe.

27. As already stated in this chapter, the ancient Gondwana, or country of the Gonds, comprises most of the countries now included in the Central Provinces, both below and above the Sautpoora range. The earliest settlers in the woods and hills, and the oldest dynasties were Gonds. The Gonds seem without doubt to have been one of the most powerful and important of the aboriginal races of India. Existing prior to the advent of the Hindoos, they possessed their own forms of heathenism, which often are preserved entire and intact to this day, and which have always and under all changes impressed their mark on the character of the tribe. But some Gonds, while retaining their external and distinctive characteristics, adopted the Hindoo and some few the Mahomedan religion. Thus there are seen in the present age, as respects faith and custom, three kinds of Gonds, namely, the aboriginal Gonds, the Hindoo Gonds, and the few Mussulman Gonds. While in physique and morale all three seem much alike. The Hindoo conquered, of the Gonds, were principally Rajpoots. These intermarried with the conquerors, and their descendants are called Rajpoots, and pride themselves on their descent. Most of the indigenous Rajpoots, so called, are really Gond Rajpoots. These mixed races, becoming acclimatised to countries that would have proved deadly to many civilized nations, spread themselves over wide domains, and in arms and policy emulated the achievements of superior tribes. Their original boundary in the south may, perhaps, have been the Godavery. If it was, they must have crossed that river, and extended far into the Deccan.

The Gond Rajpoots.

Their four kingdoms.

28. They formed from first to last four kingdoms within the present limits of these Provinces. The northern kingdom had its capital at Mundla, and at Gurra (near the modern city of Jubbulpore), and dominated the greater part of the Nerbudda Valley; while the remainder, together with the northern or Saugor district, was occupied by Boondela Rajpoots, and by Hindoos of various tribes. Of the two midland kingdoms one had its capital at Deoghur, on the southern face or slopes of the Sautpoora range, overlooking and commanding the plains which now belong to Nagpore. Deoghur is now ruined and utterly desolate; but it was a city before Nagpore was even a village. The other midland kingdom has its capital at Kherla, a hill commanding the rich valley of Baitool in the heart of the Sautpoora Hills. To this also belonged the celebrated forts of Gawilghur and Nurnalla, both in the same range. The southern kingdom had its capital at Chanda on the Wurda, and comprised a vast but wild territory; it stretched far up to the north-east, and again commanding the Godavery stretched far down to the south. These four dynasties existed at least some time before the formation of the Mogul Empire. They were brave and independent, but they could never have been rich or powerful. Still, each of them must have possessed an annual revenue of some lakhs of rupees. They were quite inferior in art and civilization to the Hindoo and Mahomedan dynasties known in other parts of India; but still they each left architectural remains and monuments of great interest at Mundla, at Deoghur, at Kherla, and at Chanda. These ruins surrounded by, or adjacent to, the waste or the rocks, or the forest, fill the modern inquirer with surprise, and attest the former energies of half-civilized races, contending with the wildness of nature. As the Mahomedan rule absorded the different parts of Central India, it attacked these Gond kingdoms in turn. The northern kingdom, however, in some struggles, well known to local tradition, maintained something of its independence, though it may have lost many of its richer provinces. The southern kingdom also does not appear to have been entirely subdued, though it was rendered tributary; but its branches across the Godavery were carried away, and added to the Mahomedan kingdoms in the Deccan. That dominion indeed spread over both banks of the Godavery, and up to a recent period the strip of territory on the left or Nagpore side of the river belonged to the Nizam. The midland kingdom was, at all events, rendered tributary, and its princes were by force, or influence, converted to Islam.

Their remains.

Dynasty of Wurungul in the Deccan.

29. Besides these four kingdoms, there was a Gond Rajpoot dynasty at Wurungul in the Deccan. When that place fell to the Mahomedans, the Raja fled northwards across the Godavery, and established himself in wild independence among the inaccessible forests.

Mahomedan rulers.

30. The Mahomedan princes and generals who were settled in Malwa (somewhat beyond the present north-western frontier of the Central Provinces) did sooner or later occupy the finest parts of the Nerbudda Valley. And the city of Hoshungabad was named after the well known Hoshung Khan. The Mahratta Province of Nagpore, too, having been brought under Mahomedan rule, was made a dependency of the vice-royalty

of the Deccan. As the Mahomedan Empire became broken up, and a general scramble for empire commenced, and as the tide of Mahratta invasion ebbed and flowed, revolutions swept like so many waves one after the other. The Nerbudda districts suffered, in common with Malwa, a long series of misfortunes. Thus the landholding portion of the Hindoo population were trodden out or banished, and the Gonds were driven to the hills and woods. And at the last, these much vexed Provinces suffered partially from Pindarry incursions; the robber tribe of Pindarries having fixed their head quarters in the wild and strong country on the banks of the Nerbudda below Hoshungabad. The depopulation and devastation which occurred in those successive periods of evil, greatly modified the circumstances and character of the people, and the effects are clearly traceable to this day. Ultimately, however, the districts of Saugor and Dumoh, and part of the Hoshungabad district, became incorporated in the dominion of the Mahratta House of Scindia, while the rest of the country now included in the Central Provinces formed the kingdom established by the Mahratta House of Bhonsla.

Misfortune of the Saugor and Nerbudda territories.

The great Bhonsla kingdom.

31. The Bhonslas did, indeed, accumulate a great extent of territory. They subdued successively each of the four Gond Kingdoms already mentioned.

There are no traces now left of the Royal Gond families of Mundla and Kherla. But the descendants of the Mahomedan Gond Princes of Geoghur, and of the Hindoo Gond Princes of Chanda, still survive as state pensioners. The Bhonslas also reduced the Gond Rajpoot Chief who, driven out from the Deccan by the Mahomedans, had established himself in the wilds of Bustar near the Godavery, and also over the Gond and Gond Rajpoot Chieftains, who dwell in the districts of the Mahanuddy, now known as Sumbulpore and its dependencies. Thence they extended their possessions over the Cuttack Province, right down to the sea. It is also to be remembered that the Bhonslas owned as one of their first possessions the Province of Berar, and bore the title of Rajahs of Berar. Hence Nagpore has sometimes been erroneously compared with Berar. After the first Mahratta war in 1803, Berar was shorn off from the Nagpore Kingdom, and transferred to the Nizam of the Deccan, under whose sovereignty it has since remained. At the same time the Province of Cuttack was ceded to the British. The power of the Bhonslas culminated under the first and greatest of the Rughojees. He ruled from the Bay of Bengal in the east to the Adjunta Hills overlooking Kandeish in the west, from the Nerbudda in the north to the Godavery in the south, over one of the greatest kingdoms ever founded by a Mahratta prince. His revenues amounted to about a million sterling per annum. He died in 1755. It was in the reign of the second Rughojee (1803) that Cuttack and Berar were lost to the Bhonslas, and the kingdom reduced by more than one-third. From that time also a British resident was established at Nagpore. Rughojee the second died in 1816, and Appa Sahib was placed on the throne. It was his treachery and defection in 1817 that brought on those events that ended so well for the British cause in the defence of the residency under Sir R. Jenkins, and the battle of Seetabuldee. One result of these affairs was the cession to the British of the districts on the Nerbudda and of the tributary states on the Mahanuddy. From that time also the two small hills of Seetabuldee (at Nagpore itself) and a few square miles of ground for a cantonment were also ceded to the British. These several cessions were ratified by the treaties of 1817 and 1826; and the several districts under the designations then recognized are all named in the schedules annexed to the last named treaty. At the same period, after the conclusion of the second Mahratta war, the Saugor and Dumoh districts were ceded to the British Government by Dowlut Rao Scindia in 1817 and 1818, and the territories under their then recognized designations are to be found in the schedules attached to the treaty of 1818. Saugor is also included in the cessions made by the Peishwa in the treaty of 1817. Thus were acquired by the British Government the districts so long known as "The Saugor and Nerbudda Territory."

Its extent.

The first and second Rughojee.

Cession of territory to the British Government and to the Nizam.

Ultimate limits of the Nagpore kingdom.

32. The remnant of the Bhonsla dominions now consisted of the Province of Nagpore itself. After the final deposition of Appa Sahib in 1818 (who, after continued acts of treachery, fled to Hindostan), Rughojee the Third, then a minor, was placed on the throne by British authority. During the long minority and regency which ensued, the Government was virtually conducted by the resident, Sir R. Jenkins. Some European officers were appointed to superintend the several districts; and a regular staff of native officials was appointed. This administration, if not quite equal to that of regular British Provinces, was consonant to the usages and circumstances of the country, and superior to any thing known previously. It is still remembered with favour by the people. It lasted till 1830, when the Government was assumed by the Rajah himself. Rughojee died in 1853, without heirs begotten or adopted, and the kingdom lapsed to the British Government as paramount in 1854.

It lapses to the British Government.

Minor cessions.

33. In 1860 several additions accrued on the several frontiers. Certain portions of the Saugor and Hoshungabad districts, previously assigned to British management (together with other districts not connected with these Provinces) were ceded in perpetuity, in virtue of certain territorial arrangements concluded with Maharajah Scindia. A portion of the Shahghur Principality, confiscated by reason of the rebellion of its Rajah in 1857, was included in the Saugor district. An important strip of territory extending along the left bank of the Godavery for 140 miles was ceded to the British Government in virtue of the recent territorial arrangements made with His Highness the Nizam of the Deccan in 1860.

34. This

34. This sketch may be concluded with a summary of the dates on which the various territories now incorporated in the Central Provinces were acquired by the British Government:—

Dates of acquisition of territory.

1817	Nerbudda Districts - - - -	From the Bhonsla Mahratta.
„	Seetabuldee Hill (Nagpore) - -	From „ „
1818	Saugor Districts - - - -	From Scindia Mahratta.
1826	Sumbulpore and its Dependencies -	From Bhonsla.
1854	Nagpore Province - - - -	From „
1860	Part of Shahhgur (Saugor) - -	From Bundlecund.
„	Hindia Hurdee (Hoshungabad) - -	From Scindia Mahratta.
„	Godavery Talooks - - - -	From Nizam of the Deccan.

Mahratta rule and associations.

35. It will be observed that almost the whole of these Provinces have been under Mahratta rule. In Nagpore Proper, which is between the Wurda and Wyngunga rivers, the Mahrattas have thoroughly left their impress upon the face and features of the country. There the manners and customs, the language, the ideas and associations, are all Mahratta, both among high and low, both in town and country and village. With certain modifications, this part of the country much resembles Berar; and the Mahratta country of the Bombay Presidency. But in the rest of these dominions the Mahrattas remained distinct as a governing class; and although everywhere indications of Mahratta influence are visible, yet with the mass of the people neither the language nor the associations are Mahratta. In the eastern part of Nagpore and Sumbulpore the Hindee language prevails with some admixture of the Bengalee and Oorya languages, inasmuch as the frontier now reaches to within 150 miles of Cuttack district, and within 120 from the district of Midnapore near Calcutta. To the south, in the districts bordering on the Godavery, the Teloogoo language is used. To the north, in and above the Sautpoora Range, the Hindee and Oordoo languages prevail; and in the extreme north above Saugor there is much affinity with Bundlecund and Hindostan. Throughout all the hill regions and in the more remote districts the Gondee dialect prevails, and there are many wild tracts where this dialect alone would be understood. In general terms, however, the Hindostanee is the lingua franca now understood with few exceptions, even in the villages throughout these Provinces.

Different languages used in the Central Provinces.

Various tribes and castes of the population.

36. Of the population, generally, it is difficult, if not impossible, to convey any comprehensive idea in a few words. There are not here, as in some parts of India, particular classes in power, and particular classes in subjection, or particular tribes in substantial occupation of large tracts of country. The people here, indeed, present every variety of tribe and caste mixed up together. There are few tracts of country, even few villages, where any one tribe can be said to predominate. It must suffice to mention some of the principal tribes.

The Gonds.

37. The Gonds have been already mentioned. They are principally found in the hill districts of the Sautpoora Range, and in the wild regions to the east and south; but a few of them are scattered about in the plains of Nagpore. The Mahomedans, generally, are not numerous, nor have they any large stake in the country. They have principally been attracted by service or adventure. There are but few Pathans from Northern India, some Moguls, a sprinkling of Deccanees, and some from Arcot in Madras. There used to be swarms of Arabs and Rohillas in the capital at Nagpore in the service of the second Rughojee, just as there are now in the Deccan. These men were mischievous and turbulent; they were happily driven out from Nagpore long ago; and there is apparently not one of them left. There are, fortunately, but few of the fanatical and priestly class of Mahomedans. Of Brahmins from Hindostan there are few; but there is, of course, a sprinkling of Mahratta Brahmins (Maharashtree), who are known to be a class of eminent ability and influence; the proportion of these, however, is small for the number of Mahrattas generally, except in the city of Nagpore, where they are numerous. But Brahmins of the poorer class are largely sprinkled all over the country as writers and petty traders, much of this kind of business being in their hands. The Rajpoots, of more or less pure descent, are numerous, especially to the east, and hold much land, some of them being large feudal landlords. As already explained, this race is much mixed with that of the Gonds, and most of them would not be acknowledged by the real Rajpoot of Northern India. In the Saugor and Dumoh districts there are some of that formidable and untractable Boondela tribe of Rajpoots that possess Bundlecund.

The Mahomedans.

Brahmins.

Rajpoots.

Mercantile classes.

38. Of the educated and mercantile class there are many Kayeths from Hindostan, introduced, a few before and many after British rule, into the public offices and departments. The Purbhos from the Bombay Concan, and the Parsees are very few. That very important class of Marwaree merchants and bankers (whose native country is in Jodhpore) are well represented in the principal towns; some of them are men of real ability and enterprise. Some of the Madras mercantile class have found their way here in connexion with the troops and the public departments.

Agricultural tribes.

39. Of the great agricultural section of the community nearly all tribes and castes are represented. The best of them are as yet, however, altogether inferior in skill, strength and industry to the great husbandman classes of Hindostan and the Punjab. But one of the chief are the Koonbees, who appear to be identical with the great Koonbee tribe in the Mahratta country of Bombay, from which tribe the dominant Mahratta race is sprung.

The Koonbees.

The Lodhees.

The Nagpore Koombees are chiefly found in the villages of the Wurda and the Wyngunga. The Koormees and Kachees, Pomvars and Bagrees, similar tribes but of Hindostanee origin, are found chiefly in the northern and central districts; they are skilful, careful and excellent husbandmen. The Lodhees possess and cultivate much of the land in most parts of these Provinces; they are found alike in the Saugor and Nerbudda territories and in Nagpore; they are reputed to be fair husbandmen, but they are not of so quiet and contented a disposition as the other agricultural classes. The Chumars (leather makers or tanners), a low caste, abound in Chutteesghur, and indeed cultivate the greater part of that rich and fertile tract. Their character is as yet inferior; but from their possession of such fine land they have a great chance and opportunity of progress. The ground is so productive that it does not call forth their energies at present. In the south, near the Godavery, the cultivators often are Telingees (from the Madras Telingâna), speaking the Teloogoo language.

Tribes dwelling in the wilderness.

40. The villages thinly dotted over the great wilderness in the centre of the Nagpore Province are chiefly held by that section of the Gonds named Mârees, a semi-barbarous race, extremely shy and timid, quite wild men of the woods, and seldom seen by an European. Of that remarkable class of Deccanee labourers, the Wuddeas, there are a few employed on the railway works; they possess superior physical energy, and are the "navvies" of these Provinces.

The Bunjairah traders and carriers.

41. To this cursory notice there should be added a mention of the Brinjarees, or Bunjairahs, or Lubanees. These men are to Central India what the Lohanee and Puracha traders are to the north of India. As traders and carriers these Bunjairahs ramify all over the country, and form a free-masonry among themselves. They travel from Bombay to Mirzapore, from Bundlecund to Masulipatam. At this moment the land carriage for cotton is entirely in their hands. In the north of India the caravans have strings of camels. But these Bunjairahs, instead of camels, have vast herds of bullocks. In the north of India the armed traders have to face the snows, and the rocky passes, and the fierce mountaineers. But these Bunjairahs have to meet different dangers, in the damp and dark forest, the putrefying vegetation, the malarious exhalation, the pestilential swamp. In the height of the rainy season, however, they have a recess, and they permit their bullocks to graze in the boundless pasturage. The character of these men is in some respects fair; but they are often daring and turbulent, and sometimes suspected of participation in robberies.

General character of the people.

42. The general disposition of the people is quiet, peaceable, and patient. Those classes which are wild or barbarous are not fierce nor aggressive. Fanaticism in any shape is rare. To the north of the Nerbudda the people are more spirited and sensitive. But they are not turbulent, and are of a milder character than the population of the neighbouring territory of Bundlecund. The upper class of the population is fairly interspersed everywhere; but its standard of education and civilization is not high. The middle class is numerous, and, all things considered, tolerably educated and intelligent. The lower class and the mass of the population must rank low, even in an Indian scale, in respect to skill, industry and intelligence; and education among them is even more rare than elsewhere in India.

The various breeds of cattle.

43. As might be expected in such a pastoral country, there are vast herds of bullocks, cows and buffaloes. But all the bovine herds are of an ordinary description, rather below than above the general Indian average, except perhaps on the banks of the lower Wurda, and the Godavery, and in a few exceptional places. In few parts is there really superior indigenous breed of cattle. The best draught cattle come either from the southern Presidency or from the Deccan. There is no breed of horses or ponies worthy of the name; the Deccan chiefly supplying these animals for the local demand. Camels are not found here, and those that are imported do not thrive in this comparatively humid climate.

Wild animals.

Elephants thrive here, and can be caught in the hills to the eastward. Wild animals of many species are abundant. The tigers, cheetahs and panthers infest all the districts of these Provinces, and are most destructive to human life. The wild boars are plentiful, and prove very mischievous in eating up the crops. The bison and the wild buffaloe is to be met with in many of the forests.

Agricultural products.

Cotton.

Cereals.

Oilseed.

Opium.

Sugar-cane.

Indian corn and millet.

44. Of the agricultural products the most valuable and characteristic is cotton, which grows already to a great extent in the valley of the Wurda and in Chutteesghur, and might be indefinitely increased. The next best cotton is raised in the valley of the Nerbudda; some is also grown in the valley of the Mahanuddy. The best rice is very largely produced in the lower valley of the Wyngunga and in parts of Chutteesghur. Wheat is produced best in the valley of the Nerbudda, in the champaign country between Nagpore and the Wyngunga, and in parts of Chutteesghur. Oilseeds are largely cultivated in Chutteesghur and the valley of the Mahanuddy. Opium of good quality is largely produced in the Baitool district, and its culture may be greatly extended. The best sugar-cane in these Provinces is to be met with in Jubbulpore districts, but with this and a few other exceptions, the sugar-cane in these Provinces is of an inferior description. In fact, the culture of sugar in these Provinces is in its infancy. It may yet be increased and improved indefinitely. Safflower of good quality is grown in Chutteesghur. Indigo to some extent is produced in Sumbulpore. Indian corn and millet (jowary) are found in most parts of these Provinces. Of fibrous substances, flax and hemp, there is but little as yet produced. Tea and coffee have not yet been introduced, though certainly the Sautpoora hills would appear to offer facilities for such introduction. The

same

same remark applies to silk. Among the natural productions lac-dye must be counted. The substance from which the dye is extracted is the work of insects, which settle in innumerable myriads upon particular trees, or shrubs, or grasses in the forests and woods to the eastward, that is in the districts of Mundla, Chutteesghur and Sumbulpore. Lac-dye.

45. The forests and jungles, as will have been already apparent, are boundless in these Provinces. The resources in valuable or serviceable timber, if not so great as might have been expected, are yet very considerable. The Sautpoora hills have extensive forests of saul of first rate quality (the value of saul being notorious), also saj and bije-saul, both trees furnishing very useful timber. To the south there are extensive teak forests, some of which are comparatively near to the Godavery. The open and cleared country is, on the whole, not destitute of ornamental trees, of these the finest are the tamarind and the mangoe, which are seen everywhere. The mangoe groves, small and great, are indeed one of the most noticeable features of the country. The avenues of trees on the Mirzapore and Jubbulpore roads are probably some of the longest to be seen anywhere. The superior date, palm, and the cocoa-nut do not abound, while the inferior dwarf palm is a weed growing in quantities. The mulberry is hardly to be found. The banyan and the peepul are commonly to be met with. The timber forests.

46. The soil is generally rich and strong in the valleys and in the champaign country. In this cardinal advantage these Provinces will be surpassed by few. So far as agriculture, arboriculture, and horticulture have advanced as yet, there seems every reason to hope that the soil will be made to teem with all the known products of India. Though the autumn and winter rains do sometimes fail, yet the regular monsoon is always copious; and for many months the whole surface of the country is covered with verdure as with a carpet. Character of the soil.

47. Of coal there are some seams. Of iron there are great quantities; how great none can possibly say at present. In the Nerbudda Valley, a short distance to the west of Nursingpore, there are coal mines on one side of the river, and iron mines on the other. The rail is here to run parallel with the river; and the mines of both kinds will be within 50 miles of the line. The mines are in the hands of an European Company. There are some coal seams in the Chindwarra district, but their real value is as yet a matter of doubt. Iron mines are worked in the Jubbulpore district; and in the hills to the north-east, iron is known to exist in large quantities, and some at least of it will come into use eventually. In the centre of the Nagpore Province, too, there are many spots abounding in iron; whether the situation of the mines will offer sufficient facilities is a question requiring experience to solve. But the iron hill of Khundeshwar is close to the bank of the Wyngunga. If that river should be passable (which is doubtful) in the flood season, to the junction with the Godavery, then means of exportation might be ultimately provided. Coal and iron.

48. The stone is chiefly of two kinds, sandstone and basalt. In some places the sandstone is coarse and suited only for ordinary masonry; in others it is fine and well adapted for carved work, and in others again thin-bedded and good for pavement. The basalt, though abundant in many parts of the country, from the difficulty of dressing and cementing it, is not in such great request. Lime is found not only in the usual form of kunkur, but also in strata of argillaceous limestone. The marble rocks of the Nerbudda are celebrated, but the stone is not of very fine consistency, and is not commercially useful. Similar rocks are found in various localities between Seonee and Nagpore, sometimes pink and sometimes spotted with red or yellow; but there, also, little or no use is made of the marble. The bricks and tiles manufactured in the Central Provinces are of an inferior description, but as yet little search has been made for suitable clay. Stones and rocks.

49. The country is almost destitute of arts and manufactures, and there are no fabrics worthy of mention. The only factory of consequence is the Lac Factory, at Jubbulpore, the property of an European gentleman. There are two screw presses for cotton and other goods—one at Hingun Ghât, the other at Chanda. Arts and manufactures.

50. Architectural remains are scattered over the country, but they are Hindoo. There are no Mahomedan remains of importance. The remains left by the Gond dynasties have been mentioned, as also the scattered Hindoo ruins of an anterior date, in several places. In the Saugor and Nerbudda territory, the Mahrattas left few external traces of their rule. But in and about Nagpore the Bhonslas constructed several noble tanks and reservoirs with masonry pipes carried under ground for miles to supply water to the city and its environs. These works do, indeed, redound to their lasting honour. They also built several fine palaces and gardens. The style of architecture was purely Mahratta, distinguished by the flat roof, the far projecting eaves, the lofty wooden pillars, the walls of black stone; the general effect being massive and sombre. But, generally, the houses of the people are mean and unsightly, bricks and tiles being little used; and the actual material consisting of wood, thatch and mat. That such should be the case in a country so abounding in common wood and grass is not surprising. But as civilization advances, it is to be hoped that the houses will be better built. Architectural remains.

51. The towns and cities in these Provinces cannot hold a high rank. There really is not one first class city in the country. Nagpore itself is, in its interior, probably one of the Towns and cities. Nagpore.

Saugor and Jubbulpore. Chanda and Mundla. Raepore and minor places.

the most ill-kept and unsightly cities in India. Saugor is a clean and good town, with a beautiful lake and environs; but its position gives it neither wealth nor trade. Jubbulpore is also well kept and is increasing with great rapidity; as yet, however, it is merely a rising place and no more. The extraordinary advantages of its position, however, seem to render its future destiny great and certain. Chanda and Mundla are truly strange cities with vast circumvallation and ruined forts, but in their interior containing little more than huts and jungle. Chanda is in a neighbourhood which is sure to be one day a centre of wealth: whether the current of trade will bring greatness to that particular spot, remains to be seen. In most of the districts, such as Nursinpore, Baitool, Bhundara and Raepore, the head quarters are large villages and nothing more. The large cotton marts, such at Hingun Ghât, Wurda, Deolee, and others, places where great wealth must accumulate, are, in respect of streets, bazaars, and houses, so backward, that few who had not seen them would credit the account of their condition. The apathy of the people in these respects is unfortunate. Accidental fires in such combustible dwellings are of constant occurrence, and so sure as the dry season comes round half these places are laid in ashes.

Trade. Commercial routes.

52. The trade of these Provinces has five great currents flowing, one to the north, one to the west, one to the south-west, one to the south-east, one to the south. The northern runs to Mirzapore, on the Ganges, and ultimately to Calcutta; its course is well open. The west is by the valley of the Nerbudda, and the south-west proceeds direct to Bombay. Both these will be occupied hereafter by the rail, and will then be united in Kandesh, wherein their united streams will flow to Bombay. The south-east is by the Valley of the Mahanuddy; the south by the Valley of the Godavery. These latter are at present but little developed; they will depend hereafter on the navigation of these two great rivers, and will tend to Cuttack, and more particularly to Coconada. It is Coconada which may be destined to become the Port of the Central Provinces.

Exports and imports.

53. The exports generally consist of raw produce: cotton, oilseeds, cereals, safflower, sugar, opium, lac, dyes, resin, wax, timber, iron. The imports consist of all kinds of manufactures and fabrics, piece-goods, cutlery, hardware, brass pots, wrought-iron, salt, cocoa-nuts.

54. Such, then, so far as I yet understand them, are the Central Provinces. Upon a survey of them the characteristics which most strike the mind are their variety, their present backwardness, their vast resources, their means of future development, and their extreme isolation from all other parts of British India, *penitus toto divisos orbe.*

General form of administration.

55. By the Resolution of the 2d November 1861, these Provinces were ordered to be administered under what is known as the Non-Regulation system, the same as that which has obtained in the Punjab and Oude. Under the Supreme Government of India, the administration is conducted by a Chief Commissioner with the usual Secretariat staff; subordinate to him there is a Judicial Commissioner, or Minister of Justice and Chief Judge in all branches; four Commissioners, each being Judge of Appeal and Sessions, and Superintendent General of a circle of districts; and 17 Deputy Commissioners, each being Judge in Civil Causes, Magistrate and Collector of a Zillah or District. The regular subordinate judicial staff consists of 15 Assistants Commissioners and 18 Extra Assistant Commissioners. Of the country thus to be administered the area is estimated at 1,50,000 square miles; the population at perhaps nine millions; and the annual revenues at somewhat less than one hundred lakhs, or one million sterling.

Civil divisions and districts.

56. The following is the distribution of Commissionerships or Divisions, and of Deputy Commissionerships or Districts:—

SAUGOR DIVISION.

Saugor District.
Dumoh „
Hoshungabad „
Baitool „

JUBBULPORE DIVISION.

Jubbulpore District.
Mundla „
Seonee „
Chindwarra „
Nursingpore „

NAGPORE DIVISION.

Nagpore District
Nachengaon „
(Wurda)
Bhundarra „
Chanda „

CHUTTEESGHUR DIVISION.

Raepore District
Belaspore „
Sumbulpore and the Gurjat Districts.

*GODAVERY TALOOKS.

Sironcha District and Bustar Dependency.

57. After this preface, which, though long, seems necessary from the novelty of the subject, I shall touch on each branch of the administration in the prescribed order.

* This is administered by a Deputy Commissioner directly under the Chief Commissioner.

CHAPTER II.—JUDICIAL.

SECTION I.—CIVIL JUSTICE.

Defective returns.

58. THE Reports of the Adminstration of Civil Justice in the Saugor and Nerbudda Territories have heretofore been incorporated in those of the North Western Provinces. For the Nagpore Province, previously to the present year, no annual report was ever drawn up. For the past year, 1861, the report for all the Provinces have been incorporated into one by the Judicial Commissioner. But the comparative statistics are very defective, and render the preparation of an accurate and comprehensive summary almost impossible. The deficiencies are even greater in the returns of the Saugor and Nerbudda Territories than in those of Nagpore.

Previous system.

59. For the Saugor and Nerbudda Territories, civil justice was administered by a judge and a native judicial staff, framed after the model of the North Western Provinces, and consisting of Principal Sudder Ameens, Sudder Ameens, and Moonsiffs; and under a procedure code, prepared by Mr. A. A. Roberts, when he held the office of judge. In the Nagpore Province, the Punjaub Civil Code was adopted from the first, and justice was administered, not by a separate judicial staff, but by the district officers and their assistants, and in the interior of districts by the Tuhseeldars, or local revenue officers in charge of sub-divisions of districts. In Sumbulpore, civil justice was administered by a native judicial officer, distinct from the deputy commissioner.

60. Up to the present time, the rules previously existing in each section of these Provinces have been acted upon. But in order to place everything on a solid and uniform basis, it has been proposed that the Civil Procedure Act, No. X., of 1859, should be introduced throughout these Provinces. As regards Principles of law, the Punjab Code is prescribed as a manual for general guidance.

New Judicial Establishments.

61. Since the formation of the Central Provinces, the Punjab scale of establishments has been declared applicable to the whole. In the Saugor and Nerbudda Territories, and Sumbulpore, this necessitated a general revision of establishments, but not for the Nagpore Province. In the former, this revision is now complete; the Principal Sudder Ameens, Sudder Ameens, and Moonsiffs, have been all abolished, or rather many of them have been incorporated in the general district establishments, and re-appear under the names of Tuhseeldars and extra assistants. The financial result will be adverted to in another chapter. But in a judicial point of view, the result has been, to largely increase the number of courts, especially in the interior of districts. Under the former system, some districts might have two or three judges in the interior, others only one. Under the new system, there will not be less than two, three, or four Tuhseeldars in the interior of every district. Formerly there were 19 officers of all grades empowered to decide causes, great and small, in the Saugor and Nerbudda Territories; there are now 50 such officers. And as the increase will chiefly be in distant portions of the territories, the convenience to the people will be considerable. A similar arrangement, has been carried out in Sumbulpore, where, in place of one officer with judicial powers, there will in future be four.

Increase in the number of judges.

62. The Tuhseeldars, then, are judges in the interior; the Deputy Commissioners and their assistants at the head quarters of districts. These are all the courts with original jurisdiction. Above them, there are the several Divisional Commissioners, who are appellate courts. And over all, there is the Judicial Commissioner as court of final appeal.

Courts of Small Causes.

63. In addition to this, the regular machinery, Small Cause Courts have been established in the cities of Nagpore and Jubbulpore from 1st July 1862, under the provisions of Act XLII. of 1860. In the other stations, wherever there are more than two judicial officers besides the Deputy Commissioner, it may hereafter be feasible, that one of them shall be entirely devoted to civil judicial business, and exercise the functions of a judge of small causes under the Act. It is hoped that cheap and speedy justice in petty cases, without appeal, may be thus secured to the principal places in these Provinces.

Civil Judges in Military Cantonments.

64. In the large Bazaars of the Kamptee Military Cantonment, which, in itself, constitutes a large city, and in the cantonments of Jubbulpore and Saugor, original jurisdiction, in cases below 200 rupees each, is exercised by the cantonment joint magistrate.

65. The aggregate number of officers, European and native, empowered to decide civil causes within these Provinces, amounts to 96.

Comparative tenacity of litigation.

66. The total number of cases before the courts within the year, amounted to 18,601, of which 17,549 were disposed of; 856 remaining undisposed of at the close of the year.

In the Nagpore Province, out of 10,396 cases in all, no less than 5,405 were disposed of by the Tuhseeldars. In districts where the distances are so great, this circumstance is satisfactory. The number of suits on a supposed population of 9,000,000, will be in the proportion of 1 to 514, and even this amount is decreasing. This does not show a large amount of litigation. Indeed, except in the city and neighbourhood of Nagpore itself, litigation is comparatively light. There is not much even at Jubbulpore and Saugor. In the Nachengaon (Wurda) district, containing the large cotton marts, there are less than 400 suits a year, which is a very low number. The main reason for this paucity of litigation is said to be the prevailing character of the landed tenures. The tenantry borrow from the farmers or landlords, and if there are disputes, such are not brought into court. Whereas in provinces where the agricultural peasantry are independent, the disputes between them and the village bankers constitute the most fertile source of litigation. Again, the trade is of a wholesale rather than a retail character; and this circumstance, again, tends to obviate disputes. So far, then, as such causes go, the paucity of litigation is rather a satisfactory social feature than otherwise. But if it be in any way attributable to delays or expenses of the courts, then a moderate increase of litigation would be a good sign. The total value of the property thus litigated within the year, was estimated at 11,93,332 rupees, or 12 lakhs.

Petty character of the litigation.

67. The nature of the respective classes of suits has never been exhibited in a classified form. This classification, which presents many points of interest, will be arranged for the current year. In general terms, it may be stated, that the greater part of the litigation relates to petty debt. So far as can be ascertained, the average value of a suit amounts to about 68 rupees.

Status of limitation.

68. The rules sanctioned in the Punjab regarding the several periods of limitation (the lapse of which, after the cause of action arising may bar the hearing) for various classes of cases have not yet been observed. Under existing orders of the Supreme Government, they will take effect throughout these Provinces from the 1st January 1863. These discriminating rules, whereby, for some cases of a difficult nature, a longer period is allowed; while for cases which, from their nature, ought speedily to be brought to an issue, a shorter period is permitted, will prove beneficial. The differential principle, too, has been admitted by an Act of the Legislature passed for the Regulation Provinces.

69. In the Nagpore Provinces the average duration of a suit has been for 41 days; in the Saugor and Nerbudda Territories for 25 days. In the Nagpore Province the results do not indicate promptitude or despatch. In many districts of the Nagpore Provinces the duration has greatly exceeded this average. And it is but too notorious in Nagpore itself that many cases, for some special cause or other, have remained pending for months, and even years. This will, however, be remedied in future by constant attention to that useful form of Return which shows, for every month, the date of the institution of the oldest case pending in every court. It is known also that delays in particular cases do frequently occur from the Cause Lists and Files not being regularly kept, and cases not being heard accordingly thereto in due order of precedence. The scrutiny of all the Cause Lists in future has been ordered.

Proportion of costs to value of suits.

70. The per-centage of costs on the value of suits has averaged seven per cent. in the Nagpore Province. But the per-centage cannot be ascertained for the Saugor and Nerbudda Territories. Under existing circumstances these averages do not supply a perfect test. Heretofore, it has been the practice to charge the fee of summonses (for witnesses and parties) in every suit according to the distance which the officer serving the summons might have to go in quest of the parties. If in a small suit the distance happened to be considerable, the summons process would be expensive. If in a large suit the distance happened to be small, the process would be cheap. Now as these processes constitute the main item in the costs, it is quite possible that the costs might be dear in some cases and cheap in others, while yet the general average struck upon the whole might appear moderate. But now the system (for some time prevailing in the Punjab) has been introduced, whereby at the outset the party compounds for the costs in one amount, calculated at a per-centage upon the value of the suit. This fluctuating scale ensures the exact apportionment of costs to the various kinds of suits classified according to value, and exactly adjusts the incidence of the necessary expenditure.

Improved mode of serving processes.

Execution of decrees.

71. The execution of decrees have been numerous. There were 14,647 cases within the year, of which 13,276 were disposed of, leaving 1,371 pending at the close of the year.

Appeals.

72. Of 13,276 cases disposed of, 2,175 were appealed. The frequency of appeals has been much complained of. If used in moderation, the right of appeal is one of the safeguards of justice. If used in excess, it degenerates into an engine of litigation, harassing to the honest suitors, gratifying only to the quarrelsome and vindictive; and fostering a disputatious spirit among the people generally. If, too, as has often been the case in Nagpore, the execution of the decree be stayed, pending the order on the appeal, the system must greatly clog the dispensing of justice. The gradual extension of Small Cause Courts will supply some remedy. Also the Punjab Rules, which are now applicable to these Provinces, and which bar a regular appeal when two lower Courts concur in a decision, has been proposed to be carried out in these Provinces. By these means, it

it is hoped, that the exercise of the right of appeal will be fenced within proper bounds.

Delay in their disposal.

73. The delay in the disposal of appeals from the decisions of their subordinates by the district officers has been excessive in the Nagpore Province. In only one district has there been proper despatch. In some districts appeals have lain over for months habitually, and even for much longer periods occasionally. If, as has been often the case, the execution of decree be deferred till the appeal be disposed of the original decision becomes a mockery.

Additional appellate officer.

74. In the district of Nagpore itself, the number of appeals having outgrown the means for their disposal, an additional appellate officer was appointed for one year, Lieutenant Colonel Balmain, who thus disposed of 310 cases in a satisfactory manner.

Arbitrators and assessors.

75. It does not appear that arbitration, or the aid of Assessors, has been extensively resorted to by the courts in any part of these provinces. The judge should not, indeed, delegate his functions to assessors; nor should he blindly accept their award. But in these provinces, as in many other parts of India, the summoning of assessors, if judiciously arranged, will be useful to the courts and popular with the suitors. In Central India especially it is well known that the punchayet or jury system in civil causes was adhered to with more than ordinary reverence in former times. The attention of all the courts has now been called to this subject.

Native pleaders and agents.

76. In the Saugor and Nerbudda Territories regular native pleaders and attorneys (Vakeels and Mookhtears) have been allowed. In the Nagpore Province they have been permitted, though not distinctly recognised. Without absolutely prohibiting, it is proposed to discourage the employment of these people, and by degrees to accustom the suitors to dispense with aid of this description. However valuable a bar and a profession may be in European communities, I confess it seems to me that such an institution is productive of more evil than good in native communities. It is true that often a man when resorting to law, even in simple cases, profits by being well advised. But from a general point of view it is certain that, if a profession of native lawyers is created, abuses arise which eat into the very heart of public morality. The inhabitants of comparatively remote and wild districts thus become rapidly instructed in arts and devices which are morally most deleterious, and which go far to counterbalance the material benefits of British Rule. Thus, too, the people would lose that simplicity and truthfulness which generally accompany ignorance and poverty before they gained those sterling qualities which follow upon enlightenment and civilization. It might indeed be illiberal to proscribe native lawyers as a class; but on the other hand, there is no necessity to organize them as a body, to admit them to examination, to accord official countenance to them as a trained profession. This remark, of course, only applies to the non-regulation provinces. But the discouragement of native pleaders as a profession will not prevent the humbler suitors from pleading their own causes through the agency of relations and friends; nor the richer suitors from pleading through their own agents or servants.

To be discouraged as a profession.

Recording of evidence by the hand of the judge.

77. The system of the evidence being recorded by the Judge with his own hand is being introduced. Already all decisions are so recorded. Here, as elsewhere, this method is found by some officers to absorb much time. But as each officer acquires practice, this difficulty disappears; on the other hand, the advantages of checking the influence of native ministerial officers, and of a closer contact between our officers and the people, are too obvious to require detailed mention.

Language used in the courts.

78. The Oordoo or Hindostance language has, heretofore, been used in all the Courts of these provinces. This arrangement is not perfectly applicable to those parts of the Nagpore Province where the language used is the Mahratta. The districts where Mahratta is spoken are those of Nagpore, Nachengaon (Wurda), Chanda, and Bhundarra. Many of the people there do indeed understand Hindostanee, and in Nagpore especially there are many influential Hindostanee settlers; but the vernacular which the great majority use among themselves is Mahratta. The adoption, then, of a foreign tongue in the Courts of Justice is unavoidably unpopular. And it leads to the almost exclusive employment of Hindostanee ministerial officials, who are foreigners to the natives of Nagpore. This, again, must have a depressing effect on the indigenous talent, and tends to lower the educational tone in that province. In the first instance, the employment of foreigners on account of their superior ability was necessary. But it will be desirable gradually to transfer these men to other districts, and to admit Mahrattas more largely to employment in Mahratta districts. This has how been ordered. It is further being arranged that plaints and petitions may be received in Mahratta, and evidence recorded in that language in cases where it is not recorded in English. On the other hand, the Oordoo is retained for many proceedings in which it is the more suitable language, and can always be used in those cases where the parties are Hindostanee. To the same end it has been ordered that all European assistants and all Hindostanee ministerial officials employed in these particular districts shall qualify themselves in the Mahratta language.

Admission of the Mahratta language into the courts of certain districts.

Registration of deeds.

79. The registration of deeds has been resorted to but little in these provinces. In the Nagpore province especially, the people have not yet learnt to appreciate its benefits. It is not thought desirable to make registration compulsory, but offices for this purpose have not only been opened at the head quarters of districts, but also have been ordered to be

opened in all the Tuhseel sub-divisions in the interior, so that the people may have the means of registration ready at hand.

The constituting of clerks of the courts.

80. It is being arranged that the chief ministerial native officials (sheristadars) shall be vested with the definite responsibilities and functions of clerks of the courts in respect to giving effect, by supplementary orders, to the decrees and proceedings of the courts. Of the competency and fitness of these men to perform such duties there can be no doubt, and a sense of responsibility will impose a restraint upon them.

Existing defects and their causes.

81. As regards the general administration of civil justice, I believe that it has been better in the Saugor and Nerbudda territories than in the Nagpore province. The officers in the Nagpore province, had, no doubt, difficulties to contend with owing to the great accumulation of cases and arrears shortly after annexation. Since then, however, there never have been in Nagpore those periodical reviews and revisions, without which, according to all experience in non-regulation provinces, the judicial administration cannot be successful. The present information is deficient; so far as it goes, however, it reveals many defects. These defects are doubtless in the main attributable to the want of regular and constant scrutiny of results; the absence of the specific instructions and corrections which would have arisen therefrom, and the failure to enforce particularly such general directions as may have been issued. Detailed orders have now been passed upon the Report of 1861 (the first ever received for Nagpore), and arrangements have been made for a regular exhibition of the results obtained in every court, month by month. Nothing short of this strict and continuous supervision will bring the courts of these provinces up to the average standard.

SECTION II.—CRIMINAL JUSTICE.

82. The reports on the administration of criminal justice for the Saugor and Nerbudda territories have been incorporated heretofore in the Reports of the North-West Provinces. For the Nagpore districts a Report of the year 1860 was recently submitted by the late Judicial Commissioner of that province. For the year 1861, however, the Reports for all the Central Provinces have been combined into one.

Abstract statement of crime.

83. The following is the abstract of crime and criminals, offences and offenders, as shown by this general Report:—

	Nagpore Division.		Jubbulpore Division.		* Saugor Division.		TOTAL.	
	1860.	1861.	1860.	1861.	1860.	1861.	1860.	1861.
Heinous Crimes — Cases reported	3,972	4,630	4,178	3,959	2,248	1,897	11,398	10,486
Heinous Crimes — „ brought to trial	1,384	1,525	–	744	–	636	–	2,905
Heinous Crimes — Persons apprehended	3,085	3,086	–	1,350	–	1,047	–	5,483
Petty Offences — Cases reported	4,113	4,315	1,709	1,893	2,182	2,785	8,004	8,993
Petty Offences — „ brought to trial	4,142	4,161	–	1,902	–	2,204	–	8,267
Petty Offences — Persons apprehended	8,614	8,302	–	3,123	–	3,713	–	15,138
Total — Crimes reported	8,085	8,945	5,887	5,852	4,430	4,682	18,402	19,479
Total — „ brought to trial	5,526	5,686	–	2,646	–	2,840	–	11,172
Total — Persons apprehended	11,699	11,388	4,288	4,473	4,343	4,760	20,330	20,621
Persons committed to Sessions	234	283	–	123	–	208	–	614
„ convicted	6,264	6,768	2,498	2,597	3,091	3,296	11,853	12,661
„ acquitted	4,883	3,976	1,481	1,653	1,139	1,144	7,503	6,773
„ otherwise disposed of	51	92	–	65	–	22	–	179
Under trial at close of the year — Cases	111	59	37	18	52	57	200	134
Under trial at close of the year — Persons	267	269	88	35	85	90	440	394

A slight increase of crime.

84. The aggregate of offences exhibits an increase of 1,036, or 5½ per cent., over the previous year. Such an increase in figures might show, not that more crime had been committed, but that more had been reported. But it seems probable that there really has been a slight increase. The old civil police were less effective during this year, which was the last of their existence, and in which they were undergoing transition.

Ratio of crime to the population.

85. There being no complete population statistics in these provinces, it were vain to calculate averages, or to draw conclusions regarding the relative proportion of crime to population.

* The new Chuttesghur Division is not shown separately this year.

population. But, supposing the total population to be 9,000,000 of souls, the number of crimes committed in 1861 would give 1 crime to every 462 souls.

86. It may be anticipated that the ratio of crime will probably be somewhat high. The people are not indeed of a proud, sensitive, turbulent, or fierce nature, which prompts to crimes of violence; nor do they possess that subtle and ingenious character which may conduce to crimes of fraud. But from its peculiarly centrical position the country is constantly traversed by wandering tribes of bad character. On many sides it is surrounded by wild regions, which give shelter to criminals. The extensive wastes favour the commission of many crimes against property. The low stage of civilisation in the mass of the people leads to a disregard of human life and safety, and to a neglect of social obligations. There is one moral defect which appears to prevail more than ordinary among the middle and lower classes, namely, avarice. It will probably be found that crime in this country is committed more for the hope of gain than for the gratification of revenge.

Prevailing motive of crime.

87. There were 69 murders committed in 1861, of which 32 were successfully prosecuted. There were no capital executions.* The above proportion, then, of murders successfully prosecuted is not so high as might be hoped for. In some parts of India murder is most commonly committed by the men to avenge or punish dishonor of their women. But here such cases are comparatively rare; partly because the character of the women is fair, and partly because the people are not jealous on this point. But the murders generally proceed from sheer avarice; a man is murdered for his cash; a woman for her jewels; a child for its ornaments. The gain for the sake of which the horrid crime is committed is generally small, and might, in many cases, have been secured without the taking away of life.

* Within the year, as the final decision was not issued till after the close of the year owing to delays in the Superior Courts.

Murders.

88. In the south-eastern extremity of the Nagpore Province (Bustar), the Meriah sacrifices of infants to an Indian Moloch once prevailed, and the stone block on which the victims were decapitated has been seen by British officers. The horrid rite is now believed to have been suppressed.

Meriah sacrifice of children nearly ceased.

89. There are no social causes here to lead to secret infanticide, and the crime is happily almost unknown. The maltreatment, and even killing of women on the supposition of witchcraft was once common in the eastern districts of Nagpore Province and Sumbulpore, and has existed even up to a recent date. It is now almost suppressed.

Absence of secret infanticide.

90. Suicide is common in some districts, and shows how little the ignorant people reck of human life.

Suicides.

91. It is to be remembered that the valley of the Nerbudda was the original seat and home of thuggee. The first bands of thugs were discovered here; and these were the tracts most frequented by the tribes that wandered about seeking what travellers they might devour. Here also has been the head quarters of that thuggee department which has reflected so much honour on the criminal administration of India. After operations extending over a quarter of a century, it may be said that thuggee in Central India is repressed.

Thuggee.

92. There were 50 dacoities (gang robberies) within the year. Of these five were attended with murder, 26 with violence, and 19 unattended with aggravated circumstances. Of the whole, 12 were successfully prosecuted. The above return is, without doubt, unsatisfactory. The only redeeming consideration, however, is this, that the gang robberies were, in many cases, committed by men from beyond the frontier: by robbers from Bundlecund or Malwa; by rebels still at large in the fastnesses of Central India; by those who took advantage of the protracted disturbances in Sumbulpore; by those who found refuge in the wild country of Rewa in the north, or of the Godavery in the south. Formerly inroads from the Rohillas and other turbulent characters in the Nizam's dominions were much dreaded on the south-western frontier of the Nagpore province. At different times they have indeed committed depredations on the right or foreign bank of the Godavery, and laid villages in ruins; but these ravages were confined to the Nizam's dominions, and did not violate the British borders. In 1858, however, probably in consequence of the generally disturbed state of Central India, some parties of Rohillas had, on two occasions, crossed the river and plundered villages in the Chanda district. The offenders were pursued, and measures of chastisement were undertaken, and since that time no such outrage has been attempted. The arrangements recently made, whereby a portion of the Hyderabad Contingent is stationed at Woon on the Deccan side of the Wurda, opposite Chanda, will render a raid from that quarter almost impossible. The measures successfully prosecuted by the Bengal Government for the suppression of the rebellion in Sumbulpore will probably prevent the recurrence of gang robberies in that direction.

Gang robbery.

Its causes and peculiarities.

93. But dacoity continues to occur in a very aggravated form on the Saugor Frontier, the robbers coming from the wild hilly country belonging to the Bhopal State, and to Maharajah Scindia's dominions in that quarter. These expeditions are probably headed by one Debee Singh, a Boondela (of Bundlecund), and an ex-leader of rebels in 1857. This man has long been a terror to that quarter. A reward of 5,000 rupees has been put on his head, and a special police officer has been set on his track. But it must be said that in these particular affairs our own police have behaved badly. Measures have now been taken to remedy the inefficiency of the police in the Saugor District.

Robberies on the Saugor Frontier.

94. River dacoity is a thing almost unknown; in fact there is little or no navigation on the rivers to afford any temptation to this crime.

Highway robbery

95. Of highway robberies there have been 73 in the year. These cases are none of them of a severe character. The roads often run for many miles through waste; and many particular trees or rocks are marked as spots where in former times robbers used to lie in wait for travellers. Organized and violent crime of this nature on the highways is now stopped by the distribution of police posts. Still, with many miles of unprotected road intervening between the posts, it is not possible to prevent the occasional occurrence of petty highway robbery.

Paucity of affrays.

96. There have been only five affrays in the year: a very small number. The unfrequency of this offence speaks well for the peaceable character of the people. It also shows that boundaries of land are not much contested.

Cattle stealing.

97. Of cattle stealing there have been 1,025 cases in the year; a large number of these might have been expected in a country with vast herds of cattle and boundless grazing grounds. The comparatively low number of the cases might lead to the apprehension that they are not all discovered or reported by the police.

Frequency of burglaries.

98. There have been 3,302 burglaries in the year; the number is larger than might have been expected, and the crime is by no means on the decrease, though the cases are not generally of an aggravated character.

Ordinary theft.

99. Of ordinary theft there have been 5,590 cases in the year. It is well known that this class of crime does not, and will not, decrease under British rule. The increase of the number of cases in the return of a particular year might really prove, not that more offences were committed, but that more were reported or prosecuted.

Adultery cases, few.

100. The returns of the year show 47 cases of adultery—a small number.

Perjury.

101. Of perjury there were nine cases prosecuted within the year—a small number. It is not to be supposed that these provinces are at all free from this, one of the prevailing vices of India, especially under British rule. But in the more remote districts, the people being more mild and simple, are less prone to falsify evidence in courts of justice. Here, as elsewhere, the summary punishment of this (to the natives) venial offenoe is much needed. It is hoped that the new law, permitting the infliction of fine, may have this effect.

Forgery and false coining.

102. Of forgery and false coining there were 13 and 18 cases respectively. These crimes are apparently rare.

103. As regards crime generally, the circumstances of the Saugor and Nerbudda Territories preclude any comparison between the effect of native and British rule. But in the Nagpore province, where such a comparison is quite possible, it is the general opinion of those able to judge that, under British rule, violent offences, and offences against the person, have decidedly decreased; the less aggravated of the offences have not decreased, and have probably somewhat increased. This precisely accords with experience elsewhere.

104. In respect to the disposal of criminal business, out of 11,172 cases instituted during the year, there were only 134 pending at the close. This return tells favourably for the industry of the district officers and their assistants.

Despatch of criminal business.

105. The average duration of cases without assistance of police was 10 days, and with assistance of police 15 days; the former average is favourable to the judicial officers, the latter is not so favourable to the police. It is, however, to be remembered, that in most districts the unavoidably excessive distance of police posts from head quarters, and of villages from the police posts, must bause delay. In the Nagpore Province there has been a marked improvement in both these averages, which shows that the despatch of business is improving.

Prosecution of crime not quite successful on the whole.

106. Of the total of crimes and offences reported, 19,479, there were only 11,172 actually brought before the magistrate. In these cases there were 20,621 persons apprehended, of whom 12,661 were, more or less, successfully prosecuted. This proportion is not entirely satisfactory.

107. The ratio of acquittals to convictions has stood at 6,773 persons to 12,661 persons during the year. This return shows that the comparative frequency of acquittals must arise from defective inquiries by the police. In the Nagpore Province, however, there has been a general improvement in this respect within the year.

Attendance of witnesses.

108. The return of attendance of witnesses shows that of 51,511 witnesses in all, 47,134 witnesses were detained in court for only one day, 2,975 for two days, and 972 for three; the remaining 430 being detained for longer periods. This return generally indicates a prompt despatch of business.

109. The result of sessions trials and of appeals from the district authorities to the Superior Courts has been as follows:—

Sessions trials.

SESSIONS TRIALS.

Number of persons committed	798
Convicted	430
Acquitted	115
Referred to Judicial Commissioner	68
Died, transferred, &c.	31
Pending, at close of year	154

APPEALS.

Cases instituted	458
Appeals rejected	104
Orders confirmed	244
Modified or reversed	84
Pending at close of year	26

This return is, on the whole, favourable, except as regards the number of sessions trials pending at close of the year.

110. In the disposal of sessions trials there is excessive delay throughout these provinces. As a rule, eight or nine months will elapse after a case is committed by the magistrate before it will be tried by the judge; and, if it be a murder case, two or three months more will pass away before the final sentence is carried out. After his commitment by the magistrate, a murderer will generally be in gaol for nine months or a twelvemonth, before he is capitally executed.

Delay in their disposal.

111. This delay is not attributable to any particular officer or officers, but to the system whereby the committed prisoner remains in the gaol of his district until the judge can come round on circuit, which may not happen for many months. Measures are now being devised to remedy this defect in future.

112. It is worthy of note, that the tuhseeldars, or local revenue officers, throughout these provinces, have for some time been invested with petty magisterial powers. These officers disposed of no less than 5,528 cases within the year, and this in a creditable manner. They are all stationed in the interior, and decide on the spot cases which would otherwise have to be dragged for miles to the magistrate's court. And, as their stations are being placed as much as possible on the main roads, the convenience of this arrangement to the people at large will become greater and greater.

Tuhseeldars vested with criminal powers.

113. In respect to punishments, the following are the numbers imprisoned:—

Classification of punishments.

For 7 years and upwards	261
For 3 years and upwards	143
For 2 years and upwards	160
For 1 year and upwards	349
For 6 months and upwards	2,366

There were 558 flogged. But since the penal code came into force, the punishment of flogging is disused for the present. The virtual abolition of the punishment by the code without the provisions of an Act for flogging is causing great embarrassment in these provinces. The punishment was largely and beneficially resorted to in the Nagpore Province, and is held to have been very efficacious. Its discontinuance, of course, increases the imprisonments, diminishing the deterrent effect of punishment, and crowding gaols already over-crowded. Juvenile offenders, too, must, for the present, be incarcerated, and the state of the gaol buildings seldom admits of their being kept properly separate from the bad example of criminals.

There were 8,318 persons fined, the total of fines imposed amounted to 64,144 rupees, of which 32,614 rupees only were realised.

Security for good behaviour was demanded in 606 cases.

114. The aggregate of property stolen within the year was estimated at 3,75,362 rupees, of which 67,309 rupees, or 18 per cent., was recovered, a decidedly small proportion. This circumstance is not satisfactory. In the Nagpore Province, however, there was an improvement within the year.

Per centage of value of property recovered to the aggregate value of property stolen.

115. In respect to the criminal administration, generally, that which depended on the magistracy was fairly done; that which depended on the late civil police was indifferently done. The general result on the state of crime was not satisfactory as regards violent and heinous offences, and sufficiently good as regards ordinary offences. The old police, however, had many difficulties to contend with owing to the external character of the country. It remains to be seen what effect the organization of the new constabulary may have on the criminal administration of the current year.

116. This brief notice of judicial administration may conclude with the mention of the proposed system of investing native chiefs and gentry with magisterial and judicial powers. The principle has been admitted in the Punjab and Oude, and acted upon apparently with

Investing Native Chiefs with judicial powers.

the best effect. It may be affirmed that there few parts of India more naturally adapted for the introduction of such a system than the Central Provinces.

Various classes of Chiefs.

117. In many of the wild and remote districts of these provinces, especially the eastern and southern parts of the Nagpore Province, there are large zemindars. The nature of their tenures will be adverted to in the chapter on land revenue. Such semblance of police as may exist within their extensive limits, is furnished by them. They are feudal chiefs with complete actual authority over their people, who are, in fact, their tenants and dependents; such are the zemindars, 75 in number, of the Raepore, Bhundara, Chanda, and Sironcha districts. Between the frontier of the Raepora and Sumbulpore districts there is a cluster of Gurjat states, 12 in number, held by half civilised chiefs, who have heretofore exercised complete power over their people, as yet, however, with an ill-defined and irregular jurisdiction. In the wild districts of Mundah, there are several families who rose into their position under Mahratta rule, and now either exercise or claim ownership over scores of villages or hamlets scattered about in the forest. In the Sautpoora Hills, also, there dwell several feudal zemindars in a position similar to that of their brethren in Nagpore. Throughout most of the Saugor and Nerbudda districts there exists a landed aristocracy. In the capital of Nagpore there are the family and principal dependents of the late Rajah. At the head of these there is the Rajah of Deor, who received his title as a reward for the fidelity of the family during the period of disturbance. At Saugor and Jubbulpore there are still the representatives of some of those families who rose to power under Mahratta rule. At Nagpore and Jubbulpore there are bankers, natives of Marwar in Rajpootana, of high respectability, whose dealings extend to all the principal marts in Central India. On the whole, then, the upper classes of natives is well represented in the Central Provinces. And the above category is exclusive of the Rajahs of Bustar and Kalahundy, who are independent, subject only to political control.

The middle class.

118. Furthermore, there exists throughout these provinces, Sumbulpore included, an important middle class in the interior of the districts. It will be explained in the chapter on land revenue how the system of tenures has tended to establish and foster this class. Be the theory of that system right or wrong, the practical effect at this day results in there being found in most villages a headman, who is, in some sense or other, master of the estate, who has some tincture of education, and to whom the villagers look up. It has been the practice to hold these men responsible for the land revenue, and for the general management of the village. Sometimes they are called "Patels," sometimes "Gountiahs," more frequently "Malgoozars;" all these names meaning, however, much the same thing. In the Nagpore Province also there exists hereditary Desh Mooks and Desh Pandyas, who once had a sort of jurisdiction over circles of villages. Whether the great lower class is in altogether a good position may be a question. But there can be no doubt that the middle class is well maintained.

119. European landholders and settlers are as yet rare. But it is hoped that their numbers will increase, especially after the opening of the railways.

120. Now it would seem to be both just, generous, and politic to admit these various classes to a share in the civil administration; to associate them with British officers in the execution of measures in which all should have a common interest; to induce them to bear and discharge those responsibilities and functions which in all civilised countries attach to the various degrees of station, influence and wealth. That the classes in question are generally in these provinces willing, indeed anxious, to undertake such functions and responsibilities, is sufficiently certain. To invest them therewith, then, would have a double advantage; one relating to the civil administration, one relating to the people generally, and particularly to those selected.

Advantage of conferring powers on the Native Chiefs and gentry.

121. As respects the civil administration, the system would, beyond measure, strengthen our hold upon the country. At present the difficulty of obtaining information of the condition of affairs in the interior, of producing any real effect upon the mass of the people, of making our influence reach to remote and scattered localities in these provinces, is but too notorious. A partial remedy at least, to these defects, will be supplied when we shall have a native on the spot, not only in every tract of country, but almost in every village, who has some acquaintance with our administration, some interest in its success, some responsibilities for its failure. Again, the men thus honoured and selected will be personally bound, in some degree, to the Government, and will, from the necessities of their position, be morally obliged to defend its measures and to vindicate its reputation. It has been truly said that, under our civil administration, the people become like an army without officers. But by the investing men selected from the upper and middle classes with judicial powers, the link now wanting between the governors and the governed would be, in some measure, supplied.

To the State.

To the people.

122. As regards the people themselves, the effect upon their character would gradually become considerable. Those who were selected would have hopes of distinction and fears of disgrace, which they have not now, and the absence of which makes their lives monotonous, and their disposition apathetic. They are naturally sensitive to personal repute. Let that be enhanced by a measure of this kind, and the anxiety to preserve such dignity will operate as a stimulus to exertion in the cause of good government. While some are thus enlisted on the side of right and justice, others hope, by conduct and industry, to qualify themselves for a similar honour. Thus the motive for good extends over a wider circle.

circle. Again, if the powers and functions be graduated according to station, merit, and qualification, then those who are in the lower grade will strive to attain to the higher, and thus the actuating motive is rendered stronger and stronger. And if the standard of qualification be at first made moderate or easy, then a greater number of persons could be selected. Thus it might become possible, by degrees, to invest almost every man of respectability and position with some kind of public responsibility. And every person so selected would be wiser and better, both as a member of society and as a subject of Government. Then, if the upper and middle classes were thus improved, the improvement would gradually affect and leaven the mass of the people. It is peculiarly observable in this country that the mass are inclined to follow their leaders, as the flock follows the bell-wether. The inferior tone, too often prevailing among the leading classes, notoriously operates as an impediment to national improvement. Whatever then shall raise the spirit, or prevent the deterioration of the upper and middle classes, will immediately, or at least ultimately, benefit the people.

123. These remarks are offered because the question is almost new to these provinces, and, at all events, has yet to be practically solved. One native gentleman only has been as yet vested with magisterial powers. It is right, indeed, that the character and antecedents of individuals should be scrutinised before the selection is made; still the local authorities are apt to assume a standard higher perhaps than is absolutely necessary, or than is to be expected from the gentry at present. More allowance should be made for their shortcomings. It would not, indeed, be right that a man should gain practice and knowledge by exercising power, experimentally, over his fellows. But this objection will almost disappear if, in the first instance, he be entrusted with small limited powers, to be gradually increased as he acquires experience and fitness. And in every case the fear of losing the powers in the event of inefficiency or misconduct would serve as a powerful check. And as regards industry and application, in which native gentry are now so often deficient, a decided impulse to these qualities would be given by the measure now recommended.

The nature of these powers.

124. There should now be the less difficulty in vesting native chiefs and gentry with magisterial powers, inasmuch as by the new police system all magisterial officers (except the principal magistrate or deputy commissioner of the district) is restricted to the exercise of purely judicial functions. The result is that individuals vested with these powers would only try the cases and prisoners brought before them by the police. And this is a duty which in England is performed by unpaid magistrates.

125. It has recently been proposed to vest all the zemindars in the Nagpore Province with magisterial powers and limited judicial powers, so as to place them in a position similar to that of the talookdars in Oude. It has also been proposed that the 12 Gurjat Chiefs should be Gazetted to exercise the powers of magistrates under the Act of Criminal Procedure. Similar recommendations have now been made on behalf of individuals selected in each of the various grades of judicial and magisterial powers according to the qualification and position of each man. The number of individuals recently recommended amount to 49.

Magisterial powers to zemindars.

To the Gurjat Chiefs.

126. According as our personal knowledge of the character of the leading men in every place shall increase, more and more will be found fit for some limited powers. Thus many of the village headmen may be selected for petty powers like those entrusted to patels in the Madras and Bombay Presidencies. At length there would be regular grades of promotion; the village headmen with petty powers; the rural chief with special powers; the large zemindar, the man of rank, or the feudal noble, with full powers.

127. Wherever the individual selected shall reside and have property in a particular locality or tract, it will be best to define his jurisdiction accordingly, as has been done in Oude, and also to some extent in the Punjab. But when, owing to the distribution or arrangement of villages, or such like cause, an exact jurisdiction on the above principle cannot be assigned, it will be convenient and practicable to give the individual power to dispose of any case, wheresoever arising, which may be referred to him, or a jurisdiction might be marked out for him near to his place of residence.

128. In the above category there would, for instance, be included State pensioners, who receive, not land, but money assignments; and who reside, not in the interior, but in cities. Such, for the most, are the family and relations of the late Bhonsla Rajah, who reside in the City of Nagpore. Several of them are well qualified for the duty, the performance of which they would esteem and honour, and which would tend to reconcile them to their altered position as subjects of the British Government. Several of these have now been recommended for magisterial and judicial powers. There are also other political personages in the interior who have been similarly recommended. Thus all these would have healthy employment for the occupation of their minds, and for the natural exercise of their energies and ambition, instead of nursing the remembrance of that which they ought rather to forget, or brooding over past circumstances which can never return.

To the Bhonsla family.

129. It has been provided that no expense to Government shall accrue from this arrangement, the individual exercising the powers must conform to the rules regarding record and returns, and must defray the cost of writing these, which, however, will be generally small.

130. If the measure be approved by Government it will be necessary that the local officers should treat the selected individuals with consideration and forbearance, making allowance for faults and shortcomings at the outset, and evincing a readiness to afford instruction until the novelty of the system shall wear off.

131. In concluding these remarks on the proposed system I venture to repeat that (so far as my experience extends) nothing could be devised more calculated to raise the morale of the people and rivet our hold upon them, while there is no part of India where it is more needed, or could be more easily introduced, than in the Central Provinces.

SECTION III.—POLICE.

132. Within the period under report the entire police of the Central Provinces has been reorganized. Here, as elsewhere, the police were of three classes:—

I.—The regular and military police.
II.—The municipal police.
III.—The village police.

Various kinds of police.

133. It will be necessary to speak of the regular and military in three territorial divisions:—

1.—That of the Nagpore Province.
2.—That of the Saugor and Nerbudda Territories.
3.—That of Sumbulpore and Seroncha, on the Godavery.

134. In the Nagpore Province the defensive and protective force, exclusive of the regular military force, consisted of—first, the Nagpore Irregular Force; and, second, the Civil Police, both being under the then commissioner of that province. The Nagpore Irregular Force was indeed a military body, and was charged for in the military department. Its war services will be duly recapitulated in the military section of this report. But in 1861, when it was determined to reorganize the police, the Nagpore Irregular Force was incorporated therein, and ceased virtually to belong to the military forces of this country.

Police in the Nagpore Province.

135. In the beginning of 1861 the Nagpore Irregular Force stood at the following strength:—One light field battery, one cavalry regiment 500 strong, three regiments of infantry 1,000 strong each, the whole numbering about 3,803 men of all ranks. The total cost was estimated at 6,44,101 rupees, or 6½ lakhs per annum. The Civil Police consisted of a body of horse (called Moolkee) 705 stroeg, and of 3,049 foot (called Burkundazes), in all about 3,754 men, costing 4,20,408 rupees, or 4¼ lakhs per annum. The total cost then amounted to 10¾ lakhs.

Proposals for its reduction.

136. The first steps towards reduction were taken in 1861 by Colonel E. K. Elliot, then Commissioner of Nagpore. The battery of artillery and one of the three regiments were broken up, and the cavalry reduced to 160 (two squadrons) and incorporated in the police (Moolkee) horse. It was at the same time proposed to organise, for the Nagpore Province, a constabulary to cost five lakhs per annum. By that scheme, including the new police and the remainder of the Nagpore Irregular Force, the total cost would have amounted to 9½ lakhs per annum. Thereafter the Government of India directed that the remainder of the Nagpore Irregular Force should be broken up as soon as possible, and embodied in the police, and that the total of all police expenditure should not exceed 6½ lakhs. With that view a revised scheme was submitted in October 1861, which comprised a fixed establishment within the prescribed limit of 6½ lakhs, provided for the gradual reduction of the Nagpore Irregular Force, and the maintenance of a number of supernumeraries until such time as they could be absorbed. This scheme, however, was not carried out at the moment, pending the orders of the Supreme Government.

Revision of the police in the Saugor and Nerbudda territories.

137. At the same time the police of the Saugor and Nerbudda territories came under revision. That consisted of military police, horse 455 men, and foot 2,522 men, and of a civil police of 2,168 men. The total cost amounted to 6½ lakhs per annum. It was proposed to break up both these bodies, and to substitute a new police to cost 4½ lakhs at a saving of two lakhs on the aggregate of former expenditure.

138. The total expenditure proposed then amounted to 11 lakhs per annum, as follows:—

Nagpore - - - - - -	6½ lakhs.
Saugor and Nerbudda - - - -	4½ „
Total - - -	11 lakhs.

Limit of, prescribed by the Supreme Government for the Central Provinces.

In February last, however, the Inspector General submitted a detailed schedule for all the above provinces, which gave a total of (12) twelve lakhs. Thereupon the Government of India ordered in April that the limit of 11 lakhs actual be observed, and that the police of the year be brought down as near as possible to that sum.

139. On

139. On the 1st of May 1862, then, there were regular establishments costing 12 lakhs, and there were then Nagpore supernumeraries (mentioned in the preceding paragraph, and which had not been reduced) costing about two lakhs more; so that the total police expenditure was going on at the rate of 14 lakhs. A reduction of full three lakhs, then, was required in order to meet the requirements of Government. With this view, then, retrenchment was carried out at once; the two remaining regiments of Nagpore Irregular Force were broken up. This measure was effected without any trouble. Most of the sepoys were taken into the police, inferior men being discharged to make room for them. The Moolkee Horse (including remnant of Nagpore Infantry) was reduced by about 100 men; the remains of the Saugor and Nerbudda mounted police, in all 150 men, were discharged, and all supernumeraries of all kinds were struck off. The police reserve at all those stations where troops were cantoned was reduced. Within the space of one month not less than (2,000) two thousand men, horse and foot, were discharged. These several measures gave the required reduction, and brought the expenditure down to ten and a half lakhs, even below the limit of eleven lakhs. For the current year, then, the police expenditure will be at the rate of 10½ lakhs, and on the 1st July the expenditure was actually going on at that rate, and no more.

Reductions recently carried out.

Madras Native Infantry stationed at Raepore and Chanda.

140. The plan of the 1st regiment Nagpore Irregular Force (broken up) at Raepore has been taken by a wing of Madras Native Infantry despatched thither from Kamptee (Nagpore), and in place of the 2d regiment at Chanda three companies of Madras Native Infantry have been despatched to that station. In future it is proposed that there should be one wing of a Native Infantry regiment at Raepore, and the other wing at Chanda. At the same time (in order to lessen the number of detached military stations) the detachments at Nursingpore and Baitool have been finally withdrawn to Hoshungabad, the head quarters, and the withdrawal of the detachment from Dumoh to Saugor has been arranged for. On the whole, then, simultaneously with the introduction of the new police no less than seven detached companies of Madras Native Infantry have been permitted to join their respective head quarters.

141. After this there followed the re-construction of the police in Sumbulpore and Seroncha.

Police in Sumbulpore.

142. In Sumbulpore, during the past several years, owing chiefly to local disturbances, the defensive force had been considerable. In 1861-62 there were the sebundy levy, 500 strong, and several companies of Bengal military police. By the time the district was transferred to the Central Provinces the military police were withdrawn, and there remained the sebundy levy, besides some (80) eighty civil policemen. The levy is now being embodied in the new police, which is to consist of 380 men of all ranks. This arrangement will give a saving of 32,000 rupees per annum, the new police being calculated to cost 55,000 rupees against 87,000 rupees of the previous year. The men of the late Sumbulpore levy will make excellent policemen, being natives of the Sumbulpore district and inured to its peculiar climate.

Police in Seroncha.

143. In Seroncha there had been no regular police organized; the defensive force consisted of a small sebundy levy of 100 men. Besides these there were a few policemen in the Bustar State, now a dependency of Seroncha. In Bustar it is found necessary to strengthen the police party, to preserve order during the frequent disputes between the Bustar people and those of the Jeypore State in Madras jurisdiction. It is also desirable to place some additional police stations at several points on the banks of the Godavery, in order to protect the increasing traffic and the various establishments now being employed in that vicinity. For all these purposes, then, a new police of 152 men has been organized at a charge of 16,000 rupees per annum. Into that the sebundy levy has been incorporated. And now a police officer has been ordered to Doomagoodum, on the Godavery, the head quarters of the navigation establishment.

144. The total police charge for the Central Provinces, then, is as follows:—

	Rs.
Central Provinces - - - - -	10,50,000
Add for Sumbulpore and Seroncha - -	71,000
TOTAL - - *Rs.*	11,21,000

Final police charge for the Central Provinces.

Or, 11¼ lakhs of rupees. The Government allowed eleven lakhs, and the Police Commission recommended 10½ lakhs. But that was for the Central Provinces, exclusive of Sumbulpore and Seroncha; and the lowest amount arrived at, for the Central Provinces as then understood, falls within the limit of lakhs.

Amount of savings actually effected.

145. The real reduction of charge, owing to the organization of the constabulary, may be seen as below; the figures relate to the whole of these Provinces, including Sumbulpore and Seroncha:—

	Rs.
January 1861 - - - - - -	18,09,113
October „ - - - - - - -	16,87,852
January 1862 - - - - - -	16,40,088
May „ - - - - - - -	14,92,000
July „ - - - - - - -	11,22,206

CHAP. XIII. Central Provinces.

The difference, less, between the last and the first figures. amounts to 6,86,907 rupees, so that it may be said that the re-organization of the police in the Central Provinces has saved seven lakhs per annum to the State.

Abstract of the present establishment.

146. The establishments of the new constabulary may be thus abstracted:—

Men.		Rupees per Annum.
1	Inspector General	22,800
2	Deputy ditto	26,400
12	District Superintendents	94,800
7	Assistant ditto	36,600
10	Probationary Officers	6,960
45	Inspectors	59,880
6,284	Foot Constabulary	5,76,380
613	Mounted Constabulary	1,67,712
	Office Establishments	26,400
	Allowance and Medical Establishments	22,632
	Clothing	42,574
	Contingencies	16,300
	Extra and temporary Allowances, Pensions, &c.	22,764
6,974	*Rs.*	11,22,206

In round numbers it may be said to stand at 6,000 foot (of all ranks), and 600 horse, the remainder being made up by European and Native officers. There are now no establishments remaining to be organised, and not a single soldier within these Provinces, save those of the regular army.

147. Moreover, it is noteworthy that the new police force is scattered in small bodies all over the country. At few points are there more than 50 men together, and at no place more than 100.

Proportion of the police force to area and population.

148. The principle laid down by the Police Commission, that every city and town should pay for its own police, has been carried out. There are 57 cities and towns in these Provinces, maintaining a municipal police for themselves without any aid from the regular establishment. The municipal funds are raised chiefly by town duties. The aggregate of funds thus disbursed amounts to 67,411 rupees, and of men thus employed to 1,000. The latter total added to the former would give an aggregate of 7,974 men.

* Including native States under administrative or political control.

149. Now if it be desired to ascertain the proportion which the aggregate bears to area and population, then, taking the population at 9½* millions of souls, and the area at 117,800 square miles, it will appear that there is one policeman to every 1,191 of inhabitants, and to every 15 square miles. Both these averages will contrast favourably with those assumed by the Police Commission, namely, one policeman to every 1,000 of inhabitants and to every five square miles. In fact, the new constabulary is moderate if compared with the population, and even low if compared with the area. The population, though sometimes dense, is generally sparse. Populous or inhabited tracts are scattered, often at enormous intervals, over wild, woody, and inhospitable regions. If this circumstance, which constitutes a peculiar difficulty to a police establishment, be remembered; if it also be borne in mind that there are three troublesome frontiers adjoining foreign territory to be guarded, and scores of wild chiefs within our own borders to be watched, then the new establishment will not appear excessive.

150. As regards expenditure per head, it will be found that the cost per man per annum amounts to 161 rupees—which appears to be a moderate rate.

Composition of the new constabulary.

151. It were premature to pronounce positively regarding the material of the new constabulary. It will possibly be found to contain too many men drafted from the inefficient civil police; but it contains, certainly, a good military element. In its ranks there are now most of the best men from the late Nagpore Irregular Infantry—men who behaved with fidelity and gallantry in 1857. The mounted police consists entirely of the Mahratta Moolkee Horse. These men, though not smart troopers, were in the employ of the Bhonsla Rajahs of Nagpore. Their fathers and their relatives were in the service for generations, and they have strong local connexions. They behaved with marked fidelity throughout the whole period of disturbance of 1857-58.

152. It were still more premature to pronounce on the merit or otherwise of the new constabulary in the detection and suppression of crime. They take all the duties mentioned in the Report of the Police Constabulary,—so far as is yet known, the result is not unfavourable. But it should be mentioned that, recently, several serious dacoities have been committed by armed gangs on the Saugor frontier.

The village police.

153. The village police has been placed under the supervision of the police officers. The remuneration and position of the village watch have not been fully fixed, but are being arranged together with the settlement of the land revenue.

154. There

154. There is one point further connected with the police administration, which requires notice in this chapter, namely, the carrying and bearing of arms. According to Act XXXI. of 1860, a proclamation was made, and large quantities were given up by the people, and lodged in custody. This was not, however, done in the Nagpore Province. It is not now proposed to take any further measures of a general nature. A regular disarming process is sure to entail oppression. In some parts of the Nagpore Province it will be practicable to prohibit the carrying of arms; and if this be done, the possessing of arms falls gradually into disuse. In other parts it is desirable that the people should carry arms. As regards the bearing of arms by Europeans it should be actively encouraged, so that every non-military European within the Central Provinces may become a trained rifleman.

The carrying and possessing of arms.

155. The present report can only deal with the re-organization of the police. The next report may show the actual results of that measure. But in this place the services of Lieutenant Colonel Taylor, the Inspector General, ought to be noticed, both as regards the rapidity with which the organization was effected, and the care and judgment with which orders for retrenchment were carried out by him. Moreover, this administration is under special obligation to the Inspector General in India, Lieutenant Colonel Bruce, C.B., for the valuable advice he gave in important measures, and the care with which he scrutinised the establishment from first to last. The support afforded also by Brigadier M'Leod, commanding the regular troops at Kamptee, did greatly facilitate the breaking up of the Nagpore Irregular Infantry.

SECTION IV.—GAOLS.

156. THE gaols are 14 in number, one being at each of the principal civil stations. Besides these there are four "lock-ups," one being at each of the four minor districts. The total then amounts to 18.

157. The average annual number of prisoners may be stated at 4,000 (four thousand). From returns received it appears that the existing buildings are properly calculated to hold only 2,576 prisoners.

Number of gaols and prisoners.

158. The gaol buildings, in respect to style and structure, may be divided into two classes—first, those of the late Saugor and Nerbudda territories; and second, those of the late Nagpore province. The gaols of the Saugor and Nerbudda territories were mostly built, about 20 years ago, with solid and excellent masonry, in a much more complete and substantial manner than would be thought necessary now-a-days. On the other hand, according to recent ideas, their construction would not be considered as well suited to conservancy, internal economy, or ventilation. The gaols of the Nagpore territories have never been actually built. The buildings that now serve as gaols are temporary makeshifts of the worst description. Sometimes they consist of places where the Mahratta Government would confine its prisoners; sometimes they are sheds hastily erected inside old native forts; sometimes the hovels are burnt down accidentally; sometimes they tumble down during a heavy fall of rain. They are generally situated in unhealthy sites, and sometimes in the heart of native cities. In respect to interior economy, they are altogether defective. The above description is also applicable to the Sumbulpore gaol. To the latter category the only exception is the Chindwarra gaol, which is much better than the other gaols of the Nagpore Province.

Gaols of Saugor and Nerbudda territories.

Gaols in Nagpore Province.

159. It is not thought desirable to build new gaols at each station, but rather to erect, gradually, gaols of a superior description at four centrical stations, namely, Nagpore, Raepore, Jubbulpore and Hoshudgabad, and to maintain lock-ups at the other stations. Of the former, the one at Nagpore has been sanctioned at a cost of 1½ lakh of rupees, and will be commenced in October next. In the meantime, to relieve the over-crowded and defective gaol in the Nagpore city, some 200 of the long-term prisoners have just been removed into a large vacant hospital in the outskirts of the civil station.

Central gaols.

Average cost of prisoners.

160. The annual cost per head of prisoners has not been high, averaging 32 rupees. There are, however, extensive variations among the different gaols in the rates per head for food, clothing, and guarding, of which the marginal instances may be selected. The conclusion is inevitable that, after due allowances being made for variety of local circumstances, some magistrates are less economical than others in the management of the gaols. The total gaol expenditure amounts to 1,16,497 rupees, or 1¼ lakh per annum. If real economy could be enforced, and an impression made on the mass of this expenditure, and the rate reduced, in some of the gaols whose expenditure per each prisoner has averaged from 40 to 60 rupees per head per annum, to say 32 rupees per head, which is a fair rate in Upper India, then there would be a large saving.

	Average Cost of Food, Clothing, and Guard.	Average Cost under all Headings.

161. The

The guarding of gaols.

161. The permanent guard duty is now taken by the new constabulary. The scale of these guards has recently been revised with a view to reduction. The extra or contingent guards are regulated at the usual rate of one guard to every five prisoners.

In-door labour.

162. The strength of guards generally is greater than might have been expected, because the "in-door labour" system has not been introduced thoroughly into any gaol, and not at all into many. At some stations indeed, owing to the extreme scarcity of labour, the services of the prisoners for local works out of doors have been indispensable.

Gaol manufactures.

163. Neither has the system of gaol manufactures been thoroughly introduced. It exists to a certain extent in the Nagpore, Jubbulpore, and Saugor gaols; but no fabrics have been introduced worthy of special mention. The profits of gaol manufacture during 1861 have amounted to sums as noted below.* Gardens are generally attached to the gaols, some of which are in fair order.

164. The instruction of the prisoners in reading is carried on to a limited extent in some of the gaols.

Solitary and separate confinement.

The system of solitary and separate confinement, of appointing monitors from among the prisoners, and of mitigating terms of sentence in reward for good behaviour, have not yet been introduced. The attention of the district officers has now been called to this subject.

The system of grouping prisoners in wards according to the class and gradation of crime has been partially adopted.

165. Emeutes in the gaols have never occurred of late, and escapes have been rare. So far the general conduct of the prisoners must be pronounced fair.

Health of the prisoners.

166. Epidemic disease in the gaols has been rare, and the general health of the prisoners has been fair, as will be seen from the per-centage of sickness and mortality given in the following Table. In some of the worst gaols, indeed, the health of the prisoners has been remarkably good. This tolerably favourable result must be in a great measure owing to the prisoners having been well fed, well clothed, and well tended, both in quarters and in hospital.

Districts.	Daily Average Sick per Cent.	Per-centage of Mortality.	Districts.	Daily Average Sick per Cent.	Per-centage of Mortality.

Civil surgeons in charge of gaols.

167. Recently, the civil surgeons at the several stations have been placed in charge of the gaols in subordination to the district officer. This will lead to a better supervision and closer division of responsibility. Generally, the civil surgeons have evinced a laudable interest in the gaols, and I desire to mention Doctors Hende and Bensley of Nagpore and Raepore respectively. Both these officers have done much by their personal efforts to make up for the unavoidable defects of the gaols under their charge.

Inspectorship of gaols.

168. If the above review does not show a perfectly satisfactory result, it is hoped that improvement may be effected during the present year. But it is to be remembered that these gaols have not as yet enjoyed an advantage which has been allowed to the gaols of other provinces, namely, that of competent inspection. The Saugor and Nerbudda gaols were under the Inspector of North Western Provinces, who was too far distant to exercise a real check; and the Nagpore gaols have never had an inspector at all. Now all these gaols are many years behind the gaols of North Western Provinces and Punjab. If these latter gaols need an inspector, how much more must our inferior gaols need one? The appointment of an Inspector of Prisons for the Central Provinces has now been recommended.

CHAPTER III.—REVENUE.

SECTION I.—LAND TAX.

169. THE land revenue for the Central Provinces has been estimated at 51¼ lakhs exclusive of Sumbulpore, or with that district at 52¼ lakhs per annum, or a little more than half a million sterling. The actual demand for the year 1861-62 amounted to 51,76,152 rupees. There was a large nominal balance uncollected, owing to the postponement for 10 days of the last instalment, for an object purely connected with routine. Half a lakh of nominal balance also accrued owing to the informal reduction of assessments. Real, doubtful, and irrecoverable balances amounted to 2¾ per cent. of the whole real demand. They chiefly accrued in the Nagpore Division. Annual yield of land tax.

170. The revenue is distributed as follows over the various districts:— Its distribution over divisions and districts.

	Rs.	*Rs.*
NAGPORE DIVISION.		
1. Nagpore	12,75,256	
2. Raepore	5,78,831	
3. Bhundarra	4,48,128	
4. Chanda	2,65,137	
		25,67,352
JUBBULPORE DIVISION.		
1. Jubbulpore	4,77,004	
2. Nursingpore	3,31,092	
3. Seonee	1,32,377	
4. Mundla	35,001	
5. Chindwarra	2,42,497	
		12,17,971
SAUGOR DIVISION.		
1. Saugor	5,79,396	
2. Hoshungabad	3,30,706	
3. Baitool	1,38,385	
4. Dumoh	3,12,632	
		13,61,119
Sironcha		29,710
TOTAL	*Rs.*	51,76,152

171. Thus many districts are very poor, and none, excepting that of Nagpore itself, are really rich. The cultivated area is not yet even approximately known, but it is certain that not more than one-seventh of the total area is cultivated. How much of the remaining six-sevenths may be culturable, not even a conjecture can be hazarded. That a large proportion, however, is not only culturable, but even highly rich and promising, may be certainly believed. In only a few and scattered portions is the cultivation fully developed, and much of the richest waste will have to be cleared of pestilential forest and brushwood before it can be reclaimed. Nor are there any sufficient data for stating the average rate per cultivated acre of the land tax. It probably ranges from four and six annas to two and two-and-a-half rupees per acre. The average rate can hardly exceed eight annas per acre, which, taken *per se*, will appear moderate as compared with the land tax in other parts of India. But still it generally is quite as much as the people can properly bear; and its low standard only indicates the backwardness of agriculture and the want of useful works, of markets for produce, and of facilities for traffic. Its average rate per cultivated acre.

172. The different kinds of agricultural produce have been explained in the introductory chapter.

CHAP. XIII. Central Provinces.

The following rates may convey some idea of the incidence of the land tax on the different kinds of crops:—

Incidence of tax on different kinds of crops.

	Rs. a. p.		Rs. a. p.
Cotton	– 12 –	to	3 – –
Poppy	7 – –	„	15 – –
Sugar-cane	5 – –	„	10 – –

* According to kinds and mode of cultivation.

Prices of agricultural produce.

173. The following figures will give some idea of the range of prices of agricultural produce:—

	Nagpore.	Jubbulpore.	Saugor.	
	M. s. ch.	M. s. ch.	M. s. ch.	
Wheat	0 24 7	0 30 12	0 23 0	Per Rupee.
Gram	0 27 0	0 36 10	0 24 0	
Dal	0 22 0	0 26 7	0 19 0	
Rice	0 21 0	0 14 7	0 12 0	
Sugar	0 2 4	0 2 7	0 2 8	
Salt	0 6 11	0 4 13	0 8 0	
Ghee	0 2 0	0 1 13	0 1 5	
Cotton	0 2 9	- -	0 3 0	
Goor	0 7 8	0 6 5	0 5 0	
Oil	0 3 14	0 3 14	—	

In the last two years prices have much risen, partly because the Saugor and Nerbudda territories supplied grain in great quantities to the famine-stricken districts of the North West, and partly because there has been some drought and scarcity in Nagpore itself. The low range of prices in Chutteesghur is remarkable, and arises from the isolation of that naturally fertile district, and its seclusion from markets.

Tenure of land.

174. The tenure of land, as recognised by the British Government, is, in all essentials, the same throughout the whole of the Central Provinces. The identity of system in the Saugor and Nerbudda Territories, the Nagpore Province, and in Sumbulpore, is indeed remarkable.

The Government is, in theory, the universal landlord. In every village or estate, there is a lessee, who takes the lease from Government, who contracts to manage the property, and to pay a fixed sum for a particular term of years. The occupants are the tenants of the lessees. There can be no doubt that this tenure is peculiar; it is indeed probably unique in British India. The question naturally arises—How did it come into existence? In order to answer that question, it will be necessary that I should glance at the past history of landed tenures in these provinces.

Origin of tenures.

175. Village communities, such as those which are found in North-western India, have not existed of late years in the Central Provinces. Whether they originally existed, is a question which cannot be discussed fully in this Report. In the northern districts, they probably must have existed. In the southern districts, they probably never did exist perfectly.

In the Nagpore province.

176. In the Nagpore Province, the villages do not, so far as can be ascertained, seem to have been founded by families who settled down on terms of equality, and whose multiplied descendants form the brotherhood of the present day. But some man of enterprise, with a slender capital, would take some tenants or dependants with him to reclaim the waste, or clear the backwoods. His descendants are the landlords, and their descendants the tenants of subsequent generations. Much of the Nagpore Province was, doubtless, settled in this manner, and the method would certainly have been encouraged by the Mahratta Government. And this supposition would not be controverted by the fact, that in the Western Deccan, the Mahrattas may have pursued a different policy. There they were in their native land, and were only the chief among equals in countries long settled with thriving communities. Here, they were foreigners, succeeding a half-civilised dynasty, obliged to spread cultivation over rich but untilled soil, and to contend with

with the encroachments of the forests. In the Nagpore district, then, the headman, though called by the ancient and honoured title of "Patel," was not always the hereditary chief of a village community. He was a village farmer, with complete powers over the tenantry. That this was the real state of things under the rule of the Mahrattas (Bhonslas) in Nagpore may be seen from Sir R. Jenkin's elaborate report written in 1826. During his virtual regency, which lasted long, and which will be favourably remembered still longer, he maintained this system generally, improving it at the same time by British administration. The farmers, on the other hand, held their leases on moderate and equable terms, the tenantry were in a great degree protected from the exactions of the farmers; but the title and rights, or rather the absence of title and rights, on either side, remained the same. When the Rajah came to govern in his own name the system which, whatever it may have been in theory, was fair in practice, did certainly deteriorate. Farmers were changed more frequently, sometimes they were supplanted by those who had interest at court, or belonged to the royal family or household, or had influence with the army; sometimes they were superseded by men who offered to pay a higher revenue; and sometimes estates, tenantry, and all were even put up to auction for the highest bidder.

Their subsequent development.

177. At this distance of time, it is more difficult to describe the state of things which immediately preceded the British rule in the Saugor and Nerbudda Territories. But the country had long been the theatre of war and invasion. Revolutions sweeping in succession over the land, had beaten down and destroyed the villages. On the restoration of peace, people returned to their fields in twos and threes. Men of rank, wealth and influence undertook to restore ruined villages, to re-settle husbandmen on deserted fields. It was thus, no doubt, that farmers and tenantry became substituted for village communities.

Tenure in the Saugor and Nerbudda territories.

178. In Sumbulpore nearly the same system has existed as that of Nagpore; but if similar in kind, it has been superior in degree. The headmen of villages in Sumbulpore are called "Gowtees." They are also farmers; but their hereditary position has always been respected, and most of the tenants under them have rights of occupancy which are never disputed.

Tenure in Sumbulpore.

179. These, then, are briefly the pre-existing conditions upon which the present farming system supervened. I presume that the object of every sound method is to adapt itself to the local circumstances of the country, giving those circumstances a fair chance of expanding and improving of themselves, rather than to impose on the people any system, however theoretically perfect. It would not, therefore, be proper to introduce any new system which had in no wise existed before, for the sake of its advantages, real or supposed. But it is useful to note the merits and drawbacks of each existing system, though it may not be possible to authoritatively devise any change or remedy.

180. It may be observed, therefore, that the prevailing system in the Central Provinces has fostered and established, if not created, a middle class among the agriculturists; and that at least one of this class is to be found in the majority of villages. These men can generally read and write; they are often of a superior class and tribe to the villagers. But often they rise to a grade above this, and in some districts of the Saugor and Nerbudda Territories there is a numerous and respectable landed aristocracy. The value and usefulness of such a class are too obvious to require further remark. On the other hand, with many exceptions, the cultivators and occupiers of the soil are sometimes depressed, and generally not so flourishing as in other provinces, and the average standard of industry, intelligence, enterprise, and self reliance among the agricultural peasantry, is decidedly low.

Prevailing system favourable to middle class in the Central Provinces.

Rather than to the lower class.

181. Such, generally, were the circumstances, proximate and remote, under which the farming system was adopted by British officers throughout the Central Provinces. Under British rule, it has existed in the Saugor and Nerbudda Territories since 1826, in Nagpore since 1854, in Sumbulpore since 1850. Rightly or wrongly, the opinion has prevailed with our officers that an estate cannot be managed without a responsible head residing in or belonging to it; that the occupant cultivators must be dependant for support and guidance on a landlord; that for the State to collect its land-tax from individual cultivators is objectionable. The village community system of the North West is almost unknown; the ryotwary system is deemed objectionable; the zemindaree system on a large scale, as applicable to tracts of country or circles of villages, or the farming system on a small scale, as applicable to single villages, have alone been understood.

Adoption of the farming system by the British Government.

182. Having thus endeavoured to explain the origin of the system, I must particularise some of its main features. As already stated then, Government has been generally the owner of all estates, and every estate is leased out to a farmer or lessee, technically termed "Malgoozar." Various terms of lease have prevailed in various districts. They have generally been short, except in the Saugor and Nerbudda Territories, where the leases were made in 1826, for periods of 20 years. The lessees could not sell, or transfer, or inherit, nor was there any clause to give them a beneficiary interest in improvement. The occupants or cultivators of the soil were the tenants of the lessees. That which they paid to the lessee in cash was regular rent, and for each estate a rent-roll was prepared. Their payments were usually in cash, not in kind; many of them possessed rights of occupancy, and the amount of rent leviable from such was limited by proscription, that is, these latter were liable only for certain fixed rates of rent, and so long as they paid that they could not be ejected. If a tenant should desert or default, his fields were at the disposal

Character of this system.

The farmers.

Their tenants

disposal of the lessee. If the lessee could introduce new tenants to reclaim the waste, the extra rent contributed to his profits. The lessee might be the hereditary headman of a village, though this was not frequently the case. He would more commonly belong to a family who had acquired possession of the village some generations previously, and had held it from lease to lease ever since. Sometimes he might be a local chief, sometimes he might be a stranger, a merchant, a banker, a speculator in land, or a court favourite.

Great zemindars.

183. There are, however, many great zemindars who are, it is believed, absolute masters of their estates paying an almost nominal revenue fixed, it has been alleged, in perpetuity. These great estates are situated in peculiar localities, either near the turbulent frontier in the north, or in the forest regions of the east and south. Many of the zemindars are rude chiefs of old descent.

Such briefly was the tenure of land up to a very recent date, whence it followed that, except in the zemindaree estates, there was no such thing as private property in land. But recently it has been proclaimed both in the Saugor and Nerbudda Territories, and in the Nagpore Province, that in future the Government will relinquish its proprietary claims, and that the rights of absolute ownership shall in future, subject of course to payment of land tax, be vested in those who may establish a fair claim thereto. In every case these claims and titles are being investigated. In some districts these inquiries have been commenced, in some partly finished, in others not yet begun.

Farmers declared proprietors.

184. The tendency of these proceedings is to confirm most of the farmers as landlords, and superior proprietors. Those who have been long in possession will be sure of confirmation as such; with strangers of but recent possession the result may be otherwise. In all cases the rights of the sub-holders will be protected. These may, in some instances, be found to amount even to proprietorships of particular occupancies, subject, probably, to a fee of superiority or seigniorage.

185. The boundaries of every estate will be marked off, and within them the ground and all its products, the cultivated, the culturable, and the waste will be the absolute property of the declared owner, saleable, transferable, heritable, subject only to the payment of land tax, and without any other reservation.

Terms of assessment.

186. This tax will be fixed at an annual sum for a period of years. The limitation of the Government demand for a term of years is really the settlement. At the expiry of that term the demand may be revised, either maintained, or enhanced, or reduced. But the property in the land being perpetual and absolute will not be open to any question at the renewal of the settlement, except the revision of demand. The question will not be who is the proprietor or who shall be responsible for the land tax; but merely whether an estate shall be assessed with as much as before, or with more or with less. The owner of the land will, of course, be responsible for the land tax. The word "Farmer" and the word "Lease," except under special and extraordinary circumstances, will be banished from our fiscal vocabulary.

Applicability of various fiscal systems.

187. Upon the issue of these inquiries depends the precise form or forms which the future land revenue system will take, and it would be premature to predict how matters will even finally shape themselves. The circumstances of the country and of the state of society are, however, so various, that probably no uniform system will in future be possible. That is to say, if the assessment of the land tax is to follow closely on the right of private property in the soil, and if the system of the settlements is to adapt itself rightly and justly to each particular form or phase of landed property, then no particular system can be prescribed beforehand, To me it appears that each of all the revenue system known to British administration is good in its place, and is suitable to the social constitution of some particular province. Therefore, in provinces like these, situated in the midst of the other divisions of the empire, touching in one quarter on the North West Provinces, in another on Madras, in another on Bombay, in another on Bengal, there will be various customs and conditions and circumstances to which one or other of the several systems will be applicable, to some the zemindaree, to others the ryotwary, to others the talookdary, to others the village community system. The notion that the ryotwary system is necessarily inapplicable to these Provinces (which notion has prevailed to a considerable extent) cannot, as seems to me, be reasonably maintained; but, on the other hand, it certainly would not be generally applicable.

Right of the State to unclaimed waste.

188. But to return. While thus the State is relinquishing all proprietary claim over cultivated land, and over uncultivated or waste land, which is in any way virtually occupied for pasturage or for operations connected with agriculture and the like, it does not relinquish its claim over the unclaimed and untrodden waste. The claim of every proprietor to the waste pertaining to his estate will be heard. To every estate or village will be allotted at least a fair proportion of waste sufficient for grazing, for pasturage, for fuel, for woodcutting, and also sufficient to allow the landholders fair margin for increasing their cultivation and for making improvements. In all these respects the fullest consideration will be given to the rights and interests of the people.

Demarcation of boundaries.

189. This done, the exterior boundaries of the estate will be marked by pillars and entered in a sketch map. Within these limits the proprietor will have the benefit of the improvements

improvements he may make, but beyond these limits the State is the owner of the unclaimed waste, and can grant that waste to grantees, or otherwise dispose of it. This demarcation of boundaries is now progressing. In three districts it is finished; in six it is proceeding; in eight it is not yet begun. In the latter a commencement should be made during the next working season. In some districts, such as Mundla, grave doubts arise both in respect of private property, and in respect to granting of waste to capitalists for want of a proper demarcation of boundaries. While the rights of the people are most scrupulously respected, care must be taken to guard the future rights of the State; otherwise many square miles of waste, as yet of unknown value, might be inadvertently allotted to village landlords. These men would nominally take over a vast extent of waste which they might have never seen at all, or scarcely heard of, and of which they could never develope the resources. At the settlement, then, the available Government waste will be carefully separated from that waste which is private property. And, if needful, those portions suitable for grants can be surveyed specially.

Tenants' right protected.

190. But while the ownership, together with the full rights of landlord, is secured to those who can prove a title thereto, the subordinate and concurrent rights of the tenant occupants of the soil are duly cared for. Whatever may be the ultimate and relative proportions of the several kinds of proprietary tenure, there can be no doubt but that hereditary tenants with rights of occupancy, and limitation of rent payable by them, are a large and important class throughout these provinces. In many places they are the thews and sinews of the general body of agriculturists. Their rights are being carefully recorded where they happen to be of the same tribe or family with the new proprietors, their claim (as has been said) to be made joint proprietors may be found admissible. In cases where the farmer may have been a stranger, and his connexion with the village may be terminated at a settlement, the hereditary cultivators may be admitted to separate and direct engagements for the land tax, and as peasant proprietors may be placed in the same position as the Merasdar ryots in Bombay. In some estates, where the hereditary cultivators are more than ordinarily strong, and pay but a low fixed rent to the landlord, their position will be virtually almost as good as that of the ryots in the most favoured ryotwary districts.

Position of hereditary cultivators.

Origin of the large zemindars.

191. The zemindars of the Nagpore Province have been already alluded to; they are numerous in the hilly and wooded districts; they are no less than 75 in number; they chiefly belong to the Gond and Rajpoot tribes. Under the native rule large tracts of land were made over to them to be brought into cultivation. Many of them have played, in the various revolutions and events of these provinces, a part which might almost be termed historical. Some of them can date their present position so far back as centuries. They pay various sums to Government annually, varying from 50,000 to 27,000 rupees, and aggregating 2,51,370 rupees, which may be considered either as tribute, or as revenue, more probably the latter. These amounts are supposed to be fixed in perpetuity. But in fact this class of tenures has never yet been defined, and no record in detail regarding them is extant. The question as to their possessing civil jurisdiction has been mentioned in another chapter. But as regards their fiscal powers, and the extent of their proprietary power, nothing whatever has been ascertained as yet. Hereafter a report will be submitted to Government with a view to these important tenures being placed on a definite and permanent basis. It will probably be found that they are in a position similar to that of the talookdars in Oude. Whether there are any, and if so what subordinate rights in their estates is quite unknown. But if it be found that they have heretofore enjoyed absolute authority over their tenantry, then noninterferance will be desirable. In that case the zemindar will be a great feudal landlord. But beyond the comparatively cultivated and inhabited estates, there will be within the extensive and ill defined areas of these zemindaries (some of them extending over tracts as large as districts) valuable wastes and forests. In this day no man can say how valuable these tracts may become hereafter. While, therefore, the real memorial or seignorial rights of the zemindar are respected, it will be desirable to scrutinise more closely his pretensions to vast tracts of waste in which there may be no semblance of possession.

Their fiscal powers.

Their right to the waste.

Settlement operations in Saugor and Nerbudda territories.

192. In the Saugor and Nerbudda territories the former settlement expired in 1856. The regular settlement was commenced in 1853-4, and has since been dragging its slow length along. As yet no settlement has been completed, nor has any assessment been announced, although in most of the districts much preliminary work has been done. In the meantime, that is for the last six years, the revenue has been collected according to the old assessment under promise made to the people on each estate that, should the new assessment, when made, exceed the present one, no demand on that account, for the intermediate period will be made; but, on the other hand, should such assessment be less than the present, then the tax-payer will be entitled to a refund for the said intermediate period. In the districts north of the Nerbudda it is well known that the people will, in many cases, be entitled, according to the above rule, either to remission of revenue, or to refund of amount over-paid. Again, in these districts, where the old assessment has been evidently too high, and uncollected balances have constantly accrued, such balances have been allowed to accumulate till they shall be finally remitted at the new settlement, and they already amount to three lakhs. Now it is obvious that these expedients, however necessary at this moment, have a demoralising effect on the landholders, and induce them to keep their lands out of cultivation. In some places this circumstance is known to be causing agricultural deterioration. Thus,

Accumulation of revenue balance.

while on the one hand the State is being subjected to future loss in the divisions north of the Nerbudda, by reason of the settlements being delayed; on the other hand, it is not receiving its fair amount of land revenue in the districts south of the Nerbudda; for those districts are known to be under-assessed, and will yield an increase at the new settlements. These considerations afford strong reasons for advancing the settlements. Various proposals in this view have now been admited, and it is hoped that during the next season some real progress will be made in the assessment.

Settlement operation in the Nagpore province.

193. In the Nagpore Province a Settlement Department was set on foot, first in the Nagpore District itself in 1858. Much preliminary work has been done, but no assessment has yet been announced. A second establishment was set to work in the Bhundara District in 1861. A small establishment has just commenced work in the Sumbulpore District. Throughout most parts of the Nagpore Province, except, perhaps, parts of Chutteesghur and Chanda, the assessments of the last settlements are supposed to be somewhat high and uneven.

194. The term of the assessment is to be 30 years in the Saugor and Nerbudda Territories, and Nagpore District. Perhaps for the more eastern districts a shorter term may be desirable.

Rent-free tenure.

195. There are many large estates held either free of revenue altogether, or else upon some favourable rate, resembling a quitrent. These have all been disposed of. In the Nagpore Province there was a special alienation officer employed for this purpose. But in all districts there remain petty tenures, thousands in number, claimed to be held free of revenue and requiring investigation.

The extra cesses.

196. The extra cesses are the same in these Provinces as elsewhere. There are the one per cent. for roads and the charges of the village watchmen and the village accountant. The one per cent. for education has just been ordered. It had not previously been levied. The remuneration of the village watchmen has not been fixed by anything more than precarious custom, but will be definitely arranged at the settlement. The village accountants have been appointed and trained in the Saugor and Nerbudda Territories, but not generally in Nagpore. In the latter Province the farmers or landlords have their own accounts kept with tolerable efficiency, and it will be preferable not to disturb this arrangement. It is better to let the landowner have his own accountant than for the district officer to appoint a man. But whenever these village accountants are appointed it will be desirable that they learn to conduct the rough survey of boundaries and fields, which work is now done by *employés* (ameens) of the Settlement Department.

The Desh Mookhs and Desh Pandyas.

197. There is another class of men, once so important, but now approaching extinction, which requires to be noticed, namely, the "Desh Mookhs" and "Desh Pandyas," names familiar to those who are versed in the history of India, as the managers and accountants for circles of villages. In the Saugor and Nerbudda Territories these men must have originally existed, but they perished in the several revolutions. In the Nagpore Province they have always existed, and though not appointed or employed by the Mahratta Government, they continued to receive certain fees and perquisites. Under British rule they have not been officially recognised, and their income has ceased. This is, perhaps, to be regretted. Inquiries regarding each of these cases have been, however, proceeding for some years past. These are now nearly complete, and recommendations in favour of the surviving Desh Mookhs and Desh Pandyas and their successors will be submitted.

Coercive processes.

198. The revenue may have been collected with some difficulty in a few instances, but yet those coercive processes known to the law in the Bengal Presidency as sale and transfers of the land have not been enforced in these Provinces. If a farmer defaulted, the lease has been made over to another, or the defaulter himself has either been thrown into prison and his movable effects sold by auction. Except in particular districts, however, even these latter processes have been rare. After the new settlement, however, the property in land will be liable to be sold absolutely in satisfaction of the Government demand. It may, indeed, be hoped that this extreme measure will rarely or never be resorted to.

Special supervision of the settlement operation.

199. On the whole, the regular settlement, embracing both a permanent tenure of property in the soil and fixity of assessment, constitutes one of the most pressing needs of the Central Provinces at the present time. For the want of it deterioration is taking place in some places, and the improvements of land now cultivated, and the reclaiming of lands now uncultivated, is retarded everywhere. The tardiness of its progress, and the important question involved in it, have been already pointed out. The more the work is inspected the more does it become apparent that great irregularities, perhaps errors, of practice, are arising; and certainly great diversities. With a view to secure uniformity of practice, together with due recognition of various principles, and a really competent supervision over the whole, special proposals have been recently submitted to Government. If these shall be sanctioned, it is hoped not only that progress will be made, but that it will start from a sound basis and proceed in the right direction.

The permanent settlement.

200. It is necessary that this chapter should include a brief notice of the important question of the "Permanent Settlement." It may, perhaps, be superfluous to state that here, as elsewhere, a permanent settlement would affect only the land-tax itself. It would fix the assessment for ever, and it should be more accurately termed the permanent and perpetual limitation of the direct State demand on the land. It would in nowise affect the

the fundamental right and property of the people in the land. That rights and property will be fixed, absolutely and immutably, whether the land tax be limited to a certain sum for ever or not. The value and interest of such right and property will indeed be greater or less according as the State demand is fixed for a short or a long term, or for ever. But under any circumstances, the nature and essence of the right and property itself will remain the same. Here, then, as elsewhere, in the above sense, the principle of a permanent settlement is applicable. It would have an effect altogether beyond immediate calculation, in stimulating the industry, enterprise, and self-reliance of the agriculturists; the application of capital; the accumulation of wealth, where the assessments were fair. It would be accepted as a great boon by the people. On the one hand, the State, no doubt, will subject itself to prospective loss by surrendering all future right to increase its land revenue. But, on the other hand, such loss would be more than compensated by the gradual, if not rapid, increase of all the other branches of the revenue. These branches entirely depend on the growth of wealth in the mass of the people. A permanent settlement will contribute more than any measure that could be devised to augment that wealth. It follows that a permanent settlement will cause all other heads of revenue, except land tax, to increase. Now in these Provinces more than one-third of the total income is derived from taxes other than the land tax. The other taxes are increasing; the land tax alone remains stationary. In a fiscal point of view, then, there can be no fear for the success of a measure which would, while restricting the land tax, cause all other taxes to rise. Again, it is quite true that the value of money will continue falling, and that prices of produce will rise more and more throughout these Provinces. Thus the agriculturists will, in a short time, receive much more for their produce than they ever did before; on the other, the price of labour will rise, and that will greatly enhance the State expenditure. All the salaries and establishments of the lower grades at least will be gradually raised, and the cost of public works will be greatly enhanced. There might appear to be some risk, then, if Government, while anticipating increased expenditure, were to limit the land tax, the main source of revenue. But it will in reality be quite safe to trust to the increase of other taxes.

Its relation to property in land.

Its great advantages.

More than counterbalances any disadvantages.

201. A permanent settlement, then, so far as it can be introduced, will be, firstly, good for the people; and secondly, equally good for the State. The questions remaining are—To what extent could it be applied? and when could it be introduced?

202 Now it is to be ever remembered that in these Provinces the railway, the roads, and the navigation, will certainly work great changes; while similar results are not here to be expected from irrigation. But this prospect exists here in common with the rest of India, neither more nor less. If, then, the prospect of material improvement does not bar the concession of a permanent settlement elsewhere, neither should it have that effect here. So far, then, as railway, roads, and navigation are concerned, the Central Provinces seem as much entitled to the advantage of a permanent settlement as other Provinces of India. But further it is to be borne in mind that the amount of culturable waste in these Provinces is enormous; and though this condition may exist, more or less, everywhere, it is peculiarly prevalent here; not only are vast tracts of culturable waste vaguely claimed by parties with doubtful title, but within the legitimate boundaries of many, even perhaps the majority of, estates and villages throughout these Provinces there is a large proportion of culturable waste. Now although the inducement held out by a permanent settlement to reclaim the waste is one of the cardinal benefits of that measure, still it is but fair to the State that this privilege should be kept within moderate bounds. It would be right to allow, to every state permanently settled, a just margin of waste as a field for extending cultivation. But it would not be right to allow a permanent settlement to an estate which might include a larger or indifferent area of waste at present quite beyond the means of the owner to reclaim, but capable in the future of being rendered valuable by a variety of contingencies. Thus in these Provinces there are many estates and villages, many entire tracts, and some entire districts, where a permanent settlement could not at present be properly introduced. Such districts are Raepore, Belaspore, Sumbulpore, Seroncha, Bhundarra, Mundla, Seonee, Chindwarra, Baitool. All these districts are in a transition state.

Prospects of future improvements.

Extent to which permanent settlement might be introduced.

203. On the other hand, there are some districts in each of which a permanent settlement might be introduced into parts, but not the whole, with as much benefit and as much reason as into other parts of India; and into these the introduction of the measure has been recommended. These districts are Nagpore, Chanda, Nachengaon (Wurda), Jubbulpore, Saugor, Dumoh, Nursingpore, Hoshungabad. All these districts (excepting Saugor and Dumoh) have large portions of their area continuously and highly cultivated, and subject to the same kind of development as the rest of India. The Saugor and Dumoh districts are more rugged, and do not possess long strips of cultivation like those just named, but in other respects their position is the same. As regards past assessments, some have been too high, and others too low, but this circumstance is not peculiar to these districts, and is but too common everywhere. On the other hand, for the Jubbulpore, Saugor, Dumoh, Nursingpore, and Hoshugabad districts there are the fiscal data, year by year, during 35 years of British rule. For the Nagpore, Nachengaon, and Chanda, besides the British assessments, there are the data of the assessments made during the regency exercised by Sir R. Jenkins and his officers.

Districts suited for permanent settlement.

204. It has, therefore, been recommended that, at the new settlement in these districts

Permanent settlement recommended.

last mentioned, now in progress, the Settlement Officer should recommend the permanent limitation of the assessment fixed by him in every estate which might appear to him fitted for, or deserving of that concession, and that this boon, if approved by Government, should be granted. The Settlement Officer would fix the future assessments for all estates alike, in some for a term of 10, and in others for a term of 30 years, in others, the best of all, he would recommend that the term of the assessment be for ever or permanent. In those estates recommended for the permanent assessment one essential condition should be that three-fourths of the culturable area should be under cultivation at the time of fixing the assessment, and it might be competent for the authorities hereafter to recommend that any estate assessed for a term of years should on attaining the prescribed condition of three-fourths of the culturable area being cultivated, be granted the boon of having its assessment declared permanent. Thus if a permanent assessment be really desired by the people, then this system would induce every landholder to increase his cultivation so as to secure the boon;—and thus the greatest possible stimulus might be imparted to agricultural industry. As the new settlement advances, and as the assessment and the proprietary right is declared in each estate the landholders will be duly apprised of the option allowed to them by the Government Resolution of the 17th October 1861 of redeeming the land tax, that is, of freeing their land from all payments for ever, by compounding for the tax by one sum paid down. It is probable that few, if any, will avail themselves of this privilege at first.

For certain estates under certain conditions.

205. The natural advantages offered in these Provinces for European colonization will be noticed in another chapter. In this place it will suffice to state that particular grants of large extent on the banks of the Mahanuddy and Godavery, and in the Mundla District, have been promised on certain terms to the agents of some gentlemen who propose to form a company for bringing land into cultivation. The Nerbudda Coal and Iron Company have obtained a very extensive grant of many square miles in the Nursingpore District. In respect to these grants it is to be borne in mind that in these Provinces their extent must be expected to exceed greatly the maximum of 3,000 acres each, prescribed generally in Bengal, while the price of the land will seldom come up to the maximum of two rupees per acre, fixed in the Government Resolution. Here the European capitalist would have to found villages in a wilderness, extending over hundreds of square miles in an insalubrious climate, and far away from roads and markets. Such circumstances indefinitely depreciate the value of waste lands.

Terms of grants to European settlers.

206. There is yet one point remaining to be noticed. It has been found also that the numerous tanks, some of them resembling lakes in expanse, and all, more or less extensive, in which the Nagpore Province abounds, and which have been constructed under former dynasties for purposes of irrigation, have of late years fallen very much into disrepair. Many of them have been inspected, and every one thus examined has been found out of repair, and some even broken; in many cases, too, nothing like the full use is made of the water by the people. It is evident that the villagers themselves are too ignorant and apathetic to take care of these valuable works of public utility, and that some better means of supervision than at present are required. On the other hand, the district officers and their subordinates in the interior (*i. e.*, the tehseeldars) have never given their attention to irrigation, and do not generally understand the subject, as yet. It has, therefore, been proposed that an officer with engineering and professional knowledge be deputed as a temporary arrangement during the next cold season to visit all the principal tanks in the Province, and in every case either to instruct the people how to make the requisite repairs or else report the matter to the district officer, who would then make the requisite arrangements. It is hoped that in few instances will any expenditure on the part of Government be needed. The people would generally defray the cost ultimately, receiving only advances from Government (Tuccavee) repayable afterwards. Wells are not generally used for irrigation, save in some districts. In the Baitool District, however, hundreds of new wells (640 in number) of small size, have been constructed by the people within the last few years.

Supervision of works of irrigation.

207. The foregoing review of the land revenue in these Provinces will have shown that the whole subject is in a difficult situation. The points demanding the most urgent attention may be recapitulated as follows:—

Summary of measure requiring attention.

I.—The marking off boundaries of villages and the waste.
II.—The principles of adjudicating proprietary titles.
III.—The application of various systems of tenures.
IV.—The determination of subordinate and tenant rights.
V.—The early announcement of an assessment for a term of years.
VI.—The selection of estates for permanent settlement.
VII.—The supervision of works of irrigation.

208. It is but too certain that not one of the matters above specified is as yet settled, or approaching to settlement, for the whole of these Provinces. When they shall have been arranged, then, and not till then, will the country advance. Until they are arranged material prosperity will, more or less, be retarded.

SECTION

SECTION II.—OTHER BRANCHES OF REVENUE.

Salt tax.

209.—The most important of the minor branches of revenue in these Provinces is the salt tax. The salt consumed in the Central Provinces is of two kinds; first, the salt from the Salt Lakes of Rajpootana, which is consumed in the northern and central districts (Saugor and Nerbudda Territories). For this salt, used above the Sautpoora Range, the inhabitants look to Rajpootana, which is the great source of supply to the North West Provinces. Below the range they look for salt to Madras and Bombay, but chiefly to Madras. Thus the second kind is the salt from Madras and Bombay, consumed in the Nagpore Province. On both kinds of salt a duty is fixed. On the first kind of salt (Rajpootana) it is levied by means of a regular line drawn from Agra, *viâ* Jhansie (in the North West Provinces), to the Saugor frontier; thence across the Nerbudda to Seonee (in the Sautpoora Range), and then turning eastward and north eastward, so as to guard the access to Mirzapore. Thus no salt can enter these British districts from Rajpootana in the west without crossing this line.

Different kinds of salt.

210. In the Nagpore Province a duty is levied without any regular line by local arrangements; that is to say, the dealers are called upon to pay duty on their known transactions. Under such arrangements the full duty of Government cannot, of course, be realised; but a regular line would not be worth the cost of its maintenance on those wild frontiers.

Duty on Saugor and Seone Customs line.

211. On the Saugor and Seonee line above described, the duty was first raised in 1855-56 at *Rs.* 1. 8. per maund of 80 lbs.; it was raised to *Rs.* 2. 8. in 1859-60, and in 1861-62 to 3 rupees, at which it now stands, being uniform with the duty on the North West Province line. The duty is high and is sometimes complained of; but in the year 1861-62, just closed, there has been no falling off in consumption, whence it is inferred that the people can afford to pay the rate. It will be evident, however, that this line does not include the Hoshungabad and Baitool districts, and part of the Nursingpore district, which thereby become exempt from any tax on salt. It would be, of course, desirable that these districts should be taxed equally with the others, but this cannot be done by means of a line. It has been found, by actual experience in these localities, that to establish a cordon of watchmen in the hills and forests would absorb all the revenue to be gained. But it will be possible, by local arrangements similar to those adopted in Nagpore, to raise a local duty similar to the regular duty. Arrangements for this purpose are now being made. The town of Saugor also enjoys an unnecessary immunity, being a free mart for the convenience of traders who store salt there; that is to say, salt may enter the town free to be stored, paying duty on being despatched elsewhere, and being liable to duty if kept in store beyond a certain time. But in fact this freedom is not really necessary for the convenience of dealers, and arrangements are being made for the abolition of the privilege, which has allowed the inhabitants of Saugor city (some 60,000 souls) to consume untaxed salt.

Duty proposed for certain districts.

For town of Saugor.

212. In the Nagpore Province the duty is levied at the rate of 1½ rupee per maund. This rate is only half that of the northern line, but then the Nagpore salt all comes from Madras and Bombay, where it has been first taxed up to 1½ rupee per maund; thus the original duty, being added together, make up the 3-rupee rate, just equal to that of the North West Provinces. Whether the imposition of this duty has checked consumption or otherwise cannot as yet be affirmed. It probably has not, inasmuch as the actual yield of the tax is double the original estimate. The Madras authorities on the eastern coast, whence most of this salt comes, seem to be apprehensive of their export trade being injured by this duty. But there are not as yet sufficient facts to justify this conclusion. If ultimately such should be proved, there would be reason to re-consider the duty. All that is known for certain is that the native dealers on the Madras side dislike the duty, which circumstance, however natural, would not alone furnish sufficient reason for remission. In the first instance, the entire realisation of the duty was entrusted to an eminent native banker of Nagpore (Bunseedhur Abeerchund), who employed his own establishment, being allowed 5 per cent. therefore on the collections. This arrangement, however desirable at the outset, could not properly be continued, and the arrangements have now been entrusted to the ordinary district authorities.

Special duty in the Nagpore province.

Still the price of salt at Nagpore, one rupee for 12 or 16 lbs., is undoubtedly high.

213. Since the formation of the Central Provinces the practicability of extending the Saugor and Seonee line, so as to embrace the Nagpore Province, has been considered. I believe that such a project would be found impracticable. The line might, indeed, be easily carried down the Wurda to Chanda, or even to Seroncha, but that would enforce duty on Bombay salt only, and not on Madras salt. To effect the latter object it would be necessary to carry the line along the Godavery, and then up through a very wild country for hundreds of miles till it touched the Mahanuddy. It would indeed be difficult to find a country more unfavourable for such a line. If the local duty, then, be continued, it must be levied in some such manner as that which now prevails. Whether there should be a duty at all may be another question. It may be true that a native of Nagpore now pays twice as much salt tax as a native of Madras or Bombay, but then he pays somewhat less than a native of Bengal, and the same as a native of Northern India, and as his fellow subjects of the Saugor and Nerbudda territories.

Difficulty of drawing a Customs line round Nagpore province.

 214. The

CHAP. XIII. Central Provinces.

Yield of salt duties.

214. The yield of the salt tax may be thus shown:—

	Saugor and Nerbudda Territories.	Nagpore Province.	Total.
1861-62	6,59,200	2,38,920	8,98,120
1862-63	6,75,000	3,00,000	9,75,000

The first duty having been imposed in 1855–56 for the northern port, and in 1861-62 for the southern, it is evident that this new branch of taxation, now amounting to 10 lakhs per annum, has proved an important addition to the revenue of these Provinces.

Income tax.

215. The income tax in these Provinces amounted in 1860-61 to 1,46,988 rupees, and in 1861-62 to 4,25,002 rupees. After recent modifications it is estimated to yield 3,00,000 rupees in 1862-63. The machinery employed was inexpensive; for the current year there is to be no charge at all for establishments. The remission of the tax upon all the smaller incomes is regarded as a boon by the people.

House tax.

216. The license tax having been abolished before being fully carried into effect needs no special remark. But with it there was to have been amalgamated the "Pandree," or house tax in the Nagpore Province. This house tax, being of old date and familiar to the people, will be retained. Under Mahrattah rule it was levied on the whole non-agricultural community (with certain favoured exemptions) upon a graduated scale. The scale is now being revised and regulated throughout the Nagpore Province. But the tax is not now known in the Saugor and Nerbudda Territories.

Excise on drugs and spirits.

217. The excise on drugs and spirits is a flourishing source of revenue. In 1860-61 it amounted to 7,49,385 rupees; in 1861-62, to 8,96,499 rupees, and is estimated to yield 9,00,000 rupees in 1862-63, or about nine lakhs. The spirit is chiefly extracted from the fruit of a tree called the "Mohwa," which grows wild in great abundance. Hitherto it bas been distilled in the villages at native stills. But the introduction of what are known as "Sudder," or central distilleries, has just been ordered after the model of the North West Provinces. It is hoped that these distilleries will be under efficient regulation.

Stamp revenue.

218. Here, as elsewhere, the stamp revenue has steadily increased, as seen below:—

1860-61, 1,67,230 rupees; 1861-62, 2,57,189 rupees; 1862-63, 3,00,000 rupees.

The highest sum being estimated at about three lakhs. The new Act X. of 1862 has been just introduced, much of the success to be anticipated will depend on the number of private vendors who may be established, and the importance of this has been duly impressed on the district officers.

Tax on sugar.

219. There is a small amount* of taxation raised from sugar by means of a local licence, in the Nagpore Province, and by means of an export duty levied on the Saugor and Seonee Customs line already mentioned.

* 1861-62 - 2,34,700
1862-63 - 2,37,400

On opium.

220. The revenue on opium† is also raised by a local licence chiefly in the Baitool District. It is believed that the system may admit of much improvement, and inquiries with that view are being made by an officer possessing special experience in the opium-growing districts of Malwa.

† 1861-62 - 10,806
1862-63 - 12,000

Town duties or octroi.

221. The town duties, or octroi, have now been assessed, and are being levied in all the towns and cities of these Provinces (with one or two exceptions, which will soon be brought up). Their total yield amounts to 2,38,615 rupees per annum. From these duties all the police charges, both for regular police and city watch, within the towns and cities themselves, are defrayed, and the total debit on this account amounts to 67,411 rupees. The remainder is devoted to local improvements. Thus, as yet, no portion of this tax is included in the Imperial revenue. The average *ad valorem* rate of these duties seems high, amounting to five, or even six per cent. In Nagpore city a relief has been granted. In Nagpore, and some of the cities in that neighbourhood, the collection of the duties was entrusted to the eminent native banker, Bunseedhur Abeerchund. This arrangement, however, desirable at the outset, could not be permitted to continue, and the duties will in future be managed in the ordinary manner.

222. The revenue of the Provinces in its various branches for the years 1860-61, 1861-62, 1862-63, may be exhibited as below. The estimate for the year 1862-63 being taken from the joint report of Colonel Elliot and myself:—

—	Land Revenue.	Abkaree.	Stamps.	Income Tax.	Salt, Sugar, Opium.	Saer, Misc.	TOTAL.
	Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*
1860-61	51,69,750	7,49,385	1,67,230	1,46,988	6,37,636	7,76,734	76,47,723
1861-62	51,76,152	8,96,499	2,57,189	4,25,002	11,43,626	3,53,711	82,52,179
1862-63	52,00,000	9,00,000	3,00,000	3,00,000	12,25,000	3,75,000	83,00,000

223. In

223. In general terms it may be said that the land tax will not on the whole increase, while the future increase of the salt tax is doubtful. But the other heads of revenue, drugs and spirits, stamps, opium, sugar and the like, will probably increase, owing to the general rise in prices and in wages. The total revenue, short of one million per annum, is small for so large a country; but the alienations are considerable. If the population be assumed at nine millions, the total average revenue per head amounts to 14 annas per annum.

Total revenue.

224. The recent date of the annexation of the Nagpore Province affords the means of comparing the Mahrattah and British taxation in that Province, a comparison which may be not interesting. The following general comparative abstract will show the results of taxation under Mahrattah and British rule respectively, the amount being given roughly in lakhs:—

Comparison of British and Mahrattah revenue in the Nagpore province.

——	Land Revenue.	Customs and Transit Duties.	Spirits and Drugs.	Stamps.	Income Tax, Licensed and House Tax.	Salt, Sugar, Opium, and Tobacco.	Miscellaneous.	TOTAL.
	Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*
Mahrattah rule -	32,00,000	6,00,000	1,50,000	- -	- -	- -	50,000	40,00,000
British rule -	29,00,000	- -	5,50,000	1,50,000	2,50,000	3,75,000	75,000	43,00,000

From the above it seems that the revenue is increasing under British rule beyond anything known under native rule.

CHAPTER IV.—EDUCATION.

225. STATE education can only be said to have been introduced, as yet, into about one-third of the Central Provinces, namely, the districts belonging to the Saugor and Nerbudda territories. For the remainder of these Provinces there is no such education existing, as will be seen presently.

State education in the Saugor and Nerbudda territories.

226. In the Saugor and Nerbudda territories, comprising the districts named in the margin, the educational system of the North Western Provinces was established when those districts came under that Government in 1853. It has been maintained up to the present time. There is now an inspector of schools at the head of it, with a staff of native officials. The total expenditure, all items included, amounts to 48,000 rupees per annum.

Saugor, Dumoh, Jubbulpore, Mundlah, Nursingpore, Hoshungabad, Baitool and Seonee.

227. The principal institution is the school at Saugor, where the English language and the learned Oriental languages are taught. It has about 300 pupils, many of them boys of good families, from the several districts of the Saugor and Nerbudda territories; some of them are even of noble family. It is presided over by an European head-master, Mr. Wiggins, aided by an efficient staff of native teachers. This school is one of a general rather than a local character, and receives scholars from other schools. In some respects, too, it serves as a Normal school, receiving pupils for instruction in the profession of schoolmaster.

The Saugor school.

228. There are no regular Zillah schools (according to the departmental designation) that is, schools at the head-quarters of a district.

229. Nor are there any regular Normal schools for the professional instruction) of village schoolmasters.

230. The Tehseelee schools (according to the departmental designation) have been generally established, there being one at the head-quarters of each Tehseeldar. The Tehseel is the civil sub-division of a district; and there are three or four such to each district Thus there are about 27 Tehseelee schools in all. In these the education is entirely vernacular (being conducted in the Oordoo and Hindee languages). These are supposed to be generally in fair condition.

The Tehseelee schools.

231. Indigenous village schools exist, supported by voluntary contributions among the villagers or towns-people. In these the instruction is chiefly carried on in the Hindee language, the agrarian population being chiefly Hindoos, who prefer Hindee to Oordoo, which latter is more suitable to Mahomedans. But these schools, though inspected by the educational officials, have not, in any way, been re-organised. And the fund known as the Village School cess (one per cent. on the land revenue) has not been levied.

Village schools.

232. Private schools in the cities and towns, and even the larger villages, are tolerably numerous and efficient.

233. There is one mission school at Jubbulpore, belonging to the Church Missionary Society, with about 180 pupils.

Mission school in Nagpore city. * Under the management of the Rev. S. Hislop and the Rev. G. Cooper.

234. In the Nagpore Province no educational system had been introduced; no Government school existed; and no public expenditure on this account had been incurred. There had, however, been for some time a good missionary school* in Nagpore, belonging to the mission of the Free Church of Scotland, established in 1846, and numbering 400 boys and 20 girls. If it has not attained to a high standard with the upper class, it has given a sound and practical education to the middle and lower class; and has been a powerful engine for good in the city. A small school of humble pretension had been established by one of the Scotch missionaries at Chindwara, and had afterwards been maintained by private effort. The one per cent. cess for village schools had not been introduced. Village schools and all private schools have continued at a very low ebb. Indeed, few Provinces could be more destitute of indigenous institutions than Nagpore; and the general standard of enlightenment, both in the mass of the people, and the upper classes, is decidedly low, and much under even the Indian average.

No State education in Nagpore province previously.

235. In Sumbulpore there has existed a school for some years, originally founded by the benevolent efforts of Dr. and Mrs. Cadenhead, and subsequently maintained by Government.

236. Such was the state of affairs up to May 1862; it now remains to mention the measures already in progress.

New educational measure.

237. There will be two circles of inspection, conterminous with the civil divisions of the country, viz., the Northern or Nerbudda Circle, embracing the commissionerships or divisions of Saugor and Jubbulpore, and including in all nine zillahs or districts; and the Southern or Nagpore Circle, embracing the Nagpore and Chutteesghur commissionerships or divisions, and including seven zillahs or districts, besides the separate District of Seroncha.

Circles of inspection.

Educational grant.

238. An educational grant of 50,000 rupees for the current year, 1862-63, for the Nagpore Province, has been obtained, and a similar grant for the Saugor and Nerbudda territories; in all one lakh per annum for state education in the Central Provinces.

Directorship formed.

239. A director of public instruction, and an inspector of schools (European officers) have been appointed; the former with head-quarters at Nagpore, the latter at Jubbulpore. An inspector (European officer) for the Nagpore Province has been recommended to have his head-quarters at Raepore, in the remote Eastern districts.

Subordinate staff of officials.

240. The existing staff, already described, has been maintained in the Saugor and Nerbudda territories, and a normal school for schoolmasters has been added at Jubbulpore. For the Nagpore Province great difficulty has been experienced in forming a native educational staff. Nothing can be a stronger proof of the backwardness of knowledge than the fact that, in such a city like Nagpore, there could not be found even one native fit to undertake scholastic duty! * The men readiest to hand were educated natives of Hindoostan; but I did not deem it proper to employ these men as they are quite foreign to, and not popular with, the natives of Nagpore. Instead of that, men from Poona have been sent for, and several well-trained young natives are on their way to join our educational staff. These persons, being Mahratta Brahmins, will readily command influence at Nagpore, where the associations and ideas are all Mahratta. It is hoped that this infusion of fresh though kindred blood will soon produce an effect on the popular mind.

Schools in the interior of the Nagpore province.

241. One of the first points to which attention is being directed in Nagpore, is the inspection of village schools in the interior. A preliminary examination has been made, and the village schoolmasters are found to be of the lowest grade. As it is a great object to work with the instruments we find, it is intended that all of these men, who are able to learn, shall undergo a course of training. With this view, a normal school for schoolmasters had been opened at Nagpore, and already numbers 30 scholars. Arrangements for similar schools are being made at the head-quarters of every district. The schools known as Zillah and Tehseelee schools (that is first class at the principal station of the district, and second class schools in each subdivision) will be opened for all the districts as soon as the new teachers arrive. But it is not proposed at present to establish zillah schools either at Nagpore, Jubbulpore, or Chindwarra, as the ground is already occupied by the mission schools which furnish excellent secular instruction. Grants-in-aid, according to the rules, have been applied for in all these cases.

Grants-in-aid.

242. With the grant-in-aid, the missionaries at Nagpore may be able to maintain a class with a high curriculum of English and Oriental learning. If such a class should fill, no Government class of the kind would be required. If it should not fill, then it will be desirable to establish, through the Educational Department, a class of this character for a limited number of scholars.

One per cent. fund for village schools.

243. It has been already mentioned that nowhere in these Provinces had the one per cent. fund (leviable from the landholders at that rate upon the land revenue for the support of village schools) been levied, doubtless owing to the incomplete state of the settlement of the land revenue. Arrangements have been made to obviate that difficulty by making allowance at the new settlement for what may now be collected. The cess will be levied together with the revenue instalment in December next. By that time the village schools can

* *Note.*—It is not hence to be understood that no boys of superior education had been *élèves* of the Mission School. Several boys from that school have been employed in other departments.

can be brought under improved discipline. It is proposed that, in accordance with the system which has proved successful in the Punjab, the village and tehseelee schools should be placed under the administrative management of the district officer (Deputy Commissioner), and should be open to the inspection of the educational authorities. This arrangement will be preferable to placing these rural schools under the administration of the Educational Department itself. But to aid in this management, a trained native official from the Educational Department will be placed at the disposal of each district officer.

244. A mission school, belonging to the Madras Wesleyan mission, is about to be established at Seroncha, on the banks of the Godavery.

Use of the Mahratta language.

245. The language to be used in the Educational Department wil be the Oordoo and Hindee for the Northern Circle, and also for the Chutteesghur Division in the Southern Circle; these being the prevailing languages in those parts. For school books generally, indents will be made upon the depôts of the North West Provinces. But in the Nagpore Division of the Southern Circle including the districts of Nagpore, Bhundara, Chanda, and Nachengaon, the language to be used will be the Mahratta; and school-books will be obtained from Bombay. The officials employed in these districts, European and native, will be versed in Mahratta.

Causes of its disuse in Nagpore.

246. Although Mahratta continues to be the popular language, it is yet but little cultivated among the upper classes. No compositions in it are issued here; and, as already stated, but few persons, well read in it, are to be found in these parts. These circumstances, which are very much to be regretted, have arisen partly from the inevitable consequences of a change of dynasty and rule; partly from the fact that no schools were founded after annexation; and partly because for many years, even before the establishment of British rule, *employés* from Hindoostan have been introduced in several branches of the service, and a number of Hindoostanees have settled here in the various trades and professions. These Hindoostanees, from their superior ability, have always beaten the Mahrattas in the race for power, influence, and fortune. From this cause, the depression and inferiority of the Mahrattas increased in a progressive ratio; while, from the absence of schools and State education, they had not the same means and opportunities as were enjoyed by the other parts of India, of acquiring instruction, and of educating and qualifying themselves and their children. It may be hoped that the educational measures now to be devised will contribute to restore the equilibrium, and to afford the Mahrattas a chance of competing with educated foreigners.

School for Europeans and Eurasians at Seetabuldee.

247. But in these Provinces generally, and in the Nagpore Province particularly, there are European and Eurasian as well as native children in grievous need of the means and opportunities of education. This want, indeed, is but too common all over India; but almost every part of India, except these Provinces, has either schools at hand or schools within reach. For instance, in Bengal, there are the seminaries of Calcutta; in the north there are the excellent institutions in the Himalayan climate. Bombay and Madras enjoy similar advantages, but the Central Provinces in the heart of India are, by their geographical position, absolutely cut off from all these advantages. Here the European and Eurasian residents cannot, except at a cost beyond their means, send their children to those distant institutions, and they must, perforce, rely on such educational resources as can be found on the spot. But there is no regular school for European or Eurasian children existing at Nagpore. There is a Sunday school kept up most laudably by the missionaries, and an Ordnance school for the families of the officials of the arsenal. But these institutions, however good in themselves, cannot supply the needs of the general community. It has, therefore, been proposed to establish a school for this purpose at Seetabuldee, the civil station of Nagpore, the building to be provided by the Committee which administers the extensive local funds of that district; and the accommodation to provide school room for 60 children, boys and girls, besides quarters for a master and mistress, and a small orphanage to provide lodging for a limited number of destitute children; private subscriptions to a considerable amount have been raised, and assistance from the Government has been solicited.

CHAPTER V.—PUBLIC WORKS.

SECTION I.—MILITARY BUILDINGS.

248. THERE are no military buildings of importance in these Provinces; no spacious and lofty European barracks have been constructed on the plan which has of late years been adopted in the stations of Northern India.

The Kamptee cantonment.

249. At Kamptee, the military cantonment of Nagpore, the European barracks for artillery and infantry were constructed, many years ago, on a permanent style, which would then have been considered good. They are still sufficiently commodious, though quite inferior to the fine barracks which are built now-a-days. Formerly the quarters for the married soldiers were arranged on what is termed the "Parcheery system," according to

which the married soldier receives a small allowance, and builds a cottage for himself. The cottages, however, gradually fell into disrepair, till they became scarcely habitable. Recently quarters have been, or are being built, by Government, on an approved plan, for the usual proportion of married soldiers.

Jubbulpore cantonment.

250. At Jubbulpore there did not exist, before 1857, any European infantry barracks. Since that time barracks of an inferior and temporary character have been constructed for a whole regiment. But the site is bad, being situate between two swamps. Of these the swamp nearest the barracks was recently ordered to be drained. A new hospital has recently been erected.

Saugor cantonment.

251. At Saugor also, before 1857, there were no barracks for European infantry. Since that time the European artillery have been accommodated in a large school-house, and a part of the infantry in some bombproof buildings. For the remainder of the infantry, temporary barracks of an inferior character have been constructed.

Nowgong and Nagode.

252. At the cantonments of Nowgong and Nagode (Bundlecund) temporary barracks have been constructed for the detachments of European artillery and infantry stationed there.

Chindwarra.

253. At Chindwarra, in the Sautpoora Hills, about 70 miles distant from Nagpore, there have been constructed temporary barracks for a detachment of European soldiers. As this station is, from its elevation, much superior to Nagpore in climate, it is desirable to maintain a detachment there of convalescents or others until a better sanatarium shall be provided.

254. There are two forts maintained by Government in these Provinces, one at Saugor and one at Nagpore. Besides these there are no other defensible posts. There are not now any native forts whatever remaining.

The Saugor fort.

255. The Saugor Fort was constructed under Mahratta rule. During the troubles of 1857 it gave shelter to the European residents. It is situated on the borders of the lake, and adjoins the city. It has no pretensions as a fortified building. Within it are now kept the depôt for medical stores, and the Ordnance depôt for stores and munitions.

The Seetabuldee fort.

256. The Nagpore Fort is on the small hill of Seetabuldee, which immediately overlooks the lake and city of Nagpore on the one side, and the large civil station on the other. It is a place of some historical interest, having been the scene of the battles which arose out of the defection of Appa Sahib. Under its protection also is situated the Seetabuldee arsenal. After 1817 the hill was fortified under British superintendence. The fortifications are of the slightest character, and hardly worthy of the name. But in the eyes of the people of the city and district of Nagpore, the prestige of this small ill-fortified hill is overwhelming. It is garrisoned by a detachment of European artillery and infantry.

The Seetabuldee arsenal.

257. The arsenal is one of the second class, and in good condition. It was built in 1820, and contains vast quantities of stores, the accumulation of many years. But for reasons mentioned in the military chapter, its abandonment is recommended. At the same time it is proposed to construct an ordnance depôt in the cantonment of Kamptee.

The Mohtoor sanatarium.

258. As yet there are no depôts for convalescent soldiers and no sanataria for European troops within these Provinces. But it has been proposed to establish a sanatarium at Mohtoor, a point in the Sautpoora Range, about 40 miles from the station of Chindwarra. The place was examined in May 1860 by a committee of officers, medical and military, and was pronounced to be suited in respect to climate, situation, and scenery, for the renovation of European health and strength during the hot months. I myself, accompanied by several officers, visited the place during May last. I believe that the report of the committee is perfectly accurate, and that the hill and plateau are fitted for the construction of a military convalescent depôt and for the construction of a sanatarium. The height above the sea is 4,000 feet. The neighbouring hills and valleys are clothed with low and thick wood. And this circumstance is calculated to injuriously affect the climate during the rainy months and the autumn. But during the winter, spring, and early summer, or more than half the year, the climate is delightful. The plateau of the hill itself is open and generally free from jungle. The soil and water are everything that could be desired. On the northern aspect the scenery is fine. In the hot months the atmosphere is cool and invigorating, and the sun is not overpowering. That the climate generally would be beneficial to the European constitution from December to July is beyond doubt. Whether it would be equally good from July to November, or whether fever would not, during these months, be prevalent, remains to be solved by experience.

Present arrangements.

259. During the present season a company of sappers and miners, and a party of prisoners have been employed in clearing the ground and improving the approaches to the hills. Temporary accommodation has been constructed at a trifling cost for three officers, a medical officer, an engineer officer, and an officer commanding the sappers; also for two European overseers. The above party, European and native, are to remain on the hill during the rains and autumn if possible, or as long as may be considered safe by the medical officer. It is hoped that thus complete observations will be taken, and that reliable experience will be gained as to the climate and character of the place during the doubtful months.

260. It has been recommended that, under any circumstances, a barrack to accommodate (25) twenty-five or thirty European soldiers be constructed at Mohtoor during the next working season, at a cost of about 20,000 rupees. Future plans.

Too great expectations, however, should not be formed regarding Mohtoor. Its altitude 4,000 feet above the sea, is less than two-thirds of that of the various Himalaya sanataria and of the Neilgherry sanatarium. And it can never, at the best, approach the excellence of those. Again, though itself tolerably free from jungle, it has hills and valleys in its neighbourhood thickly clothed with low forest and brushwood. Now it is known that above a certain altitude, apparently about 6,000 feet, jungle does not produce fever; whereas below a certain altitude it certainly does. In the lower ranges of hills fever is generally even more prevalent than in the plains. Therefore, there is apprehension that during a certain season (the rainy months and the autumn, July to December,) Mohtoor would not be more healthy than the plains, and might perhaps prove less so. But this consideration does not invalidate its undoubted advantages during the remainder of the year.

261. In a general point of view, the position of Mohtoor is remarkably centrical and convenient. It stands almost upon the very centre of the Central Provinces. Being situate on the southern face of the Sautpoora range, it is more convenient to Nagpore than to Saugor and Jubbulpore, but it is more or less convenient to all. On the north it will be distant 40 miles from the nearest railway station of the northern line, and on the south 90 miles distant from the nearest station on the southern line. It will be comparatively within reach of no less than ten stations, civil and military, as follows:— Centrical situation of Mohtoor.

		Miles.
Mohtoor to	Nagpore	90
„	Chindwarra	36
„	Chanda	187
„	Bhundara	102
„	Seonee	65
„	Baitool	48
„	Nursingpore	64
„	Jubbulpore	107
„	Saugor	113
„	Hoshungabad	63

262. A sketch map is appended to illustrate the situation of the place.

263. It will have been seen then, that the expenditure on military works has been, and is proposed to be, small. The figures are given below. The works and buildings generally, though no where good, and generally defective, are still sufficient to carry on the service of the year:— Expenditure on military works.

	Rs.
Expenditure in 1861-62	91,958
Proposed for 1862-63	1,29,069

SECTION II.—CIVIL BUILDINGS.

264. In respect to Civil buildings, much remains to be done in the Northern Districts, and still more in the districts of the late Nagpore Province.

265. The defective and often inefficient character of the gaol buildings has been described in the chapter on prison discipline. There has been no progress during the past years. During the next season it is intended to commence the construction of a central gaol at Nagpore.

266. There are as yet no police buildings worthy of the name anywhere in these Provinces. In most districts, posts, stations, barracks, hospitals for the police will ultimately have to be constructed; but it is not proposed to commence these during the next season. Police buildings.

267. In the districts of the Saugor and Nerbudda territories, and of Sumbulpore, the court-houses are complete, with the exception of one which was proposed to be built for the Commissioner of Saugor. In the late Nagpore Province much progress has been made during the year in building court-houses at Bhundara, Chanda, and Nachengaon. These completed, there will only remain the court houses of Belaspore and Seroncha to be built. The new court-house for the Judicial Commissioner has been completed, and the office of Commissioner of Nagpore has been accommodated in the building belonging to the late Nagpore irregular force. But at Nagpore the offices for all head-quarter departments, such as chief engineer, inspector of schools, inspector of gaols, auditor and accountant, and the like, have yet to be commenced. It is not, however, proposed to commence during the next working season. Court-house.

268. Staging bungalows, at intervals of from 25 to 40 miles on most of the main roads, have been built for the most part. It must be acknowledged that these bungalows, so essential to the comfort and even safety of travellers in these remote and scattered districts, Staging bungalows.

Section from Mirzapore to Jubbulpore.

275. From Mirzapore to Jubbulpore the roadway and the metalling (235 miles) were completed in 1852-53; but the bridging for the most part remains undone. During the past season five bridges were undertaken. There remains 32 bridges to be executed; these are to be proceeded with during the next working season. The sums already expended on this section cannot be stated, as much of the work was executed so long ago; but the sums required to complete amount to 3,60,000 rupees. At present mail carts run along this road during the winter and summer, but not during the rainy season, by reason of the unbridged streams filling with water. It is hoped, however, by completing some of the bridges, by erecting temporary bridges at some points, and by such like arrangement, a horse transit for wheeled carriages may be established to the great convenience of European travellers. Of the section between Jubbulpore and Nagpore (45 miles), about half the distance (from Jubbulpore to Seonee) has been nearly completed through the vigorous operations of the past season. In the remainder, from Seonee to Nagpore, comparatively little has yet been done. Two-thirds of this section will be arduous, running right thwart the Sautpoora Range. The remaining one-third crosses the champaign country of Nagpore. On this section 1,39,000 rupees have been already expended, and 8,00,000 rupees are required to complete; with great exertions, during the next working season, it might be possible to open the line to Nagpore for traffic.

From Jubbulpore to Nagpore.

The Southern line.

276. The Southern Line will extend from Nagpore to Chanda, a distance of 95 miles. It will have two subsidiary branches, one to Nachengaon on the Wurda, at the point where the railway strikes the river; another from Jam, near Hingun Ghat, to a point where the road from Nagpore to Hyderabad also strikes the River Wurda. The main line runs from Nagpore southwards through the very heart of the cotton districts to Chanda, near the point where the navigation of the Upper Godavery may be said to commence. During a portion of its course it subserves the military and political purposes of communication with Hyderabad. Its real and general importance, however, is commercial. One of the great outlets, one of the great highways which nature has provided for the Nagpore Province, is the Godavery River. Now it is this southern road which connects the capital and the richest parts of the Province with the head of the navigation of the Upper Godavery. About midway on the line stands Hingun Ghat next after Oomraotee, the best known cotton mart in Central India. It traverses the southern half of the tract described as the cotton field of Nagpore. It connects Hingun Ghat, in the north, with Nagpore, or with the nearest railway stations; in the south with Chanda. So that whether the future cotton crop of Nagpore shall go to Mirzapore and Calcutta, or to Bombay by railway, or to the eastern coast by the Godavery, in each and all of these cases will this road prove of the utmost utility. A part was commenced some time ago, but the main portion was proceeded with last season. The earthwork is nearly complete. With great exertions the greater number of the bridges could be executed during next working season, and the road opened for traffic; during the following season the metalling might be added. The sum already expended amounts to 74,000 rupees, that required to complete to 5,26,000 rupees.

Its objects and purposes.

Its present state.

The Great Eastern line.

277. The Great Eastern Line is incomparably the most important public work (railway excepted) in these Provinces. It runs from Nagpore to Raepore, and past Sumbulpore to the frontier of Cuttack. It has a branch breaking off from Sohela, near Sumbulpore, to join the Mahanuddy at Binka near Sonepoor. The total distance, main line and branch, amounts to 244 miles. From the Cuttack frontier the road is nearly finished to the sea. From Binka the Mahanuddy is sufficiently navigable all the year round. The road has some political and military importance. Disturbances have occurred, and may again occur, on the Raepore and Sumbulpore frontier, and the force for repression would have to be sent from the Nagpore side. In this point of view, then, it is of importance that the capital should be connected with this important frontier; but the real importance of the road is commercial. As the southern line connects Nagpore itself with the Godavery, so this eastern line connects the most promising part of the Province with the other great natural outlet and highway, namely, the Mahanuddy River. Its early completion would at once supply a vast stimulus to agricultural production, and cause a perceptible enhancement of the wealth of the country. It traverses from end to end the two richest, largest, and best cultivated champaign tracts in all the Central Provinces, namely, the Valley of the Wyngunga and the plateau of Chutteesghur. The grain, the oil seeds, the pulses, and some cotton, will go by the Valley of the Mahanuddy to the eastern coast. But, also, there is hope that the cotton already produced in Chutteesghur may be so increased that a new cotton field, of great extent, will be created, and its produce exported by the Mahanuddy, and it is this great commerce which the eastern road is directly to subserve.

Its commercial importance.

The Plateau of Chutteesghur.

278. The Valley of the Wyngunga is broad and rich, but the Plateau of Chutteesghur is the finest in the whole country. From the vicinity of hills and forests all round, the rains are so regular, that artificial irrigation even for the spring crops is unnecessary and unknown; so good and moist is the soil, that even sugar-cane can be raised without irrigation. For miles and miles, further than the eye can reach, there is in autumn a waving harvest of rice, and in spring of wheat. The cultivated and culturable area of the plateau cannot be less than 20,000 square miles, but the plain, so propitiously endowed by nature, is after all an oasis in that isolated region. On the north and east there are the savage hills of Mundla and of the Gurjat; on the west, the rugged district that skirts the left bank of the Wyngunga: on the south, that interminable length of forest and hill that stretches down to the Indrawutty. Thus, on all sides, it is cut off from civilisation and from trade. The effect is

Its natural advantages.

is but too apparent. So superabundant is the produce beyond the demand of consumption on the spot, that prices of grain are three times as cheap in Chutteesghur as elsewhere; and the consequence of excessive cheapness of food is manifest in the indolent, improvident, and slavish character of the people; and this backwardness, this stagnation, entirely arises from the want of communication. Let there be a road open to the west, or to the east, and this teeming produce, multiplying yearly, will find its way to the seaports of the eastern coast. Here, again, nature, in other respects so bountiful, has offered one great advantage, which, with a little artificial help, may be made available for Chutteesghur. Within 150 miles is the navigable head of the Mahanuddy near Sonepore. To that point the produce could be carried on carts, and shipped on board the boats, whence transit to the coast would be comparatively easy. If, then, only a road of 150 miles be constructed, this great advantage would be secured. It is difficult to foresee the extent to which the prosperity of Chutteesghur would increase under these conditions; nor is this the only advantage, for the Valley of the Mahanuddy itself in the Sumbulpore direction has great resources in cotton, rice, and wheat, and even indigo.

To be connected by road with the navigable head of the Mahanuddy.

279. At its opposite extremity, the road running through the Valley of the Wyngunga, connects that broad and fertile tract with the capital and with the railway terminus.

Disrepair of the old road.

280. Under Mahratta rule, the line from Nagpore to Sumbulpore was constructed in very fair style under European superintendence. It formed part of the postal line from Calcutta to Bombay; afterwards the Mirzapore route was preferred for the mails, and the road was abandoned under British rule. The roadway was allowed to fall into disrepair, but the bridges, for the most part, have stood; they are at present useless, as the traffic has deserted the ruined road; many of them will now be available for the new road.

Progress with the new road.

281. Of this new road, then, the bridging and earthwork, and part of the metalling, have been completed from Nagpore to Bhundara on the Wyngunga, a distance of 40 miles. The greater part of this work was executed during the last season. Some little work has been done, and some more planned, in the rough and barren country beyond the Wyngunga. But in the Chutteesghur plateau and onwards, towards Sumbulpore, nothing has yet been done. It is proposed to expend 3,03,000 rupees during the next season on the section between Raepore (Chutteesghur) and the Mahanuddy; and by a vigorous effort a large part of the line might be opened. It is impossible to urge too strongly the desirability of pressing on this line with energy. During the last season some progress was made; but even at that rate it would be five years before the road to Sumbulpore could be opened.

Its future prospects.

If, however, an adequate effort were made, it might be possible to open the most important section within a year, or within two years at the longest. The amount already expended amounts to 47,000 rupees; that required to complete, approximately, five laks.

The Cotton Road of the Wurda Valley.

282. The fourth line is the Cotton Road down the Valley of the Wurda. It commences at Tulligaum, below the point where the Wurda debouches from the Sautpoora hills, and running southwards down the valley through the cotton country, and passing by the mart of Arvee, touches the Wurda itself at Natchengaon, where the river is to be crossed by the railway from Nagpore to Oomraotee; thence it will proceed in a south-easterly direction, traversing the very heart of the cotton country, and passing by the mart of Deolee, will meet the great southern road at Hingun Ghat, the principal cotton mart in the country; the total distance will be 65 miles. The importance of this road, which will connect all the principal villages which grow, and the marts which collect, cotton with the railway, is too obvious to need further mention. For this line a lakh of rupees was sanctioned during the last working season, of which only 5,164 rupees have been expended; the portion of the line opened during that season was trifling, which, considering the importance of the road and the opportunity afforded, is to be regretted. The line should be a second-class one, bridged and metalled, and at the probable rate of 5,000 rupees a mile will cost $2\frac{3}{4}$ lakhs of rupees.

Its objects and purposes.

No progress yet made.

283. Such, then, are the four roads, on the early and effective opening of which the future prosperity of the country so much depends, and upon which our efforts should primarily be concentrated.

284. There are two other roads which are of great importance, and which might be partially opened at a moderate expense, without diverting resources from the four great lines already mentioned. These are the Raepore and Jubbulpore road, and the Raepore and Seroncha road.

The Raepore and Jubbulpore Road

285. The Raepore and Jubbulpore road runs from Raepore, across the Chutteesghur plateau, to the Rajadhar or Chilpee pass in the Sautpoora range. Then surmounting, by that pass, the crest of the range, it passes through the fine uplands and valleys down to Mundla on the Nerbudda, and thence to Jubbulpore. It seems certain that if this road were only open for country carts, much of the produce of Chutteesghur would find its way northwards to Jubbulpore. In the same manner the Mundla district will be opened, and an immediate impulse will be given to agriculture and trade in that district. Every one who sees that district is struck with its capabilities; it probably offers the fairest field, within these Provinces, for European colonization, and it possesses great resources in timber. It has hitherto deteriorated, rather than improved, under British rule, and the first step for its improvement is, on all hands, admitted to be the opening of this road. Some money has been expended, but ineffectually, for bridges are to be seen without superstructure,

Its objects and purposes.

structure, and passes only half opened. It would not be possible to regularly construct this road during the next season; but by patchwork here and there, by removing boulders and stones, by making some crooked paths straight, and some rough places smooth, the line might be rendered just passable for carts, which would be a great point gained, and for this a moderate grant and a small establishment would suffice.

Raepore and Seroncha road.

286. The road from Raepore to Seroncha will run right through the great wilderness, in the centre of the Nagpore Province, to the banks of the Godavery. It will enable the produce of Chutteesghur to find its way to a point below the third barrier of that river, whence the navigation to the sea may be rendered practicable for several months in the year. The distance is about 240 miles from Raepore to Seroncha. It is not contemplated to regularly make this road. But there is already a track formed by the long strings of pack bullocks belonging to the Brinjarrah carriers, which maintain a traffic between Chutteesghur and Masulipatam. It is proposed to improve this track so as to make it just passable for carts by cutting down forest and removing logs and stones. For this, a small expenditure would suffice, to be laid out under the direction of the Deputy Commissioner of Seroncha.

Roads of primary and secondary importance.

287. These, then, are the several roads to which, as it appears to me, labour and money should be devoted during the next season. It being important to concentrate effort, six lines only are placed in this category, four primary and two secondary

In the first category are,—

(I.) The Great Northern.
(II.) The Southern.
(III.) The Great Eastern.
(IV.) The Wurda Valley Cotton Road.

In the second category are,—

(I.) The Raepore and Jubbulpore Road.
(II.) The Raepore and Seroncha Road.

288. They are all of the most urgent necessity, and the development of the country is seriously retarded for want of them. Yet, excepting one section, not one of these roads is in anywise open, or near being open. The object is not to swell returns by exhibiting work which will not immediately benefit traffic; such as miles of earthwork without bridges, or bridges without approaches, but to render the line passable for wheeled carriage as soon as possible. To do this is practically to open the line.

289. Many other useful roads have been projected, to which, however, it will be impossible to devote any attention at present.

Minor roads.

290. Such are the Chindwarra Road, which will lead from Nagpore to the proposed sanatarium of Mothoor. This road, though not made or complete, is more or less open; and some excellent work has been done in the pass leading up from the plains to the hills. The expenditure on that road has amounted to 3,500 rupees. The line from Nagpore to Saugor, *viâ* Baitool and Hoshungabad, has been partially made at different times; it will be valuable for trade and general communication. The road from Jubbulpore, *viâ* Dumoh, to Saugor, and thence to Malthone on the Chandeyree frontier, will be useful for military purposes. The road from Dumoh to Nagode, through Bundlecund, will possess much local usefulness in a military, political, and commercial point of view. These roads are mentioned because they are really wanted, and ought some day to be made. But it would be idle to urge their claims at this moment, in the presence of the great works unfinished, or uncommenced, on the four main lines just mentioned.

State expenditure on roads.

291. It may now be interesting to note the sums which have been expended on roads and establishments in the Nagpore Province (*vide* Table A.), since annexation, and in the Saugor and Nerbudda Territories during the same period. The aggregate of expenditure on roads was not great until the past working season, when real progress was made between Jubbulpore and Nagpore, between Nagpore and Bhundarra, and between Nagpore and Chanda. But as yet not more than 18 miles (an insignificant distance), has been fully opened.

SECTION IV.—RAILWAYS AND TRAMWAYS.

292. The accompanying sketch map will indicate the railways projected or in progress, and the tramways which have been suggested. The former being marked in black lines, and the latter in yellow. Those sections of the tramway lines which appear to me, as at present informed, preferable for commencement, are marked in red lines on the map.

The Nerbudda Valley railroad.

293. There are three lines of railway projected, or in progress, within these Provinces; of these two lines belong to the Great Indian Peninsular Railway Company, which has its Indian head quarters in Bombay. From Bombay, the main line, running northward, surmounts the range of the Western Ghâts at the celebrated ascent known as the "Thul" Ghât. Thence, passing in a north-easterly direction into the great Valley of Kandesh, it bifurcates at a place called Bosawal. From this bifurcation, one branch runs still more north-eastward, till it strikes the Valley of the Nerbudda in the Hoshungabad district. Then, running along the southern or left bank of the river, crosses it at Jubbulpore, and has its terminus near that city. The other branch, breaking off in an easterly direction, runs through the Valley of Berar, and crossing the Wurda River, enters the Nagpore Province, and running up to the city of Nagpore, has its terminus there.

The Berar and Nagpore railroad.

The Jubbulpore and Mirzapore railroad.

294. The third line is a branch of that great railway which runs from Calcutta to Delhi, and belongs to the East India Railway Company. It passes from Jubbulpore northwards, following nearly the same direction as the Jubbulpore and Mirzapore road, till it approaches Rewah, and then proceeds upwards to Allahabad.

Total mileage of railway within the Central Provinces.

295. The total mileage of railway, as thus described within these Provinces, will be as below:—

Nerbudda Valley Line - - - - - - -	190 miles
Nagpore Line - - - - - - - - -	65 „
Jubbulpore Northern Line - - - - - -	110 „
Total Miles - - -	365

296. Of these, the Nagpore line has been partially advanced. The Nerbudda Valley line was commenced during last working season. The Jubbulpore Northern line has been surveyed, and is reported to be commenced next season. The difficulties in the Nagpore line and in the Jubbulpore Northern line will not be great. But in the Nerbudda Valley there are the Nerbudda itself, and the Shere River, and several other large streams to be bridged; the railway to Nagpore is expected to be open in two years; the Nerbudda Valley line, perhaps, not for four years; for the opening of the Jubbulpore Northern line, no period has yet been mentioned; the sites for the termini and the principal stations in these lines of railway have been fixed. The advantages of these lines of railway are so great and obvious, that it were superfluous even to recapitulate them in this report. Suffice it to say that, with these railways, most of the disadvantages arising out of the isolated and inland position of these Provinces, will be obviated. There will, then, be complete communication both with Calcutta and Bombay. The Northern line, joining at Jubbulpore with the South Western line, will form an integral section of that great line which connects Calcutta with Bombay. The Nagpore line will afford the best communication from Nagpore and the cotton districts to the western coast.

Peculiar advantages of railways in the Central Provinces.

Selection of localities for tramways.

297. In connexion with railways, the subject of tramways in Central Provinces may be briefly touched upon. To what extent tramways could be constructed in these Provinces, and how far they would prove remunerative are difficult questions, which, in the present deficiency of agricultural and commercial statistics, I cannot adequately answer. It seems clear, however, that the localities for such works must be selected for special and local reasons. The tramway apparently must be constructed so as to attract particular kinds of traffic from marts and depôts to certain points, such as railway stations. It by no means follows that a line which, irrespectively of all physical difficulty, is commercially suitable for a road will be equally so for a tramway. Country carts of various kinds can struggle over a rough country till they find a road where their passage becomes easy; but these carts generally could not be placed upon a tramway, as the gauge would not fit them. If then the merchandize is to go by tramway, there must be the breaking of bulk, and the tranferring of it from cart to truck; and this, though by no means an insuperable difficulty, is notoriously deemed objectionable by native traders.

Tramways in the Cotton Districts of the Wurda Valley.

298. Still there is good hope that localities will be found suitable for the construction of tramways. For instance, Hingun Ghat, the cotton mart, will be distant 30 miles from the railways. In that interval of distance a tramway might succeed, and there would be no special difficulty in the ground to be traversed. If a commencement were made here, the tramway might be continued down the Valley of the Wurda to Wurrora and Chanda. Such a tramway then would be on the southern side of the railway. Similarly on the northern side, from the cotton mart of Arvee, a tramway might be constructed down the Valley of the Wurda to meet the railway at Nachengaon, where the line crosses the Wurda. Such lines of tramway in the Wurda Valley would have an aggregate length of nearly 100 miles, and would run the whole way through a rich and cultivated country growing cotton principally and also wheat, millet and oil-seed. For the greater part of this distance a tramway would run parallel with roads, now under construction, on levels quite suitable to the former. A portion

To face page 372.

SKETCH MAP
OF THE
ROADS
CENTRAL PROVINCE
1862.

Scale 32 Miles—1 Inch.

tion of the road could easily be given to the tramway, and thus the expense of the latter would be considerably diminished.

Tramway to the navigable head of the Mahanuddy River.

299. The next line that would naturally suggest itself for a tramway is the Great Eastern Road, which runs from Nagpore to Sumbulpore and the Mahanuddy. The commercial advantages of this line have been stated in the chapter on roads. Whether the traffic will be sufficient to render a tramway remunerative is the question. The distance, 360 miles, would be considerable for a tramway; and for more than 50 miles between Nagpore and Raepore, that is from the Wyngunga to the Bagh Nuddee, the country is rough and desolate. Again, between the Jonk Nuddee, east of Raepore, and the Mahanuddy, some rugged ground would be met with. On the whole it seems to me probable that, at first, a tramway on this line would not be fully remunerative, though it would become so ultimately. If a tramway were thought of at all, a commencement should be made from Raepore eastward to the navigable head of the Mahanuddy. Throughout the line a portion of the roadway, now under construction, could be given up to the tramway.

Tramway between Nagpore and Jubbulpore.

300. The third line would be that from Nagpore to Jubbulpore, connecting the two capitals of these provinces and the two railway termini. Thus a triangle of communication would be formed, the two sides consisting of the railways and the base of the tramway. The country is, for the most part, difficult—comprising a part of the Sautpoora Hills—and there is no chance of its being traversed by a railway. But, as previously explained, a first class road is being constructed, and a portion of the roadway could be given up to the tramway, so as to lessen the expense. This would appear to be a point of consequence, for otherwise a tramway on this line would be very expensive. If the expense of construction should not prove excessive, then it is probable that, after the opening of the two railways, this section of the tramway would command a large amount of traffic.

301. It has been suggested to produce this tramway onwards from Jubbulpore to Saugor, a distance of 60 miles. This would, no doubt, be very valuable in a military point of view; but there would appear little chance of its being remunerative commercially.

Tramway from Nagpore to Kamptee.

302. It has been proposed to construct a short tramway, 10 miles long, between Nagpore and Kamptee; but there is a proposition also for extending the railway from Nagpore to Kamptee. If this should not be done, then, no doubt, the tramway could be easily constructed, and would probably prove remunerative.

Probable cost of Tramways per mile.

303. Of the cost of tramways various estimates have been made, the lowest being 8,000 rupees a mile, and the highest 30,000 rupees. The former is certainly too low, and perhaps the higher might be reached; but if a portion of a well-made roadway were made available, then some reduction below 30,000 would be made.

304. I have impressed on the chief engineer the propriety of arranging all the curves and levels on the main roads under construction, as much as practicable, with a view to their ultimate adaptation to tramways.

SECTION V.—CANALS.

Absence of Canals in the Central Provinces.

305. Canals at present do not exist in these provinces, nor is it yet known whether any such should be constructed. It is probable that some considerable irrigation works in the valley of the Wurda would be successful, and I have recently caused a preliminary inquiry to be made. Some works in the valley of the Godavery have been mentioned, but the paucity of population would probably preclude any undertaking of this kind. The subject of tank irrigation (a matter of great consequence in the Nagpore Province) has been mentioned in the chapter on land revenue.

Possible Irrigation Works in the Valley of the Wurda.

SECTION VI.—MISCELLANEOUS.

Local Committees formed in the various districts.

306. Under the heading of miscellaneous may be properly placed the works executed by local Committees from local funds. The committees for the several districts have been named and gazetted, and their operations are duly conducted under rules prepared after the model of those which have worked so well in the Punjab. For the first time, a regular budget of income and expenditure of the local funds throughout the Central Provinces has been just prepared and submitted to the Supreme Government.

Various kinds of Local Funds.

307. The local funds, then, consist of,—

I.—*Road Fund*, derived from a cess levied from the landholders at the rate of one per cent. on the land tax.

II.—*Ferry Fund*, being the surplus of ferry tolls, after defrayal of ferry expenses.

III.—*Pound Fund*, being the surplus of fees levied on stray cattle impounded.

IV.—*Nuzool Fund*, being the income from houses and lands, the property of Government, and chiefly consisting of property which lapsed to the British Government from its predecessors.

V.—*Town Duties, Octroi*, the levying of which has been mentioned in the chapter on revenue. It has been already explained in the chapter on police that, from this fund the cost of the police in towns and cities is defrayed; the balance or remainder being made

available in local improvement. In this place, then, the net income (after defrayal of police charges) will be exhibited.

308. The income, then, from all these sources may be thus shown for the current year:—

HEADS OF INCOME.

FUND.	Balance from 1861–62.	Income of 1862–63.	TOTAL.
	Rs.	*Rs.*	*Rs.*
Road Fund	1,42,433	62,570	2,05,003
Ferry Fund	28,482	15,163	43,645
Pound Fund	4,569	4,987	9,556
Nuzool Fund	6,532	705	7,237
Town Duties	1,15,761	2,48,777	3,64,538
TOTAL Rs.	2,97,777	3,32,202	6,29,979

309. This return exhibits a large balance accumulated at the close of 1861–62, and would seem to show that the local authorities did not sufficiently avail themselves of the resources at their disposal for the improvement of the districts. The heavy accumulations of the road fund does indeed indicate that district roads were not opened with sufficient speed. For the current year 1862–63, I propose to lay out the large income available in promoting improvement, arranging only for such moderate balance at the close of the year as would suffice for immediate requirements. Accordingly, upon the total income thus shown 6,29,979 rupees; or 6¼ lakhs, it is proposed to expend 6,07,067 rupees within the current year 1862–63; leaving a balance, at the close, of 22,912 rupees.

Heads of Expenditure.

310. The heads of expenditure will be as follows:—

	Rs.
I.—District roads	2,37,612
II.—Caravanserais, depôts, and encamping grounds	29,600
III.—Tanks	22,690
IV.—Conservancy of Cities	51,854
V.—Other local improvements	1,55,551
Rs.	4,97,307

Besides the above, the charges of town policemen and watchmen is provided for at 67,433 rupees; ferries at 12,298 rupees, and establishments at 30,029 rupees.

Principal District Roads.

311. Among the numerous district roads which are to be repaired or improved from the funds are, the Raepore and Jubbulpore road, the Raepore and Seroncha road, both of which important lines have been mentioned in the chapter on roads. From the same source something will be done for the line connecting Saugor with Nagpore (mentioned in the section on roads) for the direct road between Nagpore and Oomraotee, the cotton mart of Berar; and for the road connecting the upper valley of the Wynagunga with the main road from Nagpore to Jubbulpore.

Caravanserais.

312. The general want of caravanserais has been mentioned in the section on civil buildings. Some few of these useful buildings will be constructed within the year.

Tanks and Reservoirs.

313. The principal tanks to be enlarged or improved during the next season are the splendid tank called the Jooma Talao in the Nagpore City (one of the most important tanks in these provinces); the several tanks constructed by the Mahratta Government in the neighbourhood of Nagpore for the supply of the city with water, by means of underground masonry pipes; the well known tank at Mooltye, at the source of the Taptee river; the tank at Seonee on the Nagpore and Jubbulpore road; and the tank at Chanda. They not only promote physical comfort, but also conduce in every way to the civilization and happiness of the people. The Saugor Lake, and the numerous beautiful tanks round Jubbulpore, are already in fair order. All these are distinct from the irrigation tanks mentioned in several parts of this report.

Conservancy in the cities of Saugor and Jubbulpore.

314. In respect to conservancy, the cities Jubbulpore and Saugor have been well kept and improved. As regards the city of Nagpore, I am obliged to state that conservancy has not been maintained at all since British rule. The Mahratta Government did indeed construct some streets and drains, which have subsequently deteriorated to some extent. Some conservancy establishment for clearing the street drains were maintained, but these were

were not kept up after annexation. At the time, the local officers were absorbed in other pressing duties, and there were no local funds available at first. Now, however, a considerable sum has accumulated since the introduction of town duties; conservancy establishments have been entertained, and the drains are being rapidly cleared. New streets also are being opened out, and market places established. Boulevards are to be formed all round the great tank. I have already mentioned, in the introductory chapter, that Nagpore is probably at present one of the most unsightly and ill-kept cities in India; and, whatever efforts at renovation or restoration may be made, some little time must elapse before the city can present a fair appearance.

Improvements in the City of Nagpore.

315. There is no space to specify the various works included under the head of "other improvements;" but among them may be mentioned the beautiful gardens constructed by the Mahratta Government at various points in the vicinity of Nagpore. Since British rule these have fallen into disrepair or ruin. They are now being restored and converted into public gardens.

Public Gardens.

316. This chapter may conclude with the abstract of the total budget assignments from the Imperial revenue for the different kinds of public works for the past and the current year.

Conclusion.

	Military Buildings.	Civil.	Common Roads.	TOTAL.
	Rs.	*Rs.*	*Rs.*	*Rs.*
1861-62 - - - -	2,16,820	2,69,829	10,11,351	14,98,000
1862-63 - - - -	3,04,446	3,12,207	11,33,347	17,50,000

To the 17½ lakhs must be added 3½ lakhs from the 1 per cent. income tax collection, and about 97,000 for the district of Sumbulpore, which will bring the total up to nearly 22 lakhs.

Imperial expenditure on public works in the Central Provinces.

317. The aggregate of 1862-63, 22 lakhs, amounts to 25 per cent. on the total income of these provinces. But it is to be remembered that, in previous years, the assignments have been very small, and especially so in the Nagpore Province. The proportion of the allotment for roads, upon the total, is very considerable, amounting to 11,33,347, and this is a satisfactory circumstance.

CHAPTER VI.—POST OFFICE.

318. The postal lines in these provinces are sufficient; with one exception, they all depend on men as runners. On one line the mail is carried by horses, namely that from Calcutta to Bombay, which within these provinces runs from near Mirzapore to the Wurda, passing through Jubbulpore and Nagpore. On the Jubbulpore and Mirzapore sections for eight months in the year mail carts are used; for the rest of the line the couriers carry wallets on horseback.

Postal Lines.

319. It is most desirable to establish a horse carriage dawk for the convenience of European travellers between Mirzapore and Jubbulpore in the cold season, and as the bridges are advancing, this could be arranged during the next working season. It is doubtful whether there are enough European travellers on those roads yet to remunerate a private Company; but with the existing establishment of horses, the Post Office could provide carriages, as was formerly managed in the North West Provinces. There are bullock vans at present, but they are very tedious for travelling. The Director General of the Post Office in India has been addressed on this subject.

Horse Carriage.

320. The departmental supervision of the post offices in these provinces is not satisfactorily arranged. The post offices of the Nagpore Province are under the supervision of the Postmaster General of the Bombay Presidency; those of the Saugor and Nerbudda territories under the Postmaster General of the North Western Provinces. The control of such distant authorities is quite nominal and useless. At Nagpore there is an inspecting postmaster, but in the Saugor and Nerbudda territories there is no superior authority on the spot. If a postmaster generalship for the Central Provinces were constituted, the measure would doubtless lead to the general improvement of postal arrangements. By a re-adjustment of salaries, this might be arranged with little or no extra expense. The Director General of the Post Office in India has been addressed on this subject.

Post Master General

321. The thannah or police postal service is managed by district officers in connexion with the postal authorities, as in other provinces. They are all conveyed by runners. In all the districts of the Central Provinces there are runners employed on these branch lines at a cost of 20,484 rupees per annum charged to civil establishments. The income from the additional charge on letters delivered by the establishment is credited to the post office department; but the amount is almost nominal.

Police Postal Service.

CHAPTER VII.—ELECTRIC TELEGRAPH.

Telegraph Line.

322. The electric telegraph line in these provinces runs from Mirzapore *viâ* Jubbulpore to Nagpore, and thence crossing the Wurda at Chanda, to Hyderabad onwards to Bombay. From the Wurda there passes a line down the right bank of the Godavery to Coconada. The wires within these provinces are supported on frail and rotten posts—interruptions during the rainy season are constant; so that the existence of an electric telegraph for days together is neutralized. The entire line requires repair or renewal. The director of electric telegraphs in India has been specially addressed on the subject.

323. There are two new lines much needed in these provinces, namely, a line from Calcutta *viâ* Sumbulpore and Raepore to Nagpore; and a branch line from Jubbulpore to Saugor.

Direct line to Calcutta.

324. The first would be the direct line from Calcutta to Bombay *viâ* Sumbulpore and Nagpore, following the old postal roads. It would apparently be quite practicable. If its construction should be found conducive to the commercial interests of the two Presidency towns, there is no doubt of the benefit that would arise to the administration of these provinces from the possession of means of immediate communication with its eastern districts and its eastern frontier. For political and military purposes also, a branch line from Jubbulpore to Saugor is greatly needed. In the event of any trouble, the want of telegraphic communication with the principal military station in the northern districts would be much felt.

Line to Saugor.

CHAPTER VIII.—MARINE—NAVIGATION.

325. There is no regular marine attached to these provinces. The only vessels employed within the limits of this administration are the steamers on the Godavery. As these belong to the Madras Marine, it is not necessary to enter into details regarding them; but as they are working within these territories, a brief mention of them may be included in this Report.

Steamers on the Godavery.

326. In June 1861, the Madras Government sanctioned a scheme of connected land and water communication from the sea to Hingun Ghât, by means of steamers and boats at the reaches and tramways round each of the three barriers, which present a series of obstacles to the navigation of the Godavery. This scheme had, for its immediate object, to open up a cheap and quick route from the heart of the cotton-growing districts of Nagpore to the sea-port of Coconada; to tap the general resources of the country; and to test whether, if the Godavery route were really opened, it would be taken advantage of to the extent predicted. The scheme involved no great outlay. It appeared to answer in some degree the existing emergency of the exportation of cotton. The steamers belonging to the Lower Godavery District were at once placed at the service of the district engineer, Upper Godavery, and orders issued for the construction of the three tramways.

327. From Dowlaishwaram (below the Ghâts) where the river navigation commences to Budrachellum (100 miles) steamers now ply to and fro from July until October and November. One of these, the "Prince," is capable of towing boats and conveys 100 tons a trip. From Budrachellum to Doomagoodium, now the head quarters of the navigation agency (16 miles) extends the first barrier. The tramway here has been partly constructed, but the transit arrangements are completed, and arrangements have been made for the conveyance of 16 tons a day from Budrachellum, which is at the foot, to Doomagoodium, which is at the head, of this barrier.

The first Barrier.

328. Above Doomagoodium there is uninterrupted communication during the flood season for a distance of 70 miles of river to Deodoola at the foot of the second barrier. The steamers "Arthur Cotton" and "Shamrock" ply in this reach; the former is only employed in the conveyance of goods; 42 tons can be conveyed each trip, and one boat can be towed. The "Arthur Cotton" is only of about 60-horse power, and draws from 2½ to 3½ feet of water. The "Shamrock" is a smaller vessel.

The second Barrier.

329. From Deodoola, at the foot, to Palmilla, at the head of the second barrier, is a tramway constructed to avoid the barrier. It is about 20 miles in length, and a portion of it has been completed. Arrangements for the conveyance of goods over the remaining portion of it have been made. This tramway lies altogether on the Nizam's side of the river. From Palmilla to Mooglee there is a clear stretch of river for 60 or 70 miles. Half way on the left bank is Seroncha (the new station of a deputy commissioner), on the Godavery; where there is an electric telegraph office, a post-office, and a medical officer. The steamers "Queen" and "Rose," similar in all points, respectively, to the "Arthur Cotton" and "Shamrock," ply on this reach of the river. Arriving at Mooglee, which is at the foot of the third, last and most formidable barrier, goods are conveyed to Salgaon, at the head of it, a distance of 34 miles by carts. Of the tramway, 20 miles of the roadway only have been completed. All the larger water-courses have been bridged. From Salgaon, the steamer "Mayflower" plies as far up the Wurda as practicable, which during the freshes is to within a few miles of Hingun Ghât. At this point, there are the falls of the Wurda. The "Mayflower" is one of the smallest steamers in the Godavery, and conveys only ten tons a trip. She was despatched from Rajahmundry in July 1861, was under most favour-

The third Barrier.

able

able circumstances brought over the third or upper barrier, and now plies on the Wurda as far as the Falls. It is very improbable that other steamers can follow, owing to the difficulties to be encountered in ascending this formidable barrier, where the floods, of depths varying from day to day, rush over sunken rocks. Steamers to be employed at this upper section of the river will either have to be built on the spot or brought up in pieces and compacted together there.

Capacity of these steamers.

330. Most of these steamers, it is believed, were intended for canal navigation; hence they are, in several respects, but ill adapted to contend with the rapid currents of the Godavery in the freshes. The smaller steamers at these times frequently make little more than three to four miles an hour. The accommodation on board for passengers, considering the size of the steamers, is good. Most of them are under 50-horse power, and their average draught is two to three feet. They are doubtless very useful for Government purposes and Government passengers; but they are in nowise sufficient for any passenger traffic, nor for the conveyance of merchandise. Therefore, though valuable experimentally, they cannot be expected to produce any appreciable effect on trade, nor can they contribute to the solution of the questions connected with the general navigation of the river. Ultimately, to render the water communication thoroughly efficient, a different class of steamers will be necessary; small draught combined with great horse power being the principal requirements. Steamers of that character might tug up stream convoys of boats laden with merchandise.

Country boats.

331. At present there is absolutely no country boat traffic on the Godavery. Until quite recently one or two boats were built for a Government ferry and for navigation works. No vessel of that kind had ever floated on the river. The only floating thing ever seen was occasionally a canoe, formed from the hollowed trunk of a teak tree, paddled by a fisherman of the lowest caste, and plying from one village to another; but if hereafter the need of water-carriage shall arise, it is impossible to imagine localities better suited for boat-building than these, for the forests, teeming with timber, literally overhang both banks of the river.

332. The above brief description of the present circumstances of the Godavery naturally leads to the considering of the future prospects of navigation on that river. This is a very important but as yet somewhat speculative question, on which I hope shortly to lay fuller information, after inquiries on the spot, before the Supreme Government; but I cannot in this report avoid touching on some of the main points, so far as they are capable of discussion at present.

Navigation Works.

333. The first question is—Whether the navigation of the river can be successfully opened? It probably can. The tramways which pass round the barriers, so far as they have been fully constructed, are at least passable. In those parts where they are incomplete, or imperfectly passable, the defects seem to be certainly capable of remedy. Hereafter, along the lines of these tramways, canals could be constructed for the first and third barriers; indeed the canal for the first barrier has considerably progressed, and is almost a matter of certainty. If, as understood, the navigation for the second barrier must depend upon locks in the bed of the river, there is more room for engineering doubt; but if these several works should be successfully constructed, the highway of water would be opened from Hingun Ghat to the sea. If, however, from financial or engineering reasons, these locks or canals for the second and third barriers should not be constructed, and the present tramways permanently retained, then the line would be partly a land route, and partly a water route, and the merchandise would be transferred once or twice from boats to carts, and from carts to boats.

334. The next question is—Supposing the above works had been constructed, for how many months in the year would the navigation be practicable? Probably not for the whole year.

Period during which the navigation might be opened.

335. During the dry season the reaches of the river between the barriers become shallow, and are frequently obstructed by shoals over which the water is not many inches deep. At such seasons it is said that not even boats could pass, much less steamers. Projects indeed have been mooted for a vast storage of water near the banks of the Godavery, so as to give that river an artificial supply. Again, it has been contemplated to drive in stakes in order to assist the current itself in sweeping away the sands from the shoals; but these plans, even if the expense of them could be afforded, have not arrived at a practicable stage. If, then, there is no immediate hope of the river being navigable during the dry season, and inasmuch as the dry season lasts from December to June, it would follow that, at the best and with all the works, the navigation may possibly not continue for more than six months in the year, that is from June to December.

336. Then this question arises—Supposing the navigation to be effectually open from Hingun Ghat to the sea for the latter six months of the year, would that result suffice for the development of traffic? This may possibly be answered in the affirmative.

Prospects of traffic.

337. Within the six months cargoes to any extent might traverse the distance up and down, though certainly the voyage upwards would be tedious; and although the latter six months of the year are not the most suitable for active traffic, yet all minor difficulties might vanish in the presence of such a cardinal advantage as the effectual though temporary opening of the river for navigation. It may be that dealers would establish store depôts at the

most convenient places for lading; and thus, if the Godavery could really be opened for even six months in the year, a great traffic might possibly be created.

Advantage of the water route.

338. Next there is this question—Would a route, opened to the above extent, be cheaper and more convenient for the mass of produce and merchandise than the route to Bombay and the route to Mirzapore, supposing the latter routes to have railway? Now, if the canals and locks had been constructed on the Godavery, and if the water route were open continuously from end to end, it might be found cheaper than any other route. Very favourable calculations have been made on this point. And generally the greater cheapness of water-carriage over all other is well known. If, however, there was an interruption in the water route, and tramways had to be adopted at any of the barriers, then there would be transhipment and the breaking of bulk. This would expose the route to some disadvantages. Whether under any circumstances the Godavery would be more convenient than the other routes is open to doubt. With railways, those routes would be open at all seasons, and that is a great advantage. As for the Nagpore Province, were its productiveness fully developed, it could find employment both for the rail and the river. In that case there would be, as it were, a watershed of traffic; all above that line going by rail, and all below it going by river. Or, perhaps, some particular products would go by rail, and others by river. At all events, the river might possibly command a fair share of the traffic.

Articles of export.

339. There then follows the question—What are the articles of trade that would go up and down by the Godavery route?

Firstly.—Down the river there would be the cotton from the lower valley of the Wurda, which is one of the best cotton-growing districts in India. The finest cotton, too, is that which grows in the tracts near the head works of the navigation. From the same valley there would be large exports of wheat, maize, millet (jowaree), and oil-seeds. Again, from the district of Chutteesghur in Eastern Nagpore, a land route to the river could be provided: thence wheat, oil-seeds, safflower, and lac-dye would be exported down the river in vast quantities; and if, as some experienced men deem probable, Chutteesghur, which now produces little cotton, should become a great cotton field, there would be a further export of that article down the river. But the exclusive traffic of Chutteesghur could not be relied on for the Godavery. In the meanwhile, two other outlets for that great district are being provided—one by the cross-road to Jubbulpore, to meet the railway; another by the road towards Sumbulpore, to meet the Mahanuddy River. Still, if the Godavery were really open, Chutteesghur would at least contribute a quota to that traffic. Then in the Bustar District, near the Godavery, there would probably be grown grain for exportation; but that district, though fertile naturally, is as yet wild. It is very possible, however, that European grantees might take extensive grants of land in the waste near the Godavery. One application, indeed, for an extensive assignment has already been made. Lastly, the timber traffic, which already exists precariously on the Godavery, would be facilitated and increased. But it must be remembered that the best forests near the Godavery have become very much exhausted of late years. Such, then, would be the traffic down the river,—consisting of cotton, wheat, maize, millet, oil-seed, safflower, lac-dye, and timber. But from the various causes above mentioned, the exportation might not prove to be nearly so great as may have been anticipated. These exports, too, are all derived from the left or Nagpore bank. The right or Nizam's side of the river is more than ordinarily wild and uncultivated; it would contribute something, though not much, to the traffic.

Whence derived.

Secondly.—The return traffic up the river would consist principally of salt. As the Nagpore Province produces no salt of its own, it chiefly depends for its supply upon the Madras coast. The cocoanut is largely used, but very little grown, in the Nagpore Province. The supply of this valuable article is drawn from the littoral districts below the Eastern Ghats. Then there would be sugar, tobacco, spices of all kinds, imported up the river. These Provinces being comparatively destitute of manufactured fabrics, large assignments of these articles, and of piece goods generally, might be expected. In the same manner cutlery, hardware, and wrought iron would be imported. Lastly, there would be Government stores of considerable bulk and value.

Articles of import.

Passenger traffic.

340. Together with the above goods traffic, there would, no doubt, arise some passenger traffic also. This route could offer no particular advantage to European travellers generally; but as Nagpore is garrisoned by the troops of the Madras army, there would be a large number of both officers and men, European and native, invalids, families, and the like passing to and fro. In respect to this, as well as to the carriage of stores and munitions, this route would possess considerable military advantages.

341. It may be added here, that no expectation is as yet entertained in these parts of any produce from Berar, cotton or other, being exported by the Godavery. Still less is there any chance of exportation from the northern districts of the Central Provinces, so that the Godavery navigation project does in reality concern chiefly, if not entirely, the large Province of Nagpore itself.

342. Such, on the whole, appears to be the balance, as nearly as can be seen at this moment, of difficulties and advantages, in respect to this projected navigation for the Upper Godavery. What would be the cost of such works, including all the locks and canals, I have no data for estimating; but it could hardly be less than half a million sterling, and might possibly exceed that amount. If tramways were adopted at any of the barriers, a great

great saving in expense would be effected. But, on the other hand, the route would thereby become exposed to disadvantages which might detract from its utility.

The Mahanuddy.

343. There is one other river of which the navigation is of great concern to the Nagpore Province, namely, the Mahanuddy. Exact inquiries have not yet been made on this subject, and no great project of improvement has been designed. But from a point near Sonepore, the capital of a small State, about 40 miles below Sumbulpore, the river is understood to be navigable for large boats during six months of the year, and for small boats during the remainder. Above that point, the river is quite impracticable during the greater part of the year; and although in the floods there would be enough of water, yet the freshes are said to be dangerous, and at the best the navigation there is precarious; navigation, however, in the rains has occasionally been attended with marked success. Last year, a boat laden with cotton was borne by the Mahanuddy from the heart of Chutteesghur down to Cuttack within a week. The practical object, however, will be to connect the rich district of Eastern Nagpore by a road to Sonepore, and the mode of doing this has been explained in the chapter on roads. If the roads from Eastern Nagpore to Sonepore were opened, there would, doubtless, arise a considerable water traffic, consisting of exports and imports, the same as mentioned in connexion with the Godavery.

Its navigability.

The Wurda.

344. In the Wurda, there are falls near Hingun Ghat; below that point the navigation is connected with that of the Godavery; above that point there is no chance of the river being navigated. If the Wyngunga were navigable, its connexion with the Godavery would render it very valuable; but although boats can pass up and down at certain seasons, there are not as yet any known grounds for the hope that the river will really be available for traffic. This river is indeed full of rocks and shoals. For the same reason the Indrawutty and Selree, both feeders of the Godavery, are not navigable. Captain Glassfurd's recent visit places this beyond a doubt. The Nerbudda, within these Provinces, is altogether unsuited for navigation.

CHAPTER IX.—FINANCIAL.

345. The finances of the Central Provinces were examined by Colonel Elliot and myself in October and December 1861, and a full report thereon was submitted to, and considered by, the Supreme Government.

Heads of income.

346. The various heads of revenue have been shown in the chapter relating to that branch. The actual income may be thus exhibited, under its different items for 1861-62:—

	Rs.
Land Revenue - - - - - -	51,76,152
Abkaree - - - - - - - -	8,96,499
Stamps - - - - - - - -	2,57,189
Income Tax - - - - - - -	4,25,002
Customs and salt - - - - - -	11,43,626
Miscellaneous - - - - - - -	3,53,711
TOTAL Rupees - - -	82,52,179 or 83 lakhs.

In the joint report of Colonel Elliot and myself, the aggregate income was set down at 42 lakhs for Nagpore, and 41 lakhs for Saugor and Nerbudda territories, in all 83 lakhs, which has been entered in the Budget for 1862-63. To this again should be added one lakh-and-a-quarter for Sumbulpore. The total income may, however, be assumed at not less than 80 lakhs and not more than 85.

Revision of civil establishments.

347. As regards expenditure, in accordance with the various recommendations contained in the above-mentioned report, and with the principles approved by the Supreme Government, *all* the Civil Establishments, those pertaining to the Saugor and Nerbudda territories, to the Nagpore Province, and to Sumbulpore, have how been revised as a combined whole, on an uniform principle. In this operation the valuable data collated, and the scales and schedules proposed by Mr. Cust, in the Punjab, have been largely made use of. In the District Civil Establishments a saving of nearly one lakh has been effected. In the police the reductions effected have been explained in the chapter on that department, wherein the expenditure was reduced from 14¼ to 10½ lakhs. On the other hand, the offices of Chief Commissioner and Secretary were new creations; and the salaries of the commissioned officers in the Saugor and Nerbudda territorities were raised in accordance with instructions given before the incorporation of those territories with the Central Provinces, in order to equalise the scale with that of the Punjab and Oude. Again, an increase was made in the Educational Department, in order to provide increased instruction, and in the expenditure

for Medical Charitable Dispensaries, and a new Department of Audit and Account was created. In Sumbulpore again some increase was incurred by the creation of the Commissionership of Chutteesghur; but then the police in that district were reduced by 31,912 rupees.

Saving effected.

348. After balancing all these items of increase against the reduction, the *net* result has been a saving of 2,94,596 rupees, or nearly three lakhs of rupees, as may be seen thus:—

	Old Scale.	*Revised Scale.*
	Rs.	*Rs.*
Salaries - - - - - -	4,96,200	5,97,600
Establishments - - - - -	6,02,280	5,62,756
Police - - - - - - -	15,15,314	11,22,206
Medical Dispensaries - - - -	80,994	87,630
Educational - - - - - -	45,000	75,000
Rs.	27,39,788	24,45,192

349. Now this saving has been in a main degree rendered feasible by the amalgamation of all these various territories under one Central Administration. The reductions to this extent would never have been practicable, while one part of these Provinces was under the Government of North West Provinces, another under that of Bengal, and the remainder under a separate administration of its own. But when all the various establishments were tried by an uniform principle and brought into one focus, then a comparison at once comprehensive and minute, of one province with another, and one district with another, both as regards scale of expenditure and mode of administration, was made, and a general redistribution of expenditure effected. It is by such comparisons and distributions alone that retrenchments can be enforced.

350. The above are the ordinary and regular Civil Establishments of all kinds (including police); they amount to 25 or 26 per cent. on the total income of the Central Provinces.

Expense of surveys and settlements.

351. But there is an extraordinary expenditure, chiefly for survey and settlement operations which are designed to increase the revenue and to benefit the country, but which may be contracted or expanded according to the necessities of the year. During 1861-62 the expenditure for this purpose amounted to 2,86,782 rupees; the proposed expenditure for 1862-63 amounts to 3,64,957 rupees. This may be regarded as so much reproductive outlay.

352. The total Civil expenditure for the year 1862-63, according to the revised Budget, including all establishments ordinary and extraordinary, all police charges, and all contingencies whatsoever, will amount to 32,50,000 rupees, or 32½ lakhs; being 38 per cent. on the total income of these Provinces. From this head, however, the political and public works expenditure of all kinds is excluded. The purely Civil administration, then, in these Provinces costs one-third of the revenue.

Political expenditure.

353. The political expenditure in these Provinces is heavy, and chiefly arises from the liberal provision made by the British Government for the family and dependants of the late Rajah of Nagpore; the details of that provision have been described in the Political Section. In former years the expenditure on this account, in Nagpore, has been set down at not more than eight lakhs; but from these were excluded pensions under inquiry. These have now been all reported and brought up; and the aggregate amounts to nearly ten lakhs. To this one lakh must be added, an item from the Saugor and Nerbudda Territories and Sumbulpore, and the total will not fall short of 11 lakhs. As a set-off against this there is the Bhonsla Fund, of which the final account was appended to the joint Report of Colonel Elliot and myself. It amounts to 20 lakhs in the aggregate. The political expenditure thus amounts to one-eighth of the total income. It will gradually diminish by lapses.

Military expenditure.

354. The most important item of expenditure in these Provinces is Military. The total military expenditure shown to have existed previously to the Report of Colonel Elliot and myself reached the sum of 54,84,550 rupees, or 55 lakhs for the year 1860-61. This is the highest rate of expenditure ever attained, and represented the total force, regular and irregular, serving within these Provinces. If continued and if debited to our finances, it would absorb two-thirds of the annual income. But during the past year, 1861-62, some reductions have been effected. The disbandment of the Nagpore Irregular Force, included in this total, caused a saving of about nine* lakhs of rupees. The Regular Force was reduced by one regiment of cavalry, two regiments of Native Infantry, which saved at least seven lakhs. A battery of Artillery is to be transferred, which will produce a further saving of one lakh. These reductions will, in all, amount to 17 lakhs, and bring the military expenditure for 1862-63 from 55 to 38 lakhs. But there still remain 38 lakhs of expenditure for troops serving within these Provinces.

* All items included.

Necessary for defence.

355. The question then arises as to how far this expenditure is debitable to the local finance of the Central Provinces? The greater portion undoubtedly is so chargeable.

The

The troops at Nagpore, and the out-stations dependent on it, and the troops at Saugor, are certainly necessary for the defence of these Provinces, irrespectively of any imperial considerations. The cost of these two forces would amount to 29 lakhs, as shown in the margin, according to the average rates usually assumed in the Military Finance Department. This amount, then, is confessedly chargeable to the finance of the Central Provinces. The remainder of the Military expenditure, nine lakhs (difference between 29 and 38 lakhs), is on account of the Jubbulpore force, consisting of troops as noted in the margin. It was mentioned in the joint Report of Colonel Eliot and myself that this force is not required for local purposes, as a detachment of Europeans to prevent the station from surprise will be sufficient. If, then, this item of Military expenditure be regarded as imperial, the sum of about nine lakhs might be deducted from the 38 lakhs, and that would leave 29 lakhs, as already explained, really chargeable to local finance. If it be not so regarded, then the debit for all the troops serving within these Provinces would be 38 lakhs.

NAGPORE:	
2 Battalions of Artillery	3½ lakhs.
1 Squadron	½ „
1 European Regiment	7 „
3 Native Infantry Regiments	5 „
SAUGOR:	
2 Battalions of Artillery	2½ lakhs.
¾ European Regiment	5 „
1 Regiment of Cavalry	3 „
1 Native Infantry	2 „
Staff, &c.	½ „
TOTAL	29 lakhs.

1 Battalion of Artillery.
¾ European Regiment.
1 Regiment Native Infantry.

Balance of income and expenditure.

356. If the Military expenditure were taken at the full 38 lakhs, then the total of the three heads of expenditure, Civil, Political, and Military, will amount to 81½ lakhs, which fully equals the possible annual income. In that case it may be supposed that these Provinces will pay fully for their own defence and administration without leaving any margin for material improvement. Even in that extreme case there would remain a small surplus, and a considerable amount of local funds with which districts, roads, and stations would be kept in order; but main roads, and such like great works, would be left undone. But if the Military expenditure chargeable to local finance were assumed at 29 lakhs, then there would be a total of expenditure so chargeable of 72½ lakhs, which would leave a margin of a few lakhs for large public works.

Central Provinces pay for their own administration and defence.

357. But the Public Works expenditure though small at first has much increased of late, the total assignments of the year 1861–62 amounted to 15 lakhs, and for the current year 1862–63 to 22 lakhs. It is unnecessary to recapitulate what has been said in the chapter on that subject, regarding the necessity of these works, to the progress and development of the country. But if the cost of all these great public works, and the cost of all the regular troops (both those required for imperial and those for local purposes) serving within these Provinces, be debited to the revenues of these Provinces, then there would be a deficit of at least (20) twenty lakhs. Again, even if the Central Provinces be debited with only that proportion of the regular troops admitted to be justly chargeable, still with the present expenditure in Public Works, there must be a deficit of at least ten lakhs. According to this latter view, which is perhaps the most correct one, the balance sheet would show as follows:

But there is an actual deficit.

CENTRAL PROVINCES.

Income.	*Expenditure.*	
83 Lakhs.	Civil	32½ lakhs.
	Political	11 „
	Share of Military	29 „
	Total excluding Public Works	72½ lakhs.
	Balance at Credit	10½ lakhs.

To 72½ as above, add 22 lakhs for public works, then total expenditure 94½ lakhs, which being 10½ lakhs in excess of 83, represents a deficit of 11½ lakhs.

Arising solely from material improvement.

358. The conclusion is, then, that the finances of the Central Provinces will bear all the cost of their own administration, and of that regular military force which is necessary for their defence, and would still leave a small margin for material improvements. If that moderate modicum of improvement be foregone, then the finances would even bear the cost of that portion of the troops cantoned within their limits, which are over and above the military force necessary for defence. In this sense, then, the Central Provinces do and will "pay," though barely, for their own expenses. But if they are to be improved and developed, then some outlay over and above their income will be necessary. Such outlay, however, will not be incurred on unproductive establishments like those of defence; but, on the contrary, on highly productive and remunerative objects. And every lakh of imperial revenue which these Provinces may thus absorb now, they will one day repay tenfold into that general treasury which represents the wealth of the empire.

359. It remains to state that during the year a separate auditor and accountant has been appointed in these Provinces, in immediate communication with the administration at Nagpore. This measure will conduce greatly to due financial control.

360. The establishment of an agency of the Bank of Bengal at Nagpore, with branches at Jubbulpore and Saugor, has been proposed. This arrangement will facilitate trade and lead to the early introduction of the Government paper money.

CHAPTER X.—ECCLESIASTICAL.

Number of chaplains serving in the Central Provinces.

361. There are at present four reverend chaplains serving in these Provinces—one at Saugor, and one at Jubbulpore, both belonging to the Bengal Establishment; and two at Kamptee (Nagpore) belonging to the Madras Establishment. One of the two chaplains at Kamptee proceeds to Seetabuldee, the civil station (10 miles distant) on Wednesdays and Sundays for divine service.

The need of a chaplain to reside at Seetabuldee.

362. The need of a chaplain to be resident at Seetabuldee has been strongly represented. The station is the seat of the Administration of the Central Provinces, and is fast increasing. The European community numbers 150 families of various classes. The presence of a chaplain twice a week for a few hours is utterly insufficient for their spiritual supervision. The reverend chaplains from Kamptee, doubtless, do their utmost. But none save a resident chaplain could really perform all that is required. Formerly the Madras Government used to permit one of the two chaplains, maintained in Nagpore, to reside at Seetabuldee (Nagpore), but last year it was ordered that both should reside at Kamptee.

Diocesan jurisdiction.

363. The Saugor and Nerbudda Territory is in the diocese of Calcutta. It appears doubtful as to whether the Nagpore Province belongs to the diocese of Calcutta or of Madras. It is very desirable that this should be settled. Until it is so, there will be little chance of a chaplain being stationed at Seetabuldee.

CHAPTER XI.—POLITICAL.

364. The principal events falling within the range of this report are those relating to the annexation of the Kingdom of Nagpore, and the management of the family and dependants of the late Rajah Rughojee Bhonsla.

Annexation of the Nagpore Kingdom.

365. When annexation was proclaimed in March 1854, there was not any murmur of discontent, nor any resistance to British authority. The disbandment of the Rajah's army, and the transfer of a portion to the new Nagpore Irregular Force, were carried out in perfect order and quietness. Remembering the prosperous days under the virtual regency of Sir R. Jenkins, the people generally (with the exception of the retainers of the Royal Family) appeared to acquiesce cheerfully in the establishment of British rule.

366. The only attempt at disturbance, in consequence of measures connected with annexation, was that which occurred in 1855. The Government had deemed that if the State jewels, treasure, and household paraphernalia of the late Rajah were left to the control of the family and dependents, this valuable property would be wasted or irregularly disposed of. It was therefore determined that all these effects should be collected, and their value realised. The proceeds were to constitute a deposit in the hands of the British Government, to be termed the Bhonsla Fund, for the benefit and support of the Bhonsla family. When the State property was given up, an unsuccessful attempt at disturbance was made by the palace retainers, and a reverend missionary (mistaken apparently for an officer) was maltreated by the mob. The realised proceeds of the property, according to accounts finally closed, amount to (20) twenty lakhs of rupees; and that sum constitutes the Bhonsla Fund.

State property.

Political pensions.

367. The terms of the provision for the Bhonsla family were, in the first instance, declared at the annexation. These included the widows and connexions of the late Rajah. Accordingly the following pensions were granted:—

			Per annum. *Rs.*
	The Banka Baee	- - - - -	1,20,000
Widows of the late Rajahs.	Unpoora „	- - - - -	50,000
	Durga „	- - - - -	25,000
	Annunda „	- - - - -	25,000
	Kamuljee „	- - - - -	25,000
	Savitree „	- - - - -	10,000
			2,55,000

Of these, the Banka Baee was a very distinguished princess, widow of the second Rughojee, who is so well known to history. She had been regent in the days of Sir R. Jenkins, during the minority of the third and last Rughojee. She bore a high character, and possessed commanding influence.* Unpoorna Baee, the senior widow, died towards the close of 1855. Thereupon,

* Mr. Plowden, Commissioner of Nagpore, thus describes her character:—"Her Highness was, undoubtedly, a very remarkable woman. Her strong intellect, sound judgment, and great strength, and consistency of purpose, enabled her to acquire and maintain an ascendancy in all the councils of the State and of the palace, which she never failed to exercise beneficially; while her kindness of disposition, her self-privations, and her charities, endeared her to the palace household, and won for her the affectionate regard of the multitude. She was firmly attached to the British alliance; and her ruling principle of action was to take no step contrary to the wishes or without the permission of the British Government. By this principle she continued to be actuated after the incorporation of the province with the British territories."

Thereupon, the Banka Baee and the remaining widows formally adopted a young relative, Janojee Bhonsla, as their son, and appointed him head of the house. He was then aged 22.

The Banka Baee.

368. In 1857-58, during the time of trouble, the family behaved with fidelity to the Government; the Banka Baee setting the best example, and using all her influence in the interest of the British cause. She died, at an advanced age, in the autumn of 1858.

Final pensions.

369. Thereafter it was decided to revise the allowances payable to the Bhonsla family and to settle a provision on Janojee, the adopted son of the Ranees. The new scale of allowances was fixed as follows:

		Per annum. Rs.
	Janojee Rajah	90,000
Widows.	Durga Baee	45,000
	Annunda Baee	45,000
	Savitree Baee	15,000
	Zenana Ladies	18,000
	Household slaves, called otherwise Bhonslas and Barakurnees	20,000
		2,33,000

Janojee was constituted head of the house, and to him the payment of the stipends of the Ranees and the general control of the palace and household were entrusted.

370. The lands of Deor in the Sattara district of the Bombay Presidency, which had been hereditary in the Bhonsla family for 125 years, were conferred on Janojee and his heirs (begotten or adopted) in perpetuity, with the title of Rajah of Deor. The patent of grant signed by the Governor General, and specifying that the grant was in consideration of the fidelity of the Banka Baee and the family during the time of trouble, was presented to Janojee in June last.

Provision for dependants of the late Rajah.

371. Liberal provision has also been made for the family and connexions and dependants of the late ruler. These are very numerous, owing to the extraordinary and complicated domestic relations which it was the custom of Mahratta Princes to contract. All these cases have now been finally investigated and submitted to Government. The total sum already granted or recommended, amounts to 7,87,000 rupees, or 7¾ lakhs per annum. The pensioners number some 2,158 persons, and the pensions range from 3 rupees per annum the lowest, to 35,000 rupees the highest. The stipends of both classes, then, aggregate 9,82,000 rupees, or 10 lakhs per annum, an amount which will yearly grow less by lapses. Besides these cash payments, the family have landed grants free of revenue, worth about 50,000 rupees, or half a lakh per annum. The total as it now stands (cash and land) is equal to about 25 per cent. on the revenues of the Nagpore Province proper, or in other words, one-fourth of the income of the late Nagpore Kingdom is devoted to the support of the Bhonsla family, together with the retainers and dependants of the late ruler, in accordance with the political obligation of the British Government. But as a partial set off against this, there is the Bhonsla Fund already alluded to.

372. On the eastern frontiers of these provinces there are political affairs which claim a brief notice; although one important district in that quarter, Sumbulpore and its dependencies, has been but recently transferred from the Bengal Government to this administration. The territory now pertaining to the district of Sumbulpore consists of two political divisions:—1st. The country belonging absolutely to the British Government; 2d. The country belonging to tributary chiefs under British control.

The Sumbulpore State.

373. The first division, which is in all respects British territory, once formed the dominions of the Rajahs of Sumbulpore, who belonged to the tribe of Chohan Rajpoots. It was subjugated by the Mahrattas and formed part of the dominions of the Bhonsla family. It was ceded to the British Government by Appa Sahib and Rughojee Bhonsla in 1817 and 1826. The British Government restored the Rajahs to the throne. In 1850, however, owing to failure of heirs to the last ruler, Narrain Singh, the state lapsed and came under British administration. Until the year 1857 it remained attached to the North-Western Frontier Agency of Bengal. At that time, however, a rebellion arose which lasted long, and was put down finally, in April last, by the Bengal Government. The chief rebel, however, Soorundersah, surrendered in May last after the district had come under this administration. This Soorundersah, a relative of the late Rajah, was imprisoned in the British gaol at Hazareebagh at the instance of the Rajah himself; he was released by mutineer sepoys in August 1857. Retiring to his native district he took advantage of the troubles of the time to set up a pretension to the throne of Sumbulpore, and shortly afterwards rebelled. He was joined by most of the chiefs and landholders of the district. Military detachments were dispatched from Cuttack; but their operations were not perfectly successful, as the wild and wooded country favoured rebels. Moreover, many leading insurgents who would have surrendered, as the general pacification of the country rendered the rebel cause hopeless, were apparently deterred by fear of severity.

Origin of rebellion.

374. These events occurred early in 1858. When, towards the close of that year the Royal amnesty was proclaimed, the Sumbulpore rebels did not respond to it. Thus the rebellion continued; the British officer maintaining authority at the head quarters of the district, and the rebels eluding pursuit in the woods, hills, and forests, and constantly plundering in the cultivated and inhabited tracts. This state of affairs lasted till 1861, when additional force was employed and further promises of pardon were held out by the Bengal Government. These promises were gradually accepted, the leaders surrendering one by one and the rebellion dwindling away. In May of 1862, Soorundersah, the original leader, surrendered under pardon. There is now but one rebel at large. Peace was finally restored to the district in April 1862 under the Bengal Government.

Rebellion suppressed by Bengal Government.

375. I have stated, without comment, the main facts as they appear on the records. The Bengal Government have declared "that mismanagement attended the direction of affairs in Sumbulpore from the very commencement of the disturbances in 1857, and that the proceedings of the local authorities were generally of such a character as to create mistrust and to foster rebellion rather than to promote confidence and encourage loyalty."

The Gurjat States.

376. The dependencies of Sumbulpore consist of the Gurjat tributary states, 13 in number, as named in the margin. The revenues of these states are not accurately known. The annual income of the largest may amount to a lakh of rupees; of the smallest, not more than 15,000 rupees. The aggregate of the whole does not exceed five lakhs per annum. These states comprise a large area, sparsely populated and scantily cultivated, abounding in hills and forests. The chiefs belong to the Chohan (Rajpoot) and Gond tribes. Their past history is similar to that of Sumbulpore. They pay respectively annual tributes varying from 160 rupees to 5,333 rupees; the total amounting to 15,513 rupees per annum. They are wild half-civilized chieftains. During the time of trouble they did not side with the insurgents, but (with two exceptions) they rendered no particular aid to the British authority; and several of them harboured fugitive rebels even up to the most recent time.

Their powers and functions.

377. The chiefs are under the political control of British authority. In the management of their territories they are practically independent under ordinary circumstances, except as regards the administration of criminal justice. In that department they stand virtually towards the British officer in the relation of magistrates towards the Sessions Judge, and they have always administered the criminal laws of the British Government. It has now been recommended that the Indian Penal Code and the Criminal Procedure Act should be extended to the Gurjat tributary states, and that the chiefs should be gazetted as magistrates.

378. I am bound to state in this place that Major H. B. Impey, the Deputy Commissioner, who joined in 1861, appears, by his personal exertions to have greatly contributed to the pacification of this district. By his local knowledge and by his aptitude in conciliating the people under his charge, he is well qualified for the management of the Sumbulpore district and the control of the Gurjat chiefs.

The Bustar State.

379. The extensive dependency of Bustar claims a brief notice in this chapter. Its character has been already adverted to in the introductory chapter. It is situated in the extreme south of the Central Provinces. Its revenues may amount to one lakh of rupees per annum, and its population to 200,000 souls. Its area, of not less than 13,000 square miles, extends from within a short distance of the Godavery in the south, into the heart of the Nagpore Province, and as far as the sources of the Mahanuddy and a few rivers in the north; and from the boundary of the Jeypore State in the Eastern Ghâts to the Godavery near Seroncha in the west. This state came under the power of the Nagpore Government in 1777, when the then Rajah of Bustar bound himself to pay an annual tribute of 5,000 rupees for military aid received from the Mahrattas. Owing to its distance from the capital, the inhospitable nature of the country and its inhabitants, but especially on account of its notorious insalubrity, it has, till lately, remained unknown and uncared for, buried in the depths of its impenetrable jungles and fastnesses.

380. The Bustar Rajahs call themselves Rajpoots; but they appear to be of mixed lineage, Gonds and Rajpoots. The seat of their power was first at Wurungul, in the Deccan, the capital of Telegana, over which ancient kingdom their ancestors ruled for many generations. The gradual incroachments of the Mahomedans, however, stript them of many of their possessions. Their power waned from the commencement of the 14th century, after the Mahomedan invasion of the Deccan; and in 1421 Wurrungul fell to the victorious arms of the Bahmunee Mahomedan kings. The Rajah, attended by a band of devoted followers, made good his flight across the Godavery into the pathless forests that fringed his northern frontier; and from that day Telengana has been in the hands of Mahomedan powers. Passing into the most of the wilderness, the ancestors of the Bustar Rajahs appear to have subjected the chiefs and inhabitants whom they found in possession, and finally to have established themselves and built their capital at a spot not far from Jugdulpore, their present residence. That the rule they displaced was a prosperous one, and in a comparatively advanced state of civilisation, is still attested by the ruined temples and tanks to be found in the very centre of the territory, the former displaying much beauty of design and architecture. Subsequently, the Bustar Rajahs removed their capital to Jugdulpore, on the south bank of the Indrawutty, where it has since remained.

The founding of that kingdom.

381. When

381. When the Nagpore kingdom lapsed to the British Government, Bustar, which had always been under the immediate control of the authorities of Chutteesghur, continued to remain under the supervision of the Deputy Commissioner of that district. In 1856, Captain Charles Elliot, then Deputy Commissioner, penetrated into this tract, which no European had ever visited, and collected much valuable information regarding the country. In 1860, on the formation of the Godavery territory (ceded by his Highness the Nizam) into a separate district, it appeared advisable to incorporate Bustar with that charge, and it was accordingly placed under the Deputy Commissioner of Seroncha, Captain Glasfurd. Since then the dependency has been visited by that officer, and also by Captain Stewart, Explorer and Examiner of Forests, and additional information has been supplied.

Now incorporated with Seroncha.

382. Till a comparatively late period the Bustar Rajahs possessed full powers over their subjects. In 1839 the Nagpore Government interdicted them from inflicting capital punishments. At the same time it was arranged that the Rajah's Prime Minister should be always appointed with the sanction of the British Resident. It is indeed most desirable that the Rajah should learn to exercise his authority according to civilized ideas, and by non-interference should be made to feel his own responsibility; but in cases of bloodshed his administration is found so inefficient, as to retard the progress of society. In regard, then, to the relation of this dependency to the British Government, it has been proposed that cases punishable with death shall be under the control of the Deputy Commissioner of Seroncha. In all other matters the Rajah and his minister may adjudicate; the British officer exercising a general supervision and inculcating principles of moderation and justice upon chiefs and ministers who are too often strangers to such ideas.

Powers of the present Rajah.

383. For the last 80 years a serious dispute has existed between the Rajah of Bustar and his neighbour the Rajah of Jeypore, who is subject to the Madras Government, regarding the possession of a considerable tract of valuable country situated between Jugdulpore and Jeypore. The matter has been fully inquired into by the Deputy Commissioner of Seroncha in person in company with the assistant agent, Vizagapatam, and a plan for settling the dispute has been submitted for the orders of the Supreme Government.

Dispute between Jeypore and Bustar.

384. Since 1839 two parties of police have been maintained in Bustar, one at the chief town of the dependency, the other in the interior where it was formerly rumoured that Meriah sacrifice prevailed. There is, however, every reason to believe that the practice of sacrificing human victims has fallen into disuse, if indeed it ever did exist; and it will be sufficient to make the rajah and minister strictly responsible for the absolute prevention of the horrid rite. As serious affrays and collisions between the Bustar and Jeypore people are by no means rare, an efficient body of British police, horse and foot, have lately been stationed on the boundary of Bustar and Jeypore.

Cessation of Meriah sacrifice.

385. The dependency of Kalahundy, sometimes erroneously named Kharoude, may have an area of 2,000 square miles, an annual revenue of 30,000 rupees and a population of 60,000 souls. It is situated in the south-eastern frontier of the central Provinces, immediately to the south of the territories of the Gurjat chiefs of the Sumbulpore district. Although not covered with such dense and interminable forests as Bustar, and containing some extent of open and cultivated country, yet the greater part of the dependency to the south and east is exceedingly mountainous and rugged; the highest peak of this wild portion attaining a height of 4,000 feet above the sea level. The plains are inhabited by a partly civilized people of mixed tribes who subsist by cultivation. The hills and mountains which are held by feudatories of the Rajah are inhabited by the Khonds, a fierce, superstitious, and semi-barbarous race who are a branch of that tribe of hillmen which is ramified over the wild tracts of Orissa.

The Kalahundy State.

386. These are the people among whom human sacrifice and female infanticide did once prevail. In Kalahundy, however, owing to the unceasing efforts of the agency for the suppression of Meriah sacrifice, these revolting practices have been greatly repressed.

387. The state came under the sovereignty of Nagpore about 150 years ago, on the occasion of some assistance afforded the Rajah by the Mahrattas. Since when a tribute of 5,000 rupees per annum, subsequently reduced to 4,000 rupees, has been regularly paid. The dependency was formerly under the supervision of the Deputy Commissioner, Raepore, when, for reasons similar to those which dictated the transfer of Bustar, it was placed under the Deputy Commissioner of Seroncha. The late transfer of Sumbulpore to the central Provinces has, however, altered the situation. The Rajahs of Kalahundy had their first home in the neighbourhood of Sumbulpore; they are connected by family ties with several of the Gurjat chiefs, and by language, caste, and custom with the people of those territories. It has, therefore, been recommended that the Kalahundy be transferred from the Seroncha to the Sumbulpore district.

Now incorporated in Nagpore.

388. Much information regarding this State has been collected by the successive agents for the suppression of Meriah sacrifice, and also by the late Deputy Commissioner of Raepore, Captain Charles Elliot, who visited it in 1856. The country is poor and unproductive, and its exports but trifling. Many of the great bands of Brinjarah traders, who transport the produce of Chutteesghur to the coast, and return with salt, tobacco, &c., and cocoa-nuts, have their routes in this direction.

Dispute between the That and Pat Rajahs.

389. A serious dispute has existed for the last 12 years between the Put and That Rajahs of Thooamool, a large zemindary within this State. These two parties represent two sub-divisions of a younger branch of the Kalahundy family. Their dispute materially affects the interests of the Rajahs of Kalahundy and Jeypore. The former supports the Pat Rajah in his claims to the sole management of Thoomamool and its sub-division; while the latter espouses the cause of the latter. Captain Glasfurd, the Deputy Commissioner of Seroncha, has inquired into the dispute in person at Thooamool during this season. His report and a plan for the settlement of this dispute has been submitted to the Supreme Government.

390. On the wise management of the States above described, namely, those of the Gurjat, of Bustar, and of Kalahundy, the gradual peopling of rich but scarcely inhabited tracts and the civilizing of semi-barbarous tribes will materially depend.

391. The only other political circumstances requiring notice in this report are the addition of a part of the Shaghur State (confiscated for rebellion) to the Saugor district; and of the strip of territory along the left bank of the Godavery, ceded by the Nizam simultaneously with the territorial arrangements regarding the Hyderabad assigned districts.

392. In 1860 the Sohagpore strip of territory, belonging to the Mundla district, and the Plateau of Amerkuntuck, belonging to Nagpore, were granted to the Rajah of Rewa, in reward for the services rendered by him during the period of disturbance. The Plateau of Amerkuntuck, where the Nerbudda and the Soane both derive their source, is one of the most interesting places in this part of India. Its altitude is between 3,000 and 4,000 feet above level of sea; its climate is cool and salubrious. It almost overlooks the fertile plains of Chutteesghur; and in many respects it seems fitted for European settlement.

CHAPTER XII.—MILITARY.

393. There are not now any military forces whatever subordinate to this administration. The forces serving in these provinces are composed entirely of troops belonging to the regular army.

Formation of the Nagpore Irregular Force.

394. Under the late Nagpore Administration there was indeed a body of troops styled the Nagpore Irregular Force. This force was raised in 1854, when the kingdom of Nagpore was annexed to the British dominions. It was formed from the army maintained by the late Rajah Rughojee Bhonsla. When the Rajah (then a minor) was placed on the throne, after the defection and final dethronement of Appa Sahib in 1818, the troops were more or less organised under the administration of the Resident Sir R. Jenkins, and consisted of about 6,000 men in all, costing about 10 to 12 lakhs of rupees per annum. When this force was broken up on annexation, a new British force was raised, of men taken from the old army, under the name of the Nagpore Irregular Force, of the strength given below:—

One Light Field Battery, all ranks - - - - -	341
One Regiment of Cavalry, do. - - - - - -	592
Three Regiments of Infantry, do. - - - - -	3,003
TOTAL - - -	3,936

at an annual cost of six lakhs and 44,000 rupees. It continued to serve up to 1861, when it was reduced to two battalions of infantry of 700 each. In May of 1862 these last named regiments were broken up. The reduction and final disbandment of the Nagpore Irregular Force has been described in the chapter on police.

Its composition.

395. The Nagpore Irregular Force, which was thus maintained for the first eight years after annexation, was a well trained and effective military body, composed in the first instance entirely of old soldiers taken from the late ruler's army, chiefly men of the country, Mahrattas, and Deccanees and Mahomedans, with a small sprinkling of Hindoostanees. The native officers were generally men of good family, of approved service, and of local influence. The formation and maintenance of the force contributed to allay political discontent, and found employment for men who might have been otherwise engaged in mischief. During the troubles of 1857 the conduct of the force was good, and often exemplary; with two exceptions, however, which must be noted.

Affair on the 13th June 1857.

396. On the night of the 13th June 1857 it was discovered that the cavalry then stationed in Seetabuldee (the civil station), had conspired to mutiny and rebel in conjunction with malcontents (chiefly Mahomedans) in the city of Nagpore. On examination of the

the lines (stables), it was proved that the horses were saddled ready for action. But the first regiment of infantry close at hand turned out and stood firm, and no actual disturbance occurred. On inquiry it appeared that the conspiracy was partial, and a severe example was made of those who were proved to be conspirators. But it is evident that the service which the first regiment of infantry performed by standing so firm at that critical moment was of the greatest value to the British cause. Later in the same year in the month of August, a small detachment of the Nagpore Field Battery mutinied at Raepore, but the affair was promptly suppressed without much mischief being done.

397. But as already stated, with these two exceptions, the conduct of the force was good. The cavalry was, after the guilty men had been tried and punished, sent on service in the field, and behaved so well that the Government ultimately accepted that good conduct in condonation of the blame attaching to the regiment generally for the affair of the 13th June.

Field service of the force.

398. After these events various detachments of the force, artillery, cavalry and infantry were employed during the latter part of 1857 and early in 1858 on active field service, in different parts of the Nagpore Province and beyond its limits, north of the Nerbudda, in the Mundla district, and on the eastern frontier towards Sumbulpore. On all occasions the men evinced a willing and cheerful spirit, and their conduct in the field was so good as to merit and receive the acknowledgment of the Government of India.

State of affairs during 1857.

399. It is not practicable to include in this report any detailed account of military events connected with the mutinies of 1857, suffice it to state that, at Saugor, the 3d Irregular Cavalry, the 42d Bengal Native Infantry, and portion of the 31st Bengal Native Infantry, mutinied and left the station; that the European inhabitants occupied the fort for six months, but no act of violence was committed, nor was any attack, either then or subsequently, made upon either the fort or the city by the rebels; and that at Jubbulpore, after the Madras Column had passed through the station northwards, taking with it from there one wing of the 52d Bengal Native Infantry, the other wing broke into mutiny and fled from the cantonment without, however being guilty of any outrage there, although one European officer on detachment at a distance with a portion of the regiment was shot by his men. The arrival, soon after at Jubbulpore, of fresh Madras troops restored the confidence of the inhabitants and prevented any further anxiety being felt. At Nagpore (Kamptee), there was no sign of trouble whatever, and the conduct of the Madras troops was perfectly good.

Regular military operations.

400. Nor is it necessary in this report to describe the regular military operations undertaken in these Provinces during the period of disturbance. It will suffice to state, as a matter of history, that a column from the Madras Presidency under Major General Whitlock assembled at Jubbulpore at the end of 1857 and beginning of 1858, and clearing the country there of rebels went on to Bundlecund. Similarly a force from the Bombay Presidency, under Sir H. Rose, entered the Saugor territory, reduced the rebels in the north-west portion of these territories, capturing their forts and forcing the passes, and passed on victoriously to Jhansee.

401. The military operations in the Sumbulpore district do not require mention. Thereafter the Sumbulpore levy was formed, it has now been incorporated in the police.

402. The disbandment of the military police in the Saugor and Nerbudda territories has been mentioned in the chapter on police. The Seroncha Sebundee levy is also now amalgamated in the police.

403. Thus there is not, within all these Provinces, a single soldier irregular, or other, except those of the regular army, under the military department. It only remains to mention the strength and disposition of the troops as they now stand.

Force of regular troops in the Central Provinces.

404. During the year immediately preceding 1857, the only European troops in these Provinces consisted of about three batteries of artillery, and the rest of the forces were native cavalry and infantry, and some artillery. In the Saugor and Nerbudda territories these troops were supplied partly from the Bengal and partly from the Madras army; those at Nagpore entirely from the Madras army.

Its present distribution.

405. After the vindication of British authority in 1858-59, a regiment of European infantry was stationed at each of the stations of Kamptee (Nagpore), Saugor, and Jubbulpore—in all three regiments. The regiments at Saugor and Jubbulpore, however, furnished strong detachments for Nowgong, and Nagode, respectively, in Bundlecund. At the same time it was arranged that the native troops at Saugor and Jubbulpore should be furnished entirely from the Bengal army, while the troops at Nagpore continued to be furnished from Madras. This disposition of the European troops continues up to the present time. But recently the native force has been reduced, and in the Saugor and Nerbudda territories the Bengal native troops have been relieved by Madras regiments.

On the 1st January and 1st May 1862, the strength of the forces stood as below in batteries and regiments :—

		Artillery.		Cavalry.		Regiments.	
		European.	Native.	European.	Native.	European.	Native.
Saugor Division	January -	3	–	- -	1½	2	3
	May - -	3	–	- -	1	2	2
Nagpore „	January -	3	–	- -	1	1	4
	May -	2	–	- -	⅓*	1	3

A battery is expected to be removed, but has not yet actually left. The above arrangement shows a reduction of one battery of European artillery, one regiment of native cavalry, and two regiments of native infantry.

Its proposed future distribution.

406. According to the latest arrangement, the disposition of the forces is as below in batteries and regiments :—

	Artillery.		Cavalry.		Infantry.	
	European.	Native.	European.	Native.	European.	Native.
Saugor - - - -	2	–	- -	1	1	1
Jubbulpore - - - -	1	–	- -	–	1	1
Kamptee - - - (Nagpore) - - - -	2	–	- -	⅓	1	1⅓
Hoshungabad - - -	- -	–	- -	–	- -	½
Raepore - - - -	- -	–	- -	–	- -	½
Chanda - - -	- -	–	- -	–	- -	½

It is to be remembered, however, that the European regiments at Saugor and Jubbulpore still furnish a strong detachment to Nowgong and Nagode in Bundlecund. The wings of Madras Native Infantry at Raepore and Chanda, respectively, are in the stead of the two battalions of the Nagpore Irregular Force (broken up), which used to hold those stations. The detachments of Madras Native Infantry at Nursingpore and Baitool have been withdrawn, and arrangements have been made for recalling, to its regimental head quarters, the one at Dumoh.

Principal military stations.

407. Of the above stations, it is to be observed that Saugor is a very important point, dominating the northern districts, and holding Bundlecund in check. Jubbulpore is on the main line of communication between the north and south. Its advantages are imperial rather than local. Hoshungabad is in an excellent position, commanding the Nerbudda Valley. The importance of Nagpore as a military station, is obvious. Raepore is a somewhat isolated position, commanding the eastern districts and frontiers. Chanda on the main line between Nagpore and Hyderabad is well situated close to the frontier of the Deccan.

Actual reduction of force.

408. It may be well to recapitulate the reduction of military force, as shown in this chapter. There have been reduced then (batteries and regiments) regular or irregular—

	Artillery.	Cavalry.	Infantry.
Regular - - - - - - - - -	1	1	2
Irregular - - - - - - - - -	1	1	3
	2	2	5

With the exception of the one regular battery the above reduction comprises entirely Native troops, and must have caused, at least, the discharging of 6,000 men.

409. Before

* At this moment there is no cavalry at Kamptee, but a squadron is ultimately expected ; therefore one-third is set down.

409. Before closing this chapter, I should mention that a volunteer rifle corps has been formed at Nagpore, numbering about 70 members. It has been inspected by the Brigadier commanding, and found to be fairly instructed. This result is mainly owing to the persevering exertions of the Commandant, Captain Bolton (Assistant Commissioner). Formation of volunteer corps.

CHAPTER XIII.—MISCELLANEOUS.

SECTION I.—AGRICULTURE AND COTTON.

410. THERE is nothing to distinguish the agriculture of these Provinces from that of the rest of India. The irrigation from tanks might be improved in the manner mentioned in the chapter on Revenue. Wells and their machinery might be vastly developed. The implements of husbandry are of the same primitive character here as elsewhere. The people are tolerably skilful and industrious, especially the women, but they are quite inferior to the husbandmen of Northern India.

411. The staple products have been mentioned in the introductory chapter. If tea, coffee, or the mulberry for silk, be introduced anywhere, it must be in the several Sautpoora hill districts; it is very desirable that professional inquiry on this head should be made. But for all products, improved varieties and superior seeds are needed. With this view an agri-horticultural society for the Central Provinces has been formed at Nagpore, after the model of that which has existed in the Punjab. The large garden known as the Maharaj-Bâgh has been placed at the Society's disposal by the Local Committee. The Society is as yet in its infancy. It may, if vigorously managed, do much for the improvement of all sorts of products and plants. Formation of an Agri-horticultural Society.

412. But under the head of agriculture the most interesting item is cotton. In 1861 a report on this subject was called for from the local officers, and all the data then available were submitted to the Supreme Government in December of that year. The pith of these has been extracted in Mr. Medlicott's Cotton Hand-book for the Bengal Presidency.

413. It will not be necessary to repeat the information there given in detail; but it will accord with the objects of this report to mention such circumstances as may be of general interest, and may aid in the forming of conclusions regarding the present state and future prospects of cotton in the Central Provinces. Cotton in the Central Provinces.

414. As stated in the introductory chapter, cotton is grown in all parts of these Provinces; but in the northern or central districts, the article is generally of second rate quality. The real cotton-growing tracts are the southern districts comprised in the late Nagpore Provinces. It is to the Nagpore cotton, then, that these remarks will be chiefly confined.

415. The introductory chapter contained a geographical account of these tracts in the Nagpore Province which produce the cotton. It is sufficient to state in recapitulation, then, that of the three great tracts of cultivation which exist in this Province, two, namely—1st, the Valley of the Wurda; and 2d, the Plateau of Chutteesghur, do produce cotton; and 3d, the Valley of the Wyngunga does not, and probably cannot, produce that article.

416. At present the main cotton-growing tract is the valley previously described. According to the estimate made in 1861, about 19,361,388 lbs., or 134,454 bales * per annum are produced; and about 281,214 acres are under this crop. But these data are uncertain, as the cotton fields have not all been measured up. During the next working season, however, the field measurement of the entire tract will be carried out; and, in the next report, it will be possible to exhibit an exact statement of the cotton cultivation and of the remaining fields fit for cotton. Nor have any trade statistics been compiled for the several cotton marts. This is, however, now being done; and by the close of the official year it will be possible to present an exact statement of the respective proportions of cotton consumed locally and reserved for exportation. Produce of the Wurda Valley.

417. Now as regards the culture of cotton, it is to be remembered that the Valley of the Wurda consists of a flat plain of rich black loam, stretching from the undulating ground inland to the bank of the river. This noble plateau runs along the river for a hundred miles, expanding broadly in the centre, and contracting both to the north and south. The probable area of the plateau may be 3,985 square miles, or 2,550,401 acres; and it entirely consists of cotton soil of excellent quality. In respect to cotton, the tract has three known sub-divisions:—1. that of Arvee in the north; 2. that of Deolee in the centre; 3. that of Hingun Ghat to the south. The best cotton is that grown adjacent to, or south of, Hingun Ghat.

418. The estimated amount of land under cotton crops within the whole tract, on an average year, is 280,000 acres; and the average annual production at the present time is supposed Average of cultivation and produce.

* The bale has been calculated at 144 lbs.

supposed to be 20,000,000 lbs., or say 140,000 bales. The cultivation is in a transition state. and is increasing fast; but, as already explained, there are not as yet complete statistics. It is certain, however, that nearly the whole tract is capable of being cultivated with cotton, and that a portion only as yet is cultivated. That portion cannot be more than one-third of the whole and not less than one-fifth. That it will increase if the present demand should rise, or even continue, is undoubted. The question then arises—to what extent will such increase be possible? Some officers of local experience think that the present crop will be increased by one-third, others by one-half.

Other products besides cotton.

419. But while anticipating an increase, I would guard against the supposition that the whole area in this neighbourhood, fit for cotton, but occupied actually by other crops, will ever be cultivated with cotton. A considerable portion of the ground must be reserved for the provision of food for men and cattle in this thickly inhabited tract. At present there are three staples besides cotton; wheat, oilseeds, and *holeus indicus*, millet. The wheat and oil-seeds might to some extent be superseded by exportation from other parts of the Province, and thus a quantity of land released and made available for cotton. But the millet is of a quality hardly equalled elsewhere, and its flour supplies food to the husbandmen, while the stalk and leaves supply food to the cattle. This must apparently continue to be a staple under any circumstances, and unavoidably occupy a quantity of cotton soil. Then, it is believed, that the same field will not grow cotton year after year; the crop must be changed by rotation. For this reason, therefore, a quantity of land must be reserved for staples other than cotton.

420. But there is another tract lying somewhat inland,* which has much fine cotton soil, and in which cotton has quite recently begun to be cultivated. An increase in this direction may be anticipated.

The cotton marts.

421. The extent to which the production of cotton within the last 20 or 30 years may have increased cannot be known. Hingun Ghat itself has been a cotton mart for upwards of half a century. The mart has not increased at all within the last 20 or 30 years, and the culture in its neighbourhood has increased but little. Hingun Ghat, however, though the best known by reason of its long standing, is surpassed by Arvee, which has arisen of late years, and will soon be rivalled by Deolee, of even more recent origin. These places have superseded old marts now decayed; but it is certain that there never were any such places as Arvee and Deolee now are. These circumstances may convey some idea of the progress of cotton in this neighbourhood. On an average year the amount brought to each mart would be nearly as follows:—

Arvee - - - - - - -	5,000,000 lbs.
Hingun Ghat - - - - - -	3,440,000 „
Deolee - - - - - - -	1,720,000 „

Irrigation for cotton.

422. It is generally believed that the cultivation of cotton cannot be improved by artificial irrigation. But such a supposition does not seem to consist with probability or experience. I would refer to the analysis of the whole question given in the Punjab papers by Mr. D. F. McLeod, the Financial Commissioner. Why should cotton be a solitary exception in the whole range of agricultural produce which invariably benefits by irrigation? Does not cotton suffer frequently from drought? Has it not notoriously so suffered in these Provinces during this very last year? I should suppose that cotton must benefit by irrigation if such be rightly applied. That irrigation for cotton should be sub-soil "acting by percolation," as contra-distinguished from super-soil, diffused over the surface of the ground, is probable enough. But that irrigation in some form must be good for cotton seems to me but a rational conclusion. Some cursory inquiries and examination have just been made; and there is reason to hope that dams and watercuts could be constructed in this vicinity.

Tenure of land affecting cultivation of cotton.

423. There are experienced persons, and the native cotton dealers among them, who aver that the present uncertainty of tenure, affecting both the landlord and the cultivator, and especially the cultivator, is retarding the culture of cotton. I fear that this may be but too true. The existing defects in the tenures of all kinds have been pointed out in the chapter on Land Revenue. The earliest practicable remedy will be applied by the settlement operation, which will specially be urged on in that tract. And if certainty of tenure, both for proprietors and cultivators, can give additional impulse to cotton growing, that impulse shall be imparted within the next few months.

Amount of exportation.

424. The proportion of exportation and of local consumption, respectively, out of the aggregate of cotton, is supposed to be not quite equal; that is, about one-third exported and two-thirds locally consumed, The amount annually exported may be estimated at about 7,200,000 lbs. These calculations, however, are not certain; and as already explained, I hope that for this current year statistics may be obtained. Originally, that is 40 years ago, the cotton, then known as Hingun Ghat produce, used to be carried by Brinjara carriers down to Masulipatam in the south, and Cuttack in the east. This route was abandoned afterwards when Mirzapore became an emporium, and the road was opened in

* Known locally by the names of Oomrair and Chimoor.

in that direction. Then for some time the Nagpore cotton was exported by Mirzapore alone. But of late years the current has been partly diverted towards Bombay; and at this time about half goes to Mirzapore *en route* for Calcutta, and half to Bombay. Whether a part shall hereafter go by the Godavery remains to be seen. The conveyance by these several routes has been explained in my report on Railways, Roads, and Navigation.

Price of cotton.

425. Of late years the price of cotton has risen enormously; there are dealers who recollect that 30 or 40 years ago the price was as low as (14) fourteen rupees per bhoja (of 262 lbs), from that the advance was gradual, though certain, to 25, 30 and 40 rupees. Recently the rate has stood at 50 and 60 rupees, and is at 70 rupees at this time of writing. This must have greatly stimulated production. Within the same period, however, and in the same tract, the price of other agricultural produce has risen about threefold.

Cleaning and pressing.

426. In respect to cleaning and pressing there are the same defects here as elsewhere. But as this cotton has the longest inland distance of all to traverse, the evil is perhaps more intensely felt here than anywhere. The mishaps and vicissitudes to which consignments of cotton are liable in transit between Nagpore and Bombay, or Mirzapore, are indeed notorious. The article, loosely packed in bags, with interstices like net work, is not only dirtied and spoilt, but is also tampered with; bad stuff being substituted for good; quantities are also abstracted. It is always admitted that if the cotton were pressed by screw on the spot, and then properly packed, it would have immunity from these evils at least. Whatever else may or may not happen, this at all events does seem practicable. Like every other improvement, however plain, its introduction among natives must be gradual. Already there is a screw press to be established at Hingun Ghat, by Messrs. Hamilton, Browne and Company, of Mirzapore. I have also reported to the Supreme Government on the propriety of setting up screw presses at Deolee and Arvee, and also obtaining some machinery for cleaning.

European agency in the production of cotton.

427. As regards the settlement of Europeans in the valley of the Wurda, there is absolutely no culturable waste within that tract on which any new estate could be founded, and it is more than doubtful whether any cultivated land could be purchased. As the proprietary rights of the people are determined at the approaching settlement, land will thereafter become saleable and may legally be purchased by Europeans. But it is not probable that any estates or holdings will be in the market for sale or mortgage.

428. It follows that the only manner in which an European could here engage in the production of cotton would be to arrange with the landholders or cultivators for its being grown by them, and delivered to an agency at or near the spot. Such an agency could make its own arrangements for cleaning, pressing, packing, and despatching. It certainly seems possible for European merchants on the spot, with cash advances and fixed rates offered to the producer, to stimulate indefinitely the production of cotton.

429. As regards foreign seeds, no extensive experiments have been made in this respect. During this year the Agent for the Cotton Supply Association obtained a large quantity of Egyptian seed. It did not arrive at Bombay in time for this year's sowing. I have endeavoured by despatching camels to obtain a portion for distributiion in the Wurda District this season, but the consignment will probably be too late.

Prospect of cotton in the Wurda Valley.

430. Such, then, briefly, are the circumstances of cotton in the Valley of the Wurda. The general conclusion is this, that if the present demand continues or advances, and if the country is well managed, there will be considerable increase to production. Future progress will much depend on the railway, and perhaps (though not certainly) on the Godavery. Even these great considerations, however, are not immediate. Again, much must depend on private enterprise, which it is hoped some of the foregoing remarks may serve to guide or encourage. But there are certain things which this Administration can do at once, and which I would specify as follows:—

Measures for its encouragement.

1st. To make the cotton roads described in the chapter on Roads.

2d. To test the practicability of tramways at certain points.

3d. To project certain works of irrigation.

4th. To make a good settlement of landed tenure.

5th. To set up screw presses and cleaning machinery.

6th. To distribute foreign seed amongst the people. Too much result must not be anticipated from such measures; but they would conduce somewhat to the general cause of the production of cotton.

Cotton in Chutteesghur.

431. The next point for consideration is the cotton of the Plateau of Chutteesghur, described once in the introductory chapter and once in the chapter on Roads. In December last the District Officer stated the estimated produce at 36,750,000 lbs. per annum, and the area capable of producing cotton at an enormous extent. These estimates were held to be exaggerated, and there are no data, like the measurement of fields, available to test them. Previously the staples of this highly fertile tract were supposed to be wheat, rice, and oil-seeds. Recently the production of cotton has commenced, and is fast increasing. But none can truly say, as yet, how much land is fit for cotton, and to what extent the culture may increase. But probably there will be much land, both waste and cultivated,

available. If this be so, then the continuance of the present demand might create a new cotton field of indefinite extent.

432. In the chapter on Roads, the mode of connecting this district with the navigable head of the Mahanuddy has been explained; also the mode of connecting it with the railway terminus at Jubbulpore.

433. Cotton is grown and is increasing in the upper valley of the Mahanuddy itself. To this the same remarks as above are applicable.

434. The navigability of that important river has been touched upon in the chapter on Navigation.

Waste land available for cotton.

435. But between both the plateau of Chutteesghur and the valley of the Mahanuddy on the one hand, and the valley of the Wurda on the other, there is one cardinal difference. In the valley of Wurda there is no waste land available, and little or no hope of Europeans being directly engaged in the culture of cotton. But in Chutteesghur and in the valley of the Mahanuddy vast quantities of waste land are available, from which fine estates might be carved out by Europeon settlers, some part, perhaps much, of which would produce cotton. There is indeed room for great hope in this respect.

436. Here, as in the Wurda district, many of the results hoped for must, at the best, be ulterior. Much again must depend on private enterprise; but here also there are certain things which this Administration can do at once, and which I would specify as follows:—

Measures for encouraging cotton in Chutteesghur.

1st. To make the road from Raepore (capital of Chutteesghur) to Sonepore, the navigable head of Mahanuddy.

2d. To make a good settlement of the landed tenures.

3d. To investigate, in an exact and comprehensive manner, all the land available for cotton, culturable or waste; to measure up the cultivated land of villages, and after allotting to them all the waste which they can lawfully claim or reasonably require, to mark off the waste in lots; and to advertise large estates which might be suitable for European grantees.

437. The final and general conclusion is, that the old cotton field on the Wurda may be increased to a certain extent; and that a new cotton field in Chutteesghur and on the Mahanuddy may be created.

Fibrous substances.

438. These Provinces are not remarkable for the production of fibrous substances.

Hemp.

439. The sunn or Indian hemp (*crototarea juncea*) grows more or less everywhere; but the best is produced in Chutteesghur. It is thence sent for export to Calcutta *viâ* Jubbulpore and Mirzapore. It is highly esteemed for its colour and for the length and strength of its fibre. The superior plant *canabis sativa* has been grown with success at Jubbulpore.

Linseed and flax.

440. The linseed plant is grown largely in the Wurda Valley and in Chutteesghur; the oil-seed obtained from it is valuable and is easily exported. As is well known, the fibre of its stem produces flax; but it is much more difficult to raise the plant for its fibre than for its seeds; as yet the people seem unwilling to cultivate it for the sake of its fibre, as this process involves much care in the culture. For such cultivation, however, the Chutteesghur plateau is probably the most favourable locality in these Provinces.

SECTION II.—EUROPEAN COLONIZATION.

441. THIS subject has been touched upon in the chapter on Land Revenue, (paragraph 205). It was there explained that, in order to counterbalance the disadvantages of isolation and remoteness, it would be necessary to make grants of land on more than ordinarily favourable terms.

Waste land in Wurda Valley.

442. In the Nagpore Province itself the open country is healthy; but then it is already occupied by the native landholders and cultivators. The waste there will be found in scattered patches only, in which the people possess rights, or which are required for pasturage. This is particularly the case in the cotton ground of the Wurda, and in the upper Valley of the Wyngunga. In the districts then of Nagpore and Nachingaon (Wurda) there does not appear any chance of grants being made.

In Chutteesghur and Sumbulpore.

443. But in parts of the Chanda and Bhundara districts, and especially in the Chutteesghur and Sumbulpore districts, there are virgin tracts of great extent without any pre-existing rights or interests and without any complications, in which a perfect tenure could be lawfully accorded to an European grantee. In Chutteesghur and Sumbulpore cotton-growing estates might, it is hoped, be founded by Europeans. The capabilities of these tracts for cotton have been mentioned in the chapter on that subject.

In the Sautpoora Hill districts.

444. In a portion of the Sautpoora range there are fine tracts where excellent waste is available, and where no pre-existing rights or interests are found, and where no complication

plication would be met with. In these regions the climate will generally be good. In the upland portion of the Mundla district, especially near the Amerkuntuk plateau, and on the valleys near it, the climate is cool, perhaps even delightful; and if the ground were fairly cleared, would be salubrious. The soil is fertile and suitable for all kinds of products. But then the position is more than ordinarily isolated and remote, and that is a great disadvantage. The low land portion of Mundla would not be salubrious. If the culture of tea and coffee, and silk could be introduced into the Sautpoora Hills (as some think it may), then suitable places for European settlers could be found in localities esteemed healthy.

In the Nerbudda Valley.

445. In the central valley of the Nerbudda, in the Nursingpore and Jubbulpore districts, there will be the same bar as in the valley of the Wurda; that is, all the best land is already occupied or owned. But in the lower valley, within the Hoshungabad district, there is much waste, free from all existing rights and interests. The climate is reported to be insalubrious, but this has again been denied. The general situation of this tract is favourable, being near the line of railway to Bombay. The locality west of Hoshungabad is most promising.

In the Godavery district.

446. Lastly, the local authorities consider that tracts, to any extent, are obtainable on the left, or British, bank of the Godavery. At present the climate is insalubrious.

Insalubrity of climate.

447. But in all these cases the first practical difficulty is the insalubrity of the climate. It does not seem possible for an European grantee to reside with safety to health on an estate in any of those tracts where the best waste is available. But if he is able to collect cultivators and tenants, and to maintain a native agent on the spot, then there are stations sufficiently near and eligible for residence. For example, an European landholder residing at Sumbulpore, or Raepore, or Seroncha, might, perhaps, hold large estates 50 miles or so distant.

Scarcity of labour.

448. The next difficulty is the provision of labour, which will be felt in all the localities above indicated. But it would not be insuperable here, any more than elsewhere. If capital be invested, inducements would soon arise to attract labour from great distances. Public works are now largely carried on with foreign workmen, and private capitalists would enjoy at least equal advantage in this respect. For an estate on the Godavery, labour might be got from the coast districts. In Eastern Nagpore and Sumbulpore, from the north-west frontier of Bengal. In Hoshungabad, from Malwa. In Mundla, labour has even been procured from Hindostan.

Want of communication.

449. The third difficulty is that of communication, or in other words the conveyance of produce to market. This can and (it may be hoped) will be overcome. The chapter on Roads will have explained fully this part of the subject. Suffice it here to say that a grantee on the banks of the Godavery might hope for water carriage; in Chutteesghur, for a road to the Mahanuddy; in Mundla, for a road to the railway at Jubbulpore; in the Hoshungabad district he would have the rail close at hand.

Suitable localities for grants.

450. The conclusion is, that while existing rights and interest would mostly bar European grantees from the central Nerbudda valley, and from the valleys of the Wurda and Wyngunga (these tracts comprise the Nagpore, Jubbulpore, Nursingpore, and part of the Chanda districts); on the other hand, in the valleys of the Godavery and the Mahanuddy, and the lower Nerbudda valley, in the Chutteesghur plateau, in the uplands of Mundla, and in parts of the Sautpoora range, there are large, sometimes boundless, tracts of waste, free as air from every difficulty and complication, which might be taken up. These available tracts are in the civil districts of Raepore, Sumbulpore, Seroncha, Mundla, Chindwarra and Hoshungabad, and parts of Chanda and Bhundara. In these districts extensive applications have already been made, and in a short time it may be hoped that grants will be duly arranged. Two companies for clearing the waste are in contemplation: if they should be formed, great results will follow.

Importance of European settlement.

451. It is difficult in a general report to do justice to this subject, so full of interest and hope for the future. With European capital and enterprise it may be possible for the axe and the plough to invade the ancient dominion of the forest and the prairie. Without this, however, there is little chance that the natives of the country can battle with the difficulties of the wilderness. It is by private effort, rather than by public measures, that this result can be compassed. But there are two things which this Administration can do in furtherance of the cause, and which will, it is hoped, be done without fail. First, to secure a perfect title in eligible localities without delay or trouble, according to the resolution of the Supreme Government of 17th October 1861. Second, to open out roads, both main and branch, in the neighbourhood of any extensive tracts that may be taken up for European settlement.

SECTION III.—FORESTS.

Classification of forests.

452. THE forests of these Provinces have been generally alluded to in the introductory chapters. They may admit of topographical division into four groups:—First, there are the hills to the north of Saugor; second, those in the Sautpoora range; third, those in the centre of the Nagpore Province; fourth, those of the south near the Godavery.

There must, doubtless, be others in the eastern part of the Nagpore Province and in the hills near the Mahanuddy; but nothing specific is yet known of such. The rivers here are not always conveniently situated to convey freights of timber from the mountains down to the plains. Still our rivers do yet play their part in this great work. The Nerbudda, the Wurda, the Kanhan, the Bagh, the Indrawuttee, the Selree, and, lastly, the great Godavery itself, all carry logs to the neighbourhood of the timber marts. But inland carriage has often to be used for the conveyance of timber.

Principal kinds of trees.

453. There are four kinds of trees valuable for timber:—first, the teak; second, the saul; third, the saj; fourth, the eynee. Besides these there are a variety of minor trees, among which the most notable is the bamboo.

The teak forests.

454. The teak is not found north of the Nerbudda, nor in the Sautpoora range; but it is, or has been, abundant in the centre and south of the Nagpore Province. The girt and length of the trees are considerable, the former being often six feet, and the latter 100 feet. For many years past great quantities of teak have been exported from the districts of Bustar and the Godavery, by being floated down that river. In 1860-61, owing to the abolition of transit duties, and the greater confidence in the security of life and property after the cession of the Godavery talooks by the Nizam, no less than 24,000 to 25,000 logs were exported by this route; much of this, however, was under-aged, and measures have been taken to put a stop to a practice which, tlthough it has existed for many years, would shortly, under present circumstances, if unchecked, lead to the utter destruction of those forests. The teak forests in the centre, being comparatively near to the capital, have been worked for many years; and when the streams, feeders of the Wyngunga, were flooded, there was water carriage available. The timber for all the buildings in Nagpore and Kamptee has, for many years, been drawn from these forests, and the consumption has been very great. No arrangements for conservation were made at the time; and these once fine forests are now nearly exhausted, and reproduction must be very slow, or perhaps may be beyond hope. The teak in the south is equally fine and abundant; but many of the best forests were situated in the strip of territory along the left bank of the Godavery, which, until a very recent date, belonged to the Nizam of the Deccan. The forests were accordingly leased out, under his Highness's government, to some timber merchants (native) for the supply of the Hyderabad market, where the demand has been great for many years. These forests again have been nearly exhausted, as no arrangements whatever for conservation were made. Thus it is that, at this moment, the really productive teak forests are limited to a few tracts near the Indrawuttee river, and one tract near the Wurda. The former is comparatively inaccessible, the latter is estimated to contain not more than 15,000 logs. Arrangements have now been made to preserve the scanty remnant of the teak forests of Nagpore.

The saul tree.

455. The saul (of considerable girt and length) grows in the greatest abundance in the districts of the Sautpoora range, and in south-western parts; but it is also found, more or less, in all the wooden tracts north and south. Some of the forests have been largely used; but many still exist of great richness and are still untouched. These will now be preserved. Quantities of this wood have been used for the railway.

The saj tree.

456. The saj grows chiefly in the districts of the Sautpoora range, and in the other forests generally. The trees grow to a considerable height, and have not yet been worked up. This wood, also, will be useful for the railway. The Byje saul falls within the same category.

The bamboo.

457. The bamboo grows in extensive masses in the northern parts of the Nagpore Province, beneath the Sautpoora hills and towards the Godavery.

Department formed for conservation of forests.

458. For the conservation of forests in the Saugor and Nerbudda territories a department was organized some years ago, and great benefit has accrued therefrom. Its head quarters are fixed in the Puchmurree hills in the Sautpoora range. In the Nagpore Province conservancy rules were issued at the close of 1861, and during the summer and winter of this year a complete inquiry has been made into all the forest tracts of central and southern Nagpore; the eastern part remaining still for inquiry. These proceedings have clearly shown which particular forests are worth preserving; and the requisite orders regarding them have been issued to the district authorities.

459. The names of Captains Pearson and Stewart will be duly introduced at the end of this report; but I cannot conclude this section without stating that to their efforts are mainly due whatever is known of, or has been done for, the forests of the Central Provinces.

SECTION IV.—MINERAL RESOURCES.

460. THIS subject has been touched upon in the introductory chapter. But its importance merits a more detailed notice than could be afforded in a general introduction. For the information which is now about to be furnished, I am indebted mainly to the Reverend Stephen Hislop, Missionary of the Free Church of Scotland at Nagpore, a gentleman who has not only devoted himself to the moral improvement of the people for the last seventeen years, but has contributed much to that physical knowledge on which material improvement so much depends.

461. It

Geological formation.

461. It is necessary to preface this information by a summary of the principal geological formations in the Central Provinces. These are divisible into two main divisions, one north and one south of the Nerbudda, the river itself being generally the boundary line.

North of the Nerbudda.

462. The geology north of the Nerbudda, if we except the prolongation of the Sautpoora range beyond that river, is very simple. The great plateau on which Saugor stands rests on crystalline schists, which are seen cropping out in the plains on the north and in the valley of the Nerbudda in the south. The table land itself is composed merely of a series of strata which Dr. Oldham has designated Vindhyan, and which consists of red gritty sandstones with lower bed of shale and flagstones, destitute, so far as yet known, of organic remains. The sandstones are overlaid on the west by extensive flows of trap, in which were enclosed a deposit with fresh water shells and stems of palms, as at Saugor, through a similar stratum with the same species of shells and the vertebra of animals occurs under the trap at Narrainpore to the south of that station. This deposit is regarded by Mr. Hislop as the upper member of his Tuklee series which he assigns to the lowest eocine age. The metamorphic rocks of the Nerbudda valley are, for the most part, concealed under a great thickness of alluvium, which in its older strata is rich in the bones of huge Pachydermata, and on the surface affords bounteous harvests of grain, pulse, and oil-seeds.

Vindhyan strata.

Formations south of the Nerbudda.

463. The structure of the country south of the Nerbudda, including the portion of the Sautpoora above referred to, is somewhat more complicated. Here we have the same crystalline rocks as in the north, and like them exposed in several of the river basins. Thus they are found cropping out on the River Machna, near Baitool, on the River Colbira, near Chindwarra, and along the course of the Rivers Kanhan and Pech, after they descend from the Sheshandree step of the Sautpoora hills. But the largest exposure of these rocks begins in the valley of the Bangur, at its confluence with the Nerbudda, and running south with an average breadth of 100 miles, follows the course of the Wyngunga (properly Wun Gunga, the Forest river), till its junction with the Wurda, when it turns east, covering the greater part of Bustar, and then north-east reaching to Sumbulpore.

Geological character of the Sautpoora range.

464. It is a striking fact that the Vindhyan series, which stretches like a wall along the north bank of the Nerbudda, has nothing to correspond with it in the Sautpoora hills on the south bank. But probably this formation is to be seen much farther south in small ranges running north and south in the Chanda district, and parallel to the east bank of the Pranheeta and Godavery. These hills, composed of reddish indurated sandstone, generally rise from a metamorphic area, and though they appear on the whole flat-topped, yet gradually rise towards the south, where they end in a bluff towering precipice, surmounting a sloping talus.

Lower Damooda group of rocks.

465. To compensate for the want, or rare occurrence, of the Vindhyan in the southern division, we here meet with a group of rocks styled the "Lower Damoodas" by the Geological Survey. This series is not known in the northern division, except at the base of the northern slope of that section of the Sautpoora range, called the Meikul Hills, which, though north of the Nerbudda, are more naturally connected with the geology of the south; but south of the Nerbudda, the series appears at various points, at the base of the Sautpoora hills; on the south bank of the Nerbudda they occur in various tributaries of this river, especially the Seeta, Riva, the Tawa, and the Machna. At Oomrait, near Chindwarra, on a small affluent of the Pech, which finds its way by the Godavery to the Bay of Bengal, and at Kooiba on the Husda, a tributary of the great Mahanuddy (and situate on the extreme north-east frontier of these Provinces), the same beds have been discovered. They belong to the coal measures of India, and are distinguished by a preponderance of simple pounded forms.

466. Overlying these, in several localities both north and south of the Nerbudda, are other strata yielding coal, though of an inferior quality, with plants allied to cycas and cypress in their characteristic fossils.

Maladeva rocks.

467. More extensively spread are the Maladeva rocks which form the great mass of the Puchmurree hills, and run, with interruptions, in a south-easterly direction through the Nagpore and Chanda districts towards the Godavery. They contain a few stones, and are remarkable for bands of coarse iron ore passing irregularly through them. This age is supposed to be upper cretaceous. Above these are found the beds which have been called the Taklee series, which follow the same course along the northern face of the Sautpooras as the carbonaceous strata. They also occur in the Nagpore and Chanda districts, and it is believed that much of the open country of Chutteesghur is composed of them. They include sandstone, red shales, argillaceous limestone, and green and purplish clays, as well as the intertrappean stratum before alluded to, which in various parts of the country has embedded a great variety of fresh-water shells, and at Taklee, near Nagpore, many interesting seeds and fruits.

The Trap rocks.

468. The trap which commences at Amerkuntuk and forms the plateau of the Meikul hills at Jubbulpore, crosses the Nerbudda, and constitutes the table land of Seonee, Chindwarra and Baitool, and finally descending into the plains, covers the western and larger portion of the district of Nagpore, whence it extends uninterruptedly to the coast at

Bombay. The trap as well as the metamorphic rocks are, in many tracts, overlaid by that peculiar sort of iron-clay called laterite.

The iron ores.

469. It is in the crystalline schists which lie at the base of our geological scale, and in this laterite which occurs at the top, that iron ore is found. To the age of the former belongs the ore of Punaghur and of Dhurmpoora, near Lamata Ghat in the Nerbudda, both near Jubbulpore, which may yield about 50 per cent. of iron. The same kind of ore, though not worked, and not likely to be so for a long time, is met with in the Beila Deela hills of Bustar. A reformation of it is extracted from the mines near Tendukhera on the north bank of the Nerbudda, where the average per-centage of pure metal is believed to be 50, and at Agaria and Jaolee, north-east of Jubbulpore, where it is said to be 60. Specular iron ore occurs also abundantly in the metamorphic rocks of the Chanda district, and is dug at Dewulgaum, three miles from the east bank of the Wyngunga, at the foot of a hill named Khandeshur in the Chanda district, which rises to a height of 200 feet above the level of the plain, and is richly charged with metal. Some of the best specimens picked up below are partially magnetic, and may contain not less than 72 per cent. of iron. In the same neighbourhood similar ores are worked at Bhanpore, Goongwye, and Lohara, within 12 miles of the west bank of the Wyngunga, and at Metapar and Ogulpet, which are situated at a greater distance. At Ambajirree and other villages situated in the Chandpore pergunnah, north-east of Nagpore and near the Wyngunga, laterite ore is smelted, but of course it is not so rich in iron as those last mentioned.

In the valley of the Wyngunga.

The iron mines of Tendukhera near the Nerbudda.

470. In the Nerbudda territory, the best locality for more extensive operations, would appear to be Tendukhera, or more correctly speaking Oomerpanee, where the smelting of the ore, which is by no means refractory, may be aided by a limestone flux brought down the river, and where, when the jungle should fail to afford a supply of fuel, Seeta river coal is procurable at a distance of 30 miles, while the site of the furnaces is only about four miles from the north bank of the river, and 15 from the line of the Great Indian Peninsular Railway on the south bank. On the whole, this is by far the most favourable locality within the Central Provinces, for European enterprise in this branch. It is probably destined to future greatness.

471. Other favourable localities are Agaria and Jaolee near Jubbulpore, where the ore is rich in metal, the jungle adjacent and extensive, and within a convenient distance of the extension of the East Indian Railway from Allahabad to Jubbulpore.

Iron in the valley of the Wyngunga.

472. In the Chanda district, the Dewulgaum furnaces on one bank of the Wyngunga, and those of Lohara, &c. on the other, are worthy of attention. At these the ore, which is of the richest description, has long been smelted with the charcoal from the extensive jungles around them; and notwithstanding the imperfect mode in which the manufacture is conducted, considerable quantities of iron are produced, which are carried by bullocks to great distances. It is believed that the jungle, when properly conserved, would furnish enough fuel for works of some importance. A flux can be procured from the banks of the Prenheeta, into which the Wyngunga flows; and if the navigation of the Godavery be improved, as at present proposed, a cheap means of conveyance will be afforded for the iron to the east coast. Should the ores of these localities be worked to any large extent, there would be little need of that obtained from the laterite, which is preferred by the natives simply on account of its softness, and its greater adaptation to their capabilities. On the whole, this neighbourhood is a tract of great interest and promise.

Red ochre pigment.

473. However, this formation would still be valuable from its furnishing the useful pigment red ochre or ruddle; this is extracted, of very excellent quality, from the quarries of Mundunpore and Thakoortola on the west of the Raepore district.

Munganese.

474. Allied to the iron ores above described, is the black oxide of munganee at Satuck, Koomaree, Biroli near Bhoora, and on the Lanjee Goodwa hills, which lie in nearly a straight line drawn to the north-east from Nagpore to the Bungur River.

Iron in the Seonee district.

475. In the Seonee district, within the Sautpoora Range, iron ore is found in several places. In the Kutunghee pergunnah, near the foot of the Sautpoora Range, and near the borders of the Bundarra district, it is found in large quantities in the lands of a village called "Lohâ Agree." This iron is much valued for its softness and malleability. It is found in small quantities in the Dongurea talookas, south-west of Seonee, about 12 or 14 miles. But all over the Durasee talookas, the hills which form the edge or margin of the Seonee plateau, and distant from 12 to 20 miles from Seonee, in a south and south-easterly direction, great quantities of iron are to be found. The ore is worked out after the native fashion, by a class of people called "Agree," chiefly at the villages of Ambaghur, Pukhan, Dulall, Durasee, Moondapar. In almost all the beautiful valleys between these hills are streams which, without artificial appliances, are running all the year round; and which might with judicious damming, and an arrangement of reservoirs and inclines with sluice gates (as in the Dehra Doon Canal), might be turned to great account for motive power. And in the same neighbourhood there is a rich abundance of low forest, whence fuel could be supplied. The quality of the Durasee ore has not been definitely ascertained. If it should prove good, then the advantages on the spot, in respect to fuel and motive power, would be considerable. And the locality is only 12 miles distant from the

the main road from Nagpore to Jubbulpore. In several parts of the Lucnadown Pergunnah, near Chupara, Guneshgunge, and in other places, iron is found, but it is chiefly lateritic*.

476. In the same direction gold is washed from the sands of the Soane River, near Lanjee, and another tributary of the Wyngunga, near Thuroora. It is also found near Purtabpore and in the Kotree River, in Bustar; and at Heerakond in the Mahanuddy, not far from Sumbulpore. At all these places the natives do not earn more than a bare subsistence; but whether the washing would prove more remunerative by a more systematic mode of operation, it is difficult to pronounce.

Diamond mines.

477. It is unnecessary here to refer to the diamond washings at Heerakond, as they have been frequently described in several publications. The only other locality in the Central Provinces where this gem has been discovered, is Wyraghur in the Chanda District, where, in former days, it was washed out of a laterite grit. An inferior kind of corundum is obtained from Pohora, in the Sahangurree Pergunnah. Potstone is cut into vessels at Deenee, near Rampeylee, and at Biroli, near Thuroora, both in the Bhundarra District, and at Jumbool Ghat in that of Chanda. In the softer form of steatite, it is to be met with at the Rajadhar Pass, in the Sautpoora Hills between Raepore and Mundla.

Coal in the Central Provinces.

478. The coal of the Central Provinces would appear to have been exaggerated, both in regard to quantity and quality. That which is procured from the upper carbonaceous strata, with remain of cycadciæ is scarcely worth the expense of digging; but that which is obtained from the "Lower Damooda" beds, if proper attention be paid to the selection of sites for works, may turn out to be of considerable economic importance. The best of all the Nerbudda localities seem to be *Mopanee* on the Seta River, where the four seams give an aggregate of 20 feet of coal. This place is in the hands of an European company, and seems destined (like Tendookera) to future greatness; and where the railway, passing within 10 miles of the north of it, will not only create a demand for its own purposes, but also afford facilities of transport to the towns and ironworks along the line. At Kotree, near Shahpore (situate between Nursingpore and Hoshungabad), the coal is not so abundant, and the place is about 20 miles further south of the line; still this village, by means of a tramway, would form a useful addition to the other supply. Rawundeo, on the Tawa River, as described by Mr. J. G. Medlicott, promises well both in quality and quantity; the only disadvantage being that it is 10 miles south of Shahpore. This additional distance, however, would only require a prolongation of the Shahpore tramway to that extent, as from that town to the railway both the Kotree and Rawundeo minerals would be carried along the same road. The coal near Oomrait, which lies close to the surface, with a very slight dip, has already been begun to be mined by Mr. Stanbrough; but though in horizontal extent it may be equal to that found at the three localities above named, yet in thickness it is not to be compared, being confined apparently to a single seam of one foot, and that too far removed from the course of traffic. The Koorba coal field, on the extreme north-east frontier, has not yet been examined.

The Mopanee coal fields near the Nerbudda.

Coal at Oomrait.

SECTION V.—SURVEY.

Existing means of geographical information.

479. FOR the Saugor and Nerbudda territories generally, except Mundla, the available topographical information is generally good. For the western parts of the Nagpore Province, what is known as Norris's Survey, made many years ago under Mahratta rule, is very useful and complete. But for eastern, central, and southern parts of Nagpore and for Sumbulpore, there is an utter want of reliable survey. As regards the southern parts of Nagpore, our general topographical information has been much improved during the last season by the visits of Captains Stewart and Glasfurd.

Various surveys in progress.

480. The revenue survey was commenced in the Saugor and Nerbudda territories during 1853-54. It was interrupted in 1857, but has been since resumed. It has been completed in the Jubbulpore and Nursingpore districts; half finished in the Saugor division; for the other districts it is not yet commenced. In the Nagpore province it has been completed for Nagpore and Bhundarra districts, but not commenced in the other districts. This survey marks the boundaries of villages and estates, and supplies details of cultivated and waste lands, and is a complete and excellent work. It will be very desirable that the topographical survey party, now working in the Berar Hills, should extend their operations to those hills in the Baitool and Chindwarra districts, which might be made available for European sanataria and settlements.

Geological survey.

481. The operations of the geological survey of India (chiefly conducted by Messrs. J. G. Medlicott and William Theobald, junior), have extended over the Vyndhya Range, the Nerbudda Valley, and the northern face of the Sautpoora Range, and full accounts have been published. Of the southern face of the Sautpoora Range, and of the Nagpore Province, there has been no regular geological survey. Previous to the geological survey, the mineral resources of the Nerbudda had been examined by Messrs. Blackwell and Jacob.

* Iron is also produced in the Langhee Hills, and in the villages near Sahungurree, in the Bhundara district; it is very useful for local consumption, but it is also of a lateritic character.

SECTION VI.—FAIRS.

Places where the principals fairs are now held.

482. AMONG the best means for increasing internal trade, and with it civilization, for arousing a spirit of progress by interchange and intercourse; and for improving breeds of useful cattle in the interior; is the establishment of annual fairs at seasons suitable to the holidays and festivals of the people. In these provinces, as elsewhere, the people are naturally disposed to favour such institutions. In regions like these, too, numbers of ignorant and half civilised people, from wild and remote districts, repair to these occasional fairs and derive much improvement thereby. Already four celebrated fairs are held on the banks of the Nerbudda, one near the Marble Rocks of Jubbulpore, one near Nursingpore (an account of which has been published in the "Government Gazette,") one at Gurrakota, and one near Hoshungabad. All these have largely increased under British rule. Other fairs are also held, one on the banks of the Wyngunga, in the Sautpoora Hills, one in the Chutteesghur Plateau, one on the banks of the Wurda, near the cotton mart of Arvee, and one near Chanda. All these may be vastly improved and extended, to the great benefit of the people, by the easy and beneficial exercise of official influence. An inquiry is making through all the district officers, with a view to the establishment of additional fares. At two places especially, namely, the sacred Ramteek hill, near Nagpore, and the famous plateau of Mooltye (in the Baitool district), where the fountain source of the River Taptee springs from the ground, it may be possible to establish fairs of great dimensions for the merchandise, produce, and cattle of the surrounding districts. It is hoped that the next year's report may show some increase to these useful institutions throughout the Central Provinces.

Mode of extending these institutions.

SECTION VII.—CARRIAGE AND SUPPLIES.

Impressment of labour and carriage.

483. IN provinces like these, thinly populated, deficient in capital, and backward in enterprise, and yet having troops, travellers, and public departments to be provided for, the supply of labour and carriage must be a subject of anxiety. Heretofore the seizure of bearers, labourers, carts and bullocks, at the principal stations, and along all the main lines of road has been common, and for the most part has been carried on under authority exercised through the police, or the revenue officials, and often by private travellers and individuals. At some places, such as Nagpore, Jubbulpore, palanquin bearers can really be got for hire without any pressure; but at few other places does this advantage exist. Labourers, carts, and bullocks are probably pressed everywhere. The impressment system here, as elsewhere, is called by the well-known name of "Begâr." In these provinces it is a matter of loud and universal complaint among the people. In these provinces, however, the evils resulting are three-fold; 1st, labour is abstracted from its proper sphere, and loss to agriculture and traffic ensues; 2nd, the labour so abstracted is not, and cannot be, remunerated; 3rd, the authorities, finding that urgent need is temporarily supplied, are tempted to defer the more difficult work of introducing radical reform.

Evils of that system.

484. The moral wrong involved in the continuance of this, under a civilized Government, is too obvious to require further mention. That the system is not of British creation, and was bequeathed to us by the Native Government, may be true, but that cannot furnish a really valid excuse. On the other hand, until some local means and resources shall be found, it is difficult to prohibit absolutely this unfortunate system; and the prohibition, if issued, would not be effectual. European officers and travellers in these provinces must, by some means or other, be provided for; often too, military requirements are imperative, and it is difficult to prevent public departments from abusing authority where the need or the temptation is great.

485. It has also been one of the recognised duties of the police to procure supplies for travellers of all classes. This system, if it do not lead to downright oppression is, nevertheless, open to much abuse, and is demoralising to all concerned.

Police prohibited from interfering.

486. The first step in reform has been the absolute prohibition to the new constabulary against the seizure of labour and carriage, and the procuring of supplies. The police may give information regarding supplies, and may assist in obtaining carriage for European travellers on prepayment of a really fair price; but the employment of force is forbidden. There seems to be no doubt that this prohibition is operative, and is attended to by the police. The next stepwill be the further prohibition to the police against any interference even to the above limited extent.

Appointment of headmen and contractors.

487. But the real remedy which can alone prove effectual is the provision of local supply, and resources in labour and carriage. At present, with the exception above noted, none such exist. The plan so successfully adopted in the Punjab will equally succeed here. Let headmen and contractors be appointed at every station, great and small; some undertaking

undertaking to furnish bearers and labourers, some to furnish carts. Let these men be appointed with the sanction and countenance of the district authorities. Let them charge at rates which experience may show to be really remunerative in the existing state of the market. And let them be rewarded by a small commission on all they supply, to be paid by the party supplied. Such men will gradually collect and attract a sufficient supply of labour and carriage. As private individuals, they cannot force, they must induce; and the only effective inducement will be the offer of good wages. Orders have been now issued to all Commissioners and Deputy Commissioners, and arrangements are set on foot for the establishment of these headmen and contractors everywhere. This done, it is hoped that all legitimate requirements will be met, and oppression put an end to. But prices will rise—an inevitable result, which is not, however, on the whole, to be regretted.

SECTION VIII.—POPULATION.

Absence of statistics at present.

488. ON this subject also there are really no reliable statistics. Estimates have indeed been made from time to time, but no census has ever been taken in these provinces. In point of fact, however, the taking of a census in such provinces as these by any procedure that could be adopted for that purpose might prove a delicate matter; and if it were done at all a suitable opportunity should be watched for. The present time does not seem to me to be quite a fitting one for this purpose. In the meantime, however, the progress of the settlement will afford excellent means of calculating the agricultural population, without creating the least alarm or surprise among the people. This done, it might be practicable to take a census in the towns. At all events, within a brief period the number of houses can be reckoned up, and from that the aggregate of the population could be assumed with a fair degree of certainty. At this moment I can only state that for the Nagpore Province, including Bustar, the population has been estimated at between 4,000,000 and 5,000,000; and the population of the Saugor and Nerbudda territories at 3,000,000 and more. Then the population of Sumbulpore and its dependencies are supposed to be 500,000; altogether the total population of these provinces is assumed at 9,000,000, or something under.

Mode of preparing such in future.

SECTION IX.—TRADE STATISTICS.

Absence of statistics.

489. THE entire absence of reliable statistics regarding trade and production has been more than once alluded to in the preceding pages of this Report. No such statistics has yet been prepared, or attempted to be prepared, in these provinces, although there are many pressing questions, the solution of which might be assisted by data of this kind; in some cases the returns of the Octroi, recently established, may supply some information. But even this would be very incomplete and insufficient for any important purpose. Arrangements are now being made, chiefly through the existing Civil machinery, for the collection and collation of the statistics of trade and traffic in all the towns and cities, and in all the main lines of road throughout these provinces; so that some statistical returns of general value may be available.

Measures taken for their preparation in future.

SECTION X.—HISTORICAL REMAINS.

Architectural ruins and buildings in the Central Provinces.

490. THERE are historical remains scattered all over these provinces, belonging apparently to Rajpoot Gond dynasties, mentioned in the introductory chapter, or to the Hindoo dynasties which preceded them. There are scarcely any Mahomedan remains. The most remarkable of the Hindoo architectural specimens, are those at Ramnuggur, near Mundla; at Jubbulpore; at Bhera Ghaut, near the Marble Rocks; at Chowraghur in the Nursingpore district; at Rahutghur in the Saugor district; and at Kheela in the Baitool district; at Ghunsore in the Seonee district; at Deoghur in the Chindwarra district; at Ramteek and Katolee in the Nagpore district; at Ruttunpore in the Belaspore district; at Chanda, Bullarpore, and Bhanduk, in the Chanda district; at Budrachellum on the Godavery; in the heart of the wilderness of the Bustar State. Many of these valuable and interesting ruins have been much neglected; but the district officers have now been required to have the old buildings within their respective districts properly cared for, and watchmen entertained for that purpose at the expense of the local funds.

SECTION XI.—HOSPITALS AND DISPENSARIES.

Civil surgeons.

491. The medical arrangements throughout these provinces are now complete. There are civil surgeons, commissioned officers, at 16 civil stations, including the proposed sanatarium of Muthoor; the remaining two stations, Nachengaon and Belaspore, having apothecaries. The presence of these officers greatly tends to mitigate the disadvantages of residence in remote stations, and thus adds strength to the civil administration.

Charitable dispensaries.

Their results.

492. At all these stations charitable dispensaries have been either established or recommended. For the few remaining to be founded, propositions have been recently submitted. Buildings have been provided, and subordinate medical establishments entertained. Native patients or others applying for either medicines or medical treatment, receive such gratuitously. And a limited number of several cases are treated in-doors; the patients being accommodated in the building. Many of these dispensaries have not yet reached their full growth in usefulness. The figures given below, will show approximately the relief afforded within the past year 1861:—

	Out-door.	In-door.	Male.	Female.
Nagpore	4,449	435	4,243	641
Raepore	6,087	863	5,349	1,101
Chanda	1,030	315	1,115	230
Chandwarra	1,096	169	1,072	193
Bhundara	2,059	251	1,787	523
Kaota	385	26	343	68
Belaspore	1,037	13	808	242
Hoshungabad	510	15	—	—
Saugor	3,297	208	—	—
Jubbulpore	8,065	557	—	—
Nursingpore	700	167	—	—

493. The annual cost of these dispensaries amounted to 14,941 rupees in the year 1861, of which 1,910 rupees were defrayed by private subscription, and the remainder by the State. This expenditure will fall at the rate of $7\frac{1}{2}$ annas per head per annum, on the aggregate of patients. Besides the physical benefits conferred by these institutions, their moral influence is considerable in wild and half civilised places, such as many of these districts are. Rude and timid tribes, when seeking relief from the severe ailments to which they are liable, are brought within the influence of conciliation, and taught to emerge from the retreats of barbarism.

494. In the Nagpore city, an additional hospital is being built by the public spirited contribution of Dr. Hende, the civil surgeon, and Rae Bensee Lall Abeerchund, the banker.

Vaccinators.

495. Vaccination generally has not been successful in these provinces, partly owing to the prejudices of the people, and partly no doubt to defects in the operation itself. The following figures will show the number of persons vaccinated during the year 1861:—

	Number Vaccinated.	Successful.
Saugor	466	321
Jubbulpore	1,329	949
Hoshungabad	1	1
Nagpore	1,395	1,231
Raepore	480	374
Chanda	26	—
Chindwara	109	73
Bhundara	1,454	1,255
Total	5,260	4,204

CHAPTER XIV.—CONCLUSION.

496. IT remains to mention or bring to the notice of the Supreme Government, the names of those officers who have played a good or a distinguished part in the administration of the territories now included in the Central Provinces.

497. It would not be proper for me to mention, particularly, the names of Colonel W. C. Erskine, who was Commissioner of the late Saugor and Nerbudda territories from 1853 to 1861; or of Mr. G. Plowden, who was Commissioner of the late Nagpore province from 1855 to 1859; or of Colonel E. K. Elliot, who held that office from 1859 to 1861, was appointed Chief Commissioner of the Central Provinces in December of that year, and proceeded to Europe on medical furlough in March 1862. The services of these officers are doubtless well known to Government. But I crave permission to record my sense of the cordial aid and co-operation afforded by Colonel Elliot in the important financial inquiries in which I was associated with him during the autumn of 1861, in respect to the Central Provinces. Many of the results of those inquiries have been described in this Report.

Services of officers under the civil administration.

498. Among the officers immediately connected with the Administration, Lieutenant Colonel Spence held the office of Judicial Commissioner from the 1st October 1860 to 11th December 1861, when he became Commissioner of the Nagpore division. As a civil and criminal judge, he has, in the disposal of a vast number of cases, obtained the confidence of suitors and of the people generally. He held charge of the Chief Commissioner's office from the 27th February 1862 to the 25th April 1862. Mr. A. H. Cocks was judge of the Saugor and Nerbudda territories, and acted as Commissioner for some time, and proceeded to Europe on medical furlough. He has left a name deservedly popular with all classes, European and Native.

499. Among the Deputy Commissioners, Mr. R. S. Ellis, of the Madras Civil Service, was district officer of Nagpore during the troubled year of 1857-58. By his spirited and energetic conduct during that trying time, he added stability to British authority and honour to the British name among the people he ruled. Captain G. F. S. Browne (Madras Staff Corps) in the Saugor division, proved himself an able and energetic officer. He acted as judge in the Saugor and Nerbudda territories for some months, and is now officiating as Commissioner of the Nagpore division. Captain Charles Elliot, Madras Artillery, rendered good service in the Chutteesghur district during the year 1857-58, and received the honours of the Bath. He is known to be an officer of general ability. He has been appointed Commissioner of the Chutteesghur division. Colonel Balmain (Madras Artillery) acted as additional Judicial Commissioner for a year at Nagpore, and disposed of much heavy appellate business in a satisfactory manner. He is now acting as Commissioner of Chutteesghur. Major W. H. Crichton (Madras Staff Corps) received the honours of the Bath for service rendered during 1857-58, and has managed a large wild district with vigour and judgment. Major Snow has, as Deputy Commissioner of Nagpore, acquired popularity with the upper class of natives. Captain Nembhard, Bengal Staff Corps, and Mr. Master, Civil Service, have proved themselves to be good district officers. Mr. Ross, Uncovenanted Civil Service, has been engaged successfully in important settlement operations in the Nagpore district. Captain Glasfurd, Bombay Staff Corps, in charge of the Godavery district, has managed his wild and extensive charge with judgment and care; and has, by tours undertaken in insalubrious localities, added greatly to our knowledge of those parts. Major Impey (of the Bengal Army) did, by political and civil services in the Sumbulpore district and its dependencies, mainly contribute to the restoration of peace in that much vexed territory. Major Dennys (Bengal Army) has served but for a short time in these provinces; but he has managed successfully a difficult district, the administration of which had fallen into a backward state.

500. The following Deputy Commissioners and Assistants have been well reported of:—

Captain W. B. Thompson.
„ A. C. Gordon.
„ H. F. Waddington.
„ F. A. Fenton.
Major J. N. Maclean.
Captain C. Baldwin.
„ J. J. Fulton.
„ A. B. Cumberlege.
Mr. H. J. MacGeorge.
Mr. H. Read.
Lieutenant G. A. Warner.
Captain C. T. O. Mayne.
Lieutenant M. P. Ricketts.
„ C. H. Grace.
Captain H. S. Rammell.
„ H. F. Bolton.
Mr. J. Chisholm.

Captain J. Ashburner (Bombay Army) has conducted the political duties connected with the Palace of Nagpore in a satisfactory manner. Captains Ousely, Playfair, and Magniac, Cantonment Joint Magistrates at Saugor, Kamptee, and Jubbulpore respectively, have all discharged their important duties in a satisfactory manner.

501. Among the Extra assistants, I desire to mention especially Agha Mahomed Shoostree, who has distinguished himself as a prompt and efficient civil judge at Nagpore. Mr. Cline, Mr. Manton, Mr. Cameron, and Sheo Pershad are well reported of. Among the late Judicial Staff of the Saugor and Nerbudda territories the following officer is mentioned favourably:—Kooj Beharee Lall, now an extra Assistant Commissioner.

502. Of those officers engaged in the ministerial duties, Mr. Barclay, of the Chief Commissioner's Office, Mr. A. M. Russell, of the late Commissioner's Office at Jubbulpore, and Mr. J. Bailey, Superintendent of the Judicial Commissioner's Office, deserve mention for their zeal, ability, and knowledge.

503. I am not able to name any of the Tehseeldars, or of the Sheristadars, as having won distinction.

504. The new police has been so recently organized that I am not able to notice many of the officers. But it is due that the Inspector General, Lieutenant Colonel H. D. Taylor (Madras Army), should be noticed in this Report. In carrying out the retrenchments ordered, and in organizing the reduced establishment, so as to make them as effective as possible, he has evinced both judgment and ability. The Deputy Inspector General, Major Moxon (Bengal Army) is a zealous and experienced officer. Among the District Superintendents, I desire to mention Captain Morris, who has been in charge of the Nagpore city and district for more than half of the last official year, and has introduced much reform into the police. Under him Sheikh Boodun, the city superintendent, an experienced official obtained from Bombay, has rendered good service.

505. In the Forest Ranger department, the services of Captain Pearson (Madras Army) and Captain Stewart (Bombay Army) deserve praise. In the performance of their duties these officers have travelled in unhealthy places, and dwelt for months in the hills and forests. In the Revenue Professional Survey, Captains Grant and Oakes have executed their important work in a complete and accurate manner.

506. In the Customs Department, Messrs. Bell, Melville, and Bartie have rendered effective service.

507. Among the Civil Surgeons Dr. Hende deserves special mention, not only as a professional officer, but for his zeal in the management of the gaol and the dispensary. From his private funds he has contributed largely to the erection of a new dispensary building in the city of Nagpore. Also Drs. Wilson, Wyndowe, Bensley, King, and Cameron are officers of known merit and ability. As a class, all the civil surgeons in these provinces have done well.

508. Lastly, I have to state that Captain Mackenzie (Bengal Army), during the brief time that he has served as Secretary to the Chief Commissioner, has afforded important aid in prepairing the requisite instructions for the Fiscal and Judicial Departments; and, in the revision of all Civil establishments, has rendered valuable service, both administrative and financial.

Services of officers in the late Nagpore Irregular Force.

509. In the Nagpore Irregular Force, Major H. Shakespear, the Commandant, originally served in the Hyderabad Contingent, and afterwards in the Nagpore Province; served with high distinction throughout the years 1857 and 1858. The following officers belonging to that force also deserve honourable mention:—

Major W. G. Arrow.	Captain E. M. Playfair.
Major J. C. Day.	Captain C. L. Pereira.
Major E. G. Wood.	Captain J. E. Burton.
Major the Baron F. Von Meyern.	Lieutenant A. Cockburn.
Captain T. E. L. Higginson.	Doctor S. J. Wyndowe.

Services of officers in the Department of Public Works.

510. In the Public Works Department I should first mention Lieutenant Colonel H. Maxwell (Engineers), Chief Engineer, who infused energy and life into the Public Works of the Nagpore province. Lieutenant Colonel A. Impey (Engineers), having proved himself a good superintending engineer in the Saugor and Nerbudda territories, has since been highly efficient as officiating Chief Engineer of the Central Provinces and Secretary in the Public Works Department. Of the other officers, I desire to mention foremost Mr. Heyman (Executive Engineer), in charge of the division of the Great Northern Road. The style and the speed with which he has advanced difficult works in a wild and rugged country entitle him to signal praise. In these successful operations Mr. Whiting (Supervisor) has afforded very important aid. In the erection of bridges, on another section of the same line, Mr. O'Donnell has proved himself to be an efficient and able officer. Captain Prior (Madras Army) has evinced capacity for becoming a valuable executive officer. Major Campbell (Madras Army) has done much work out of doors, and is an officer of industry and practical knowledge. Captain Cobbe (Madras Artillery), assistant to Chief Engineer, has managed the affairs of that office in a highly satisfactory manner, and is an officer of considerable attainments. Captain Chapman (of the Madras Army) performed good work on the Chindwarra road. I desire to add that Captain Sim, commanding the Madras Sappers at Seroncha, has co-operated cordially with

with the civil authorities, and has rendered his men very useful. Mr. Meara (Civil Engineer) has executed a considerable amount of work on the Great Eastern Road.

Concluding remarks

511. This Report is now concluded. I have endeavoured to explain, with as much brevity as the number and variety of the subjects would admit of, what has been done, and what is being done, for the administration of the Central Provinces. The matters to which attention is now being particularly directed may be stated as follows, in the same order as the several chapters and sections of this Report:—

I. The giving effect in the Judicial Department to Act VIII. of 1859 for Civil Procedure, and to the Punjab Code for Principles of Law.

II. The lessening of the excessive duration of suits, and the better regulation of costs.

III. The working of Small Cause Courts, so as to avoid hasty and imperfect decisions, while securing speedy justice; and the limiting of the frequency of appeal.

IV. The employment of assessors and punchayets; the discouragement of Native pleaders and agents; and the establishing of clerks of the courts after the model of Oude.

V. The recording of evidence by the hand of the judge, and the admission of the Mahratta language into the courts of the districts where that language is spoken.

VI. The quicker despatch of criminal trials before the Session Courts.

VII. The vesting of Native chiefs and gentry with judicial and magisterial powers, graduated according to individual fitness.

VIII. The punctual rendering of such returns in all branches of the Judicial Department, as may lead to the constant correction of defects.

IX. The working of the newly-organized constabulary.

X. The entire suppression of gang robbery.

XI. The erection of suitable gaol buildings; the introduction into the prisons of those measures which have elsewhere been found to conduce to the moral discipline of the prisoners; and the subjecting of the prisons to regular inspection.

XII. The commencement and early completion of the revised assessment of the land tax for periods of twenty and thirty years throughout these provinces.

XIII. The concession of a permanent settlement to all estates fit to receive it.

XIV. The securing of a perfect proprietary title in the land, generally, throughout these provinces; and the protection of tenant right and other subordinate interests.

XV. The demarcation of unclaimed waste land available for grantees.

XVI. The inspection and regulation of the settlement operations on an uniform principle.

XVII. The better supervision and repair of minor irrigation works in the Nagpore province especially.

XVIII. The improvement of the local arrangements for collecting the salt tax in certain districts; and its extension into districts now exempt.

XIX. The improvement of the system of excise on intoxicating liquors, by confining their manufacture to central distilleries.

XX. The working of the new Stamp Act.

XXI. The modification of the opium system.

XXII. The introduction of State education into the Nagpore province.

XXIII. The establishing of village schools throughout these provinces by means of the cess, levied at the rate of one per cent. on the land tax.

XXIV. The establishing of sanataria in the Sautpoora hills.

XXV. The completion of the main roads connecting Nagpore with the North.

XXVI. The speedy opening of the great line connecting Nagpore with the valley of the Mahanuddy, and with the Eastern coast.

XXVII. The construction of roads in the cotton districts of the Wurda valley.

XXVIII. The commencement of tramways in connexion with the railways.

XXIX. The better management of municipal works and local improvements generally, and in the Nagpore province particularly.

XXX. The observation of the circumstances connected with the navigation of the Godavery.

XXXI. The revision and regulation of all kinds of civil expenditure and establishments, so as to secure financial economy.

XXXII. The management of wild states and chiefs under political control (especially those on the frontiers), so that they may be won over to the cause of order.

XXXIII. The preservation of the existing forests.

XXXIV. The selection of localities suitable for European settlement, according to the Government Resolution of 17th October 1861.

XXXV. The better preparation of cotton by means of superior cleaning, pressing, and packing.

XXXVI. The progress of the revenue survey.

XXXVII. The establishment of fairs in the interior for merchandise, produce, and cattle.

XXXVIII. The prevention of the impressment of labour and carriage, and the introduction of an equitable system of supply.

XXXIX. The collection and collation of reliable statistics of population, trade, and agriculture.

512. On the first formation of a new division of the empire, work falls heavily upon those entrusted with its administration. This is especially the case when organic changes have simultaneously to be carried out in the Imperial system of some departments, such as those discussed under the Revenue and Judicial Chapters of this Report. Something has been effected—much remains to be done. But I think that, upon a consideration of past progress, and the present condition of affairs, there arises abundant hope of improvement in the future. I trust that the measures which have been introduced, as well as those which have been proposed, may meet the wishes, and tend to carry out the policy, of his Lordship the Governor General in Council.

(signed) *R. Temple,*
Nagpore, 1 August 1862. Offng. Chief Commsr., Central Provinces.

(No. 123.)

From Captain *Hector Mackenzie,* Secretary to Chief Commissioner, Central Provinces, to Colonel *H. M. Durand,* C.B., Secretary to the Government of India, Foreign Department, Fort William; dated Head Quarters, Nagpore, 14th August 1862.

Sir,

I AM instructed by the Officiating Chief Commissioner, to forward a statement of the receipts and expenditure of the Central Provinces for the year 1861-62, compiled from returns received from the Deputy Auditor and Accountants-General of Allahabad and Bombay respectively, in the form prescribed in your Circular Docket, No. 1,353, of the 30th June (received in this office on the 15th ultimo).

2. The accuracy of the figures may be depended upon as representing actual receipts and audited expenditure during the year 1861-62. They may be found to differ somewhat from the figures given in the Financial Chapter of the Administration Report, by Mr. Temple, forwarded to you under cover of my No. 20 of the 5th instant, which it may hardly be necessary to remark, indicate the revenue and charges appertaining to the year, without respect to actual collection or disbursement.

I have, &c.
(signed) *Hector Mackenzie,* Secretary.

STATEMENT of RECEIPTS and EXPENDITURE of Central Provinces for the Year 1861-62.

	RECEIPTS.	Rs.		DISBURSEMENTS.	Rs.
I.	Land revenue, including Sayer and Abkarree	58,69,501	A.	Allowances, refunds, and drawback	28,759

CHAPTER XIV.

P U N J A B.

ANNUAL REPORT on the ADMINISTRATION of the PUNJAB TERRITORIES, for the Year 1861-62.

SECTION I.—JUDICIAL.

PART I.—CIVIL JUSTICE.

1. The salient statistics of civil justice will be found in the Table below :— Statistics.

DIVISION.	Total Number of Suits on the File.	Number disposed of.	Remaining for Decision.	Total Value of Suits disposed of.	Average Value of each Suit decided.	Average Cost of each Suit.	Percentage of Cost to Value.	Average time occupied in each Case.	Percentage of Cases decided in favour of Defendant or Respondent.	Percentage of Cases disposed of by Razeenamah.	Percentage of Non-suits and Dismissals.	Percentage of Work disposed of by Tehsildars.	Miscellaneous Cases disposed of.
				Rs.	*Rs.*	*Rs.*	*Rs.*						
Delhi - - - - -	4,775	4,627	148	4,64,551	100	8	8	20	9	14	4	28	6,183
Hissar - - - - -	2,167	2,105	48	1,35,876	64	6	9	18	14	15	7	40	2,217
Cis-Sutlej States - - -	10,155	9,905	250	6,68,679	68	4	6	14	17	14	5	31	6,383
Trans-Sutlej States - -	15,706	15,147	559	6,94,170	45	3	8	25	16	15	3	48	8,981
Umritsur - - - -	15,675	15,193	388	7,23,515	48	4	8	20	18	16	9	38	17,170
Lahore - - - -	14,702	14,236	383	8,00,703	56	4	7	24	12	16	10	38	6,263
Rawul Pindee - - -	11,701	11,198	478	4,18,398	37	3	8	22	16	20	8	45	4,342
Derajat - - - -	8,465	8,316	94	2,47,024	30	3	9	12	13	14	8	43	3,979
Mooltan - - - -	10,365	10,256	109	4,81,876	34	4	11	13	13	17	4	51	3,790
Peshawur - - - -	5,654	5,468	181	1,83,484	33	3	9	15	15	9	9	41	2,538
TOTAL for 1861 - - -	99,365	96,451	2,638	48,18,276	50	3¾	8	19	15	16	7	40	61,855
TOTAL for 1860 - - -	1,04,221	1,01,296	2,236	57,09,153	56½	3½	6	33	18	17	8	38	64,548

2. Compared with 1860 there was an increase of 12 per cent. in the number of original suits instituted. The districts in which the increase was most visible were Jullundur, Sealkote, Lahore, Goojranwalla, and Jhung. The number of appeals diminished both in the district and the Commissioners' courts.

Increase of original suits.
In what Districts most visible.
Decrease of appeals.

3. The

Comparative litigation in Divisions.

3. The subjoined figures show the comparative litigiousness of the different divisions:—

DIVISION.	Population.	Total Number of Suits on the File.	Proportion of Suits to Population.
Delhi	1,328,650	4,775	1 to 278
Hissar	858,021	2,167	1 to 396
Cis-Sutlej States	1,761,377	10,155	1 to 173
Trans-Sutlej States	2,250,941	15,706	1 to 143
Umritsur	2,313,628	15,675	1 to 147
Lahore	1,558,715	14,702	1 to 106
Rawul Pindee	1,691,409	11,701	1 to 144
Derajat	910,696	8,465	1 to 107
Mooltan	1,230,632	10,365	1 to 118
Peshawur	862,756	5,654	1 to 152
TOTAL	14,766,825	99,365	1 to 148

Delhi less litigious than the Punjab.

4. The frequency of appeal to law in the Punjab proper, as compared with the Delhi territory, is very marked.

Class of cases increased.

5. The increased litigation is most perceptible in parole debts, which multiplied by one-fourth, and in debts on unregistered bonds, which rose by a third.

Average value of suits.

6. The average value of suits declined from *Rs.* 56 8 - to *Rs.* 50. It will be observed that the average for the Delhi division is 100 rupees, nearly double that in any other.

Proportion of suits decided by Tehsildars and Native judges.

7. The proportion of cases decided by the Tehsildars was 40 per cent., and of all the Native judges 60 per cent. Of the cases appealed to the District Courts, 20 per cent. were remanded for re-investigation.

Revision of judicial proceedings.

The reasons for it.

8. The extent to which the revision of the proceedings of the lower Courts is carried in the Punjab has attracted some attention; but the Lieutenant Governor, after carefully considering the subject, has become fully convinced that, so long as the judges are charged with Revenue and executive duties, have no special training for judicial work, and are unassisted by educated and respectable pleaders; it is very necessary for the superior Courts to have the power of insisting on the complete investigation of cases. Any uncertainty thus introduced into the operation of the law Courts is a less evil than that of affirming an imperfect trial, though it by no means follows that, because further inquiry is ordered, the decision of the lower Court is reversed. In consideration also of the ignorance of suitors who generally conduct their own causes, it has not been deemed expedient to withhold from the Appellate Courts the power of admitting supplementary pleas and evidence. The one object kept in view is to ensure the administration of substantial justice, by means of the existing judiciary, for any change of agency is dependent on financial consideration.

Satisfactory results.

9. The result is certainly not unsatisfactory. The industry of the courts is sufficiently attested by the fact, that out of 99,365 suits only 2,638 remained undecided at the end of the year; the average duration being 19 days.

Despatch and remands not productive of unpopularity.

10. It has been suggested that the expedition with which cases are disposed of, coupled with the facility allowed to appeals, and the frequency of remands, may bring the system into disrepute. But experience is the only fair solution of this question. If an annual decline in the number of cases instituted were perceptible, there would be ground for suspecting something wrong in the *officina justitiæ*. But what is the fact? An annually increasing resort to the law Courts, and that not merely for large sums, for which great risk and inconvenience will always be incurred, but for trivial amounts, which, even in this cheap Province, would not be worth recovery if the process were attended with the proverbial legal evils of delay, vexation, and expense. All suits for landed rights, which are those involving the longest inquiry, are decided in the Revenue Courts. The great mass of work consists of petty debts. Of the cases decided in 1861, 88 per cent., were less than 64 rupees in value. And as has been truly remarked by the Judicial Commissioner, the indebted community are lax of habit, and require a little gentle pressure to be brought face to face with their creditors. Many cases are disposed of by confession of judgment, and 16 per cent. are settled by compromise. Though the number of suits is large, the work is, for the most part, simple. It is most important that the way to its adjudication

Suits for land excluded from civil courts.

Petty nature of litigation.

Recusancy of debtors. Cases settled without detailed trial. Simplicity of the work.

adjudication should be easy and direct, and that there should exist speedy means of review and correction. These objects are attained under the present system, and in the statistics of the past year there is nothing to show that it fails to meet the wants of the parties concerned, and it may fairly be concluded that a scheme of Civil justice, of which the community increasingly avail themselves, is not practically defective in itself, or ill-adapted to the wants of the people most interested.

Cognovits.

11. The Lieutenant Governor has under consideration a proposal made by the Judicial Commissioner for admitting "cognovits." It is hoped that many suits may thus be stopped *in limine* before any expenses are incurred.

Family councils.

12. It is also in contemplation to devise some special trial, by means of "family councils" or otherwise, for the settlement of domestic disputes which the parties concerned do not wish to bring into open Court. Such disputes are very frequent in families of rank in the Punjab.

Limitation of appeals.

13. It has been ruled, that second appeals shall not be admissible unless some distinct error of law is shown from the decision of an Assistant Commissioner with ordinary powers of a Tehvildar, affirmed by a Deputy Commissioner, or in any suit in the nature of those cognisable in the Small Cause Courts where the value of the claim is under 500 rupees.

Small cause courts.

14. Judges of Small Cause Courts have been appointed at Delhi, Simla, Umritsur, Lahore, and Peshawur. These Courts have been freely resorted to, and the procedure is prompt and final; but it is considered too soon to pronounce decidedly on their general effects. They have rather afforded a means of settling a class of cases formerly not brought into Court at all than relieved the district tribunals of any considerable portion of their former work.

Honorary civil judges.

15. The jaghirdars invested with Civil jurisdiction disposed of 2,085 in average of 13 days to each case. The Commissioners have generally reported favourably of the manner in which this class of officers have used their powers. Their knowledge of, and influence with, the people, and the nearness of their residences to suitors, appear to more than make up for any deficiencies of judicial skill, which indeed is but little needed in the petty cases of which they have cognisance. Some of them are described as extremely zealous.

Registration.

16. The necessity of registration has, to a certain extent, been forced upon the people by the provisions of the Stamp Act, and 23,563 deeds were registered in 1861 to 12,440 in 1860.

Model account books.

17. The people have shown no disposition to adopt the model account books circulated for their instruction.

PART II.—CRIMINAL JUSTICE.

Number of cases.

18. The criminal business in 1861 was unusually heavy; 41,263 cases were brought to trial, the number in 1860 being 35,303. It speaks well for the diligence of the Courts that only 296 cases remained under trial at the end of the year.

Average duration of trials.

19. The average duration of trials, both with and without the police, was the same as the preceding year, namely, eight days with and seven days without the police.
Of 94,807 witnesses examined, 88,675 were discharged on the first day.
The average duration of sessions trials was reduced from 37 to 27 days.

Indian penal code introduced.

20. The Indian Penal Code having come into operation, a considerable difference has been caused in the nature of punishments; but it would be premature to compare the results of the new and superseded systems.

Capital sentences.

21. The number of capital sentences amounted in 1861 to 45, or 19 in excess of 1860.

Honorary native magistrates appointed in large cities.

22. In the large cities the plan of deputing a magistrate to the chief police office, for the purpose of disposing of all petty cases, has been tried with much satisfaction to the people. No detailed record of the evidence is kept, but the Deputy Commissioner has the power of ordering a fresh trial where he may deem it advisable. At Lahore this minor criminal business is now transacted by a *quorum* of Native magistrates, residents of the city, who are selected for their rank and the good repute in which they are held by their fellow-townsmen. Their functions are discharged with efficiency, popularity, and relief to the stipendiary magistracy.

Jaghirdar magistrates well reported on.

23. Similar results have attended the jurisdiction conferred, about a year ago, on selected jaghirdars in rural localities. The following jaghirdar magistrates have been specially mentioned by the Commissioners:—

Sirdar of Booreea, Cis-Sutlej States.
Raja Jodbeerchund, of Nadown.
Raja Ram Singh, of Seeba.
Sirdar Goordut Singh, Ferozepore district.
Sirdar Jhunda Singh, Goojranwalla district.
Khwja Mahomed Khan, of Khutuck.

PART III.—POLICE.

Statistics of crime.

24. The following Table exhibits the number of crimes committed in the Punjab and its dependencies for the three past years :—

YEAR.	1st Class of Atrocity.	2d Class of Atrocity.	3rd Class of Atrocity.	4th Class of Atrocity.	Total of Heinous Offences.	Minor Offences.	GRAND TOTAL.
1859 - - - - -	265	792	20,273	2,362	23,692	23,226	46,918
1860 - - - - -	257	730	21,948	1,906	24,841	22,354	47,195
1861 - - - - -	253	721	28,470	2,190	31,634	22,460	54,094
Difference between 1860 and 1861 - - -	— 4	— 9	× 6,522	× 284	× 6,793	× 106	× 6,899

Analysis thereof.

These figures show an increase of 14·6 per cent. in the aggregate of crime for the year 1861. There was one crime to every 274 persons of the population instead of to every 314, as in the year preceding. The increase is almost entirely in heinous offences, there being one heinous crime to 470 persons instead of to 596, as in 1860. Yet in crimes of the two highest degrees of atrocity* there is a slight but continuous decrease throughout the three years.

In 1861 this decrease is in crimes not affecting property, as wounding with intent to murder and unnatural crime; whilst aggravated dacoitee, highway robbery, burglary, theft, and cattle-stealing materially increased. Coming to the third class of heinous crimes, which consist principally of the above-mentioned unaggravated, we find the large increase of 29 per cent. Burglaries were increased by 2,177; thefts by 2,471; cattle-stealing by 1,682. The increase in crimes of the fourth class is not excessive, but again it is to be noted, that uttering counterfeit coin increased by 120, and receiving stolen property by 132.

Sudden increase in crimes against property.

25. The characteristic of the year, therefore, is a marked increase in the frequency of crimes against property.

Now, in 1858, a decrease was observable in this description of crime. Crimes of the third degree of atrocity numbered—

In 1856 - - - - - - - - -	18,220†
In 1857 - - - - - - - - -	17,876†
In 1858 - - - - - - - - -	17,457†

It has been shown that in 1859 and 1860 no extraordinary increase occurred. But in 1861 the increase was most serious. In 19 districts this increase occurred under all the three heads of burglary, theft, and cattle-stealing; in eight districts under two of these heads, and in four under one. The increase was sudden and general, and must have arisen from some abnormal and pervading cause.

New system of police introduced, Cis-Indus.

26. A new system of police had been introduced into the Cis-Indus Territory, and it became a question whether or not the increase of crime were traceable to this cause. As the old system had been maintained in the Trans-Indus Divisions, a solution was easily attainable by a comparison of the incidence of crime in the two tracts. If the increase were visible only in the Cis-Indus Territory, then it might plausibly be attributed to the changes of departmental organisation; but if the increase were equally apparent in the in the Trans-Indus Country, some other cause must be sought for.

Was increase of crime due to this cause?

Comparison between Cis and Trans-Indus police, not unfavourable to former.

27. It would not have been surprising if, on the first employment of a new agency, some temporary derangement had resulted. Many circumstances, in fact, concur to render its career, at the first start, one of comparative inefficiency. But the criterion is not unfavourable to the Cis-Indus Country. Crime has there increased 12·3 per cent; in the Trans-Indus 13·7 per cent. As regards heinous crime, the increase in the Cis-Indus

* 1st CLASS.

Murder.	Murder with highway robbery.	Murder with cattle-stealing.
Murder by Thugs.	Ditto with burglary.	Wounding with intent to murder.
Ditto with dacoitee.	Ditto with theft.	Aiding and abetting in Suttee.

2d CLASS.

Culpable homicide.	Theft with serious aggravation.	Rape.
Affray or riot with homicide.	Cattle-stealing with ditto.	Incest.
Dacoitee with serious aggravation.	Assault - ditto.	Unnatural crime.
Highway robbery with ditto.	Administering poisonous drugs, &c.	Arson.
Burglary - with ditto.		

† Exclusive of the Delhi and Hissar Divisions, then attached to the North Western Provinces.

Indus has been 27·4 per cent.; in the Trans-Indus only 26·2 per cent.; but it is to be noted that crimes of the two first degrees of atrocity slightly increased in the Cis-Indus; in the Trans-Indus they considerably diminished. This last result is unusual; the character of the Trans-Indus population being commonly far more disposed towards violent crime than that of the more peaceable inhabitants of the Cis-Indus.

Crime, Cis and Trans-Indus, compared and analysed.

28. The following figures, showing the proportion of henious crime to population in the two regions, illustrate this difference of character:—

Cis-Indus - - -	1860 - - -	1	crime to	604	persons.
Trans-Indus - -	1860 - - -	1	„	536	„
Cis-Indus - - -	1861 - - -	1	„	475	„
Trans-Indus - -	1861 - - -	1	„	425	„

The description of atrocious crime which decreased in the Trans-Indus Territory were chiefly wounding with intent to murder, aggravated assault, rape, and unnatural crime. Murders with theft, and aggravated burglaries, and thefts increased. Coming to the aggravated felonies, of 11 cases of dacoitee, which appear against none in the year preceding, no less than nine occurred Trans-Indus. Highway robbery increased in all the districts, Trans-Indus; and Cis-Indus in the districts of Ferozpore, Loodiana, Thanesur, Delhi, Rohtuck, and Sirsa. It is observable that the increase of burglaries was not excessive in the districts (excepting Loodiana) south of the Sutlej; but in the richer tracts immediately to the north this crime became much more frequent, as the figures below will show:—

	Cases.		
	1860.	1861.	Increase.
Jullunder - - - - -	397	458	61
Hoshiarpore - - - -	659	1,078	419
Umritsur - - - - -	290	471	181
Goordaspore - - - -	195	640	445

Again thefts have not generally increased in the Cis-Sutlej Districts, excepting in Ferozpore; whilst in the Trans-Sutlej and Umritsur Divisions the same enormous excess, as in burglaries is visible. This excess appears also in the Lahore and Rawul Pindee Divisions. In the Lahore and Mooltan Divisions, cattle-thefts, the normal crime of the pastoral inhabitants, increased in a ratio ranging from 30 to 110 per cent., and an excess of this crime disfigures the statistics of almost every district in the Punjab, but is not marked either in the Cis-Sutlej or Trans-Sutlej tracts. Wanton destruction of cattle and child-stealing were more frequent generally. Coining was very rife at Umritsur.

29. It has been shown that the increase of crime was sudden, that it chiefly affected property, and that it was general and not to be accounted for by changes of police. It has also been seen that whilst violent open crime, such as highway robbery, appeared south of the Sutlej, to the north there was an enormous increase of petty burglaries and thefts. Great destitution may also be inferred to have existed from the prevalence of child-stealing and cattle-slaying. The statistics are probably not quite accurate, but they faithfully corroborate the conclusions to be deduced from actual events.

Severe famine south of Sutlej.

High price of food north of Sutlej.

30. During 1860 a severe famine afflicted the districts south of the Sutlej. It was most severely felt in the districts of Goorgaon, Delhi, Kurnal, Thanesur, Rohtuck, and Hissar. It was mitigated in a considerable degree by the means taken to feed the starving population, but the mortality was great and the privation general, and may easily have induced the desperation which rushes into open and violent crime. Again, although no famine was felt across the Sutlej, yet food became very dear, and the poorer classes, sorely pinched, were impelled to theft and robbery.

Increase of crime attributable to this cause.

It seems useless to seek for other causes of the increase of crime, when one so imperious and irresistible as the famine is at hand.

The quantity of wheat to be bought for a rupee declined on an average as follows:—

	Mds.	*Srs.*	*Chs.*
1859 - - - - - - - -	1	1	–
1860 - - - - - - - -	–	30	–
1861 - - - - - - - -	–	15	12

Proportion of heinous crime in each district.

31. The prevalence of heinous crime in each district, and the proportion in which it has increased during the year, will be readily gathered from the Table below:—

—	DISTRICT.	Number of Persons to one Heinous Crime.	
		1860.	1861.
1	Goorgaon	1,174	1,209
2	Huzara	1,568	1,025
3	Kangra	1,331	983
4	Jhelum	1,032	764
5	Dera Ismael Khan	1,189	623
6	Sealkote	760	618
7	Goordaspore	1,086	581
8	Jullundar	731	580
9	Rohtuck	915	571
10	Kurnal	1,068	552
11	Mozufferghur	486	517
12	Goojranwalla	605	515
13	Umballa	502	510
14	Rawul Pindee	891	497
15	Thanesur	464	454
16	Hissar	449	477
17	Umritsur	725	473
18	Goojrat	757	470
19	Dera Ghazee Khan	469	441
20	Googaira	535	432
21	Jhung	689	419
22	Ferozepore	698	418
23	Loodiana	356	390
24	Bunnoo	424	386
25	Lahore	407	386
26	Mooltan	475	372
27	Hoshiarpore	525	363
28	Peshawur	345	304
29	Sirsa	257	290
30	Shahpore	357	253
31	Kohat	286	211
32	Delhi	216	191
33	Simla	445	140

Adultery decreasing.

32. The following decline in the number of cases of adultery reported has taken place. It will be remembered that the decrease became apparent simultaneously with the appointment of corporal punishment for the offence:—

Year.	Number.
1859	875
1860	689
1861	675

Comparative success of police in prosecution of crime.

33. Subjoined are statistics elucidating the comparative success of the police in the prosecution and punishment of crime under the two different systems in force:—

YEAR.	Per-centage of Cases brought to Trial of those Reported.		Per-centage of Acquittals.	
	Cis-Indus.	Trans-Indus.	Cis-Indus.	Trans-Indus.
1860	72·8	82·3	22·	28·8
1861	72·6	84·3	26·9	22·5

The inference is in favour of the old police, who, in the Trans-Indus, have brought to trial a larger proportion of crimes, and also prosecuted a larger proportion to conviction. But such a result was to be anticipated not merely because the old system operates to the disadvantage of accused persons by uniting the police and judicial powers in the same person, but still more because the new police have not attained the skill and experience which they will hereafter acquire.

34. The

34. The strength and cost of the new police (Cis-Indus), exclusive of cantonment or canal police, or Thuggee establishments, are as follows:—

Strength and cost of new constabulary, Cis-Indus.

Number.	DETAIL.	Cost per Annum.	TOTAL.
	European Supervision:	*Rupees.*	
1	Inspector General	27,000	
1	Personal assistant to Inspector General	9,600	
4	Deputy Inspectors General	57,600	
25	District superintendents	1,84,800	
31	Assistant ditto	1,03,200	
2	Probationary assistants	3,600	
64			3,85,800
	District Police Force:		
56	Inspectors	92,640	
427	Deputy inspectors	2,80,800	
1,570	Serjeants, Foot	2,30,664	
276	Ditto Mounted	93,168	
9,102	Constables, Foot	7,26,564	
1,368	Ditto Mounted	3,28,320	
12,799			
444	Recruits	34,440	
	District establishments	14,124	
	Repairs of arms, &c.	7,572	
	Hospital establishments	7,836	
			18,16,128
	Office establishments	- -	15,444
	Medical attendance	- -	17,568
	Clothing	- -	35,076
	Contingencies	- -	1,39,560
13,307	GRAND TOTAL	- -	24,09,576

The distribution of this force is thus indicated:—

Strength of Force.	Area in Square Miles, Cis-Indus.	Population.	Proportion to One Policeman.	
			Area, One Policeman.	Population, One Policeman.
13,551	76,042	13,271,223	5·6 miles.	979 people.

The actual expenditure under the head of police has amounted to 33,65,220 rupees during 1861-62.

35. The

Detail of heinous crimes, Trans-Indus.

35. The subjoined table shows the number of crimes, of the first and second degrees of atrocity, committed, Trans-Indus:—

Division.	District.		First Class. Murder.	Murder by Thugs.	Murder, with Dacoitee.	Murder, with Highway Robbery.	Murder, with Burglary.	Murder, with Theft.	Murder, with Cattle Stealing.	Wounding, with intent to Murder.	Aiding and Abetting Suttee.	Second Class. Culpable Homicide.	Affray or Riot, with ditto.	Dacoitee, with Serious Aggravation.	Highway Robbery, with ditto.	Burglary, with ditto.	Theft, with ditto.	Cattle Stealing, with ditto.	Assault, with ditto.	Administering Poisonous or Intoxicating Drugs with Criminal intent.	Rape.	Incest.	Unnatural Crime.	Arson and Incendiarism.

Murder much less frequent in Peshawur than formerly.

Mostly caused by female infidelity.

Illustrative anecdote by Burnes.

36. The number of murders in the Peshawur District is still very large, though less than in 1860. But compared with 12 years ago, when the number was one a day, the improvement is striking. The prevalence of arson requires attention. Female infidelity is by far the most frequent cause of murder. Repeated executions have not yet changed the moral sense of the people regarding the summary revenge with which they consider this crime may justly be visited. The following story, told by Burnes, illustrates that, under their former rulers, murder committed from such provocation was not held to be criminal:—

"As we passed the suburbs of the city we discovered a crowd of people, and on a nearer approach saw the mangled bodies of a man and woman, the former not quite dead, lying on a dunghill. The crowd instantly surrounded the chief of our party; and one person stepped forward and represented, in a trembling attitude, to Sultan Mahomed Khan, that he had discovered his wife in an act of infidelity, and had put both parties to death; he held the bloody sword in his hands, and described how he had committed the deed. The chief asked a few questions, which did not occupy him three minutes: he then said, in a loud voice—'You have acted the part of a good Mahomedan, and performed a justifiable act.' He then moved on, and the crowd cried out—'*Afreen*' (Bravo)." These same Puthans will nevertheless sell their wives, and use them as mere beasts of burthen.

Immigration of Wuziri and Ghilzai graziers.

Cause of Strife in Kohat.

Police Administration difficult.

Population divided into factions.

37. It is stated that, owing to the extension of cultivation in the Kohat District, the customary annual immigration of Wuziri and Ghilzai graziers, and their flocks and herds from the mountains in winter, is becoming a source of strife and crime. The facilities for escape to the independent hills embarass the police administration of this district, although the surrounding tribes are bound by engagements to procure some sort of reparation for the injured parties after the Puthan fashion. The population are also much divided in religious tenets. The people of Lower Miranzai, the Toorees of the Korum, and several small tribes west of the Korum, are Sheeahs; the rest, Soonees. Under the names of "Gar" and "Samil," supposed to be those of two brothers, whether Mahomedan or Hindoo is doubtful, are ranged two very ancient factions which are irrespective of creed or tribe. The "Samil" party is the stronger.

38. The

38. The following crimes were committed in the Dera Ismail Khan District by the border tribes:—

Border raids in Dera Ismail Khan District.

	Raids.	Dacoitees.	Thefts.
Wuziris - - - - -	7	30	22
Shoranis - - - - -	- -	1	4
Biluchis - - - - -	- -	1	—
Bhatanis - - - - -	- -	1	1
Not traced to any tribe - -	- -	9	26
Total - - -	7	42	53

The above classification of border forays is graduated according to the number of men reported to be concerned in the robbery.

Colonel Taylor's remarks thereon.

39. Colonel Taylor, the Commissioner, makes the following remarks:—

"Considering that, from January to the middle of June, and from the 13th of August to the middle of October, we were at open variance with the Muhsood Wuziri tribe, who were anxious, in the commencement of the year, to do all they could do to make us feel the inconvenience of being at war with them, the amount of infringement of the border which they were able to accomplish was very small. The Wuziris, in their attacks, lost several men, and on one occasion a party of the 3rd Punjaub Cavalry captured a whole body of the marauders in the low hills about the Zerwunnee Pass. After the treaty was concluded, it was broken by the Jangee section of the tribe, by their murdering the grass-cutters of the 3rd Punjab Cavalry. After this, the whole of their tribesmen and property were seized, and they were mulcted to the full amount of 600 rupees blood-fine per man, which they had covenanted in the treaty to pay."

System of police on the border described.

40. It may be well to give an account of the system of police in force, in the words of the Commissioner:—

"The cordon of military posts along the border line supplemented by local police, but all now, when on the exterior line, under the command of the military officer commanding on a certain tract of frontier, may be looked upon as the general measure in force, on the Bunnoo and Dera Ismail Khan border, for the repression of crime on the part of the border tribes. On the Bunnoo border, however, the Ahmedzai Wuziri tribes, located in Bunnoo, are held answerable for the good conduct of their tribesmen; and this latter system prevails throughout the Dera Ghazee Khan District, and is attended, from the peculiar patriarchal character of the chiefs, with signal success.

"On the Dera Ismail Khan border, village cattle is not allowed to be grazed west of the frontier road, unless attended by an armed guard; and on the Tonk border, the villagers are bound under penalty to provide a *dhole*, or Native drum, for each village, and to beat it on occasion of an alarm."

Honorary police officers.

Cattle lifting in Goojranwalla.

41. The experiment of investing landholders with police functions has been tested in the Lahore and Mooltan Divisions, in both of which there are extensive wastes, affording great facilities for the perpetration of cattle-theft. The results have been successful in the Goojranwalla District, as will be seen from the following Table:—

COMPARATIVE STATEMENT of Cases of Cattle-theft which have occurred in the *Goojranwalla* District.

YEAR.	Number of Cases reported.	Number of Cases brought to trial.	Number of Persons brought to trial.	Disposed of on Trial.		
				Convicted.	Committed.	Acquitted.
1850	844	209	404	170	- -	223
1851	1,190	205	441	182	- -	212
1852	598	176	310	193	- -	132
1853	532	201	352	247	6	95
1854	423	311	593	328	- -	224
1855	404	245	475	270	5	174
1856	197	147	288	189	8	81
1857	226	187	360	185	6	125
1858	252	178	340	237	2	97
1859	257	198	353	234	- -	110
1860	256	189	344	177	- -	159
1861	336	313	606	342	- -	260

These figures show a material decrease in the number of cattle-thefts reported. During the past year several unreported cases have been brought to light by the honorary police officers. But the chief improvement is in the number of reported cases brought to trial. The fact that, out of 336 cases, 313 were brought to trial, in a district where previously in a large proportion no arrests were made, must have a deterrent effect on the commission of cattle-thefts, particularly as the prosecutions show a fair average of convictions.

Disclosures of a cattle thief.

42. The subjoined statement of an old thief discloses some of the ramifications of the crime:—

"Those engaged in the 'profession' of cattle-lifting have accomplices (belees) all over the country, of whom they make use as occasion offers, and in return lend their aid when asked. There are various ways of disposing of the stolen animals to evade the first hue and cry. Sometimes an artful thief will merely transfer them from his neighbour's yard to his own shed, and, when all the trackers for miles round are vainly scouring the country and following up false scents, he quietly conveys his booty to some convenient 'belee.' Ordinarily, however, the cattle is conveyed as far as possible the night it is stolen, and concealed during the day at a 'belee's' well, or if there is not safe shelter there it is taken to his house, but this is avoided if possible. A patch of sugar-cane is also a favourite place of concealment.

"The necessity, to the cattle-lifter, of having a number of belees, arises from his not being able always to choose the time when he will make off with a prize. Sometimes but a few hours of night remain when he gets clear away with his prize, and he dare not travel during the day, so must take refuge at the house of his friend. But he always prefers making the most of the night, by going, if possible, 30 *kos* or more. When once in the Bar it is safe to travel by the day. The distances stolen cattle are conveyed before they are finally disposed of varies very much in some cases. Where the owners are persons of influence, and likely to make great efforts to recover their property, the animals are taken a very long way. Some men have belees at Delhi, Mooltan, and Peshawur. The belees are not ordinarily rewarded with a share in the cash realized from the animal; they aid in stealing, but a strict account is kept of service given and received; nothing is done, and no risk incurred, without an equivalent return, and periodical balancing of account takes place. On those occasions fierce altercations on the value of the mutual assistance rendered takes place, each party crying down his own animals and exaggerating the value of the others. Such controversies often end in bloody fights; and when rogues fall out, honest men come by their own.

"The value of the stolen property depends very much on the degree of danger in buying it. An animal worth 50 rupees would ordinarily be sold to a belee, only 10 miles off from the owner's village for 12 or 13 rupees; if, however, he made great efforts to get more, and stood out stoutly for a higher bid (and here the narrator spoke as though he were thinking of some successful, but hard-fought bargain), it might be possible to get 15 or 16 rupees for it.

"Sometimes a regular system of exchange exists, each party taking over and disposing of his friend's stolen cattle, brought to a convenient place for that purpose; the animals to be stolen or exchanged are fixed on, and their respective merits discussed on beforehand."

Honorary police officers successful in Lahore Division.

Less so in Mooltan Division.

43. Half the district of Goojranwalla is under the police management of these honorary police officers. Smaller portions of the Lahore and Ferozepore Districts are subject to the same agency, and the results have been satisfactory. But in the Mooltan Division the experiment has proved less successful. The landholders are allowed small pieces of land rent-free in consideration of their services; but, compared with the regular police, the cost to the State is small, whilst the employment of men of their own locality in the Government service is acceptable to the people.

Cost of Punjab Police.

44. The following figures exhibit the cost of the Punjab Police as recently organized:—

	Rupees per Annum.
Cis-Indus Police	24,09,576*
Trans-Indus Police	4,53,048
Cantonment Police	27,012
Thuggee and Dacoitee Establishments	10,700
Canal Police	16,421
TOTAL	29,16,757

Reduction in Police Establishments.

45. Since 1859 the cost of the police establishments has been reduced from 46,61,013 rupees to 29,16,757 rupees, being nearly 17½ lakhs per annum.

Separation of duties of the military and police in Derajat.

46. Hitherto the separation between the duties of the Punjab Irregular Force, protecting the Derajat, and the police under the civil authorities has not been very defined. It has always been thought important that the force should be aided by the men of the country, who have generally been entertained by the district officer, and under the designation

* In this sum are included all guards, departmental and personal.

designation of police or levies. It has now been arranged that 403 horsemen and 217 foot, costing 1,45,596 rupees, shall be incorporated with the irregular force under the command of Brigadier General Chamberlain, C.B., and that the police shall, in future, be relieved of all concern with the protection of the border. It has been proposed that the additional cost entailed on the military department shall be met by the reduction of a Native infantry regiment.

Commendation of police officers.

46½. The Lieutenant-Governor considers that too short a time has been allowed to admit of a just discrimination of the comparative merits of the officers of the police department. He, therefore, confines himself to an expression of his satisfaction with their conduct generally. But his special thanks are due to the Inspector General, Major Hutchinson, for his labours in connexion with the organization of the force; and to Major Younghusband, for his co-operation.

PART IV.—GAOLS.

General results.

47. The daily average number of prisoners increased during the year from 10,065 to 11,185: the total expenditure on gaols from 40,804 *l.* to 44,265 *l.* But the average cost of each prisoner has decreased from *Rs.* 40. 8. 7. to *Rs.* 39. 9. 2. The increased number of prisoners is due to the increase of crime; the increased aggregate expenditure to the high price of food;* the decreased average cost of prisoners to the abolition of several gaols.

Unusual sickness. Inspector General's remarks thereon.

48. Unusual sickness prevailed. The following are the remarks of the Inspector General on this subject:—

"In August and September, at the time that cholera was so rife in the great military stations, the disease appeared in the gaols at Delhi, Thanesur, Rohtuck, and Umballa, but not a single case appeared amongst the prisoners in the Central Gaol at Lahore, although it is situated on the same plain and within two miles of the barracks at Mean Meer, where its ravages were so destructive. At the two former gaols the epidemic appears clearly to have been communicated to the convicts by the indiscreet assembling of masses of the starving poor at the very entrance of the prison for the purpose of supplying them with food. On this point the medical officers of Delhi and Thanesur are very decided in their opinion.

"It is worthy of record that in no instance did the epidemic break out first in the gaol, but commenced either in the bazar or amongst the European troops.

"The number of deaths from the disease were 24 at Rohtuck, 21 at Delhi, 18 at Umballa, and two at Thanesur; the admissions to hospital being 71, 34, 26, and 6 respectively. This is by no means a larger proportion of casualties than what occurred elsewhere.

"But, closely treading on the heels of this dreaded scourge, another epidemic of a much more deadly character appeared at the gaols of Jullunder, Umballa, Thanesur, and Delhi, which it is remarkable are all situated in adjacent succession to one another on the Grand Trunk Road; the distances between each being 107, 27, and 101 miles, taken in the order they are here enumerated.

"The type of the disease was, in many respects, very peculiar; although ushered in with febrile symptoms in most instances, yet in many cases the prisoners died in their wards, and were found to have slept the sleep of death without their giving any warning to their companions, or complaining of their being ill.

"But the most striking features were the rapidity with which the disease proved fatal, running its progress in the course of only a few days or even hours, and the apparent inutility of all the remedial measures employed. Tonics and stimulants were freely administered; and port wine, bazar spirits, quinine, and ammonia have been largely indented for, and used with a liberal and ungrudging hand.

"The prisoners were also removed into tents or other buildings; the hospitals and barracks fumigated and whitewashed; the plaister of the walls removed, and even the ground composing the flooring dug out to the depth of a foot and replaced with fresh earth. All other sanitary precautions of a general hygenic nature have been had recourse to; the wells cleaned out; drinking water both boiled and filtered; an increased quantity of vegetables allowed as part of the dietary; labour reduced or put a stop to; and, lastly, a very large number of prisoners have been released from gaol and sent to their homes.

"Although the great proportion of cases were recorded, at the time, as remittent or intermittent fever, yet there appeared, in almost every instance, either congestion of the brain

* Price of wheat of second quality.

	M. s. c.
1859	1 – 11
1860	– 30 –
1861	– 15 12

brain and liver, or diarrhœa and dysentery, and it was these serious organic complications which were the immediate cause of death.

"The essential character of the disease is decidedly zymotic, partaking clearly of the main features of the nature of typhus or gaol fever, such as was attended with such fearful mortality on two separate occasions in the Newgate Prison and Milbank Penitentiary in England, as well as at Bancoorah, in Bengal, in 1833, and at several other gaols in this country at various times. The cause is best described by the expressive phrase of 'blood poisoning,' a state we know to be produced by the want of pure air and sufficient cubic space to keep the human frame in a state of health, combined with the operation of fear, the mind being kept in a depressed condition, either by the loss of liberty, or other cause.

"All classes of men suffer precisely from the same causes, and the same result is produced under whatever circumstances they may be situated. It occurred amongst the remnant of Sir John Moore's army, after the memorable retreat from Corunna; it occurred in the Crimea, as well as in several of our campaigns, and, still more recently, among the Sonthal prisoners, and those confined at Delhi after the mutiny in 1858.

"Although the disease only appeared in its epidemic form, and attended with such fatal results in the four gaols before specified, yet at other stations the prisoners have suffered much more than in the three previous years. At the Lahore Central Gaol every one of the inmates, not only among the convicts, but even among the establishment and guards, were prostrated with fever immediately after cholera had left the station in the month of September."

Rate of mortality.

49. The rate of mortality rose from 2·33 in 1860 to 8·64 in 1861, exclusive of prisoners who may have died after being dismissed to their homes. The following figures show the rate of mortality since 1852:—

1852	9·72	Year of great sickness.
1853	4·95	
1854	6·21	
1855	5·07	
1856	10·10	Year of great sickness and cholera.
1857	6·67	
1858	4·83	
1859	2·35	
1860	2·33	
1861	8·64	Ditto - ditto.

Progress of education amongst prisoners.

50. Education amongst the prisoners is reported not to have progressed. The profits of gaol manufacture were less by 58,149 rupees than in the previous year; a result to be expected from the closure of gaols and the prevalence of sickness. But the Inspector General considers the labour of prisoners is not made the most of. He argues that "if a native can support himself and family by his daily labour as a free man, he ought to be made, at least, to support himself, when in gaol, so far as his food is concerned."

Gaol manufactures.

The most noticeable gaol manufactures are:—the silks made after English patterns at Mooltan; the paper from Rawul Pindee; and the carpeting and cotton goods from Jullunder, Ferozepore and the Lahore Central Gaols.

Escapes.

51. Only 12 prisoners escaped out of 35,910, and of these eight were recaptured. The per-centage of escapes has been reduced from ·81 in 1853 to ·10 in 1861, which says much for the efficiency of the system.

Continued success of the monitor system.

52. The plan of employing prisoners as monitors in the central gaol, under the careful superintendence of Doctor Dallas, has been proved to work well in practice. He thus describes it:—

Dr. Dallas's remarks thereon.

"On the 1st of March 1861, the system was introduced into this gaol: 74 burkundazes were dismissed, and a similar number of monitors, who had been selected, were told off to take their places. The duties of these monitors were explained to them carefully; they were to superintend the prisoners entrusted to their charge; they were responsible for their custody, for their doing their proper quantity of work, for good order and regularity in the gang, ward, or workshop under them; in short, the duties heretofore supposed to be performed by burkundazes were to be performed by them, but keys were not to be entrusted to them, nor were they to go outside the gaol. The privileges were—they were to wear a different dress from the other prisoners; they were to have their irons taken off with the exception of an ankle ring; they were to be excused from labour; and for each year's service as monitor they were to receive a remission of three months in their sentence.

"The dismissal of 74 burkundazes rendered a large sum of money available; this was made use of to employ three men at 18 rupees a month, 1st class warders; and 18 at 12 rupees a month, 2d class warders. The duties of these warders were to supervise the monitors, to prevent their oppressing or ill-treating the prisoners under them, and to see that

that all orders and routines were carried out properly. At night they were to furnish patrols for the interior of the gaol; they were not guards; their number was fixed, not with any reference to the number of prisoners, but with regard to the plan and size of the gaol; their pay was fixed at a high rate, in order to induce men of respectability to take service, for the gaol service has never been popular; its duties are irksome and continuous, and no one who can get employment elsewhere will seek it in a gaol. It was also hoped that a regular service might be established, in which men could be trained and drafted off to other gaols as darogahs.

"Although the pay has been fixed at a high rate, yet the saving effected has been considerable. In 1860 it amounted to *Rs.* 1,506 6. 8.; in 1861, to *Rs.* 2,315. 10. 2.; and in this latter year it would have been still larger had not the pay of trade instructors (*Rs.* 559. 11. 4.) been met from it. In the present year (1862), in consequence of the second circle of the gaol having been partially built, and to some extent occupied, it has been found necessary to increase the number of second-class warders to 29; but this is almost as many as will be required when the whole gaol is completed; and so soon as this is done, and all the prisoners from the Golah Serae Gaol moved into the Central Gaol, the saving, I imagine, will be very much larger.

"I think I may venture to say that the order and quiet regularity in the gaol has increased since the introduction of the system; and that this has not been brought about by any increase in the severity of the punishments inflicted will be seen from the following table:—

YEAR.	Daily Average Number in Gaol.	Number Flogged.	Flogged to strength Per Cent.	Otherwise punished.	REMARKS.
1857 - - - -	1,780·80	268	15·04	- -	The last column refers to punishments, increase of daily task for petty acts of disobedience and neglect.
1858 - - - -	1,784·28	86	4·81	195	
1859 - - - -	1,615·71	80	4·95	1,220	The monitor system commenced on 1st March 1860.
1860 - - - -	1,566·97	57	3·63	863	
1861 - - - -	2,100·61	72	3·42	393	

Commendation of officers.

53. The Lieutenant Governor has much reason to be satisfied with the superintendence exercised by the Inspector General over the management of the gaols. In addition to his ordinary duties, Dr. Hathaway, during the year under report, minutely inspected the conservancy arrangements in the cantonments of the Punjab.

Dr. Dallas, the superintendent of the Lahore Central Gaol, also deserves mention.

SECTION II.—REVENUE.

PART I.—LAND TAX.

Demands and collections.

54. The following table gives the customary comparative details concerning the realisation of the land tax*:—

——	Demands.	Collections.	Balances.	Particulars of Balances.				Percentage on Demand	
				In train of Liquidation.	Doubtful or Undetermined.	Irrecoverable.	Nominal.	Of Collections.	Of Balance.
	Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*
1860-61 -	1,94,93,464	1,82,33,901	12,59,563	56,528	5,55,126	4,66,769	1,81,140	93	7
1861-62 -	1,94,37,736	1,86,02,320	8,35,416	1,67,879	48,744	3,54,996	2,63,797	96	4

The

* Where the figures differ from those given in the Report for 1860-61, they are taken from revised Returns. Some discrepancy has been caused by the omission of the amount of service commutation in the Cis-Sutlej States in 1860-61.

The subjoined figures exhibit the collections under the two principal heads:—

	Demand.		Collections.	
	1860-61.	1861-62.	1860-61.	1861-62.
	Rs.	*Rs.*	*Rs.*	*Rs.*
Land Tax, including tribute and service commutation -	1,90,03,687	1,90,86,546	1,77,44,124	1,82,51,130
Miscellaneous - - -	4,89,777	3,51,190	4,89,777	3,51,190

Balances.

55. It will be observed that the balances of the past year are much less than in 1860-61. Nevertheless the effects of the famine materially affected the collection of the revenue instalments due on account of the spring harvest. Irrecoverable balances to the following amount occurred in the tracts most affected:—

	Rupees.
Delhi Division - - - - - - -	31,706
Hissar „ - - - - - - -	2,30,841
Thanesur District - - - - - -	70,904

The amount of the nominal balances has been increased by the exchange of Government villages for those held in jaghir by Rajah Tej Singh.

Balances in famine districts.

56. The degree in which the collection of the land revenue was impeded by the famine is visible in the table below:—

DISTRICTS.	Entire Balance.	Percentage on Demand.
	Rs.	*Rs.*
Delhi - - - - - - -	34,830	9
Goorgaon - - - - - - -	50,627	4
Kurnal - - - - - - -	17,663	2
Hissar - - - - - - -	25,773	4
Rohtuck - - - - - - -	2,06,592	23
Sirsa - - - - - - -	10,684	7
Umballa - - - - - - -	71,131	15
Thanesur - - - - - - -	96,230	23

In other divisions.

In the remaining divisions the revenue was, as in 1860-61, fully realised.

	Percentage of Demand Realised.
	Rs.
Trans-Sutlej States - - - - - - - - -	99
Umritsur - - - - - - - - - -	95*
Lahore - - - - - - - - - -	99
Rawul Pindee - - - - - - - - -	99
Mooltan - - - - - - - - - -	98
Derajat - - - - - - - - - -	94†
Peshawur - - - - - - - - - -	97

Remission of land-tax.

57. It was found necessary to remit nearly the whole of balances of 1860-61 reported as doubtful, or about 5½ lakhs. By the help of this timely relief, and the grant of loans for the replacement of agricultural stock, the population of the famine-stricken region have recovered from the effects of the calamity in a greater degree than could have been hoped for. The rains of 1861 were abundant. The autumn crops were generally good, and, though the spring crops of the current year did not turn out very well in some of the districts south of the Sutlej, the prevalent high prices afforded some compensation. North of the Sutlej the spring harvest was excellent, though in some places damage was done by hail storms.

58. The

* Heavy nominal balances on account of Rajah Tej Singh's jaghir.
† Ditto, owing to revision of settlements.

58. The subjoined statement shows a great increase of litigation:— Litigation.

DESCRIPTION OF CASE.	DISPOSED OF.		PENDING.	
	1860-61.	1861-62.	1860-61.	1861-62.
Regular Revenue Suits	16,384	28,516	1,174	1,476
Appeals from Subordinates to Deputy Commissioners	2,546	3,580	135	111
Appeals from Subordinates to Deputy Commissioners	3,694	4,312	194	423
Appeals from Commissioners to Financial Commissioner	798	633	41	246

The increase is caused by facilities which have recently been afforded for challenging the settlement record, and by the growing appreciation of the value of rights in the soil.

PART II.—EXCISE AND OPIUM.

59. The revenue derived from these sources has not fluctuated greatly, but still remains considerably below the sum realised in 1859-60, probably owing to the poverty caused by the famine. No increase of revenue from these sources.

60. Measures have been taken for the experimental establishment, in 10 districts, of sudder distilleries. Sudder distilleries experimentally established.

PART III.—CUSTOMS AND SALT.

61. The comparative returns of the two past years are as follows:— Receipts.

	RECEIPTS.		Increase.	Decrease.
	1860-61.	1861-62.		
	Rs.	*Rs.*	*Rs.*	*Rs.*
Delhi Customs Line	33,73,778	42,01,063	8,27,285	—
Indus Preventive Line, and Sind Sagur Salt Revenue Department	27,40,720	25,54,169	-	1,86,551
Trans-Indus Salt Mines	87,855	85,129	-	2,726
Sutlej Preventive Line	2,020	20,619	18,599	—
TOTAL *Rs.*	62,04,373	68,60,980	8,45,884	1,89,277

The net increase amounts to 6,56,607 rupees.

62. The increase on the Delhi line has occurred thus:— Delhi Customs line.

	Rupees.
Increase in Salt revenue	3,39,285
Ditto Sugar	4,84,391
Miscellaneous	3,609

The quantity of salt imported has decreased, so that the additional income is due solely to the increased rate of duty. As some months before the price of Punjab salt was raised a good deal found its way to the North Western Provinces, and lessened the quantity which would have otherwise been imported from the lakes of Rajpootana. The increased revenue from sugar is in great part attributable to the briskness of the trade. It is said that during the famine few marriages took place, and that the great number which have since been celebrated led to the large exportation of sugar. The Customs collections on the Importations of salt decreased. Sugar revenue increased.

CHAP. XIV. Punjab.

the entire line from the Sutlej to the Nagpore frontier have, in 1861-62, exceeded a million sterling, the details being—

	Rupees.
Salt	94,36,935
Sugar	12,76,063
TOTAL Rs.	1,07,12,998

Pind Dadun Khan salt mines.

63. The receipts from the sale of salt at the Pind Dadun Khan mines, though less than in the preceding year, are still much in excess of the estimate formed at the commencement of the past year, with a knowledge of the large purchases made previous to the enhancement of price.

Receipts from new duty on sugar.

64. The new duty imposed in December 1861, on sugar passing down the Sutlej, produced 19,203 rupees up to the end of the official year.

PART IV.—CANAL REVENUE.

65. The revenue derived from works of irrigation in the Punjab during 1861-62 was as follows:—

	Rupees.
Baree Doab Canal	3,06,629
Inundation Canals	39,338
Western Jumna Canals	4,03,883
TOTAL Rs.	7,49,850

Increase in revenue from irrigation.

This shows an increase of 37,276 rupees over the collections of the previous year, and is mainly due to the extension of irrigation in the Baree Doab. The full return of revenue, however, is not shown by these figures, as the indirect increase to the land revenue exceeds considerably the canal collections.

PART V.—INCOME TAX.

Income tax collection.

66. The yield of this tax, under the several schedules, has been as follows:—

One per Cent.	Two per Cent.	Three per Cent.	TOTAL.
Rs.	Rs.	Rs.	Rs.
1,58,757	3,08,589	4,63,731	9,31,077

Abandonment of License tax and two per cent. income tax very acceptable to the people.

67. The abolition of the license tax has caused general rejoicing in the Punjab, particularly across the Indus. The proposed abandonment of the two per cent. income tax will also be hailed by a large class of the industrious orders as a desired relief, though the assessment throughout the Punjab is decidedly light and has not excited discontent.

PART VI.—STAMPS.

Duties realised from stamps.

68. The sums realised from these duties are shown below:—

	Sale of Law Stamps.	Duty on Unstamped Paper.	Penalties.	Bill and Receipt Stamps.	TOTAL.
	Rs.	Rs.	Rs.	Rs.	Rs.
1860-61	6,29,148	1,781	333	19,647	6,50,909
1861-62	9,27,641	4,012	1,384	39,991	9,73,028

The

The increase amounts to 3,22,119 rupees. The penalties of the Act have not yet become sensibly felt, but as time goes on will be more severely enforced. Although poor, compared with some other nations, the people of Hindostan are a busy people, and a tax skilfully let fall on business transactions can hardly fail to prove increasingly productive. The Financial Commissioner, however, is apprehensive that the duties may be evaded in the petty transactions, which form the great mass, by entries in unstamped account books; and he is of opinion that it may hereafter become necessary to require that the leaves of such books be stamped.

Proposal to stamp leaves of account books.

He further suggests that the stamps for law proceedings and for mercantile documents should be of a distinctive kind.

And to have a distinctive stamp for law proceedings.

69. The subjoined table shows an aggregate increase of nearly 10 lakhs of revenue from all sources, of which 3,68,419 rupees is due to land revenue, 6,56,607 rupees to salt and Customs, 37,276 rupees to canal revenue, 3,22,119 rupees to stamps, and 23,196 rupees to miscellaneous items. On the other hand, there has been a decrease of 29,433 rupees on spirits and drugs, and 3,83,744 rupees on assessed taxes, owing to the abandonment of the license tax. The income derived from the postal and electric telegraph departments are not included, as it cannot be correctly ascertained:—

General summary of increase and decrease of revenue.

		Land Tax, including Tribute and Miscellaneous Items.	Spirits, Drugs, and Opium.	Salt and Customs.	Canal Revenue.	Assessed Taxes.	Stamps.	Miscellaneous (exclusive of Post Office and Electric Telegraph).	GRAND TOTAL.
1860-61	*Rs.*	1,82,33,901	6,16,286	62,04,373	7,12,574	13,14,821	6,50,909	8,22,105	2,85,54,969
	£.	1,823,390	61,629	620,437	71,257	131,482	65,091	82,210	2,855,496
1861-62	*Rs.*	1,86,02,320	5,86,853	68,60,980	7,49,850	9,31,077	9,73,028	8,45,301	2,95,49,409
	£.	1,860,232	58,685	686,098	74,985	93,107	97,303	84,530	2,954,940
Difference	*Rs.*	+3,68,419	+29,433	+6,56,607	+37,276	+3,83,744	+3,22,119	+23,196	+9,94,440
	£.	+ 36,842	+ 2,944	+ 65,661	+ 3,728	+ 38,375	+ 32,212	+ 2,320	+ 99,444

SECTION III.—EDUCATION.

70. The progress of education will be gathered from a review of the several classes of schools:—

Progress of education.

Zillah schools are 23 in number, 21 of the superior and two of the lower grade. The number of students on the rolls has fallen from 2,309 to 2,283, and the average attendance from 2,018 to 1,814; but the students of English have risen from 1,523 to 2,016.

Zillah schools.

Tehsilee Schools.—Four of these schools have been reduced since last year; the number is now 119. Notwithstanding this, the students have increased from 6,437 to 6,765; the average attendance from 4,564 to 5,452.

Tehsilee schools.

Village schools have increased in number from 1,686 to 1,750; the students from 32,165 to 38,849; the attendance from 26,867 to 31,016.

Village schools.

Female schools have increased in number from 38 to 52; the pupils from 812 to 1,312; the average attendance from 671 to 1,168.

Female schools.

Normal schools are eight in number; the average attendance increased from 352 to 377. The preponderance of Mahomedans to Hindus has slightly diminished, but still remains as 289 to 104. During the year, 398 teachers obtained certificates on examination.

Normal schools.

Private institutions aided by Government, and subject to official inspection, are 30 in number. The 15 higher class schools contain 2,290 scholars, and have an average attendance of 1,925; the lower 623, with an average of 484. The large schools under the superintendence of missionary clergymen at Lahore, Peshawur, Umritsur, Delhi, Rawul Pindee, and elsewhere, contribute most efficiently towards the education of the people.

Private educational institutions.

71. In all there are 1,982 schools either maintained or aided by Government, having 52,480 scholars on their rolls, and an average daily attendance of 42,192.

Aggregate results.

72. The aggregate expenditure has amounted to 5,11,284 rupees, of which 1,75,758 rupees are from Imperial revenues, 2,84,976 rupees from the proceeds of the educational cess, and the balance from private sources.

Expenditure on education.

A tabular analysis of this expenditure is subjoined:—

DESCRIPTION of SCHOOLS.	Number of Schools.	Number of Scholars on the Rolls at close of 1861-62.	Number of Scholars attending daily on an average during 1861-62.	Aggregate Expenditure from all Sources.	Chargeable to Imperial Revenues.	Chargeable to One per Cent. Educational Cess Fund.	Cost of Educating each Pupil.			
							Total Cost.		Cost to Government.	
							1860-61.	1861-62.	1860-61.	1861-62.
				Rs.	Rs.	Rs.	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.

Increased appreciation of education by natives.

73. There have been some hopeful indications of an increasing appreciation of the advantages of education on the part of the people.

Candidates for entrance to Calcutta University.

Four candidates educated in the Punjab were successful in passing the entrance examination for the Calcutta University. In 15 schools a teacher of elementary English is now maintained, partly by voluntary subscriptions contributed by the students. Adult classes for the study of English have been formed at some principal stations at the request of the inhabitants, bankers and traders attending amongst others.

Spread of English language in vernacular schools.

Adult classes for study of English

Revenue of progress in Umballa circle.

74. In the Umballa Circle there was some retrogression in consequence of the famine and sickness, from which the tract suffered severely. The attendance at the zillah schools (excepting Delhi) fell from 574 to 446. Still the students of English rose from 407 to 458. In 39 tehsilee schools the average attendance fell from 45 to 43 per school. On the other hand, the number of the village schools increased from 482 to 580; the average daily attendance from 6,547 to 7,408. The average of each school is 13 students. The increased attendance is very visible in Goorgaon, Rohtuck, and Sirsa, though these districts all suffered from famine. The education in these schools is, of course, very rudimental. The Inspector, Captain Holroyd, observes—"It should be borne in mind that the majority of these schools have not yet been in existence for four years; that in most cases the village schoolmasters were originally teachers in indigenous schools; that they were totally ignorant of ciphering, had never heard of geography, and had never seen a map of their own or of any other country; and that they had not the slightest idea of cultivating the understanding of their pupils, to whom they taught Persian after the old traditional method."

Review of progress in Lahore circle.

75. The statistics of the Lahore Circle show improvement.

In the eight superior zillah schools the average attendance rose from 748 to 779, and the number of pupils learning English from 705 to 899. In the tehsilee schools the average daily attendance increased from 2,128 to 2,227. In the village schools the names on the rolls rose from 17,407 to 21,455, and the average daily attendance from 15,607 to 17,283.

School established at Kurtarpore.

76. A significant incident is mentioned by the Deputy Commissioner of Jullunder:—"There is now a school at Kurtarpore. The late Guru, Sadhu Sing, had paramount influence there, and objected to a Government school being established in the town. Since his death the people themselves have come forward and petitioned for one, and there is now a small school of about 50 boys, in which the young Guru professes to take great interest."

School founded by Sirdar Jaunda Sing, Bootalah.

77. But the old Seikh noblesse are not all opposed to education. Sirdar Jhunda Sing, of Bootalah, in the Goojranwalla district, has procured the foundation of a school at that place, of which he pays half the expenses.

78. It

* Of this, 37,864 rupees on building Tehsilee and Village School-houses.

78. It is stated that the zemindars complain, that when their children learn to read and write, they will not plough, but require a servant; and that, practically, the hours of attendance are limited to three hours a day.

Hours of attendance limited.

79. The Inspector was solicited by the teachers and pupils of one of the indigenous schools (not in connexion with Government) to assist them in studying arithmetic and geography. Some of the students of the normal school were accordingly deputed for the purpose. The circumstance shows that the Government system is causing re-action in schools not within its direct influence.

Government system re-acting on indigenous schools.

80. In the four zillah schools of the Rawul Pindee Circle the average attendance declined from 262 to 238. The number of tehsilee schools has been reduced to 37, with an attendance of 1,867, of whom 665 are agriculturists. The Inspector reports favourably of the progress of the schools in the frontier district of Bunnoo.

Review of progress in Rawul Pindee circle.

81. The village schools have increased from 340 to 359, the pupils from 6,047 to 7,253. Of the district of Dera Ghazee Khan it is remarked:—"The increase of 44 village schools is chiefly owing to the great interest shown by the Lughari chief, Jumal Khan, in the cause of education, as he himself supports the greater number of pupils attending the school at Choti, a village almost entirely inhabited by Bilochis."

Interest taken in education by the Lughari Chief, Jumal Khan, in Dera Ghazee Khan.

82. Of the female schools 34, attended by 1,052, are in the Jullunder district. The best of these schools has been thus reported on by a lady who inspected it:—

Female education in Jullunder district.

"The native lady in charge, Hyat Bibi, was greatly deserving of commendation. She was a well-mannered, intelligent person, and appeared to have perfect control over her scholars. The elder girls read several Persian and Hindustani books, among others the Gulistan. The little pupils were all clean and well dressed. Most of the schools have been provided with an instructress in needlework, and the girls have begun to learn writing. This was an innovation; the general opinion being that there might not be much harm in women learning to read books; but that they could not possibly make a good use of writing." An instance is mentioned of the effects of the inspection made:—"My visits, and the little presents I made them, seemed to create a great excitement, and immediately after my departure some 30 or 40 little girls enrolled themselves as scholars."

83. These schools owe their origin to the exertions of Captain Elphinstone, the Deputy Commissioner. If they shall contribute in any effectual degree to dissipate the existing prejudice against the education of girls, their usefulness can hardly be over-rated. When once the social restriction is removed, it will not be difficult to direct the course of female learning.

Exertions of Captain Elphinstone in the cause of female education.

84. During the year great progress has been made in the erection of school-houses throughout the Province. The supply of books and maps has also been much increased.

Erection of school-houses.

85. Advantage has certainly attended the superintendence exercised over the vernacular schools by the district authorities. By holding public examinations, and distributing prizes, by countenancing the schoolmasters, and occasionally selecting the pupils for public employment, the civil officers have it in their power to stimulate the progress of learning, and in several districts the effects of their influence are perceptible.

Advantage of placing village schools under superintendence of district officers.

86. The exertions of Captain Fuller have brought the department into a very satisfactory state. Mr. Alexander, the Inspector of the Lahore Circle, also deserves mention.

Commendation of officers.

87. The following is a detail of the students at the Lahore Medical College:—

Lahore Medical College.

ENGLISH CLASS.

European	1
Hindus (Punjabees)	4
Mussulman (Punjabee)	1
Hindu (Bengalee)	1
	—7

NATIVE CLASS.

Natives of Punjab and its Dependencies	Hindus	27
	Musselmen	28
Native of North-Western Provinces	Hindus	—
	Musselmen	5
		— 60

Many more natives apply for admission than are required. It is very desirable that a suitable building should be erected, as it is otherwise impossible to preserve proper discipline.

The expenditure on the college during the year amounted to 37,495 rupees.

Expenditure.

The Principal, Mr. J. B. Scriven, is entitled to the credit of having organised the institution. Dr. Brown, the Professor of Chemistry, has rendered useful service in analysing the water of the wells in the cantonment of Meean Meer.

Commendation of officers.

SECTION IV.—PUBLIC WORKS.

General summary of expenditure.

88. The following statement exhibits the amounts provided in the Budget, and the actual expenditure during the year under each head of the classification of Public Works; the figures in the column of actual expenditure include amounts expended from the Reserve:—

	Amounts Provided.	Actual Expenditure.
	Rs.	*Rs.*
Military	3,97,841	6,56,420
Revenue	8,820	19,103
General	14,854	18,213
Ecclesiastical	58,250	80,889
Educational	6,190	28,166
Judicial	72,690	1,50,163
Municipal	- -	49,044
Industrial	64,094	47,248
Agricultural	10,09,171	12,31,408
Communications	19,69,226	17,27,782
Telegraph	7,709	2,485
Reserve	5,34,063	—
Direction	2,56,290	2,70,447
Establishments and contingencies	9,00,802	10,22,596
TOTAL *Rs.*	53,00,000	53,03,964

These figures give the general totals, including new works and repairs.

PART I.—MILITARY.

Fortifications.

89. The defences of the Ferozepore Arsenal have been commenced. In substitution for the large project which had been submitted, estimated to cost upwards of five lakhs, another of a different kind, of less costly construction, and capable of being completed within a comparatively short space of time, was proposed by the superintending engineer, and approved by the Government of India. The work is now well in hand.

A new outpost has been built at Janee Kheyl, on the Derajat frontier, about 15 miles from Bunnoo, for a detachment, horse and foot, of the Irregular Frontier Force.

Two fortified places of refuge have been built at Jhung and Sirsa, at a cost of 4,456 rupees and 2,414 rupees respectively.

A new communication has been opened between the principal, upper and lower, batteries of the fort of Attock.

Cantonments.

90. The only work under this head, besides ordinary petty works and repairs, has been the commencement, under the orders of the Government of India, of series of levels in the several cantonments, and the establishment of bench-marks, indicating the relative heights of different points; a work suggested by the commission appointed to investigate the circumstances attending the outbreak of cholera at various stations in 1861, and intended to furnish the means of ready information of importance with relation to drainage and other sanitary measures.

The same occurrence, and more especially the very fatal visitation of cholera in the cantonment of Meean Meer, Lahore, led to the appointment, in the Punjab, of a special sanitary commissioner, who minutely inspected all the cantonments of European troops and their military buildings, and whose report is now in the press.

Accommodation for troops.

91. The lower stories of four barracks in the Fort of Delhi, designed for double stories, have been completed for occupation as single storied buildings. Further clearances inside the fort have been carried out.

Additional wash-houses have been built for European infantry at Umballa.

The new barracks at Kussowlee, which were nearly completed at the close of the previous official year, have now been finished and are occupied. The restoration of the two barracks at the same station, burnt in 1858, is in progress.

Improved accommodation for the garrison of the Citadel of Kangra is approaching completion.

A commencement had been made before the close of the year of two new barracks for the Convalescent Depôt at Bhagsoo (Dhurmsala).

At the cantonment of Meean Meer the deep cess-pits, which are believed to have affected the water in the neighbouring wells, have been cleaned out and filled up, their contents being removed to a distance beyond the limits of the cantonment. With a view

to

to the investigation of the influence of these cess-pits on the wells, the water of the several wells was analysed by the chemical examiner for the Punjab. The result of his examination will appear as an Appendix to the Report of the Commission above referred to. The water of the wells will now be analysed again after the lapse of some time from the clearing and filling up of the cess-pits.

At Ferozepore, barracks for one company of European infantry have been commenced within the fortified arsenal enclosure.

The European Infantry Hospital at Mooltan has been completed with out-offices.

The buildings of the old native infantry cantonment of Jhelum have been put in repair for accommodation of European troops. They are now occupied by a detachment of cavalry from Sealkote.

The work remaining last year to complete the European infantry barracks at Rawul Pindee has been carried out, and two new plunge-baths have been built.

Additional wash-houses have been built in the left European infantry lines at Peshawur.

Additional accommodation has been built for the Guide corps in the Fort of Hotee Murdan.

Also for the Native troops in the Fort of Dhuleepghur, Bunnoo.

Materials have been prepared for new lines for a corps of Seikh infantry at Kohat.

92. Under this head only ordinary and petty works. None of sufficient importance to call for special notice. Ordnance.

93. Liquor godowns have been built at Subathoo, Kussowlee, and Ferozepore. Commissariat.

94. Petty works connected with the buildings of the Remount Depôt at Kurnal. Stud.

95. The provided and actual expenditure in each of the above sub-divisions of military works during the past year, including repairs, has been:— Total expenditure on military works.

	Provided.	Actual.
	Rs.	*Rs.*
Fortifications - - - - - -	26,203	43,706
Cantonments - - - - - -	28,162	69,684

TOTAL - - - *Rs.*	3,97,841	6,56,420

PART II.—CIVIL ADMINISTRATION.

REVENUE.

96. Three new Tehsils have been built during the year, one in the Goorgaon district, and two in the Rohtuck district; these last combined with Thannahs. One Tehsil in the Kangra district and one combined Tehsil and Thannah at Jhelum are approaching completion. Another Tehsil, in the Goorgaon district, has been commenced. Additions for defensive purposes, to a combined Tehsil and Thannah in the Rohtuck district are in progress. Land and miscellaneous.

97. Nothing to be recorded under this head. Customs.

98. Various works in connection with the salt mines at Pind Dadun Khan. Extensive additional works for the further development of the salt traffic have been proposed, particularly mechanical appliances at the mines and roads through the salt range; and a civil engineer has been appointed to carry out the works in contemplation. Salt.

99. Nothing under this head. Post Office.

GENERAL.

100. With exception of the completion of the Government office at Murree, there is nothing under this head deserving of notice. Public Departments.

101. Nothing under these three heads beyond petty works and repairs. Scientific institutions, charitable institutions, monuments, and antiquities.

ECCLESIASTICAL.

102. The churches for small stations, mentioned in last Annual Report, have, during the past year, been completed at Hissar, Sirsa, Rohtuck, Goordaspore Goojrat, Mozuffurghur, Dera Ghazee Khan, Dera Ismail Khan, Bunnoo, Kohat. That at Shahpore is almost complete, the windows only remaining to be glazed. Of the Church at Madhopore the masonry is finished. The Church at Goorgaon is in progress. Churches.

A little additional work has been done in the completion of St. Paul's Church, Umballa; the church enclosure and gates. The extension and alterations of the old church bungalow at the same station, now used as a Presbyterian place of worship, have been completed. Improvements of the Roman Catholic chapel at Umballa have also been carried out.

A spire is being added to the church at Kussowlee.

The church at Rawul Pindee has been enlarged by the addition of transepts.

The church at Peshawur has been completed. Some improvements of the church enclosure still remain, and the completion of the enclosure wall and gates.

Burial grounds.

103. Enclosure walls of the Roman Catholic burial grounds at Subathoo and at Mooltan are in progress.

The burial ground at Nowshera has been enclosed.

The graves of European soldiers, who died of cholera in camp, at places in the neighbourhood of Lahore have been surrounded by enclosure walls.

EDUCATIONAL.

104. The buildings for the military Normal school at Sunawur are approaching completion. Accommodation has been provided for the female Normal school by the purchase of a house at Kussowlee in lieu of the buildings originally intended to be erected at Sunawar. To the buildings of the Lawrence Asylum, Sunawur, have been added quarters for the medical officer.

JUDICIAL.

Police.

105. Rest houses for police officers on circuit are being built; nine have been completed, two in Sirsa district, one in Rohtuck, one in Shahpore, five in Jhung, and others are in various stages of progress.

Police lines are in progress at Dhurmsala.

Six thannahs have been completed during the year, two in Umballa district, one in Ferozepore, Mooltan, and Huzara, and one at Murree. Seven more are in progress in the districts of Lahore, Gogaira, Peshawur, Dera Ismail Khan and Dera Ghazee Khan. Fourteen police chowkies have been erected.

Court houses.

106. Alterations and additions have been made to the Deputy Commissioners' cutcherries at Delhi and Jullunder.

A circuit house has been commenced at Rohtuck. A building has been purchased for a circuit house at Goordaspore.

A cutcherry has been completed at Abbottabad for the Deputy Commissioner of Huzara.

Gaols.

107. The second circle of the central gaol at Lahore is well advanced.

Worksheds and other buildings have been added to the district gaols of Rohtuck and Goojranwalla. Four additional wards have been built for the Umballa gaol, and solitary cells for the gaol at Kangra.

PART III.—PUBLIC IMPROVEMENTS.

Indus River works.

108. In last year's report some account was given of the encroachments of the Indus at Dera Ismail Khan, and of the works which have been undertaken with the view of protecting that city and station, and giving the main current a direction away from the bank on which the river had so largely advanced. The works constructed last year were so far successful that no further serious encroachment took place, and a shoal began to be deposited where the principal encroachments had been made. But important parts of the works have been destroyed in the high floods, they were only partially and temporarily successful in effecting the second object, the prevention of future encroachments, by directing the main body of the river down the eastern channel. The works have been renewed this year with some variation, adapting them to the altered condition of the channel at the part where the principal works are constructed, about five miles above Dera Ismail Khan. At this point one long oblique bund across the river has been constructed, and some guiding and protecting spurs; these are designed to give the current an easterly tendency towards the head of the channel above referred to. And a series of spurs thrown out from the bank at a short distance above the cantonment, is designed for the immediate protection of the part most important to save, and most seriously threatened. The general success of the works up to the present time has been satisfactory and promising.

Municipal.

109. At Simla a tunnel for water supply has been driven into the principal hill in the heart of the station. The discharge of water is now satisfactory, and there is every reason to hope that the project will be permanently successful.

A few minor famine works under this head were executed during the year.

Industrial.

110. Three out of the four sets of mill-houses for flour mills, sanctioned to be built on the Baree Doab Canal, are in progress.

The saw mills on the Ravee at Madhopore have been completed at a total cost of 77,000 rupees, and are in active operation. The value of the saw mills, in connexion with the supply of timber from the forests on the Ravee, is very great; and provision has been made for the erection of similar saw mills on the Chenab, in connexion with the forests on that river and its tributaries.

Further additions have been made to the buildings for the workshops at Madhopore.

AGRICULTURAL—(IRRIGATION).

Baree Doab Canal.

111. The main channel and branches, which have been in progress during past years, are now nearly completed, and the principal expenditure during the year under review, has been on the Rajbuhas or distributing channels. The main channel, upper, as far as the Vahn escape, was opened in January last. Large provision has been made for the extension of the Rajbuhas during the present year. Upwards of 200 miles of Rajbuha are now open, besides the old Huslee Canal, 104 miles in length, now united to the Baree Doab Canal, and acting as one of its great distributing channels.

The works near the head of the canal, for protecting the canal from the floods of a large hill-torrent and carrying it off into a new channel, have been completed.

The total expenditure during the year on this canal, including the workshops and flour mills above mentioned, has been:—

	Rs.
Original Works - - - - - - - -	6,70,380
Repairs - - - - - - - -	1,33,733
Establishments and Contingencies - - - -	1,96,848
Rs.	10,00,961

Inundation canals.

112. These canals, having no permanent flow of water, but fed from the rise of the rivers in the monsoon, are in three groups, the Upper Sutlej, Lower Sutlej, and Indus Canals.

The principal canals of the Upper Sutlej group are the Khanwah, the Kutora, and the Sohag. The Khanwah has been improved and extended. Of the Kutora three-fifths of the excavation have been completed. Of the Sohag the escape channel has been completed, and about two-thirds of the projected Rajbuhas have been excavated.

There have been no important extensions of the irrigation works of the Lower Sutlej Canals. The large annual clearances have been carried out in the usual manner, and improvements have been made of the roads along the canal banks and of the canal bridges.

The Indus Canals are largely appreciated, and enterprising efforts are being made by the principal zemindars of that wild and waste frontier to extend their benefits and bring a larger area into cultivation by their means. Every encouragement is being given to the extension and improvement of these canals. Of the one lakh assigned to the Punjab towards the close of last year out of the proceeds of the 1 per cent. income tax, 25,000 rupees were allotted to the Indus Canals, 15,000 rupees were expended before the end of the year on a regulator bridge for the Manka Canal, an escape and a new cut.

Puttiala Canal.

113. During the past year the Maharajah of Puttiala revived the project of an irrigation canal, to be drawn from the Sutlej near its issue from the lower hills, and to pass through the Puttiala territory. The Maharajah undertook to bear the expense of the preliminary survey and preparation of the project, if the British Government would supply the officers to conduct it. The survey was commenced in January, and before the close of the official year, data had been procured for a design and estimate which are now under preparation.

Western Jumna Canals.

114. The re-modelling of the defective allignments of these canals has been continued. The excavation of a new channel in the upper part of the line of the main canal between Indree and Boodha Khera, near Kurnal, is in progress. This new cut, part of the general scheme for the re-modelling of these canals, was commenced last year as a famine work. Two other portions of new channel, the Boorea cut, 8,890 feet in length, and the Dhamlee cut, 5,110 feet, were also commenced as famine works, and 16,000 rupees was allotted to them as such from local funds. The call for aid of this kind to the people of the famine districts was considered to be at an end from the month of October last, and from that time these works have been continued, as parts of the general project, from Imperial funds.

Two new regulating bridges have been commenced, and some minor works executed.

A new allignment of part of the lower half of the main line, or Delhi Canal, has been marked out.

The bunds for irrigation reservoirs in the Delhi Division, repaired and re-constructed during the past year as famine works, have now been taken in charge by the Superintendent General of Irrigation, North Western Provinces, under whom the Western Jumna Canals have remained, and will be superintended by the officers of those canals.

Minor irrigation works.

115. Two other smaller works were executed during the past year to give employment to the people of the famine districts. Clearance of the Chitung Nuddee, in the Thanesur District, and a tank for irrigation and water supply in the Umballa District.

Total expenditure on irrigation works.

116. The total expenditure during the past year on irrigation works, and their repair and maintenance, has been—

	Rs.
Original works - - - - -	7,94,486
Repairs and maintenance - - -	3,11,264
Rs.	11,05,750

117. The

Forests.

117. The expenditure on the timber operations of the Pangee Agency (forests of the Chenab and its tributaries) during the past year has been 1,08,793 rupees, and the receipts 1,31,823 rupees, giving a net profit of 23,030 rupees. The agency has been chiefly employed during the past year in supplying timber for the Punjab railway works.

During the past year Dr. Cleghorn, Conservator of Forests in Madras, has been deputed to examine and report upon the forests of the Punjab. He is now pursuing a systematic examination of the principal timber forests of the Himalyan districts of the Punjab, and is directing his attention to the other products of these hills of economic value. He has examined some of the principal tracts of forest land in the plains on which the railways and the steam navigation of the rivers are dependent for supplies of fuel, and has investigated into the supply of fire-wood for some of the principal military stations and large cities.

Arboriculture.

118. An expenditure of 6,788 rupees has been incurred in planting out trees from the nurseries, chiefly along the banks of the Baree Doab Canal.

COMMUNICATIONS.

Metalled roads.

119. On the Trunk Road from Delhi upwards to Umballa there have been no new works of importance with exception of the re-commencement of the large bridge over the Markunda River, the well foundations of which are in active progress. The traffic on this section of the Trunk Road is great and constant, and the expenditure is considerable on maintenance and repair.

Metalled crossings of river channels.

During the past year metalled roadways have been made across the beds of the sandy river channels which intersect the Trunk Road, and across the heavy sands of the approaches to the boat-bridges of the large rivers.

Information was obtained from various quarters regarding the modes of construction which had been practised, with more or less success, in different places for metalling on sand, and for roadways on sandy beds of rivers. One or two different methods have been adopted, varying in certain details, but similar in the main general features; a shallow excavation in the sand filled in with clay to form the sub-stratum for the metalling, the whole retained by double rows of fascines at the sides, secured by deep stakes; the finished roadway flush with the river bed.

These metalled river crossings have been constructed across the beds of the Tangree and Markunda Rivers, between Kurnal and Umballa, and the Guggur, north of Umballa (over part of which also is a temporary timber bridge), and on the approaches to the boat-bridges across the Sutlej (at Loodiana), the Beas, the Ravee, the Chenab, and the Jhelum. The very lengthy crossing of the Sutlej at Ferozepore, about five miles, including several channels of various width, into which the river is here divided, crossed by boat-bridges, has not been thus metalled. The ordinary roadway of fascines, brushwood, and grass, has been continued for the present. But the executive engineer of the 8th Division, Grand Trunk Road, has, to improve this tedious crossing, prolonged the embanked roadway from the south side into the river channel, shortening the river crossing by about two miles, with the intention, should this year's operation be successful, of advancing the work similarly next cold season, by which the whole width of crossing may be reduced by about another mile. The embankment is protected by spurs; and the course of the portions of the divided stream, liable to bear down upon it, will, it is hoped, this year be successfully turned into another more central channel; and the whole river ultimately confined to one or two channels at that part, with a more limited amount of sandy approach on either side, which can then be metalled like the others.

The advantages to the general traffic gained by the metalled crossings constructed this year have been very great. They have now been submerged by the annual rising of the rivers, and it remains to be seen, on the subsidence of the rivers at the end of the monsoon, which of the descriptions of metalled roadway has, on the whole, been most satisfactory, and how much, if any of them survives the season's floods. It is not likely that any one can have escaped extensive damage, requiring large repair and partial re-construction; but it is hoped that in most cases, at all events, a large portion of the materials will be saved and made available for the renewal in the cold season of these most important links in the communications by the chief highways of the Province.

The road from Ferozepore to Lahore is approaching completion.

In the 9th Division, Grand Trunk Road (from Loodiana *viâ* Jullunder to Lahore), new road chowkees have been built at Phugwara and at Umritsur.

The metalled road from Umballa to Kalka was pushed on in the beginning of last year as famine work for giving employment to the starving people. Under the orders of the Government of India the original project was expanded, and the work was ordered to be executed on a somewhat more costly scale as being part of a great chain of first class communication. It has been carried on in accordance with these instructions, and is approaching completion.

A commencement has been made of the metalling of the road from Umritsur to Butala and Pathánkote.

Other minor metalled roads have been carried on as famine works in the districts chiefly affected by the famine, Delhi, Goorgaon, Rohtuck, Hissar and Sirsa.

Lahore and Peshawur Road.

120. On the Lahore and Peshawur road progress has been made in the metalling, on which, including the collection of metal, upwards of 3¼ lakhs have been expended during the past year. On the earthwork and general construction of the road 1,11,000 rupees have

have been expended. Of the first large section of the road, 100 miles, from the Ravee to the Jhelum, the greater part of the metalling is expected to be completed, if no unforeseen occurrence prevent, by the end of the present calendar year. The kind of metalling used is, according to the locality, kunkir, broken stone and broken brick. The kinds of stone available at different parts of the line are of very various quality. Metalling is also in progress in the other divisions of the road. A considerable extent has been completed in the fourth division, both Cis and Trans-Indus.

Of the large bridges on the Lahore and Peshawur road the following are in progress:—

Deena	-	112th mile;	10 spans of	40 feet.	Piers on well foundations.
Bishendour	-	130th „	3 „	60 „	
Váh	-	192d „	10 „	30 „	
Gondul	-	216th „	5 „	40 „	
Bridge 126	-	Piers on well foundations.			
Bára	-	258th mile.	Difficult foundations, 18 feet deep.		

The first and last of the above have just been commenced. The others are at various stages of progress. The bridge over the Hurro River, 204th mile, 10 spans of 40 feet, is nearly completed. The large bridge over the Sohan River, 163d mile, 15 masonry arches of 63 feet, has just been commenced.

The following are not yet commenced:—

Bágh Butcha	-	10th mile.				
Chekóree	-	82d „	13 spans of	40 feet, on well foundations.		
Bukrála	-	120th „	12 „	30 „		
Léh	-	163d „	1 „	170 „	timber.	

And for the bridge over the Bhimber, 70th mile, which was designed to have 15 arches of 30 feet span, a new design will be prepared, giving a larger amount of waterway which has been found to be requisite.

Indus tunnel.

121. The experimental gallery of the tunnel under the Indus at Attock is now making satisfactory progress. It was delayed for a considerable time during last year owing to the large influx of water into the west gallery, which required the work on that side to be for a time suspended. On the arrival of the chain pump and horse gin, made up at Roorkee, work was successfully resumed. This apparatus has been found to work most satisfactorily; it is capable of meeting a much larger influx of water than is now experienced.

Of the whole distance between the vertical shafts, 1,505 feet, a total length of 1,025 feet of gallery had been driven on the 1st May, leaving 480 feet to complete.

Unmetalled roads.

122. Of new unmetalled roads in the plains no important extensions have been made. Some new inexpensive lines of communication between the military posts on the Trans-Indus frontier have been constructed under the military officers of the frontier force. Various improvements have been made of unmetalled roads in the districts of Hissar, Umballa, Shahpore, Jhung, Mozufferghur, and Dera Ghazee Khan.

Hill roads.

123. On the road from Kalka to Simla additional stone parapets have been built.

Measures were taken before the close of last year for carrying out improvements of the lines of road in the valley of the Sutlej between Simla and the Chinese frontier, officers were appointed to conduct the work, and since the commencement of the present official year it has been rigorously started.

The road between Rawul Pindee and Murree has been opened out for wheel traffic as far as Trét, about 13 miles from Murree, and improvements have been made of the road above that point.

The road from Kala Serai, on the Lahore and Peshawur road, to Gurhee in Huzara, through Hurreepore and Abbottabad, the trunk line of the Huzara district, has been completed.

Various improvements have been carried out on the road from Abbottabad to Umballa on the Indus frontier to make it easily passable throughout for laden mules.

A few improvements have likewise been made of the new road between Abbottabad and Murree.

Bridges.

124. The well foundations of the masonry bridge over the Markunda River, on the trunk road, 14 miles south of Umballa, are in active progress. As also those of the bridge over the Guggor, on the same road, eight miles north of Umballa.

The bridges on the line of the Lahore and Peshawur road have been noticed above.

A commencement has been made of the masonry abutments for the timber bridges over the Suggoo and Yarik nullahs on the road between Dera Ismail Khan and Bunnoo. The works were for a time suspended in consequence of the total want of water within a great distance of the sites of the bridges. The lattice girders have been made up at Dera Ismail Khan.

Ferries and boat bridges.

125. New superstructure has been made for the boatbridge over the Indus at Attock.

The bridge of boats over the Beas at Wazeer Boolur has been completed.

The boat-bridge across the Ravee at Lahore was maintained throughout last monsoon.

Accommodation for travellers.

126. A Dâk bungalow has been built at Rohtuck.

In the Sirsa District twenty-three tanks have been constructed. These were executed as famine works for employment of the starving people.

For the water supply in the Margulla Pass, to be connected with the Memorial to General Nicholson, iron pipes have been ordered from England.

Total expenditure on communications.

127. The total expenditure during the year under this head (Communications) has been—

	Rs.
Metalled Roads	13,17,328
Unmetalled Roads	1,63,533
Bridges	94,891
Boat-bridges and Ferries	1,36,507
Accommodation for Travellers	15,523
TOTAL Rs.	17,27,782

Electric telegraph.

128. Of the Telegraph Office at Murree the masonry is in a forward state.

The second line of Telegraph between Rawul Pindee and Murree was completed early in last year.

PART IV.—WORKS EXECUTED FROM LOCAL FUNDS.

Expenditure from local funds.

129. The following Statement exhibits the expenditure on works executed from Local Funds, arranged under the same heads as the expenditure on Imperial Works :—

	Original Works.	Repairs.	TOTAL.
CIVIL ADMINISTRATION.	Rs.	Rs.	Rs.
Revenue	2,583	560	3,143
General	10,620	3,961	14,581
Ecclesiastical	8,058	1,953	10,011
Educational	73,011	482	73,493
Judicial	27,718	2,994	30,712
PUBLIC IMPROVEMENTS.			
Municipal	1,09,543	17,784	1,27,327
Industrial	70	- -	70
Agricultural	1,13,094	12,377	1,25,471
Communications	2,53,907	1,42,712	3,96,619
TOTAL Works	5,98,604	1,82,823	7,81,427
Establishments	- -	- -	2,00,994
TOTAL Rs.			9,82,421

The principal works on which this expenditure has been incurred are the following:—

CIVIL ADMINISTRATION.

General.

130. A new Agri-horticultural garden has been laid out and commenced at Lahore. The former garden, between the City of Lahore and the Ravee, is inconveniently situated; and from its position liable to submersion and serious injury from the floods of the river. The new garden is laid out nearly midway between the Civil Station of Anarkullee and the Cantonment of Meean Meer, and is watered by an irrigation channel from the Baree Doab Canal. It will contain a Botanic Garden under the special direction of one of the Professors of the Medical College.

A Dispensary at Hissar is nearly completed. Additions have been made to the Dispensary buildings at Delhi, Thanesur, Goordaspore, Bunnoo, and Dera Ismail Khan.

Sundry repairs have been effected for the preservation of the minarets of the Emperor Jehangir's Tomb at Shadura, near Lahore.

Ecclesiastical.

131. Furniture for the Church at Rohtuck. Improvements to burial grounds at Delhi and at Shahpore.

(The amount set down under this head includes the expenditure on two of the small churches at Jhung and at Bunnoo, to be re-paid from Imperial Revenues, to which the buildings are chargeable).

Educational.

132. Twenty-five Tehsil school-houses have been completed, and 14 more are in progress. 445 village school-houses have been built and 155 are in progress. An Anglo-vernacular school has been built at Hissar, and a zillah school at Jhung. A large school-house is in progress at Mooltan.

133. Twenty-eight

133. Twenty-eight Police bungalows have been completed and 14 are in progress. Judicial.

A Commissioner's Cutcherry has been built at Rawul Pindee. A circuit-house for Commissioner has been built at Goojranwalla, and a building for the same purpose has been purchased at Ferozepore, and a house for Commissioner's Cutcherry at Dera Ismail Khan.

Various small sums have been expended on wells and other additions and improvements to Gaol.

PUBLIC IMPROVEMENTS.

134. On the foundations and lower story of the Delhi Institute 20,148 rupees have been expended during the year. The amount of the estimate is 80,000 rupees. Part of the funds are obtained from private contribution. The building is designed to comprise a Hall of Commerce, a room for Public Meetings, a Museum and a College. Municipal.

Two model lodging-houses have been built at Lahore.

Various town improvements in the Jhung District have been carried out.

A tower for town clock at Peshawur is approaching completion.

Two covered vegetable markets have been built at Lahore, and a vegetable market at Kohat.

New foot-paths have been made in the Chandnee Chowk, the principal street of Delhi.

Streets of the main bazar at Bhawanee, in the Hissar district, have been raised and metalled.

Streets have been paved and improved of various towns in the districts of Sirsa, Loodiana, Jullunder, Sealkote, and Jung.

Several minor improvements have been made of works for water supply in different towns. The arching of the branch canal in the Chandnee Chowk, Delhi, has been repaired. The clearing of tanks at Bullubghur, in the Delhi district, has been completed at a cost of 19,410 rupees. A ghât for females has been built to a tank at Sirsa, and new ghâts at Mozufferghur and Khanghur.

Various works for sewage and drainage, public necessaries, levelling of ground, and general conservancy have been carried out in 15 districts. The filling in of the city ditch at Lahore is not quite completed.

135. Wells and tanks for irrigation have been constructed and improved at various places in the districts of Rohtuck, Umballa, Loodiana, Thanesur, Jullunder, Ferozepore, Sealkote, Rawul Pindee, and Jhung. Agricultural.

On the restoration and improvement of the bunds for irrigation reservoirs in the districts of Delhi and Goorgaon, commenced last year as a famine work, a total sum of 45,018 rupees has now been expended. These works have now been taken in charge by the Superintendent General of Irrigation.

Various sums have been expended on the planting of a large number of trees in almost every district of the Punjab.

136. A sum of 1,21,316 rupees has been expended from local funds during the year on metalled roads. The principal of these are the road from Delhi to Muttra, from Umballa to Kalka, from Umritsur to Pathánkote, from Dera Ghazee Khan to Mooltan (through a heavy sandy tract, being metalled with bricks), and the roads to the railway station at Lahore. Communications.

A considerable extent of unmetalled district roads has been completed in 14 districts, and other unmetalled roads are in progress. The amount expended on unmetalled roads during the year has been 40,424 rupees.

Bridges of various magnitude and importance have been built in 19 districts.

A new boat-bridge has now been established at Kadirabad, on the river Chenab, on the direct line between the salt mines of Pind Dadun Khan and Lahore.

A boat bridge has been completed across the Cabul river in the Peshawur district.

On works for accommodation of travellers, European and Native, a total sum of 35,975 rupees has been expended during the year in 22 districts. These works include four Dâk bungalows, six rooms for Europeans at serais, 13 serais, and 28 wells, completed; and seven serais and two wells in progress.

PART V.—RAILWAYS.

137. This line was formally opened on the 1st March 1862, from which time occasional trains ran. It was finally opened to the public for passenger traffic on the 10th April. This was in time for the annual festival at Shalimar Gardens, Lahore; and during the first 10 days after the opening nearly 3,000 passengers were conveyed daily. Umritsur to Lahore.

During the past year the earthwork has been raised and dressed, and two miles of new embankment executed, consequent on the change of site of the station at Umritsur.

The bridges and culverts are complete, with exception of one girder bridge near Lahore, where a temporary wooden bridge for the present takes the place of the permanent one till arrival of the iron girders from England.

Of the permanent way, 21 miles have been laid down during the year, the 11 miles previously laid have been re-adjusted, and the whole is in good working order.

A mud fence has been made along the whole line, except for a short distance near Lahore and Umritsur, where a post and rail fence has been set up. Sixty-one sets of level crossing gates have been fixed.

At Lahore the defensible passenger station is approaching completion. The goods shed nearly complete, has been fitted up temporarily to serve as a passenger station. The workshops for engine-repairing, carriage-building, &c., are in progress. Some portion has been roofed. Delay has been occasioned by the difficulty in obtaining the long timbers required for the roofing. The short diversion of the high road which passed through the ground taken up for the Lahore station has been completed.

At Umritsur also the goods shed is being used as a temporary passenger station. A permanent station has not been commenced. The completion of this goods shed also is delayed on account of roofing timber. A tank, pump-house, and engine pit, have been finished, and a pump fixed.

The intermediate stations at Meean Meer and Atâree have been nearly completed. At the latter (about the middle of the line) a tank has been built and pump fixed.

On the opening of the line the following was the rolling stock available:—

1 Passenger Engine.	6 Third Class ditto.
1 Goods Engine.	13 Low-sided Trucks.
2 Second Class Carriages	1 Break Van.

There was not sufficient rolling stock to meet the requirements of goods traffic. By the month of July it was hoped the Railway would be prepared to carry merchandise.

The third class fare has been fixed at the low rate of four annas (sixpence) for the whole distance of 32 miles. The amount of passenger traffic between Lahore and Umritsur—the political and the commercial capitals of the Punjab—has always been great, and the metalled road, which was parallel to the Railway, was daily traversed by a large number of *ekkas* (small one-horse carriages) which conveyed native passengers at rates varying from four to eight annas each. The ekka traffic has nearly left this road since the opening of the railway with the above low rate of third class fare. The second class fare, on the other hand, appears to have been fixed too high at two rupees (four shillings). Even wealthy and respectable natives prefer travelling third class at the present fares, and the proceeds of second class traffic are at present little more than 3 per cent. of the third class receipts.

One circumstance worthy of special notice is the large number of females travelling daily by railway on this line. They are sometimes nearly as many as half of the whole number of passengers. They sit together in carriages separate from the men, and lately some second class carriages have been fitted up with venetians for the use of females of a higher class to enable them to perform the journey in the privacy to which they are accustomed.

The following is an Abstract of the traffic and receipts on the Lahore and Umritsur line from the date of opening, 10th April, to the 4th May, 25 days:—

	PASSENGERS.				RECEIPTS.		
	1st Class.	2d Class.	3d Class.	TOTAL.	Passengers.	Horses, &c. and Parcels.	TOTAL.
					Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*

Lahore to Mooltan.

138. The length of this line between the city stations is 206 miles, and, with the extension at the Mooltan end to Sher Shah Ghât on the Chenab—the steamer wharf—218 miles.

During the past year the whole of the earthwork, most of which had previously been roughly finished, has been raised to formation level and dressed.

About half of the culverts between Lahore and Mooltan have been built, and a large quantity of materials collected and prepared for the remainder.

The progress now being made in the supply of ballast by contractors is satisfactory. These contracts are for 70 miles of the line. On the rest of the line there has been delay and difficulty in procuring ballast and sleepers, and a supply of Greave's patent iron sleepers for 40 miles of rail has been ordered from England. About 40 miles of permanent way has been delivered at intervals along the line, and about 14½ miles of sleepers. A temporary way has been laid from Mooltan to the Ghât on the Chenab.

The permanent station at this terminus will be on high ground, a short distance from the river, the course and banks of which are uncertain. At the river it is proposed to have only an open platform with some small temporary buildings.

At the Mooltan station, work has been commenced on the goods shed. A temporary store has been built, and arrangements have been made for preparation of materials. Fifteen bungalows along the line for plate-layers have been finished.

Progress on the Mooltan line during the past year has not been so satisfactory as could have been desired owing to the want of success of the native contractors who had undertaken

taken large amounts of work. The desert nature of the country through which the line runs, and the very scanty population, place peculiar difficulties in the way of these undertakings, and much allowance is to be made on this account for the shortcomings of the contractors. As noticed in last Annual Report, the low state of the rivers for the past two or three years has affected the supplies of timber from the hill forests, for the conveyance of which these rivers furnish at once the highway and the motive power. This season the snow line has been unusually low, and there is prospect of a larger supply of water in the hill streams, which will better furnish the contractors with the means of delivering the quantities of sleepers still required. The works are now being executed, in great measure, by the Railway engineers directly, without contractors; and the exertions of the chief engineer and his staff, and the progress now being made, encourage the hope that the line may be opened early in 1864.

Delhi to Umritsar.

139. The Railway Company has been authorised to raise 2,500,000 *l.* for the construction of this line. The different lines proposed have been examined and reported on during past years. The Punjab Government has strongly recommended a course nearly parallel to the present Trunk Road, *viâ* Umballa, Loodiana, and Jullunder, crossing the Sutlej and Beas Rivers, at sites contiguous to the present bridges of boats. On receipt of approval and orders, work will be at once commenced.

Expenditure on Punjab railways.

140. Subjoined is a statement of the expenditure on Punjab Railways during the past year, and total expenditure since the commencement :—

Expenditure on Punjab Railways up to 30th April 1862.

DETAIL.	Previous to May 1861.	During year 1861-62.	Total up to 30th April 1862.
	Rs.	*Rs.*	*Rs.*
Survey and preliminary expenses	98,454	- -	98,454
Survey of lines from Delhi to Lahore	37,723	2,003	39,726
Salaries, &c., Agent's Department

Carriage building and locomotive erection shops	- -	11,879	11,879
Advances, miscellaneous	2,71,000	1,23,123	3,94,123
Purchase of bungalows	- -	29,246	29,246
TOTAL - - - *Rs.*	24,15,838	16,84,709	41,00,547

Commendation of Public Works officers.

141. The Lieutenant Governor desires to make favourable mention of the following officers of the Public Works Department serving within the Punjab territories during the year under review :—

Colonel H. Rigby	Superintending Engineer, 1st circle.
Captain C. W. Hutchinson	Ditto, 2d ditto.
Lieutenant Colonel A. Taylor, C.B.	Ditto, Lahore and Peshawur road.
„ A. D. Turnbull	Superintendent General of Irrigation. North-Western Provinces.
Captain J. H. Dyas	Director of Canals, Punjab.
Major H. W. Gulliver	Superintendent, Baree Doab Canal.
Captain T. G. Glover	Superintendent, Western Jumna Canals (now Deputy Superintendent General, Irrigation, N. W. Provinces.)

Executive Engineers.

Mr. W. Purdon	Bridges and branch roads, Umballa.
„ J. D. Smithe	Madhopore workshops, and Chenab and Ravee forests.
Major E. N. Sandilands	Fourth division, Lahore and Peshawur road, and Officiating Superintendent Indus Tunnel.
Captain C. M. Browne	Western Sirhind division, and Officiating Lahore division.
Lieutenant G. Newmarch	Assistant to Chief Engineer, and Assistant Secretary to Government, Public Works Department.
Mr. H. Garbett	On special duty, Indus river works.
„ D. Kirwan	Indus canals.
„ A. G. Crommelin	Officiating controller and examiner of accounts.

Assistant Engineers.

Mr. L. B. Bean	Officiating Executive Engineer, 3d division, Lahore and Peshawur road.
„ W. B. Harington	Officiating ditto, Sealkote division.
Lieutenant H. F. Blair	Officiating ditto, Kohat division.
„ T. T. Carter	Officiating ditto, Huzara division.
Lala Kunhya Lala	Lahore division.
Mr. S. W. Nugent	Fourth division, Lahore and Peshawur road.
„ P. J. Flynn	First ditto, ditto.
„ R. J. Elwes	Jullunder division.

SECTION V.—POST OFFICE.

District Dâks.

142. The following figures shew the extent to which the correspondence of the Punjab has been conveyed by the district posts during the past three years:—

	Covers Delivered.	Returned Undelivered.	TOTAL.
1859-60	506,650	43,669	5,50,319
1860-61	572,057	45,526	6,17,583
1861-62	555,139	55,790	6,10,929

There has been a slight diminution in the total number of covers conveyed during the past, as compared with the previous year, though the number is still greatly in excess of what it was in 1859-60. The proportion of undelivered letters has increased from 7 to 9 per cent.

SECTION VI.—ELECTRIC TELEGRAPH.

Telegraph continues efficient and useful.

143. Nothing new has occurred during the past year worth recording under this head; the several lines of telegraph in the Punjab maintain their efficiency and usefulness.

Reason why receipts and disbursements are not noted.

144. Heretofore, the aggregate receipts and disbursements of the Telegraph Department in the Punjab have been noted in the Annual Administration Reports on information supplied by the Director General of that department. In the present instance, that functionary has stated that, as this information is furnished by him direct to the Supreme Government, it appears unnecessary to supply it for incorporation in the Local Administration Report.

SECTION VII.--MARINE.

Department of Inland Navigation organised.

145. A department of Inland Navigation for the Punjab has been organized, the cost of which is estimated as follows:—

	Cost per Annum.
	Rs.
Superintendent, Inland Navigation	7,200
First Assistant	4,200
Second ditto	3,000
Establishments of four steamers	58,644
Ditto of two Flats	10,560
Office and Medical Establishments, including Contingencies and Travelling Allowances	29,947
River Conservancy Works	23,288
Factory	45,600
Fuel for Steamers and Factory	30,000
Stores for Ships, Engines, and Factory	2,00,000
TOTAL	*Rs.* 4,12,439

The last item is exceptionally high, and will be reduced in subsequent years. There is necessarily a large expenditure on stores on the first establishment of a steam flotilla and factory.

Steamers on Upper Indus.

Description of River.

146. Three steamers are already plying between Mithunkote and Mukhud.* Mithunkote is about 540 miles from the sea, and about 357 miles from Mukhud. The river between these places is very broad, but shallow, and impeded by sand banks. In the worst places the channel will be as low as two feet in depth in the dry season. Its velocity varies from three to five miles per hour. The rapids which formerly existed at Kalabagh have now disappeared. Mukhud is a trading town, and may be approached by native boats even in the flood season. Between Mukhud and Attock the navigation is difficult for about four months of the year, on account of the swiftness of the stream at places where it is narrowed by rocks. It is probable that in the low season something may be done towards removing some troublesome rocks by blasting, particularly at Kunaba. During the remainder of the year country boats can be towed up as high as Pubbeh, on the Kabul River, about 12 or 14 miles from Peshawur. Measures are in progress to ascertain whether steamers will be able to ply regurly between Attock and Mukhud, and it is probable that stern-wheeled vessels, one or two of which are expected from England, will be successful.

Traffic on river between Attock and and Mukhud.

147. It is only during the last year or two that merchandise has been sent down the river from Attock. Formerly only two boat-loads of pilgrims, bound for Mecca, started from thence. The commodities now sent down stream are rice, snuff, empty beer casks, and boxes. Hides and sheep's wool are beginning to be transported, and during the past year three boat-loads of ghee started for Bombay. Up the river are brought salt and sissoo wood for the Government works. During eight months boats can be towed up. The towing path is being improved. The time taken is about 16 days from Mukhud. The freight for salt is 50 rupees per 100 maunds; for wood, *Rs.* 42. 8. The rates for freight down stream are lower, but they generally include all charges as far as Rohree, in Sindh, which, united with Sukhur on the opposite bank, has become a large entrepôt of trade.

There is a tolerable camel road from Mukhud to Attock, which is being improved. This may perhaps hereafter be improved so as to be passable for carts.

Advantage of having steamers on the Indus.

148. In transporting bulky Commissariat stores, such as beer in hogsheads, and Ordnance material, the steamers will effect a large saving to Government, as the land route has hitherto been employed. As a mode of transit for passengers also they will be extremely convenient to the public, as there are no metalled roads on either bank. But it is more doubtful if the steamers will, at first, attract much mercantile freight, for, although the exports from Afghanistan meet the Indus both at Attock and Dera Ismail Khan, the line of trade from the first has hitherto been with Umritsur and Lahore; and from the second the camels used, being the property of the Powindah merchants, are the cheapest means of conveyance. The bulky raw produce now conveyed in country boats would not bear the cost of steam freight. There will now, however, be water carriage for English goods from Kurrachee to within 12 miles of Peshawur.

149. The

* The steamers began to run in June 1862.

149. The following figures show the state of boat traffic :—

Boat traffic.

YEAR.	Number of Boats.	Tons.
1857-58 - - - - -	3,548	42,125
1858-59 - - - - -	3,965	49,871
1859-60 - - - - -	3,806	53,043
1860-61 - - - - -	2,945	39,708
1861-62 - - - - -	2,442	33,208
Difference between 1860-61 and 1861-62.	— 503	— 6,500

The decrease has been chiefly in cereals, the export of which was repressed by the prevailing scarcity. A check was also given to the export of saltpetre by the prohibitive proclamation issued by Government under our doubtful relations with America.

The following articles show an increased export from the Punjab, as :—

	Maunds from	Maunds to		Maunds from	Maunds to
Cotton - - -	8,639	48,941	Ghee - - -	15,711	17,587
Indigo - - -	1,741	2,446	Oil - - - -	3,823	8,147
Sesamun Seed - -	4,536	69,390	Sheep's Wool - -	76,104	83,766
Tobacco - - -	315	1,363	Horns - - -	3,700	20,400
Hemp - - -	2,311	4,793	Hides - - -	43,568	47,760

In the last quarter of the past year there is an encouraging increase in the amount of traffic by boats, which would seem to indicate that the trade, which for some time past had declined, was reviving.

Indus steam flotilla traffic.

150. Below are the Returns of the Indus Steam Flotilla, which has now been broken up, steamers belonging to the Railway Company, and the Inland Navigation Company, succeeding it :—

	Weight in Tons.	Measurement by Feet.	Number of Private Passengers.	Total Amount Realised.
				Rs.
1860-61 - - - -	605	17,951	381	18,550
1861-62 - - - -	926	22,072	259	25,004

SECTION VIII.—FINANCE.

Appendix I., receipts and disbursements.

151. The accounts given in Appendix I. of the receipts and disbursements for the year are, for the first time, according to the form prescribed by the Budget and Audit Committee.

The following is the financial result :—

YEAR.	Receipts.	Civil Disbursements.	Surplus over Civil Expenditure.
	Rs.	*Rs.*	*Rs.*
1860-61 - -	3,29,27,053	1,91,78,188	1,37,48,865
1861-62 - -	3,04,70,828	1,64,67,647	1,40,03,181
Difference - -	—24,56,225	—27,10,541	2,54,316

152. Ever

Military expenditure not taken into account in former reports.

Reason for this.

152. Ever since the annexation, the difference between the receipts and civil disbursements has been denominated surplus. The reason appears to be, that the Local Government, exercising no control over the military expenditure, cannot be held responsible for its operation on the local finances. The Local Administration exercises, on the other hand, a material influence over the civil expenditure, for the original estimates and subsequent alterations have all been framed under its directions, and sanctioned *pro formâ* by the Supreme Government. It appears, therefore, fair and necessary that, in stating the financial results of the year's administration, in order that the Supreme Government may judge of the efficiency of the management generally, only that expenditure should be exhibited which has been affected by the management under review. And this has been the course followed. Any other would indeed have involved much labour and correspondence, for, as the military accounts are not kept by the Local Accountant, it would have been necessary to refer to Calcutta for all details.

Military expenditure now exhibited.

153. Orders have now been received to exhibit the military expenditure of the Province. For the reason above given no account of the actual expenditure can be given; but the following figures, framed according to data furnished by the Military Finance Department, show approximately the cost of troops and military buildings for 1861-62:—

	Rs.
Cost of troops, &c. - - - - -	2,38,10,000
Military Public Works - - - - -	6,56,420*
Rs.	2,44,66,420

Financial result.

If it be ruled that the whole military expenditure shall form a charge against the Punjab finances, the account will stand as follows:—

	Rs.	*Rs.*
Receipts - - - - - - -		3,04,70,828
Disbursements—Civil - -	1,58,11,227	
Military -	2,44,66,420	
		4,02,77,647
Deficit - -	*Rs.*	98,06,819

Proposed reductions in military expenditure.

154. The Lieutenant Governor has recently submitted to the Supreme Government proposals involving a reduction in the military expenditure amounting to 51,65,000 rupees, besides a saving of 2,00,000 rupees on account of buildings. If these reductions be sanctioned, the military expenditure will be brought down to 1,86,45,000 rupees, and it probably could not be further lowered without risk.

Army of North Western frontier.

155. The cost of the troops at Peshawur, Mooltan, and Rawul Pindee, forming, together with the Punjab Irregular Force included, the army of the north western frontier, amounts to 1,10,19,000 rupees.

Properly an Imperial charge.

Some doubt has been expressed as to whether or not this sum can now properly be regarded as an Imperial charge. It is admitted that previous to the mutinies the frontier army did protect the interior provinces as well as the Punjab; but it is argued that there are sufficient European troops in the North Western Provinces and Bengal to render them independent of the aid of the Punjab, which consequently ought to pay for all the troops within it. But in the first place the statement that the troops are sufficient for all purposes requires some demonstration; and secondly, if they really be sufficient, both for occupation and also for the repulse of foreign aggression, it follows that they are unnecessarily strong, for, protected by the Punjab, the Interior Provinces are in no danger of attack from without. It may be said that the state of India, and the delay attending the despatch of re-inforcements from England, necessitate the maintenance in India of a European force more than sufficient for the occupation of the country in times of peace. If this point be conceded, still the excess cannot be regarded as the garrison of the Interior Provinces. It is simply an Imperial reserve available for action in any part of India. Moreover its presence may not be permanent. Necessary after the shock of the mutiny, continued political tranquility may possibly hereafter justify its diminution, and in that case the Interior Provinces would again become dependent on the frontier army of the Punjab for protection. The fact then is that, under ordinary strategical arrangements, there would be only one frontier army which would be placed on the Punjab border for the external protection of the whole of the Bengal Provinces; but that in an extraordinary exigency troops have been poured into the Interior Provinces in such numbers as to suffice in themselves both for occupation and exterior defence. The Imperial nature of the service performed by the Punjab frontier army remains unchanged. What has been changed is the strength of the European reserve in India, which has been greatly increased. Therefore, it may fairly be argued, that the cost of the frontier army ought, as heretofore, remain an Imperial charge; and if it be the case that the troops in rear are more numerous than is necessary for purposes of occupation, then the excess ought also to be charged to the Imperial account as reserve.

156. If

* This sum is also included in the Civil expenditure given above.

Financial result, excluding cost of frontier army.

156. If this principle were observed, the Punjab (like other provinces) would be charged with the cost of its interior garrison, amounting (after including buildings, and effecting the reductions proposed by the Lieutenant Governor) to 82,82,420 rupees, together with a proportion of the cost of the reserve, which is not known.

		Rs.
Exclusive of the last item, the account would then stand thus:—		
Revenues		3,04,70,828
Expenditure—Civil	1,58,11,227	
„ Military, including buildings	82,82,420	
		2,40,93,640
Excess of revenue available for Imperial purposes		Rs. 63,77,181

Reason why the whole military expenditure might be regarded as an Imperial charge.

157. But the Lieutenant-Governor has ventured to express his opinion against this method of charging the military expenditure. Whether the Punjab be a profitable possession, financially, or not; being now an integral portion of the Indian Empire, and its most exposed point, it must be held and defended. To this end, it is essential that the best military arrangements be made, irrespective of the capacity of the revenues of the province, to bear the cost. If, in a military point of view, troops are, for the general defence of the Empire, more advantageously placed in the Punjab than in the North Western Provinces, they must remain there, however inadequate the Provincial revenues may be to support the charge. So also, if for sanitary purposes, it be desirable to station Europeans within the Punjab Himalayas, no considerations of local finance should be allowed to interfere with the arrangement. On this plan the army would be regarded as an establishment maintained for the occupation and defence of all India, its numbers fixed, and occasionally revised on a consideration of the political circumstances of the time being; its distribution decided solely by the recognised principles of strategy; and its expenditure charged in proportion to the revenues of the several provinces protected.

The administration of each province would show, as has hitherto been done in the Punjab Reports, the detail of its civil expenditure which being unlike the military expenditure, under its exclusive control, it is directly and undividedly responsible for, and the economical management of which is a fair test of its success.

Items of revenue increased.

158. The following figures show the items of revenue which have increased in the year under report:—

	Rupees.		Rupees.
Land Revenue	4,37,041	Stamps	3,00,493
Income Tax	6,96,085	Marine	996
Stage Carriage Licenses	3,742	Public Works	4,67,336
Customs	4,98,397	Tribute	1,25,230
Salt	2,39,976		
		TOTAL	Rs. 27,69,296

The causes of increase have been explained in the revenue section.

Items of revenue decreased.

159. The decrease is thus distributed:—

	Rs.
Sayer	75,641
Abkaree	15,647
Duty on Arts, Trades, &c.	11,35,776
Law and Justice	61,604
Miscellaneous	39,36,853
	Rs. 52,25,521

The duty on arts, trades, and dealings was not levied in 1861–62. The miscellaneous revenue of 1860–61 was swelled by an extraordinary item of 34½ lakhs received on account of territory sold to the Cis-Sutlej Chiefs.

Items of expenditure increased.

160. The increase in disbursements has been as follows:—

	Rs.		Rs.
Allowances, Refunds, and Drawbacks.	59,276	Marine	18,994
Customs	59,185	Miscellaneous	4,612
Salt	19,157	Civil Contingencies	61,930
Law and Justice	80,322		
Education, Science, and Art	16,383		Rs. 3,19,859

The

The large increase under the head of Customs is caused by an increase which has been made to the preventive establishment for the better detection of smuggling; and also for the levy of duties on saccharine produce passing down the Sutlej. The increase under the head of Law and Justice is nominal; the cost of service of processes having been shown against "Stamps" in 1860–61. The Civil Contingencies have been increased on account of charges for the London International Exhibition.

Items of expenditure decreased.

161. The decrease of expenditure was as follows:—

	Rs.
Land Revenue	- 53,180
Assessed Taxes	- 27,829
Stamps	- 38,469
Allowances under Treaties	- 9,77,175
Miscellaneous charges against income	- 2,143
Public Works	- 1,94,109
Salaries and expenses of Public Departments	- 12,528
Police	- 4,47,058
Political charges	- 4,28,370
Superannuation and charitable allowances	- 8,49,539
	Rs. 30,30,400

The decrease under the head of Assignments and Charitable Allowances is owing to large arrears having been paid in 1860–61, and to compensation granted on account of losses caused by the mutinies, having been charged to the latter head. A less sum has been expended under "Internal Improvements," for land taken up for railways. The saving under the head of police is permanent, but the real amount of reduction is shown in the proper section. The decrease under "Political Agencies" is nominal.

Proportion of revenue expended on internal improvements and public works.

162. It will be observed that more than one-sixth of the revenues has been expended on internal improvements and public works.

Reform in system of account.

163. The reforms in the system of account inaugurated by the Budget and Audit Committee, have been fully carried out during the past year.

The old classification of account was swept away, and one substituted similar in almost all respects to that adopted in the home accounts.

The expenditure under each head of service is now shown in two columns "Adjusted" and "Unadjusted," doing away with the necessity for a separate head of "Miscellaneous Advances" or "Inefficient Balance," to which formerly all advances were in the first instance, debited—a system which rendered it impossible to tell at any time the real progress of expenditure on any particular service.

The monthly returns of Treasury officers are now submitted with perfect regularity.

Printed forms of cash account have relieved Treasury officers from much clerical labour; but on the other hand a new return has been introduced, viz., a monthly abstract of receipts and disbursements, showing the progress of the income and expenditure as compared with the Budget Estimates.

Minor reforms in district treasuries.

164. A reform has been carried out in the internal economy of the Treasury offices, by the introduction of what is known as the Bengal system of separation of cash and account. The duties of the cashier are restricted to a simple record of cash received and disbursed, while the native accountant or Mohásib is the channel through which all transactions, whether by cash or transfer, pass in the first instance.

The organization of the accounts of the branch or Tehsil territories has been also improved, and a better system of incorporating these accounts with those of the Sudder Treasury has been introduced.

Plain and intelligible rules for paying money into, and paying money out of, Government Treasuries have been published, and are hung up outside all Treasuries for the guidance of parties having transactions with them.

The system of payment by cheques on letters of credit has been introduced for all branches of the Government service with great advantage.

Inspection of treasuries by Deputy Auditor General.

165. The important Treasuries of Umritsur, Jullunder, Umballa, Simla, and Delhi, were visited, and their working inspected by the Deputy Auditor and Accountant General in November.

Accountant General's visit.

Mr. R. P. Harrison, the Accountant General of India, visited Lahore in February, and inspected the head office of account and several of the more important Treasuries. Mr. Harrison expressed himself as generally satisfied with the state of the offices that came under his inspection.

Favourable notice of officers of account.

166. In this Department the Lieutenant Governor desires to acknowledge the services of Mr. C. E. Chapman, on whom the labour of superintending the transition from the old to the new system has devolved; also of Mr. R. Taylor, Civil Paymaster.

SECTION IX.—ECCLESIASTICAL.

Nothing to record under this head.

167. Beyond the progress made in the erection of churches and other ecclesiastical buildings, as recorded in the Public Works section, there is nothing worth noting under this head. The small churches at detached civil stations, which were sanctioned by the Supreme Government two years ago, have nearly all been completed. Hissar is still without a resident clergyman.

SECTION X.—POLITICAL.

Cabul.

168. The south-western extremity of the Hindee Kush is known as the Siah Koh, or Black Mountain. On and beneath its southern slopes is the district of Gowr. Rugged with precipitous hills, crowned with forests, its valleys are inhabited by a Nomad population, amongst whom the Taimuni tribe hold a principal place. The strength of the country has usually secured to its chief a certain degree of independence. But about the year 1845 the Wazir Yar Mahomed Khan of Herat brought it under subjection, and, transporting many of the Taimunis to Herat, forced some to reside in the city, and others to serve in his army. He subsequently appointed Aktar Khan Alizai Governor of Gowr on account of his known hostility to Kokan-dil-Khan, the then ruler of Kandahar.

Seat of the Taimuni Tribe.

Yar Mahomed's operations against them.

Abdul Ghafur Khan.

169. At the commencement of the year, under report, Abdul Ghafur Khan was chief of the Taimunis. It is said that he could summon 12,000 horsemen to his standard, and enjoyed a revenue of three lakhs of rupees. The chief place is Tysarah.

His forces and revenue.

Furrah.

170. The strong fort of Furrah is situated on the road between Kandahar and Herat, and commands the frontier district of the Cabul territories abutting on Herat and Gowr.

Outrage committed by the Taimuni Chief.

171. The Taimuni chief, instigated by private enmity, procured the murder of a kinsman of his own resident in the Furrah district. The Governor, Mahomed Shariff Khan, a son of the Amir, resenting this outrage, applied to the Amir for permission to punish its perpetrator, and though at first discouraged, ultimately obtained it, on the ground that the chief was a feudatory of the Afghan Government, and had formerly been coerced by an Afghan force under the command of Julaloodeen Khan, son of the Wazir Mahomed Aktar Khan.

Its results.

Visit of the Amir's daughter to Furrah.

172. On hearing of the preparations being made, Sultan Ahmed Khan, the ruler of Herat, remonstrated; and his wife, the daughter of the Amir, together with her son, Shah Newaz Khan, anxious to prevent a family feud, went over to Furrah and had an interview with Mahomed Sharif Khan. It was given out that her entreaties had prevailed, and that a pardon had been extended to Abdul Ghafur Khan. That chief accordingly disbanded his followers. But Mahomed Sharif Khan then made a sudden night march, compelling him to flight, and leading, in a few days, to the complete reduction of his country, the people of which had been alienated by his oppression.

Its effects.

Mahomed Sharif Khan's occupation of the Taimuni Chief's country.

The Chief goes to Herat.

173. Abdul Ghafur repaired to Herat, but Sultan Jan was then endeavouring to reduce the Mir of Maimunna to subjection. He did not ultimately succeed; and at the beginning of March he suddenly advanced to Subzawar, half-way between Herat and Furrah. He was accompanied by Sirdar Amir Afzul Khan, son of Poordil Khan, and Sirdar Gholam Mohindin Khan, son of Sirdar Kokandil Khan, who strongly urged him to push on to Kandahar. His force consisted of 8,000 regulars and three guns, together with a crowd of militia, which soon moved on Khillutgah, about 4½ miles from Furrah, the place where former kings used to hold investitures.

Sultan Jhan's march against Furrah.

Arrives at Khillutgah.

Garrison of Furrah.

174. Sirdar Saifulla Khan, the youthful son of the Amir, held the citadel of Furrah with four companies of regular infatry, 200 jazailchees, 200 horse, and four small guns; but the gates were in the hands of the Khans of Furrah. After an interval of 19 days, three of these, Khan Mahomed Khan, Idukhel, Jabâr Khan, Nurzai, and Mahomed Khan, Achakzai, opened the gates, and a day or two after the Sirdar was obliged to surrender. Protection was extended to the ladies of the garrison: the troops were disarmed and turned out. The Kandahar Sirdars advanced as far as Ghirishk, on the Helmund, but did not then attempt to make any demonstration against Furrah.

Treachery of the Khans.

Reduction of the fort.

Advance of Kandahar Sirdars to Ghirishk.

The Amir at Jelalabad.

175. The unwelcome news reached Amir Dost Mahomed Khan at Jelalabad. He immediately addressed letters to the principal personages of Kandahar, requiring them to obey the directions of Mahomed Amin Khan; and warned the Khans of the Jelalabad, Kabul, Ghuzni, and Kohistan provinces, together with Saadut Khan of Lalpura, to be in readiness with their partizans for service. The Amir himself, after some unavoidable delay, marched towards Kandahar, and reached Ghirishk on the 9th of June.

Summons to the Khans.

Marches towards Kandahar.

Death of Sultan Mahomed Khan. His parentage.

176. On the 16th of October 1861, died Sirdar Sultan Mahomed Khan at Kabul. He was the son of Payendah Khan, surnamed Sarafraz Khan, the Wazir and victim of Shah Zeman,

Zeman, and his mother was a Thoki Ghilzi. In the partition of the Kabul territories, which followed the acknowledgment of the pre-eminence of Sirdar Azim Khan, the five brothers, of whom Sultan Mahomed was the third, obtained the government of Peshawur. Having, together with the present Amir, Dost Mahomed Khan, treacherously aided Runjit Singh's victory at Naeshehra, which gave Peshawur to the Seikhs, he was maintained in possession jointly with Dost Mahomed, who subsequently resided at Hashtnugur, on condition of paying a tribute of horses and rice. Afterwards, when the Kandahar brothers interfered to prevent Dost Mahomed Khan's occupation of Kabul, and at the same time set aside the imbecile son of Azim Khan, for the preservation of the balance of power in the Mahomedzai family, Sultan Mahomed was allowed to rule at Kabul. Here, owing to the opposition of the Kizzilbashes, of whom was Dost Mahomed's mother, he favoured the Suni sect, and excited religious strife; and being, though not without bravery and capacity, frivolous, indolent, and luxurious, he was in no long time ousted by the more enterprising Amir. Retiring to Peshawur he again intrigued with the Seikhs, who, under the guidance of Huri Singh Nulwa, and with the Shahzadah Nao Nihal Singh at their head, occupied Peshawur with 9,000 men, whilst Sultan Mahomed and his brothers fled across the border. At that time Dost Mahomed had marched towards Kandahar to meet Shah Shuja-ul-Mulk, who had appeared in force from Shirkarpore. Sultan Mahomed, distrusting the fortune of his brother, attempted to establish his own influence in the Jelalabad district, but the complete defeat of the Shah made him press on to Kabul in time to adorn the triumphant return of Dost Mahomed. A religious war being projected against the Seikhs by the Amir, Sultan Mahomed, during the negotiations which followed, went over to the enemy. Runjit Singh then conferred on him the districts of Hashtnuggur, the Doabah Kohai, and Haugu. He was also made the governor of the fort of Rhotas; but subsequently falling under the displeasure of Raja Jowahir Singh, the Seikh minister, he was summoned to Lahore and placed under surveillance. The Amir long regarded Sultan Mahomed as an enemy. When urged to settle his differences with the Seikhs by assenting to his restoration to Peshawur, he replied that his "brother would gladly compass his destruction; that with Sultan Mahomed at Peshawur he would not be safe for a day; and that he would rather see it in the hands of the Seikhs." On the British occupying Lahore, Sultan Mahomed was released by Sir Henry Lawrence, and he justified the Amir's bad opinion of him by giving up his liberator's brother, General George Lawrence and Mrs. Lawrence, who had taken refuge with him at Kohat, when the Seikh troops mutinied at Peshawur. On this account Sir John Lawrence declined to accede to the request of Gholam Hyder Khan, the late heir apparent of Kabul, that he should be restored to the fiefs which he held under the Seikhs. He afterwards enjoyed a jaghir in Lughman, and resided in the Kabul territories until his death. He was averse to the English alliance. His brother, Pir Mahomed Khan, died a short time before him.

Governor of Peshawur.

Released by Sir H. Lawrence.
His ingratitude.
His exclusion from any benefit of the treaty made with the Amir.
Return to Kabul.
Death of Pir Mahomed.

177. In the first half of 1861, some hostilities occurred between Bukhara and Khokand; these have, it is reported, been terminated by a treaty.

Treaty of peace between Khokand and Bukhara.

178. It was mentioned in last year's report that Muhsood Waziris had agreed to the terms offered to them, and had been again admitted to trade in our territories. The basis of their new engagements was that each main section, the Alizais, the Baholzais, and the Shamankhels, should be responsible for any outrages committed by members or sub-divisions belonging to their respective sections. Several thefts were soon afterwards committed; five grass-cutters of the 3d Punjab Cavalry were murdered, as well as a herdsmen. In consequence of these crimes, in which the Bahlolzai and Alizai sections were concerned, their tribesmen within our territory were arrested, their trade was stopped, and their merchandize and property was seized. The Shamankhel, not being implicated, came and went without interruption, except when they used Alizai camels, which were confiscated. The Muliks subsequently professed their readiness to make good the fines due from them under the treaty, amounting in all to 4,500 rupees. Their camels, therefore, were sold, and the balance paid by a banker, who was to be re-paid by the offending sections, with interest, by a toll on all pack animals until the debt should be liquidated.

Border tribes.
Engagements entered into by the Muhsood Waziris.
Their breach.
Sections implicated.
Fines imposed.
Method of payment.

179. Soon afterwards (17th November) a deputation, comprising the principal men of each sub-division, waited on the Commissioner at the Dera Ismail Khan, with the object of ratifying the treaty previously made. The demonstration was believed to be sincere, and they have since behaved well. Colonel Taylor, however, took the opportunity of pointing out that the Shingis and Malikshais of the Bahlolzai section are hereditary thieves, exposed to constant temptation from the Powindah camels feeding immediately under their hills. He advocates their settlement on waste lands, but there is a difficulty in finding any with the advantage of irrigation. The Lieutenant Governor is very sensible of the great importance of this and similar projects as bearing upon the gradual civilization of the border tribes.

Interview of the Chief Mulliks with the Commissioner.
Difficulties of the tribe.
Proposed colonization.

180. Early in 1862, some instances of kidnapping Hindoo traders occurred on the Hazara border. The influence exercised immediately across the Indus by certain fanatical Syuds and Hindostani Mahomedan emigrants is very prejudicial to the maintenance of good order amongst the independent tribes.

Jydoons and Hindostani fanatics.

181. On the 1st November 1862, the anniversary of the assumption by Her Majesty of the direct government of India, his Highness the Maharaja of Jummoo and Cashmere was invested with the insignia of the Order of the Star of India.

Investiture of Maharaja of Jummoo with Order of Star of India.

SECTION XI.—MILITARY.

Preliminary remarks.

182. Heretofore the local Government has abstained from reporting on the Military branch of the administration in its Annual Reports, not having had any control over the Military Departments, and not having generally been consulted on the distribution of troops.

But in paragraph 28, proceedings dated 11th November 1861, in the Financial Department, the Supreme Government, in reviewing the income and expenditure of the Indian Empire, thus remark:—

"The large amount of military charges attracts, perhaps less than any other, the attention of the local administrations, which are apt to consider such matters as beyond their immediate control, and only indirectly connected with their responsibilities.

"It is true that the general military defence of the country is peculiarly and especially the duty of the general Government of India; but there is no officer in civil charge of a Province who has it not in his power to influence the decision of that Government as to the force requisite to garrison his Province; and, apart from the direct influence of good or bad government on the quiet of a country, every such officer has constant opportunities of reviewing every question connected with its military occupation, and has often better means than the Military Commandant of knowing in what quarter reductions of military force are possible. It is, therefore, a duty of each local administration to take the initiative in proposing measures of reduction wherever it sees a possibility of doing so."

Army in the Punjab.

183. Under these circumstances a record will be made, in the Annual Reports by this Government, of the forces stationed in the Punjab. Appended is a Return marked (A.), showing the distribution of troops under the orders of his Excellency the Commander in Chief, from which it will be perceived that, exclusive of the Punjab Irregular Force, we have the following force in the Punjab:—

	Approximate Number of Men.		Approximate Cost.	Cost per Man.
			Rs.	
21 Batteries of European Artillery with 102 guns, field and siege - -	2,000	- -	30,85,000	European 1,061·5
3 Regiments of British Cavalry - -	2,000	- -	27,00,000	
14 „ of „ Infantry - -	12,000	- -	1,12,00,000	
Europeans - -	- -	16,000		
8 Regiments of Bengal Cavalry - -	3,800	- -	18,37,000	Native 279·6
14 „ of Native Infantry - -	9,600	- -	- -	
2 Companies of Sappers - - -	100	- -	19,88,000	
Natives - -	- -	13,500		
TOTAL - - -		29,500	2,08,10,000	

The force consisting of—

Europeans - - - - -	16,000 with 90 field guns.
Natives - - - - -	13,500
Total - - -	29,500

It is interesting to compare, in strength and expense, this force with the force occupying the same stations prior to the mutiny in 1857.

	1857.	1862.	Cost Approximate, 1857.	Cost, 1862.	REMARKS.
			Rs.	*Rs.*	
Europeans - Men -	12,650	16,000	2,36,06,000	2,08,10,000	The data on which these calculations are based were obtained from Finance Commission.
Europeans - Guns -	70	90			
Natives - Men -	41,500	13,500			
Natives - Guns -	36	—			

184. In

184. In the Punjab Irregular Force reductions have been continued to bring the regiments of the force to the scale laid down in Government General Orders, Nos. 400 and 494 of the 3d May and 14th June 1861.

Punjab irregular force, reductions.

A Statement marked (B.) is appended, showing the reductions effected, viz. :—

Artillery	54	men.
Cavalry	240	„
Infantry	786	„
Total	1,080	effecting an annual saving of 1,60,000 rupees.

Artillery mountain trains.

185. Sanction of the Supreme Government was received to the proposal to assimilate the Peshawur and Huzara Mountain Train Batteries. The former consisted of eight, and the latter of four guns.

Both batteries have now been made to consist of four guns, with an efficient establishment, and a saving of 14,576 rupees per annum has been effected.

Strength of the Punjab irregular force.

186. A Statement marked (B.) is annexed, showing the strength and distribution of the several batteries and regiments of the Punjab Irregular Force.

The 3d Regiment Seikh Infantry are still employed in Oude, and under the orders of his Excellency the Commander in Chief. Excluding this regiment the force, in strength and cost, is as follows:—

	Strength. Men.	Cost per Annum.	Cost per Man.	REMARKS.
		Rs.	*Rs.*	
Artillery	575	2,72,673	476·1	The cost per man agrees with the data furnished by the Military Finance Commission.
Cavalry	2,815	11,52,987	409·6	
Infantry	7,893	15,22,544	192·8	
TOTAL	11,283	29,48,204	264·1	

The cost of each regiment and battery of the Punjab Irregular Force is shown in statement appended, and marked (C).

Brief notice of distribution of army in Punjab.

187. The army in occupation of the Punjab is composed of three divisions, a brigade at Delhi, and the Punjab Irregular Force. The strength and cost may thus be stated:

		Strength.		Cost.
		Europeans.	Natives.	
				Rs.
Under His Excellency the Commander in Chief.	Delhi Brigade	1,000	900	13,00,000
	Sirhind Division	4,900	3,100	59,70,000
	Lahore Division	5,300	3,800	69,20,000
	Peshawur Division	4,800	5,700	66,20,000
Under Government of India.	Punjab Irregular Force	-	11,200	30,00,000
	TOTAL	16,000	24,700	2,38,10,000

Proposed reduction.

The question of reducing this force has recently been under the consideration of the Local Government, and it has been shown that, if such reductions were rendered necessary, by weakening Delhi and Ferozepore, abolishing Sealkote, and converting the hill stations of Dugshaie and Subathoo into Sanataria for troops in the plains, an annual saving of 51 lakhs of rupees can be effected.

Delhi brigade.

188. The brigade at Delhi forms a part of the Meerut division in the North Western Provinces. The troops occupy the palace, magazine, and duriagunge, and hold the principle gates of the city. Military jurisdiction extends for 500 yards beyond the city wall. The political importance of Delhi dates from the time of the slave kings. It remained

remained the seat of Government of succeeding dynasties, and in the mutiny of the Bengal Army in 1857, it at once became the seat and heart of the revolt. Since the mutiny the palace has been turned into a citadel which, held by an European garrison, and having heavy ordnance on its defences, can command the city.

Sirhind division.

189. The Sirhind division, under the command of Major General Renny, has its head quarters at Umballa, a post of considerable importance both with reference to the independent Seikh Chiefs on its left, and the Hill principalities on its right flank.

Two British Infantry Regiments are located at Subathoo and Dugshaie for the benefit of the mountain climate, but their position has no military significance. A brigade of troops is placed at Jullunder in the centre of the populous Doab of that name. They hold the fort of Phillour, on the right bank of the river Sutlej, and tend to overawe the population of the neighbouring hills, who, after annexation, evinced a turbulent spirit.

Lahore division.

190. Lahore is the head quarters of the division, under the command of Major General Cunningham. As the ancient capital of the Punjab, Lahore is occupied in strength. The fort adjoins the town, and is held by a detachment of European troops from Meean Meer, which is the military cantonment, about six miles distant from the town.

In this division are three celebrated forts, Kangra, Govindghur, and Mooltan; and the following stations:

Ferozepore.	Mooltan.
Umritsur.	Sealkote.

Kangra (iucluding Dhurmsala). At present there is a strong brigade at the healthy cantonment of Sealkote, within a forced march of the capital of Cashmere; but his Honor the Lieutenant Governor has expressed an opinion that this force is not absolutely required.

At Mooltan the troops maintain the communication with Lahore, and act also as an effective support to the force stationed to the west on the Trans-Indus Frontier. It is one of the keys of the Punjab.

Ferozepore and Umritsur may be regarded as outposts of Lahore; the former place is held by a strong force, as it contains the main arsenal in Upper India; the latter place is now connected with Lahore by the railway, but still has a force in the cantonments, and in the fort of Govindghur.

Peshawur division.

191. Peshawur is the head quarters of the remaining division in the Punjab, which is under the command of Major General Sir Sydney Cotton, K.C.B. The distance from Lahore to Peshawur is 270 miles, and four large rivers intervene, besides several mountain streams. The road is in course of being metalled, and most of the bridges are nearly completed. Bridges of boats are maintained on the rivers, excepting in the flood season.

The station of Peshawur occupies a commanding position in front of the Khyber Pass. The valley is about 35 miles broad, and is almost surrounded by the hills of many independent tribes. Formerly, when under the rule of the Dooraneè Monarchy, the population, moved by a fanatical impulse, frequently took up arms *en masse* against the Seikhs, then rulers of the Punjab. The battle fields on which the Seikhs and Mahomedans had many desperate struggles, can be pointed out to the traveller as he moves from Rawul Pindee to Peshawur. First, the field of Haideroo or Huzroo, where an Affghan army was defeated about A.D. 1814, then the post of Sydhoo, where Sirdar Boodh Sing defended himself against 150,000 Mahomedans; and again at Nowshera, where Runjeet Sing (A.D. 1823) defeated Wazir Azim Khan, supported by the fanatics of Eusofzaie.

Not many miles from Peshawur is the Fort of Jumrood, built by the Seikhs at the mouth of the Khyber Pass. It was from this post that Dost Mahomed, in 1836, advanced with an immense army of Mahomedan fanatics, who were only dispersed by treachery on the part of Sultan Mahomed Khan.

From these few facts it will be seen that Peshawur is in the midst of a martial and fanatic population. Before our rule commenced the tribes on the hills along our border regarded the plains as their rightful hunting-ground, and for ages past have carried out their predatory habits. Their aggressions into our territory were only checked by expeditions into their hills and fastnesses, and they desist only on learning to fear the result, and feeling that we possess the power to punish. Our relations with them are friendly or otherwise, accordingly as we are feared, and it is, therefore, necessary that we should always be strong on the frontier, and be ready, at all times, not only to meet aggression, but to take an expeditionary force into the hills.

Peshawur has, since the mutiny, been considerably reduced in native troops. On the assassination of Colonel Mackeson the force was raised to 10,000 men, but now the force only musters about 6,000. A strong reserve is placed at Rawul Pindee and Campbellpore, and this force will be made more effective as a support to Peshawur as soon as the tunnel or a bridge at Attock is completed. The Fort of Attock is held by a European garrison, and thoroughly commands the passage of the Indus.

Punjab irregular force in defence of the frontier.

192. The remaining, and greater part, of the frontier, in length about 600 miles, is held by the Punjab Irregular Force under the command of Brigadier General Nelville Chamberlain, C.B. The Corps of Guides are stationed at Murdan in Eusofzaie. Two regiments of Infantry, with Mountain Train Artillery, are located in Huzara. The hills in this district are exceedingly difficult to traverse, and enabled the people to maintain nearly an independent state under the Seikh rule. Recently the country has been a good deal opened

opened out by the commencement of military lines of roads, one connecting Muree with Abbottabad, another running from Abbottabad to Umb.

Some 40 miles to the south of Peshawur is the station of Kohat, which, under the Doranee rule, formed part of the Government of Peshawur. Owing to the interposition of a chain of mountains shooting to the east from the Safèdkoh, there is no direct communication excepting through the Kohat Pass, which, not belonging to us, can be closed at any time by the Affghan tribes in and about it. This chain of mountains, forming a spur into our territories nearly to the Indus, belongs to the Afriedes, a tribe who can muster about 20,000 fighting men. At Kohat is located a brigade of the Punjab Irregular Force.

Further to the south is the station of Bunnoo, held by a brigade of the Punjab Irregular Force, the distance from Kohat being about 82 miles. The defence of the main portion of the frontier, lying between these two stations, has, for the past four years, been entrusted to a Chief on our border. The troops at Bunnoo furnish detachments on out-post duty on the frontier, which has to be watched to prevent raids being committed by the tribe of Wuzeerees.

Passing through the Peyzoo Pass, about 35 miles south of Bunnoo, we enter upon the Derajat, which extends to the Sindh border, and in which are the stations of Dera Ismail Khan, Dera Ghazee Khan, and Rajanpore, all held by troops of the Punjab Irregular Force. At Dera Ismail Khan is the Fort of Akilghur, in which is a small magazine depôt. A company of European Infantry is detached from one of the regiments at Rawul Pindee for the purpose of holding the fort. A portion of the company are located in cantonments. The frontier along the whole Derajat is watched and guarded by posts at various intervals, averaging about 10 or 12 miles apart.

Raids.

193. The raids on the Dera Ismail Khan border have been treated of in the police section.

The hillmen chiefly make raids for cattle, and are skilful in their enterprises; and unless immediate notice is given to the post on the frontier line, the robbers penetrate too far into their hills to admit of successful pursuit.

On the Mithunkote border one raid was perpetrated by men of the Muree tribe. About 24 horsemen and eight footmen were engaged; they separated into several parties before entering our territory. One party encountered and murdered five potash burners, residents of Asnee. Another party seized and carried off to their hills six camels and their attendants.

On receipt of this intelligence a jemadar of Guide Sowars, attached to the 1st Punjab Cavalry, with nine horsemen, tracked the camels to the Pass, and after a long pursuit came up with the party of eight robbers with their booty. A hand to hand conflict ensued; all the camels were re-captured; three of the robbers were slain, two of the jemadar's party received sabre wounds in the encounter. As a mark of the approbation of Government, of the skill and determination displayed by the jemadar and his men, rewards to the extent of 420 rupees were bestowed on the men.

Reductions in Native army.

193½. At the commencement of the official year several regiments were reduced under the orders of the Supreme Government, together with large bodies of military police in the North-Western Provinces, Oude, and the Punjab, chiefly inhabitants of this Province. But, in consequence of the measures taken to prevent the loss of service being productive of distress to the native officers and men, no discontent was created; and the diminution of the number of Punjabee troops had the best effect in abating the intrigues and idle talk of disaffected parties. The grant of a gratuity of 12 months' pay to the cavalry, and to the infantry of sums ranging from three to 12 months' pay, according to length of service, completely satisfied the lower ranks, whilst the higher obtained in addition grants of waste or uncultivated land near their own homes. In this manner 253 native officers, &c., were absorbed into the general population with every mark of contentment.

The cost of these grants to the State has been small in comparison with the object in view. A yearly revenue of about 5,000 rupees has been assigned, and about 5,000 acres of waste land given away.

Reduction in cattle establishments attached to Punjab Irregular Force.

194. Consequent upon reductions carried out in the strength of infantry regiments of the Punjab Irregular Force, the camel establishments underwent the following reduction:—

	Camels.	Surwans.
Original Establishment per regiment - - -	70	14
Reduced Establishment - - - - - -	55	11
Saving - - - -	15	3

This measure effected a saving of 1,890 rupees per annum, besides an outlay of about 10,000 rupees required to complete the establishments on the original scale.

Improvement in breed of horses.

195. This subject has at different times engaged the attention of the local Government, but little has been done during the past few years. The matter is one of importance to the State, as the efficiency of the irregular cavalry regiments in the Punjab is much affected, as the difficulty in procuring remounts for Punjab cavalry regiments on the frontier has considerably increased.

In 1851, in connexion with the inquiry instituted into the state of the Government studs, the question was first taken up by this Government; but stallions were not actually introduced into the Punjab until 1853, when 10 Arab stallions were purchased and distributed. In 1856-57 the number of stallions was increased to 22, and the results, as regards improvement in the progeny, were satisfactory and progressive, until the mutiny of 1857 occurred. The mutiny interfered materially with the progress. Districts were drained of many of their best breeding mares, as the demand for horses was very great in consequence of the numerous troops of irregular cavalry, police, and levies which were raised at that time.

The subject has again come under the consideration of this Government, and in succeeding reports it is hoped that success may have to be recorded.

As an inducement to native breeders to improve their stock, prizes for the best colts and fillies exhibited at the annual fairs held at Lahore, Umritsur, and Rawul Pindee have been awarded. The local Government now wish to obtain some fine stud-bred horses, as stallions, for distribution in the best breeding districts.

Cholera at Meean Meer.

195½. It is elsewhere mentioned in this Report that many parts of the Punjab were visited by cholera during the past year. Of the European military stations, Meean Meer suffered the most severely. A memorandum by Captain Norman, of the Quartermaster General's Department, on the progress of the disorder in the Meean Meer garrison, is given in Appendix III. It will be seen that out of a total strength of 2,150 European soldiers, 758 or 35 per cent. were attacked, and 482, or more than 22 per cent., died, exclusive of 45 women and children, who also fell victims to the disease.

Visit of Sir Hugh Rose to Trans-Indus frontier.

196. In February 1862, the Trans-Indus frontier was honoured by a visit by his Excellency Sir Hugh Rose, G.C.B., &c.; the first Commander in Chief who has inspected the Derajat frontier. His Excellency was pleased to express himself well satisfied with all that he saw during his tour, and recorded a high opinion of Brigadier General Chamberlain, C.B, and of the force under that officer's command. Many of the corps of the frontier force served with great distinction during the campaign of 1857-58, and gained for themselves and the force high honour and lasting name; but, heretofore, the whole military arrangements for the defence of the frontier have never been inspected by any Commander in Chief, and consequently the opinion recently expressed by his Excellency Sir Hugh Rose, G.C.B., &c., has been most pleasing and gratifying to the local Government.

Volunteer rifle corps.

197. There are two volunteer rifle corps in the Punjab. The first at Lahore, raised in October 1860, and the second at Simla, raised in April 1861. The Lahore corps consists of 177 members, formed into four companies. During the past winter, parades were held two or three times a week for drill and target practice, and the instruction was carried on under a trained musketry instructor from one of Her Majesty's regiments of infantry.

During the absence of Colonel A. A. Roberts, C.B., on furlough, the command has for the past year been exercised by Captain G. Sim, to whom and to the officers of the corps generally great credit is due.

Commendation of officers, Punjab Irregular Force.

198. The conduct of the force during the past year has been excellent. The following officers deserve especial mention:—Brigadier General Chamberlain, C.B., commanding Punjab Irregular Force.

CORPS OF GUIDES.

Brigadier Lumsden, C.B., late Commandant, now commanding Hyderabad Contingent.

Brigadier Lumsden resigned the command of the Corps of Guides in March last to assume command of the Hyderabad Contingent. He raised the regiment in 1846, and remained at its head ever since, with only two interruptions—once on furlough to Europe on medical certificate, and once on political duty to Kandahar. Brigadier Lumsden was the first officer who gave practical shape to the irregular system of the Punjab Force, and he was the first to introduce into the ranks, and bring under discipline, the wildest and most independent of the border tribes.

CAVALRY.

Lieutenant Colonel Hughes, commanding 1st Punjab Cavalry. Lieutenant Colonel Browne, commanding 2d Punjab Cavalry.

SEIKH INFANTRY.

Surgeon H. B. Buckle, 4th Seikh Infantry.

PUNJAB INFANTRY.

Lieutenant Colonel A. Wilde, C.B., commanding 4th Punjab Infantry (now commanding Corps of Guides). Lieutenant Colonel Vaughan, commanding 5th Punjab Infantry.

5TH OR HUZARA GOORKHA BATTALION.

Major Rothney, commanding.

SECTION XII.—MISCELLANEOUS.

PART I.—AGRICULTURAL.

Fal of rain.

199. The fall of rain was generally sufficient. As usual, it varied in different localities; the average of the Simla District being reported at 198 inches, that of Gujrat at 54, that of Delhi 24, and that of Mooltan at 4¼. Captain Dyas, director of canals, has devised an improved rain gauge, which, it is hoped, will soon be brought into use.

Prices of grain.

200. Prices of grain continued at almost famine rates up to the close of 1861. The granaries of the Punjab were thoroughly exhausted, and the new harvest was closely stored and jealously husbanded. At one time solicitude was felt regarding the supply of grain for the troops at Peshawur, but the crisis was surmounted. The average price of the best kind of wheat on the 1st of January at the principal places was as follows:—

	1860-61.	1861-62.
Delhi	8 seers	14½ seers
Umballa	10½ „	13¾ „
Lahore	14 „	13½ „
Peshawur	29¼ „	12 „

Since the setting in of the rains of 1861, food has become much cheaper.

Sale of waste lands.

201. Plots of waste land in the Lahore and Gujrat Districts have been sold to the value of 4,235 rupees, and the revenue of land paying 786 rupees per annum has been redeemed in Hissar, Loodiana, and Ferozepore. Certain reserved waste lands in the Baree Doab, which served as shooting grounds under the Seikh regimé, and are now accessible to irrigation from the new canal, are eagerly sought after, and purchasers have even come forward for the desolate grazing land in the Moltan and Goojranwalla Districts; but in the absence of European capitalists it is not probable that negotiations will be upon any large scale. That the value of cultivated land is increasing is shown by the return of absentees, and the tendency of owners to oust their tenants, also by the fact that the average price of land voluntarily sold exceeded seven years' purchase.

Value of land increasing.

Irrigation projects in Dera Ghazee Khan.

202. A remarkable movement has occurred in the frontier district of Dera Ghazee Khan. It was mentioned in the last report that a chief named Mussoo Khan had offered to excavate a canal on condition of being allowed to hold the land irrigated free of revenue for a term of years. His example has stimulated other landed proprietors to combine, and the district officer, Captain Minchin, has now under consideration five separate projects (the main expenses of which are to be defrayed by private parties) for the construction or re-opening of irrigation channels. Some of the leading chiefs and landholders of the district have contributed funds towards the completion of the works; as the chiefs of the Lugharees, Mazarees, Dreshuks, Nootkanees, the Jaghirdar of Ranjanpore, the Mukdoom Sahib, &c. In a border country, dependent for its cultivation, in a great measure, on the skill and economy with which the streams from the hills are managed, covered in parts with thick jungle, and inhabited by a predatory population, the spontaneous desire for agricultural improvement on the part of the leading chiefs cannot be appreciated too highly.

Cotton.

203. The rise in the price of cotton has led to a considerable increase of cultivation. At Karachi, the value of cotton exported has risen from 85,690 rupees in 1861; to 11,91,974 rupees in 1862; but it is not exactly known to what amount the Punjab has contributed.

Flax.

204. The cultivation of flax has been retarded by some of the European seed imported having failed. The plant grown from indigenous seed has yielded hardly any marketable fibre; but that from imported or acclimated Riga seed is considered by the agent of the Belfast Company at Sealkote fit for the finer manufactures. An advance of 1,000 *l.* for two years has been sanctioned in favour of the Company by the Right Honourable the Secretary of State, and as fresh supplies of Riga seed are expected immediately, there is every prospect of the operations being successful. Experience has also attested the wisdom of the plan adopted by the Company in sending out a skilled agent to instruct the growers and purchase the crops. The cultivators of Sealkote are now eager to cultivate the plant, and are reported to have fought amongst themselves for the small quantity of European seed available.

Its cultivation increasing.

Silk.

205. Silk of fair quality has been produced both in the valley of Kangra, and in the neighbourhood of Umritsur, chiefly through the exertions of Mr. H. Cope, who has for many years past paid attention to the subject. It has also been ascertained that a Kashmiri, named

named Jafir, has for a long period continued to rear silk worms on the Upper Ravee, and to sell the produce at a remunerative price. The silk manufactures at Lahore, Mooltan, Bhawulpore, and elsewhere, afford a sure market for silk, and are susceptible of extension. At present the supply of silk is derived chiefly from Bukhara, and if the article can be produced of equal quality in the Punjab, the saving in the cost of the raw material will be very considerable.

Indigo. Increase of exports.

206. The indigo of Sind and the Punjab has suddenly come into favour. The Karachi papers state that the quantity exported has in one year risen from 3,60,859 rupees to 14,03,644 rupees. Formerly the export from Karachi was almost entirely to the Persian Gulf; but last year, for the first time since 1857, despatches were made direct to England. It has been discovered that, though the indigo is impure and ill-prepared, the colour is good.

Increase in export of wool.

207. The export of wool has also increased. There is no doubt that, besides the wool of Affghanistan, which already finds its way in large quantities to Karachi by the caravan route through Kilat and Khoydar, that of Chumurti, in Chinese Tartary, is of very superior quality. This is now brought to the fair at Rampore; and as the facilities of carriage by rail and water are increased, it is by no means impossible that it may be profitably sent to the seaboard for exportation. The quantity is inexhaustible.

Cattle fair at Umritsur.

208. The annual cattle fair of Umritsur proved unusually successful. The number of beasts sold is reported at 30,000.

PART II.—SURVEYS.

Delhi and Hissar revenue survey.

209. On the completion of the Revenue Survey of the Trans-Indus frontier, one portion of the establishment was ordered to the Delhi and Hissar Divisions to survey territory which had lapsed to Government; the other portion was detached for the survey of district and tehsil boundaries in the Rawul Pindee Division. The former party surveyed an area of 1,130 square miles in 431 villages, comprising pergunnah Bullubghur, in the Delhi district; pergunnahs Bahadurghur, Badlee, and Jhujjur, in the Rohtuck district; and the jaghirs of Dojana, Nahur, and Patowdee. In the pergunnahs all village boundaries were laid down; in the jaghirs the topography only.

Boundary survey in Rawul Pindee Division. Area surveyed.

Cost of surveys.

210. The expenditure during the past financial year was 39,910 rupees. The expense of work in the Rawul Pindee Division, amounting to 16,642 rupees, being deducted from the above, that for the Delhi and Hissar Divisions will be 23,268 rupees, or only *Rs.* 20. 9. 6. per square mile.

Great trigonometrical survey, Kashmir Series.

211. During the field season of 1861, the Kashmir Series party of the Great Trigonometrical Survey, under Captain Montgomerie, was employed in Khagan, Little Tibet, and Ladak. The triangulation on the west was extended from the northern end of the Kashmir Valley across the Kishengunga River, and over Khagan by means of stations on the southern and northern snowy ridges of that valley.

Progress in Khagan.

212. From these stations several points around Khagan were fixed; as also some snowy peaks beyond the Indus to the north of Swat, one peak being probably just to the south of Chitral. A good foundation was thus made for the triangulation of the whole of Khagan, and it is hoped that hereafter more peaks may be fixed Trans-Indus in the direction of Chitral, Gilgit, and Yasseen.

In Little Tibet.

213. In Little Tibet (the triangulation having been completed in former season) great progress was made with the topographical work. A detailed survey was made of a large tract of country, including the gigantic glaciers on the Brahaldo and Basha branches of the Shigar River, as also of those on the Saltoro. These glaciers have turned out to be of unprecedented magnitude; one of them, the Baltoro glacier, being 34 miles in length; and another, viz., the "Biafo Ganse," forming, with its southern and northern branches, a continuous mass of ice about 64 miles in length, and varying in breadth from one to three miles, besides several others 20 miles in length, and a large number, all over 10 miles in length: such masses of moving ice as do not exist anywhere out of the Arctic and Antarctic regions. Captain Montgomerie reports that, with the work of the last and former seasons, the materials for the Map of Little Tibet are now almost complete.

In Ladak.

214. In Ladak the triangulation was in many places carried up to and beyond the Chinese frontier by means of observations taken at points all over 17,000 feet, and in some cases over 20,000 feet in height. It was by no means a simple matter working on the Chinese frontier, as the Tartars are jealous even of the common boundary. It is due to the care and patience shown by Captain Montgomerie that all such difficulties were overcome. On the whole, the triangulation progressed well. The positions of Haule, the chief place belonging to the Maharaja east of Leh, and of Padum, the capital of Fyauskar, were finally fixed, as also those of many other points, including some high snowy peaks to the south of the Chomoriri salt lake.

The topographical work in Ladak also made good progress, materials for the maps of a large area of country having been completed, embracing several of the large salt lakes, the Puga borax fields, a large portion of the Upper Indus River, and other subjects of interest.

215. The

215. The work was carried on in a very elevated country, generally over 14,000 feet, and sometimes attaining from 26,000 to 28,000 feet of elevation, barren and desolate in the extreme.

Difficulties of the survey.

Supplies and fuel had to be carried for great distances, Yak dung being often the only combustible available.

The weather, moreover, was not favourable, as the effects of the very heavy rains of last season in Hindostan extended across and beyond the Himalayas, troubling the party with clouds, and sometimes with snow and rain.

Progress satisfactory.

216. Notwithstanding these and other difficulties, naturally accruing in such a very elevated, rugged, and desolate country intersected by immense glaciers and other obstacles, in proportion the total progress made was very good; the triangulation done during the season covering about 12,000 square miles, and the topographical work 14,500 square miles of country.

Captain Montgomerie is also entitled to the praise of enlisting the sympathy of the Maharaja in his scientific operations, and of well controlling his large establishments.

PART III.—DISPENSARIES AND VACCINATION.

Increase in number of patients treated.

217. The past year was very unhealthy, famine and its constant attendant, pestilence, having visited many districts of the Punjab. Our dispensaries were in consequence largely resorted to, there being a very marked increase in the number of patients treated in 1861 over those of 1860. It is believed that this increase is not entirely due to the prevailing sickness, but that it indicates also the growing popularity of these institutions. The figures are as follows:—

PATIENTS treated in Punjab Dispensaries.

	Remaining at the End of previous Years.	IN-DOOR.			OUT-DOOR.			GRAND TOTAL.
		Male.	Female.	Total.	Male.	Female.	Total.	
1860 - - -	2,088	11,901	1,692	13,593	131,325	33,999	165,324	181,005
1861 - - -	2,026	10,649	1,856	12,505	144,137	39,865	184,002	198,533
Difference - -	— 62	— 1,252	+ 164	+ 1,088	— 12,812	+ 5,866	+ 18,678	+ 17,528

Inspector General's summary of results.

218. The Inspector General, Dr. Hathaway, thus sums up the results of the year's operations:—

"The general review of the working of the Government Dispensaries must be regarded as presenting a favourable result. * * * More than one new dispensary has been opened to the public during the year 1861, and several additions and alterations of a very beneficial nature have been carried out in some of the older institutions.

"The majority of the Civil and Medical officers have taken an increased interest in these charitable establishments, and there is no doubt that in each successive year they are more and more appreciated by the native community. I believe that, on the frontier especially, they have indirectly exercised a political benefit, helping on the great cause of civilization, and tending to subdue the ignorance and barbarism of the wild and uneducated tribes who now, in case of sickness occurring amongst them, will depute a messenger to travel on foot scores of miles in order to obtain medicines and advice. In surgical cases requiring an operation, they place the most implicit faith in the skill of the English operator, and submit themselves to the knife with perfect confidence as to the result."

Spread of vaccination.

219. As regards vaccination, a very large increase in the number of operations has been gained, and by the exertions of Dr. Garden, Superintendent of Vaccination, Hill States, it has been extended to Lahoul. The statistics are given below:—

	Successful.	Unsuccessful.	Doubtful.	TOTAL.
1860 - - - - - -	97,471	22,776	11,734	131,981
1861 - - - - - -	107,672	23,346	12,238	143,256
Difference - - -	+ 10,201	+ 570	+ 504	+ 11,275

Vaccine virus obtained from England; on the whole, successful.

220. During the past year a supply of vaccine virus in glass tubes was obtained from England, and distributed to several stations. In some instances the matter failed; but on the whole it has proved very successful, and a further supply has been applied for. On this subject Dr. Hathaway remarks:—

"It is satisfactory to observe, from the Report received from the Deputy Inspector General of Hospitals in Pegu, that the English lymph transmitted from Simla to Rangoon 'produced as fine pustules as Dr. Graham had ever witnessed anywhere, and that from this matter vaccine operations were carried on in Burmah, up to the end of April, with complete success.' It proves satisfactorily that, where ordinary care be taken, first, in packing and transmitting the virus; and secondly, in performing the operation on properly selected subjects at the commencement, so as to guard against wilful or accidental interference on the part of the native parents or friends who may be opposed to the system, distance or time in transit does not impair the character of the matter, or modify its action."

Smallpox rare.

221. Dr. Hathaway adds:—"Smallpox scarcely existed as an epidemic in any part of the Punjab during the last year, and the protective results of vaccination are thought by many to have displayed themselves unmistakeably. That the labour of overcoming the deep-rooted prejudice and ignorant credulity of the Asiatic is one of difficulty, and must be admitted; but still it is one that every year makes lighter, and the results already gained are an earnest of what may be ultimately hoped for by perseverance and energy. With native subordinates educated at the Medical College to assist our efforts, the question, like that of all others connected with the progress of science, is one of time only."

PART IV.—TEA.

Decrease in yield of tea.

222. There has been a considerable decrease in the yield of tea in the Government plantations, as compared with the previous year:—

1860–61	26,532 lbs.
1861–62	13,589 „

Improved quality of tea produced.

Increased crop of seeds.

But this decrease has been more than counterbalanced; first, by improved manipulation, the proportion of fine to coarse tea being as five to one, while in the previous years the proportions were nearly equal; and secondly, by an increase in the out-turn of seeds, viz:—

1860–61	1,258 maunds.
1861–62	1,490 „

Distribution of seeds and seedlings.

223. The demand for both seed and plants continues to be great. The following gratuitous distribution has taken place during the past year:—

Seeds to 22 Europeans	600 maunds.
„ to 307 Natives	417 „
	1,017 maunds.
Seedling Plants	5,100,000.

Great demand.

So great is the demand, indeed, for both seeds and seedlings, that it may fairly be assumed that in a few years hence, as tea planting spreads over the Kangra Valley and the Kohistan of the Punjab, and the produce becomes known in the English market, tea will become one of the staple articles of export from these Provinces.

Tea cultivation spreading.

224. The number of European settlers engaged in tea cultivation has increased, and the Maharajas of Puttiala and Jummoo, the Rajas of Mundee, Naadoun, Teeree, Rilloo, and Noorpore, besides other chiefs and men of note, have also taken it up.

Measures taken to facilitate transfer of land in Kangra.

225. Measures have been taken to facilitate the transfer of land from the native proprietors in the Kangra Valley to the European planters. The Government has agreed, in some instances, to forego its lien on the forests on condition of the landholders consenting to sell land for tea cultivation. The rule is, that two-thirds of the land occupied by forests are preserved, and the Zemindars are allowed to cut wood only in the remaining third. The object of this arrangement is to prevent the wanton destruction of timber; but as the supply of timber is very abundant, the introduction of the tea plant is of much greater importance than its preservation. It is hoped that by the advantage conceded to the landholders, by the abandonment of the Government lien on the forest lands they may be induced to sell to parties anxious to cultivate tea. The result of this arrangement is not yet known. The extent of land fit for the growth of tea is not very large.

226. The financial state of the Government plantation for the past year may be thus briefly stated:— Financial results.

		Rs.	a.	p.
13,589 lbs. of tea, at 1 rupee 8 annas per lb.		20,383	8	–
Expense of working the plantation		20,000	–	–
Profit	Rs.	383	8	–
Add—				
1,490 maunds of seed, at 20 rupees per maund		29,800	–	–
5,100,000 seedlings, at 3 rupees per 100		45,000	–	–
Total in favour of plantation	Rs.	75,183	8	–

The Government plantation is now maintained at the wish of the settlers as the best means of keeping up the supply of seeds.

227. In the present disorganised state of China, the cultivation of tea in the Himalayas is peculiarly important. If the annual supply from China to Europe diminish, a market will at once be open. But it may be that there is one nearer at hand. Nothing but the poverty of the people of Kashmir and Ladak limits their consumption. Until recently they have been confined to the brick tea brought by the triennial caravan from Lhassa; but of late, sea-borne tea has been imported ftom Umritsur. Again, the people of Central Asia are almost universally tea drinkers. "The love of the Bokharees," says Burnes, "for tea is, I believe, without parallel, for they drink it at all times and places, and in half a dozen ways, with and without sugar, with and without milk, with grease, with salt, &c." The caravan passing through Yarkand to Khokand and Bukhara brings large quantities, and some is probably brought by the caravan coming from Mai-ma-chin. Now, there is a practicable, though somewhat difficult, route to Yarkand by Leh over the Karakorum mountains, and a valuable product like tea would well bear the expense of the journey. Or there is the longer but easier route by Peshawur to Bukhara, which is open nearly the whole year, and along which there is a large and well-established trade. The naturalization in our territory of a plant in universal demand all over Central Asia may most materially facilitate our intercourse with that unexplored region. Importance of tea cultivation. Probable demand in Europe. In Kashmir and Ladak. In Central Asia.

228. It now only remains to record the names of the civil officers under the Punjab Government whose services, during the year under report, entitle them to the favourable notice of the Supreme Government. Commendation of civil officers.

The higher officers in the Punjab Administration have, heretofore, evinced the same conspicuous earnestness in their duties.

Mr. McLeod, C.B., has presided over the Department of Finance with marked success. He is earnest in developing the resources of the Province, and advancing in every way its prosperity. His administration is popular with all classes, and he carries all with him.

Mr. Cust has continued to officiate with ability as Judicial Commissioner. He has systematized the rules for the administration of justice, and introduced many improvements. His services as Special Commissioner in finance matters deserve acknowledgment.

The services of Messrs. Perkins and Smyth, the personal assistants of the Financial and Judicial Commissioners, have been very valuable.

The Lieutenant Governor has much pleasure in himself recording the valuable services of his secretary, Mr. R. H. Davies. He has been indefatigable and unwearied in carrying on his arduous duties, and by his ability and excellent judgment has rendered the Government most efficient aid.

Mr. W. Kirke, formerly Officiating Assistant Secretary to the Government, has since been confirmed in the appointment, which he owes to his own merits and long and faithful services.

Major Lawrence, C.B., has vacated the post of Military Secretary. The Lieutenant Governor regrets the loss of his experience and efficient service in this department. He has been succeeded by Captain Black, late staff officer to the Punjab Irregular Force.

The services of Colonel Maclagan, Secretary to Government, in the Public Works Department, as well as Chief Engineer, have been most valuable. He has introduced order and system, and the department has much progressed under his able management.

Captain G. Sim performed his duties as Consulting Engineer and Under Secretary to Government in the Railway Department with tact and discrimination. During his absence on leave, his place has been taken by Major Warrand, of the Engineers.

Major Hutchinson, Inspector General of Police, has been specially noticed in the Police Section. But presiding, as he does, over an important department, the Lieutenant Governor considers that the excellent services he has rendered to the Government should be here specially noticed.

The following officers also deserve favourable mention:—

Commissioners.

Lieutenant Colonel G. W. Hamilton.
Mr. E. L. Brandreth.
Major H. R. James, C.B.
Lieutenant Colonel R. G. Taylor.
Mr. P. S. Melvill.
Mr. T. D. Forsyth, C.B.
Mr. W. E. Money, Commissioner of Customs.

Deputy Commissioners.

Mr. J. Nasmyth, Officiating Commissioner.
Major O. J. McL. Farrington.
Mr. W. Ford.
Mr. P. H. Egerton.
General H. C. VanCortlandt, C.B.
Mr. J. H. Oliver.
Mr. F. H. Cooper, C.B.
Captain A. L. Busk.
Mr. R. E. Egerton.
Captain F. R. Pollock.
Captain J. E. Cracroft.
Captain B. T. Reid.
Captain H. W. W. Coxe.
Major W. McNeile.
Mr. A. Brandreth.
Major S. F. Graham.
Captain J. M. Cripps.
Major J. W. Bristow.
Major R. R. Adams.
Captain R. Young.
Captain N. W. Elphinstone.
Captain P. Maxwell.
Captain E. H. Paske.
Mr. J. W. Macnabb.
Captain H. B. Urmston.
Captain W. G. Davies.

Assistant Commissioners.

Captain A. A. Munro,
Captain T. S. Tighe,
Captain C. H. Hall,
Lieutenant C. C. Minchin,
Mr. W. B. Jones,
} Officiating Deputy Commissioners.
Captain T. W. Mercer.
Captain C. A. McMahon.
Major H. A. Dwyer.
Captain R. O. T. Nicolls.
Captain J. R. G. G. Shortt.
Captain J. C. Horne.
Mr. T. H. Thornton.
Captain R. J. D. Ferris.
Lieutenant W. M. Lane.
Mr. H. E. Jacomb.
Mr. H. Burra.
Captain H. P. Babbage.
Mr. G. Knox.
Lieutenant J. W. H. Johnstone.
Lieutenant R. H. Hudlestone.
Lieutenant G. G. Young.
Mr. J. G. Cordery.
Lieutenant P. W. Powlett.
Mr. J. B. Lyall.
Sir A. H. Lawrence, Bart.
Lieutenant E. L. Ommanney.
Lieutenant C. V. Jenkins.
Mr. D. Fitzpatrick.
Mr. C. W. P. Watts.
Mr. O. Wood.
Lieutenant F. M. Birch.
Mr. L. S. Saunders.
Lieutenant H. C. A. Szczepanski.
Lieutenant E. P. Gurdon.
Lieutenant F. D. Harington.
Lieutenant R. T. Hare.
Mr. C. J. Powlett.
Lieutenant F. C. Bewsher.
Lieutenant P. L. N. Cavagnari.
Mr. L. Cowan.
Mr. F. E. Moore.

Extra Assistant Commissioners.

Mr. J. H. Penn.
Madhopershad.
Mr. J. C. Murphy.
Mahomed Sultan.
Mr. L. Berkeley.
Mr. T. C. Vaughan.
Mr. W. H. D'Gruyther.
Shazada Mahomed Zumboor.
Bunsee Lall.
Hadee Hoosein.
Kaim Alee.
Mahsoom Alee.
Aga Kullubabid.
Mr. A. J. S. Donald.
Mr. G. D. Westropp.
Mr. G. Thompson.
Pundit Munphool.
Jyshee Ram.
Syud Jumal Alee.
Faiz-ul-Hussun.
Mr. T. W. Moore.
Dya Shunkur.
Mirza Azim Beg.
Ameen Chund.
Colonel Dhunraj.
Mr. F. R. Scarlett.
General Hursook Rai.
Wuzeer Alee.
Mr. H. B. Beckett.
Gopal Dass.
Mr. W. P. Woodward.
Hyat Khan.

Rs.	11,82,27,948	11,21,00,269	34,49,764	95,77,443

* *Note.*—This is the amount collected on account of License Tax, and was originally shown under the head of Duty on Arts, Trades, and Dealings. But as the License Tax has since been remitted, and this sum must be refunded, it was considered better to transfer it to a Debt head, so that it might not appear as portion of the revenue of the year.

(signed) *C. E. Chapman,*
Deputy Auditor and Accountant General.

APPENDIX, No. II.

APPENDIX III.

MEMORANDUM ON CHOLERA AT MEEAN MEER.

THE first case of cholera occurred in a company of the 51st K. O. L. I., which was occupying a barrack in the artillery lines. This case occurred on the 6th August, and terminated fatally on the 7th. On the 8th there were two more admissions, both of which terminated fatally on the same day. On the 8th a man of the 1st troop, 2nd brigade, Bengal Horse Artillery, was admitted into hospital with cholera, and died the same day.

The dates of the first cases in each of the regiments and batteries at Meean Meer, were as follows:—

European Troop, Royal Horse Artillery, 9th August, most cases on the 22nd; last case 26th August.

Meean Meer Artillery Division, consisting of 1st troop, Bengal Horse Artillery, and 1st Company, 3rd Battalion. First case on the 8th August; at its height on the 15th; last case 3rd September.

The 3rd Company, 4th Battalion Bengal Artillery, quartered in the fort, had only two admissions, one on the 28th August, the other on the 31st; this terminated fatally on the 1st September. It must be remembered that this company lost nearly half its number during the epidemic in 1856.

5th Bengal European Cavalry.—First case on the 13th August; disease at its height on the 19th; last case 4th September.

51st K. O. L. I.—First case on the 6th August; at its height on the 21st, when there were 48 admissions and 15 deaths; on the 22nd there were 29 admissions and 20 deaths; last case 15th September.

Wing, 94th Regiment.—First case 12th August; at its height 21st August; last case 15th September. Moving into camp on the 16th August, the 1st troop 2nd brigade, Bengal Artillery, marched to Shadera and were accommodated in the verandah round Jehangeer's Tomb. Poukahs were put up, and everything done to make the men comfortable. A decided improvement was observed in the health of the troop, almost immediately the move had been made.

On the 7th, a wing 51st K. O. L. I., marched to Chubeel, on the Umritsur Road.

On the 22nd, the 1st company, 3rd Battalion, joined the Bengal Horse Artillery at Shadera.

On the 23rd, the European Troops marched to Choong, the first march on the Mooltan Road.

On the 25th, the 5th Bengal Cavalry marched to Burhie, the first march on the road to Hurreekee Ghât.

On the 26th, a detachment of the wing 94th, marched to Nujaz Beg on the Mooltan Road.

A small camp was formed for the 94th in cantonments.

A camp was also formed at Umur Sidhoo on the Ferozepore road. This was also for the 51st.

One hundred men of the detachment, 51st, quartered in the fort, moved out to Leban Singh's Chaonie, but the selection of this spot was not good, and two or three days after the detachment was moved to a high piece of ground near the house of W. Kirk, Esq., Assistant Secretary, Punjab Government. Mr. Kirke kindly gave up his house to be used as an hospital. Subsequently the men of this detachment were removed to Ummur Gidhoo.

On the 22nd August the large infantry hospital in the cantonment was abandoned, and several of the empty barracks turned into hospitals. One or two of these speedily became so offensive, that they too had to be vacated.

On the 22nd September the troops began to return to quarters, the barracks and hospitals having been thoroughly cleaned and whitewashed, and the wood work in the hospitals painted.

In abstract, which is attached, is shown the number of admissions and deaths in each corps.

It is to be remarked that Meean Meer has only twice been visited by cholera, viz., in 1856 and 1861. On each occasion the first case occurred on the 6th August.

During the epidemic of 1861 medical assistance was sought from all neighbouring stations. At one time there were 22 doctors with the different detachments.

CHAPTER XV.

OUDH.

ANNUAL REPORT of the Administration of the Province of Oudh for the Year 1861-62.

SECTION I.—JUDICIAL.

INTRODUCTORY REMARKS.

The past year was not distinguished by many very great novelties in the Judicial Department. The important experimental reforms introduced in previous years, especially the arrangement of the offices under a clerk of the court in supersession of the old Omlah system, the mode of recording evidence, the methodical statement of pleas and issues, and the system of registration, have been steadily prosecuted and made satisfactory progress. The advantage of preparing the way for the extension to this province of the regular Codes of Procedure was not overlooked; all rules were framed with a view to that end, and the codes were consequently introduced at last with comparatively little violent change, and have been working smoothly since the beginning of the year.

PART I.—CIVIL JUSTICE.

Original suits.
* Appendix I.

2. The Statement* shows 8,432 cases filed in the year under review, to 6,558 in the previous year. The increase is considerable, nearly 30 per cent., but the litigation is still very moderate. In making comparisons with the older provinces, however, it must be borne in mind that many suits regarding interests in land, which are there included in the Civil Statements, are here disposed of by the Revenue Courts.

The increase was pretty general throughout the province, with one or two exceptions, regarding which no satisfactory explanation can be given. Nearly all the suits are either for debts on bonds, or otherwise, or suits between bankers and traders; but a good many are connected with contracts, particularly agricultural advances Trans-Gogra, called Lawuk cases, which formed the subject of a special reference to Government.

Value of suits.

3. The total value of suits is 77,47,811 rupees, giving an average value for each suit of 958 rupees. But it is stated that the normal averages are wholly disturbed by large suits in the city of Lucknow, and that, excluding them, the average for districts vary from 100 rupees to 120 rupees, and in one district it fell as low as 34 rupees. Of the whole number of suits as many as about one-third are for values not exceeding 12 rupees; rather more than half of the whole for values from 12 rupees to 100 rupees, and the remainder for larger sums; 45 cases in all being for values above 5,000 rupees, of which 33 were in the Lucknow Civil Court.

4. Of the total number of cases disposed of, nearly one-fourth were adjusted or struck off, and about the same proportion decreed by confession and consent. A little more than one-half, or upwards of 4,000 cases, were decided by the Courts, of which somewhat more than three-fifths were decreed in favour of plaintiff, and somewhat less than two-fifths in favour of defendant; of decrees in favour of plaintiff more than one-half were for the claim in full.

Distribution and duration of cases.

5. Most of the Civil suits are decided by assistants. Deputy Commissioners take very few, generally only those beyond the competency of assistants. Assistants are usually restricted to cases not exceeding 500 rupees, and one officer has the Small Cause Court of the Sudder station of each district, for all cases not exceeding that amount, and presenting no peculiar difficulties. Tehseeldars have jurisdiction up to 100 rupees, and have decided about one-fourth of the whole number of suits; 253 petty cases were decided by honorary assistants, who were invested with Civil powers last year for the first time.

The

The average duration varies a good deal in the different districts. The general average for each suit is shown by the returns to be a little more than 20 days, which is a reduction in the average of previous years.

Cases were disposed of as they came in, and there were no serious arrears; only in Sooltanpore and the Lucknow Civil Court was there an accumulation of the work of a week or two at the end of the year.

Costs.

6. There is an apparent decrease in the per-centage of costs caused by increased value of large suits in Lucknow, but the real average costs of district suits has increased, in consequence of the new stamp laws. Exclusive of stamps, the costs were extremely light.

Appeals.

7. The number of appeals was large; 641 appeals were preferred to Deputy Commissioners and the Civil Judge, from the decisions of their subordinates; 162 appeals to Commissioners from decisions of Deputy Commissioners, and 220 to Judicial Commissioner, of which 49 were from the decisions of Commissioners, and 171 from decision of Civil Judge, making a grand total of 1,023, or about one-fourth of the cases decided on their merits.

The per-centage of reversals was moderate, 8·80; but there are others modified, and more "returned for re-investigation."

The Judicial Commissioner considers that the remedy, for the want of sufficient inquiry, which this seems to indicate, is nothing less than the general improvement of our Courts, and that it is because the most common want is the failure to go thoroughly into a case that appeal and revision seem very necessary, and that it would be dangerous to make any change, which removing checks might render inquiries more superficial, and decisions more rash. Many cases are, however, remanded for trial of new issues arising out of the construction by the Appellate Courts, of the most uncertain and ill-defined Civil Laws.

The Judicial Commissioner most rarely differs from the conclusions of the Civil Judge of Lucknow in issues of fact; but as regards law, he remarks that two judges rarely take exactly the same view of a difficult question; because, there being no exact standard, every officer forms his own opinion of the law as it ought to be. To remove this uncertainty as far as possible, the Judicial Commissioner has carefully revised, for circulation, all decisions involving important principles, abstracting the points ruled after the fashion of English Reports, and has thus accumulated for guidance, a considerable number of select cases, embracing many of the points which most commonly arise.

The average of appeals from the decisions of the Civil Judge is double the general average. This is partly because his cases are unusually difficult and important, and partly because professional pleaders abound in Lucknow; whereas in the District Courts they are almost unknown.

The average duration of each case in the Judicial Commissioner's Court is very low indeed, for the highest Court of Civil Appeal, being, from date of institution, 14 days, and from date of receipt of file, eight days.

Appeals to the Privy Council.

8. The doubt regarding appeals to the Privy Council has been set at rest by the explanation that the rules for appeals from the Sudder Courts do not apply to Oudh; but that there is an undoubted appeal on the motion of the parties themselves, as one of Her Majesty's prerogatives. It is anticipated that several cases will be taken to the Privy Council.

Procedure.

9. Constant attention has been paid to, and corrections made in, the details of procedure, and the system has been more and more assimilated to, and prepared for, the introduction of Act VIII. of 1859, of which it was all along a simple and modified form. In sifting out the real issues and rejecting irrelevant superfluities, it is believed there has been considerable improvement, though this cannot be shown exactly by returns.

Cause lists.

10. There has been greater regularity in the cause lists, and methodical order of cases, which is of much importance, as leading to general improvement in judicial method and educating the people to punctuality and exactness. Care is at the same time taken that the consequences of want of punctuality are not made too penal to people unaccustomed to it.

Account books.

11. The rule regarding the exclusion as evidence of account books not kept in such a form as to give security for their genuineness, has been carried out. The reports on the subject are not very conclusive, and it does not appear that petty bankers and traders have generally altered their style of book-keeping, the more respectable mahajuns always have had sets of books.

Law of limitation.

12. The effect of the short limitation introduced in anticipation of, but corresponding to, Act XIV. of 1859, is still considered extremely beneficial, and has been attended with no serious difficulty. After a prolonged trial, it is pronounced a great improvement.

Registration of deeds.

13. It was feared that the new stamp law, making it obligatory that documents presented for registration should be stamped, would be a serious blow to the system, and certainly at first some check was thus occasioned. Notwithstanding this, the returns show a great increase in number of registers during the year. It must be explained, however, that of the increase nearly half appears under the new head of agricultural leases,

and most of these in one district. When leaseholders claim subordinate rights or exceptional privileges, which are admitted by landlords, the registration of their pottas may operate beneficially in preventing litigation hereafter; but when these rights are disputed by landlords, the officiating Chief Commissioner believes that it is quite impracticable to carry out a general order for the compulsory grant of pottas, without judicial decision rendering registration unnecessary; and with regard to ordinary cultivators in the vast majority of cases, they and their landlords are in accord. There is little prospect of a suit between them, and both parties think not only the registration of the potta, but the potta itself, superfluous.

Excluding the agricultural leases, there will still be found a steady increase in the ordinary registration, amounting to full 50 per cent. on that of the previous year. The registrations are chiefly of bonds for the payment of money, or deeds affecting real property; but there are also a considerable number of agreements regarding betrothal. The average fee paid for each registry was about seven annas; excluding Lucknow, where it is 12, the average of districts may be taken at about six annas. The number of registry offices in the province, is 189, and the average remuneration of each register 72 rupees per annum, but this is very unevenly distributed.

Few registered cases come into Court, and when they do, the genuineness of the registry is never seriously disputed; still in future such disputes may arise, and the greatest care will therefore be constantly exercised.

Execution of decrees and sale of land.

14. The restrictions upon the sale of land in execution of decrees, have worked satisfactorily; in not a single instance was landed property sold, and there have not been complaints of failure to realise in consequence.

Full details regarding ordinary cases of execution of decrees, have not been furnished; but from the particulars forthcoming, it would appear that generally little difficulty has been experienced in satisfying decree holders, and that in a very few cases has it been found necessary to resort to the coercive processes of distraint and imprisonment.

Lucknow court.

15. The very important Lucknow Civil Court has worked most satisfactorily under Mr. Fraser's able management; the business increases, and several very heavy cases were disposed of during the year. The Assistant Judge, Mr. Lincoln, had a very large number of cases on his file, and at one time arrears accumulated; but by an alteration of procedure, he succeeded in getting rid of his arrears. In consideration of the great and growing importance of the duties of these officers, Government has recently sanctioned a liberal augmentation of their salaries.

Trial by jury; *vide* paragraph 22 of last year's Report.

16. Mr. Fraser has bestowed much time and attention upon the system of trial by jury, which is said to have worked well and smoothly, and to the satisfaction of both the judge and the parties. But the cases were carefully selected, and in Lucknow there are very unusual facilities for getting a really intelligent jury, which make it quite an exception to the general rule; and however effective serving on juries may be made as an instrument of political instruction, the Officiating Chief Commissioner does not think very highly of it as a means of justice at present, though in time he hopes to see juries and assessors capable of giving an intelligent and impartial decision.

General results.

17. On the whole, it is believed that the action of our Civil Courts was good, the procedure became more regular and methodical, cases were disposed of as they came in, and although the number of appeals was large, the per-centage of reversals by Deputy Commissioners decreased from 13·90 in 1860, to 9·97 in 1861; and by Commissioners from 10·84 to 7·73. In the Judicial Commissioner's Court only was there an increase of from 5·35 to 8 80.

Code of substantive law.

18. A Report of the Judicial Commissioner on the Civil Law of the country was submitted to Government by the Officiating Chief Commissioner, on the 17th October last, with his letter, No. 2460, and the correspondence of the Judicial Commissioner with his subordinates, on the same subject, has been printed and will be forwarded.

Act VIII. of 1859.

19. The Code of Procedure, as now formally introduced into Oudh, differs from the original code, in the retention of the power of revisal by the superior Courts, and the mode of recording evidence, and also in the following important points: permission to parties who cannot themselves attend, or who are not cognizant of the facts, to appear by relations, friends and business goomastas, instead of regular pleaders, and restriction on the sale of land in execution, without the special permission of the superior Courts, and where the code allows alternative courses, that is adopted which is most consistent with our previous system.

Under the Act it was necessary to provide for the admission of qualified pleaders. The rules for their admission were approved of by Government, and published in the "Gazette." No great progress has yet been made, but several practitioners have been admitted, and the Judicial Commissioner hopes before long to get up a tolerable bar.

PART II.—CRIMINAL JUSTICE.

20. The Statements for 1861 show that, though the number of persons brought to trial for heinous and felonious offences had diminished; a considerably larger number of minor cases were disposed of, so that there was, on the whole, an increase of 1,220 persons tried during the year. The increase of criminal business was pretty general throughout the province, with the exception of Lucknow, where there was a decrease, and Roy Bareilly, and Seetapore, where it was about stationary.

Trials and their results.

21. About 40 per cent. of the persons tried were acquitted in the District Courts; the proportion varies a good deal in different districts, and the Judicial Commissioner is of opinion that the variation is attributable rather to peculiarities in police practice, than in that of the Courts. Of the whole number of cases, 2,259, or something more than one-sixth of the whole, were disposed of by Deputy Commissioners; 7,445, or about five-eighths, by assistants; 2,105 by tehseeldars, and 812 by honorary magistrates. Petty cases are generally taken to the nearest tehseeldar or honorary assistant; but still the number of cases disposed of by all these local officers, is less than one-fourth of the whole, a proportion which might with advantage be increased.

22. The average duration of cases in the District Courts, is 8·72 days in cases cognizable, and 7·18 in cases not cognizable, by the police. This is a reduction on the averages of last year, and a pretty fair result.

23. The number of persons tried in the Criminal Courts, and the results of the trials were as follows, viz.:—

DISTRICT COURTS.

NATURE OF CRIME.	Cases Tried.	Persons under Trial on 1st January 1861.	Persons Apprehended during the Year.	Total Persons Tried.	Acquitted.	Required to find Security.	Convicted.	Committed.	Died, Escaped, Transferred.	Under Trial.	TOTAL.

JUDICIAL COMMISSIONER'S COURT.

Persons under Trial on the 1st January.	Received during the Year.	Total.	Convicted.	Acquitted.	Returned to Courts of Commissioners.	Pending.	Total.
6	103	109	82	3	23	1	109

24. The result of trials for each class of offences, is shown in Appendix D. There have

CHAP. XV. Oudh.

have been no political trials of the least importance. Cases of murder are classified as follows:—

By Thugs	5
For the sake of robbery	13
By poison	8
Ordinary	84
Attempts	27
With dacoity	2
TOTAL	139

in which one person was convicted, 153 committed, and 145 acquitted. The per-centage of cases reported, in which apprehensions were made, was 89·55, and of cases tried in which convictions were obtained, 71·17.

25. Most of the murders for the sake of robbery, are murders of children for their ornaments; and for this offence the offenders are very generally brought to justice. The number of persons convicted of murder in the Judicial Commissioner's Court, was 63; and of attempts, 8; total 71 persons; of whom 22 were capitally sentenced; 79 persons were tried in suttee cases, of whom 37 were committed to the sessions.

26. The convictions for serious breaches of the peace and attendant homicides, are not so numerous as to call for particular remark. Taking the whole of the crimes against property, in which theft is an element, the proportion of persons convicted to cases reported, decreased from 37·08 per cent. in 1860 to 27·26 per cent. in 1861; but a large proportion of the cases were so petty, that the injured parties did not think it worth their while to prosecute.

Appeals.

27. The Appeal Statement shows that there have been a considerable number of appeals in each grade of Appellate Courts, but they principally relate to miscellaneous cases. The number of cases in which orders have been modified and reversed, is considerable, but comparatively few cases have been remanded for further investigation.

Punishments.

28. The following Table shows synoptically the whole of the punishments inflicted in 1861:—

COURTS.	Deaths.	Transportation for Life.	Transportation for Terms.	Imprisonment above Seven Years.	Imprisonment above Three Years.	Imprisonment above Six Months.	Imprisonment under Six Months.	Fined.	Flogged.	Dismissed.	Security.	Outlawed.	Lunatic Asylum.	TOTAL.
Judicial Commissioner's	22	48	1	8	2	–	–	–	–	–	–	–	1	82
Commissioner's	–	–	1	64	37	42	8	9	2	1	–	–	–	164
District Officer's	–	–	–	–	182	1,482	2,028	8,263	3,639	113	442	1	–	16,150
TOTAL	22	48	2	72	221	1,524	2,036	8,272	3,641	114	442	1	1	16,396

The number of persons flogged is considerable, but the severity of this punishment was greatly reduced, the number of stripes seldom exceeding 30, and the practice of giving a second instalment was prohibited. A little more than one-half of the fines awarded were realised.

Clerk of the court.

29. The reports of the working of the moonsurim's office are favourable, the system seems a decided success, and is a great step to a practice which will supersede the old Omlah system, besides economising the labour and facilitating the work of the Judge.

The moonsurims are all natives acquainted with both English and Oordoo.

A great distinction between this and the old system is, that whereas the ministerial officers formerly had great power without responsibility, they are now strictly responsible for the limited and strictly defined powers which they exercise, while they much more aid the suitors and relieve the Judge. The use of English also makes the supervision of the Judge infinitely more effective.

But to carry out the system fully, it is necessary that it should be yet further extended, and that the whole of the old class of native writers should gradually be displaced by men who have learnt a little English.

Under the new system we should be able to give larger pay to fewer men, and it has been proposed to Government to try this experimentally in one division. Criminal cause lists have been introduced, and another important reform has been effected which deserves notice; formerly files of pending cases were kept by the Omlah in bundles, so that the judicial officer himself could never tell exactly what work he had on hand; now they are

are kept in labelled pigeon holes within reach of the judicial officer, who can thus ascertain at once what cases are pending before him, and in what order they should be brought forward without reference to any subordinate. This is a great advance towards the ultimate abolition of the Omlah and the substitution of a clerk of the Court for each judicial officer.

RECORD OF EVIDENCE.

30. The difference of opinion as to the language in which evidence is to be recorded has been settled in favour of English. The recording in English by the hand of the Judge, secures his attention to the whole case, and therefore a more complete knowledge of it than was always acquired under the old system, and this advantage amply compensates for any little increase of labour caused by the new mode. More time is no doubt required to get through the same amount of work, because the Judge is now compelled to do one thing at a time instead of two, as was formerly the very common and very objectionable practice, and this is the main cause of the objections raised to the improved system.

Police in connexion with judicial tribunals.

31. The present system of police has very greatly progressed and improved in its working with the Judicial Department during the past year. Arrangements have been made by which the police take all Court duties, and become in every way the Executive, the hands as it were of the magistrate, relieving him of much detail, and his office of a great deal of writing, all orders being at once taken down by the police officer in attendance, in an order book.

Under the present constitution of the force, Commissioners have been necessarily relieved of their duties as superintendent of police.

The relative positions of the police and judicial officers have been clearly defined, there is a good understanding between the departments, and they work very well together.

General results.

32. There is still a good deal of inexperience and some laxness in the District Courts, and great necessity for close and careful supervision; but, on the whole, criminal business has been promptly and pretty satisfactorily disposed of, while the trials in the Sessions Courts of the Commissioners leave little to be desired.

The pending file at the close of the year was very light.

Penal Code and Code of Criminal Procedure.

On the 1st of January 1862, both these Codes came into force, though the Procedure Code was not formally extended to the province till some months later. The Procedure Code has been so far modified, that Deputy Commissioners have been allowed to retain the powers they formerly possessed of trying all cases not punishable with death, and passing sentences of imprisonment up to seven years, and the Judicial Commissioner has been invested with all the powers of two or more Judges of the Sudder Court, under sections 398, 401, and 420 of the Code. The record of evidence in English by the hand of the Judge has been maintained, as heretofore, with the addition of the certificate prescribed by the Code at the foot of each deposition.

The Judicial Commissioner has prepared a Table classifying all offences, whether cognizable under the Code or any other enactment, all similar or cognate offences being classified together with reference to the sections of the Code or Act under which they are penal; he has also revised and amended the whole of the periodical returns, to adapt them to the new law.

There is considerable wideness of definition in some of the latter parts of the Code, and the Judicial Commissioner has found it necessary to issue instructions with the view of removing misconceptions, and preventing the possibility of people taking advantage of this wideness to make the criminal courts an engine of annoyance to their opponents.

The proposal to retain the powers of revisal formerly held by Appellate Courts has been negatived, and revision is confined to illegal sentences. Considering that some of our officers are inexperienced, and that in heinous cases appeals are almost unknown, the Officiating Chief Commissioner cannot but apprehend that injustice, for which there is no remedy, will sometimes be the result; and as he possesses the prerogative of pardoning a guilty person on other than judicial grounds, he thinks that the absence of any provision for interference in behalf of innocent men unjustly sentenced, is rather an anomaly; it is very poor consolation for such a man to know that the proceedings in his case have been strictly according to law.

PART III.—POLICE.

Introductory.

33. IN the year preceding that under review, district superintendents of police were made directly subordinate to Deputy Commissioners, and placed at their disposal for the performance of police duties, without prejudice however, to the absolute control of the Inspector General, in all matters appertaining to the discipline, interior economy, and organization of the force. The arrangement worked well for the time, and paved the way for the introduction of Act V. of 1861, under which the police was constituted an entirely independent department. Instructions were then issued, clearly defining the respective duties and powers of the police and judiciary, the procedure was simplified

CHAP. XV. Oudh.

and the change caused little, if any, interruption in the harmonious working of the departments.

When the last report was submitted, very heavy reductions had just been made in the strength and cost of the force, and during the past year still further reductions were effected, as will appear from the subjoined Statement:—

	STRENGTH.	TOTAL PAY.
		Rs.
May 1861 - - - - -	8,523	14,11,980
May 1862 - - - - -	8,263	13,67,352
Saving - - - *Rs.*		44,628

And further, very great reductions will shortly be carried out, chiefly in the mounted branch. Some modifications, attended with a slight decrease of expense, were made in the grades of European officers. The inspectors appointed last year are highly spoken of, they are constantly on the move, exercising a close supervision over the lower ranks; they have proved very useful in the investigation of heinous offences; and it is believed they have done much to raise the general tone of the force, and to increase its popularity.

Town police. Appendix (L 1).

34. Besides the regular force chargeable to Government, town police, payable from local funds, is mantained at an annual cost of 1,19,616 rupees. The Lucknow city police constitues about two-thirds of this force, the remainder are employed in the most important towns and bazaars throughout the province, though under the European police officers they are a strictly local body, and not liable to removal from one place to another.

Rural police.

35. At the summary settlement after annexation, a tax of no less than six per cent. on the revenue they paid to Government, was levied from landholders and appropriated to the payment of village chowkeedars, and on re-occupation this system was reverted to. After one year's trial, the plan was declared a total failure, and in December 1859 Mr. Wingfield, after consulting the most experienced officers in the province, directed a return to the old system of remunerating the chowkeedars. Some officers subsequently reported that many landholders had failed to make any provision for the chowkeedars, and Deputy Commissioners were thereupon ordered to warn landholders that, if they did not give the chowkeedars who required it, five pucka beegahs of average land, the cess would again be demanded from them. This order was unfortunately much misunderstood, and resulted in discontent and dissatisfaction on the part of both landowners and chowkeedars. Many complaints were made to the Officiating Chief Commissioner, and at last he found it necessary to issue a detailed memorandum (*vide* Appendix)* explaining clearly the old system to which a return had been directed, and defining the duties and responsibilities of landholders in regard to the reporting of crime and to the village police.

* O 1.

Liberal rewards were also prescribed in all cases where chowkeedars did good service. It is hoped that under these rules, not only will the chowkeedar become more zealous and efficient, but landholders will feel that their responsibilities are more immediate and more likely to be practically enforced than heretofore.

Working of the police in the detection and prosecution of crime.

36. The general results of the working of the police in the detection and prosecution of crime, are briefly as follows:—

Appendix (A 1).

The cases reported and dealt with in 1861, are considerably in excess of the previous year. Excluding a few miscellaneous cases, which cannot be classified in the Comparate Statement, the number reported is 16,986 against 12,604 in 1860. Deducting those in which the injured parties declined to prosecute, 8,450 cases were taken up in 1861 to 6,114 in 1860. In 8,450 cases 9,329 were persons brought to trial, of whom 61·12 per cent., or about 3 per cent. more than in 1860, were convicted.

Heinous offences.

37. The number of murders and attempts at murder is nearly stationary; a large proportion of these cases spring from causes altogether beyond the control of the police; in all other heinous offences there has been a great decrease. Appendix B. is a statement of these cases and their results, which, excepting in dacoities and robberies, which have not been successfully dealt with, are favourable and creditable to the police. From the statements of confessing prisoners, the Inspector General, North Western Provinces, has been led to believe that some at least of the remarkable Oonao murders, are the work of a gang of professional murderers; but all attempts to unravel the mystery, and bring the perpetrators to justice, have failed. It is, however, some satisfaction to know that the energetic preventive measures which were adopted, have proved efficacious hitherto, and not a single case has been reported since May 1861.

38. The

38. The returns show a great increase in thefts by housebreaking or house trespass during the year, and a slight decrease in ordinary thefts; the change of nomenclature may have occasioned some variations in classifying these offences. In all, 15,844 cases were reported, in 8,529 of which the plaintiff did not appear, and the rule forbidding interference in such cases was strictly enforced. In the remaining 7,315 cases, of 6,260 persons apprehended, 4,049 were convicted, 2,015 were acquitted, and 196 remained under trial. The value of property reported to be stolen was 3,88,853 rupees, and of that recovered 52,246 rupees, being a very trifling increase in both over the preceding year. The per-centage of property recovered may appear small; but it is generally believed that complainants greatly exaggerate their losses.

Ordinary crimes against property.

There is considerable difference of opinion how much of the increase in cases of the burglarly reported is real, and how much should be attributed to more faithful reporting. Be this as it may, there is no doubt that the offences under this head are generally of a very petty description, and it is for this reason that the injured parties did not prosecute at all in more than half of them; a considerable proportion are only attempts at theft. Several dacoities, though in no case accompanied with violence, occurred in the city of Lucknow; the police failed to check these, till towards the end of the year, when a clue was obtained and several parties prosecuted. No conviction ensued, but since then the crime has ceased.

No other crimes call for special notice.

Castes.

39. With the view of attaining the proportions of castes fixed last year, the enlistments have been chiefly confined to the higher-caste Hindoos, of whom there is still a great deficiency. The Inspector General considers them in education, intelligence, and efficiency much superior to the lower-caste men. The prescribed and existing numbers are as follows:—

Appendix (J 1).

	Number Prescribed.	Number Existing.
Mahomedans - - - -	1,000	1,033
Brahmins and Rajpoots - - -	2,000	1,198
Hindoos of lower castes - -	3,500	3,727
Sikhs and Punjabees - - -	2,000	2,414

Education.

40. A number of boys were enlisted as an experiment at no extra expense, they learn drill, take orderly duty, and undergo a course of instruction, which it is hoped will render them hereafter valuable police officers. Among adults, too, the desire for instruction has greatly increased, the average daily attendance at school has doubled, and several Native officers, including some Sikhs, have, from profound ignorance, become scholars enough to write their diaries. In one district 18 men are learning English at an American Mission School; they are of all classes and creeds, and their attendance is entirely voluntary.

General results.

41. In addition to the various duties detailed in last year's Report, which the police have continued to discharge satisfactorily, they have been lately most usefully employed in executive Court duties, all of which they now perform, and they also serve all processes in criminal cases.

With regard to their success in dealing with crime, there is much diversity of opinion. The Judicial Commissioner says: "In point of detective ability and success, the police is so far certainly inferior to the old police," and many Judicial Offiers endorse this unfavourable verdict.

On the other hand the Inspector General argues, *vide* paragraph 51 of this Report, that the working of the police in Oudh contrasts favourably with the results obtained in other provinces, and quotes statistics which prove the soundness of his argument.

The police laboured under one great disadvantage, in 1861, under the old regime, the real detectives in all ordinary burglaries and thefts were the village chowkeedars; and these, for reasons given elsewhere, were dissatisfied with their position, and did not co-operate heartily with the regular police. But though on the question of comparative efficiency as detectives there may be differences of opinion, all accounts concur in describing the present force as infinitely less corrupt, less oppressive, and consequently more popular than their predecessors. On the whole, the officiating Chief Commissioner considers that the results are satisfactory as to the past, and encouraging for the future.

It must be recollected that although the police has existed since 1858, it is only within the last two years that it can be said to have entered thoroughly on civil duties.

Great improvements, mainly owing to the sound judgment and unwearying vigilance of Colonel Barrow, have been effected during the past year, and the spirit in which they have been made and accepted justifies the expectation that the still remaining faults will be surely eradicated, as the means are afforded by the gradual substitution of more educated men for the illiterate members of the old force, whose previous services in another line prevent their summary removal.

PART IV.—GAOLS.

42. THE want of suitable gaols was commented upon in last year's Report; owing to the recent re-occupation of the Province, the prison population had risen rapidly, and it was obvious that, as the Penal Code abolished corporal punishment, a still more rapid increase must follow its intrduction, and that arrangements would have to be made for a corresponding increase in gaol accommodation.

The Lucknow central gaol which had been commenced the year before under the superintendence of Doctor Cannon was therefore pushed on rapidly, and one of the inner circles is now ready. Divisional gaols were begun at Fyzabad and Seetapore, the former made good progress, and six barracks and the hospital have been completed. The Seetapore gaol was not undertaken so soon, and not much has yet been done. These gaols are all on the radiating system, the central gaol will hold 2,400 prisoners, and each of the divisional gaols half that number. Besides these, the conversion of the deserted barracks at Sultanpore into a gaol for 500 or 600 prisoners was carried out in a rough way, and arrangements have been made for interior fittings, &c., which will be proceeded with immediately after the rains. Trifling additions have also been made to some of the district hawaluts, and the accommodation completed and arranged for will be sufficient to meet the requirements of the Province for the present. The Lucknow civil gaol has been improved, and separate accommodation been provided for Europeans and Natives of respectability.

Number and cost of prisoners.

43. The daily average number and cost of prisoners compared with the previous year were as follows:—

	1860.	1861.
Daily average number - - - - -	1,71,929	2,59.836
Total cost - - - - - - - *Rs.*	93,725 0 0	1,16,754 0 0
Annual average cost of each prisoner - - *Rs.*	54 8 2	44 14 11

Being a reduction in the average cost of *Rs.* 9. 9. 3. per annum on each prisoner; this decrease is general throughout the Province, except Baraitch and Gonda; and there the increase is in the permanent gaol guard supplied by the police, and this has been greatly reduced. The Inspector of Prisons hopes, by rigid economy and a close scrutiny of hospital and miscellaneous charges, to lower the average cost of each prisoner to about 40 rupees for the current year.

Employment of prisoners.

44. In the district hawaluts short-term prisoners only are confined; they are generally employed in out-door labour, or in grinding wheat, expressing oil, and making coarse blankets. Even in the central and divisional gaols, pending the completion of the buildings, it is impossible to introduce the most approved methods of intramural labour. Some progress, however, has been made; besides cloth and blankets for prison wear, paper, canvas, carpetting, towels, &c., have been manufactured for sale; and in the Lucknow gaol a lithographic press has been worked. The value of articles manufactured for prisoners, and the product of convict labour employed on gaols and public buildings amounted to *Rs.* 46,618. 10. 2., of which about five-sixths was for constructing gaols and public buildings. The net profit credited to Government on gaol manufactures was *Rs.* 2,818. 13. 2.

Health of prisoners.

45. The excessive sickness in Lucknow was temporary, and the health of the prisoners has been generally good, the per-centages of sickness and mortality for 1860 and 1861 are as follows:—

	1860.	1861.
Daily proportion of sick to strength per cent. per annum.	11·27	7·02
Deaths to strength per cent. per annum - -	17·74	7·54.

Showing a very gratifying decrease.

46. The

46. The gaols are not yet so forward as to admit of any novel experiments in prison labour; tread mills have been tried in two or three districts, but they always break down. It is proposed to import iron machinery from England. As before, the use of hand grind-stones built high, so that the prisoners must stand up to them, has been found the most effective punishment. General remarks.

A separate ward is being prepared in the central gaol for a juvenile reformatory, it will hold about 60 boys; an institution of this kind is much needed; and there has been a great deal of correspondence regarding the treatment of youthful offenders, though as yet no definite line of action has been resolved upon. As was expected, the number of prisoners has greatly increased since the Penal Code was introduced. On the date of its introduction, *i. e.*, 1st January 1862, there were 3,497 prisoners in gaol; four months after there were 4,299; and though after a time the increased discharges will to some extent counterbalance the admissions, a great majority of which are for short terms, still there is little doubt the prison population will exceed 5,000 by the end of the year.

The general results, particularly the great decrease in the average cost of prisoners, and in the sickness and mortality, are satisfactory. During the greater portion of the year, the gaols were under the supervision of the Judicial Commissioner; but towards its close, Doctor Cannon was appointed Inspector of Prisons; he is an able and energetic officer, and has the advantage of considerable experience in gaol management.

SECTION II.—REVENUE.

PART I.—LAND TAX.

47. FOR the spring crop, on which the first demand for the year fell, the season was propitious, and the harvest considerably above the average. In the Trans-Gogra districts only was there a failure, and this was fully compensated by the abundant khurreef crop, which enabled the Zemindars to clear off all arrears without difficulty.

The rains set in very early, and were unusually heavy and long continued; the result was what might have been expected, the crops on high lands were magnificent, while on very low lands they suffered, and were in some cases destroyed by the excessive rain; sugar-cane in particular was much damaged in many places by the superabundance of moisture. The general result, however, was favourable, and both the rubbee and khurreef crops were above the average.

48. The land revenue has been collected with facility, and the balances are even smaller than last year, as the following Table will show:— Collections.

DIVISIONS.	Year.	Demands.	Collections.	Balances.	PARTICULARS OF BALANCE.					Per-centage of Balances to Demands.
					REAL.			Nominal.	Total of Balance.	
					In Train of Liquidation.	Doubtful.	Irrecoverable.			
		Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	
Lucknow - -	1860-61 - -	27,91,834	27,77,515	14,319	704	–	12,488	1,127	14,319	0·52
„ - - -	1861-62 - -	27,95,652	27,87,628	8,024	1,477	–	606	5,941	8,024	0·29
Khyrabad - -	1860-61 - -	24,28,618	24,16,354	12,264	423	804	388	10,649	12,264	0·50
„ - - -	1861-62 - -	24,18,110	24,17,883	227	–	–	91	136	227	0·01
Baiswarra - -	1860-61 - -	25,13,567	25,09,628	3,939	–	–	42	3,897	3,939	0·15
„ - - -	1861-63 - -	25,05,371	24,99,394	5,977	170	–	–	5,807	5,977	0·24
Fyzabad - -	1860-61 - -	25,72,823	25,71,092	1,731	–	–	–	1,731	1,731	0·06
„ - - -	1861-62 - -	25,85,370	25,81,138	4,232	1,123	–	–	3,109	4,232	0·17
TOTAL of - -	1860-61 - -	1,03,06,842	1,02,74,589	32,253	1,127	804	12,918	17,404	32,253	0·31
TOTAL of - -	1861-62 - -	1,03,04,503	1,02,86,043	18,460	2,770	–	697	14,993	18,460	0·18

The entire demand on account of land revenue was realised within the year, except 18,460 rupees, and of this 697 only is irrecoverable.

Each succeeding year's experience strengthens the conviction that, though it may press

heavily in a few instances, the summary settlement is in general very moderate, and that a material increase of revenue may confidently be calculated upon from the regular settlement now in progress.

The nominal balances are remissions on account of land taken for public purposes, grants of jagheers in reward for good service, maafees erroneously assessed and released after investigation, and cessions to Nepaul in modifying the boundary.

49. Dustuks have been issued under the restriction noted last year, the number has considerably decreased, as is shown by the following comparative statement:—

DIVISIONS.	1860-61.	1861-62.
Lucknow	3,834	3,143
Khyrabad	1,443	644
Baiswarr	2,105	1,539
Fyzabad	2,332	1,462
TOTAL	9,714	6,788

Coercive measures.

50. It is matter of congratulation that, as last year, it has not been necessary in any case to have recourse to the ordinary coercive processes of distraint, transfer, farm, or sale.

In three of the four divisions no estates were held kham for arrears of revenue. In the Fyzabad Division the estates of Nanpara, in Baraitch, and of Baboo Madho Pershaud of Birhur, in Fyzabad, were under direct management as a punitive measure; both have been lately restored into the hands of their owners, the desired results having been fully attained, order substituted for disorder, arrears of revenue liquidated, and rentals showing a handsome surplus made over to the proprietors. The management was very economical, being 2·44 per cent. on the income in Birhur, and only 1·5 per cent. in Nanpara.

The very large estates of Mahomedabad in Seetapore and Mullapore, in Luckeempore, were, as before, in the Court of Wards, their owners being minors.

The management of those estates, as well as of the confiscated villages, has been most successful, and the results creditable to the officers concerned.

Remissions of revenue.

51. The remissions of revenue during the year amounted to 31,034 rupees.

The annual comparative statements of the different descriptions of cases and of those with and without pottahs are subjoined:—

DIVISIONS.	By Landlords against Tenants.		By Lessees against Tenants.		By Tenants against Landlords.		GRAND TOTAL.	
	With.	Without.	With.	Without.	With.	Without.	With.	Without.
Lucknow	280	1,111	30	168	327	1,274	637	2,553
Khyrabad	179	395	48	34	285	733	512	1,162
Baiswarra	323	852	54	118	629	1,251	1,006	2,221
Baraitch	600	765	396	628	566	751	1,562	2,144
TOTAL	1,382	3,123	528	948	1,807	5,009	3,717	8,080

52. The

Summary suits.

52. The systems of granting pottahs to sub-proprietors in Talookdaree estates had been generally introduced in 1859-60, and was reported to have worked satisfactorily. The Chief Commissioner thought the system might be extended with advantage, and in January 1861 he issued orders that every cultivator of the soil should hold a pottah for the land in his occupation from the commencement of the next agricultural year.

It was believed that the effect of the measure would be to reduce the amount of litigation, and to facilitate the decision of summary suits.

The penalty prescribed for inattention to the rule was that parties suing without a pottah should be placed in a similar position to claimants on unstamped bonds in a civil court.

The penalty, however, proved insufficient, and it was not found practicable to enforce the general grant of pottahs; indeed, considering that besides disputes about the amount of rent, claims to subordinate rights and exceptional privileges are very numerous, and a large proportion of them not admitted by landlords. The Officiating Chief Commissioner does not see how it is possible to carry out a general order for the compulsory grant of pottahs without judicial interference carried further than is either practicable or desirable. One Commissioner remarks that the pottah question is not so easy a one as it seems; that the cultivators look upon the pottah as an official formulary more required by Government than desired by themselves, and that this compulsory interference may have an injurious effect on the good feeling generally subsisting between landlords and their tenants, and in this opinion the Officiating Chief Commissioner concurs. A genuine pottah, by narrowing the issues, no doubt facilitates the adjustment of suits, and so far secures one of the advantages anticipated. With respect, however, to the effect of the pottah order on the amount of litigation it is impossible to come to any definite conclusion, though the Officiating Chief Commissioner fears that in some instances its result has been to awaken long dormant claims which might otherwise have been suffered to slumber.

The suits have largely increased, but in a considerable proportion no doubt the cause of action had arisen prior to the attempt to introduce the system, and there were disturbing influences at work which might suffice to account for all or more than all the increase. Land had become more valuable from the greater facilities for disposing of its produce, and greater security to life and property than formerly existed.

Landlords consequently asked for enhanced rents, and in many cases the demand was quietly acquiesced in; but in some it was disputed, and an appeal to Court became necessary. Again the near approach of settlement stimulated litigation and led to a great increase in ouster cases in some districts. Landlords tried to get rid of parties with disagreeable claims, and the latter often retorted by claiming what they had no right to, both feeling the advantage of establishing themselves in a good position and of being able to prove possession when the regular investigation came on.

The number of suits during 1860-61 and 1861-62 were as follows:—

	1860-61.	1861-62.
With pottahs - - - -	2,858	3,717
Without pottahs - - - -	6,776	8,080

being an increase of about 30 per cent. on the former, and 20 per cent. on the latter. The number of suits by landlords against tenants, and *vice versâ*, are almost equal, as was the case last year.

The increase has been entirely in suits for rent and ouster. The cases of exaction have continued to decrease, and were in 1861-62 about half of what they were in 1859-60.

Regular revenue suits.

53. These suits were referred to in paragraph 84 of last year's Report, and the principle therein enumerated of postponing till regular settlement all cases in which final orders could not be passed without probable injury to the rights of others, and generally all cases in which no hardship would be entailed by delay, has been steadily adhered to. Notwithstanding this restriction, these cases have been rather numerous, no fewer than 1,832 having been instituted within the year. These suits have been chiefly claims to villages or shares of villages, and for payment of rent of previous years. In some districts claims between persons of equal interests for groves or their produce have been very numerous. Claims for redemption of mortgage have generally been postponed till settlement. Claimants are invariably furnished with a copy of the order referring them to settlement, and the term of limitation is counted back from the date of passing it. Full instructions regarding the constitution, jurisdiction, and procedure of the Revenue Courts in the disposal of these suits were issued, *vide* Appendix (U 2).

CHAP. XV. Oudh.

Some difference of opinion has arisen on the question of jurisdiction in certain classes of these cases, the Judicial Commissioner holding that they are properly cognisable by the Civil Courts, and the matter has been referred for the orders of Government.

Appeals.

Appendix (G 2).

54. From the orders of Deputy Commissioners 1,792 appeals were preferred to commissioners in revenue suits, and 94 were pending at the close of the year, making a total of 1,886 on the file.

In 1,390 of these the orders were confirmed, in 153 reversed, in 136 modified, and 207 remained pending; the number of cases in which decisions were interfered with is still considerable, though a great reduction upon last year.

Appendix (H 2).

In his capacity of Financial Commissioner, the officiating Chief Commissioner has disposed of a large number of both regular and miscellaneous appeals from the orders of commissioners, as will appear from the appended statement, and it will also be seen that he has rarely found occasion to interfere with the orders passed.

Maafee investigations.

55. These investigations have been nearly concluded, except in the Gonda, Sultanpore, and Seetapore districts, where some are still pending. The results of cases disposed of are given below, those in which an order for resumption is passed will not be resumed till regular settlement except in cases of fraud. A statement of the settlement of resumed Maafees is also given:—

Regular settlement.

56. The general principles on which the record of rights was to be prepared and assessments made, were briefly noted in last year's Report.

Detailed instructions were subsequently issued regarding the preparation of village statements, and the mode of calculating the assessments and rulings given on many difficult questions which had arisen, and were submitted for the officiating Chief Commissioner's orders.

Rules

Rules were also laid down for the disposal of claims of parties alleging themselves to be owners of villages, and formerly paying revenue direct to Government, but now included in a Talooka, and of parties who, as ex-proprietors or descendants of former proprietors, held land at favourable rates, and the manner in which such persons and their tenures should be recorded. The settlement operations were at first confined to the districts of Pertabghur and Oonao; lately the field survey was extended to Lucknow and Roy Bareilly, but no rights were investigated in these districts.

In Oonao and Pertabghur considerable progress has been made in the investigation of claims to settlement, shares of villages, and under proprietary rights; and in Oonao the Deputy Commissioner has completed (though not given out) the assessment of 368 villages at 3,72,314 rupees, being a decrease of 14,661 rupees, or less than 4 per cent. on the old juma. This result is much more favourable than was expected, as the district was universally considered to be greatly over assessed, and a heavier reduction was thought possible.

In Pertabghur the Deputy Commissioner has not finally assessed any estates, but has taken several villages from different parts of Pergunnahs, and has closely compared rates and soils, and made calculations to prepare for the coming assessment. From the inquiries made, he believes that the result of the revision of settlement will be an increase in the Government revenue of 10 to 15 per cent. The increase in this case was expected as well as the decrease in the other, as the Baiswarra Division is notoriously under-assessed.

The progress made in the survey will be given under that section.

Annexed is a return showing the progress made in the interior measurements and compilation of preliminary records:—

PART II.—ASSESSED TAXES.

57. Of the license tax it is unnecessary to say more than that its unexpected abolition was hailed with unbounded satisfaction by all classes of the community. For the income tax, except in the City of Lucknow, the payments of the previous year, whether to the local trades tax, or under Act XXXII. of 1860, were made the basis of assessment, unless the parties objected to such assessment. For the City of Lucknow, and in districts also, in all cases in which objections to the preceding year's amounts were preferred, or when parties were assessed for the first time, the assessments were regularly made in accordance with Act XXXII. of 1860. Officers were instructed to assess so as to avoid injustice and oppression, and yet not so as to deprive Government of what it was fairly entitled to with a leaning in favour of the party taxed.

SCHEDULE I.—Was disposed of with comparative ease, the parties taxed being nearly all landholders, whose revenue was of course known.

SCHEDULE II.—Proved much more troublesome, the returns of income filled in by the parties were perfectly useless, in not a few cases the total income was returned at less than the preceding year's assessment; and under these circumstances, and in the absence in many cases of regular sets of books, it was quite impossible to ascertain the amounts of incomes even approximately, and officers, after making such inquiry as the case admitted of, were obliged to assess according to the best of their judgment. A large proportion of the tax under Schedule II. is drawn from the City of Lucknow; the assessment here was a most arduous and protracted undertaking, and has just been completed. Numerous appeals have been preferred, and in many cases reductions have been made; even now, compared with other great cities, Lucknow certainly does not appear to be under-assessed.

In the districts it has been found necessary to order some revisions; but, as a rule, the tax seems to have been fairly imposed, and there have been few appeals or complaints of over-assessment.

The number of parties assessed, with amount of assessment, are given in the statement subjoined:—

PART III.—CUSTOMS EXCISE.

58. The principle of the Sudder distillery system and the difficulties attending its introduction were adverted to in last Report. The system was cautiously introduced and extended by degrees over the whole of the Province. District officers were allowed rather a wide discretion at first, and considerable diversity of practice was the result. From the 1st of May 1861, this discretionary power was entirely withdrawn, strict uniformity enjoined, and all interference of Government officers in matters of detail prohibited. Abkars distilled their own liquor in Sudder distilleries, and before removing it paid a still-head duty of 12 annas per gallon on liquor 25° or more below proof, and 2 rupees on liquor of greater strength. All vendors were required to take out licenses, but from a large proportion of them no fees were demanded. In a few Tehseels the system has been in force only since the 1st of November last.

The annexed Comparative Statement shows the receipts of 1861-62 to be 6,19,643 rupees against 5,99,463 of the previous year:—

As a rule the system has been most successful where it has been longest at work; its first introduction, or even any change in its details, is almost invariably followed by an alarming falling off in the receipts, and even with much care and attention some months, perhaps as much as a year, is required to restore an equilibrium, although on the receipts for

for the province there has been an increase; in all of the tehseels recently brought under the system there has been a large decrease; sooner or later they will, no doubt, attain their former average, and probably, like the others, go beyond it. Very different degrees of success have attended the measure in different districts, but it is difficult to say how far this is attributable to the good or bad management of the officers in charge.

In a densely populated country, with numerous towns and bazars, the system can be introduced with comparative facility, and in this respect some districts have advantages over others. Some districts, too, have always been in the hands of one or more influential Abkars, who have exerted themselves to the utmost to obstruct the new system and retain their monopoly, while in others there are plenty of Abkars quite independent of, and indeed often very hostile to, each other, and some of these have always been willing to work the new scheme. The frontier districts laboured under great disadvantages, as the Oudh shops could not compete with the vendors of the North West, who paid no fixed duty, and could, therefore, afford to sell at comparatively very low rates. In Lucknow there has been a falling off of about one-fourth on the revenue of 1860–61, but the system then prevailing was forced and unsound, and though it succeeded for a time could not have been permanently maintained. The duties of the Deputy Commissioner of Lucknow are also very onerous, and it is impossible for him to devote the necessary time and attention to Abkaree arrangements. The Superintendent of Excise was placed in charge a few months ago, and the receipts at once began to increase. The receipts of both Durriabad and Ooano are good, and in the latter district they have increased nearly 25 per cent. Seetapore shows a small increase; in Hurdui and Mohomdee, both frontier districts, there has been a great falling off; the former has greatly improved of late; the latter has not. The Abkaree receipts in the Baiswarra division, which were very low, have increased more than 50 per cent.; in one district, Roy Bareilly, they have nearly doubled.

In Fyzabad, the receipts, high before, have increased about 15 per cent.; in Gonda and Baraitch there has been a decrease, though not very heavy. Considering that this is the first year in which the Sudder Distillery system has been in force throughout the province, the financial results are certainly encouraging; and it is satisfactory to know this increased revenue has been raised on a diminished consumption, for all officers report a great decrease in drinking and drunkenness. During his cold weather tour, the Officiating Chief Commissioner became satisfied that spirits could bear a higher rate, and the duty from 1st May 1862 has, therefore, been fixed at two* rupees per gallon of proof spirit, and *Rs.* 1. 8. per gallon 25° under proof; on the frontier rates one-fourth lower have been sanctioned until the Sudder distillery system is introduced into the North West.

* *Vide* paragraph 10 of No. 2176, dated 16th August 1862.

License fees have also been levied for all shops, except a few on the frontier. The rates are for cities 15 rupees, for towns and large bazars *Rs.* 7. 8., and for small bazars and villages 2 rupees per mensem.

For the first three months of 1862-63 there has been a slight decrease of revenue under these rules; but from this no opinion of the ultimate result can be formed, as almost every change in Abkaree arrangements causes a loss in the first instance.

The receipts from drugs are nearly the same as last year, and call for no particular remarks.

	1860-61.	1861-62.

The Officiating Chief Commissioner pointed out the advantages likely to arise from the formation of a separate department of Excise and Stamps, and the Supreme Government sanctioned the appointment of a superintendent and four assistants from 1st May last. Mr. Braddon took charge on that date, and in future more attention will be paid to these departments, and a greater degree of uniformity enforced, resulting, it is hoped, in a considerable increase in these sources of revenue.

PART IV.—STAMPS, SALT AND OPIUM.

59. Great pains have been taken not only to make the provisions of the Act* generally known, but to give the public every facility in procuring stamps within a convenient distance from their houses.

Stamps.

* Act XXXVI. of 1860.

All honorary assistants are notaries public; many talookdars, chowdries and others,

were appointed vendors, and now there is hardly a considerable town or bazar in the province where stamps cannot be obtained.

The Act was of itself calculated to raise the revenue, and combined with the arrangements referred to has led to a very satisfactory increase of about 40 per cent. in the receipts, as is shown by the subjoined:—

COMPARATIVE STATEMENT.

DIVISIONS.	Receipts in 1860-61.	Receipts in 1861-62.
	Rs.	*Rs.*
Lucknow - - - - - -	1,07,272	1,47,550
Khyrabad - - - - - -	23,282	28,953

Baraitch - - - - - - -	31,574	49,710
TOTAL - - - *Rs.*	1,93,495	2,68,735

The value of receipt stamps sold has very largely increased, showing that, considering the novelty of the measure, fair progress has been made in extending their use; though it cannot be doubted that the law is still evaded in the greater number of cases.

With regard to judicial and revenue stamps, some irregularities and omissions were discovered by the superintendent in the course of a tour of inspection; measures have been taken to correct these, and to prevent any diversities of practice in future.

Much attention has been devoted to the subject, and a further large increase in this source of revenue is confidently anticipated.

Salt.

60. Towards the end of the year, the privilege of manufacturing salt for home consumption was withdrawn, as there was reason to believe it had been abused.

The Commissioner of Baiswarra reports that edible salt has been illicitly manufactured by parties professing to make kharee and saltpetre; (it is sometimes difficult to decide what is and what is not edible salt, and resort to analysis has been found necessary). Several seizures have been made, but it is not believed that the manufacture has been carried to such an extent as to materially affect the Government revenue. During the famine year the import of salt from the North Western Provinces was greatly in excess of the requirements of the province. Traders who came from the famine districts in search of grain almost invariably brought salt, which they were obliged to sell at once for what they could get; prices in consequence became ruinously low; and not only were the markets glutted, but large quantities were exported to Goruckpore, and even as far as Ghazeepore.

There was a great falling off in the imports of this commodity last year, but not greater than was to be expected under these circumstances.

The import was, however, very considerable; the quantity imported into one district is estimated at over 80,000 maunds, of which three-fourths was for local consumption; and though no very reliable data are available, the total quantity imported into the province cannot be set down at less than three lakhs of maunds.

Saltpetre is largely manufactured over great part of the province; 14,000 maunds are reported to have been made in Hurdui, and 7,500 in Seetapore, while about 10,000 maunds were exported from Fyzabad; from other districts no returns have been received.

The manufacture and refinery of saltpetre were formerly unrestricted; but lately Acts XIV. of 1843, XXXVI. of 1855, and XXXI. of 1861 have been extended to Oudh, and licenses for manufacturing crude saltpetre and other saline substances, also for refining saltpetre, and purifying the salt educed in the process, will be granted in accordance with the provisions of these Acts. Rules on the subject have been framed, and submitted for the sanction of the Supreme Government. It is expected that a great stimulus will be given to the production of saltpetre, by the permission to separate and purify the salt.

Opium.

61. Early in the year several complaints reached the Officiating Chief Commissioner of the proceedings of the Opium Department with respect to cultivators; some of these were evidently groundless, and others, though apparently not altogether unfounded, were too general for an inquiry to be instituted. Subsequently, some instances of compulsory grant of pottahs to cultivators in the Oonao district were brought to notice by the Commissioner of Lucknow, and the Officiating Chief Commissioner found it necessary, with the view of checking these alleged abuses, to issue some rules based on Act XIII. of 1857, regarding the disposal of opium cases. It is believed that these rules have had the desired effect, as no complaints have been preferred since, and all officers concur in testifying to the growing popularity of the opium cultivation, though many of the cultivators are under the impression that there is an order of Government for them to cultivate.

Mr.

Mr. Nicholson is a most energetic officer, and his judicious arrangements, backed by the assistance of Messrs. Francis and Osborne, have been most successful, and the produce has nearly doubled, having risen from 2,703 maunds in 1860-61 to 5,135 in 1861-62.

No portion of this increased production is attributable to the enhanced price, which was made known too late, but it will unquestionably prove a great stimulus to future operations.

During the past year 28,455 beegahs were under opium cultivation, and 59,547 persons were engaged in it; the average produce was nearly seven and a quarter seers per beegah, but in some districts it was over 10 seers. The opium agent estimates the net Government revenue from Oudh opium at 22,69,600 rupees, so that Government derives a profit of about 38 rupees from each opium cultivator. The above amount is exclusive of opium sold in the province.

Much inconvenience was experienced from the want of suitable godowns for weighments, but this will now be remedied, as a lakh of rupees have been sanctioned for opium buildings.

The proceeds of the sale of Government opium are as follows, viz. :—

	Rs.
Lucknow - - - - - - - - -	69,420
Khyrabad - - - - - - - - -	10,963
Baiswarra - - - - - - - -	10,551
Fyzabad - - - - - - - - -	5,477
TOTAL - - - *Rs.*	96,411

N.B.—In last report some Abkaree items were erroneously included in the totals under this head, the correct amount for the year was 41,357 rupees.

SECTION III.—EDUCATION.

62. A large Imperial grant was expected under this head, and a scheme for the promotion of education submitted to Government, but no orders have yet been received on the subject.

The talookdaree schools alluded to last year have been maintained; with regard to them the Deputy Commissioner of Seetapore remarks :—" The difficulties which beset this school from the first have not been removed, the talookdars hang back and do not send their sons to school willingly, and those boys who do attend are constantly withdrawn from their studies for insufficient reasons. I confess that this is disappointing; but I look forward with confidence to a time not many years hence when some of these boys we educate against great difficulties now will grow into men, and add the force of their example to the weight of their personal influence as talookdars. I freely admit that the results heretofore attained are not commensurate with the time and labour and money they have cost; but I do not, therefore, regret the outlay or the trouble; they will bear fruit hereafter." The same remarks apply to all those schools. The talookdars are averse to sending their children to schools at a distance; with the mothers this feeling is even stronger, and the boys themselves are very apathetic and insensible to the advantages of education, though there are a few honourable exceptions.

In all the talookdaree schools there is a lower class composed of sons of Government officials, and of respectable natives engaged in mercantile pursuits.

These boys attend regularly, work hard, and their progress is most gratifying; many of them will turn out most useful public servants.

In Gonda there has been a falling off in attendance, but in other districts there has been an increase. There are now at—

Seetapore - - - - - - - -	55
Fyzabad - - - - - - - -	106
Mohomdee - - - - - - - -	69

The talookdars have everywhere evinced great liberality in subscribing to these schools, and in Baraitch they have lately offered to contribute a large sum for the establishment of a school at that station.

Besides these institutions there are inferior schools, supported partly by fees and subscriptions, and partly by small grants from the Octroi funds. In the Lucknow division there are eleven of these, one at each Tehseel and Suddur station, except Lucknow, where it is not required; they are attended by 390 scholars, of whom 62 are learning English.

Similar schools have been established in the other division and in Hurdui, where many of the boys learn English; they have been very successful, chiefly owing to the strong interest taken in them by some of the leading talookdars. There are a considerable number of village schools, but they are poorly attended and require no particular notice.

The school established at Lucknow, through the personal exertions of Colonel Abbott, for the education of the daughters of Europeans and Eurasians, continues to flourish; it is a most useful institution, and deservedly popular.

SECTION IV.—PUBLIC WORKS.

63. The budget grant for the year was limited to 19 (nineteen) lacs, of which 7 (seven) lacs were allotted to works of internal improvement.

Owing to the advanced state of the buildings for the accommodation of troops, only 5½ lacs were allotted to military works, which had absorbed the bulk of the budget grants of the three previous years.

The only other considerable allotment, viz. 1½ (one and a half) lakhs, was for the central gaol at Lucknow, and the two divisional jails at Fyzabad and Seetapore.

PART I.—COMMUNICATIONS.

64. Great progress was made on the Lucknow and Fyzabad road (80 miles), and the branch to Byram Ghat (20 miles).

These roads were only commenced in March 1861, but by the close of the year under review, the section (18 miles in length), between Lucknow and Nawabgunge, Bara Bunkee, was completed in every respect, with the exception of one bridge; the earth work and 25 bridges on the remainder of the road, were finished; and the bricks for the other bridges and a large amount of kunkur were collected.

The progress on the Fyzabad and Allahabad road was also considerable. On the section (72 miles) that fall within the Oudh boundary, all the earth work, except in the immediate vicinity of the large bridges over the Goomtee and Sye, and all the minor bridges, were completed. Five large bridges still remain to be constructed. A single coat of metal was consolidated over a length of 12½ miles, and kunkur for 54½ miles, was collected. On the section between the Oude boundary and Allahabad (16¾ miles), the earth work only was commenced at the close of the year.

The road between Roy Bareilly and Dalamow Ghat (on the Ganges), 16 miles in length, was commenced during the year; the whole of the earth work and eight bridges were completed, and considerable progress was made in the collection of metal.

The road between Fyzabad and Gonda (about 30 miles) was also commenced during the year, the earth work and 10 bridges in the section (16½ miles) between Gonda and Wazeergunge, were finished.

A bridge of boats was maintained across the River Gogra at Fyzabad, and 27 new boats were built for it.

PART II.—MILITARY.

65. The demolitions of the city of Lucknow were cleared on the east and west faces of the "Stone Bridge Fort," so as to complete a clear esplanade all round the fort, 500 yards in width; the work was very heavy.

Although the grant for barrack accommodation was restricted, still a great deal of work was done; only one barrack was entirely constructed, but in 45 others more or less work was done. Of the subsidiary buildings, 31 more entirely built; 47 that were in progress during the preceding year were completed, and 28 others were commenced and carried to various stages of progress.

The two following Tabular Statements exhibit the expenditure throughout the province during the year, exclusive of that for establishments and stock in hand.

In the second statement the expenditure in former years is added:—

WORKS.	Lucknow Division.	Fyzabad Division.	Roy Bareilly Division.	Seetapore Division.	First Road Division.	Second Road Division.	Third Road Division.	Central Gaol Division.	TOTAL.
	Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*

PART III.—RAILROAD.

66. A project for the construction of a line of railway from Lucknow to Cawnpore, without Government guarantee, was put forward last year, and Government liberally acceded to the request of the projectors for certain privileges to enable them to accomplish the undertaking.

Funds, however, were not forthcoming, and the original company resigned in favour of Mr. Palmer, who undertook to construct the line.

He too, however, abandoned the enterprise, and the Officiating Chief Commissioner feeling assured that no company in Oudh could complete the work, suggested to Government that the East Indian Railway Company might be disposed to connect Lucknow with their main line at Cawnpore; and though no reply has been received to this communication, it is hoped that the proposal may be favourably entertained.

PART IV.—IRRIGATION.

67. Under this head, there is nothing to add to last year's report.

PART V.—MISCELLANEOUS ROADS AND BRIDGES.

68. District roads and bridges have received much attention, and large sums have been expended on them, particularly in the Fyzabad and Khyrabad divisions. The roads have been subdivided into provincial, main district, and district. A detailed memorandum, showing the roads and the sums set apart for them is annexed, (*vide* Appendix.*) In Baiswarra there has been a fair amount of work done. In Lucknow the frequent change of officers has seriously retarded progress in this important department, and no works of any note have been constructed. In the Fyzabad district, 101 miles of new road have been made, and 50 miles repaired; one unfinished masonry bridge of three arches, each 25 feet span, one of two arches, each 14 feet span, and two of one arch 25 feet span, were completed; 47 pucca drains and 19 bridges from 10 to 20 feet span were constructed, besides nine temporary wooden bridges; one bridge with three arches, each of 22 feet span, and another with three arches, each of 35 feet span, have been undertaken, and are approaching completion, and heavy embankments have been thrown up as approaches to these bridges; a bridge of boats was also constructed across the Goomtee on the Fyzabad and Roy Bareilly road.

* M (2).

In Gonda 60 miles of new road have been marked out; approaches to the wooden bridges have been made and metalled; one bridge of 30 feet span, and two of 15, with masonry abutments and timber superstructure, have been constructed, and 12 minor pucca bridges completed, or nearly so.

In Baraitch 30 miles of road have been raised; 12 large wooden bridges, two of them 200 feet span, have been built; 14 are in various stages of progress, and for 22 more the materials are on the ground.

In Seetapore 78 miles of new road have been made, and 73 miles repaired; four pucca drains and six timber bridges built. Captain Thompson has shown great ingenuity in constructing a bridge, of part trestles and part piles, over the Serayn, at Seetapore; it is 160 feet in length, and stood the rains well.

In Hurdui 116 miles of new road have been made, and 178 repaired; 17 pucca drains constructed, and two large bridges commenced.

In Mohomdee the old district roads have been repaired, and 97 miles of new road made, and six bridges constructed, one, a large pile bridge, over the Oel.

Bridges of boats were maintained over the Gogra both at Fyzabad and Byram Ghat, and for both a large number of new boats have been built, as the withdrawal of the country boats for these bridges was found to interfere most seriously with the trade to the eastward and Calcutta.

At Sultanpore, too, over the Goomtee, a bridge of boats was kept up; but it is now proposed to replace this by a pile-bridge 200 feet in length.

Several serais have been built on the main lines of communication, at a cost of 20,248 rupees.

The receipts and expenditure of the Road and Ferry Funds are as follows:—

DIVISIONS.	RECEIPTS.			DISBURSEMENTS.				
	Road Fund.	Ferry Fund.	TOTAL.	Roads.	Bridges.	Serais.	Establishments.	TOTAL.
	Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*
Lucknow - -	39,942	25,834	65,776	17,220	22,467	250	3,199	43,136
Khyrabad - -	56,991	44,525	1,01,516	22,926	19,471	4,737	18,471	65,605
Baiswarra - -	47,424	22,626	70,050	37,875	17,518	973	5,600	61,966
Baraitch - -	63,609	63,533	1,27,142	28,516	59,286	14,288	5,832	1,07,922
Total - - *Rs.*	2,07,966	1,56,518	3,64,484	1,06,537	1,18,742	20,248	33,102	2,78,629

PART VI.—PUBLIC BUILDINGS.

69. The Commissioner's kutcherry at Fyzabad has been finished, and a similar building constructed at Roy Bareilly. A handsome nuzzool building has been fitted up for the Deputy Commissioner's kutcherry at Lucknow.

A district kutcherry, on a plan approved by Government, has been commenced at Fyzabad; and in different districts 32 new police posts have been completed, or nearly so.

The new gaols have already been referred to under that head. The temporary district buildings were repaired at a moderate cost.

SECTION V.—POST OFFICES.

70. District post offices were maintained as in the preceding year. The number of men employed is 368, the number of miles over which they travel 1,596, and the cost 18,750 rupees. The letters and covers delivered are said to be 162,655, and the number returned undelivered 37,974; but under the present system, sealed packets are received from and sent to district post offices, and these figures are not to be depended upon.

SECTION VI.—ELECTRIC TELEGRAPH.

71. There is nothing to be said on this subject.

SECTION VII.—MARINE.

72. No steamer has ascended the Gogra for many months, and there seems no immediate prospect of the establishment of a regular line of steamers. This is, perhaps, not much to be regretted, as, without feeders in the shape of good roads to the river communication, the speculation might not have proved remunerative; but by the end of the rains this want will be supplied to a great extent. The Fyzabad and Lucknow Road will be well advanced, and a great portion of it metalled, as will also the Lucknow and Byram Ghat Road and the road from Byram Ghat *viâ* Seetapore towards Rohilcund will be passable. The Gogra is always navigable as far as Byram Ghat, which is nearer Calcutta, and 30 miles nearer Cawnpore than Allahabad is, and the voyage to Byram Ghat presents far fewer obstacles. Downward freight would be procurable if carried at fair rates. The charges hitherto have been double those on the Ganges, while there can be no doubt that sooner or later all European heavy goods for Goruckpore, Oude and Rohilcund, must come by the Gogra. The line is well worthy of the attention of enterprising capitalists; and the Officiating Chief Commissioner is confident that steam communication from Calcutta to Fyzabad and Byram Ghat will eventually prove a decided success.

SECTION VIII.—FINANCE.

*N (2).

73. A statement in the prescribed form is appended,* but the financial position of the province is really far more favourable than these figures make it appear. The Oudh treasuries pay the advances and expenses of the Opium Department, while the profit which Mr. Hamilton, opium agent, estimates, after deducting all expenses at 22,69,600 rupees on the season's out-turn, will go to swell the receipts of the Bengal Government.

Again, the import of salt from the North Western Provinces is, on a very low estimate, three lakhs of maunds per annum. The duty on this quantity at three rupees per maund

is

is nine lakhs, which, though drawn from Oudh, is included in the salt revenue of the North West. Oudh, too, of course, gives its contribution to the Customs of the Bengal Presidency, although no data are available for estimating the amount.

The receipts from land revenue are nearly stationary, and no material increase will be obtained under this head till the regular settlement comes into force in several districts. Under assessed taxes there is a large decrease owing to the abolition of the duty on arts, trades and dealings. The receipts from Sayer also have diminished for reasons given under "Forests." Abkaree, opium and stamps all show an increase, especially the last, in which the increase is 40 per cent. The only increase in disbursements requiring notice, is in the Revenue Department; it is owing to the extension of the regular settlement operations which are now in progress in four districts; this item will continue to increase for some years, but the result of these operations will be a very large permanent addition to the land revenue. Both in military and police charges considerable reductions have been made, and will be carried much further during the current year.

The amounts under bills drawn and bills paid, are nearly alike. With regard to "adjusted receipts of," and remittances to and from other governments, owing to want of uniformity in the preparation of treasury statements, it is impossible to ascertain the result of these transactions; but the balance appears to be in favour of the Province. The Officiating Chief Commissioner believes that the new system of accounts is still imperfectly understood, and that there is considerable diversity of practice in classifying the different items of receipt and expenditure; and he, therefore, strongly urges that a competent officer of the Pay and Audit Department should be deputed to visit all treasuries, to see and correct what is amiss, and to give such instructions as are called for to insure uniformity in the preparation of accounts and statements in future. No cash remittances have been received from other governments except a small sum in copper coin, yet the cash balances have increased from 25,64,907 rupees on 1st May 1861, to 33,00,908 rupees on 1st May 1862, showing that the cash receipts during the official year have been, allowing for copper coins received, nearly seven lakhs in excess of the cash disbursements.

SECTION IX.—ECCLESIASTICAL.

74. The church at Gonda had doors fitted, floor laid, and a few other petty works executed to it during the year.

The Roy Bareilly church, of which only the brick-work was finished in 1860–61, was quite completed.

A church for Roman Catholics was entirely built in the Dilkhoosah cantonment, Lucknow.

SECTION X.—POLITICAL.

75. The Province has remained perfectly tranquil, and nothing has occurred during the year to excite the public mind or disturb the political atmosphere. The most interesting event was Lord Canning's last visit to Lucknow, which took place in November last. The immediate object of the visit was to receive an address from the British Indian Association of Oudh, on the question of female infanticide, which prevails to some extent chiefly among the Rajpoot clans. The talookdars had been some time in deliberation on the subject, and had drawn up certain rules for the suppression of this cruel and inhuman practice. These rules were laid before his Excellency; the most important was, that "every talookdar should take a solemn covenant from his tenants, binding them never to commit or countenance directly or indirectly, female infanticide in anywise whatever, and that, in the event of any one violating the covenant, be his rank or condition in life what it may, he shall forthwith be handed over to the laws, and excommunicated for ever from the pale of Hindoo society as a felon and an outlaw."

A durbar was held at Lucknow on the 5th November, and an address bearing the signatures of about 200 talookdars was presented and read by Colonel Durand, Secretary to Government in the Foreign Department, *vide* printed report of British Indian Association for 1861. The Governor General, in his reply to the address, approved generally of the measures proposed, but warned the meeting that "in accepting an aid beside and beyond the law, there was no compromise on the part of Government with so hateful a crime, and that if the result of the efforts of the association should not equal their expectations, or should be tardy in showing itself, the law would not be allowed to sleep, but would be enforced to the utmost power of Government, regardless of everything but the utter suppression of the abomination."

The rules, with unimportant modifications, have been introduced, and up to this time upwards of 55,000 persons have signed the covenant. It would be premature as yet to offer any opinion on the result of the measure, but it is certainly well meant, highly creditable to the talookdars of Oudh, and apparently well-calculated to promote the object in view.

The distinguishing feature of the Oudh policy, which was prominently alluded to last year, is the experiment of associating the great landholders and native gentlemen of mark with the officers of Government in the administration of the province.

As the measure is one of very great importance, and as it is known that some diversity of opinion prevails on the subject, the Officiating Chief Commissioner has deemed it advisable to transcribe the reports of all commissioners in full with the view of making known the views of the most experienced officers of the commission on the general working of the system. The Judicial Commissioner has recorded his opinion at considerable length in the 99th and subsequent paragraphs of his report already submitted to Government.

Colonel Abbott, Commissioner of Lucknow, reports—"There are few extensive talookdaree holdings, but the result, I consider, to be highly satisfactory; 621 cases, criminal, civil and revenue, were disposed of by them; 59 were heard in appeal or reviewed, of which only 16 were interfered with.

"Chowdree Gopal Singh, talookdar of Bangermow, in the Oonao district, disposed of more than two-thirds of this work himself, and is deserving of the Chief Commissioner's especial and favourable notice. His powers are not confined to his own talooka, but he has had made over to him the entire pergunnah of Bangermow." The Assistant Commissioner says, and I agree with him, that "the general fairness of his decisions, the easy access to redress in his court, have made his administration popular and successful.

"His cases have been well reviewed, and I think it most encouraging to find a native gentleman, unremunerated, entering into the administration of the country thus *con amore* with such excellent results.

"None of the other talookdars come any way near him in the amount of work disposed of, but they have all done their little satisfactorily. There is an inclination, I have observed, to be too lenient in criminal cases, but this might be expected."

EXTRACT from Report of Mr. *Simson*, Commissioner of Fyzabad.

"Para. 85.—In the criminal department, in the Fyzabad district, it has rather decreased, with the exception only of Rajah Roostum Shah's; for Rajah Madho Pertab Singh received criminal powers only from the commencement of the year. Their decisions have continued to give satisfaction; only two appeals were preferred, and the original order was maintained in both. It was necessary, however, to bring to your notice a case of Rajah Roostum Shah in which he allowed very great delay and other grave errors in procedure to occur, and the caution which was then administered will not be without its effect.

"86. The work done in the civil department has been nominal, but a beginning has been made by Meer Baquir Hoossein and Rajah Roostum Shah, and in time I trust the honorary assistants will appreciate these powers also.

"87. But by far the largest proportion of cases has been decided on the revenue side, and the number has considerably increased since last year. The total, I must note, however, includes the miscellaneous cases as well, which is very embarrassing. It were easy to separate the miscellaneous cases from the summary suits, but among the former I find such important cases as those for 'adjustment of rents,' as well as 'applications for copies,' and such like orders of course, and I am not at present in a position to distinguish the real case work."

"88. The number of cases decided by Maharajah Maun Singh continues by far the most numerous, and his decisions again present the salient points well chosen for remark in last year's report;—the appeals are few, but the proportion of reversals is very high. The maharajah continues to discharge these duties with the 'acuteness' and ability for which he is distinguished.

"89. Meer Baquir Hoossein is again next in order, and in some points of view his work comes out better than the maharajah's. The ratio of suits appealed is very low, and only one of his orders was interfered with.

"90. Rajahs Roostum Shah and Madho Pertab Singh, though inclined to be dilatory, have acquitted themselves fairly.

"91. Two talookdars, the Maharajah of Bulrampore and Sheo Bahadoor Singh of Kumyar, are invested with powers, but the latter has not yet commenced to try any suits. The former has decided a fair number of criminal and a few revenue cases in a very satisfactory manner, and continues to deserve the high opinion I have uniformly had to express regarding him both as an honorary assistant and a landlord.

"92. Sirdar Bikrumma Singh has been non-resident in Baraitch for the greater part of the year. Nisar Ally Khan, who is the son of the loyal Kuzzilbash, on whom the estate was conferred by Government, has received powers during the year, and though he is more inexperienced as regards our laws and system than I anticipated, he has begun well. He is well read in Persian, is a fair English scholar, and takes a pride in possessing these powers; and, being an energetic man and very well affected towards Government, I doubt not that, in the words of Major Steel, he will in time 'become a valuable aid to the district officer.'

"92½. In fine, I consider that the measure of entrusting these gentlemen with powers continues to produce on the whole very satisfactory results; while at the same time I have

have seen further reason to maintain the opinion I have already expressed, 'that their position in certain classes of cases makes impartiality on their part very difficult.' With the Chief Commissioner's sanction, they have been cautioned against entertaining suits in which their servants are personally interested, and if it were also distinctly ruled that they are debarred from hearing cases regarding the adjustment of cultivators' rent in which they are personally interested, in contradistinction to those in which a Pookladar or *bonâ fide* Thakadar is the real plaintiff, I think the risk of partiality would be very much reduced.

"93. Full advantage has been taken by Captain Reid in the Fyzabad district of the Chief Commissioner's recommendation to refer to talookdars not invested with powers all fitting cases connected with their estates, and no less than 115 cases are reported as having been satisfactorily disposed of in this way. It cannot be doubted that much useful assistance may be obtained by the deputy commissioner by adopting this course, if the plan is carried out with tact and judgment; but the cases referred must never be lost sight of, and a date, before which the plaintiff is to be satisfied on the petition returned, with a report, should invariably be fixed, else plaintiffs are apt to be worn out by delay, and other irregularities to occur."

EXTRACT from Report of Mr. *Tucker*, Commissioner of Baiswarra.

"Para. 69. The talookdars have generally performed their criminal work satisfactorily throughout the year. A great deal of their work is performed in a patriarchal way, and is not reduced to writing.

"70. Their revenue work should, in my opinion, be performed in an unofficial manner. No man sitting on the bench should decide his own cause.

"71. I take the opportunity of bringing to the notice of the Chief Commissioner the valuable services of Major Orr. Of the native honorary assistant commissioners, Rana ShunkurBuksh Singh still holds the first place. The Deputy Commissioner brings to notice, also, the services of Lall Sheopall Singh, the son and heir of the loyal old Rajah of Morarmow.

"72. I expect much assistance in the trial of sessions cases from Shahzadah Sahdeo Singh; from Baboo Ajeet Singh, of Tirowl; Baboo Surubjeet Singh, of Tekaree; Baboo Thakoor Pershaud Singh, of Tiloee; Rajah Humvunt Singh, of Kalakankur; and Baboo Ajeet Singh, the uncle of the Rajah of Pertabghur."

EXTRACT from Report of Colonel *J. Clarke*, Commissioner of Khyrabad.

"Para. 82. The Deputy Commissioner of Seetapore considers the progress made by these gentlemen in the highest degree creditable to them; he has examined many cases. He says, "The criminal convictions are double the acquittals, decrees for plaintiffs are six times the decrees for defendants in civil suits, and 17 times in revenue suits.' He also says, 'After remarking that people go into Talookdars' courts when they have a reasonable case to go on, it has been argued that suitors are deterred from appealing by fear of the talookdars' displeasure; but I think this argument is not tenable in the face of the countless instances in which men do complain against their talookdars in other than judicial cases."

Mirza Shumshere Bahadoor.
Mirza Aga Jan.
Banee Singh.
Thakoor Sheo Buksh Singh.
Thakoor Jowahir Singh.
Thakoor Gooman Singh.
Mirza Ahmed Beg.

"83. The Deputy Commissioner thinks, where all have done so well, it is invidious to praise a particular officer. Shumshere Bahadoor has done the most work. I consider Aga Jan deserving of commendation.

"84. The very indiscreet conduct of Thakoor Sheo Buksh Singh, of Kutesur, to the police, in a case where his interests were concerned, has been laid before the Chief Commissioner.

"85. I transcribe the 16th paragraph of the Report of the Deputy Commissioner of Hurdui:—'236 cases were decided by honorary assistant commissioners; the greater share of work fell upon Syud Mahomed Ushruff and Shumshere Bahadoor, the former having decided 73 and the latter 49 cases. Thakoor Lall Singh disposed of only four cases during the whole year. I examined a great number of the cases prepared by these gentlemen; the result was very creditable to them; only five cases were appealed, four from the decision of Mahomed Ushruff, and one from the decision of Chowdry Hushmut Ally. The decisions were all confirmed except in one case in which the order of Mahomed Ushruff was set aside. I beg particularly to bring to your notice the names of the following gentlemen who have distinguished themselves during the year:—Rajah Hurdeo Buksh, Shumshere Bahadoor, Fuzl Russool, and Syed Mahomed Ushruff.'

"86. Mr. Ross commends Rajah Unroodh Singh, of Oel, and Rajah Gunga Singh, of Bhoor; and I concur in thinking these gentlemen most excellent examples of their class. Mr. Ross thinks care should be taken not to hamper the honorary assistant commissioners too much with our rules and forms; this is the opinion I last year expressed."

A statement of cases decided by honorary assistants is appended.

STATEMENT of Cases tried by Honorary Assistant Commissioners.

TOTAL	812	253	1,415	51	8	136	37	6	77	14	2	48	11	7·86

It is unnecessary to expatiate upon the advantages of the system in a political point of view, as these are generally admitted; and the following remarks have reference solely to the conduct of the honorary assistants in the trial of cases:—

Civil cases were tried by honorary assistants last year for the first time, and a good commencement has been made. The amount of criminal work has greatly increased.

The results of civil and criminal trials and appeals are as follows:—

	Civil.	Criminal.	Revenue.
Total decided	253	812	1,415
Appealed	8	51	136
Confirmed	6	37	77
Reversed	2	14	48
Pending	–	–	11

These figures speak for themselves, and the convenience to the parties of having their cases disposed of without the intervention of Government Omlahs, and without the delay and expense of a journey to a distant station, can hardly be over-estimated. Some of the sections of the Penal Code lately introduced have been misunderstood, and mistakes made in consequence; but these have not been altogether confined to honorary assistants. In some cases there is room for suspicion that the honorary assistants, ignorant of forms and fearful of rebuke for errors, employ our old Omlahs and allow them to do too much. This practice cannot be altogether prevented, but will be discouraged as much as possible.

On the question of revenue jurisdiction there is some difference of opinion. The Commissioner of Baiswara says, no man sitting on the bench should try his own cause, and this opinion is shared by other officers of the Commission, who apprehend that this power might be abused, and might lead to the discredit of the system.

The

The Officiating Chief Commissioner is not prepared to say that such arguments, based on anticipation of what might probably occur, are not well founded; but, as far as can be learnt from general information, and from the result of trials, the anticipation has not as yet been fulfilled. Of 1,415 revenue suits decided, 136 were appealed; and of 125 disposed of, 77 orders were upheld and 48 reversed. The reversals were, therefore, 35·29 per cent. of cases appealed, but only 3·39 per cent. of cases tried. The per-centage of cases appealed to cases tried was low, only 9·31; and considering the encouragement given by the large proportion of orders reversed, and the notoriously litigious character of the tenants of some of the great landholders, there can be little doubt that nearly every man who really had any grounds to go upon did appeal. The paucity of appeals is, therefore, a favourable feature, and may reasonably lead to the inference that in the cases not appealed, with rare exceptions, substantial justice had been done. The Commissioner of Fyzabad, in his 87th paragraph above quoted, remarks upon adjustment of rent cases. It was never intended that honorary assistants should try such cases; and as soon as it was brought to notice that one of them had done so, the practice was checked, and instructions issued calling attention to the original rules, and clearly defining their revenue powers.

If European officers do their duty as they have done hitherto, the Officiating Chief Commissioner believes there is little fear that injustice will be done, or that, if done, it will not be remedied.

The talookdar alluded to by the Commissioner of Khyrabad was deprived of his powers on the recommendation of the Officiating Chief Commissioner, for permitting his retainers to take by force certain market dues claimed by a neighbour as well as himself, and which the native police officer had collected with the consent of both parties, and was about to deposit with a third party pending the settlement of the dispute.

Though the Officiating Chief Commissioner has in some instances had occasion to find fault, he considers that the general results of the measure are encouraging, and that, on the whole, the honorary assistants have discharged their duties satisfactorily.

The honorary assistants who are mentioned with praise by Commissioners and Deputy Commissioners have well earned the commendations they have received. The following are specially deserving of notice:—Maharajah Dirghejee Singh of Bulrampore; Maharajah Maun Singh, who decided a large number of cases; Rajahs Hurdeo Buksh, Unroodh Singh, Juggal Singh, and Gunga Singh; Rana Shunkur Buksh; Lall Sheopal Singh, Meer Baquir Hoossein; Shumshere Bahadoor; Fuzl Russool; Mahomed Ushruff; Aga Jan, and Chowdree Gopal Singh, who is very highly spoken of.

With the view of dispelling the doubts adverted to in paragraph 53, the Officiating Chief Commissioner drew up the draft of a Bill to provide for the succession to, and the rights in respect of certain talookas and granted estates, and for the jurisdiction of the Courts of this province in suits relating to land. The Bill, somewhat modified in its details, is now under consideration.

It is proposed to extend the principle of self-government to some extent to cities and towns; and provision for so doing will be made in the draft of an Act which the Officiating Chief Commissioner is now preparing for the regulation of municipalities in Oudh.

76. The revised line of Nepaul frontier has been definitely marked out; it juts awkwardly into our territories in several places, and the action of the police in the pursuit of criminals is sometimes seriously embarrassed in consequence. Political—Nepaul.

77. Last year vast quantities of grain were exported to the famine districts in the north-west, this year the trade has taken an easterly direction, and more grain has been sent down the Gogra and Goomtee than has crossed the Ganges. The other principal exports are peas, pulse, linseed and other oilseeds; also opium, ghee, saltpetre, jute, hides, horns, lac and catechu to Calcutta; molasses to the North West; cloth of tanda manufacture, which is very durable, to Nepaul and the North West; saul timber, chiefly for railway purposes, to Cawnpore. The imports are English wines and stores of sorts, English cloth and yarn (which has partly displaced country); metal ware of different kinds from Calcutta and Mirzapore; salt and cotton from the North West; cattle, copper and iron in small quantities, and spices from Nepaul. Trade.

Tables of estimated exports and imports have been submitted for the Seetapore, Fyzabad and Gonda Districts, and copies are annexed; though probably not very accurate, they are of interest, as conveying a good general idea of the trade of the country. Considerable progress has been made in most districts in introducing an uniform scale of weights and measures. Appendices (O 2) to (R 2).

The Officiating Chief Commissioner fears that the development of trade has been seriously retarded by the practice of impressing carriage for the Commissariat and other purposes. The amount of wheeled carriage in the province is very limited, and is not likely to increase rapidly if liable to indiscriminate seizure.

Traders in the North Western Provinces send large quantities of salt in very fine carts which are in great favour, and frequently impressed when about to take back grain and molasses; they are kept an indefinite period, and perhaps discharged eventually at some distant station. The course of trade is thus deranged, a feeling of insecurity engendered, and merchants discouraged from repeating their ventures. With the view of mitigating this evil as far as possible, the Officiating Chief Commissioner has strictly prohibited the seizure of carriage except for troops on the march; but he thinks some relief might be given by the commissariat authorities who might avail themselves of the carriage kept up for moveable columns for the conveyance of their stores, or arrange to make their despatches smaller and more frequent when this could be done without detriment to the public service.

CHAP. XV. Oudh.

During the cold weather Mr. P. Saunders, Commissioner to report on the Cultivation of Cotton, visited the Province; he considered the soil generally most fertile and well adaped to the growth of cotton; he did not confine his enquiries to cotton, but extended them to everything connected with the capabilities of the Province; and his Report, which has been published, contains much interesting information on a variety of subjects. Mr. Saunders shared the general opinion that if Manchester wants plenty of cotton from India, she must put her own shoulder to the wheel, and send men and money to make the necessary arrangements in India.

Mr. Saunders complained of the inconvenience he experienced in crossing rivers; but he was then travelling by an unfrequented route in a very wild part of the country, where it would have been waste of money to construct bridges of boats, such as are maintained on the main lines of communication, where the amount of traffic is such as to justify the necessary outlay.

SECTION XI.—MILITARY.

Appendix (S 2).

78. On 1st May 1861 the strength of the military force in Oudh was 11,341 of all ranks; on the 1st May 1862 it was 9,255 (*vide* Return appended), showing a reduction of upwards of 2,000 men. The decrease is entirely in the native portion of the force, the strength of the European troops being almost exactly the same as last year.

The station of Gonda is, however, only temporarily occupied, and it is believed that the European regiment now there will shortly be removed.

A regiment of native infantry was lately moved from Agra to Lucknow, because one regiment was considered by the military authorities insufficient for the military guards, causing of course a sensible increase of expenditure under this head.

SECTION XII.—MISCELLANEOUS.

PART I.—AGRICULTURE AND HORTICULTURE.

79. The Agri-Horticultural Society of Oudh was constituted in December 1860, and commenced operations in April 1861.

The first consignment of English seeds was unfortunately a total failure; this failure, though not confined to Oudh, has been very discouraging, especially to native subscribers, many of whom have withdrawn.

Cotton.

80. Among the experiments, cotton has naturally received by far the greatest share of attention. In the end of May the secretary sowed a quantity of both New Orleans and Egyptian seed, and to make the experiment on cotton cultivation as complete as possible he also sowed some native cotton, which he treated in the same way as the foreign.

Of the New Orleans seed about one in a thousand only germinated, and, on the contrary, of the Egyptian about one in a thousand only failed. The results were the same throughout the Province, and can only be accounted for under the supposition that the American seed was originally bad, or had been damaged somehow, as the seed received the year before came up very fairly.

The Egyptian and native cotton grew well and produced a large number of pods; but owing, perhaps, to the unusual amount of rain that fell last year, many insects of all kinds were generated, and the pods, especially the Egyptian, were to a large extent destroyed by the ravages of a small red maggot.

The Secretary thinks more can be done with seed from other parts of India than with foreign seed, and that, while striving to introduce foreign cottons, the improvement of the native kinds should not be lost sight of. Attempts were made to produce a hybrid between the New Orleans and native cotton, with the view of procuring a hardy plant with a good staple; they failed, but will be repeated. The Secretary next tried hybridization between the Egyptian and New Orleans kinds, and succeeded in fertilizing two pods of the former with the pollen of the latter; they ripened and produced healthy seed, which will be sown next year.

These experiments in hybridization, though tedious and requiring a long time to test their effects, may produce very favourable results.

Further experiments are being made with acclimatized seed as well as with some procured from Malta. The cotton crops in the garden this year are remarkably fine and promising.

Maharajah Maun Singh carefully prepared some land near his residence, which he subdivided and sowed month by month with the view of ascertaining the best season for sowing; the results have been encouraging, and though the experiments were not on a very large scale, he is sanguine that cotton cultivation in Oudh, if properly attended to, will prove highly remunerative. It is now generally admitted that it was a mistake to sow the foreign cotton seed just at the beginning of the rains, as a heavy fall, such as we had last year, immediately after sowing, will destroy the seed or wash it away. The best plan seems to be to sow a month or two before the rains, and to irrigate the land once or oftener.

This

This gives the plant time to take firm root, and when the heavy rain does come, it is strong enough to withstand its violence.

81. Attention has been given to the propagation of the mulberry tree with the view of introducing the silk-worm throughout the province at a future period. Several thousand cuttings of two good kinds have been received from Seharunpore, and in a few years the Lucknow garden will be able to furnish the whole of Oudh with this valuable tree. Mulberry.

These and various other experiments in the Lucknow garden, of which an account is given in the Society's printed report, have all been conducted by Dr. Bonavia, late secretary, who is a highly accomplished botanist, and exceedingly zealous.

82. In February 1861 Colonel Clarke procured a small supply of Cashmere silk-worm eggs from Mr. Cope of Umritsur, and made them over to Mr. P. Carnegy, who undertook the charge; the worms were kept in an empty room in his house, and the trays and baskets were of the same kind as used in Bengal. The following memorandum of his proceedings, and the result, was given by Mr. Carnegy :— Silk-worms.

"On the 24th of February I received from the Commissioner a small box of silk-worm eggs of the Cashmere variety. On that day a few of these eggs were hatched, and they continued hatching till the 3d of April, after which date about a hundred eggs remained, which have shewed no signs of vitality. The worms were at once supplied with mulberry leaves, and fed well and regularly, except at the intervals of changing their skins. The worms continued very healthy until the 29th of March, when the first cocoons were spun. On the 10th of April there were 1,500 cocoons, and on the 27th of April, when the last cocoons were formed, the number amounted to 3,100. The cocoons first formed were very good, indeed superior to any I have ever seen, but as the heat increased the quality deteriorated much, till the last formed cocoons were not better than the common Bengal cocoons. Some of the last hatched worms spun prematurely, and went into the chrysalis state after surrounding themselves with a mere film of silk. From this it seems that it would be advisable to force the hatching, so that all the cocoons would be spun by the 1st of April. The irregularity of hatching has been the only drawback, and this, I think, would be remedied by exposing the eggs to a moderate heat about the middle of February. A plentiful supply of mulberry leaves was always procurable, and it has been fairly proved that the worms will thrive on them.

"Five hundred of the Cashmere cocoons have been sent to Bengal to be spun into silk, and reported on. Nothing has been heard by me about the result as yet, but, judging from some silk wound off by myself in a rough manner, there is every reason to expect that it will be favourable."

Some of the cocoons were sent to Mr. Cope at Umritsur, who describes them as very beautiful, and of excellent quality. The cocoons sent to Bengal were also favourably reported on. Mr. Turnbull, of the Ghuttal establishment, writes :—"They are certainly very fine and far superior to any thing of the kind in Lower Bengal. If they are from the Cashmere worm they have deteriorated about 56 per cent. and are much smaller, as 100 cocoons weigh 3½ tolahs, while those sent by Mr. Cope from Cashmere, and which elicited such praise from Count Frieschi, weighed 5½ tolahs. However strange it might appear, your cocoons have yielded more silk; 400 cocoons producing 2¾ tolahs, while those from Cashmere 9½ annas. I consider your silk as good as any I have reeled from Cashmere and elsewhere, and which I have forwarded to you by Dâk Banghy."

The experiment is so far very promising, and arrangements have been sanctioned for continuing it on a larger scale.

83. Horticultural gardens have also been kept up at the head quarters of all districts. Experiments with New Orleans cotton were tried in all of them, but in all, as in Lucknow, the seed completely failed. Gardens.

84. Hemp is grown extensively in Trans-Gogra, where the soil is very favourable for the production of this plant; the cultivation is capable of great expansion, and it is certain to become one of the principal exports of the province; it was proposed to try Punjab acclimatized seed this year, but unfortunately none could be procured. Hemp.

PART II.—FORESTS.

85. Our acquaintance with the Oudh forests was very imperfect, but it was known that, although the best tracts had been ceded to Nepaul, many forests producing valuable timber still remained on our side of the border.

A superintendent was therefore appointed to look after them, and joined his appointment in September last. A survey of the forests was at once undertaken with the view of enabling the superintendent to ascertain their total area, to separate the tracts which it was desirable to retain as saul preserves from those which were better suited for jungle grants, as well as to arrange a plan of operations for making timber available to the public, and for the general conservancy of the forests. It was expected that this survey would be completed within the year, but this expectation has not been realized; only one-fourth of the whole estimated area has been surveyed and laid out in 68 tracts with about 418 miles of demarcation.

The survey has already been reported on, the advantages of completing it within the year pointed out, and application made for sanction to the necessary outlay.

The Oudh forests have hitherto suffered much from the practice of girdling trees for the sake of the resin, young saplings too were often cut for fences and other purposes; these practices have been checked, and a few rules promulgated defining the law of trespass as applicable to the forests, and making known the penalties to which trespassers are liable under the penal code.

The superintendent has been invested with the powers of a 1st class subordinate magistrate. Great damage is done by a gigantic creeper which abounds in the forests, and attacks many trees, and sooner or later destroys them; these creepers must be removed, and though a few strokes of the axe will kill them, they are so numerous that the cost will be considerable; under the present system the forests are closed to contractors. The forest department fells the timber and conveys it to the nearest convenient ghaut, where it is sold by auction. It was originally intended to take only the main trunk of the tree, but subsequently it was found expedient, for the purpose of utilizing the refuse timbers, to convey to market sawn timber likewise.

The estimate of forest receipts and expenditure is as follows:—

Divisions.	Collections.		Disbursements.		Net Receipt credited to Government.		Remarks.
	1860–61.	1861–62.	1860–61.	1861–62.	1860–61.	1861–62.	
	Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	
Khyrabad	91,439	61,735	6,575	40,561	84,864	21,174	
Baraitch		19,361		552		18,809	
Total	91,439	81,096	6,575	41,113	84,864	39,983	

The present system of working the forests being entirely new, the superintendent did not consider it prudent to enter on it too largely all at once, but preferred introducing the system gradually, while himself gaining local knowledge and training the establishment to the new order of things; and the operations of the year have, therefore, been limited.

The following is a statement of timber felled and carted to depôts on the Sardah River:—

No.	Description of Timber.	Size.	Cubic Contents.	Remarks.
1,221	Saul logs	25′	37,787	Mean girth 60 inches.
5,782	Sleepers	10′ × 12″ × 6″	28,910	Sawn timber.
231	Sleepers	10′ × 10″ × 4″	635	
181	Beams	20′ × 12″ × 12″	3,620	
742	Kurries	10′ × 5″ × 4″	1,546	
86	Kurries	10′ × 4″ × 4″	93	
	Total Cubic Feet		72,591	

This timber at the very low estimate of twelve annas per cubic foot is worth 54,443 rupees. There are some tracts of forest where the trees have been injured by girdling for the purpose of extracting the resin; they are rotten at the core and not fit for exportation as logs, but they are nevertheless well adapted for railway sleepers; hitherto saul only has been issued for sleepers, but there can be no doubt that good sleepers might be made of other woods, particularly the stunted sisoo and the saj or sene.

These tracts may perhaps be exempted with advantage from the operation of the rule that the forests should be closed, and the superintendent is now in correspondence with a firm of railway contractors regarding them.

On the completion of the survey the superintendent proposes to sub-divide the forest tracts into about 30 equal compartments to be worked in rotation, so that each compartment can be closed for 29 years, which will give ample time for the smaller sized trees to become fit for felling; it is not intended to cut any of less than 50 inches in girth.

This scheme, however, is open to obvious objection, and will probably be modified when all the tracts have been surveyed and reported upon.

86. Annexed are statements of grants of waste land (distinguishing those under the old rules from those under the new), and of payments of purchase money.

TOTAL - - -	23	4,709	- -	4,177 4 —	—

Considerable sums were received just after the close of the official year, and several lots have lately been sold, chiefly to Europeans. In the Seetapore district there was much competition at these sales, and one lot of 1,700 acres was knocked down at 15 rupees per acre. The purchaser was proprietor of the land bordering upon the jungle, and its acquisition was, therefore, a great object to him; but as other parties bid nearly as high, the Deputy Commissioner considered that the selling price was the fair market value of the land; but the Commissioner differed from this opinion and looked upon the rate as quite exceptional,

and more than would be paid for good cultivated land; and it is probable that his view of the case is correct, and the landholder paid so high a price because the land was near his residence.

The grants of waste land in the Khyrabad division are numerous, and more have lately been made, several of them to European applicants. In one district no fewer than 21 Europeans have acquired or are about to acquire lands. These gentlemen have a fair field before them; they will receive every encouragement from the local authorities, and it is hoped that the praiseworthy spirit of enterprise they have displayed may be rewarded with success.

The only other portion of the province where any considerable opening for European capital and energy exists is in the Trans-Gogra districts, where there is a great deal of waste land; but till the Saul preserves have been surveyed and demarcated, it is impossible to say what tracts will be available for grants.

Some native grantees have greatly exerted themselves in bringing their grants under cultivation, particularly Rajah Gunga Singh, of Bhoor, and Fuzl Russool, a Talookdar of the Hurdui district; the latter last year built six villages, settled above a thousand cultivators in them, and cleared and brought under the plough over a thousand acres of jungle land. Other grantees also are known to have been very energetic, but they have not been specially brought to notice by district officers.

PART III.—SURVEYS.

87. The Demarcation Department had got so far a head of the regular survey, that it was deemed expedient to reduce the establishments, and confine their operation to certain districts.

The amount of work done is, therefore, considerably less than in former years. The whole of the Durriabad district, one tehseel of Lucknow, and one of Hurdui, have been demarcated, making in all 2,187 square miles, divided into 2,572 estates, for each of which a separate map has been prepared. The average cost per square mile is *Rs.* 29. 3. 5., considerably in excess of the previous year, when it was only *Rs.* 20. 1. 11. This excess is partly attributable to the loss of time in moving establishments from Durriabad to Hurdui, and partly to the fact that when the establishments were reduced, a corresponding reduction could not immediately be effected on the cost of European supervision.

From 1st May 1862 a remodelled and greatly reduced establishment has been sanctioned. Including the operations of former years, 9,004 villages, with an area of 6,720 square miles, have been demarcated and are ready for the revenue surveyors, in addition to the work they have on hand, being more than two years' occupation for three surveys at last year's average; but in the eastern districts the progress of the survey may be slower, as the villages are very small. There were 230 boundary disputes, of which more than one-half were about waste land and marshes: 216 appeals were preferred, of which 188 were decided. The decisions were upheld in 166 cases, and modified or reversed in 22. The work allotted to the reduced demarcation establishment is to maintain the boundaries in districts not yet professionally surveyed, to proceed gradually with the demarcation of other districts, and to arrange to prevent any obstruction to the work of the revenue surveyors. The revenue survey has been carried on in the districts of Oonao, Pertabghur, Lucknow and Roy Bareilly.

In last year's report the areas surveyed in 1860–61 were estimated at 1,180 square miles in Oonao, and 1,048 in Pertabghur. The calculations for area had not then been closed, and the estimates were not very correct. The actual out-turn of the season was as follows:—

	Villages.	Square Miles.
Oonao - -	800 - -	926 by Colonel Vanrenen's party.
Pertabghur -	1,450 - -	1,046 by Captain Anderson's party.

During 1861–62 Colonel Vanrenen completed the survey of the Oonao district, and nearly one-half of Lucknow, comprising in all 1,070 villages, with an estimated area of 951 square miles. He reports favourably on the Hudbust maps, and states that few discrepancies have been found between them and the professional boundaries.

Captain Anderson completed the district of Pertabghur, and surveyed about two-thirds of Roy Bareilly, making the total work for the season 1,378 villages, with an area of 1,228 square miles, being an increase of nearly 20 per cent. over the work of the previous year, which is satisfactory, especially as it was accompanied by a slight decrease of expenditure.

The field measurements were carried on as last year under the superintendence of deputy Commissioners, except in Lucknow, where Mr. Kavanagh had charge, in addition to his demarcation duties; in both Lucknow and Roy Bareilly operations commenced towards the close of the year.

The

The following Table shows the progress made and cost of survey:—

Districts.	Number of Mouzahs entirely Surveyed.	Number of Mouzahs partially Surveyed.	Total Number of Acres Surveyed.	Cost of Survey.	Average per 1,000 Acres.	Remarks.
				Rs.	*Rs. a. p.*	
Lucknow - -	81	57	83,423	445	101 3 8	
Oonao - - -	1,111	35	7,88,852	60,106	76 3 1	
Roy Bareilly -	83	104	49,707	7,411	149 1 1	
Pertabghur - -	1,417	120	6,56,454	57,240	87 3 1½	
TOTAL - -	2,692	316	15,78,436	1,25,202	84 6 3	

The average was very high in Roy Bareilly for the first two or three months, till the work got into full swing; but it is now as low as in other districts.

Settlement operations will be commenced in Fyzabad also on the 1st October next.

PART IV.—CONSERVANCY.

88. The levy of Choongee has, as last year, been confined to towns and considerable bazars, in which a town police was kept up. The rate was reduced on several commodities, and a very large number of minor articles were altogether exempted, with the view of making the tax as little vexatious as possible. A great falling off in receipts was looked for, but it has not taken place; on the contrary, previous receipts have been fully maintained, giving ground for belief that the general increase in the trade and material prosperity of the province, has been sufficient to compensate for the heavy reductions and exemptions.

The receipts and disbursements from Choongee, and other municipal funds, are as follows:—

Divisions.	Receipts.				Disbursements.			
	Municipal Fund.	Choongee.	Nuzzool and Local Agency.	Total.	Police.	Conservancy.	Local Improvements.	Total.
	Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*
Lucknow - -	5,335	2,19,258	1,34,853	3,59,446	1,22,656	38,850	2,01,214	3,62,720
Khyrabad - -	- -	37,865	4,397	42,262	12,647	6,737	27,042	46,426
Baiswarra - -	- -	7,582	3,108	10,690	3,763	2,303	822	6,888
Fyzabad - -	1,506	72,157	15,626	89,289	21,286	5,909	30,401	57,596
TOTAL - *Rs.*	6,841	3,36,862	1,57,984	5,01,687	1,60,352	53,799	2,59,479	4,73,630

The disbursement for city police, *Rs.* 1,17,595. 2. is a very heavy item; but large reductions have been made in the force, and the estimated cost for the present year is 97,332 rupees.

The conservancy establishments in Lucknow and other cities and towns have been carefully supervised, and much attention given to arrangements for draining and keeping the streets thoroughly clean, though a good deal yet remains to be done in this line.

The surplus, after defraying the cost of police and conservancy, has been appropriated to various public works and improvements. In Lucknow large grants have been made to the Episcopalian and Roman Catholic churches and other public buildings, including a museum and spacious serae, and also to the Agri-Horticultural Society's garden. Measures have also been in progress some time for the establishment of an asylum for indigent Europeans.

In Fyzabad the entrances to the city from Allahabad and Lucknow have been greatly improved, a fine old gunge repaired and made habitable; roads metalled connecting the Chouk with Ajoodhya and the Gogra, and also with the Imperial road to Allahabad, and a grant of 4,000 rupees was made to the soldiers' garden in cantonments. In other districts many of the station and city roads have been repaired, bridged and metalled; main streets have been widened and improved, and a number of seraes and gunges have been built, and various minor improvements have been effected. In the Baiswarra division the funds are limited, and very little was available for local improvements. Several works of public

utility have been constructed by private individuals. The talookdars of Oudh are constructing a very extensive and commodious serae or dhurmsala, to be named after Mr. Wingfield; it will be an elegant and useful building; the cost is estimated at considerably over a lakh of rupees. The Maharajah of Bulrampore has built a handsome bazar called Wingfield Gunge. Mr. Jacob Johannes has also constructed a gunge at a cost of 5,000 rupees, and Raja Sheodeo Singh has expended 6,000 rupees on a similar work. In Oonao 3,000 rupees, and in Durriabad 5,415 rupees have been expended on wells, tanks, gunges and temples, none requiring special notice.

Rs. 6,100 in Hurdui, and 5,595 rupees in Seetapore have been expended on works of the same description.

PART V.—DISPENSARIES.

89. These useful institutions have been successfully worked, and have increased in popularity. European officers, as well as talookdars and other members of the native community have continued to subscribe liberally to them. The managing committees are composed of the Commissioner as *ex officio* President, the Deputy Commissioner and Civil Surgeon *ex officio* members, European gentlemen and officers, talookdars and other natives of respectability.

The annexed statement, Appendix T. 2, shows that the total number of patients treated was 53,700, of whom 2,789 were in-door, and 50,911 out-door patients; of these, 34,469 were cured, 3,795 were relieved, 185 incurable, 342 died, 13,523 result not known, and 1,389 remaining.

The receipts and expenditure were as follows :—

Divisions.	Receipts.	Expenditure.	Balance.	Remarks.
	Rs.	*Rs.*	*Rs.*	
Lucknow - - -	25,633	14,068	11,565	
Khyrabad - - -	10,752	8,300	2,452	
Baiswarra - - -	10,570	5,422	5,148	
Fyzabad - - - -	8,932	4,887	4,045	
Total - - *Rs.*	55,887	32,677	23,210	

In Lucknow there are three dispensaries, viz. :—

The Huzrutgunge hospital, the City hospital and the Yoonanee hospital, where patients are treated on the Greek system.

The patients were as follows :—

	In-door.	Out-door.
Huzrutgunge - - - - -	250	10,609
City - - - - -	641	8,519
Yoonanee - - - - -	250	14,581

Many important operations have been performed both in the city and Huzrutgunge hospitals. There have been numerous deaths in the city hospitals, which Dr. Douglas satisfactorily accounts for by saying that these are mostly cases of poor wretches brought in by the police, having been found lying about the streets in the last stage of disease when treatment was hopeless. A fine building has been constructed at Seetapore, at a cost of 7,700 rupees, of which 500 rupees was contributed by Government, and the rest by private individuals. In Hurdui also a good dispensary has been built; one public-spirited talookdar, Mahomed Ushruf, who has also distinguished himself by his zeal in the cause of vaccination, gave the munificent donation of 1,000 rupees.

The Fyzabad dispensary has been greatly improved and enlarged; a spacious room capable of accommodating 30 in-door patients, an eye ward, operating room, and verandah, have been added; a building at a convenient distance has also been fitted up as Lock hospital.

At Gonda a new building is nearly complete, the cost having been defrayed from subscriptions principally by talookdars, supplemented by the Government grant of 500 rupees.

Dr. Whishaw at Fyzabad performed 62 capital operations, of which five only were unsuccessful, and Dr. Bensley of Baraitch performed 20 without a single casualty, besides operating for cateract in 30 cases.

Both these officers bear testimony to the extraordinary efficacy of bin iodide of mercury as a cure for goître. Though the application is a very painful one, and has in many cases to be repeated, the success of the treatment attracts large numbers of those who are affected with this unsightly appendage, and no fewer than 2,758 persons came for treatment to Baraitch alone.

The progress in vaccination has been generally unsatisfactory, the people have a strong prejudice against it, and they have not yet had time to see its advantage in successful cases; very many cases too have failed owing to the inferior quality of the lymph, and this may have retarded the progress of the measure. It has been difficult hitherto to secure the services

services of respectable men as vaccinators, as they were engaged for four months only; henceforward Government have sanctioned their retention throughout the year, and it is hoped that next season's returns will show an improvement; but time, patience and perseverance, aided by the co-operations of enlightened and influential natives, are required to induce a general resort to this useful precautionary measure.

CONCLUSION.

90. In conclusion, it only remains to record the Officiating Chief Commissioner's opinion of the officers of the commission.

Mr. George Campbell, Judicial Commissioner. The officiating Chief Commissioner has already expressed his great admiration of the hearty zeal with which Mr. Campbell conducts the executive duties of his department. He is constantly on the look-out to introduce improvements in the conduct of business, and his supervision of the courts subordinate to him is unremitting.

Colonel Abbott, Commissioner of Lucknow, has performed his multifarious duties with his usual ability and hearty energy. The Officiating Chief Commissioner has noticed with great satisfaction the careful attention paid by him to cases regarding rights arising in the process of settlement of Oonao, many of them involving points of considerable difficulty. His recorded decisions are superior to those of any other officer in the important respect of giving such descriptions of the cases from their beginning that the Officiating Chief Commissioner is seldom obliged to call for the vernacular papers in order to understand the nature of the suits.

Colonel Clarke, Commissioner of Khyrabad. A very practical officer, of sound judgment and earnest honesty of purpose. He has resigned the service since the close of the year, and the province has lost one of its very best officers, one in some respects unequalled.

Mr. Tucker, Commissioner of Baiswarra, is a very good judicial officer, but the Officiating Chief Commissioner is not altogether satisfied with the amount of his work, or the efficiency of his supervision; he is rather inclined to point out what he thinks ought to be done without seeing that it is done. His recorded decisions are often not intelligible by themselves, and the Officiating Chief Commissioner has very frequently occasion to look into the vernacular papers in order to understand them.

Mr. Simson, Commissioner of Fyzabad. An excellent officer of sound judgment, and with whose very careful performance of his duty, especially that of superintendence, the Officiating Chief Commissioner has had frequent occasion to be much pleased.

Captain Reid. The Commissioner, Mr. Simson, speaks in the very highest terms of this officer, and has not said a word too much in his praise. For systematic hard work, patient investigation and correct judgment, he has no superior. He has acted as Commissioner for three months during the year, as Inspector General of Police in the preceding one, and has since declined the permanent appointment, and is now officiating as secretary.

Mr. Capper. His late Commissioner, Mr. Tucker, says he is sorry to lose him; and his present one considers him a most accomplished and valuable officer. He has very great ability; but the Officiating Chief Commissioner does not think he makes a sufficient use of it. Whenever he takes any particular work in hand he does it thoroughly well.

Captain Thompson. The Commissioner, Colonel Clarke, remarks as follows :—" Captain Thompson's value as an administrative officer has before been frequently acknowledged, and his increased experience is adding to his value as an officer; he has taken pains this year to attend to forms and details, which he was at an earlier period of his service not disposed to regard sufficiently."

Captain Thompson is an officer of great ability, but not with a corresponding determination to work; the Officiating Chief Commissioner was glad to learn lately from Colonel Clarke that for the past few months Captain Thompson had shown more appplication: that is all he requires to be a first-rate officer.

Major Steel. His Commissioner, Mr. Simson, speaks of this officer as follows :—" The investigation of his cases by Major Steel was thorough, his judgment was good, the success of his kham management deserves especial mention, and his interest in all that concerned the prosperity of his district was great; and if his procrastination has occasionally tried my patience, I have always attributed it to the ill-health he has at times been affected with. The District has now lost the benefit of his services; but I hope he will return in due time with renovated health, and resume his appointment."

Notwithstanding his occasional procrastination, due to ill-health, rendering him afraid to attack some subjects, the Officiating Chief Commissioner considers him as one of the very best officers in the province, certainly one of the most hard-working and best liked by the inhabitants of his district, with whom, high and low, he was a general favourite. The Officiating Chief Commissioner much regretted his departure on leave to Europe.

Major Thurburn. His Commissioner, Colonel Clarke, speaks as follows of this officer: —" Major Thurburn held charge of the Mohomdee district for ten months, and then left for Europe on sick certificate. He was very short-handed in assistants the greater portion of

the year; he is a thoroughly hard-working officer who originated and carried out much that is useful; he took great interest in encouraging the settlement of Europeans on the waste lands; his judicial decisions are careful and well considered."

The Officiating Chief Commissioner believes this to be generally correct.

Captain Perkins. His Commissioner, Mr. Tucker, merely thanks him for promoting trade by establishing a depôt for merchandise in addition to the thriving market which bears his name. Captain Perkins has done well in these matters, but deserves much more praise than that so meagrely accorded him. He has had charge of a troublesome and heavy district, with sometimes insufficient assistance, and a greater proportion of his work than of many other Deputy Commissioners has come before the Officiating Chief Commissioner, who, although finding fault with him in one or two matters, entertains so high an opinion of his sound steady judgment and careful attention to his duty that he selected him to officiate as Deputy Commissioner of Lucknow during Mr. Capper's absence. Colonel Abbott, the Officiating Chief Commissioner, observes, that he considers Captain Perkins a steady reliable officer.

Captain Ross. His Commissioner, Mr. Simson, speaks of him as a very zealous officer, taking much interest in his district, and this is true. He could ill be spared from Gonda, which he has managed remarkably well upon the whole, though apt to be rather hasty in his conclusions and too lenient to his Omlah, errors which experience will remove.

Mr. Clifford. His Commissioner, Colonel Abbott, speaks as follows of this officer:—"Mr. Clifford, the Deputy Commissioner, has been conducting the revenue settlement. Of his excellent qualities I need not remind the Chief Commissioner. They are as well known to him as to me. Yet it is a pleasure to have it in my power to name him prominently."

The Officiating Chief Commissioner heartily concurs in entertaining a very high opinion of Mr. Clifford, who has had the very onerous duty of conducting the settlement of Oonao, in which he has exhibited remarkable patience, method and judgment. It is scarcely possible that any officer could have given more satisfaction to the people and his superiors than Mr. Clifford has done.

Captain Chamier. The Officiating Chief Commissioner thoroughly concurs with Colonel Abbott in considering Captain Chamier a most valuable officer, well acquainted with all classes of the people. He was a little deficient in experience, but his departure on sick leave was a great loss to the province.

Mr. Lindsay. His Commissioner, Colonel Clarke, speaks as follows of this officer:—"Mr. Lindsay had charge of the Hurdui district throughout the year: he is a most hard-working officer, most punctual and expeditious in the despatch of business; he has now a thorough knowledge of his district, and manages it exceedingly well. His over-zeal led him into a mistake in the new system of Abkaree, but that has been rectified, and I trust this will not be held to debar him from receiving the Chief Commissioner's commendation for his general charge. I consider Mr. Lindsay has made a great advance, both as a judicial and revenue officer, in the last year."

So far from thinking ill of Mr. Lindsay for his mistake in Abkaree, the Officiating Chief Commissioner's opinion of him has very greatly risen on that account, for instead of turning rusty, as some officers would have done, he at once adopted the prescribed course with such judgment and good-will as in a few months to render his district almost the model one of the province in regard to Abkaree, and this is no slight praise considering that his district is bounded on two sides by the North Western Provinces, where the duty on spirits is very much lower than in Oudh. But in every thing Mr. Lindsay shows the same judgment and perseverance, and Colonel Clarke does not speak too highly of him.

Assistant Commissioners, 1st Class.

Mr. Anderson. Colonel Abbott remarks that this officer is intelligent, industrious and careful, and with a little more experience will be all that is desired. The Officiating Chief Commissioner has great confidence in Mr. Anderson's sound judgment and careful mode of work, and has sent him to take charge of Baraitch, where he will, it is hoped, reconcile the inhabitants to Major Steel's loss.

Mr. R. M. King. Mr. Tucker remarks of this officer as follows:—"Mr. King is an officer of talent and ability: and if his report should appear to the Chief Commissioner too theoretical, I would plead that the free expression of opinion is always valuable, and that further experience will modify extreme views."

The Officiating Chief Commissioner quite agrees with Mr. Tucker. Mr. King is an officer of remarkable ability, and he has devoted himself most earnestly to his difficult work, the settlement of Pertabghur. The Officiating Commissioner has read his report with much pleasure, though unable to concur in all his opinions.

Mr. Glynn. Mr. Tucker's remarks are as follows on this officer:—"I was sorry to lose Mr. Capper, but Mr. Glynn, by his energy and zeal, has supplied the loss. He has founded a market at Dalmow, which, I hope, will speedily become a commercial town of considerable importance, and he is earnest and eager in promoting the prosperity of the district of which he has charge. By his exertions alone the Abkaree Revenue had been made to yield many thousand rupees more than it otherwise would have done. I trust greatly to him for the protection of the Salt Revenue."

Mr.

Mr. Tucker has not said more of Mr. Glynn than the Officiating Chief Commissioner can most fully concur in. Mr. Glynn has now commenced the settlement of Roy Bareilly, a work which will severely test his method and judgment, but not, the Officiating Chief Commissioner firmly trusts, be found too much for them--there is no fear that there will be any want of energy and zeal.

Captain Shaw. Mr. Simson reports as follows of this officer:—"Captain Shaw, Assistant Commissioner, has officiated as Deputy Commissioner for six months, three months in the Fyzabad, and three in the Gonda district. His immediate superiors in the district have always reported most favourably regarding him, and Captain Reid again bestows on him the highest encomiums. I agree in nearly all that has been said in his favour from first to last, and very much regret having to detract from it in even the slightest degree; but in the course of examining his work defects have come under my notice, and the exigencies of my position, more especially after what has occurred, require me to notice them. Captain Shaw's zeal is undoubted; he takes great pains with his cases, and he works generally from morning to night, but his cases are frequently not well got up, and in consequence they have been subjected to severe criticism in instances in which the decisions have afterwards proved quite correct. His defects are attributable, I think, to a want of system, and of the faculty of recording clearly the points of a case, but he has constantly been overwhelmed with work which is not favourable to the acquirements of habits of either method or precision; and I doubt not that, had the district of which he was put in charge been as light a one as ordinary, he would have come out of the ordeal with credit to himself and benefit to Government and the people."

The Officiating Chief Commissioner believes that Mr. Simson has correctly stated the case as regards this officer, who has been transferred to Roy Bareilly, where easier work will enable him to pay more attention to the getting up of his cases and the preparation of his decisions, both as regards their contents and writing, for the latter, as the Judicial Commissioner truly remarks, defies appeal. Captain Shaw is so anxious to do his best, that the Officiating Chief Commissioner entertains great hope of his improvement, for it is not his judgment that is in fault, so much as the manner in which his decisions are recorded.

Mr. T. H. Kavanagh. Messrs. Simson and Tucker both speak very highly of this officer as thoroughly up to his work, indefatigable at it, and always ready to make himself useful; and the Officiating Chief Commissioner knows Mr. Kavanagh well deserves this praise.

Lieutenant Hawkins. Colonel Abbott speaks as follows of this officer:—"Lieutenant Hawkins has conducted the duties of the district, while Mr. Clifford was employed in conducting revenue settlement. He is a very careful painstaking officer, and records his cases most clearly and efficiently. A very efficient judicial officer, and daily improving in his revenue knowledge. He has taken much pains with his annual report, in which I have criticised some few points which had better have been omitted; still it contains sufficient to show that he has given the subject of the administration his attention."

This is higher praise than the Officiating Chief Commissioner is disposed to concur in. Lieutenant Hawkins takes pains with his judicial cases, but he does not appear, to the Officiating Chief Commissioner, to take any deep interest in his work generally, and to do so much or so well as his ability would enable him to do, while a somewhat strong belief in his own competency tends to prevent improvement in the points in which he is deficient.

Mr. Ross. Colonel Clarke says, "that Mr. Ross promises to be a most efficient and popular officer; he is somewhat inexperienced, and perhaps a little hasty." Mr. Ross does want experience, but he has remarkably sound sense, and a very earnest desire to do his duty, and the Officiating Chief Commissioner is convinced that in a few years there will scarcely be a more efficient officer in the province. He is perhaps as yet slightly too much addicted to *shikar*, but the Officiating Chief Commissioner cannot think the worse of him for that.

Dr. Young entered the commission during the year as Assistant Commissioner 1st Class, a circumstance which was not in his favour as regards the good-will of his brother assistants; but his many good qualities have already overcome this temporary disfavour. Circumstances have led to his rather rapid transfer from one division to another, so that no Commissioner says much about him; but the Officiating Chief Commissioner knows they think remarkably well of him; and fully concurring in that opinion himself, he has since the close of the year put him in charge of a district where his patience, temper, and good judgment have already gained confidence for him.

2nd Class Assistant Commissioners.

Mr. Wood. The Commissioner, Mr. Tucker, says that Mr. Wood is a valuable officer of Government in his judicial capacity, and the Officiating Chief Commissioner has always heard a very good account of him from others, but he has himself seen very little of his work. He does a considerable portion of the revenue work, but did not take a fair share of the civil and criminal, and he does not, the Officiating Chief Commissioner thinks, relieve the Deputy Commissioner of so much work as he might do.

Mr. Crommelin. This officer being absent at the close of the year, the Commissioner, Mr. Tucker, has omitted to mention him. The Officiating Chief Commissioner knows him to be a sound steady officer, of great application to his duties.

Mr. Berkeley is described by the Commissioner, Colonel Clarke, as an excellent general business officer, whose health latterly failed much. He had charge of the Seetapore district during the six months of Captain Thompson's absence in England, and did his work very well, under the immediate supervision of the Commissioner.

Mr. Lang. Mr. Simson concurs in Major Steel's opinion of this officer, which is as follows:—"Mr. Lang is clear-headed, methodical, and gets through his work well and quickly."

Colonel Abbott is unable, from the short period Mr. Lang was under him, to give an opinion of his work, but says he was zealous and attentive. The Judicial Commissioner entertains a high opinion of Mr. Lang as a judicial officer, and the Officiating Chief Commissioner fully concurs with him.

Mr. Maconochie has lately been transferred to the Settlement Department. Colonel Abbott describes him as a painstaking improving officer, and the Officiating Chief Commissioner believes he will do credit to his selection for the important duties now entrusted to him.

Lieutenant Fisher is said to be very painstaking, and the Commissioner, Colonel Clarke, considers him better in the judicial than in other departments.

Mr. Harrington. This officer returned during the year, and has been so short a time in any district, that he is not mentioned by either Commissioners or Deputy Commissioners. The Officiating Chief Commissioner knows him to be an officer of very considerable ability, who only requires experience and opportunity to distinguish himself.

3rd Class Assistant Commissioners.

Lieutenant Eckford. The Commissioner, Mr. Simson, states as follows of this officer:—"Lieutenant Eckford still wants experience, and I have had occasion to complain more than once of the getting up of his cases; but I have lately noticed an improvement."

The Officiating Chief Commissioner can say nothing in favour of this officer, who wants either ability or application enough to enable him to pass the higher standard of examination.

Lieutenant Hewitt. The Commissioner, Mr. Simson, remarks as follows:—"Lieutenant Hewitt, Assistant Commissioner, Gonda, was the only assistant there for the greater part of the year, and much work in both departments has devolved upon him. He investigates his cases thoroughly; his record is well got up, and his judgment is good; and I should be very glad to see him obtain the promotion which he has fairly earned."

The Officiating Chief Commissioner has seen but little of his work, and it consisted principally of investigations into rent-free tenures; they were not very well done, owing, the Officiating Chief Commissioner thinks, to Lieutenant Hewitt's not having been properly instructed on what he had to do, otherwise the Officiating Chief Commissioner has no reason to disagree with Mr. Simson's very favourable opinion of this officer.

Lieutenant Forbes. The Commissioner, Colonel Abbott, speaks as follows of this officer:—"Lieutenant Forbes, Assistant Commissioner, was moved to Lucknow, is a steady good officer, passed his examination for the higher standard with credit, takes much pains with his cases, and gives sound judgments. He is a very promising young officer."

The Officiating Chief Commissioner entertains a very good opinion of this officer, who has shown both ability and power of application, and passed his higher examination in a remarkably satisfactory manner.

Mr. M. Mason. Major Steel states, "that this officer has done a good amount of work, and will, he feels sure, turn out very well; and the Commissioner, Mr. Simson, concurs with him."

The Officiating Chief Commissioner believes him to be a very fair officer, and will take the earliest opportunity of bringing him to a station where more will be seen of his work than in the remote district of Baraitch.

Mr. Knighton. The Commissioner, Colonel Abbott, speaks as follows of this officer:—"Mr. Knighton has recently passed for the higher standard, and is an officer of promise. He has conducted the Treasury, the Civil Court, for some time; and the Revenue Civil Court as well as Criminal work. I am glad to be able to notice him favourably."

And the Officiating Chief Commissioner concurs.

Mr. Dyson. The Commissioner, Mr. Tucker, has great confidence in this officer, who has ability; but the Officiating Chief Commissioner thinks he wants somewhat of the discretion to be acquired by experience.

Lieutenant Phaire did not join during the year.

Extra

Extra Assistant Commissioners, 1st Class.

Mirza Abbas Bey, the Commissioner, Colonel Clarke, remarks, is a very useful officer; and his Deputy Commissioner thanks him for the very great help he has given him in every way. Mirza Abbas Bey is, in the Officiating Chief Commissioner's opinion, an excellent officer, of good judgment and great application.

Mr. Williams. Captain Thompson describes him as an exceedingly painstaking hard-working officer, and admirably adapted for the posts he has held, as Judge of the Small Cause Court, and in charge of the Treasury.

Extra Assistant Commissioners, 2d Class.

Syed Abdool Kakeem. He is said to be sound and trustworthy in his judgments, and his duties altogether too have been creditably performed. This officer well deserves the praise given him.

Mr. Collins. The Commissioner, Mr. Tucker, says he has brought his services to notice in his Judicial Report, but the Judicial Commissioner does not mention them; and the Officiating Chief Commissioner knows that Mr. Collins does very little work indeed. A special report is about to be made regarding him.

Moonshee Ramdyal makes an excellent Extra Assistant Commissioner.

Rai Ajoodhiapershad is a very experienced and able officer, with a capacity for getting through much work in a satisfactory way. The Officiating Chief Commissioner has a very good opinion of him.

Mr. Walker is said by the Commissioner, Mr. Tucker, to be a valuable servant of Government as an executive officer, but no opinion is expressed of him in a judicial capacity. He does a very considerable amount of work, and a large proportion of the criminal cases are tried by him.

Mr. Bickers. The Commissioner, Colonel Abbott, speaks of him with great praise as Treasury officer of Lucknow, and he most fully deserves it. The Officiating Chief Commissioner would be very glad to have some more officers like him in charge of treasuries. Mr. Bickers, however, does judicial work, criminal and civil also, and does it very well.

Moonshee Nundkishore. A steady, hard-working officer, says Colonel Abbott, without much force of character. Colonel Clarke, under whom he was for some time, entertained a very high opinion of him, especially as regards integrity. He has not succeeded in his management of the Lucknow Abkaree department, which the Officiating Chief Commissioner fears was much neglected.

Moonshee Hurshai. A good steady officer, careful in his procedure and diligent in his duties; and to him is attributed the success in distributing the weights in the Oonao district, which was so remarkable. It is to be regretted that there is so little prospect of promotion held out to Native Extra Assistants. He holds the same rank as 3d Class Extra Assistant that he held before the mutiny. It would be well were there some means to reward good services by good service allowances, as was proposed lately in the Punjab, in the English Office department.

Mahomed Buksh Khan, made a judicial officer late in life, for executive services. He has failed.

Mr. Garstin ably assisted his Deputy Commissioner, says Mr. Tucker.

Moonshee Huzaree Lal is said by Mr. Tucker to be well qualified for revenue duties. He is a very fair officer.

Mr. Haldane is very well spoken of by all his superiors, who consider him a steady hard-working officer, who exerts himself to do his best, and is qualified to exercise higher powers than those entrusted to him.

Moonshee Dabeepershad would be better as a police than as a judicial officer.

Mr. Fraser, Civil Judge of Lucknow. No officer does better service than Mr. Fraser. Details are given in the Judicial Commissioner's Report.

Mr. Lincoln; a fair officer.

Mr. Bradford, Demarcation officer, has ably and zealously done his duty, and is now transferred to the Commission as 2d Class Deputy Commissioner, and appointed to officiate at Fyzabad.

Mr. Kavanagh does his duty, as assistant to Mr. Bradford, quietly and thoroughly, and is highly esteemed by all who have to deal with him. He is now in charge of the reduced Demarcation department.

Of 3d Class Extra Assistant Commissioners in the Demarcation department, one, Jwalapershad has been dismissed for corruption; another, Ulee Hossein, is suspended and under trial on the same charge. No accusations have been made against the third, Moonshee Guneshee Lal, which is creditable to him.

The tuhseeldars specially mentioned by Commissioners are,—

In Khyrabad Division.

Kulb Ali, of Baree, lately appointed Officiating Extra Assistant Commissioner.
Hurpershad, of Seetapore.
Neas Ahmed, of Shahabad.
Dhokulpershad, of Sundeela.

In Lucknow Division.

Enaitoollah, of Ramnugger.

In Baiswarra Division.

None.

In Fyzabad Division.

Nujjuf Ali, of Dostpore.
Kishen Lal, of Nanpara.

On the whole, the Officiating Chief Commissioner is thoroughly pleased with the officers of the commission, who, as a body, earnestly endeavour to do their duty. On one point only has he fault to find with all Commissioners and Deputy Commissioners and officers in charge of districts. As a general rule, their statements and returns are neither correct nor submitted at the proper date, and in some instances the errors and delay are anything but creditable to the officers concerned. He hopes for improvement on this point.

Dr. Cannon is fulfilling the expectations entertained on his appointment, by introducing order and economy into gaols.

Mr. Currie was secretary during the year. It is unnecessary to say anything of this officer's well-known capacity, but the Officiating Chief Commissioner cannot omit to mention his very deep obligation to him for able advice and aid, always so cheerfully given.

Mr. Wyllie was assistant secretary. He has a very clear head and sound judgment, with great power of application. Whatever work he did was thoroughly done, and to be confidently relied on. The Officiating Chief Commissioner was very sorry to see him leave Oudh.

Colonel Vanrenen and Captain Anderson conducted their survey duties with the same success as in the preceding year. Their work is most carefully done, and they give no unnecessary trouble to any one.

Captain Chamberlain's duties have lain more in the North West than in Oudh during the past year, but his operations, backed by the precautionary measures of the regular police, have put a stop to the Oonao murders.

The Officiating Chief Commissioner has been led to form a very high opinion of Colonel Crommelin, C.B., chief engineer, and his subordinate officers, Lieutenants Champain, Pemberton, and Swetenham; also of Mr. Marshall, executive engineer, whose road from Fyzabad to Allahabad is a model, or, rather, will be so when finished.

The Officiating Chief Commissioner thinks there is a tendency in the department to potter over their work, but this is probably owing to the system, which seems to require too much time to be spent in office.

The hospitals and dispensaries have been very well managed during the year, and Doctors Douglas, Wishaw, and Bensley deserve especial mention. A very great number of operations have been performed by Dr. Wishaw at Fyzabad, Dr. Bensley at Baraitch, and both have successfully treated a very large number of natives for goitre.

Colonel Barrow has been in charge of the police during the year, and the Officiating Chief Commissioner cannot speak too highly of his intimate knowledge and unwearying care of the force, of his sound sense and strict impartiality. He has worked most harmoniously, too, with the judicial officers, retaining the independence in subordination to them so difficult to hit, but without which the police must become a mere tool, little more to be depended on than the old body. All allow that the force and the system have greatly improved during the past year, and it is to Colonel Barrow that this is due, and his promotion in another line, however well deserved by him and gratifying to all who know him, is a very serious loss to the police, let who will succeed him. He has laid the Officiating Chief Commissioner under deep obligations to him for the way he has worked, and the frank and zealous aid he has always afforded.

The

The Officiating Chief Commissioner fully concurs in the praise given to Major Aitken, Deputy Inspector General, by Colonel Barrow. Major Aitken has exhibited great sense and determination in carrying out the system, the success of which he has deeply at heart. The Officiating Chief Commissioner has learnt much from his excellent reports on the districts he visited.

Captain Barrow is an exceedingly steady sound-judging officer, working without fuss, and never doing wrong. The Officiating Chief Commissioner admired the order and good spirit he had infused into his police.

Captain Hill scarcely needs an addition to his numerous testimonials. He is a most energetic officer, always trying to improve his men, whether it be in police procedure, drill, or football.

Captain Ryall is an excellent officer, who has performed the onerous police duties of Fyzabad to the great satisfaction of the Magistrates.

Captain Sharpe is, as Colonel Barrow remarks, a very zealous intelligent officer, with some mistaken ideas, which time will, it is hoped, correct. To his praise be it said, that he is the terror of the omlah wherever he goes.

Lieutenant Danvers; apathetic.

Lieutenants Woodcock and Tweedie; excellent officers.

Captain Ouseley, ditto; selected first to act as City Magistrate, and then transferred to the settlement department.

Captain Clarke has been steadily improving during the year, and latterly very successful.

Lieutenant Maynard. The Officiating Chief Commissioner regrets to say this officer has been somewhat negligent in his duties lately. He can work well if he likes, and must do so, if he wishes to be better spoken of next year.

Lieutenant Stainforth; an intelligent and zealous officer; but he, like Lieutenant Maynard, was, perhaps, too young when put in charge of a district.

Among the assistants, the only officers who have had opportunities yet of showing their capacity are Lieutenant de Montmorency, Mr. Hamilton, Lieutenant Woodcock, and Mr. Blenman, who are very promising officers. Lieutenant de Montmorency is now officiating as assistant secretary to the Officiating Chief Commissioner. Mr. Hamilton, who knows his duty well, and Lieutenant Woodcock are in charge of districts. The Officiating Chief Commissioner cannot refrain from adding to this a notice of Mr. Gibson's very promising commencement in charge of Sultanpore, although it has occurred since the close of the year.

(signed) *J. Reid,*
Officiating Secretary to the Chief Commissioner of Oudh.

APPENDICES to the REPORT on the ADMINISTRATION of the Province of OUDH, for the Year 1861-62.

APPENDIX A (1.)

APPENDIX E (1).

ABSTRACT of Five Mysterious Cases of Murder by Strangulation detailed under peculiar Circumstances.

1. THE first of these murders was reported on the 3d January, while the Chief Commissioner and Commissioner were encamped at Oonao. The dead body was found one mile from Oonao, in the village of Rajpore. Inquiries made by the police, but with no results; the body was never recognised. Strangulation was declared to have been the cause of death. Round the neck a rope in eight coils was found; none of the assembled villages of Oonao, Busheerutgunge or Nawabgunge Ilaquas could recognise the deceased. The chowkeedar of village Rajpore was sentenced to find two securities of 50 rupees each, in default to suffer one years' imprisonment; he was imprisoned.

2. The second of these cases was reported on 7th January. The corpse was first seen by a chowkeedar close to the Grand Trunk Road, within the boundaries of the village of Mullawan. The lumbadars of the village of Jugdespore, whose fields adjoin that village, separated only by the Grand Trunk Road from Lucknow to Cawnpore, removed the corpse to the spot where it was found; a rope in several coils was found round the deceased's neck. He was thought to be a pensioner, as he had 5th Light Cavalry buttons on his coat. The corpse was sent to Lucknow for identification by the pension establishment, but with no result. The police apprehended two persons who were seen standing near the corpse, their houses were searched, but nothing suspicious was found in them. One chowkeedar was sentenced to a year's imprisonment in this case, he not having been able to find two securities for 60 rupees each.

3. The third case occurred in May last. The body of a man with a rope round his neck was found on the borders of the village of Occhur and Sarai Kathan. This was reported at police station, Hurha, on the 6th May. Police investigated, but found no clue, nor did a reward of 500 rupees which was offered lead to any results.

4. The fourth murder was reported on 27th May. The dead body was found lying in a tope about a quarter of a mile east of Oonao. It was never identified, nor was any clue found which could lead to the detection of the murderers. A cord in three coils was found round the neck. The civil surgeon stated that death was caused by strangulation, and that deceased died while drunk. The retail dealers of spirits in Oonao were deprived of their licenses for not telling the names of those who had bought liquor from them on the night of the murder.

5. The fifth of these murders was reported on 31st May by a police sowar, at police station, Hurha. The corpse was found near village Hilgee, with a cord round the neck; no identification or detection ensued.

Case of Strangulation in imitation of above, being Conspiracy to gain Reward.

Another case of strangulation, in imitation of the above mysterious murders, was a very peculiar one from the circumstances connected with it. Bhowany, a policeman, and Bhikaree and Bhabootee, informers, stated they had seen Urjoon (a Takoor resident of the Lucknow district), kill a man and ride off. Captain Ryall and Lieutenant Dodd immediately mounted and galloped off to Urjoon's village, "Bustee Khera," in Lucknow district, 30 miles off. Urjoon's behaviour on being captured completely bore out the assertions of Bhowany and the informers, as he tried to escape over the rear wall of the village into the jungle, and then being unable to get away passed through a trap-door and hid himself on the roof where he was captured, after making an attempt to throw himself off the roof. This conduct was altogether that of a guilty man, and when in addition a running noose (consisting of a thin waxed rope with a loop at one end and an iron ring at another) was discovered hidden in an earthen pot, it appeared certain that at last one of the miscreants who had committed so many murders in the Oonao district had been taken. However, as the investigation proceeded some suspicious differences appeared in the details of the murder as given by Bhikaree and Bhabootee, and on these men and Bhowany being severely cross-examined by Captain Ryall, the whole case came out. Bhabootee owed a grudge to Urjoon, Bhowany was tempted by the hope of promotion and the large reward offered for the discovery of these prevalent murders, and Bhikaree having the same hope of reward, they joined a traveller, murdered him after night-fall with a piece of rope, and then at once brought the information that they had seen Urjoon commit the murder and ride away. The murdered man was a resident of Oonao, as were all three of his murderers, who expiated their crimes on the scaffold.

Case of Murder by Poison in Oonao District in 1861.

1. Baladeen and Mohuree took poison in August 1861, from a person who joined them on the Grand Trunk Road, near Gooshain Gunge. He accompanied them across the Ganges into Oudh, and succeeded in administering some drug or poison to them at Lekara, near Bangermow. They both became insensible and were robbed, eventually Mohuree died from the effects of the poison.

N. B.—This is the only instance throughout the year in Oonao district in which death has ensued in any case of robbery by poison, and it is therefore believed that murder is not the object of these poisoners. The description of the man who committed the above-mentioned crime tallies with that of a man who drugged Matadeen, his mother and sister, on 3d January 1862, at the village of Berokee.

In addition to the murders detailed above, seven ordinary murders occurred during the year, one for sake of robbery, and six ordinary, in five of which convictions were obtained.

Cases of Robbery by Poison that occurred in Oonao District in 1861.

1*st. Case of Deen Mahomed, cartman to Ghoolam Abbass, of Roy Bareilly.*—A party of five, consisting of two men, one woman and two children, engaged the cart of Ghoolam Abbass, of Roy Bareilly, to go to Jhansie. While halting at Asurkeera, Deen Mahomed, the cartman, was made insensible by drugs or poison being mixed in his dâl. The travellers took away the cart and bullocks and sold them to the lumberdar of Hurgaon, in the Meeangunge Ilaqua, where they were recovered by Captain Ouseley, in November 1861, eight months after the crime was committed. It occurred on the 23rd March 1861. Deen Mahomed recovered.

2*nd. Case of Moolla, servant of Badoolla.*—On the 29th March a party (answering almost to the same description as those who poisoned Deen Mahomed and took away his hackery) hired a cart from Badoolla to go from Suffeepore to Meeran-ke-Serai. Badoolla sent his servant Moolla with the cart, and the next day, the 27th March, Moolla was rendered insensible by some poison (probably dhutura) in his food, and the cart and bullocks were taken away and have never since been heard of. The first report of the crime was made at the police station of Bangermow on 29th March, two days after the robbery occurred, which of course gave but small chance to the police. Descriptive rolls of the poisoners were sent to all the surrounding districts, and the Cawnpore district superintendent apprehended seven persons, but they were not identified and were released.

3*rd. Case*

3*rd. Case of Chundee, occurred on 8th June* 1861.—Chundee was going to buy cattle, and was joined by a traveller, who drugged him with bhâng and robbed him of 25 rupees. Complainant pointed out the man, who was apprehended and chullaned.

The case was tried by Mr. Elliott, who, considering there was not sufficient proof, released the prisoner.

N. B.—It is believed that the same party poisoned Deen Mahomed in the first case, and Moolla in the second; and they are also supposed to have committed a similar crime on the person of Fakeera Gharywan in February this year (1862). It would appear that their object is not to produce death, as in all of those instances the poisoned men recovered.

LUCKNOW, *the* 8th *April* 1862.

MEMORANDUM on Arrangements for the Prevention and Detection of violent Crime against Person and Property in the Oonao District, more especially Murder by Strangulation and Robbery by Poisoning.

I. In addition to constant patrolling from the police stations of Oonao, Nawabgunge, Poorwa, Suffeepore, Meeangunge, Bangermow, Hurha, and Mowrawan, an organized system of patrol has recently been organized from the 19 following out-posts, and is now carried out as follows:—

II. The strength of each out-post is two mounted constables, one head constable, and other three or four constables, foot police. By orders lately issued by the Deputy Inspector General, one sowar commences patrolling at a little before daylight and returns at 11 a.m., the other starts at 4 p.m. and returns at 10 p.m. The whole of the foot police at out-posts, formerly men raised for the extra police, have been relieved by the most experienced constables of the Oonao police, and they have been directed to act much more as detectives than formerly; one of them at least is directed to be constantly moving about in disguise mixing with travellers, especially those coming from the Ganges.

Each head constable in charge of an out-post is directed, on the occurrence of a heinous crime, to set out at once to the spot after despatching one sowar to the nearest police station, and the other sowar to the district superintendent; no written report is required from them, so that the information reaches quickly, but the name of village and direction from out-post is invariably to be given, so that the superior police officers may reach with the least possible delay.

The usual precautions regarding the non-disturbance of the corpse and the preservation of marks of foot-steps are directed to be taken.

The chowkeedars of the district have been warned to be on the look-out, especially for bodies of travellers coming from the Ganges, and that they will be liberally rewarded in the event of a heinous crime being brought to light through their instrumentality.

III. The following are the out-posts and general patrolling directions of the sowars:

1. Pucchudda, eight miles from Nujjufghur Ghat. The sowars patrol to the ghat and back again.

2. Bickrampore, 10 or 12 miles from Ganges. Patrol towards ghat and meet half-way the Nujjufghur patrol.

3. Nujjufghur, a ghat on Ganges. The sowars patrol towards Bickrampore and meet sowars from that out-post.

4. Cawnpore Bridge. The sowars patrol towards Oonao and meet Oonao patrols.

5. Purrior, a ghat on Ganges, nine miles north-west of Cawnpore Bridge. The sowars patrol towards Nawabgunge and Oonao alternately.

6. Jajahmow, a ghat 12 miles west of Purrior, patrol towards Meeangunge.

7. Radhun Ghat, — miles west of Jajahmow, patrol roads leading north and east from ghat.

8. Tukya, between Bangermow and Meeangunge, patrol towards Baree Thannah and Moostuffabad.

9. Moostuffabad, patrol towards Bangermow and Tukya.

10. Mudarnuggur, patrol between Bangermow and Nanahmow Ghat.

11. Nanahmow Ghat, patrol towards Bangermow.

12. An outpost on road, about four coss from Mehndee Ghat, patrol towards ghat.

13. Mhowaza, half way between Suffeepore and Meangunge, patrol towards these two places.

14. Baree Thannah, patrol towards Lucknow and Bangermow.

15. Muddaree Khera, or road between Poorwa and Oonao, patrol towards those two places.

16. Phoolwa Ghana Ghat, patrol four coss from ghat and back.

17. Bhysaie on Poorwa and Hurha road, patrol towards those two places.

18. Surraga Ghat, patrol four coss from ghat.

19. Dabee Chowkee, two miles from Oonao. No sowars.

IV. To supply this large force of sowars nearly all the reserve at head quarters has been employed, and a force of 15 horses and 20 foot from Lucknow district has been sent into the Oonao district.

V. An out-post has also been established near Mehndee Ghat in Hurdui district, and one constable in disguise is constantly near the ghat.

VI. Two very intelligent police officers have lately been temporarily sent from other districts principally for the purpose of carrying out an organized system of patrol and detectives. These officers are Inspector Sew Singh and Deputy Inspector Hyatt Khan, and the out-post will be divided between them and Inspectors Sewdeen Doobey and Uttur Singh; a very successful detective from the Lucknow district has also lately been sent into Oonao; he is head constable, second grade, Moona, and is a Passee.

VII. Three of the poisoned men, Mattadeen, Balladeen and Fakeera have been entertained in the extra police, and are stationed at different ghats for the purpose of recognising their poisoners.

VIII. Finally, the means taken for the prevention of violent organized crimes in Oonao would appear to have had some effect.

There has been no murder by strangulation for more than 10 months, and during the year there were only four cases of robbery by poison, in one of which the poisoned man died. Since the beginning of this year there have been two cases of robbery by poison, but no deaths.

(signed) *R. W. M. Aitken,*
Deputy Inspr. Genl. of Oudh Police.

(signed) *L. Barrow*, Lieut. Colonel,
Officiating Inspector General of Police.

Appendix O (1).

Circular.

(No. 16—378 of 1862.—General).

From the Secretary to Chief Commissioner, Oudh, to _____

Sir, Dated Lucknow, the 17th February 1862.

I have the honour to forward, for your information and guidance, copy of a memorandum drawn up by the Officiating Chief Commissioner on the subject of village chowkeedars, their appointment, removal, remuneration and duties.

2. The Officiating Chief Commissioner desires that the instructions contained in this memorandum may be rigidly enforced.

3. Commissioners are requested to draw the attention of Settlement Officers to the modification of paragraph 12 of Settlement Circular, No. 14, enjoined in paragraph 13 of this memorandum.

I have, &c.
(signed) *C. Currie,*
Secy. to Chief Commr. of Oudh.

Memorandum.

1. In 1859 Captain Thompson, Deputy Commissioner of Sectapore, submitted an admirable memorandum to the Chief Commissioner on the subject of the chowkeedaree arrangements in his district, showing that the system introduced into the province at annexation of making the chowkeedars Government servants, and paying them cash wages from a fund raised by a tax levied on the landholders of no less than 6 per cent. on the amount of revenue they paid to Government, was a total failure. The Chief Commissioner, in his Circular No. 132, dated the 3d December 1859, remarking on Captain Thompson's memorandum, expressed himself strongly in favour of the old system as described by Captain Thompson, and authorised a return to it in the Khyrabad division; but as it might not have prevailed generally throughout the province, he called for reports from the officers on the subject. Their replies show that a very complete system of village watch had existed everywhere, and the majority of able and experienced officers in the province were strongly in favour of a return to it, either without change or with one or two slight modifications.

To Commissioner, Lucknow, No. 348, dated 21st February 1860.
To Commissioner, Fyzabad, No. 383, dated 24th February 1860.
To Commissioner, Baraitch, No 906, dated 2d May 1860.

On receipt of each divisional report each Commissioner was authorised to revert to the old system in letters as per margin. It does not appear from the correspondence before the Officiating Chief Commissioner what was actually done in consequence of this permission; cash realizations from the landlords on account of chowkeedars' wages of course ceased, except as regards 8 annas per cent., which was retained to form a fund for rewarding good service.

2. On the 8th September 1860, however, the Chief Commissioner issued Circular No. 57, stating that he had been given to understand that though the tax had ceased to be collected, some talookdars had failed to give rent-free land to such chowkeedars as did not possess it or other adequate remuneration, as required by Circular No. 132 above quoted, and that much discontent consequently prevailed. Deputy Commissioners were accordingly directed to warn talookdars that, unless they assigned five pucka beegahs rent-free to the chowkeedars who required it, cash payments would be reverted to, and the cess collected as before. This order was unfortunately much misunderstood, and often put in force with more zeal than discretion. Officers overlooked the two very important points in it: first, that it did not apply to such chowkeedars as already had either sufficient land or other adequate remuneration; and secondly, that the alternative offered by Mr. Wingfield to those talookdars who did not comply with the requisition, was a return to cash payments, and not a threat to enforce the order by measuring off the five beegahs through Government officers. In some places the order was enforced without reference to the remuneration which the hereditary chowkeedars received in grain and presents, or in others to the fact that they still retained their rent-free lands in spite of the appointment of Government chowkeedars. In one district, at least, the Deputy Commissioner sent out ameens and regularly measured off five beegahs in each village to the chowkeedar. On the other hand, some talookdars, the Officiating Chief Commissioner has reason to believe, understood the order to mean that a chowkeedar was not to receive more than five beegahs, and in

in restoring their rent-free land, restored that quantity only. The consequence has been confusion and discontent, and a varying and uncertain system. The chowkeedar and the villagers or landowners are now antagonistic, a feeling which in relation to this very matter Mr. Wingfield so much deprecated giving rise to between classes. The chowkeedars are rendered independent of those for whose benefit they exist, and whose servants they should be, they are discontented with what they have got, and complain that the villagers do not give grain, &c., as they used to do, and that the land assigned them is of the very worst quality, perhaps quite barren. The villagers naturally dislike giving anything to a man over whose services they have no control; they want a man to watch their fields and houses, &c., and not one who considers it his sole duty to report thefts or conceal them, as may be. The landholders are, of course, dissatisfied at having land forcibly taken from them and assigned to others, and at being held responsible for reporting crime, when the chowkeedars, whom they are forced to pay, are no longer under their authority.

3. The Officiating Chief Commissioner has had many complaints on this subject, and he knows many officers, some of high position, are greatly dissatisfied with the present state of affairs, as regards chowkeedars and their pay. He therefore considers it necessary to explain clearly the old system, a return to which was directed by Mr. Wingfield, and which shall be strictly adhered to in future, so far as it is consonant to our laws to rescind the five beegah order, so largely responsible for the confusion, and to define the duties and responsibilities of landowners in regard to the reporting of crime and to the village police.

4. Under the old system the chowkeedar was originally appointed by the landlord or the villagers, and was paid by them, responsible to them, punished by them, and removed by them, all without interference on the part of Government officers. They were paid by a portion of rent-free land, by a certain proportion of the village crops, by presents from the villagers, sometimes in all three ways, sometimes in the two latter only. Their duty, whether in any village there existed both goraets and chowkeedars, or solely the latter, was to watch the crops and the village, to run errands, to make good the value of property stolen in the village, or to catch the thief, and as the emoluments were generally liberal, and the office had become hereditary, the villagers had often the benefit of the services of the whole of the chowkeedar's family. Now, allowing that it is the duty of Government to take measures for the protection of the property of its subjects, it is clear that it could not superintend the machinery required for watching crops and villages, not even at an enormous expense, while the people themselves can do so very cheaply, and with tolerable effect, and such duties are generally recognised as belonging to municipal government, and are left to communities, who, if they think watch and ward necessary, and tax themselves for it, will see that the work is done. In large towns some help is necessary to enforce uniformity; in small towns and villages the people can act best for themselves.

5. Again, the running of errands is a matter which Government wisely leaves to the people themselves to settle about, and the Officiating Chief Commissioner observes that no officer proposes to regulate that department of village life.

6. Lastly, under our laws we cannot make the chowkeedar produce the thief or refund the value of the stolen property, nor did the former Government interfere in these affairs; they were left entirely to the people.

7. Of the old duties of the chowkeedars, then, not one related to Government, but we have imposed a new one on him, in common with all village officials and landholders. We require these persons to report all crimes occurring in their villages, to aid the police in the investigation of crime, the apprehension of offenders, and one or two matters of the same kind. We have nothing else to require of the chowkeedar, all his other duties, watching, carrying messages, procuring supplies, concern the villagers and landowners; and if in addition to these they contract with him to catch the thief, or make good the stolen property; when a theft occurs in the village the Officiating Chief Commissioner sees no objection, except this, that the chowkeedar may probably commit a second theft to pay for the first; but we cannot officially interfere to enforce this contract. A theft, however, must be reported even though the chowkeedar has made good the amount.

8. In future, then, it must be distinctly understood that the chowkeedar is the village servant, and that in consequence of his being the village servant, he is bound to report crime and aid the police, &c.; but Government has nothing whatever to say to him in regard to his appointment, dismissal, mode or amount of payment, or performance of village duties. These matters lie entirely between the chowkeedar himself and the talookdar or zemindar or villagers who appoint him. Between them they settle the duties and terms, and no Government officer has a right to interfere in any other way than he can by law do between any ordinary employer and servant, though upon proved misconduct of a chowkeedar in regard to his duties towards Government, the employer can be ordered to change him.

9. By paragraph 52 of the Government letter of the 4th February 1856, the spirit of the regulations, as regards the responsibilities of landlords in criminal and police matters, was ordered to be applied to Oudh. These responsibilities are described at pages 277-8 and 9 of Tucker's Note Book, and paragraph 185, page 83, of Directions to Settlement Officers, and the punishments to which they are liable are given in Sections 176 and 177

ot the Penal Code. In a talooka village, then, for instance, the talookdar himself, the sub-proprietor or the tikadar, the managing or collecting agents of the proprietor, the putwarree, the chowkeedar are jointly and severally responsible, according to the circumstances of a case, for reporting a crime. The landowners and agents may report through whom they please; they will generally report through the chowkeedar, and the chowkeedars therefore must be assumed as the persons through whom reports will ordinarily be made, and when a chowkeedar reports, it shall be considered as exempting all others from the necessity of reporting; but if a talookdar chooses to appoint other agency than the chowkeedar for reporting crime in a village, (and if he does so he must file a list of the persons so appointed), the report of such a person will not exempt the chowkeedar from the necessity of also reporting the same occurrence.

10. The officer in charge of a district may, upon the proved misconduct of a chowkeedar in regard to report of crime or aid to the police, or other public (in contradistinction to village) duty required of him, order his removal, and direct the proper party to appoint a person in his place. This should not be done the first, or second, or third offence, unless very serious; warning and fines will be enough at first.

11. When a crime has not been reported in any village, the chowkeedar alone should not be punished; the other persons resident in the village, and bound as he is to report a crime, should be invariably punished with him, and more severely than he is. Where concealment is systematic, or in any particular case where there is reason to believe that a landlord or his agents, although not residing in a village where a crime has occurred, have been cognizant of its occurrence, and yet have not reported it, they also will be liable to punishment according to the extent of guilt established against them, whether simple neglect of a duty or connivance at a crime. The duties of a chowkeedar in regard to the police and to criminals, and the punishment to which he is liable for neglect of them, will be found in the laws quoted in paragraph 9 of this memorandum.

12. When in any village a chowkeedar is not kept up, the District Superintendent will report the fact to the officer exercising the powers of magistrate in regard to such matters, who will first warn the party concerned of the alleged neglect, and if this is not sufficient, will enforce appointment by a fine. Should the neglect be habitual or persisted in, the officer aforesaid will proceed to nominate a chowkeedar, and will require the Deputy Commissioner as collector, or the settlement officer in districts under settlement, to fix the remuneration payable by the owners of the village, either in cash at the rate of 36 rupees per annum, or in land yielding produce to the same annual value. A chowkeedar so appointed shall be considered a Government servant only, unless the villagers choose to pay for his services to them by a per-centage in crops, or in any other way, and when a chowkeedar has been thus appointed, the old system will not be reverted to, however much the landlord or villagers may wish it, until at least two years have elapsed. By Section 21, of Regulation XX., of 1817, landlords are legally bound to nominate chowkeedars, and by Section 188 of the Penal Code are punishable for disobedience to an order duly promulgated.

13. Settlement officers will, in their proceedings, record the names and status of the parties whose duty it is to appoint chowkeedars, the amount of their wages, and the mode of paying them; any land in a chowkeedar's possession will, of course, be so recorded with the terms of the tenure as in any other case, but the settling officer will not set aside for the chowkeedar any land in addition to that which he may be found to hold. Paragraph 12, of Settlement Circular, No. 14, is modified accordingly, and Settlement officers will be informed of the same. This rule does not apply to villages in the predicament described in the preceding paragraph. In these the settlement officer will fix and record the chowkeedar's rights.

14. The present list of chowkeedars will be assumed as correct, but the Inspector General of Police may, whenever he thinks proper, direct the talookdars and other landowners of any district to furnish fresh lists of the chowkeedars of their villages. These lists they are bound to furnish under Section 21, Regulation XII., of 1807, and are punishable for not doing so under the above quoted Section of the Penal Code.

15. The Inspector General of Police shall exercise the power of a magistrate throughout the province, as regards the punishment of landholders and others: first, for not reporting crime; second, for not keeping up chowkeedars; and third, not filing list of them, and district superintendents will be guided by his instructions as to which classes of cases they take to the Deputy Commissioner and which to him. Generally speaking, Nos. 1 and 2 should go to the Deputy Commissioner, and No. 3 to the Inspector General. The Deputy Inspector General is furnished with like powers to be exercised, however, on his tour only, and in the district in which he may happen to be. When the Inspector General thinks that the circumstances of any district require a district superintendent to be vested with these powers, he will report, mentioning distinctly whether the superintendent already is the district has shown discretion enough to justify his being invested with the powers.

16. The Inspector General of Police will prescribe rules regarding periodical reports by chowkeedars to the nearest police station, besides their occasional report of crimes, &c. Periodical reports should not be oftener than once a fortnight for those who are near, and

once

once a month for the very distant. Once a year at least the chowkeedars attached to each police station should be assembled and inspected by District or Assistant Superintendent.

17. Good conduct on the part of a chowkeedar must always be rewarded with a liberal hand, and the Officiating Chief Commissioner will take steps to secure funds being placed at the disposal of District Superintendents for this purpose.

(signed) *C. Currie,*
Secy. to Chief Commissioner of Oudh.

APPENDIX A (2).

(No. 388.)

From *G. Campbell*, Esq., Judicial Commissioner of Oudh, to Captain *J. Reid*, Officiating Secretary to Chief Commissioner of Oudh.

Sir, Dated Lucknow, the 3d June 1862.

I BEG to submit the Inspector of Prisons' Report on Gaols in Oudh during the past year, with the prescribed Returns, and my remarks in reply.

2. Dr. Cannon's onerous duties in building the central gaol have not admitted of his making the careful examination of each gaol in the province which I could desire; but he has, at my request, rapidly run round most of them, and the result will, I am sure, be beneficial, especially as regards the additions and improvements in progress.

3. The report on the past year will, I trust, be considered as satisfactory as could be expected under the circumstances.

4. There has been a very gratifying decrease in the mortality. The excessive unhealthiness of the Lucknow Gaol has proved to be temporary; the number of deaths in that gaol during the year under report has come down to 8 per cent., and latterly I believe that it has been positively healthy.

5. The cost of the gaols has been *Rs.* 1,20,252. 15. 11. It is quite useless, at present, to compare the cost per head of charges, which are fixed without reference to numbers, viz., the fixed establishment and police guards. To judge of the real fluctuating expenditure, we must take column 10 of Statement No. II., showing the cost per head for diet and fuel, clothing and bedding, medicines, miscellaneous and contingent guards. The cost then for the year of each prisoner for all these charges, and exclusive of the fixed establishments, is *Rs.* 26. 11., which, considering the want of secure gaols, and the excessive dearness of the year (the famine year in the North Western Provinces), is not, I think, excessive.

6. I have before explained that we had not the means of much discipline, and the gaol building has lately taken the prisoners from manufactures to ordinary manual labour. On the whole, I believe that as much has been made of the prisoners as could be expected, and that the deterrent effect has certainly not been less than is usually the case where there are no especially penal appliances. That more cannot be said is not, I think, occasion of blame to the Administrative Officers, for in this department we can do nothing without money, and over that we have no control; we have not yet any means of solitary confinement, and all our gaols have hitherto been of the rudest description.

7. For the future our prospects are considerably improved. Dr. Cannon deserves the greatest credit for the way in which he has pushed on the Central Gaol, one of the two under circles of which is now ready. So far as we have yet had experience, there is every prospect of the site proving quite healthy, and if so, I am sure that it is an excellent one.

The Fyzabad Gaol is also far advanced, and several barracks will be ready before the rains.

The Seetapore Gaol was not undertaken so soon. Two or three barracks are promised before the rains, but it seems doubtful.

8. The conversion of the deserted barracks at Sultanpore into a gaol for 500 prisoners has been carried out in a rough way, but we still altogether want interior fittings and compartments, &c., which may be supplied for about 4,000 rupees more, if the money be granted.

9. The minor district gaols are, however, still in a lamentable state, owing to our failure to obtain any money to add to them. They are, as the Chief Commissioner is aware, mere hawalats, calculated to hold 50 or 60 people, and with no separate hospital or women's wards or other conveniences. I do not see how it is possible that, under the present law, which substitutes imprisonment for flogging, the public service can be carried on with these buildings without great injury and inconvenience. In two or three of the districts I have succeeded in getting some additions made by prisoners' labour, eked out

by small aids from local funds which happened to be available. I do sincerely trust that it will soon be thought proper to grant the very moderate sum required for rendering them decent gaols, fit for holding the district prisoners up to six months, on the plan which I long ago submitted.

10. I should gladly welcome the establishment of a reformatory for juvenile and improvable offenders, and think that, upon the whole, a penal farm established on waste land would succeed best.

11. The gaols are not yet in so forward a state as to admit of my concerting with the Inspector of Prisons any novel experiment on that most difficult of all problems—effective prison labour. I am never free from doubt whether in our ordinary intramural system the seclusion is not counterbalanced by the extreme lightness, pleasantness and sociability of the work. I am never able to get over the feeling that to make carpets and twine, and knick-knacks, as we see it in a gaol, is rather a pleasant occupation than otherwise, free as the happy prisoners are from all the cares and anxieties and struggles of this working world.

12. The great want is some really rigorous occupation for those who deserve rigour, such that we can safely measure and regulate it. The only resource we at present have is in hand-mills placed high, so that the prisoners must stand to them. I am an admirer of tread-mills. We have tried one or two, but the machinery always breaks down. I would strongly recommend that the iron machinery for a few good tread-mills should be imported from England.

13. How far it is desirable to give to a thief education, which he would never have had if he had remained honest, is a different question; but, upon the whole, I think the advantage of instruction preponderates. I have suggested to Dr. Cannon to try to make a commencement in this way.

I have, &c.
(signed) *G. Campbell,*
Judicial Commissioner of Oudh.

APPENDIX B (2).

(No. 58.)

From *H. M. Cannon*, Esq., M.D., Inspector of Prisons in *Oudh*, to *G. Campbell*, Esq., Judicial Commissioner of *Oudh*.

Sir, Dated Lucknow, the 28th May 1862.

I HAVE the honour to submit the accompanying Statements, from I. to XVII., with a "Comparative Gaol Expenditure Form" as prescribed by Government, showing all the details of prison management in Oudh during the year 1861.

2. Not having entered upon the duties of Inspector of Prisons until after the commencement of the current year, it will not be in my power to do much more than furnish the above-named Tabular Statements, together with a general abstract of the divisional annual reports, showing the comparative increase or decrease of expenditure under every head for the last two years.

3. It would be presumptuous in me were I to comment on the management of the different gaols during 1861. I have as yet only had opportunity of making a hasty inspection of 10 of them, more with a view of reporting and suggesting improvements on the subject of increased gaol accommodation which was urgently required.

4. I am, however, prepared to show that, under Mr. Campbell's supervision, the financial results of 1861 are very favourable as compared with the previous year, and in the face of circumstances which naturally might have been expected to raise the cost per head per annum, has, by an improved system of economy under several headings, been reduced from *Rs.* 54. 8. 2. in 1860 to *Rs.* 46. 4. 5. per head per annum in the year under review. The unfavourable circumstances to which I more particularly allude is, in the first instance, the effect the North Western Provinces' famine of 1860 had in draining Oudh of all its superfluous grain, and so raising the price of provisions in the early part of 1861. Again, owing to the want of prison accommodation and the increase in the number of prisoners, three important gaols were sanctioned and commenced upon, which necessitated the prisoners being divided into large gangs for employment on the several works, thus requiring an addition to the strength of police and Burkundauz guards, which invariably form the heaviest items of expenditure in prison management.

5. Being quite aware of the advantages and disadvantages regarding expenditure to which different gaols are subjected from locality or unforeseen circumstances, I shall only note comparison between those belonging to the same divisions.

6. The

6. The following is a general abstract of the number and disposal of prisoners throughout the different gaols in Oudh for the year 1861:—

Remaining on 1st January 1861	2,025
Committed during the year	10,342
Total prison population	12,367
Released during the year	8,384
Escaped	25
Died	195
Executed	24
Remaining on the 31st December 1861	3,497
Aggregate number during the year	948,401·40
Daily average	2,598·36

7. Statement No. I. gives a detail of the annual expenditure of each gaol, which amounts in the aggregete to *Rs.* 1,20,252. 15. 11. on account of 2,598·36 prisoners confined during the year 1861, being, as compared with the previous year, which was *Rs.* 93,725. 2. 5. on 1,719·29 prisoners, exhibiting an increase in expenditure of *Rs.* 26,527. 13. 6., and in prisoners to the number of 879·07.

8. Statement No. II. gives the cost per annum of each prisoner under the different items of expenditure incurred on his account; the gaols are classed in this table according to the cost per head, the Lucknow Central Gaol showing the lowest, and the Roy Bareilly the highest, rate per man.

9. The average expense per head which each prisoner in Oudh has been to Government during the past year (repairs and alterations of gaols included) is *Rs.* 46. 4. 5., whereas in 1860 it was *Rs.* 54. 8. 2., showing a saving on 2,598 prisoners (at a decrease of *Rs.* 8. 3. 9. per head) of *Rs.* 21,392. 14. 6.

10. This decrease in the annual cost of each prisoner, and which I hope to reduce still further by five rupees per head during the current year, should, under the disadvantageous circumstances noticed in para. 4, be considered very satisfactory, and in itself sufficient testimony of the growing zeal and attention of district officers to the minor details of gaol management and economy.

11. You will observe in column 2 of Statement II. how variable is the cost per head for "fixed establishment;" this, however, will no longer occur when the Schedules of the above for the different gaols in Oudh have received the sanction of Government.

12. Column 4, "Permanent Gaol Police Guard," is the great item of expense in the keep of prisoners, especially in small gaols, where the prison accommodation is both inadequate and insecure. As soon as the larger gaols are more advanced, this guard will not only be very much reduced, but fixed at a standard strength for the three classes of prisons; even now I am happy to be able to state that during the year under review, there has been a reduction per head in this respect of *Rs.* 5. 5. 5.

13. Column 5, "Contingent Gaol Burkundauz Guard," is high, and must remain so, so long as prisoners are employed at out-door labour, especially by the Department Public Works on the new prison buildings. I hope, however, to reduce this source of expense to a mere trifle, so soon as the larger gaols are complete, and ready to receive the prisoners at intramural labour.

14. Column 6, "Miscellaneous Expenses," is high, but will decrease every year as district officers become more experienced in the management of their respective gaols.

15. Column 7, "Native Medicines." The successful efforts that have been made by the medical officers to reduce expenditure under this heading is deserving of praise; in one gaol the reduction has been as great as six rupees per head,* showing the necessity that existed for demanding more economy and supervision in such matters.

* Of sick treated in hospital at Fyzabad.

16. Column 8, "Diet and Fuel." The cost on this account is moderate, but I expect to find it much reduced during the current year, although a more liberal scale of diet has been sanctioned by the Judicial Commissioner. District officers were in the habit of purchasing wheat at bazar rates, grinding it in their gaol mills, and charging for Atta in their monthly accounts, crediting the gain to the profit on manufactures. I have issued strict prohibitory orders to this arrangement for the future. Atta is to be charged for at the bazar rate of wheat, allowing a certain wastage per maund in grinding. This will make a considerable difference in the annual cost of prison food: for example at Oonao, within the last three months, the cost of food for prisoners has been reduced seven annas per head per mensem.

17. Colum 9, "Average Cost of Bedding and Clothing." The reduction under this heading to the extent of *A.* 12. 5. per man is very creditable, considering the great increase in the number of prisoners and the quantity of new clothing required; it is, however, much higher than I could wish it to remain, *Rs.* 2. 13. 6. per head; but so long as the wear and tear at out-door labour exists, it will be necessary to renew the greater part of the clothing every year. It must be observed, however, that there have been other causes for the high

rate of this item; it has always been the great source of profit and peculation for the native officers. The hot and cold weather clothing, when changed at the end of each season, was scarcely ever seen again, and no proper account appears to have been kept of that in store.

Circular No. 4, dated 21st March 1861.

I have lately issued such instructions as will ensure greater economy for the future. I beg, moreover, to urge the advantage of district officers employing their prisoners to make up all articles required for prison use, in preference to purchasing them in the bazar, and working their men on fancy articles that do not meet with a ready sale. The requirements of the gaol should be the first consideration, and spare men and spare time should alone be employed on remunerative manufactures. The native officials invariably oppose this system; it prevents their obtaining a per-centage on the materials; it tends to lessen the out-turn of such articles as yield direct profits; and so again interferes with the amount of per-centage to be divided amongst the gaol establishment at the end of the year.

18. Tabular Statement No. III. shows the proportion of mortality and sickness; also the total cost of all hospital charges for each gaol during the year 1861. It is gratifying to find, on reference to this table, that although the average number of prisoners has increased by 879·07 on the previous year, the daily average number of sick have decreased by 11·28, and the deaths to strength per annum by exactly 109; the per-centage of deaths to strength on the whole is only 7·54, whereas in 1860 it was 17·74, giving a reduction of 10·20 per each; and had it not been for the high rate of mortality at Fyzabad (nearly 17 per cent. to strength), the average of deaths would not have been unreasonably great. I shall remark upon the above excessive mortality when treating of the management of particular gaols.

19. I beg to call attention to column 9 of this Statement, and again to notice the success which has attended a closer supervision of the hospital diets on the part of medical officers. There is an actual reduction of *Rs.* 581. 0. 1. in the face of an increase of 879·07 prisoners, or *Rs.* 3,528. 0. 11. in 1861, to *Rs.* 4,109. 1. 0. in 1360. I will abstain from making any further remarks on the sanitary state of the Oudh prisons, as it is my intention to do so very fully in my next report, by which time opportunities will have been afforded me of offering more decided opinions on the subject. One point, however, I feel convinced of, that as the area and ventilation of the sleeping wards are increased, so will be the health of the convicts confined in our gaols. I attribute 8-10ths of the sickness in prisons to the unnecessary manner in which the prisoners are cooped up at night, merely that the native guard and officials may be spared a little extra vigilance and attention; this I am determined to remedy in the first gaol that is completed on the radiating system. I see no reason why the short termed and well-behaved prisoners should not be allowed to sleep in the enclosed yards and worksheds.

20. Statement No. IV. is little more than a repetition of No. II.; it is gratifying to remark, on reference to column 5, the enormous reduction there has been in the cost per head per annum in all the gaols throughout the province, with the exception of the two noted in the margin; that of Roy Bareilly is so excessive, that I have thought it necessary to call for explanation, which will be forwarded with this report.

Increase per head.

	Rs.	*a.*	*p.*
Baraitch -	9	15	2
Gonda -	6	11	2

21. Statement No. V. shows the "sex and age" of all convicted prisoners on the last day of the year 1861; there is nothing worthy of remark, except, perhaps, the number of prisoners under the age of 20 years, they amount to 306; the proportion of female prisoners is also large, namely 189.

22. Statement No. VI. showing "previous convictions" is very incomplete, and I fear not much to be depended on; the information on this subject will be more carefully collected for the future.

23. It will be observed, on reference to Statement No. VII., that out of a gaol population of 12,367 souls, there were only 188 who could read and write. I cannot suppose this statement either to be correct; little progress has been made in prison education, nor can we expect to do so much in this department of gaol discipline until some of the larger gaols are completed.

24. Statement No. VIII. shows the direct cash profits on gaol manufactures paid into treasury during the year to amount to only *Rs.* 2,818. 13. 2.; but when it is remembered the large amount that has been earned by prisoners employed on the new gaol buildings throughout the province by the department public works, also in grinding wheat and making prison clothing ("called indirect profits"), I think we may congratulate the gaol department in having earned the large sum of *Rs.* 46,618. 10. 2. Of this sum the prisoners engaged in building the new Lucknow Central Prison earned during 10 months 6,631 rupees at a rate fixed by me of half that of paid labour, and which during the current year will, I hope, exceed double that amount, and enable me ultimately to reduce very considerably the estimated cost of that building. If we add the "indirect" to the "cash profits," *Rs.* 2,818. 13. 2., we have *Rs.* 49,437. 7. 4., which may fairly be deducted from the aggregate cost of keeping prisoners in Oudh during 1861, leaving the expenditure on this account at *Rs.* 70,815. 8. 7., instead of *Rs.* 1,20,252. 15. 11. I have not included in this calculation the estimated saving to Government by the substitution of prison labour for paid establishment in performing the menial duties in the gaols, as it is rather a fictitious source of profit, and the loss incurred by hired labour, although much less in amount, may fairly be placed in the balance against it.

25. There

25. There is one point I cannot pass over without observation, namely, the great number of prisoners employed as servants in the different gaols, the average of which is as high as 23·12 per cent., in some it reaches 47·77 per cent. I have used every effort since my incumbency to remedy this waste of labour, and have in a great measure been successful, but there is still much to be effected.

26. Statement No. XIV. shows the number of escapes and recaptures; the former amounting to 28, and the latter to 15, leaving 17 prisoners still at large. The escape of nine prisoners from the Sultanpore gaol has been the subject of a special Report, and means have been adopted to prevent the possibility of a similar occurrence. Of the eight escapes from the Lucknow gaol three have been recaptured, one a long termed prisoner of desperate character; three of the five still at large are short termed men, who ran away from the insecure huts at new gaol buildings. When the new prisons are completed an escape from within the walls will be almost impossible, except when accomplished through the connivance of some of the gaol officials.

27. Table No. XV. is a nominal roll of the officers in charge of gaols during the year, and the date of receipt of the annual returns and statements by the Inspector of Prisons, the last of which I am sorry to say did not come to hand until the 17th May 1862, and must be my apology for the delay which has occurred in furnishing this Report. There will, I trust, be more punctuality in this respect for the future.

28. Table XVI. shows the number of prisoners to be 260, who have been flogged and otherwise punished in the different gaols in the province during the year 1861, and were it not for the high rate of punishments at Fyzabad, which were deemed necessary by the local authorities to enforce a proper observance of gaol discipline, the punishment roll would have been unusually small, considering the great number of long termed men and desperate offenders now undergoing their sentence in the prisons of Oudh.

29. It would appear from this Table there were only three solitary cells in existence during 1861, so that the punishments by that ordeal have been "nil;" when the three new gaols are completed there will be no want of means for enforcing this most valuable form of punishment, either for breach of gaol discipline, or as a mixed form of imprisonment.

30. Table No. XVII. gives admissions and releases of all classes of prisoners during the year; the total, however, is fictitious, as several prisoners are recounted after transfer to other gaols; the actual number committed in Oudh during the year, *vide* paragraph 6, is 10,342, and not 11,917; the total prison population should number 12,367, not 13,942 as shown in this statement.

31. As mentioned before, it will be impossibe for me to offer special remarks on the management of the several gaols, having had but a hurried opportunity of inspecting some of them. I will confine my concluding remarks in the most part to the present state of gaol accommodation in Oudh, and that sanctioned for the province, which is in progress of completion.

The probable requirements under the operation of the new penal code can be more accurately approached by statistics from the Judicial Commissioner's office.

	Prisoners.
The new Lucknow Central Prison when completed will contain with ease	2,500
Fyzabad Divisonal Gaol, now far advanced	1,200
Seetapore, which has been commenced	1,200
Sultanpore with Hawalat	550
Roy Bareilly with Hawalat	150
Pertabghur with Hawalat	100
Oonao	75
Durriabad with Hawalat	150
Gonda	75
Baraitch	100
Mahomdee	75
Hurdui	75
TOTAL	6,250

32. This Report is accompanied by copies of those from Commissioners of the different divisions. You will observe that Colonel Abbott requests earnest consideration "as to whether it is expedient to continue the Lucknow gaol press to its full extent, that it is too formidable a competition with the free press, and should only be kept up for the convenience of revenue and police purposes, printing of codes, &c., for which prison labour may be legitimately employed."

33. I entirely concur with the Commissioner; but under these restrictions it will be necessary that the gaol press should meet with full support at least to the extent above cited from all the civil authorities, so as to prevent this method of employing prisoners becoming a dead loss to Government, which it inevitably will be if the gaol presses are only worked by fits and starts, and the requisitions for the above named forms left entirely to the caprice of district officers.

34. I beg, therefore, to suggest that officers of the Commission be instructed to indent on the gaol press for whatever forms the Local Government may direct to be printed at that establishment; this will enable me to meet their wishes promptly, and keep up such an establishment on this branch of gaol manufactures as will ensure a certain number of prisoners being constantly employed and prove a fair profit to Government.

35. The Commissioner in his Report alludes to the want of proper prison accommodation at Durriabad; this has since been provided for on a scale to meet all the requirements of the districts.

36. The irregularities complained of by Colonel Abbott in submitting the monthly goal bills have occupied my particular attention, and great improvement has already taken place in this respect.

37. I do not feel the same concern expressed by him regarding the inadequate gaol accommodation in his division. The new central gaol, which is rapidly progressing towards completion, will hold upwards of 2,400 prisoners. Durriabad has been enlarged, and Oonao will never be required for more than 90 or 100 at most.

38. The civil gaol and hawalat at Lucknow will soon be placed in such repair as to contain an average of 130 prisoners under trial of all denomination, with two wards for European debtors.

39. It is very gratifying to observe the improvement in the health of the prisoners at the Lucknow central gaol during 1861.

The deaths were only 97 on a daily average of 1,152·76 prisoners, or 8·4 per cent. per annum; whereas in the previous year there were 237 deaths to a daily average of 723·01, or 32·78 per cent. per annum, and had it not been for a slight visitation of epidemic cholera amongst the gang on the new gaol buildings, the per-centage of deaths to strength would have been only 7·20.

A copy of my remarks on this epedemic is attached as an Appendix to this Report.

40. The Commissioner of the Baraitch Division in his able Report attributes the excessive mortality at Fyzabad to the correct cause, namely, the unhealthy position of the old gaol and the deficient accommodation and ventilation of the wards and hospital, and not to improperly cooked and unwholesome diet, in which view Dr. Bruce, the Inspector General of Hospitals, entirely concurs.

41. I am happy to be able to state that six barracks of the new divisional gaol, with a magnificent hospital, are now ready to receive the prisoners; they will be transferred before the commencement of the rainy season.

42. I must notice a clerical error in calculating the saving per head under "Native Medicines" at Fyzabad, which is stated both by the Commissioner and Deputy Commissioner in their Reports to be as high as *Rs.* 6. 7. 3. per head per annum; but I find in checking this calculation that it is only *Rs.* 5. 11. 8. on a daily average of 30·50 sick treated in hospital, and not on the whole number, which is *As.* 11. 5. This, however, amounts to a very considerable saving, and shows what can be done by proper supervision of expenditure in small matters.

43. I agree with the Commissioner in thinking that in estimating the sanitary condition of this gaol, the 190 cases of stripes should be excluded from the daily average of sick, which would reduce the per-centage very considerably.

44. Great efforts have been made at Fyzabad to increase and improve the manufactory department; they have made their own clothing, besides that for prisoners of other districts, and paid a small cash profit to the credit of Government. The paper, blanket, towel and other manufactures are very creditable, and when they have the advantage of good work-sheds and a well-organized system of intramural labour, I have no doubt will hold a very forward place as regards gaol manufactures.

45. The other two gaols of this division require no particular remarks, they are built on the model hawalat system, and when the repairs and enlargements are completed, for which sanction has been requested, they will contain from 75 to 100 prisoners each.

46. Colonel Clarke, the Commissioner of the Khyrabad Division, expresses himself satisfied in the diminution in the cost of the keep of prisoners at Seetapore during 1861; and as this part of the province was much influenced by the famine of the preceding year, the reduction of *Rs.* 27. 9. per head per annum for the keep of prisoners at Seetapore must be considered very satisfactory. There is one charge, however, which I must notice, namely, that of *Rs.* 6. 11. 3. per head for native medicines; the civil surgeon explains this excess as principally to be attributed to the large number of opium cases in the gaol during 1861. Opium when given to this extent amounts to an indulgence, it should never be sanctioned, except in emergent cases; the civil surgeon should be requested to scrutinise this expenditure more narrowly.

47. As all the available prisoners in this division have been made over to Department Public Works for the erection of the new gaol at Seetapore, not much profit can be expected from the manufactory department, but the executive engineer will receive credit for their labour, which will be carried to the gaol account at the end of the year under the head of "indirect profits."

48. The

48. The Mohomdee and Hurdui gaols have not been visited by me; I can, therefore, give no opinion on the accommodation they afford. I observe from the reports that there is no separate ward or hospital at either place; that the sick are located with the healthy. This shall meet with my earliest attention, as such an arrangement, in the event of epidemic disease, might prove disastrous. The Commissioner has already issued orders for temporary arrangements to be made to obviate such a result.

49. You will observe that both the Commissioners of Baiswarra and Baraitch have in their reports advocated the employment of additional European agency for the management of the divisional gaols at Fyzabad and Sultanpore. I scarcely think the time has arrived for laying this proposition before Government, and although I admit the advantage, and, perhaps, necessity of such supervision, I think it better to wait until these prisons are nearer completion, when the officers appointed can introduce a strict system of discipline, economy, and remunerative labour, which it will be impossible to effect while the majority of the convicts are employed at out-door work in building their own prisons.

50. The Commissioner, in his remarks on the gaols in his division, omits noticing the charge per head for police guard at Roy Bareilly, which amounts to *Rs.* 62. 9. per head per annum. The escapes from Sultanpore have been the subject of special report, but as the great inclosing wall is now completed, there will be no excuse for such occurrences for the future.

51. While on the subject of this gaol, I beg to urge that the opportunity of completing it, and converting the two barracks into a second-class prison, with a proper detail of hospital buildings, guard-rooms, and solitary cells, &c., should not be lost sight of. The Baiswarra division requires a divisional gaol as much as any of the others, and Government has, in the shape of unoccupied barracks, two buildings, which, at the small additional outlay of 6,000 rupees, can be converted into a complete divisional prison, capable of containing 550 inmates.

52. I need not further advocate the wisdom of such an arrangement; it would enable the Deputy Commissioner at Pertabghur to do away with one of the establishments at that station, which are both expensive and unsatisfactory.

53. In concluding this report, I must remark, that you had better not refer for comparative financial information in the large statement ordered to be prepared by Government, as the cost of the permanent police guard was not included in 1860. Statement No. II. of the old form is entirely to be relied on.

54. Trusting that the financial results, as shown in these tables, may be considered satifactory,

I have, &c.
(signed) *H. M. Cannon*, M. D.,
Inspector of Prisons, Oudh.

N. B.—Since writing the above, the explanation called for regarding the high rate of police guard at Roy Bareilly has been furnished, by which it appears they had entered an overcharge of *Rs.* 3,498. 15. 7., which will make considerable alteration in the figures of this report, causing the financial results to be more favourable. Copy of the correspondence is annexed, by which it will be observed that, instead of an increase per head per annum of *Rs.* 22. 15. 5. at Roy Bareilly, there has been a decrease of *Rs.* 10. 11. 2.

H. M. C.

(No. 251.)

MEMORANDUM.

Judicial Department,
Commissioner's Office, Lucknow Division,
1 March 1862.

THE gaol reports of the three districts of this division were received on the following dates:—

Lucknow	-	20th February.
Oonao	-	11th „
Durriabad	-	3d „

They are forwarded to the Inspector General of Prisons for compilation and report. The Inspector General, with the returns of other gaols before him, will be in a better position to form a comparison, and a decided opinion upon the comparative working of these gaols. I would merely call attention to the costs, which appear considerably too high, requesting him to suggest measures of economy and uniformity. I forward a set of rules that were drawn up for the working of the Lucknow gaol, and suggest their careful revision, and that a set of rules be printed in English and vernacular, for guidance of the officers concerned.

2. The Judicial Commissioner, in his memorandum, dated 12th ultimo, calls attention to certain particulars; for instance, the high charge of Lucknow gaol, and the mode of

crediting profits of prison labour at Oonao. By the Deputy Commissioner's reply, it will be seen that grinding atta is a direct source of profit, and has nothing to do with grain ground for the prisoners. The only objection I had to make to it was, that the gaol was grinding at a lower rate than the market price for labour, and I directed that it should be as high, for I object to the gaol under-selling labour, to the detriment of the poor labourers.

3. I would also request your attention to the consideration of expediency of continuing the gaol press to its full extent. I think it should be very much limited, and not be allowed to be such a formidable competition with the free press. I do not advocate its total abolition; it will be convenient to retain it for police and revenue purposes. For instance, the publication of the codes recently introduced at the lowest possible cost will be a benefit to the public in general, to which the labour may be legitimately employed, and I do hope this may be effected as speedily as possible.

4. The state of accommodation for prisoners at Nawabgunge is, I know, occupying your attention, and is urgently needed. Without tabulating the contents, it is not in my power to make any very valuable suggestions; but I have little doubt, as you proceed on this operation, you will find ample scope for notes, and plenty of room for improvement.

5. I will not, however, forget to mention the great irregularity with which the contingent bills of the Lucknow gaol have been received. The bills should be punctually prepared and submitted before the 5th of each succeeding month for which they are due, and in that case it will be invariably audited by the 15th of the month. With very ordinary arrangements this should be practicable, and will save much of the inconvenience that is felt at present.

6. Under the new Act our gaols will shortly be quite inadequate for the wants of this division. This must be carefully watched, and reported. The return will enable you to form some estimate of the increase there has already been, and what it is likely to be in future.

(signed) *S. A. Abbott,*
Commissioner and Superintendent.

(No. 210.—Judicial.)

From *David Simson,* Esq., Commissioner and Superintendent, Baraitch Division, to *H. M. Cannon,* Esq., M.D., Inspector of Prisons, Oudh; dated Fyzabad, 12 April 1862.

Sir,

I HAVE now the honour to offer a few observations on the management of the gaols in this division during 1861, as shown in the annual returns.

2. The following statement shows the great increase which has taken place in the number of convicts:—

	Total Number of Admissions.	Daily Average Number of Prisoners.	Number remaining at Close of Year.
Fyzabad - 1860 - -	1,309	262·09	284
„ - 1861 - -	1,194	342·37	521
Gonda - 1860 - -	1,188	74·44	82
„ - 1861 - -	1,203	71·76	64

In Fyzabad, the divisional gaol, the number may in general terms be said to have doubled. The prisoners from Gonda and Baraitch sentenced to terms exceeding six months, and even for shorter terms, should the number of prisoners exceed the capacity of the hawaluts there, are immediately transferred to Fyzabad, so that there ought not to be a large increase in the number of prisoners in these gaols; nor has this actually been the case at Gonda. But in Baraitch this rule has not been strictly acted on, and our gaol accommodation has been so defective at Fyzabad, and the prisoners were so healthy at Baraitch, that I have not enforced it. In point of fact, therefore, in Baraitch the prisoners have considerably increased also.

3. The prison accommodation has been very deficient, but you have yourself lately had an opportunity of inspecting the several buildings, and I have little to add to the account of them which I gave in my report for 1860. We managed to keep the mud walls of the temporary gaol at Fyzabad, referred to in that report, standing throughout the rains.

About

About half the prisoners were usually confined in it, and they have been at least as healthy as those in the old gaol; so the project has answered well; and before the ensuing rains we hope to be able to occupy a portion of the new divisional gaol, and dispense with one if not both of the present makeshift buildings. The Baraitch hawalut has been finished, and in a style much superior to the Gonda one, by the Deputy Commissioner, Major Steel, who has given a good deal of attention to its erection; but I am unable to enter into details, as he has said nothing about the cost, &c., in his report, and the bills have not yet come in. Nothing has been done to the Gonda hawalut, but the addition of a female ward and a hospital has been sanctioned.

4. The health of the prisoners has been good in Gonda and Baraitch, but indifferent in Fyzabad. Out of the 58 deaths in the latter gaol, 54 were from diarrhœa and three from dysentery, and the Deputy Commissioner, in his report, has recorded the Civil Surgeon's opinion on the subject at length. The diet question has been fully discussed in the correspondence with the Judicial Commissioner marginally noted.* I then recommended that Indian corn should be dropped, and the mixture of wheat and atta definitely adopted, as has now been decided on; still I am not prepared to say that Indian corn, when properly cooked, is an unwholesome diet; and in the absence of any other reason, I am inclined to attribute the excessive mortality to the defective hospital accommodation and ventilation, which, in the opinion of the Inspector General, Doctor Bruce, were more than sufficient to account for it.

	Per-centage of Sick.	Per-centage of Death to Strength.

5. Captain Reid enters into full detail regarding the expenditure, which I need not repeat. Suffice it, therefore, to say that I think he fully accounts for the increase of the averages in most of the heads of contingent expenditure. In gaols where the average strength of the prisoners is pretty stationary, and the stock of fetters, clothing, and cooking pots, &c., has once been laid in, the advantage in calculating averages per head rests chiefly with the gaol in which the greater number of prisoners is confined; but in a gaol like Fyzabad, where the increase has been very great and rapid, and new stock had to be purchased, it is clear that the result would be just the opposite. Captain Ross also accounts for the increase of charge, which is not excessive. The Baraitch return is not before me; but the principal increase, I believe, has been in the diet, caused by the Deputy Commissioner's buying in a stock of wheat when he expected prices to rise still higher on account of the famine, while, in point of fact, they soon after fell, so that the speculation turned out a bad one.

6. Hospital charges have greatly decreased in the Fyzabad Gaol, which proves the correctness of the opinion I last year expressed. The averages in Gonda and Baraitch are much higher, but the smaller number of prisoners accounts for this.

7. I regret to see so many juvenile offenders confined in gaol, though the total number is not great. If the Whipping Act is not speedily passed, a reformatory will not only have become a desideratum, but a necessity, though the establishment of such an institution in this country on a sound basis is not without difficulties.

	12 to 16 years.	16 to 20 years.

8. The escape statement is very favourable, only two prisoners escaped from the Fyzabad gaol, and none from Gonda or Baraitch. The result may be reviewed in various ways, and is due, I am afraid, fully as much to the easy work exacted from the prisoners as to the care of the contingent guards. While the great bulk of the prisoners are employed outside the gaols, the enforcement of hard labour and prison discipline, in the proper sense of the term, is universally allowed to be impossible.

9. There are, of course, no manufactures, except in the Fyzabad gaol. The results are given by Captain Reid, and are as good as could be expected. The mistake in the last year's statements referred to by him was then discovered by me, and corrected in my report.

10. Statements 9, 10 and 11 require no remark. I am glad, however, that you have now made the difference between the price of atta and wheat a matter of account, instead of a cash transaction, by which the chance of embezzlement has been greatly lessened.

11. As remarked last year, statement No. 12 should be blank, and statement No. 13 has again been misunderstood.

12. The number of prisoners released on account of sickness has been considerable in Fyzabad. I am glad to see the order was, of course, invariably given on the strong report of the civil surgeon, and the mortality in that gaol, I think, fully justified his recommendations.

	Good Conduct.	Sickness.

13. I fully agree with Captain Reid that flogging is required as an *ultima ratio* to support gaol discipline; but I cannot coincide with him in the inference he leaves us to draw from his remarks, that the system of administering it, as it obtained in the Fyzabad gaol in the earlier months of the year, was a good one. The practice then was to punish every slight breach of gaol discipline with five or six stripes, owing to which the frequency of the punishment was greatly increased, while its effect, both owing to its frequency and the lightness of the punishment, was proportionably diminished. I therefore directed that for first and petty breaches of discipline, other punishments, such as the hand-mills, &c., should be preferred, and that when it was necessary to flog an obstinate offender, or for an aggravated offence, the flogging administered should be sufficiently severe to afford an example to the other prisoners.

14. I most thoroughly concur with Captain Reid, however, as to the desirability of obtaining additional European agency for the management of so large a gaol as the Fyzabad one; but this is not the place to discuss the question at length.

15. Mr. T. Kavanagh, Assistant Commissioner, has again prepared a caste statement, the results exhibited in which are much the same as last year.

16. The delay in writing this letter has been caused by the transmission of the original Baraitch statements direct to your office, and the receipt of duplicates only yesterday, though they have repeatedly been called for for some time past.

I have, &c.
(signed) *D. Simson*,
Commissioner and Superintendent of Baraitch Division.

(No. 16.—Judicial.)

From *St. George Tucker*, Esq., Commissioner and Superintendent, Baiswarra Division, to *H. M. Cannon*, Esq., M.D., Inspector of Prisons, Lucknow; dated Sultanpore, 1 April 1862.

Sir,

With reference to the 2d paragraph of the Judicial Commissioner's Circular, No. 31, of 13th February, I have the honour of forwarding herewith the annual gaol returns and reports for the three districts in this division, with a memorandum by myself.

Memorandum

MEMORANDUM by the Commissioner and Superintendent, Baiswarra Division, on the Gaol Returns for 1861.

THE expenditure on buildings has been trifling. A sum of 500 rupees was sanctioned for adapting the barracks at Sultanpore to the purposes of a gaol. It has not been debited in the accounts for 1861. Upwards of 1,000 rupees more will be required. The Inspector of Prisons has already given full instructions regarding the adaptation of these buildings. I would recommend that they be placed under charge of Doctor Constant, who would report to the Inspector of Prisons through the district officer, and I hope that a sufficient permanent establishment may be sanctioned. Expenditure.

2. With reference to Captain Perkin's remarks on the hawalut, I am of opinion that it will answer well enough for the present for prisoners under trial. It is near enough to the cutcherry, and close to the public lines, so that the relief of sentries can be very easily made.

3. The miscellaneous charges are high at Sultanpore; the clothing and bedding charges are high at Pertabghur. Those for contingent guards are enormous at the latter station. An explanation has been called for.

4. The cost of native medicines is high at Roy Bareilly and Pertabghur, but very moderate at Sultanpore.

5. The health of the prisoners has been good; particularly so at Sultanpore. I beg that the services of Doctor Constant may be brought to the notice of Government. I believe that he is well satisfied with the native doctor, Ghumundee Lal. Health of Prisoners.

6. With reference to Appendix II., the Deputy Commissioner of Pertabghur has omitted to record the expense incurred for the gaol guard. He has been requested to supply the omission.

7. With reference to Appendix VI. of the Statements, I am of opinion that it cannot be relied on. We have not hitherto been able to ascertain all the previous convictions of prisoners. Previous Conviction.

8. With reference to Appendix IX., the Deputy Commissioner of Pertabghur has been requested to explain on what principle he has calculated that the convicts have earned for Government 3,477 rupees in the construction of public buildings. I am at a loss to understand what buildings are alluded to. Receipts.

9. The district officers have not hitherto had sufficient space within their gaols for the employment of convicts on manufactures. Some have been employed in grinding wheat, expressing oil, and weaving blankets. The manufacture of paper and tât puttee (gunnee cloth) would be profitable, especially the latter. The material can be obtained in almost any quantities within 12 miles of Sultanpore or Pertabghur. Appendix XIII. Appendix X.

10. Out of door, ramming down kunkur is, I have found, the best employment for prisoners who wear irons. They have not to walk much, and are not liable, consequently, to get sores on their ankles.

11. I recommend, however, that the mass of the convicts confined in this division should be employed within gaol inclosures. Here labour is cheap and wages low. The contrast between the ill-fed honest poor and the well-fed prisoners is demoralizing. The employment of prisoners out of doors is undoubtedly good for their health, and I would, therefore, recommend the transfer of all prisoners sentenced to more than four months for simple theft, budmashee, and breach of the Salt and Abkaree Laws, to the districts beyond the Gogra, where labour is scarce and food cheap.

12. With reference to Appendix XIV., for Sultanpore, I forward herewith the correspondence regarding the escape of nine of the prisoners.

13. The Deputy Commissioner of Pertabghur has omitted to notice the escape of two life convicts while on their way to Allahabad. It appears to me, that until an officer in charge of a gaol has received a receipt for a transferred prisoner, he is not at liberty to enter him in column 10 of the Statement A., Gaol Return, and should enter him in column 9 in the event of his escaping on the road. The correspondence on this subject also will be forwarded should you wish to see it. A copy of Mr. King's explanation received to-day is appended.

(signed) *St. G. Tucker,*
Commr. and Supdt. of Baiswarra Division.

(No. 5.—JUDICIAL.)

From Colonel *J. Clarke*, Commissioner and Superintendent of Khyrabad Division, to *H. M. Cannon*, Esq., M. D., Inspector of Prisons, Oudh.

Sir, Dated the 13th March 1862.

I HAVE the honour to forward herewith, in original, the Gaol Reports and Returns of this division for 1861; they show, I think, that as much has been done as could be expected.

2. The additional accommodation in the Hurdui gaol, referred to by the Deputy Commissioner as sanctioned by me, is to cost 250 rupees, and will be paid for from the amount in hand on account of fines levied for the destruction of public buildings during the mutiny.

3. I am of opinion, as I have always been, that each district should have a proper gaol building capable of accommodating 150 or 200 prisoners.

4. The general results of the Return now submitted show a diminished net cost of each prisoner during the past year, and I know from frequent personal observation that all that attention to management can do, under the circumstances, has been done.

5. As these Returns and Reports are over due, I do not detain them for further comment; but should you desire such, which, however, I do not think I can offer with any advantage, I shall be happy to attend to your wishes.

I have, &c.
(signed) *J. Clarke*,
Commr. and Supdt., Khyrabad Division.

(No. 10.)

From *H. M. Cannon*, Esq., M.D., Superintendent, Lucknow Gaol, to *F. Douglas*, Esq., M.D., Civil Surgeon, Lucknow.

Sir, Dated Lucknow, the 27th January 1862.

I HAVE the honour to submit a short sanitory Report of the gang of prisoners working under my orders at the new central gaol buildings between the Alumbagh and Cantonments.

As regards the topography, the position of the new site is, I think, unexceptionable, the ground is high, and capable of being well drained on all sides. During the late trying rainy season, when almost every part of the neighbouring country was under water, the land selected for the new central gaol remained high and dry.

The prisoners went into temporary huts erected for them on the ground on the 25th February 1861, and from that period to the end of the year the daily average strength of the gang has been 476 working prisoners.

The men have been well fed, well clothed, and well sheltered from the weather; they have done a fair amount of remunerative labour, and I have every reason to be perfectly satisfied with their sanitory condition.

The daily proportion of sick to strength has been under two per cent. (or 1·88), and had it not been for a short but severe visitation of epidemic cholera, which made its appearance during the very heavy rains on the 3d September 1861, the mortality would have been a mere fraction.

It may be interesting to make a few remarks on the curious advent of this disease; it appears to have travelled slowly from the Muchee Bhawun Fort in a direct line to Cantonments (a distance of three miles), carrying off a solitary individual at long intervals on its way; it then crossed the Roy Bareilly road from the extremity of Cantonments, and attacked the sick in my temporary hospital at the gaol works on the 3d September 1861.

I next morning took prompt measures and had tents pitched quarter of a mile from the other prisoners, and had the ground inside and outside thickly strewed with hot ashes from the lime and brick-kilns. This was done once a day so long as the sickness lasted; nevertheless in 14 days there were 25 cases admitted, 14 of which were fatal. These were, however, confined (with two exceptions) exclusively to the sick in hospital. Two mehters who were selected for menial duties at the hospital tents were the last attacked, and died on the 17th and 18th, when the epidemic ceased as suddenly and unexpectedly as it appeared; causing one casualty on the 20th in a village on the Cawnpore road, about a quarter of a mile off, which was the last I heard of it in the neighbourhood.

I must

I must here remind you that the fact of my worst cases of sickness, with the exception of those of cholera, have been sent into the City Gaol hospital for treatment, has tended to reduce my per-centage of sick, and in the same ratio increased yours. I believe, however, I am correct in stating that of those sent in by me for treatment only three have died, making a total number of only 17 deaths in connexion with the gang under my supervision.

An Abstract Tabular Statement is herewith attached.

TABULAR STATEMENT of PRISONERS employed from 25th February to 31st December 1861.

Inspector of Prisons' Office, Lucknow,
20 May 1862.

(signed) *H. M. Cannon,*
Inspector of Prisons.

APPENDIX C (2).

(No. 387.)

From *G. Campbell*, Esq., Judicial Commissioner of Oudh, to *H. M. Cannon*, Esq., M.D., Inspector of Prisons, Oudh.

Sir, Dated Lucknow, the 3d June 1862.

I HAVE the honour to acknowledge your report upon prisons for the past year, which will be submitted to the Chief Commissioner; meantime I communicate a few observations.

2. With reference to your 17th paragraph, I quite agree that prisoners should, as far as possible, make articles required for prison use, provided only a suitable labour is thus supplied. I would not sacrifice punishment to this object. For instance, in the Lucknow gaol almost all the able-bodied villains used to be employed twisting a small bobbin on the pretext that the thread was required for blankets. That was making penal servitude a mere farce.

3. I entirely agree in the remarks in your 19th paragraph, that the prisoners should not be more than is really necessary cooped up at night, and that care should be taken to prevent the guard doing so to save themselves trouble. I am decidedly of opinion that in all securely arranged gaols the prisoners should be allowed to sleep out in the ward-yards in the hot weather, with the exception only of those imprisoned for very long terms, or of a dangerous character, and even in respect to long-term men, when it can be safely done, such indulgence is desirable.

4. A juvenile reformatory would be very desirable; but I observe that most of the prisoners classed as juvenile are between 16 and 20. The number of very young boys is not yet large.

5. I trust that you will carefully test the future returns of prisoners who can read and write, and that you will soon be in a position to devise effective means for increasing the number.

6. Effort should also be made to obtain something like a correct return of previously convicted prisoners.

7. There appears to be some mistake in the statement of cash profits. The Lucknow gaol would appear, according to the statement, to have lost heavily in manufactures instead of gaining, and the sums credited appear to be merely a part of previous cash balances, the rest of which has disappeared. The profit in the other gaols is small. To show the account correctly it seems necessary that stock in hand should be included. I beg of you to revise the statement and explain how the matter really stands as regards the Lucknow gaol. I trust that there will be good profit in future. No commission is to be paid to any official in any gaol till after I have sanctioned that course on a report showing clearly that permanent profit comes regularly in from manufactures of a permanent and well established kind.

8. I do not think that you are correct in deducting indirect profits from the total expenditure, because if these sums had not been saved they must have been added to account of expenditure partly in our accounts and partly in those of the Public Works Department for gaol building.

9. You should see that the men employed on gaol services are kept within the prescribed limits. Some of those making up the proportion quoted by you seem to be employed on occasional duties not usually classed under this head. The quarterly returns did not show excess.

10. I have already expressed an opinion that the excessive resort to flogging in the Fyzabad gaol is injudicious, and am glad that the Commissioner has taken measures to put a stop to it.

11. The mortality in the Fyzabad goal proves to be so high that I think some special report should have been made at the time. I beg that you will report what has been the sanitary state of the prisoners in this gaol during the last — months.

12. I have seen no signs that the gaol press has unfairly affected private enterprise; on the contrary, I find that people who desire to establish presses have been prevented on supposed political grounds, and one private lithographic press has much of a monopoly. But if the trade be entirely free, it may be well principally to do Government work at a cheap rate at the gaol press. I should like to know if you have printed the judicial forms which I lately sent, and circulated cheap rates at which you are ready to supply them.

13. It is gratifying to know that the mortality in Lucknow has been so much reduced.

14. And I am sure that the best thanks of the Government are due to you for the rapid and efficient way in which you have pushed on the central gaol.

15. I agree

15. I agree with you that the excessive charges for opium and native medicines, on which you remark, must be cut down.

16. I am glad to learn that the excessive charge for police guard in the Roy Bareilly Gaol is a mistake. But to make sure that there may be no errors and over-charges in future, I beg that, after ascertaining the exact state of each gaol, you will settle with Colonel Barrow the guard to be kept up for each, and submit a general statement of the whole.

17. Seeing the delay in the periodical returns, and with a view to enable us to meet the increasing number of prisoners, and to prevent any confusion, I beg that you will call on each district officer to furnish you by return of post with following present state of his gaol and submit the whole to me:

1st. Whether any and exactly what additions have been made or will be completed before the rains; what is the present accommodation, and how many it is fitted to hold, or will positively without fail be fitted to hold before the rains.

2d. Present number in the gaol, including prisoners of all kinds.

3d. Up to what term prisoners are kept and beyond that term, and where those beyond that term are sent.

18. Be so good as to communicate to local officers such of the above observations as it is necessary that they should know.

I have, &c.
(signed) *G. Campbell,*
Judicial Commissioner of Oudh.

APPENDIX D (2).

(No. 1467.)

From the Secretary to the Chief Commissioner of Oudh, to the Judicial Commissioner of Oudh.

Sir, Dated Lucknow, 11 July 1862.

I HAVE the honour, by direction of the Officiating Chief Commissioner, to acknowledge receipt of your letter, No. 388, dated 3d ultimo, submitting the Inspector of Prisons' Report on Gaols with prescribed returns for the past year, and to make the following observations:

2. The statements show a daily average of 2,598·36 against 1,719·29 of the previous year, or an increase of about 50 per cent., while there is a decrease in the total average cost of *Rs.* 9. 9. 3., per head; the error in the Roy Bareilly returns has been rectified in the statements, and the only exceptions to the general decrease are Baraitch and Gonda in the former of which there is an increase of *Rs.* 9. 15. 2., and in the latter *Rs.* 7. 11. 6. This increase is, however, chiefly attributable to the excessive cost of the permanent gaol police guards, which the Inspector of Prisons has already considerably reduced, and on which he promises a still further reduction during the year.

In other items also the Officiating Chief Commissioner observes with satisfaction that the Inspector hopes to carry still further the measures of economy which have been fairly successful during the year under review.

3. The great diminution of both sickness and mortality is very gratifying, and there are good grounds for believing that when the new gaols are finished, there will be a still further improvement in the health of the prisoners. The Officiating Chief Commissioner believes there is much truth in Dr. Cannon's remark that the prisoners suffer from being cooped up at night, and he approves of the suggestion that short-term and well-behaved prisoners should be allowed to sleep in the work-shed and enclosed yards at seasons of the year when exposure to the night air may not be considered objectionable.

4. The gaol accommodation has, as you remark, been greatly improved, specially in Lucknow, where Dr. Cannon has been most energetic, and in Fyzabad where the divisional gaol under the supervision of the executive engineer is in a forward state.

Rs. 20,000 have been set apart in the budget for district gaols; from this a grant of 6,000 rupees has lately been made to meet the cost of the additions and improvements in the Sultanpore gaol referred to in your 8th paragraph. For most of the minor district gaol grants have been made to provide for necessary improvements (*vide* my letter, No. 473, of 28th May), and for the other similar grants will be made on receipt of the information called for in my letter above quoted; but the Officiating Chief Commissioner does not agree with you that these buildings are in a lamentable state; on the contrary he thinks that, with the additions and improvements which will be provided for this year, they will be found quite sufficient for our present requirements.

The inspector shows in his 31st paragraph that the total gaol accommodation for the province will be ample.

In the Lucknow civil gaol it is believed that suitable quarters have been provided for Europeans and natives of respectability.

5. The Officiating Chief Commissioner concurs in your remark on the desirability of employing the gaol press to do Government work at a cheap rate.

6. However desirable a reformatory for juvenile offenders may be, the Officiating Chief Commissioner doubts very much whether the plan you propose would be at all likely to succeed; he will be glad if you will, in concert with the Inspector of Prisons, make arrangements for a serviceable treadmill in the central gaol, and submit a rough estimate of the probable cost.

7. In conclusion, I am desired by the Officiating Chief Commissioner to express his obligations to you for your careful and efficient supervision, and to state that he considers that Dr. Cannon, Inspector of Prisons, has done excellent service, particularly in the construction of the central gaol; and that considering the disadvantages under which they laboured, the general results are satisfactory and creditable to the officers who had been in charge of gaols during the year.

I have, &c.
(signed) *J. Reid*,
Officiating Secretary to the Chief Commissioner
of Oudh.

APPENDIX, E (2).

Appendix M. (2).

Memorandum.

1. With a view to regulate the expenditure of local funds so as to ensure their being applied in the manner most advantageous to the public interests, the Officiating Chief Commissioner has determined on classifying the several roads in the province and directing the attention of district authorities to the construction of those which appear of primary importance.

2. The roads will be divided into the following classes:—

(I.)—Imperial.

(II.)—Provincial.

(III.)—Main district roads.

(IV.)—District roads.

1. Lucknow to Cawnpore.
2. Lucknow to Shajehanpore.
3. Lucknow to Fyzabad.
4. Lucknow to Byram Ghat.
5. Roy Bareilly to Dalamow Ghat.
6. Fyzabad to Allahabad.
7. Fyzabad to Gonda.

3. Imperial Roads.—It is unnecessary here to make any remarks on these, as the cost of their construction and maintenance is defrayed from the Imperial revenue and not from local funds. They will be coloured red on the maps. A list of the present Imperial roads is marginally given. The road from Lucknow to Roy Bareilly is at present an Imperial line, but it will be transferred from the Public Works Department to the district authorities, while the road from Seetapore to Shajehanpore, which has hitherto been repaired from local funds assisted by grants-in-aid, will be made an Imperial line.

4. The Officiating Chief Commissioner has determined that the following shall for the present be the provincial roads, as they traverse large sections of this province and connect

nect the Imperial roads with the principal towns of neighbouring districts. They are marked in continuous black lines on the map:—

(I.)—Lucknow to Jounpore *viâ* Roy Bareilly, Salone, Pertabghur and Padshapore.

(II.)—Lucknow to Jounpore *viâ* Sultanpore.

(III.)—Fyzabad to Roy Bareilly.

(IV.)—Bulrampore to Seetapore *viâ* Gonda, Secrora and Byram Ghat.

(V.)—Utroulah to Seetapore *viâ* Bulrampore, Ekonah, Baraitch and Chelaree Ghat.

(VI.)—Khyreeghur to Cawnpore *viâ* Luckhimpore, Seetapore, Neemkar, Beneegunge, Sundeela and Russoolabad.

(VII.)—Lucknow to Shahjehanpore, *viâ* Sundeela, Hurdui and Shahabad.

The exertions of the local Committees of the several districts through which these roads pass should be principally devoted to them. They should be considered first class roads, and their width should be uniform (see paragraph 5 of Circular No. 4-83 of 1862) and a side line should always be maintained on them. No time should be lost in constructing permanent bridges wherever required. Further instructions will be given regarding each road.

Lucknow to Jounpo *viâ* Roy Bareilly, Salone, Pertabghur and Padshapore

5. The first portion of this road has, up to this time, been under charge of the Public Works Department. It is described by the chief engineer as a fair road, partially embanked, but not metalled; temporary bridges provided throughout the line. Any sums sanctioned for the repairs of this section during the current year will be expended by the Public Works Department, and from 1st May 1862 it will be made over to the district authorities. The chief engineer will be requested to furnish any information in his power regarding the requirements of the road in regard to raising, embanking and bridging.

The second section of the road, from Roy Bareilly to Salone, lies partially within the Roy Bareilly and partially within the Pertabghur District; a bridge of considerable dimensions is in course of construction near the boundary of the two districts, and sufficient funds for its completion have, it is believed, been provided.

On the third section, lying between Salone and Pertabghur, are several very large bridges. The civil engineer has lately been deputed to inspect the sites where these bridges are required, and to prepare plans and estimates for their construction. A grant-in-aid of 14,000 rupees has been made for this line, but no information has been afforded as to its expenditure up to the present date.

	Rs.
Grant-in-aid	14,000
Roy Bareilly	6,450
Pertabghur	3,500
Total - - - *Rs.*	23,950

The last section is between Pertabghur and Padshapore in the Jounpore District, An allotment has been for this road from the road and ferry funds of the Pertabghur District, but it is doubtful whether the sum allotted will be sufficient to make the road passable at all seasons of the year.

Lucknow to Jounpore *viâ* Sultanpore.

6. This road, as far as Saltanpore, was formerly under the Public Works Department, but has lately been transferred to the district authorities. A grant-in-aid of 9,850 rupees has been assigned to this road during the current year, of which 5,000 rupees is to be expended in the Lucknow District, and 4,850 rupees in that of Roy Bareilly. A further sum of 15,000 has been granted for the repair and completion of a large bridge over the Lonee Nullah. The total assignments are given in the margin.

	Rs.
Grant-in-aid	9,850
Lucknow	5,000
Sultanpore	4,000
Total - - - *Rs.*	18,850
Additional grant	15,000
Total - - - *Rs.*	33,850

The Lucknow Local Committee has assigned a considerable sum to this road, and has expressed its determination to expend the grant-in-aid in the construction of bridges.

The attention of the Sultanpore and Roy Bareilly Committee should be called to the importance of this line, and they should forward surveys of such portions as lie within their respective jurisdictions, accompanied by a detailed report of the principal requirements in the shape of earthworks and bridges.

Fyzabad to Roy Bareilly.

7. The Officiating Chief Commissioner has lately travelled over the greater portion of this line. The section situated within the Fyzabad District will be completed as a raised, bridged, but unmetalled line during the current year. The Committee should now devote any funds at their disposal to metalling the road, which is one of the most important in the province.

	Rs.
Grant-in-aid	4,700
Fyzabad Road and Ferry Funds	8,421
Total - - - *Rs.*	13,121

A bridge of boats has already been constructed at Amghat, at a cost of 3,500 rupees, and it is hoped that the tolls collected will in future cover the cost of maintenance.

The section in the Roy Bareilly and Sultanpore Districts has not been satisfactorily constructed. The old line of road has been taken and widened without any attempt being made to cut off unnecessary curves, or to divert the line so as to connect any important marts, such as Shunkergunge and Tilloee, lying but little removed from the old track. A sum of 8,000 rupees has been assigned as a grant-in-aid to this section of the road, and the sums marginally noted have been apportioned by the Road and Ferry Fund Committees for its construction.

	Rs.
Grant-in-aid	8,000
Sultanpore	2,700
Roy Bareilly	6,000
Total - - - *Rs.*	16,700

CHAP. XV. Oudh.

The Officiating Chief Commissioner has directed that no further expenditure may be incurred on this section of the road until a survey of it has been made by a competent engineer. The chief engineer has been addressed on the subject, and meanwhile the Commissioner of Baiswarra has been desired to put a stop to all works on the road, and to forward a statement showing exactly what balance remains unexpended both of the grant-in-aid and of the assignments mode by the local committees.

Bulrampore to Seetapore *viâ* Gonda, Secrora and Byram Ghat.

8. The Officiating Chief Commissioner has traversed the greater portion of this line also, and considers it one of the most important in the province.

Little or nothing has been done on the first section of the road, viz., from Bulrampore to Gonda. A sum of *Rs.* 257. 7. has been assigned for the completion of the road, and *Rs.* 3,959. 12. 2. for bridges. A very large sum will be required for raising and embanking the road, but no time should be lost in crmmencing this work whenever funds may be available.

For the second section of the line, from Gonda to Byram Ghat, a grant-in-aid of 8,700 rupees has been allowed, and the Local Committees have assigned the sums marginally noted for the construction of bridges on the line. It would be advisable for these committees to devote a large proportion of the sums at their disposal from other sources than the Road and Ferry Funds to the completion of this line as a metalled road throughout. Should they be able to do this, the Officiating Chief Commissioner would ask the chief engineer to allow Lieutenant Sweetenham, now in charge of the Gonda and Fyzabad Line, to take charge of the supervision of this road also.

	Rs.
Baraitch	1,989
Gonda	3,841
Total *Rs.*	5,830

As regards the third section, from Byram Ghat to Seetapore, which may be considered the most important of the whole, the Officiating Chief Commissioner is of opinion that a more direct route might have been chosen; but as considerable expense has been incurred in constructing the present road, which connects several towns of importance, he will not insist on a new line being laid out. Every exertion should be made to complete the metalling of this road, and as soon as the funds for this purpose are available, on which point the Commissioners of Lucknow and Kyrabad are requested to report at an early date, the supervision of the work will be entrusted to the executive engineer of Seetapore.

	Rs.
Seetapore	2,300
Grant-in-aid	11,500
Total *Rs.*	13,800

Utroulah to Seetapore *viâ* Bulrampore, Ekonah, Baraitch and Chelaree Ghat.

9. A glance at the map will show the importance of this line, connecting, as it does, the Rohilcund Division with the Trans-Gogra districts of this province and Goruckpore.

The road from Utroulah eastward to join the road from Bansee in the Goruckpore District should be made at once, either to Dumurriah Gunge or Biskohur. The sum of *Rs.* 178. 2. 3. allowed by the Gonda Committee for constructing the section of this road between Utroulah and Bulrampore is quite inadequate, while a far larger sum than 166 rupees will be required for the bridges on it.

The Baraitch Committee have assigned a sum of 160 rupees for marking out that portion of the second section of this road which lies in their jurisdiction; but nothing appears to have been done or contemplated by the Gonda Committee for the construction of the line between Bulrampore and the borders of the district towards Ekonah. This must be done at the earliest opportunity.

A sum of 850 rupees has been assigned for the construction of the road from Baraitch to Chelaree Ghat. It is probable that a much larger sum will be required to make this passable throughout the year.

	Rs.
Seetapore Road	3,000
Boats	400
Bridges	1,500
Total *Rs.*	4,900

The Seetapore Committee has made provision for the construction of the road from Chelaree Ghat to Biswee; at this point this road will join the preceding one. The Officiating Chief Commissioner does not propose to carry it further at present, though eventually it may be extended to the Ganges at some point found most advantageous.

Khyreeghur to Cawnpore *viâ* Luckhimpore, Seetapore, &c.

10. This is an important line connecting the extreme north of the province with the large military station of Cawnpore.

The sums noted in the accompanying statement have been allotted to the different sections of this road by the local committees of the districts through which it runs. Only one portion has not been provided for, viz., that which lies between Sundeela and Ooras. The Commissioners of Lucknow and Khyrabad are requested to make arrangements for the construction of this portion of the line as soon as practicable with a view to complete the line of communication throughout. The sum of 740 rupees proposed to be expended in the construction of a bridge on the Pilkhannah Jheel on the road between Sundeela and Benegunge has not yet been sanctioned. Further report on this is awaited.

Lucknow to Shajehanpore *viâ* Sundeela, Hurdui, and Shahabad.

11. This is a more direct route to Shajehanpore than the Imperial Line *viâ* Seetapore. A grant-in-aid of 10,000 rupees has been given to this road, and the local committees have also assigned the sums shown in the Statement.

12. The main district roads are those which connect one division with another, and act as feeders to the Imperial and Provincial roads. They are marked on the map by dotted lines, and are as follows:—

(I.)—Baraitch to Belwa Bazar *viâ* Secrora.

(II.)—Nanpara to Roy Bareilly *viâ* Byram Ghat, Darriabad and Nyapoora Ghat.

(III.)—Fyzabab

(III.)—Fyzabad to Azimghur *viâ* Tandah.

(IV.)—Tandah to Jounpore *viâ* Jelalpore.

(V.)—Tandah to Dalamow Ghat *viâ* Sultanpore, Amethee and Salone.

VI.)—Shajehanpore to Dalamow Ghat *viâ* Shahabad, Sandee, Belgram, Madhogunge, Bangermow, Oonao and Behar.

(VII.)—Sultanpore to Cawnpore *viâ* Gowreegunge, Jais, Roy Bareilly and Behar.

(VIII.)—Futtehghur to Nanpara *viâ* Hurdui, Seetapore and Mullapore.

(IX.)—Mohomdee to the Ganges *viâ* Pusgawan, Pehlanee, Hurdui and Belgram.

(X.)—Luckhimpore to Shajehanpore *viâ* Mohomdee.

13. This is a new road in course of construction. It lies entirely within the Baraitch Division, and the sums marginally noted have been assigned for it during this year. The Local Committee propose to construct the road only as far as Nawabgunge, opposite Fyzabad, but the Officiating Chief Commissioner desires it may be continued to Belwah Bazar in the Goruckpore District. It is hoped that larger sums may be assigned to this road next year.

Baraitch to Belwah Bazar *viâ* Secrora.

	Rs.
Baraiteh Road	640
Gonda	255
Total Rs.	895

14. A sum of 15,000 rupees has been given as a grant-in-aid to that section of this road which lies between Nanpara and Byram Ghat. It is believed that this portion of the road is well advanced towards completion. The sums noted have been assigned to it.

Nanpara to Roy Bareilly.

	Rs.
Grant-in-aid	15,000
Baraitch Local Funds	5,305
Total Rs.	20,305

The section from Byram Ghat on the Gogra to Nyapoora Ghat on the Goomtee lies within the Durriabad District. The sum of 7,389 rupees has been allotted for this road, as marginally shown by the Durriabad Committee.

	Rs.	a.	p.
Road	2,052	2	4
Bridges	5,389	–	–
Total Rs.	7,441	2	4

From Nyapoora Ghat to Roy Bareilly, the road traverses the districts of Sultanpore and Roy Bareilly. The approach to the Ghat on the south side of the river is described as full of ravines and otherwise difficult of construction. The Officiating Chief Commissioner has desired that it may be left alone for the present. He will be glad to be informed whether it has been surveyed in accordance with the instructions contained in my No. 297, dated 26 April 1861, to the address of the Commissioner of Baiswarra. The sums marginally noted have been allotted to this section of the road.

See paragraph 15 of No. 897, dated 15th November 1861, to Commissioner of Baiswarra.

	Rs.
Sultanpore	2,000
Bareilly	700
Total Rs.	2,700

15. The portion of this road lying within this province is within the Fyzabad District, and the Committee attach great importance to its early completion. They have granted the sums marginally noted for this purpose.

Fyzabab to Azimghur *viâ* Tanda.

	Rs.	a.	p.
Road	2,769	12	–
Bridges	4,500	–	–
Total Rs.	7,269	12	–

16. This road also belongs to the Fyzabad District. It is said to be a very important commercial line, connecting Tanda with Mirzapore.

Tanda to Jounpore *viâ* Jelalpore.

	Rs.
Road	1,200
Bridges	4,000
Total Rs.	5,200

17. This line traverses the Fyzabad, Sultanpore, Pertabghur and Roy Bareilly Districts, and connects Tanda on the Gogra with Dalamow on the Ganges opposite the Futtehpore Railway Station; considerable sums have been assigned for the construction of this road by the several Committees, as marginally shown.

The road may be divided into the following sections:—1st, Tanda to Sultanpore; 2d, Sultanpore to Amethee, forming part of Road D. in the Baiswarra divisional Budget; 3d, Amethee to Salone, corresponding with Road I. in the same statement; and 4th, Salone to Dalamow Road N.

Tanda to Dalamow Ghat *viâ* Sultanpore, &c.

	Rs.	Rs.
Fyzabad Road	2,460	
Bridges	750	
		3,210
Sultanpore Road D.	850	
Road I.	500	
		1,350
Pertabghur Road I.	750	
Road N.	481	
		1,231
Roy Bareilly Road N.	–	200
Total Rs.		5,991

18. The first section of this road, from Shajehanpore to Shahabad, corresponds with the last section of Provincial Road No. 7. The second section from Shahabad to Sandee lies in the Hurdui District. It is proposed to construct one bridge on this line at the Heerapore Nullah, and 2,487* rupees have been devoted for the construction of the road.

Shajehanpore to Dalamow Ghat *viâ* Shahabad, Sandee, &c.

* Unexpected sanction of 1859-60.

The third section, from Sandee to Mullaon *viâ* Belgram, should be carried through the important mart of Madhogunge, the direct road from Belgram to Mullaon being given up.

The fourth section is from Mullaon to Oonao. The small portion lying between Mullaon and the large village of Moradabad has not been constructed, although a sum of 3,000 rupees has been set apart for the construction of a bridge on the borders of the

Districts of Hurdui and Oonao, payable in moieties by each, and a further sum of 615 rupees for a bridge across the canal in the Oonao District. The road must be constructed at once. A sum of 3,460 rupees, exclusive of the above, has also been assigned to this road by the Oonao Committee. The last section is between Oonao and Dalamow. For this the Oonao Committee has assigned 466 rupees, but nothing has been allotted to it in Roy Bareilly.

Sultanpore to Cawnpore *viâ* Guneshgunge, Jais and Roy Bareilly.

	Rs.
Sultanpore Road G. - -	3,000
Roy Bareilly - - -	1,000
Total - - - Rs.	4,000

19. The first section of this road corresponds with Road G. of the Baiswarra divisional statement. The sums marginally noted have been allotted to it.

The second section from Roy Bareilly to Behar is Road H., and on this section the large sum of 9,435 rupees has been allotted. From Behar to Oonao the road follows the last section of the preceding road from Oonao to Dalamow.

Futtehghur to Nanpara *viâ* Hurdui, Seetapore and Mullapore.
* Unexpected sanction of 1859–60.

20. The first section is from Futtehghur to Hurdui. A direct road between these places is being constructed at a cost of 2,123* rupees, and 4,400 rupees for bridges.

The second section connects Hurdui with Seetapore. A sum of 423 rupees has been assigned for clearing that portion of the road situated within the Hurdui District, and 1,000 rupees was proposed to be spent on the construction of a bridge on the Hurhurpore Nullah; but this last has not been sanctioned, as the Commissioner thought it unnecessary at present. A bridge over a Jheel at Bhynouree will be completed at a cost of 1,500 rupees, of which 967 rupees will be expended this year. In Seetapore 460 rupees has been assigned for the repairs of this road, and 41 rupees for a bridge.

	Rs.
Unexpected sanction of 1859–60 -	103
Sanction for 1861–62 - -	320
Total - - - Rs.	423

The third section, from Seetapore to Mullapore, is incomplete. A road at present extends as far as Lahurpore, and one is projected from Luckhimpore to Mullapore, which will probably cross the Chouka River at a place marked on the map as Purbutpore. The line from Seetapore to Lahurpore should be extended so as to join this road at Purbutpore, or any other convenient spot. No time should be lost in marking out and selecting the best line for this road.

The last section, from Mullapore to Nanpara, lies within the Baraitch District; although no mention is made of this road in the Baraitch Budget, yet the Officiating Chief Commissioner observes that an assignment is made for a road from Chelaree Ghat to Nanpara *viâ* Seopore, and he believes that this road could easily be connected with the Ghat opposite Mullapore. The Commissioner of Baraitch is requested to report on this point.

Mohomdee to the Ganges *viâ* Pusgawan, Pehlanee, Hurdui and Belgram.

21. The first section of this road, from Mohomdee to Pehlanee, is not yet laid out. It should be surveyed and marked out at once, and as soon as the trial line has been approved by the Deputy Commissioner, land for its construction should be taken up.

From Pehlanee to Hurdui a road has been made, and 382 rupees have been assigned for clearing and repairing it.

From Hurdui to the river a road has been made as far as Belgram, but it must be continued to the river. A sum of 604 rupees has been set apart for the repairs of this section, and 3,306 rupees have been sanctioned for bridges. A further sum of 1,393 rupees for a bridge is in abeyance, pending further report.

22. As regards district roads, it will be sufficient to give a list of them as far as they are known, marking with a cross those to which the Officiating Chief Commissioner attaches most importance. They will be shown on the map by lines and dots, thus —·—·—·—. The names of these roads and the sums set apart by the Road and Ferry Fund Committees for expenditure on them is given in the accompanying Statement.

(signed) *C. Currie*,
Secretary to Chief Commissioner.

APPENDIX U (2).

Circular No. C.—1123 of 1862.

Regular Suits—Revenue Side.

From the Secretary to Chief Commissioner, Oudh, to the Commissioner, Division; dated Lucknow, 16 April 1862.

Sir,

I HAVE the honour, by desire of the Officiating Chief Commissioner, to forward for your information and guidance the following instructions regarding the constitution, jurisdiction and procedure of the Revenue Courts in the disposal of suits of a civil nature. The circulars marginally noted * having been embodied in these instructions, may be considered cancelled. Revenue.

2. On the annexation of the province, his Excellency the Governor General in Council, in laying down rules for its administration, directed that the principle found so beneficial in the Punjab, of entirely excluding from the jurisdiction of the Civil Courts all claims to proprietary and accessary rights in land, and of withdrawing that power of revision which in the regulation provinces, and in the first instance in the Punjab also had been reserved to those courts, should be unquestionably and from the first adopted in Oudh. Thus the duty of investigating and judicially deciding all such claims, was held to appertain to the revenue authorities exclusively, that is to say, to the settlement officer (his decision being open to appeal to his superiors in the Revenue Department) wherever the case might admit of delay, or be of so peculiar and intricate a character as to admit of being satisfactorily dealt with by that officer only, and to the Deputy Commissioner as a revenue officer, in those cases in which a final order could be clearly given, without prejudice to the general interests of the village, and in which hardship and injustice to individual claimants would evidently be entailed by delay.

3. The

18–591 of 21 February 1861.
25–764 of 5 March 1861.
29–952 of 18 March 1861.
55–2359 of 16 July 1861.
63–2564 of 5 August 1861.
57–2395 of 19 July 1861.
17–3000 of 13 September 1861.
Paragraph 7, Circular No. 47–2096 of 24 June 1861.

3. The above orders have, by a late Act of Parliament, been declared to have the force of an act of the Governor General of India in Council. All claims to proprietary and accessary rights in land are then the suits of which (*see* Section 1, Act VIII. of 1859) the Civil Courts in Oudh are barred from taking cognizance by an act of the Governor General in Council, and no decisions passed by the Revenue Courts on such claims can be revised or called in question in the Civil Courts.

4. The suits which, under the above rules, are cognizable by the Revenue Courts exclusively, may be classified as follows:—

(I).—Claims to a proprietary right in land.
(II).—Claims to a sub-proprietary right in land.
(III).—Claims for redemption of mortgage of landed property.
(IV).—Claims to succession in landed property by inheritance.
(V).—Claims for participation in the profits of estates.
(VI).—Claims for possession of groves, or right to the produce of groves between two persons of equal interests.
(VII).—Claims for recovery of rents of former years.

5. When the regular settlement is in progress in a district, all claims of classes I., II. and III. must be referred to the settlement officer. The ordinary Revenue Courts are interdicted from taking them up.

6. In a district in which the regular settlement has not commenced, these suits may be heard by the Revenue Courts, provided that the party suing has been dispossessed of the rights to which he lays claim, subsequent to the summary settlement of 1858–59.

7. But even in this case a discretion is left to the Deputy Commissioner and Commissioner to decide whether the claim is one that calls for immediate trial, or can be allowed to lie over till the regular settlement.

8. It is to be understood as the leading principle that all cases which are of a peculiar or intricate character, or in which a final order cannot be passed without probable injury to the rights of others, or generally in which no hardship or injustice will be entailed by delay, shall be left to the settlement officer to dispose of. A copy of the order referring the petitioners to the regular settlement should always be given to them, and the period of limitation will be computed back from the date of the petition.

9. The settlement with the talookdars being final so far as their right to engage for the estates settled with them is concerned, has swept away a multitude of claims; but still many are preferred for fractional interests in zemindary mehals, maafee or malgoozaree, or for redemption of mortgage, which it is believed do not call for immediate decision.

It is necessary to give more detailed instructions regarding each class of case.

(I).—Claims to a proprietary right in land.

10. These may be sub-divided as follows:—

(A).—Claims to possession of a village or fractional portion of a village, khalsa or maafee.
(B).—Claims to specific lands.

11. Wherever settlement operations have commenced, suits of the above nature are cognizable by the settlement officer only, and are exempt from stamp duty under the provisions of the general exemptions of Schedule B. of Act X. of 1862. If preferred in a district in which settlement operations have not commenced, the petitions must be written on stamp paper, of the value prescribed for petitions of plaint in Clause II, Schedule B. of the said Act. Should it be decided that the claim is not one that calls for immediate decision, and the petitioner is referred to the regular settlement, the Deputy Commissioner may, with the sanction of the Commissioner, refund the value of the stamp duty paid on the plaint, provided no appeal has been preferred to a superior Court against the original decision.

12. As regards claims to possession of a village, or fractional portion of a village, preferred in districts in which settlement operations have not commenced, it must be borne in mind that such claims can only be preferred by persons recorded in the khewut; and that if a man was in possession of his share when the khewut was drawn up and has since been deprived of it, he will be entitled to demand that his possession be maintained according to that record. But if he was not in possession when the khewut was drawn up, his claim cannot be heard now, because in that case the khewut, which professes to be merely a record of possession was incorrect, and is of no validity. The maintenance of possession till the regular settlement, in accordance with khewuts prepared at the summary settlement, will not bar the settlement officer from judicially determining the right of opposing claimants, as against that of the parties whose possession has been temporarily maintained.

12 *a*. As regards rent-free tenures the Chief Commissioner is of opinion, that as the grant of a jagheer in Oudh generally carries with it a proprietary right in the soil when a holding

a holding is released in favour of one or more maafeedars, the Government simply consents to waive its claim to the payment of land revenue on the holding in perpetuity, or for the life or lives of one or more persons specified. This act on the part of Government can in no way affect the proprietary rights in the soil existing at the time of agreement, and those rights must be maintained in their integrity. When then a holding is released for the joint lives of two or more persons, the heirs of each will succeed to all the rights enjoyed by their ancestor, and will be exempt from the payment of land revenue until the decease of the surviving maafeedar, in whose favour the grant was originally made. All claims to a participation in rent-free holdings must be heard as regular suits, revenue side, and judicially decided. Should it be ascertained in the course of such investigations that the grant in dispute has been released in favour of certain persons, under a misapprehension of the true facts of the case, it will be open to Government to reconsider the question of the validity of the grant, and to determine whether it shall be released at all or not.

13. Claims to specific lands in co-parcenary villages should not be taken up in any shape during the present settlement, because, if the claim is decreed, it is impossible to execute it without trenching on the rights of others. Khewuts have been prepared for co-parcenary villages, as far as they can be prepared prior to a khusrah survey, and must be accepted; no claims to be recorded as proprietors in villages, the khewuts of which already exist should be heard. Persons preferring such claims should be referred to the regular settlement.

14. There are, however, claims to specific lands which require to be carefully dealt with, viz. lands declared or claimed as nuzzool. In districts in which settlement operations have commenced, the proprietary right in all patches of land, commonly considered Government property, should be investigated and judicially decided by the Settlement Officer, and a list of all such patches of land as may finally be declared to be Government property, should be prepared and retained in the Deputy Commissioner's office.

15. In districts in which settlement operations have not yet commenced, a list of all nuzzool property should be prepared and claims preferred by individuals, should be heard as "regular suits, revenue side," and should, after due investigation, be judicially decided. Such claims should not be summarily dismissed, on the ground that the property claimed has been declared nuzzool, because, in the great majority of cases, such declaration has been made, may be, by the Chief Commissioner on insufficient data, without full investigation.

(II).—Claims to a sub-proprietary in land.

16. Such claims are not generally directly preferred except before a Settlement Officer. When they are directly preferred prior to the commencement of the regular settlement in a district, they must be written on stamp paper, of the value prescribed for petitions of plaint in Clause 11, Schedule B. of Act X. of 1862. They must be heard by Deputy Commissioners only, and must be decided in accordance with the instructions issued for the guidance of settlement officers, such decisions being final, subject only to appeal in due course.

17. It is in summary suits, and suits for the adjustment of rent-rates, that the issue of a sub-proprietary right is generally raised in a district in which settlement operations are not in progress. In disposing of such claims, however indirectly raised, district officers must be guided by the instructions issued to settlement officers. It will be borne in mind, however, that such decisions in miscellaneous cases are to hold good only for the term of the summary settlement, and will not be binding on the settlement officer.

(III).—Claims to redemption of mortgages of landed property.

18. These are of two kinds:—

(A).—Claims by mortgagers who never gained possession of the land mortgaged to recover the money advanced on the mortgaged land.

(B).—Claims by mortgagees to recover possession.

19. It has been determined to be a just and sound principle, to treat as money debts claims by mortgagees who never gained possession of the land mortgaged to recover the money advanced on the mortgaged bond. These are, therefore, common Civil suits, and cognizable as such by the Civil Courts. Circular, No. 120, dated 13 August 1860.

20. Claims by mortgagers to recover possession may be preferred on plain paper if presented to a settlement officer, pending the formation of a settlement; in all other cases stamp paper of the value prescribed for petitions of plaint must be used.

21. Such claims against talookdars are barred by the Governor General's order confirming the settlement made with them.

22. The following Rules have been issued regarding the period of limitation to the hearing of such suits:

23. When no term has been fixed in the deed for the duration of the mortgage the period of limitation will be that laid down in Clause 12, Section 1 of Act XIV. of 1859,

for suits for the recovery of immovable property, viz. 12 years, reckoning from the date of delivery of possession to the mortgagee. But if a term has been fixed in the deed within which the mortgagee can redeem, that will be the period of limitation. Thus, if the term was only six years, and it has expired, no suit for redemption will lie. But if the term was 30 years, the suit can be brought at any time within that period. In most mortgages in Oudh, however, no term is specified, and to suits for redemption of them the 12 years' limitation Rule will apply.

24. Should it be a condition of the mortgage deed that the mortgager re-enter on the expiration of a certain period, and the mortgagee has nevertheless kept possession, then the cause of action will arise from the date of the expiration of that period, and the 12 years' limitation Rule will reckon from thence.

25. It is by no means imperatively necessary to take up every claim to redemption of mortgage during the currency of the summary settlement. The instructions contained in paragraph 8 of this circular are to be applied to such claims. It will, of course, be understood that should a mortgager and mortgagee appear in court and express a desire to revert to former possession, the Deputy Commissioner will give effect to their wishes.

(IV).—Claims of succession to landed property by inheritance.

26. District officers will not interfere, on the death of a talookdar or other landed proprietor as to the succession, except when such interference is unavoidable, in order to prevent fights or almost certain injury to the property, real or personal. There will almost always be some generally acknowledged heir who will quietly succeed. When this is not the case, the Deputy Commissioner will take such steps as he may deem best adapted for the temporary security of the property, either upholding the party in possession, or determining summarily the right to possession, and delivering possession accordingly, or appointing a curator to collect the rents, and placing the personalities in charge of any unobjectionable member or members of the family or other respectable persons. Immediately on proceeding to take these measures, the Deputy Commissioner must report his intentions to the Commissioner with his reasons, and must again inform that officer when his arrangements are completed. The Commissioner will, of course, confirm, modify, or set aside the Deputy Commissioner's order, as he may deem proper.

27. When succession has been quietly effected, or when a temporary arrangement, as above explained, has been made, all claims must be preferred to the Deputy Commissioner on stamp paper of the value prescribed for petitions of plaint in Clause 11, Schedule B., Act X. of 1862. The decision of such claims should be deferred till the Bill lately introduced into the Legislative Council, and bearing on this subject, has been passed and become law.

28. In paragraph 16 of this Circular it has been ruled that claims to a sub-proprietary right in land directly preferred in a district in which settlement operations have not commenced are to be heard by Deputy Commissioners only. Similarly all claims to succession in talookas, *i. e.*, estates the proprietors of which have received a sunnud, must be heard by Deputy Commissioners only. All other suits of the four classes heretofore detailed may be heard by Deputy Commissioners or Assisstants with full powers. In suits involving claims to succession in talookas, a copy of the decision will be forwarded at once to the Chief Commissioner through the Commissioner. This latter officer may, in the event of no appeal being preferred, and it seeming necessary to do so, make any further inquiry personally or through the district officer, and in forwarding the papers to the Chief Commissioner will enter fully into all matters which the Deputy Commissioner may not have thoroughly explained, or on which he may disagree with him, and will distinctly record his own opinion.

(V).—Claims for participation in the profits of the estates.

29. In the older provinces the action of the revenue courts is confined to the enforcement of a rendition of accounts; but in this province, where judicial and fiscal functions are united in one and the same officer, there is no reason why an order for the rendition of accounts should not be accompanied by a decree adjudging the amount due according to the accounts so rendered. Claims for participation in the profits of estates and claims for rendition of accounts will be held synonymous. They will be cognizable only when preferred by persons recorded in the khewut, and if brought to recover dues of the preceding year, will be heard as summary suits; but if of former years, as regular suits, revenue side. In the latter case the petitions must be written on stamp paper of the value prescribed for petitions of plaint, and may be heard by any officer vested with full or special powers. Claims against agents will be treated in the same manner as claims against a lumberdar.

(VI).—Claims to possession of groves or right to the produce of groves between two persons of equal interests.

30. These have been variously treated as regular suits for rights in land and as cases of ouster. Under the Native Government permission to plant groves was freely given by the landlord to Brahmins, Bunyahs, and other persons possessed of no proprietory interest in

in the soil. The claims now preferred arise either from the possession of the grove, or the right to the produce being contested between two persons of equal interests, or from the attempt of the zemindar, who is owner of soil on which the trees stand, to take rent from or eject the occupant of the grove.

31. If the claim is of the former character, it should be heard as a regular suit, revenue side; stamp paper of the value prescribed for petitions of plaint must be used; such cases may be heard by any officer vested with special powers.

32. If the suit arises from an attempt of the zemindar to take rent from or eject the occupant of the grove, it must be treated as a summary suit between landlord and tenant. The zemindar has an undoubted right to demand rent for the land, for the trees are generally a source of income, and if not, the land might be made so; but if the owner of the grove is willing to agree to a fair rent, he should not be ejected from possession.

33. In either case the Deputy Commissioner can, if he thinks necessary, put one party in possession pending the settlement of the claim.

(VII.)—Claims for recovery of rents of former years.

34. Such claims require no specific instructions. They must be preferred on stamp paper of the value prescribed for petitions of plaint, and may be heard by tehsildars within the limits of their jurisdiction in purely civil suits, viz. 100 rupees.

35. The practice of referring suits of any of the classes mentioned in this circular to tehsildars for inquiry, and deciding the case chiefly on their report, is irregular and strictly interdicted.

36. The Rules of Procedure prescribed by Act VIII. of 1859 for civil courts will be followed in the trial of regular suits, revenue side. The evidence in such suits as well as the decision will be recorded in English whenever the investigation is conducted by an European officer. The same rate of fee for the issue of processes as has been prescribed by the Judicial Commissioner for civil suits will be exacted. The deciding officer will, in writing his decision after giving the names of the parties and the subject of the suit, state the value of the suit and of the stamp on which the suit was admitted, and briefly note the mode in which the value was calculated.*

* *Vide* Notes, Clause 11, Schedule B., Act X. of 1862.

37. Copies of decrees and judgments in regular suits, revenue side, are exempt from stamp duty wherever the value of the suit is less than 50 rupees under the exemption in Clause 5, Schedule B., Act X. of 1862.

38. Regular suits, revenue side, cannot be admitted for the purpose of setting aside summary decrees. Persons dissatisfied with the decision of any officer in the summary suit Court, can appeal as a right up to the Commissioner, whose decision will be final, the Chief Commissioner retaining to himself the power of admitting an appeal from the Commissioner's decision on a point of law, but not of facts.

39. Cases of the several classes enumerated in this circular will, when heard by the district courts, be included in the business statement under heading 48 A., regular suits, revenue side. A memorandum should be added at the foot of the statement showing the nnmber of each class of case disposed of during the period for which the statement is prepared.

(signed) *C. Currie,*
Secretary to Chief Commissioner of Oudh.

(No. 103.)

From Lieutenant Colonel *L. Barrow,* C. B., Officiating Inspector General of Police in Oudh, to *C. Currie,* Esq., Secretary to Chief Commissioner of Oudh, dated Lucknow, 10 April 1862.

Sir,

I HAVE the honour to submit, for the Chief Commissioner's perusal, the annual reports of the district superintendents of police, and to offer some observations on the police administration of the past year. The Returns † that accompany this Report will show the working of the police, and some improvement as compared with the previous year.

† A. B. C. D. of Appendix.

2. From cognizable and non-cognizable crimes having been mixed up under the heading "Other Miscellaneous Crimes" for 1860, those offences have been omitted in the Comparative Return A; but exclusive of these, during the present year, there have been reported to the police 16,986 offences to 12,604 in the previous year; and deducting those

Cases reported and dealt with in 1860-61.

CHAP. XV. Oudh.

in which plaintiffs did not desire to prosecute, 8,450 cases were dealt with in 1861 to 6,114 in 1860; the general results for the two years are as follows: *—

* *Vide* Appendix A.

——	Number of Cases in which Complaint was made.	Persons Apprehended.	Acquitted.	Convicted.	Per-centage of Acquittals to Apprehensions.	Per-centage of Convictions.	Transferred, Escaped, or Died, or Remaining.
1860 -	6,144	9,157	3,540	5,331	38·65	58·21	3·11
1861 -	8,450	9,329	3,254	5,702	34·68	61·12	3·80

The acquittals, it must be observed, include not only those tried and acquitted, but those arrested and released without trial.

Value of Property stolen and recovered.

3. The value of property stolen is entered according to reports made at police stations, and is no doubt considerably exaggerated. The amount recovered is, therefore, not a fair proportion to what is actually stolen, but it is impossible to say what per-centage this bears to the reported amount. The reported value is 3,88,853; this to 3,66,244 last year; 52,246 rupees worth being recovered in one year, and 50,020 rupees in the other.

Increase and decrease of crimes in 1860-61.

4. "Thefts by housebreaking or house-trespass" is the crime that shows the largest increase during the year. "Cattle thefts" are rather more, and "ordinary thefts" slightly less; but the change in nomenclature of crime has something to do with these variations. In heinous crimes there are 134 murders and attempts—this to 130 last year, and 59 culpable homicide to 43. In "grievous hurt" and "rioting" there is a great decrease of crime, and it is matter of congratulation that an offence which was so common in this province, ordinarily caused by violent land disputes, has so much diminished. "Robbery" and "dacoity" are also both on the decrease, the proportions for the two years being 29 so 24 of "dacoity," 76 to 44 of "robbery with hurt," and 184 to 87 of "ordinary robbery." Rapes have increased from 36 to 60, whilst then some heinous offences show a decrease. On the whole there has been an increase of crime reported, and it has been more successfully dealt with.

Enquiry by police in theft cases. *Vide* Appendix A.

5. It will be noted that there are a large proportion of thefts in both years, which were not taken up in consequence of plaintiff not appearing; and in 1861 the number of burglaries and thefts not taken up on this account increased by more than 2,000, being 8,529 for that year to 6,447 in 1860; this arises from the rule having been more strictly enforced, that the police shall not interfere in such cases when unattended with personal violence, unless on application from the party who suffers. I would here observe that Clause 2, Section 2, Regulation 2 of 1832, inhibits inquiry by the police, in cases in which no written application is received; but this law is one of those about to be repealed by a Bill now before the Legislative Council. The rule then for police not to interfere when plaintiffs do not seek inquiry will become a special one, for there is nothing in Act XXV. that prohibits such investigation being made by the police after a theft is once reported. I merely desire to note that the law is not quite clear on this point, for by Section 135 the enquiry is compulsory, and the provisions of Section 136 scarcely relieves the police from taking up a case if reported; but if any other interpretation than the present one was placed on these sections by judicial officers, officers in charge of police stations would never be at rest nor the people either, and a further consequence would be a most extensive concealment of crime.

Working of the police.

6. The four first returns in the Appendix will show more particularly the working of the police for the past year. The Table B. gives the per-centage of cases and persons convicted in the nine most heinous classes of offences. Out of 575 cases reported, in 474 of them apprehensions followed, and 443 were tried, in 321 of which there were convictions; the apprehensions were more numerous than they will be again I hope; for 1,269 persons were arrested, of whom 770 only were convicted, or 60·67 per cent. to the number tried. Dacoity and highway robbery have not been successfully prosecuted; there are always a large number of arrests in these cases; the average of persons convicted is consequently bad. The police are prohibited from taking up charges of rape, except on complaint of relations of nearest degree; but the charge still appears to be frequently made on slight grounds; for of 59 persons tried for this crime, 31 were convicted and 28 acquitted. In other crimes the return shows a fair average of success.

Annual Abstract of Crimes. Appendix C.

7. The Annual Abstract of Crime exhibits the whole of the cognizable cases (17,647) reported to, or taken up, by the police during the year. Non-cognizable crimes are not now included in the Return as complainants are referred to the magistrate; the police, however, perform the work of process-servers in such cases, but only act under the magistrate's order. There is a most distinct ruling as to the crimes police can deal with on their own motion, and the Criminal Procedure Code, Act XXV. of 1861, has been strictly acted up to during the past year under the provisions of the preliminary Act XIII.

8. In

8. In cases taken up by the police, the four quarters of the year exhibit a gradual improvement in the per-centage of cases brought to trial as follows:— Per-centage of cases brought to trial.

		Per cent.
Quarter ending 31st March	1861	55
„ 30th June	„	55·43
„ 30th September	„	61·98
„ 31st December	„	62·74

9. The per-centage of cases and persons convicted for the four quarters is— Per-centage of cases and persons convicted.

		Cases.	Persons.
Quarter ending 31st March	1861	65·36	57·26
„ 30th June	„	77·47	68·06
„ 30th September	„	78·61	63·52
„ 31st December	„	77·58	66·01
Total for year	„	74·83	63·88
For 1860, it was		0	58·21

10. The Return D. will show the average work of each district, but I would not condemn those showing indifferent per-centages. Average work of each district.

The duration * of cases before the police I believe to be satisfactory, and that work is really very expeditiously disposed of; if it were not so I think complaints would have reached me from the Judicial Department; but from the reports there would appear to be no fault found on this score; and as regards the detention of prisoners only for 24 hours by the police, the rule is rigidly enforced, and no inconvenience whatever has arisen from the old period of detention being shortened. The per-centage of convictions on evidence first adduced by the police is in many districts very satisfactory, and it is a point in which the police will improve; eventually very few cases, it is hoped, will go up with insufficient evidence. The European officers have been enjoined to check any tendency there may be on the part of the police to keep back evidence in favour of defendants, and the instances are, I trust, of the rarest in which prosecutions are not *bonâ fide*; had there been a contrary tendency, I think such a delinquency should have been brought especially to notice, but during the whole year no such report has reached; and as the District Superintendent chullans every case in English, the evil can hardly exist in reality. * *Vide* Appendix D.

11. In the report of convictions and acquittals, I am dependent on returns that reach me from police officers, which necessarily differ in many respects from the magistrate's returns; for until the last quarter of the year, when orders were issued in Chief Commissioner's letter, No. 1,421, many cognizable cases were taken up by magistrates without any intervention of the police of which we know nothing. The result of committed cases also are not reported to us, so that these returns will bear no comparison with any judicial ones without a chapter of explanations. It would appear advisable for the future that the police returns should end with the report of crimes and apprehensions made by them, and that the magistrates should begin with the convictions and acquittals, the results being reported to this department by Deputy Commissioners. Convictions and acquittals.

12. An examination of the Returns shows a preponderance of crime in no particular district, according to what is reported,† excepting perhaps Fyzabad, which is, however, a large district. Roy Bareilly and Luckhimpore have always been light in crime, the latter so much so as to have called for investigation, but there appears no reason to believe that it was concealed there, more than elsewhere; the land disputes which are generally those under the headings "Aggravated Assault" and "Rioting" have much decreased, particularly in Fyzaban and Sultanpore, the two districts in which these offences were very prevalent Crime in districts.

	Cognizable Crimes reported.	Cognizable Crimes taken upon complaint.		Cognizable Crimes reported.	Cognizable Crimes taken upon complaint.

prevalent the previous year.* The returns give a large increase in the reports of different kinds of theft; but beyond this no district has a speciality for any particular crime except Oonao, which still shows a large number of murders † than any other, whilst it is pretty free from other heinous crimes. In previous years and up to May 1861 these murders were effected by strangulation in a particular portion of the district. A force of extra police was therefore located on the spot; and since June last this crime has taken a new form—that of poisoning or drugging for the sake of robbery, and has been committed in different parts of the district; only one of the poisoned men died in these cases. It would appear, therefore, that death is not the object of these robbers.

Strangulation and poisoning cases. ‡ Appendix E.

13. These strangulation and poisoning cases are both described in an Appendix ‡ of this Report, and in special reports to the Chief Commissioner. The measures taken to put them down are also given in the Appendix; our best police officers have been in turn employed on the spot; and during the year the Thuggee Department, with their superintendant, investigated some cases without success; the Commissioner also, with a separate agency, attempted without avail to unravel the mystery; and the civil officers of the district paid much attention to the subject, giving the police all the aid in their power. The perpetrators, who no doubt came from the other side of the Ganges, invariably attack travellers, and the dead bodies of those killed by strangulation have not been recognized. This renders discovery extremely difficult.

14. One murder by strangulation, which was committed by our own agents with a view to secure reward by fixing the crime on certain budmashes of the district, was cleverly discovered by the police, and one constable and two informers were hanged for the offence.

15. Oonao is the great thoroughfare into Oudh; and although murders by poison have been more frequent in the North Western Provinces and Punjab than even here, they have not extended to our other districts, except Lucknow, where a few cases of robbery by poison have occurred. In the former province a special officer is, I believe, investigating these cases, and in the latter one man appears lately to have confessed to no less than 19 murders by poison. Murder by strangulation has, I trust, ceased for good, and the poison cases have latterly been mostly unsuccessful attempts, or more probably merely cases of drugs being administered for the sake of robbery, and not with the intention of producing death. I trust, therefore, under the arrangements now made, there will be an end to them also. The map that accompanies the Appendix will show how the murders were first confined to a particular spot.

Extinction of rebels.

16. The year under report has seen the extinction of the last remnant of the rebel sepoys who took refuge in the jungles in this province. On the Gonda and Goruckpore boundaries there is an extensive belt of jungle in which, as far back as 1859, several rebel sepoys took refuge; the police have more than once been in conflict with them, and five posts were kept up in order to watch the jungles, but have now been discontinued, the two last of the rebels having, one been shot, and the other transported; the civil authorities had, however, to put great pressure on the landowners before this desirable result was attained; such a dread had these sepoys established that the people were afraid to act in concert with the police against them.

Forgery cases of Gonda.

17. In Gonda also a very extensive forgery was discovered and ably prosecuted; as many as 48 forged seals were found, both of our own and the old Goverment kutcherries; this case was reported in letter No. 389, dated 26 November last.

Heavy crimes.

18. It would be recapitulation to detail the various heavy crimes in which the police have acted, as they appear in the judicial reports; and, excepting the more frequent murders in the Oonao district, there has indeed been no organized crime in the province to deal with; such crimes as have been committed neither in number nor atrocity are in any way in excess of the ordinary state of things.

Lucknow city.

19. During the year the city police has been unavoidably subject to many changes of superintendents; but the organization has, I am sure, been improved, although there has been a reduction of annual expenditure from 92,244 rupees to 77,844 rupees.

20. The mounted constables have been entirely done away with. The system of "patrols," which had been under trial, was discontinued, and "beats" again established. The police posts have been, in the latter part of the year, much more scattered; and I think Mr. Blenman's remarks on the present system and working of the Lucknow police deserves attention. Dacoity, or *what is called such*, in the city is well described in the superintendent's report. In the 10 cases which occurred during the year none of that violence designated the crime that the title would import; it became dacoity from the number engaged and from arms being carried, but no marked violence ensued. The police failed in putting a stop to these dacoities until the last months of the year, when a clue was discovered to the gang; and since their prosecution, though no conviction ensued, the crime has ceased, and indeed for some months heavy burglaries have so also.

21. The

21. The Returns for the four quarters show a gradual decrease of crime—

	Cognizable Cases Reported.	Cases in which Apprehensions were made.
1st Quarter	428	244
2d „	396	213
3d „	222	217
4th „	230	230
	1,276	904

Of the above—

852 cases were tried and 658 cases were convicted,
1,263 persons tried and 840 persons convicted.

These returns, if indifferent, are not so remarkably so as to call for much comment or stricture.

22. There is a good deal of miscellaneous work required from the Lucknow city police, which would appear to be more properly a tehseeldar's work.

The superintendent details 395 cases of this kind, which have occupied much of his time. Police interference in many of them was undesirable, but the city magistrate would appear to be hampered for means otherwise to dispose of such cases.

23. The following are the heavy crimes in the city during the past year, the result of which is shown in the city annual report:—

Murders	10
Dacoity	10
Robbery with hurt	2
Robbery	2
Coining	5

24. The mode of making and uttering false coin is described in the Report. Since the close of the year some offenders have been successfully prosecuted for this crime. Altogether the city during the year has been very well conducted, there has been but a single case of "riot," and but very few of "aggravated assaults," which speaks well for a large city not accustomed in past years to much law or restraint.

Accidents.

25. The Return which accompanies Appendix F. shows 3,361 persons killed by various accidental causes, and 316 injured; the deaths by falling into wells, &c. (1,660), attract notice. The police under the magistrate's orders see that wells are covered in, and punchayets are assembled on occasions of death, but no suspicion appears to have attached to this class of cases, nor have the police investigations been commented on. I have therefore abstained from directing further interference; but the number of accidental deaths calls, I think, for the magistrate's attention.

Arms.

26. The arms taken during the year are few in number, comparatively speaking (3,588 of sorts); under the new law no officer can search except under the warrant. In cases of dacoity and in searching houses for other stolen property, arms are constantly found concealed; this is the only indication we have that the search in 1858–59–60 did not quite clear the country of weapons.

Strength of Oudh police. *Vide* Appendix G.

27. The Oudh police on the 31st December 1860, and on the same date in 1861, shows a considerable reduction in number and cost:—

	Number of Men.	Cost.
		Rs.
December 1860	9,218	15,99,200
December 1861	8,253	13,29,324
Decrease - - - *Rs.*		2,69,876

This reduction was in a measure effected by putting a stop to recruiting, and partly by gratuities; the efficiency of the force has suffered in no way by the reduced numbers. Magistrates object to the mofussil police being decreased; but to effect further reduction Deputy Commissioners must yet give up some stations. I am convinced that the work may be equally well done with fewer posts and fewer men, particularly when the jurisdiction of the different stations is properly rectified, and this work has been put in hand.

Police expenditure.

28. Under the present budget system, the expenditure shown under the head police for next year is 11,72,898 rupees, the remainder being chargeable to revenue, judicial and gaol, as per Return H. This might be reduced to 10½ lacs; but it will require some care and

and consideration to effect, as it will be observed by the district officers' reports that the constant large reductions in the force has, in their opinion, caused much discontent and distrust. This feeling is, however, I am of opinion, only temporary, and everything tends to show that police service is still extremely popular with all grades. I should wish, however, that a limit was at once fixed to our police expenditure; and having reduced it to that, there would be an end of the matter. For a population of eight millions and 28,000 square miles, 11½ lacs of rupees does not appear excessive. By a studied economy, however, the force might perhaps be reduced to 10½ lacs, and for the present, with this view, recruiting has been again stopped.

Reductions and changes.

29. Besides reductions some effective changes have been made in the constitution of the force; there have been some modifications in the grades of European officers, with a slight decrease in the amount expended on that agency, as shown in the Return G.; the native commandants, soobadars and jemadars, a portion of the former military system, have been done away with, and inspectors and chief constables have superseded those denominations; this change has lessened the military element in the police, which was desirable; and on this point I would observe that little is done beyond keeping up sufficient drill to make the men smart, march together, and teaching them how to use their arms. The baton has superseded the musket on most duties, except over gaols and treasuries. Each man does not get on an average more than six weeks' drill and instruction during the year, which is sufficient.

Inspectors.

30. As regards the inspectors, they are the most useful body of officers in the force; all district superintendents speak of the advantages derived from having this well paid respectable class; they are made altogether responsible for their circles, and an active supervision is thus established over all the lower grades. One great effect of the system is the improved relations of the police with the people of the country, and during the past year the one great improvement I believe to have been the superior tone given to the force.

Office establishments.

31. During the year, amongst the changes (beneficial it is hoped), regular office establishments and moonshees have been done away with altogether, and both English and vernacular work is now entirely done by members of the regular force; at the same time the writing work was very considerably reduced at station-houses and in the district superintendents' offices. Arrears are not allowed, and at the end of the year there were no unanswered references. The evil of making work by clever moonshees was fast gaining ground when they were swept away, and the advantages of the present system are now fully admitted. Educated men will be provided from existing material, and an impetus has been given to education in the police which deserves notice.

Schools.

32. Schools had previously existed in name only, but during the last six months of the year the average daily attendance has doubled what is shown in the Return I. as the average for the whole year. Several native officers (and Sikhs amongst them) have, from profound ignorance, become scholars enough to write their own roznamchas; the force will never again have to go into the umlah ranks for station writers, and an attempt is now about to be made to impart some judicial instruction to the superior officers of police; it has been found that to a certain point in criminal cases many police officers do well enough and show great acumen, but they fail in the end in adducing proof; they do not know at all what amount of evidence is required to convict. I now propose to turn out officers in the police with some idea at least of the "law of evidence."

Recruit boys.

33. As another means of providing also a class for the police in future years from our own resources, a boy establishment (as before reported and sanctioned as an experiment) has been added to the force at no extra expense to Government; the testimony is universally in favour of this system, and the boys in several of the schools are well enough advanced to send to the higher district schools of which we avail ourselves; some of them are readers, and are made use of to give *vivâ voce* instruction to the men in the force (who cannot read) in the Acts and regulations appertaining to police, and hereafter no one will have the excuse that he acts in ignorance of regulations. The boys, besides drill and instruction, take duty as orderlies in our Court; they will be feeders to the force, and of great advantage to it hereafter.

Education movement in the police.

34. The education movement in the police has exemplified in a small way how readily natives will take to instruction if offered to them. As one instance, in the Seetapore district, besides those in the police school, no less than 19 men attend the American Mission School, viz., one deputy inspector, four head constables, and 14 constables; of these 18 learn English. One constable is so far advanced in English as to be learning arithmetic and history. The Rev. Mr. Grasey states that the men who are learning are most persevering. The attendance of these men at the school is quite voluntary on their parts; in fact, they had commenced attendance before the district superintendent was aware that they had done so. The men who attend this school are of the castes named in the margin. About 550 of all ranks are now receiving a really practical education, and the whole force in turn have *vivâ voce* instruction in all police procedure. Recruits are besides compelled to attend the school as a portion of their education as policemen. These arrangements for instructions are made without any expense whatever to Government; but when, as it is hoped soon will be the case, something is done for education in India, small grants-in-aid may be proposed.

Musselmen	3
Brahmin	1
Kaiths	2
Shepherds	2
Rajpoot	1
Seikhs	4
Kahar	1
Sweepers	2
Jaut	1
Bhaut	1

35. The

35. The proportions of castes in the police have been attended to, and the enlistments have been chiefly amongst the higher classes, of which there is even yet a deficiency; the number* as they exist, and as they are ordered, are— Castes.

Vide Appendix J.

	Ordered Proportions of Castes.	Existing Proportions.
1. Mahomedans - - - -	1,000	1,033
2. Brahmins and Rajpoots - -	2,000	1,198
3. Hindoos of lower caste - - -	3,500	3,727
4. Seikhs and Punjabees - - -	2,000	2,414

These lower caste men are generally inferior as policemen, and they are wanting in education and intelligence; the ordered proportion of inferior castes is too large, and I would reduce them by 500. Passees, as a rule, do not like the regular service, or work well, out of their own immediate circle. The Seikhs and Punjabees appear to take to the country, and the higher grades amongst them have turned out many very good officers. There is a good deal to be said, perhaps, in regard to the advantages of the police being more a local body; but I should regret to lose the Punjab element.

Rural Police. *Vide* Appendix K.

36. In 34,487 villages there are 28,642 chowkeedars on our returns; they have worked well, and as rural police have been of great assistance to the regular force, who are in a great measure dependent on them and zemindars for the report of crime. There are, of course, many instances in which they could have detected it, and have failed. They are often themselves the criminals. I have, I regret to say, no reliable returns which show from what classes during the year the largest number of criminals have sprung. The gaol returns will, no doubt, afford the best information on this point; but as far as police reports go the passees are not responsible for the greatest amount of crime. It will be needless now to touch on the dissatisfaction expressed during the year in regard to the remuneration of chowkeedars; their transition state from receiving a regular monthly allowance from Government, and again reverting to the system of payments in land or grain, caused the discontent; but the Chief Commissioner's recent orders will correct this. Chowkeedars have not now a hard time of it; they have to report if a crime occurs; but otherwise once a fortnight or once a month, according to distance, is all that is required of them. The amount of crime reported thus is in excess of the previous year; apparently, therefore, they do their duty.

Rewards to chowkeedars.

37. The Return (I.) shows that there has been no very liberal distribution of the Chowkeedary Fund, and it would be of great advantage if this money was in the hands of district officers to be distributed under proper checks. In the Khyrabad division, from being better remunerated, they are more disposed to aid the police than elsewhere. The chowkeedars are the natural police of the country, and I think a system has yet to be worked out by which what is called regular police will be reduced, and some organized system devised to deal with crime more through the village police; and this subject may hereafter be brought more prominently to notice.

Rewards to regular police.

38. The same Return (I.) shows the rewards given by magistrates in the regular force. A few district officers pay their police well for good service. New rules have now been introduced by which the police officers can reward.

Punishments.

39. I am still inclined to think that so much of the military regulation should have been retained as would have admitted of police officers flogging their own men up to 20 or 30 stripes under the confirmation of the inspector or deputy inspector general for particular classes of crime, such as "disgraceful conduct," "violence" to the people of the country or prisoners, and any marked disobedience not quite amounting to mutiny. Many good men are lost to the service, because dismissal is all that officers have to fall back on. Police officers object to fine, and rightly so; it impoverishes men, and increases the chance of their resorting to corrupt practices. Confinement also, which involves forfeiture of pay, is for the same reason unpopular; frequent dismissal is the consequence, and we thus lose trained men when a dozen lashes would have afforded a wholesome example to others, and would save a man being thrown out of employ to join malcontents. The service would be more popular if dismissal was less frequently resorted to. I strongly advocate, therefore, the punishment of flogging to the extent of 30 lashes, guarded by such restrictions as would prevent its being much resorted to; this more particularly, as district superintendents have no magisterial powers, and cannot punish their own men under Section XXIX. of Act V., and the inspector general's powers as a magistrate over his own men are also limited in this respect; as it has been ruled that he cannot punish without a regular trial before himself, it is obvious he cannot try on the spot, and it would be equally inconvenient frequently to drag witnesses to head quarters for investigation. It appears to me that such cases of our own men as require severer punishment than can be given under Section VII. of the Act, should be tried by district superintendents, and the sentence be confirmed by the inspector general on the record. Three months' imprisonment is all we are permitted to give our own men, and there seems to me no sufficient reason for placing a restriction which virtually negatives this power.

Town police. *Vide* Appendix L.

40. Lucknow and Fyzabad are the only cities requiring anything like a special police, though several towns, as shown in the Appendix, have a small separate force; in these latter the men are local, but are under the orders of the police officers, and subject to the same rules as other police when the number is less than eight.

Pound fund.

41. The Pound Fund receipts, disbursements, and balance are shown in the Appendix (M.); a net balance remained at the close of the year at the disposal of Government, after paying all expenses, of 11,736 rupees.

Superannuation fund.

42. During the year the superannuation fund has been established under the provisions of the Police Act. Subscriptions of constables have been fixed at half anna per rupee, and all above that grade at one anna; the rules have already been submitted and approved of. It will be an admirable provision in future years, and save much expense to Government; but it should fall on the State, I think, in the first instance, to undertake a portion of the pension of men of the late army who have done good service, but had only served from 10 to 15 years before transfer to the police. The ruling has been as yet that the fund shall pension all who had not served 20 years in the army, and that Government should pension all above that period. The services of men sent by the Rajah of Puttialah and other independent chiefs should reckon towards pension in the same way as service in our own army. The men of this police entered the service on the full understanding that their previous service would reckon for pension as if they had remained in the army; but the Government letter No. 13, dated 7th January 1862, forwarded with the Chief Commissioner's No. 139, dated 16th January 1862, upsets this understanding.

General police fund.

43. The sum of *Rs.*15,484. 13. 6. has been saved by guards furnished to the military and to private parties by the service of processes (which is only 1,344 rupees) and savings from establishment, which latter item is in addition to the saving of 2,67,876 rupees, effected by reductions in the force (elsewhere noted). In Appendix (N.) a detail of these items is given, which is only for the last few months of the year, when the Act was declared in force in Oudh. The sum of 15,484 rupees, a saving from the Budget Estimate of 1861–62, might be kept in deposit, and appropriated to the repairs of stations during the next year.

Police stations.

44. The police have been very indifferently located as yet, but in consequence of the reductions (previously exhibited) 32 station houses are now being built from the savings effected during the year, and they will be completed before next rains. I trust the remaining stations may be built by other savings.

Court duties.

45. During the past year the police have taken up in the magistrates' courts the Nazir's work, they serve all processes, bring all cases complete before the magistrate, and are responsible to him for these duties. A marked improvement has taken place in the way charge sheets are forwarded. Every case now sent to a European magistrate is submitted in English by the district superintendent, or in his absence is prepared by his assistant (if he has one), or by the head quarter inspector. There is no running after magistrates with chullans; if he takes his court into the district, his court officers accompany him, and summon all parties required by him direct from camp. The charge sheets contain a good history of the case, and should be of much aid to the magistrate; the object enjoined on police officers is to assist the judicial department in every stage of a case to the utmost. The work in courts has, I am assured, been satisfactorily done, and every criminal court of the province, except the honorary assistant magistrates', is now provided with properly qualified officers for the duty. With the facilities afforded us by the Judicial Commissioner in rules lately laid down for the conduct of business, and by the assistance of the magistrates, there is ample room for hoping that in the next year criminal cases will be brought before the courts in a more satisfactory and expeditious way than has ever yet been known. The police have the means at their disposal, and for the future should be held very strictly responsible for any delays caused by them, either in cases taken up of their own motion, or cases in which the magistrate calls on them to act.

District dâk.

46. The district dâk arrangements are indifferent in some instances, and cause delays in the transmission of orders; it has for some time past been understood that the district postal service would be undertaken by the General Post Department, but nothing has as yet been done to relieve the police from the delivery of letters; but I am not at all sure that the business of our Courts would not be expedited if the district dâk arrangements were altogether in our hands, and I believe it could be done as economically, if not more so, by paid hurkaras attached to the police, who would then, of course, do the general public service of delivery of letters as well as the Government service.

Honorary assistant magistrates' courts.

47. Although the officers are only now being attached to the honorary assistant magistrates' courts, the police have performed such work as serving processes, or summoning witnesses; they chullan and prosecute cases before the honorary magistrates when necessary; and it is most satisfactory to note that there have been no complaints against the police; or, to be particular, I may add, one talookdar magistrate, in one instance, mentioned the delay of the police in replying to his requisitions. I last year reported on the valuable aid received from talookdar magistrates, and this year I can fully confirm previous conviction that they are most admirably adapted for the position they hold; that the ability they show, and the cordial co-operation they give to the police, is an immense addition of strength to that body, and supports their authority in the country; it is to their influence and to their working of the passees (village police) that detective success must generally be attributed.

Talookdar's relatives in police employ.

48. Some of our native police officers are selected from the families of the talookdars. Maharajah Man Sing, Rajah Hurdui Buksh, and others, have near relatives in the police. And here I would with deference note the working of the rule that officers should not serve in districts in which they hold land; it appears to me that it is in such positions that their services are of more value; for instance, Man Sing's son-in-law has worked out in his estate some very good cases, but removed to another district he will not be nearly so efficient an officer. Our honorary magistrates act as judges in their own estates, yet when

when a man enters the regular service of our Government, it is ruled that he cannot serve, whether as magistrate or police officer, near his own land; yet it would seem reasonable to suppose where a man's best interests be, there he will exert himself to the best of his ability; in fact he would be less likely to disgrace himself in the immediate neighbourhood of his home than anywhere else. We ignore the value altogether of local knowledge and experience, and make it a rule for every Government servant to serve where he is least known and liked. I venture to express an opinion that superior officers, whether European or Native, will do the best work in the locality in which they have some personal and vested interest. I am aware there are many arguments against such a system, but they hardly outweigh the advantages.

Advantages of criticism to police.

49. Under the present system the police will, of course, be subject to criticism from the authorities trying cases brought up by our agency; but the most beneficial effects have already, I venture to say, been derived from this; so long as the departments were one, the police were subject to no strictures, however unlicensed and unbridled their course; little was heard of it, until complaints had become so loud of the tyranny and oppression of the system that inquiry could no longer be put off. During the past year the new system has been fully worked, and the rules for guidance by the preliminary Act XIII., which were entirely in accordance with the code introduced on the 1st of the present year, have been acted up to, subject then, as it now wisely is, to checks in regard to confessions and detention of offenders, and subject to an almost inquisitive supervision by the judicial officers, who can review every act as it comes before them in every case; the police are compelled to refrain from acts that formerly brought them into such public ill-repute.

50. For the future they will get no more credit than they actually deserve; and whether or no judicial officers are right that under the existing system police are not so successful in the detection of crime as they were of old, or whether police officers are correct in asserting that even in the now raw state of the system they are quite equal as detectives, it matters little, in comparison to the fact, that police must, of necessity, now be more respectable; their actions are under some check. Bribery, corruption, violence to prisoners, oppression of the public at large, will all be exposed so long as the departments are separate and distinct; and here I would report that a rule has been adopted in this province that no relatives of the judicial or civil native establishments shall be admitted into the police. By inquiries instituted last year, it appeared that large numbers had crept in, and many valuable men have now been relieved from police employ in consequence of the rule. This may give rise to some unpleasant feeling, but it should be borne in mind that it is no disrespect to the highly educated classes filling our courts that this is done; it is simply with a view to prevent anything like an amalgamation between the two departments, for an unity of interests in the lower native grades often defeats the best efforts of our officers to check irregularities.

Detection under new and old system.

51. Whilst advocating, however, the advantages to the police arising from the scrutiny maintained by the judicial department over their proceedings, I would beg to make a slight notice of such comparisons as have been drawn from time to time in regard to the detective ability of the police under the present and former system. Attention being directed to this point, it will be found that there is the same want of success as of old in theft, burglaries, and robberies; but on the whole there is no remarkable deterioration, for taking the Punjab in the last year of its police under the old system and Madras, Oudh in the past year bears comparison as shown in the following two returns:—

No. 1.—COMPARATIVE STATEMENT showing the Number of Cases (cognisable by the Police) Reported; the Number of Cases in which Apprehensions were made; and the Per-Centage of "Cases Apprehended to Cases Reported" in Oudh, the Punjab, and Madras.

Name of Province, and Year.	Number of cognisable Cases Reported.	Number of Cases in which Apprehensions were made.	Per-Centage of Cases Apprehended to Cases Reported.	REMARKS.
Oudh, 1861 - - - - - -	9,110	5,357	58·81	
Punjab, 1859 - - - - - -	23,693	12,905	54·46	
Madras, 1859 - - - - - -	17,434	9,565	54·29	- - Apprehensions include cases pending at close of former years.

No. 2.—COMPARATIVE STATEMENT showing the Number of Persons brought to Trial for Offences cognisable by the Police; Number of Persons Convicted and Acquitted; and Per-Centages of Convictions and Acquittals in Oudh, the Punjab, and Madras.

Name of Province, and Year.	Number of Persons brought to Trial.	Number of Persons Convicted.	Number of Persons Acquitted.	Per-Centage of Persons Convicted, to Persons Tried.	Per Centage of Persons Acquitted or Released, to Persons Tried.	REMARKS.
Oudh, 1861 - - -	10,305	6,415	3,890	62·25	37·74	
Punjab, 1859 - -	22,318	14,439	7,879	64·65	35·26	
Madras, 1859 - -	24,313	4,011	20,302	16·49	83·50	

By the above it would appear, then, that Oudh is best in apprehensions to cases reported, whilst the number of persons acquitted are very considerably below the Madras average, and scarcely above the Punjab, to which it runs close also in convictions; but avowedly it has not been the object as yet to press the police hard to secure convictions, or to make apprehensions. I have kept in view that amongst natives high pressure put on to gain any particular end only leads to oppressive acts. Unlimited apprehension has indeed been checked as much as possible; the records will show that "violence to prisoners" to secure confession, "bribery," and tyranny to the public, have been most unrelentingly dealt with during the year. In curing these evils, for cured things will be, something is perhaps sacrificed to public justice; and the police may suffer in their character as detectives; but the principle, right or wrong, is strongly inculcated that justice must not be secured on the above terms. Whatever may be said, however, of the police as detectives, officers of all departments, talookdar magistrates, and the large landholders, all bear testimony to the much improved character of the police.

Oudh Association.

52. The "Oudh Association" as a body have promised me their valuable aid in putting down bribery and corruption in the force, and the example of the members of that Association alone will have a marked effect, and I venture to express a warm opinion that this will be but one of many advantages that will accrue to the administration at large if this body are worked to the useful ends they themselves propose.

Police freedom of action required.

53. There are points, too, under the new system that may eventually call for attention; for however desirable it may be to place checks on the police, and such judiciously used, are no doubt of great public advantage, yet the question must some day arise in regard to interference in the action of the police. In a large city like Lucknow, for instance, it cannot always be desirable to disclose the names of those giving information; it is not at all intended by this remark to advocate the employment of paid informers; and in Circular 325 of 1861 I pointed out "the wide distinction between professional thief-takers and the police availing themselves of information voluntarily offered, or gained by the police from the general public, and that we were not bound, in my opinion, to bring into a public court all parties from whom information is gained; but whilst officers used their influence to prevent the employment of the infamous class of informers, I deemed them quite at liberty in particular cases to avoid disclosing publicly their sources of information." This reticence on the part of the police is deprecated, and I am inclined to think that the stress laid on the conduct of the police in some cases in the City of Lucknow has caused embarrassment; therefore I observe, that the balance between the checks it is so wise to place over them, and any injudicious cavilling at their proceedings requires to be nicely preserved, for any undue weight of censure thrown into the scale may prevent the police from acting boldly; they will always be on the look out for stringent remarks, and especially in such a place as Lucknow, where the conduct of the police can be so easily discussed, their freedom of action should not be too much interfered with. On another point, too, the police are, perhaps, too much surrounded with checks and suspicion. The law has wisely determined that confession before the police is no evidence, but it has provided that any magistrate can make preliminary investigations on the spot, and a confession before him is evidence. It has, however, been ruled here, that no magistrate should take down a confession until some advanced stage of the proceedings, which has not been very clearly defined as yet; for instance, in a case of murder in which three defendants were taken, there was good evidence to prove that they were the last persons seen with deceased, and there was a specific charge of murder made against them; one of the parties volunteered confession; the police officer did not take it himself, but went before the magistrate on the spot. It was ruled, however, that this magistrate should not take it down, or interfere, till the case was more advanced; these checks are likely to detract from the chances of a successful prosecution by the police, they are not provided for by law, but the contrary; and public justice might be defeated by the omission on the part of a magistrate to record a confession at any stage of the proceedings. This instance is merely given to exemplify my assertion that some day the police must be relieved from over-strained interpretations on particular points; but whilst noting in a general way the very exceptional instance in which the action of the police may be considered to be cramped, it will be noticeable throughout the reports the cordial testimony given by district superintendents to the assistance they have received from magistrates. The harmonious working of the two departments may indeed be recorded without an exceptional instance; and I have also to notice the very valuable aid I have myself received from the Judicial Commissioner on many occasions in which it has been necessary to consult him in regard to orders issued to police relative to their court and other duties, in which we come into contact with the judicial authorities; and if this part of their work has been satisfactorily done by the police, as I believe it has, much is due to Mr. Campbell's assistance.

54. During the year the police has taken its standing as a separate department; the officers are, I venture to say, better satisfied with their position; their relations with the magistracy are defined, and my best acknowledgments are due to Commissioners and Deputy Commissioners without exception for the interest taken in the police.

Character of officers.

55. It remains now to speak of the officers of the force, European and native; and in the first instance I would remark that much of the success of the new system depends on the selection of district superintendents. The frequent but unavoidable changes, and the consequent necessity of placing too young officers in charge has been a disadvantage.

I have

I have the pleasure of reporting that the district superintendents of this force are, as a body, extremely zealous in the performance of their duty; and what is a great element for future success, they take much interest in their work. During the year more *esprit de corps* has been established, and it is most desirable that the feeling of emulation now existing should be kept up amongst the district superintendents. Captain Barrow is a very steady good officer, and no police in the province are perhaps in better order than that of Seetapore. Captain Hill is an energetic and capital police officer, and has been of much assistance in compiling a very useful work for the native grades. Captain O. L. Smith, absent on leave during the greater part of the year, and Captain Ryall, are both very good officers; the latter is very highly spoken of, and deservedly so, by his Deputy Commissioner. Captain Sharpe is a most diligent officer, who devotes his whole time to his work; he has some mistaken principles, which he will, I trust, correct; but it is due to him to say that there is no more zealous and intelligent officer in the province. Lieutenant Danvers requires to be earnest in his attention to his duties to place him on a par with the above-mentioned officers; he has all the desire to do well, and his future success depends on himself. There are not two more promising officers in the force than Lieutenants Woodcock and Tweedie; they have been most attentive to their duties, and if they continue in the same course will deserve well. Captain Ouseley's qualifications as a police officer can be best judged of by the fact of his being recently selected to perform the duties of city magistrate. Captain Clarke, appointed a district superintendent during the past year, is fast making a good police officer; he is of some standing in the service, and will be an acquisition. Lieutenants Maynard and Stainforth, the two junior district superintendents, in the absence of older officers, succeeded too young perhaps to independent charges; but they have both done remarkably well, and are fast becoming fitted for their position. Of the assistants, Lieutenant de Montmorency, Mr. Hamilton, Lieutenant Woodcock, and Mr. Blenman are promising officers; the latter has, I think, a speciality for police work, and has shown himself a good assistant in the city of Lucknow, which has been in his charge for some time. We have some very good European inspectors, amongst whom I may mention Mr. Connors and Bonnor; the former knows his work well, and the latter is fast learning it. Messrs. Ewart and Masters also promise well; during the year we turned out one European inspector (Mr. Berrill), who is doing very well as an assistant district superintendent, I am informed, in the Central Provinces, to which he was promoted from Oudh. Mr. Prince in the city police is also a rising officer. The limits of this report will not admit of my naming so many of the native officers of the police as I could desire; it is to them we have to look in a great measure for the successful working of the new system; the improvement in knowledge of their duties during the year is most marked. The officers named in the margin,* I feel confident, are most trustworthy, and fitted for their places; the greater number are officers of the late army; some are better than others, but all I have named are most valuable servants of Government, and well deserve notice. I would here beg to advocate that the grade of assistant be opened to native inspectors; they are some of them worthy to work in concert with any of the grades of European officers, and I hope to see native assistant district superintendents in the Oudh police.

56. I have been much indebted during the year to Captain Aitken, deputy inspector general, for his assistance in working the force. The chief commissioner will have been able to judge from his notes on the inspection of districts that he carries out determinedly the views and principles approved of by the chief commissioner for the better organization of the police; he has the good of the service and success of the system much at heart, and works earnestly for it.

57. An interchange of circular orders has taken place between this province, the Punjab and North West, and I cannot close this report without bringing to the chief commissioner's notice the valuable assistance received from Mr. Court and Major Hutchinson; to the former officer I am also indebted for aid on several points referred to him.

I have, &c.
(signed) *L. Barrow*, Lieut.-Col.,
Offg. Inspector General of Police in Oudh.

† The difference of 10 persons between this and the number shown last year as "under trial," is owing to the omission in Captain Chamberlain's statement for that year of persons concerned in Thuggee and poisoning cases.

CHAPTER XVI.

HYDERABAD ASSIGNED DISTRICTS.

ANNUAL REPORT of the HYDERABAD ASSIGNED DISTRICTS for the Year 1861-62.

(No. 26 of 1862.—Civil Department.—General.)

From Colonel *Cuthbert Davidson*, C.B., Resident at Hyderabad, to Colonel *H. M. Durand*, C.B., Secretary to the Government of India, Foreign Department, Fort William; dated Hyderabad, 27 June 1862.

Sir,

THE following Administration Report of the Hyderabad Assigned Districts, for the year 1861-62, is enclosed for submission to the Right Honourable the Viceroy and Governor General of India in Council.

Scope of the present Report.

2. The judicial portion of the Report has reference, in accordance with the orders of Government, to the calendar year 1861, and the remaining sections comprise the transactions of the official year, commencing on the 1st May 1861, and ending on the 30th April 1862.

Preliminary Remarks.

3. The territorial limits of the districts in Berar, belonging to his Highness the Nizam, comprising the Hyderabad Assigned Territory, will be most readily understood by a reference to the Sketch Map* which accompanies this Report.

* Appendix No. 1.

Transfer of Districts completed.

4. The transfer of the districts required to complete the stipulated amount of assigned revenue, namely, 32 lacs of rupees per annum, was completed on the 23d October 1861.

Boundary of the Districts.

5. The Wurdah, it will be perceived, is the boundary on the east; the Paeen Gunga, for about two-thirds of the distance, is the boundary on the south; but, unfortunately, the remaining portion of the southern boundary, and on the west, north-west and north, except where it is coincident with the Taptee, is open, and without any natural demarcation.

SECTION I.—JUDICIAL.

PART I.—CIVIL JUSTICE.

Constitution of the Civil Courts.

6. On the restoration, in the early part of 1861, to his Highness the Nizam, of the Raichore and Dharaseo districts, and the acquisition of supplemental territory in Berar, an assistant commissioner was added to West, a tehsildar to East Berar, and another tehsildar was transferred from the former to the latter district. With these exceptions, no alterations have been made in the constitution of the Civil Courts.

Number of Civil Courts.

7. The sanctioned number of Superior and Small Cause Courts is 30, namely, one revenue and judicial commissioner's, two deputy commissioners', five European assistants', two European extra assistants', two native extra assistants', and 18 Small Cause Courts.

Paucity of Officers.

8. These courts are numerically sufficient to carry out the administration of civil justice efficiently and promptly; but at no one time during the year have all the officers who should have presided over them been present at their posts. At the close of the year no less than four European officers were absent through illness, and in so small a commission this must inevitably involve a serious obstruction of judicial business.

 9. There

Increase of litigation.

9. There was also during the year an increase in the amount of litigation, resulting from the introduction into the assigned districts of Act XIV. of 1859, which provides for the further limitation of suits. The courts were crowded with creditors, naturally anxious to obtain the decision of their claims before the change of law should render them obsolete.

Act for simplifying the Procedure of Courts of Civil Judicature.

10. In June 1861 the Government sanctioned the application to the Berar districts of Act XXIII. of 1861, for simplifying the procedure of the courts of civil judicature not established by Royal Charter, and accordingly this Act, with the Oude modifications, came into operation on the 1st January 1862, in East and West Berar.

Cases pending and filed.

11. At the close of the year 1860, 247* original suits were pending, and during the past year 5,583 were filed, making a total of 5,830. In the previous year 2,273 only were filed.

Cases decided.

12. In 1861, 2,219 cases were decided on their merits, of which 2,040 were decreed in favour of the plaintiff, and 179 in favour of the defendant.

Cases pending.

13. Seven hundred and forty-four cases were amicably adjusted, 12 were withdrawn, and 135 were dismissed for default. Thus altogether 3,110 cases have been disposed of, leaving 2,720 cases on the files at the close of the year.

Cause of large number pending.

14. The number of cases disposed of in 1860, was 2,264, so that 846 cases have been disposed of in the year under report more than in the previous year, and the larger number of cases pending at the close of 1861, simply represents the increase of suits which the introduction of the New Limitation Act brought upon the files. Special instructions have, however, been issued, impressing upon the district officers the necessity of clearing off these arrears with all possible energy.

Value of property litigated, and cost of litigation.

15. The value of property litigated was *Rs.* 5,66,729. 2. 10., and the cost of litigation *Rs.* 19,554. 11. 6., or *Rs.* 3. 7. 2. per cent. The average value of each suit was *Rs.* 182. 3. 8., and the average cost was *Rs.* 6. 4. 7.

Duration of suits.

16. The average duration of suits was 38½ days. In 1860 it was 44½ days, and in 1859, 83 days.

Courts of Appeal.

17. Appeals both in civil and criminal cases from the decisions of assistants and extra assistant commissioners of all grades lie, in the first instance, to the deputy commissioner of the district.

Commissioner's Court of Appeal.

18. On the Commissioner's file there have been 60 cases, 47 of these suits remaining from 1861. The Deputy Commissioners' decisions have been reversed in 10, confirmed in 38, and modified in two cases. Of the rest three were remanded for re-investigation, and one decided by Razeenamah (deed of compromise), leaving six pending at the close of the year.

Value of property itigated.

19. The value of property under litigation in decided cases was *Rs.* 1,60,517. 5. 7., and the costs *Rs.* 4,681. 1., or *Rs.* 2. 14. 8. per cent.

Average value and cost of suits.

20. The average value of each suit was *Rs.* 2,972. 8. 8., and the average cost *Rs.* 86. 11.

Duration of cases.

21. The average duration of each case was 280 days. In 1860 it was 101 days. The Officiating Commissioner explains that the cause of delay is to be attributed to the large number (47) of cases left on the file at the close of 1860, and to there having been no Commissioner during the first two months of 1861.

District Appeal Courts.

22. In the District Appeal Courts 44† cases were pending trial at the close of 1860, and 151 were instituted during the year under report, making a total of 195.

23. Of these 125 were decided on their merits; the orders of the lower courts having been confirmed in 96, and reversed in 29 cases. Of the remainder one was amicably adjusted, 14 were remanded for re-investigation, and two dismissed for default, leaving at the close of the year an arrear of 53 cases, slightly exceeding that of the previous year (44).

Value of property litigated.

24. The value of property litigated was *Rs.* 20,581. 14. 4., and the costs were *Rs.* 1,523. 5. 6., or *Rs.* 7. 6. 5. per cent.

Average value and cost of litigation.

25. The average value of each suit was *Rs.* 147 0. 2., and the average cost *Rs.* 10. 14. 1.

Duration of each suit.

26. The average duration of each suit was 96½ days; in the previous year it was 121 days.

Detention of witnesses.

27. Of 1,732 witnesses summoned, only 214 are shown to have been detained for more than one day; and of these 14 only for seven, four for eight days, and one for a month.

28. One

* Disagrees with last year's Statement, because, it is stated, the Revenue suits are excluded.

† A discrepancy is here also noticed between this and last year's Statement; probably owing to the before specified reason, the exclusion here of Revenue suits.

28. One hundred and eleven persons were imprisoned for debt during the year, at the close of which five remained in confinement. Civil debtors and Revenue defaulters.

29. In addition to the suits decided in the Civil Courts, 84 original and 29 appeal suits were disposed of in the Revenue Courts, and 53 original and 16 appeal suits remained on the file at the close of the year. District Revenue suits.

30. On the Commissioner's Revenue file there have been 26 cases, 15 of them suits remaining from 1860. The Deputy Commissioner's decisions have been reversed in four, and confirmed in nine cases; of the rest one was remanded for re-investigation, leaving 12 pending at the close of the year. Commissioner's Revenue Appeals.

31. The value of property litigated in these suits was *Rs.* 8,772. 0. 11., and the costs *Rs.* 393. 4. 6., or *Rs.* 4. 7. 9. per cent. Value of property litigated.

32. The average value of each suit was *Rs.* 626. 9. 2., and the average cost *Rs.* 28. 1. 6. Average value and cost of suits.

33. The average duration of each case was 347 days. Duration of cases.

PART II.—CRIMINAL JUSTICE.

34. Under the authority of the Government of India the provisions of the New Penal Code have been extended to the Hyderabad Assigned Districts, and it accordingly came into operation on the 1st January 1862. Had there been sufficient time to test the practical working of the Code, any detailed mention of it would not properly find a place in this report; but there is reason to believe that it will be found an easily intelligible and comprehensive system of criminal law. The New Penal Code.

35. There has been, on the aggregate, an increase of detected crime: but it is very satisfactory that there is a marked decrease in organized crime of the most serious description. Increase of crime.

36. In 1859 there were 47 dacoitees (gang robberies); in 1860, 22, and 15 in 1861. Dacoitees decreased.

37. Highway robberies have considerably increased. They are for the most part perpetrated in the jungly and sparsely populated southern portion of East Berar, to which the recent treaty has added an extensive tract of country. These highway robberies have not generally been attended with any degree of ferocity. The principal sufferers have been villagers, returning from the neighbouring market town with their weekly purchases and pittance of coin, of which they have been robbed, but without the further cruelty of wanton violence. A bad harvest, high prices, and consequent distress among the poorer classes are among the causes to which the increase in this species of crime is to be attributed, while its commission is rendered easy, and apprehension of offenders difficult by the jungly nature of the district in which it has been most frequent. Increase of highway robberies.

38. The following Table contrasts the crimes committed in 1860 and 1861:— Comparative state of crime.

	In 1860.	In 1861.
Crimes of the 1st Class of Atrocity.		
Murder	19	28
Dacoity with murder	1	3
Robbery with murder	1	3
Culpable homicide	1	1
Manslaughter	6	–
Attempt to murder	4	10
Total	32	45
Crimes of the 2d Class of Atrocity.		
Dacoity with wounding	1	2
Highway robbery with wounding	3	6
Robbery with ditto	2	3
Grievous hurt	3	1
Assault with wounding	9	3
Rape	4	–
Causing hurt with a shart instrument	3	3
Wounding	1	5
Unnatural offence	–	1
Administering opium	3	3
Wounding in attempt to commit robbery	1	–
Previous abetment of suicide	–	1
Total	30	28

	In 1860.	In 1861.
Crimes of the 3d Class of Atrocity.		
Dacoity	20	10
Highway robbery	53	90
Robbery	3	8
Burglary	283	492
Theft	410	264
Arson	8	2
Cattle stealing	137	157
„ killing	—	1
„ lifting	—	1
Causing hurt	6	5
Lurking, house trespass and theft	4	16
Kidnapping	1	1
Total	925	987
Crimes of the 4th Class of Atrocity	1,194	1,549
GRAND TOTAL	2,181	2,609

Value of property stolen and proportion recovered.

39. The value of property stolen is estimated at *Rs.* 60,514. 2. 1.; that of the portion recovered at *Rs.* 10,092. 14. The average amount stolen in each case was *Rs.* 23. 9. 3., and the proportion per cent. recovered was *Rs.* 16. 6. 6., being a somewhat more favourable result than was obtained last year, namely, *Rs.* 15. 8. 11.

Crimes not traced.

40. Of 2,609 reported cases of crime the police have failed to trace 870, or 33 per cent.

Result of trials.

41. Of 1,862* cases committed for trial during the year, 306 resulted in total acquittal, in 1,506, convictions were obtained, and 50 remained for trial.

Number of cases disposed of in the several Courts.

42. The following statement shows the number of cases disposed of in the several Courts:—

1 Commissioner's Court	88 Cases.
2 Deputy Commissioners' Courts	125 „
5 Assistant Commissioners' Courts	310 „
3 Extra Assistant Commissioners' Courts	13 „
18 Tehsildars' Courts	1,276 „
TOTAL	1,812 „

Average duration of trials.

43. The average duration of Trials is shown below:—

1 Commissioner's Court	59 Days.
2 Deputy Commissioners' Courts	20 „
5 Assistant Commissioners' Courts	21 „
3 Extra Assistant Commissioners' Courts	27½ „
18 Tehsildars' Courts	13 „

Sentences passed.

44. The following is an abstract of the sentences passed:—

	Confirmed by the Resident.	By the Commissioner.	By the Magistracy.
Hanged	8	—	—
Transported	-	13	—
Imprisoned for 14 years and under	-	2	—
„ 10 „	-	2	—

„ 8 „	22	57
„ 9 „	22	27
„ 10 „	24	55
„ 1 month	191	275
TOTAL	3,346	4,547

PART III.—POLICE.

46. A new system of police, upon the constabulary principle, lately inaugurated at Madras, has been submitted to and sanctioned by the Government of India, at an annual cost of about 10,000 rupees more than that at present existing. This provides for more ample supervision by European officers; while these officers will be at leisure to devote themselves entirely to their police duties, instead of being embarrassed, as at present, with interruption from their civil occupations. It was hardly possible, under the old system, and with the intermixture of jurisdiction in the districts, as at first transferred by the Nizam's Government to British management, that any system of police could be efficient. It will be observed from a glance at the Sketch Map* which accompanies this Report, that the portions marked yellow and green, Surf-i-khas (Crown lands) and Jagheers (private estates), completely interlaced the portions of the territory under British jurisdiction, and there was always conflicting authority at work, which prevented the prompt and combined action of the police, and rendered their exertions futile. The districts so coloured have now, however, come also under the immediate control of the British administration, and there ought to be no further difficulty in establishing and organizing the efficient body of police which has been sanctioned. The new Constabulary Police. * Appendix No. I.

PART IV.—GAOLS.

47. In 1861 there was no change in the gaol buildings; but sites for the new penitentiaries at the head quarters of each district were selected and sanctioned, and their construction will be commenced during 1862-63. Gaol accommodation.

48. An attempted outbreak took place among the prisoners at Sooltangherry, which resulted in six of them being killed, and several wounded; none succeeded in effecting their escape. Attempted outbreak.

49. The average number of prisoners during the year was 672, and the average cost of each prisoner was *Rs.* 44. 9. 11. Average number of prisoners.

50. In-door labour has not been introduced to any extent worth noticing, as the imperfect nature of the present gaol accommodation does not admit of it. In-door labour.

51. During the monsoon, scurvy made its appearance among the prisoners in the Sooltangherry Gaol. Immediate instructions were issued to ensure efficient medical attendance, a thorough ventilation and white-washing of the buildings, a judicious variation of diet, personal cleanliness among the prisoners, the removal of noxious vegetation in the vicinity, and every sanatory precaution. Of 198 prisoners confined in the gaol 11 died. Scurvy in the Sooltangherry.

52. The average mortality among the prisoners throughout Berar was 24, or 3½ per cent. Average mortality in both Districts.

SECTION II.—REVENUE.

PART I.—LAND TAX.

Revenues of the new Districts.

53. The revenues of the districts in Berar, transferred to British management by the Treaty of December 1860, were collected by the Nizam's officers for the year 1860–61, and did not form part of the actual income of the Assigned Districts until the year 1861–62.

Revenue demand compared with previous year.

For the year 1860–61 - 36,37,058 rupees.
For the year 1861–62 - 39,13,433 „
Increase of Revenue demand in 1861–62 } 2,76,375 rupees.

54. For the purpose of comparison, however, the revenue demand of each year is noted in the margin, irrespectively of its appropriation or of the agency through which it was realised.

Land Revenue proper.

55. In 1860–61 the demand on account of Land Revenue proper was 29,83,415 rupees; in 1861–62 it amounted to 32,24,718 rupees, showing an increase of 2,41,303 rupees.

Taxes relinquished in the new Districts.

56. A much larger immediate increase of Land Revenue might have been shown, had it not been found necessary to relinquish, in the newly-acquired Talooks, many taxes imposed by the Native Government, which our system of administration does not recognise, and to introduce in those Talooks generally a more equitable Government demand. In the Surf-i-khas estates (Crown lands) especially the exactions were excessive, and rent was charged for land that had been uncultivated for years. The natural consequence was, that people threw up their holdings in despair; but we may reasonably trust to a more liberal system for a rapid extent of cultivation and prosperity.

Fall of rain.

57. The last agricultural season has not been by any means favourable. Not that there has been a deficiency of rain in the aggregate, but it fell unseasonably: at one time the country was deluged, and at another completely parched up.

State of the crops.

58. The cotton crop was a light one, as was also the jowarry crop, upon which the greater portion of the inhabitants depend for food, and the scarcity in Berar itself, as well as in the adjacent districts, resulted in almost famine prices; jowarry, for instance, ordinarily sold at 45, falling to 20 seers for the rupee. Those of the cultivators who had good crops, which were not in the grasp of the money-lenders, must have derived large profits; but there has been some distress among the poorer classes. The general prosperity of the country is, however, proved by the facility with which the revenue has been realised even in a bad season.

PART II.—SAYER.

Sources of Sayer Revenue.

59. The principal items included in Sayer are the Grazing Tax, and the produce of fruit trees. The demand in 1860–61 was 1,02,989 rupees; in 1861–62, 1,06,412 rupees; exhibiting an increase under this head of 3,423 rupees.

PART III.—ABKARREE.

Increase of Abkarree Revenue.

60. The increase arising from the sale of the Abkarree contracts amounted to 48,671 rupees. The demand in 1860–61 was 3,03,517 rupees, and in 1861–62, 3,52,188 rupees.

Realisations from Opium Contracts.

61. The sale of the opium contracts has realised 36,436 rupees, being 8,659 rupees in excess of the previous year; 3,402 rupees were uncollected at the end of the year, but no portion of this sum is irrecoverable.

PART IV.—STAMPS AND MISCELLANEOUS.

Increase of Stamp Revenue.

62. In consequence of the introduction of the new Act, the Stamp Revenue has been very nearly doubled. In 1860–61 it amounted to 37,471 rupees; in 1861–62, to 70,377 rupees.

Miscellaneous Land Revenue.

63. The demand on account of Miscellaneous Land Revenue for 1860–61 was 75,342 rupees, and for 1861–62, 48,045 rupees. The decrease of 27,297 rupees has been caused by village expenses, held in deposit, having been credited to Miscellaneous Land Revenue in 1860–61.

Salt Revenue.

64. The Salt Revenue, which is derived almost exclusively from the wells near the Poornah River, amounts to 36,160 rupees, being 6,552 rupees in excess of the income from

from the same source in 1860-61. 9,513 rupees of the demand remained uncollected at the close of the year, but the whole of the balance is held to be recoverable.

65. The receipts under the head "Law and Justice" amounted to 13,623 rupees, being 1,481 rupees above those of the previous year. Receipts under "Law and Justice."

66. The realisations under "Police" were 8,494 rupees, or 7,921 rupees more than in 1860-61. Receipts under "Police."

67. A sum of *Rs.* 217. 9. has been credited to "Public Works" in East Berar, on account of the sale of some Government buildings. Receipts from Public Buildings.

68. The Miscellaneous revenue, derived from the sale proceeds of intestate property and various other sources, amounts to 16,761 rupees. There is a decrease in this item of 47,462 rupees, which arises from about half a lakh of accumulated village expenses in East Berar, which had reverted to Government, being credited to this head in 1860-61. Sale proceeds of intestate property, &c.

PART V.—GENERAL RESULTS, INCOME TAX, LOCAL FUNDS, &c.

69. The total demand on account of Land Revenue, as fixed at the annual settlement for 1861-62, amounts to 37,31,364 rupees, being 2,66,102 rupees in excess of the previous year, and the whole demand has been realised with the exception of 1,15,407 rupees. This balance is chiefly owing to Land Revenue payable by Purgunnah officers, which will be settled on receipt of their Roossooms, and by the last instalment on account of Abkarree contracts falling due after the close of the year; 14,649 rupees are considered irrecoverable. Land Revenue demand and collections.

70. In the year under review the whole Revenue demand on account of the assigned districts, omitting Income Tax, amounted to 39,13,433 rupees. The demand from the same territory in 1860-61, when part of it was under the management of the Nizam's officers, was 36,37,058 rupees, showing an increase in the year 1861-62 of 2,76,375 rupees. Total Revenue demand and collections.

71. The uncollected balances amount to 1,28,322 rupees, of which 14,649 rupees on account of Land Revenue is, as above stated, supposed to be irrecoverable. Uncollected balances.

72. In addition to the foregoing sources of income is to be noticed the income tax, amounting to 8,294 rupees for the year 1861-62, which is credited to Imperial revenue. This tax is levied only from servants of Government. Income Tax.

73. Besides the Government revenue, there is a considerable sum derived from local funds, available for the internal improvement of the districts. These funds consist of the road fund, levied from cultivators at the rate of one per cent. on the land revenue; the municipal fund, which formerly was collected on different systems, but which has now been distributed over the trading classes, as nearly in proportion to their profits as possible; the pound fund, accruing from the sale of unclaimed cattle, which has only recently been included among the local funds and the ferry funds. During the year some subscriptions previously collected for educational purposes, but unemployed, have been credited to a school fund. Local Funds.

74. The demand on account of the various funds is as follows:— Demand under this head.

Road fund	34,179	rupees.
Municipal fund	68,402	„
Pound „	4,477	„
Ferry „	285	„
School „	866	„
TOTAL	1,08,209	„

75. The demand from the same sources in 1860-61 amounted to 72,296 rupees, so that there has been an increase in the income of the local funds of 35,913 rupees. Increase under this head.

76. The uncollected balances at the end of the year on account of local funds was 20,185 rupees, of which 4,306 rupees are supposed to be irrecoverable. Uncollected balances under this head.

77. The arrangements consequent on the recent treaty involved the abolition of the Enam Department, and the paucity of officers in the districts has rendered any satisfactory progress in Enam investigations a simple impossibility, demonstrating the urgent necessity of the commission being at all times kept up to its established strength, and of arrangements being made for at once efficiently supplying the place of temporary absentees. Enam Department.

78. The village expenses, which are not included in the demand, amounted in the year 1861-62 to 5,16,011 rupees. Village expenses.

SECTION III.—EDUCATION.

Proposed project of Education.

79. A project for the establishment of certain schools in Berar, to be supported from the local funds, was submitted to Government on the 13th December 1861, it not being considered desirable at present to burden the finances with any large outlay for a comprehensive scheme of education. Our immediate want is that of elementary schools both in English and vernacular.

Interdiction of Expenditure.

80. The interdiction of all expenditure from the public revenues on this account, contained in the Government Despatch No. 6883, of the 23d December 1859, has necessarily retarded the introduction of an efficient system of education in Berar, even upon the limited scale to which it is proposed to confine ourselves; but the more pressing requirements of the districts have received careful consideration, as have also the obstacles which present themselves to the diffusion of useful instruction among a semi-barbarous and suspicious people.

Difficulty to be overcome.

81. One great difficulty has been experienced and remains yet to be overcome, namely, the reluctance common to all indigent agricultural classes with which children are permitted to attend school, when by light labour in the fields, or on the extensive public works in progress, their labour can be turned to profitable account by their parents. A child six or seven years of age can in this way earn from two to three rupees a month, amply sufficient to feed and clothe it; while the same child, if at school, must be maintained by its parents, who are accustomed to prefer a present gain, comparatively small, to future advantage, however permanent or considerable.

Indifference to European Education.

82. Nor is it alone the agricultural classes in Berar (generally Mahomedans and Mahrattas) who are backward in sending their children to our schools. Those engaged in mercantile pursuits (for the most part Marwarries) evince much indifference to the general education of their children. Skill in the Native system of accounts and in the conduct of their commercial transactions, which the parents themselves, or those around them, are eminently qualified to impart, is all of which they as yet recognise the importance. The prospect of employment under our Government will, no doubt, suggest the necessity of more extended qualifications, and the following experimental scheme, recommended by the officiating commissioner, may serve our present purposes, while it may be gradually extended to keep pace with the wants of growing intelligence:—

Present scheme of Education.

83. One English school to be established at each of the two sudder stations, and 12 Mahratta schools in each of the two divisions of Berar, thus allowing one vernacular school for each tehsildaree, and three for location in other large towns; every vernacular school to be divided into two classes, superintended by separate masters. In the lower class the rudiments of the language to be taught, while more advanced pupils are educated in the higher. The fees from each pupil in the English schools to be one rupee, in the higher Mahratta classes four annas, and in the lower two annas monthly. The proposed scale of remuneration to instructors and the cost of the whole scheme are as follows:—

	Per Mensem.	Per Annum.
	Rs.	*Rs.*
2 English schoolmasters	200	
24 Mahratta schoolmasters, at 50 rupees each	1,200	
24 Ditto assistant schoolmasters, at 20 rupees each	480	
TOTAL	1,880	22,560
Books, rent of schools, and other incidental expenses		1,440
TOTAL *Rs.*		24,000

Distinction to be kept in view.

84. When we have provided the means of a practical business-like education, we shall have perhaps done all that it is expedient for us in our present relation towards the inhabitants of these districts to attempt. It may be well to keep in view the distinction between education and instruction. "So long as we are precluded by the peculiarity of our position from directing or materially influencing the social and moral training of those whom we would educate, it may be questioned whether we should not be sowing the seeds of mischief and disquiet by imparting any high degree of merely scholastic and technical instruction."

Schools at Hyderabad.

85. At Chudderghaut there is the Residency Medical School, supported entirely by the Nizam's government. In the city of Hyderabad a madrissa (college) in which there are 24 teachers of purely Oriental languages and sciences, with an English class conducted by Mr. Carey.

86. At

86. At Chudderghaut there are also the Bishop's School, supported and conducted by the Roman Catholic clergy, and a Protestant school, maintained by private subscription. The Bishop's School at Chudderghaut.

87. In the adjacent cantonment of Secunderabad is an orphanage for boys and girls, with which the cantonment school is incorporated, and these with a cantonment school at Bolarum are in addition to the regimental schools always found in the corps of the British army. Schools at Secunderabad and Bolarum.

88. In the medical school above mentioned the natives of the city of Hyderabad are taught up to a certain standard, then furnished with a diploma and employed by the minister in the different districts of the Hyderabad territory. A dispensary is placed under their supervision, and European medicines and surgical instruments are supplied to them at the cost of the Native government. They are at liberty, if they prefer it, to take up private practice in the city of Hyderabad. Medical School at the Residency.

89. This institution has been a great success, and is duly appreciated by the minister, the people at large, and the different graduates who have matriculated there. Its sphere of usefulness has the prospect of being still further increased, as Her Majesty's Secretary of State for India, in his Despatch No. 36 of the 23d March 1861, has highly approved the system upon which it has been conducted, and the exertions of its able superintendents, Doctors Maclean and Smith. Her Majesty's Government is also prepared, it is intimated, to extend to the institution the same measure of support which it received from the Court of Directors of the East India Company. A considerable supply of books, instruments, and other desiderata for the use of the school have been consequently applied for by the Government of India to the Secretary of State for India. Success of this School.

90. As suggested by the Governor General in Council, the proposals of Dr. Fleming, the present superintendent of the medical school, for the establishment of a clinical hospital and dispensary inside the town of Hyderabad, have been recommended to His Highness the Nizam, who has thoroughly entered into Dr. Fleming's views and promised them every support. The only delay at present is in discovering a suitable building which will contain not only the clinical ward, but a pauper dispensary and a lunatic asylum, both of which latter institutions the Minister, Salar Jung, is desirous of establishing at the same time and under the same roof. Proposed Clinical Hospital and Dispensary in the City.

91. At the Bishop's School, the Chudderghaut School, the Orphanage, and the Bolarum Cantonment School, an education equal to that of a good grammar school can be obtained. Examinations are held annually, superintended by competent officers, with whom are associated the different clergymen officiating in the cantonment. Standard of Education in the different Schools.

92. To this enumeration of educational establishments may be objected the obvious want of a regular and organised system of education among them, but the impracticability of its introduction is the result of the schools being maintained from so many different sources, and from their being principally supported by the government of a foreign prince. General defect of the Schools.

SECTION IV.—PUBLIC WORKS.

93. Labour has been in great request at Secunderabad throughout the year. The extensive public works in progress furnish full employment for all the labouring classes, even in a place where they are in general so largely redundant as in Hyderabad. Demand for labour at Secunderabad.

94. But, in addition to local requirements, labourers were sought out here for the works on the Godavery and for the hydraulic works of the Irrigation Company, and the means resorted to eventually by the private agents to procure them amounted to something like the nefarious practice of crimping. On complaints reaching the minister, he directed that all engagements for the exportation of labourers beyond the Hyderabad Territory should pass through his own office; and this, it is believed, has occasioned considerable disappointment to those officers who expected to derive a large supply of labour from Hyderabad by means of private agencies. Exportation of labourers for the Godavery, &c. works.

PART I.—ROADS.

1.—*Nagpore Dâk Line.*

95. The total length of this road is 245 miles, of which 165 miles are in the assigned districts, and 80 miles in His Highness the Nizam's dominions, under charge of the executive engineer, Jaulnah Division. The amount authorised for repairs and improvements in the budget of 1861-62 is 57,100 rupees, besides a sum of 1,000 rupees for improving the Sawergaom Ghaut. 21,472 rupees had been expended to the end of January 1862, and the work is in progress. The ghaut has been much improved by a company of the Bombay Sappers and Miners. Length of the Nagpore Dâk line.

2.—*Feeders of the General Indian Peninsular Railway running through Berar to Nagpore.*

Line selected as feeders to the railway.

96. The following lines of road were selected by a committee convened by the Resident at Hyderabad:—

(I.)—Aukolah railway station to Akote, West Berar, about 29 miles.

(II.)—Budneira railway station to Moresee, East Berar, about 39 miles.

(III.)—Sheogaum railway station to Bowenbeer, West Berar, about 24 miles.

(IV.)—Chandpore railway station to Julgaom, West Berar, about 16 miles.

(V.)—Moortoozapore railway station through Duncapore to Unjungaum, East Berar, about 29 miles.

(VI.)—Sheogaum railway station through Kamgaom to Maikur, West Berar, about 48 miles.

(VII.)—Akolah railway station through Pathoor and Bassim to Hingolee, West Berar, about 71 miles.

(VIII.)—Chandoor railway station, east of Budneira, to Koora, East Berar, about 10 miles.

(IX.)—Woon to the Wirdah towards Hingunghaut in the Nagpore Territory, East Berar, about 15 miles.

(X.)—Budneira railway station to Ellichpore Cantonment, East Berar, about 35 miles.

(XI.)—Moortoozapore railway station through Karinjah to Poosud, East Berar about 57 miles.

(XII.)—Chandoor railway station through Tullagum to Woon, East Berar, about 94 miles.

(XIII.)—Budneira railway station through Nair to Paingunga, East Berar, about 76 miles.

(XIV.)—Sheogaum railway station to Ballapore, West Berar, about 8 miles.

Total, 551 miles.

Measures adopted to carry out the lines.

97. The two first were immediately undertaken by order of Government. Surveys, plans, and estimates are being prepared by the executive engineer, Berar Division. In the meantime the lines are being marked and opened out, for which purpose a sum of 26,000 rupees was sanctioned by Government on the 23d of November last, the additional one lac from the one per cent. income tax has also been allotted to these roads.

Contribution from local funds for this purpose.

98. It has been suggested to Government in the budget of 1862-63 that a sum of one lac of rupees be further expended in the ensuing year, from the local funds of the assigned districts, upon marking out and rendering practicable for traffic as many feeders to the railway as possible.

Proposed road from Hingolee to Jaulnah.

99. A road from Hingolee to Jaulnah, distance about 100 miles, within the Nizam's dominions, has also been proposed to be undertaken at the expense of His Highness the Nizam, but nothing definite has yet been arranged.

Road from Hingolee to Woon.

100. The road from Hingolee by Poosud to Woon, on the banks of the Wirdah, is being marked and opened out from the local funds of the assigned districts; this will run into the heart of the south-east part of the assigned districts, and will be of much benefit in opening up the country.

Line from Aurungabad to Nandgaum Railway station.

101. A most important line from Aurungabad *viâ* Dowlutabad and Manickpoory to Nandgaum railway station, a distance of 56 miles, has been surveyed and marked out by Lieutenant Foord, executive engineer, Jaulnah Division. A sum of 30,000 rupees has been entered in the budget of 1862-63 for rendering this road practicable as soon as possible.

3.—*First Class Metalled Road from Toka to Aurungabad, in the Nizam's Dominions, 26 Miles, under Lieutenant Foord, Executive Engineer, Jaulnah Division.*

This road in rapid progress.

102. The estimate amounting to 1,12,800 rupees was sanctioned by Government, with an allotment of 50,000 rupees for the year 1861-62. The work was undertaken on contract by Messrs. Hill and Cutts, and is in rapid progress. The road will be completed during 1862-63.

4.—*Road from Secunderabad to Nagpore.*

Rest houses on this Road.

103. The construction of six travellers' bungalows has been proposed on this line between Oodgheer and Keenee, and nine tiled sheds or rest-houses for travellers, at stages 25 miles apart, between Secunderabad and Hingunghaut *viâ* Nirmul, on the Nagpore Road.

5.—*Trunk*

5.—*Trunk Road from Secunderabad to Tanderwaddy, on the Hyderabad and Sholapore Road.*

104. This road was commenced about the beginning of 1858, and completed in May 1860. The first section of the line, 62 miles, was executed at an expense of 1,43,602 rupees, on contract, under the supervision of the Hyderabad Public Works Department, but paid by His Highness the Nizam's Government. The second section, 65 miles, was also constructed at the expense of the same Government, by Mr. Marrett, the superintendent of roads. The third section, from Thoorooree to Tandulwaddy, 39½ miles, running through the late Dharaseo Division of the assigned districts, was constructed by the Hyderabad Department Public Works, at an expense of 1,55,000 rupees, which was sanctioned by the Government of India and paid from the revenues of those districts.

This road completed in May 1860.

105. There is a mail cart and a bullock transit for travellers running on this line, and bungalows at easy stages. Extensive repairs are going on throughout the whole length, especially in the third section, where the whole road is being macadamized at a sanctioned outlay of 1,49,000 rupees.

Mail cart and bullock transit on this line.

6.—*Road from Hyderabad to Bellary, viâ Kurnool.*

106. This road was commenced in 1856. The total distance from Hyderabad to the Toongabuddra is 122 miles. It was formerly a cart track, running through several miles of thick jungle and rough and rocky ground. A few miles of it only was cleared and lined out in 1856, when, for want of funds the work was suspended. In June 1861 it was ordered to be recommenced, and the entire line was marked out, cleared, and made available for cart traffic as a fair-weather road before the commencement of the present year. It is now being improved, all muddy portions being covered with gravel. The original estimate for this road was *Rs.* 62,084. 2. 9, and 42,000 rupees has been expended up to this date. The estimate, however, did not provide for bridging rivers and nullahs.

Condition of this road.

107. There are three bungalows available for travellers on the first 54 miles of this road, and four others are in progress.

Bungalows on this road.

7.—*Sholapore and Bellary Road.*

108. In March 1861 the Postmaster General of Bombay proposed that a portion of this road from Moodanoor to Comply, on the opposite side of the Toongabuddra, and lying within His Highness the Nizam's country to the extent of 41 miles, should be lined and cleared out. Accordingly it was commenced and completed in June following, at a cost of *Rs.* 4,908. 8. The road being the only direct one between Bellary and Sholapore, promises to become one of great importance, and is even now much used by carts in the dry season. During the rains it must be impracticable, as the greater portion of it is over black soil.

The portion lying in the Nizam's country cleared out.

8.—*Trunk Road from Hyderabad to Masulipatam.*

109. The portion within the Hyderabad Territory of this important line is 91 miles. It is practicable for cart traffic at all seasons, and a comfortable bungalow has been erected at every stage.

Practicable for cart traffic.

110. Two commodious rest-houses, one at Goordrampilly, 35 miles from Hyderabad, and the other at Sooriapett, 44 miles beyond that, have been provided for soldiers, at a cost of 2,207½ rupees each. The expenditure was met from the Secunderabad Abkarree Fund.

Rest-houses for soldiers on this road.

111. At the 67th mile this road branches to Madras. From this point to Warrenpilly, on the left bank of the Kistna, the distance is 45 miles, and the whole length is in good repair.

Branch to Madras.

112. These roads are maintained at the small annual cost of 36 rupees per mile.

Average cost of maintenance per mile.

113. As it would take up too much space of the limits allowed for this report, and in order that the Government may judge fully of the work done, it seems desirable that the progress reports of the executive engineers of the Berar Division, for 1861-62, should be submitted without curtailment to the Foreign Office, and this has been accordingly ordered.

Progress reports of the Berar Division submitted.

PART II.—RAILROADS.

114. The railway through the valley of Berar, with its attendant telegraph, will be opened out, it is expected, in all 1863. In the meantime, as the foregoing details will show, an extensive system of feeders has been laid down, with a view to uninterrupted communication between the railway and the principal marts in Berar, which are at any distance from the line.

Railway and telegraph through Berar.

PART III.—MISCELLANEOUS.

115. The Deputy Commissioner's cutcherry at Akolah was finished during the year, and is now occupied by the district establishment.

Cutcherry at Akolah.

116. The sites of the large gaol at Akolah and of the smaller one at Oomrawuttee have been finally selected, and the former building will be commenced at once.

Sites of gaols.

117. A regular establishment has been entertained for the conservancy of the town of Oomrawuttee, and the same system will be adopted in other large towns as the increase in the municipal fund renders the introduction of the measure possible.

Conservancy.

SECTION V.—POST OFFICES.

No change under this head.

118. No changes in the district Post Offices have been reported during the past year.

SECTION VI.—FINANCE.

Military and other establishments in the Nizam's territory.

119. From a memorandum received from the Financial Department in 1861, it appeared that the cost of the military and other establishments in the Nizam's territory, imposed a charge on the British Government of, according to one computation, 47 lacs, and to another 26½ lacs of rupees.

Finance Commission assembled at Hyderabad.

120. To test these computations, and to ascertain the financial position and actual requirements of the Province, a commission was ordered by the Government of India to assemble at Hyderabad, in the month of August last, composed of the Resident, Mr. Temple, and Brigadier Browne.

Result of financial investigation.

121. The following statement exhibits the result of the financial investigation:—

	Rs.	*Rs.*
Net revenue of the ceded districts of Bellary, Cuddapah, Kurnool, &c.		33,75,000
Present cost of the subsidiary force	50,00,000	—
Proposed reductions, according to military requirements of the Province, as recommended by the Commission.	25,00,000	
Political charges	1,10,407	26,10,407
Surplus in excess of expenditure		7,64,593
Revenues of East and West Berar		36,32,686
Civil charges and military charges of contingent		34,67,640
Surplus	*Rs.*	1,65,046

Nizam's contribution for all charges in his dominions.

122. In short, a thorough examination of all the sources from which revenue was derived from the Hyderabad State for Imperial purpose proved that the Nizam's subsidy to the British revenue from the ceded districts and assigned territory may be computed, in round numbers, at nearly a million sterling annually of gross revenue; and that His Highness's Government in reality, when the requirements of the Hyderabad territory are alone considered, pays for all establishments, Military, Civil and Political, within his dominions.

Views of the commission.

123. The views of the commission were submitted to the Government on the 13th August 1861, and, with some minor reservations, were generally accepted.

Revenues of the assigned districts.

124. In the Hyderabad assigned districts, during the past year, the Government revenue (excluding Income Tax) collected during the year was as follows:—

	Rs.	*a.*	*p.*	*Rs.*	*a.*	*p.*
Land Revenue				31,79,296	5	5
Sayer				96,401	3	2
Abkarry				3,23,584	6	8
Miscellaneous				48,045	6	—
TOTAL Land Revenue			*Rs.*	36,47,327	5	3
Salt	31,429	12	6			
Opium	33,466	10	4			
Stamps	70,377	5	6			
Law and justice	13,622	9	9			
Police	8,494	—	1			
Miscellaneous	16,761	1	7			
Public works	217	9	—			
				1,74,368	15	9
TOTAL Collections			*Rs.*	38,21,696	5	—

125. The

125. The revenue last year was *Rs.* 29,61,722. 3. 9., and the newly-acquired talooks were valued at *Rs.* 7,72,397. 10., giving a total revenue of *Rs.* 37,34,119. 13. 9. There has been, therefore, an increase in 1861-62 of *Rs.* 87,576. 7. 3., and this in the face of taxes relinquished in the new talooks to the extent of *Rs.* 46,895. 14. 7., and of the necessity of introducing a liberal settlement in them, of which the full benefits can only gradually be developed. Revenue compared with last year.

126. The disbursements on account of the Civil Administration have been, during the year, as follows:— Civil charges.

	Rs.	*a.*	*p.*	*Rs.*	*a.*	*p.*
Salaries of officers				84,748	4	4
Salaries of Establishments including police				3,32,610	15	2
Contingencies				64,037	13	9
				4,81,397	1	3
Revenue survey	60,000	–	–			
Yeomeahdurs	12,739	4	3			
				72,739	4	3
			Rs.	5,54,136	5	6

127. A surplus thus remains of *Rs.* 32,67,559. 15. 6. for the pay of the contingent, public works, and the other purposes for which the country was assigned to British management. The departmental accounts, exhibiting the actual disbursements under these heads have not all to this date reached the Resident's office; but according to the budget estimate for the year 1861-62, corrected by the actual disbursements hitherto ascertained, these charges will amount to 34,38,665 rupees. leaving, as the surplus of receipts over expenditure for the year under review, 3,83,031 rupees.* Surplus revenue.

128. With thisrapidly increasing revenue the debt against His Highness the Nizam, which on the 30th of April 1860 amounted, according to the Accountant General's statement, dated the 30th of November 1861, to *Rs.* 5,35,937. 1. 8., must be soon extinguished. Debt against the Nizam.

129. The accounts for the year 1860-61 have not yet been received from the Accountant General at Calcutta; but according to the financial statement appended to the administration report of the Hyderabad Assigned Districts for that year, the actual receipts in 1860-61 were 42,18,257 rupees, the actual disbursements 41,83,369 rupees, leaving a balance for that year in favour of receipts of 34,888 rupees. Financial result of 1860-61.

130. This sum deducted from the balance of the previous year against His Highness the Nizam, together with the excess of receipts over expenditure for the present year, will diminish the debt against the Nizam's Government on the 30th of April 1862 to 2,92,048 rupees, as particularised in the margin.

Diminution of the debt against the Nizam.

		Rs.
Balance against the Nizam on the 30th April 1860		5,35,937
Deduct excess of receipts over expenditure in 1860-61	34,886	
„ excess of receipts over expenditure in 1861-62	3,83,031	
		4,17,917
Balance	*Rs.*	1,18,020

131. The whole amount of taxes remitted in the Berar Districts, since their management was assumed by British officers, is *Rs.* 3,85,356. 13. 6., as shown in the accompanying Schedule, Appendix No. 2.

Taxes remitted in the Assigned Districts.

		Rs.
Add interest on debt from 1st of May to 31st December 1860, not charged in disbursements exhibited above for 1860-61, pending the orders of Government		1,74,028
Balance against the Nizam on the 30th April 1862	*Rs.*	2,92,048

132. A great scarcity of copper coin has been experienced in Berar, notwithstanding that in the year under report 1,26,000 rupees' worth has been imported from Madras, and 75,000 Scarcity of copper coin.

			Rs.
* Disbursements according to Budget Estimate for 1861-62			34,70,494
Deduct over-estimated in Budget for Hyderabad Contingent	*Rs.*	30,568	
„ „ for Yeomeahdars		1,261	
			31,829
			34,38,665
Deduct salaries, establishments, &c., as in preceding paragraph			5,54,136
			28,84,529
Surplus revenue above shown			32,67,560
Estimated surplus for the year of receipts over expenditure		*Rs.*	3,83,031

CHAP. XVI. Hyderabad Assigned Districts.

75,000 rupees' worth on a former occasion. The scarcity still seems to remain, and all classes complain that they receive only from 14 to 15 annas in copper coin for the rupee. Steps, however, have been taken to remedy the evil so far as an abundant importation of copper coin is calculated to do so. Its exportation from the districts by the Sahoocars is the chief obstacle to be surmounted.

Total Administrative Charges.	Rs.
Civil charges, as shown by the Commissioner - -	4,81,397
Salaries, &c., Residency Civil Office - - -	31,631
TOTAL - - - Rs.	5,13,028

133. The total charges on account of civil administration and police throughout Berar are 5,13,028 rupees, being a per-centage upon the gross revenue, 38,21,696 rupees, of *Rs.*13. 6. 9.

SECTION VII.—MISCELLANEOUS.

PART I.—AGRICULTURE.

Cotton cultivation.

134. Experiments with the view of introducing exotic cotton have been continued, but still without success. These experiments will be persevered in, while efforts will be made to improve the native staple by more careful cultivation.

Essentials for obtaining cotton for home market.

135. But it has become evident that if cotton adapted for the home market, equal or nearly so to American produce, be expected from Berar, the cleaning and ginning must be conducted by different agency to the culture.

Object of the cultivators.

136. The cultivators' object is to obtain a quick return for his crop: it is, therefore, a matter of great indifference to him whether his cotton is clean or full of seed, leaves, and gravel, so long as it meets with a quick sale.

Cultivator unable to clean cotton.

137. It seems doubtful, even if he had the inclination, whether he has the time thoroughly to clean his cotton. Other agricultural avocations of vital importance to his land demand his attention and labour, and it is a common remark among the ryots that they have no spare time, and that the seasons already come round too fast. In short, the higher price he might obtain for cleaner cotton would not pay him for the extra labour and the neglect it would entail on other matters connected with his farm.

Remedy for this drawback.

138. The remedy is obvious. The exporting merchants must have on the spot, in the cotton districts, agencies, storehouses, gins, screws, and packing machinery, merely purchasing his crop from the cultivator. Of the remunerative result there can be little doubt, and another most beneficial effect will be that the cultivator will be no longer in the power of the grasping village money-lender and extortionate middlemen, as at present. It is believed that such an agency has already been established at the Railway Station of Budneira, and it is to be hoped that others will speedily follow.

PART II.—SURVEY.

Progress of the revenue survey.

139. The Revenue Survey has been pushed on as rapidly as the funds at the disposal of the Department would permit.

Extent of land measured.

140. During the year 601,933 acres have been measured.

Number of fields, classed.

141. Revenue survey fields, 10,756, comprising 186,450 acres, have been classed.

Settlement introduced.

142. The settlement has been introduced into 70 villages, containing 107,144 acres. The realised revenue of these 70 villages in 1860–61 was 74,367 rupees. In the present year, under the survey settlement, not less than 95,000 rupees will be realised, an increase in the revenue of 20,633 rupees, or 28 per cent.

Average cost of measurement and classification per acre.

143. The average cost of measurement on the operations of the year ending 31st of October 1861, with which date ends the survey year, was 1*a.* 9¾*p.* per acre, and the cost of classification 5½*p.* per acre, giving 2*a.* 3¼*p.* per acre for the whole operation, including settlement.

Hindrance to work from fever.

144. All the field establishments have, it is stated, suffered much from fever in Berar during the year, and considerable hindrance to the work has been experienced from this cause.

Tenure of waste lands

145. A proposal made by the Officiating Commissioner, Hyderabad Assigned Districts, has been sanctioned by the Governor General in Council, for waste lands in the Southern Talooks

Talooks of East Berar, being leased out for 10 years without any intermediate modification of terms. His Excellency also concurs with the Resident in thinking that it will be advisable to grant leases at low and fixed rents for 10 years certain to persons who are willing to take up waste lands or deserted villages, which are not likely to be reached by the Survey much before the expiry of that term.

Terms of the Leases.

146. The kowls (leases) will be drawn up so as to give a reasonable security to the tenants, that those who lay out capital on the lands will be permitted, at the end of the 10 years, to continue in occupation on payment of a fair rent.

PART II.—VACCINATION.

Vaccination re-established in restored Districts.

147. It is satisfactory to observe that vaccination has recently been re-established in the districts restored to his Highness the Nizam by the treaty of 1860.

Temporary cessation of Vaccination in restored Districts.

148. While these territories were under the administration of the British Government, vaccination was a regular operation in each district; but on their transfer to the Native Government, the vaccine establishment was discharged and the operation ceased.

Re-establishment of the prophylactic at the Minister's desire.

149. In the course of the first year the Minister expressed a wish to re-establish the system which has accordingly been done, so that the ground gained in this matter during British administration, instead of being lost, has been re-occupied and adopted as a basis for further prophylactic operations.

Vaccination in the Assigned Districts.

150. In the assigned districts of Berar four vaccinators have been employed—during the year 557 children were vaccinated, and 435 cases were successful. The accompanying tabular statement (Appendix No. 3) will show in detail the numbers vaccinated throughout the Hyderabad territory from 1st May 1861 to 30th April 1862.

CONCLUDING REMARKS.

Time required for perfecting the administration.

151. It has been somewhere remarked that the administration reports of the Indian Local Governments and administrations must necessarily be eulogistic. It may with more truth be said of those who minutely criticise them in a hostile and carping spirit, that nothing is easier than to find fault. The oldest and most perfect Governments are not brought to perfection in a day, but after a long series of trials and experiments, and during many years of anxious practical investigation. Why then should so much, and so immediately, be expected from Indian administrators amidst a population antagonistic in their social and religious relations to European customs?

Present Government appreciated by the people.

152. It cannot but be a matter of congratulation and of credit to the members of the Hyderabad Commission, that the anarchy and oppression existing in the Nizam's Berar districts eight years ago have now, under the unwearied exertions of British officers, almost entirely ceased; and that a Government, however imperfect, but still of material and progressive improvement, has been established, which is pointed to by the people as equitable, beneficent, and providing for the security of person and property, while it is acceptable to all classes, because it has the welfare and happiness of all as its primary object.

Services rendered by the several Officers.

153. Whatever may be the hereafter of the Nizam's assigned districts of Berar, or under whatever Government they may be placed, it must be a matter of no little satisfaction and honest pride to the officers who have conducted the administration thus far, that the rough edge of anarchy was, in the first instance, removed by their zeal and energy, and that they were the primary agents who introduced order into the administration.

Their names prominently brought forward.

154. It is not probable that the writer of the present report may submit another on the same subject to the Government of India; and while fully impressed with many shortcomings of the administration, he feels that he would be forfeiting a pleasing privilege and neglecting an imperative public duty were he to omit this the last opportunity of placing prominently on record the names of those officers to whose instrumentality the successful conduct and results of the administration are eminently and entirely due.

RESIDENT'S OFFICE.

Commendation of Major Thornhill.

155. Major Thornhill, assistant resident, has, during the last six years, with only a short respite as secretary to the Commission, conducted all the various and multifarious duty connected with that office with the greatest tact and unvarying assiduity and ability.

Mr. George Boswell, a most valuable Officer.

156. Mr. George Boswell, extra assistant, as the head executive officer in the resident civil office, has had most onerous and responsible duties to perform, in which he has proved himself second in ability to no one, and is a most valuable officer of Government.

DISTRICT OFFICERS.

Captain Cadell deserving of the favourable consideration of Government.

157. Captain Cadell, Deputy Commissioner, West Berar, and Officiating Commissioner has brought all the practical ability of a naturally sagacious mind to bear on his duties in the Commission, and well deserves the favourable consideration of Government for the manner in which he has officiated as Commissioner.

Commendation of Captain Allardyce.

158. Captain Allardyce, Deputy Commissioner, East Berar. The duties of taking over the newly assigned districts, after the Treaty of 1860, devolved on this officer, and they were excellently performed with unrelaxing industry and complete success.

Favourable mention of other Officers.

159. Captain Stubbs, Assistant Commissioner, Officiating Deputy Commissioner, West Berar -
Lieutenant Bell, Assistant Commissioner, East Berar, on sick leave to Europe - - - -
Captain Bushby, Assistant Commissioner, Officiating Deputy Commissioner, East Berar - -
Mr. C. Hodern, Assistant Commissioner, West Berar - - - - - - - -

Are all officers of zeal and ability, and deserving the commendation of Government.

Extra Assistants.

Favourable notice of the Extra Assistants, &c.

160. Mr. Bymanjee Jamasjee - - - -
Mr. C. Davies - - - - - -
Mr. Seeta Ram Row - - - - -

Are industrious, zealous and painstaking officers, ever desirous to do their duty properly.

Superintendent of Police.

Captain T. Davies - - - - - -

Commendation of Major Anderson.

161. The supervision of the survey has been entrusted to Major Anderson of the Bombay Revenue Survey, who has proved himself not only an excellent surveyor, but an officer of most varied attainments, and thoroughly acquainted with the wants of the people, and what is due to the interests of Government.

Dr. Fleming's deep interest in his duties.

162. Superintendent of Hyderabad Medical School.—Dr. J. B. Fleming became Superintendent of the Medical School on the resignation of Dr. George Smith, and has shown deep interest in his duties, and already attached the pupils to his person by his conciliatory manners resulting from a deeply cultivated mind.

PUBLIC WORKS DEPARTMENT.

Captain Tyrrell a most zealous officer.

163. Captain Tyrrell, Executive Engineer.—A most zealous and hard working executive engineer.

Notice of Captain Francis.

164. Captain Francis, Assistant Engineer.—A most earnest and laborious officer.

Notice of Lieutenant Haldane.

165. Lieutenant Haldane has proved himself an excellent and hard working officer, who does not fear exposure in a malarious district, having been employed in laying out the district roads between Hingolee along the banks of the Paeen Gunga to Woon.

Good service of Officers who have left the Commission.

166. The experienced and eminent abilities of Mr. F. N. Maltby, Mr. C. B. Saunders, Mr. T. H. Bullock, Captain Meadows Taylor, and Major Ivie Campbell (who died at his post), ought not to be forgotten in this record of excellent and approved services of the officers of the Hyderabad Commission, although they have all ceased to form a portion of it.

Cuthbert Davidson,
Resident.

Resident's Civil Office, Hyderabad Residency,
27 June 1862.

APPENDICES to the REPORT on the HYDERABAD ASSIGNED DISTRICTS, for the Year 1861-62.

APPENDIX, No. V.

No. 10 of 1862.—Civil Department.—Revenue.

From Major *A. R. Thornhill*, First Assistant Resident, in charge Hyderabad Residency, to Colonel *H. M. Durand*, C.B., Secretary to the Government of India, Foreign Department, Fort William; dated Hyderabad, 4 August 1862.

Sir,

ADVERTING to Section VII., Part II., "Survey" of the Resident's Administration Report for 1861-62, I beg to submit the accompanying copy of a letter No. 219, dated the 26th July 1862, from Major Anderson, Superintendent of Revenue Survey, communicating the correct result of the introduction of the new settlement in the 70 villages as compared with the year 1860–61.

2. Major Anderson's letter has only this day reached me.

From Major *W. C. Anderson*, Superintendent of Revenue Survey, S.M.C., to the Assistant Resident, Hyderabad,—No. 219, dated Dharwar, the 26 July 1862.

BY letter No. 179, dated 10th ultimo, paragraph 5, I reported that the realized revenue of the 70 villages into which the survey settlement has been introduced "was in 1860–61, 74,367 rupees. In the present year not less than 95,000 rupees will be realized, an increase in the revenue of 20,640 rupees, or 28 per cent. There is in addition Government unoccupied waste bearing assessment 13,807 rupees, out of which some is being taken up daily. I have, therefore, above stated the current year's revenue to be not less than 95,000 rupees, it may possibly be a thousand or two more than that, for my last return was dated the 15th ultimo, (May), and then the taking up of waste land had by no means ceased. I have little doubt that, before another three years elapse, at least two-thirds of the present waste, assessed at 13,807 rupees, will have been taken up, and the revenue have increased to at least 1,05,000 rupees, or upwards of 41 per cent. on the realization of 1860–61.

2. I have now received returns up to the 5th instant, and find that I have, in the passage above quoted, very much over-estimated the time required for the bringing the unoccupied Government waste, amounting on the 20th May to land assessed at 13,807 rupees, into occupation. Out of this amount, since the 20th May and up to the 5th instant, land assessed at 11,715 rupees has been taken up, and only 3,101 acres, bearing assessment 2,092 rupees, remained on the latter date unoccupied waste.

3. The following Statement shows the result of the settlement in the 70 villages compared with the realizations of 1860–61:—

	Rs.
Realizations of 1860–61 - - - - - - -	74,367
Survey Assessment of Government land occupied up to the 5th instant, after deducting 2,056 rupees, to be remitted in the present year on account of unexpired Kowls granted before the settlement - - -	1,06,824
Increase of revenue in 1862–63 - - -	32,457 or 43 per cent.

4. Still some small amount of the waste remaining, 3,101 acres, bearing assessment 2,092 rupees, may be taken up in the current year. But at the late period of the season I cannot anticipate that any material extent of it will be taken up. The above figures, therefore, show pretty nearly the result of the settlement of the current year. In future years I doubt not that the small area of waste will be still further diminished, and the revenue will also benefit by the full assessment on lands at present held under Kowls, as they fall in year by year.

5. I will send in an exact Statement of the revenue result of the settlement when the accounts for 1862–63 are finally made up. I hasten, however, to communicate the above result, which has even exceeded my most sanguine anticipations, in the hope that it may be in time for embodiment in the administration report.

No. 1747.

FORWARDED to the Home Department in continuation of No. 1572, dated the 6th ultimo. (To be returned.)

By Order,
(signed) *J. T. Wheeler*,
Asst. Secy. to Government of India.

Foreign Department,
6 September 1862.

ANNUAL REPORT on the Administration of the Straits Settlement, for the Year 1861–62.

SECTION I.—JUDICIAL.

PART I.—CIVIL JUSTICE.

1. The introduction of the system under which the members of the court establishment are now remunerated by suitable fixed salaries, all fees being duly accounted for and carried to the credit of the State, has had the anticipated effect of reducing to a considerable extent the labours of the Judges of the Supreme Court; both at Singapore and Malacca there has been a material diminution in the amount realized from suitors, whilst at Penang it has dwindled down to about one-half the sum received in 1860–61, and is insufficient to cover the disbursements from the Treasury on account of the pay of the Registrar and his clerks.

2. The number of cases decided in the different Courts of Requests is in excess to that of last year, whilst the amount received by fees is somewhat less, hence it would appear that the modification of the Rules under which fees were originally levied, has had the desired result of diminishing unnecessary and vexatious litigation, and barring the advancement of fraudulent claims, few cases being now filed, in which recourse to the court is not absolutely necessary to ensure the liquidation of a just demand.

3. The advantages of the District Courts are fully appreciated by the Chinese residing in the interior, and even amongst the Malays they are becoming popular, no less than 257 cases having been filed during the 12 months at the District Court of Aloor Gajah in Malacca.

PART II.—CRIMINAL JUSTICE.

1. There have been only two cases not included in the Police Report of sufficient moment to require any special remark.

One occurred at Singapore: Three junks, strongly suspected of having been concerned in some of the piracies reported to have taken place in the Gulf of Siam, were arrested by order of the Government, and the necessary proceedings taken against them in the Supreme Court under the provisions of Act XII. of 1857. The Court, however, was of opinion that there were no sufficient grounds to warrant their condemnation, and they were therefore released. Subsequently, however, there has been reason to believe that the opinion formed by the police as to their real character may have been correct, one of the number having been recognised as a junk that had been captured and carried away by pirates in the China Seas.

2. The

2. The other was that of a Malay who had been implicated in a gang robbery at Batu Kawan, in Province Wellesley, and having been closely pursued by the police, had sought refuge in the Perak territories; he had, however, barely crossed the Kreean River when he was overtaken by one of his pursuers, whom he mortally stabbed. He was subsequently apprehended, but the murder having been committed beyond the frontier, it was necessary that he should be committed for trial under the provisions of Act I. of 1849. On the case, however, being laid before the Grand Jury, doubts were entertained as to the prisoners being amenable to the jurisdiction of the Court, owing to a supposed informality in the order directing his being brought to trial, and, after reference to the Honourable the Recorder, the Bill against him was thrown out; he was, however, tried on the minor charge, convicted, and sentenced to 15 years' transportation.

PART III.—POLICE.

1. Since the changes in the police at Singapore, alluded to in the last Administration Report, the conduct of the force appears to have been satisfactory.

2. Several of the new stations and barracks along the Old Straits have been erected almost entirely by the labours of the peons attached, and their construction reflects great credit upon all concerned. During the period of their being thus employed, as they would have experienced considerable difficulty in obtaining food, they were, as a temporary indulgence, permitted to be furnished with rations at the expense of the State.

3. The alterations and additions to the main station in the town having been completed, the Commissioner's and Magistrate's Offices have been removed from the building formerly occupied as a police office.

4. At Penang the conduct of the police force has been generally exemplary, there being, however, one serious exception, that of a subadar on duty at the main station, and employed in the collection of fines imposed by the magistrate, who absconded with the sum of 68 dollars, which had been entrusted to his charge; he was subsequently apprehended, brought to trial, convicted and sentenced to one year's imprisonment in the House of Correction.

5. Consequent on a representation made to the Rajah of Quedah as to the necessity of his adopting suitable measures to preserve the peace of the frontier, and prevent his territories from becoming the resort of the bands of plunderers, by whom Province Wellesley has been so long infested, the border jungles have ceased to afford a refuge to delinquents of this description, and there has not been a single case of gang robbery in the province throughout the year.

6. The tranquillity of Prince of Wales's Island has been disturbed on several occasions, owing to the disputes between rival Chinese Secret Societies. In August there was a serious disturbance between the Tuah Peh Kong and Chin Chin Societies, which lasted for 15 days, during which time a number of cowardly assaults and outrages were committed. In April a similar quarrel occurred between the Tuah Peh Kong Society on the one part, and the Ho Seng and Ghee Hin Societies on the other; it was not of so long duration as the former, the contending factions having made up their differences in the course of a week. On both occasions recourse was had, with great success, to the expedient of appointing the acknowledged heads of societies as special constables, and attaching them to police stations, so as to induce them to take a warm personal interest in the preservation of the peace. By a steady persistence in this course, it is hoped that these unseemly displays of resistance to the law on the part of the Chinese may be permanently suppressed.

7. The pretensions of the Kling Societies have also experienced a severe check, and their fraternities are consequently rapidly falling into disrepute and insignificance.

8. Owing to the construction placed by the Court on the wording of Section 4 of Act XIII. of 1856, under which it has been ruled that the Deputy Commissioner of Police is not competent, on his own authority, to receive a gambling information, and issue a warrant thereon, the exertions of the police to check the crime of gambling have been somewhat nullified, as the publicity given to the transaction by the informer's being obliged to attend upon the Commissioner, who is also the Resident Councillor of the Station, often deters him from giving information, whilst even when it is afforded it renders the prospect of apprehending the offenders less certain, more especially as the gaming-houses being all strongly barred and fortified, entrance can in many cases only be obtained through stratagem, the provisions of Act XXXVIII. of the 17 & 18 Vict. not being applicable to the Straits.

9. Great complaints have been made relative to the rapidly increasing number of lepers by whom the Station is infested, the poor-house apparently not affording sufficient space for their accommodation.

10. Owing to its numerical inefficiency, and to its being under-paid, the state of the police force at Malacca continues unsatisfactory. Out of the town police, num-

CHAP. XVII. Straits Settlement.

bering 112 of all ranks, there have been 44 dismissals and 42 resignations within the year.

11. The services of the Deputy Commissioner have been fully engaged in visiting the country and frontier stations. The European Inspector has, as usual, given great satisfaction: a small increase has been made to his salary. The native officers have generally behaved well.

12. Although as detectives the frontier police have not proved successful, as a preventative to crime the establishment of the force has been attended with great advantage, not a single case of buffalo stealing or kidnapping having occurred since the occupation of the frontier stations.

13. The returns (included amongst the Appendices) furnished by the Commissioner of Police show an increase of crime at all three stations. It appears, however, somewhat doubtful whether this result is to be attributed to an actual increase in the number of offences committed, or to the increased accuracy of the returns now supplied.

14. At Singapore the increase has taken place entirely under the heads of "Larceny" and "Police Cases." In serious crimes there is a very considerable decrease.

SINGAPORE.

Arson.

15. There have been two cases of arson; the one case was that of a Chinese Bangsal at Chan Chu Kung, which was reported to have been set on fire by a party of four Chinese, and property of considerable value destroyed; the alleged offenders were arrested, but the case was dismissed after a lengthy investigation; it is supposed that the complaint was preferred owing to a dispute regarding some land. The other case occurred in the district of Saletar, a quarrel having taken place between two Malays regarding a house, one of the disputants, rather than surrender the property, set fire to it; the case was brought before the magistrate and dismissed.

Assault.

16. Three hundred and twenty cases of assault have been reported, many of them, however, have been mere petty quarrels, whilst the statements made with regard to the loss of property must be received with suspicion, complainants often adding an accusation of robbery to render the charge more serious.

Breaches of trust.

17. Of breaches of trust the cases have been of a trifling character, calling for no special remarks.

Bribery.

18. The four instances of bribery have been simple cases, in which a few cents have been offered by prisoners to police peons to secure their release.

Burglary.

19. Out of 20 cases of burglary brought before the magistrate 13 were dismissed, seven being sent for trial at the criminal sessions, of these three only require notice. The first occurred in the house of a Portuguese woman residing in Waterloo-street; her room was entered during the night by a discharged servant, and jewellery to the value of 50 dollars carried off; the burglar was, however, arrested the same morning by the police, and being committed before the Supreme Court, was sentenced to 18 months' imprisonment in the House of Correction. The second was perpetrated in the house of a dyer, in South Canal Road; the adjoining house being vacant, the burglar, a Chinese, obtained means of entrance by removing a portion of the brick partition, and carried away property worth about 140 dollars; he was, however, apprehended with the stolen property in his possession by one of the night watchmen in another part of the town, and the necessary conviction having been obtained, was awarded 14 years' transportation. Several persons were concerned in the third; a Portuguese woman residing in Bencoolen-street was awakened by hearing a noise in her room, and on giving the alarm observed one of the burglars jumping out of the window; on examination it was ascertained that ornaments valued at 49 dollars had been stolen; through the exertions of two detectives it was discovered that a gang of robbers were located behind the race course, and on the necessary search being made the whole of the missing property was regained; five Chinese were committed for trial, one only being convicted and sentenced to seven years' transportation; the others were, however, convicted on a charge of having fraudulent possession of some property belonging to the Court Interpreter, and a resident of Brass Bassa Road, and punished by six months' confinement with hard labour.

Child stealing.

20. There have been two cases of child stealing; in the one a little girl, the daughter of a Malay woman, was carried off by a Chinaman, and disposed of by him at Rhio; she was, however, through the aid of the Dutch authorities recovered, and the culprit was transported for seven years. In the other, a Hindoo child was taken away by one of the performers attached to a native theatre; he was, however, arrested when on his way to Malacca with the child in his possession, tried, and imprisoned for 18 months in the house of correction.

Conspiracy.

21. There has been only one case of conspiracy, in which a fraud was perpetrated on a Portuguese, by which he was deprived of a valuable piece of land; the plans of the conspirators were so well arranged that the suspicions of the victim were not aroused until the

the fraud had been completed, and one of the parties concerned had absconded; three persons were implicated, one was admitted to bail by the magistrate, and secretly left the settlement, forfeiting his recognizances; the other two were convicted and sentenced to 18 months' confinement with hard labour.

Cutting and wounding.

22. Ten cases of cutting and wounding were sent up for trial at the criminal sessions, the first was the result of a quarrel regarding a woman, weapons were resorted to, and the complainant received three wounds, not however of a serious nature; the offender was imprisoned for six months in the house of correction, and called upon to give security for his good behaviour for three years. In the second, the alleged perpetrator was discharged. The third was that of a Government peon, who charged another Kling, of whom he was jealous, with having cut his throat; his statement, however, was not credited by the jury, who, from the medical testimony, considered that the wound had been inflicted by his own hand, and the prisoner was consequently released. The fourth offender was an old Kling, who, in a fit of jealousy, attacked a woman with whom he had cohabited, inflicting upon her several severe wounds; her life was at first despaired of, but she recovered, and her assailant was punished with four years' incarceration in the house of correction. The fifth arose out of a quarrel between two Chinese coolies employed under a road contractor, regarding their implements of labour, one struck the other with a parang (Malay knife); as he had, however, received great provocation, his punishment was limited to one month's imprisonment with hard labour. The sixth was of a serious nature; it had its origin in a bad feeling existing between two Chinese members of a Christian and a Ghee Hok Society; the Christian was wounded in the abdomen; after considerable difficulty, a large body of the police being for some days detached on the duty, the culprit was apprehended, and sentenced to transportation for 15 years; the Honourable the Recorder taking the opportunity of causing intimation to be given to the Chinese residents at Serangoon, in which district the crime had been committed, that such offenders would always meet with severe punishment. It is hoped that this warning will have a beneficial effect. The seventh occurred in the course of a series of petty disturbances between two Kling factions, the one being composed of the boatmen or red flag men, and the other of all the bad characters and prostitutes of Campong Glam, under the leading of a time-expired convict. In one of the numerous fights that took place wounds were inflicted, two of the rioters were captured and committed by the magistrate to the house of correction for three months. They were afterwards, on another charge of assaulting and wounding, brought to trial before the Supreme Court, but as it appeared that the second offence had been committed at one and the same time as the first, for which they had been punished, they were discharged, being bound down on their own personal security for one year. The remaining cases were connected with a Hoey difference between the Seh Tan and Seh Lim tribes; the feud, however, having been amicably settled, when the cases was called on for trial the prosecutors failed to appear, and the prisoners were accordingly released.

Forgery.

23. Only one case of forgery has been reported, in which, on the matter being investigated by the magistrate, the evidence adduced in support of the charge was of so unsatisfactory a nature that a fine of 50 rupees was inflicted on the complainant as a punishment for the malicious prosecution of the defendant, to whom the amount was paid.

Gambling.

24. Although the police deserve credit for the numerous cases of gambling, more especially those in contravention of Act V. of 1844, they have brought to notice, there seems little doubt that the vice is still extremely prevalent; the offence is one upon which it is generally extremely difficult to secure a conviction, whilst the remuneration that may be granted to informers from the Police Fund being very small, they often find it more profitable to watch the police than to assist them.

Housebreaking.

25. The few charges under the head of housebreaking have been mere cases of larceny, and have been all summarily dealt with by the magistrate.

Larceny.

26. Of the 2,778 cases of larceny recorded, the majority have been committed by house servants. The Hylam Chinese are generally employed as servants; they are perhaps more addicted to theft than any of the other Asiatics in the Straits, and enjoy greater opportunities of obtaining access to valuable property. The provisions of Section 4 of Act XLVIII. of 1860 have been found to work beneficially in preventing the escape of offenders, when the property stolen from temporary residents has exceeded 50 rupees in value. Sixteen persons, charged with larceny, were committed for trial at the criminal sessions, ten were discharged, the remaining six being convicted and sentenced, one to transportation, and five to imprisonment for various periods in the house of correction.

Manslaughter.

27. Three cases of manslaughter have been noted; two occurred from furious driving; in the third instance the charge was brought against the architect and contractor of a range of new buildings, which, in the midst of a violent squall, fell to the ground, burying one of the workmen under the ruins. The Bill was thrown out by the Grand Jury.

Murder.

28. There have been six cases of murder, being the same number as recorded last year. The first was that of a Chinese sawyer working in the country, who was supposed to have been murdered by his master, though no cause for the crime has hitherto been discovered. Intimation of the deed did not reach the police until three days after its occurrence, when the body was exhumed; three men were arrested on suspicion, but discharged, consequent

on the want of sufficient evidence against them. The second was that of a burglar, who met his death at the hands of three Kling men, who were attempting to arrest him; the circumstances of the case did not, however, warrant a conviction on the charge. In the third the victim was a woodcutter, who, whilst employed with two other Chinese in cutting wood near Pulo Samboo, was attacked by some Malays, with the view of plundering his boat; the deceased, having offered resistance, was speared in the abdomen, and died before reaching Singapore; two Malays were arrested, but the evidence was not considered sufficient to substantiate the charge against them, and they were discharged. The fourth case was one of a peculiarly painful nature: a Malay fishing boat having approached a merchant vessel lying in the roadstead, the commander, under the impression that she was hovering about for the purpose of taking off some of his crew, fired two shots from a musket at the fishermen; one man was seen to fall into the sea, and another was wounded in the leg; the body of the first not having been recovered, the charge for wilful murder was not sustained; but as regards the second offence, shooting with intent to do grievous bodily harm, the prisoner was convicted and sentenced to penal servitude for six years. In the fifth instance the culprit was a Malay residing near Saletar; in a fit of passion he murdered his father-in-law and wounded three women; before the arrival of the police, he was placed under restraint by his relatives, who bound him so tightly that he subsequently died in hospital from the effects of the injuries he received. The last murder committed was on the person of a Chinese hawker, who was selling his wares on the Rochore River, behind Tanjong Rhoo; his death was caused by a severe blow on the head; no clue to the murderer has as yet been obtained.

Perjury.

29. Under the head of perjury there are only two cases deserving of notice; in one, two Klings, members of a secret society, committed wilful perjury before the police magistrate; they were committed for trial at the sessions, and sentenced to twelve months' imprisonment in the house of correction. In the other a Kling contractor, who had brought a false charge of assault against the commissariat conductor, was accused of subornation of perjury; a true bill was found by the grand jury, but owing to the magistrate having neglected to have the depositions in the original case duly signed, no further proceedings were taken.

Piracy.

30. Only four cases of piracy appear on the returns, and this crime, as regards the immediate neighbourhood of Singapore, appears to have been in a great measure suppressed. This result may be attributed to the energetic conduct of the police authorities, who, aided by his Highness the Tumongong, have strenuously exerted themselves to clear the adjacent seas and straits from the marauders, by whom they were formerly infested. Two of these pirates, who had long been the terror of peaceable traders, Pah Ranti and Si Abboo, were so harassed by the continued pursuit of the police, on two occasions their boats being captured, that they eventually surrendered to a petty native chief subordinate to the Government of Netherlands India.

Rape.

31. One case of rape occurred; it was perpetrated on a Chinese girl of eight years of age; the offender was tried and punished by 18 months' imprisonment, with hard labour.

PENANG.

Arson.

32. At Penang eight cases of arson have been reported; only one, however, is deserving of remark. A Chinaman attempted to set fire to the house of a police Kling informer, by lighting a large kind of squib immediately under it; this, however, exploded, and the Chinaman was so burnt, that he died the next day from the effects of the injuries received.

Assault.

33. In comparison with the returns of last year, there has been a slight decrease in the number of assaults; a large proportion of the cases noted have arisen out of the quarrels between the members of the different secret societies, and many are of the most trivial nature.

Breaches of trust.

34. There have been 19 cases of breaches of trust, and property to the value of 3,435 dollars is alleged to have been made away with; two cases, however, involving a sum of 2,636 dollars were brought before the magistrate, and dismissed as frivolous complaints.

Bribery.

35. Of bribery there have been five cases, but only two of any importance: in the first a Chinaman was accused of offering a dollar to a police jemadar to grant his release; the bill was thrown out by the grand jury; and in the second a Chinese nakodah offered the Deputy Commissioner 40 dollars to restore some arms that had been seized by the police; the offender was sentenced to six months' imprisonment in Her Majesty's gaol, and to pay a fine of 40 dollars.

Burglary.

36. Although 173 cases of burglary have been recorded, only five have been of any magnitude. The first case requiring mention occurred in Penang-street; the thieves got over the back wall of the court-yard attached to the house, and broke into a store-room containing opium, by cutting away the two wooden bars of the window; they removed the contents of an entire box, valued at 1,250 dollars, without disturbing any of the inmates of the house. This was evidently a skilfully planned robbery, and the opium must have been at once shipped on board some native vessel; several men have been arrested on suspicion, but discharged for want of proof against them. In the second, the thieves clambered for a considerable distance along the roofs of the adjoining houses, and then lowered

lowered themselves into a court-yard by sliding down two strong poles which were tied together, and which they must have brought with them; they carried off property to the amount of 60 dollars, and made their exit by the front door without being perceived; no clue has been obtained to the perpetrators of this robbery. The third house plundered was a jeweller's shop in Penang-road; the thieves entered by making a hole in the brick wall, close to the back door, and then forcing in the door-post, they ransacked a glass case containing watches and jewellery worth about 731 dollars; the police are still engaged in tracing out the offenders. The other two cases occurred in the country district. In the first instance an attack was made by a party of Malays on the opium shop at Batu Oban; the shop is close to the beach, and about a mile distant from the nearest police station; no resistance was offered by any of the inhabitants of the village, and after plundering the shop the robbers returned to their boat, and had got clear away before any report of the occurrence was made to the police. The second was of a similar nature: two Chinese shops in a large village, also on the sea-shore, and not far from Batu Oban, having been plundered by a large gang of Malays, who deterred the neighbours from rendering assistance by firing off muskets, and threatening to kill any one who dared to leave his house; the value of the property carried off has been estimated at 394 dollars. It has been ascertained that both these burglaries were committed by Malays from Qualla Mudah, in the Quedah territories; two of their number have been arrested by the police, and two more by the Rajah of Quedah; and there is every reason to hope that the whole of the party will eventually be brought to justice.

Counterfeit coin.

37. The police have been most successful in bringing to punishment a gang of coiners, who had long carried on operations in the vicinity of George Town without detection; they had arrived at a considerable degree of perfection in the art of making counterfeit dollars, and had engaged the co-operation of a native merchant of apparent respectability in giving them circulation; but of this gang, including their accomplice, nine have been convicted, and eight of the number sentenced to transportation.

Cutting and wounding.

38. Of cutting and wounding there have been 18 cases reported; with the exception of three, however, they were not of a serious nature, and were all treated by the magistrate as ordinary cases of assault. Of these three the first occurred in Queen-street: a Chinaman, a minor from Laroot, who had only been a few days at the station, accompanied a prostitute to her house; he had hardly been in her company about half an hour, when the neighbours were alarmed by hearing her cries, and, on rushing to her aid, seized the man with whom she was still struggling, although she had received a deep wound on her neck inflicted with a knife; the offender was convicted and transported for life. The second took place at Pulo Tikoos: a Chinaman, actuated by jealousy, laid in wait for his rival as he was walking home at night with the woman to whom he was attached; attacked him furiously with a large butcher's knife, and inflicted several severe wounds; he was sentenced to seven years' transportation. In the last the culprit was a Malay resident of Jellutong, addicted to opium smoking, who, in a fit of jealousy, attacked his wife with a parang, wounding her, as well as a man and another woman who came to her assistance, severely; he then fled across to the province, and has since escaped to the Quedah territories; but there is reason to believe that he will be apprehended and made over by the Quedah authorities.

Embezzlement.

39. There have been 10 cases of embezzlement, some of a very serious character. In the month of December, two cash-keepers in merchants' offices, and a bill collector in the mercantile bank, were convicted of this offence, and sentenced respectively to 18 and 12 months' imprisonment. In January there were two cases: the cashier of the mercantile bank was charged with embezzlement to the amount of 1,500 dollars; he was found guilty and sentenced to seven years' transportation; the other case was that of the police subadar, which has already been referred to.

Forgery.

40. Out of the four instances in which forgery has been committed, three convictions have been obtained.

Gambling.

41. One hundred and thirty-four cases of gambling have been reported, and 598 persons apprehended; but in spite of the best efforts of the police, many long established gaming-houses continue to exist, in the present state of the law it being extremely difficult to suppress them.

Housebreaking.

42. There have been only two cases of housebreaking deserving of any notice; one was committed by a time-expired Armenian convict, who, having been accustomed to visit the Armenian priest, took advantage one day of the latter's absence to break into the house, and steal the church plate valued at 605 dollars; of the stolen property 420 dollars' worth was recovered, and the convict sentenced to seven years' transportation; whilst awaiting deportation, he effected his escape from Her Majesty's gaol; after being some time at large he was recaptured, but again made his escape from the police escort in whose charge he had been placed. The other is supposed to have been perpetrated by a party of convicts; during the night the thieves entered the commissariat go-down by letting themselves down through the roof from which they had previously removed some tiles; an iron chest was opened, and property to the value of 200 dollars carried off; a clue to the perpetrators has been obtained.

Larceny.

43. Under the head of larceny there has apparently been a very great increase of crime; this

this is, however, in some measure accounted for by the increased accuracy in the preparation of the returns.

Murder.

44. Eleven murders have been committed; the first occurred at Ayer Etam. A gang of plunderers attacked a lone house and mortally wounded the owner, by whom they were resisted; three of the gang were arrested, and two found guilty and sentenced to death, the third turning Queen's evidence. The second was that of a Malay, who, whilst in his boat off Pulo Rhimow, was robbed by a party of Malays who followed him in another boat; he received a wound from the effects of which he died the next day; no clue to the guilty parties has as yet been discovered. The third took place at Ralow: a Chinese cooly was found savagely murdered by repeated blows of a lading, on a bridle path leading from Ralow to Bali Pulow; revenge must have been the motive for the crime; two persons were arrested on suspicion, but the evidence against them not being sufficient to support a prosecution, they were released on bail. The fourth was perpetrated at Choro Tokong in the southern division of Province Wellesley: some Malays, maddened at the loss of their money at a gaming-house, broke into it at night, killed two Chinese on the spot, and mortally wounded a third; they immediately crossed the frontier and took refuge in the neighbouring native state. In the fifth instance the murdered man was an old Chinaman living by himself in a hut about a mile from the police station at Pulo Betong: on the night of the murder, about nine o'clock, a neighbour heard the deceased calling for assistance, and on running towards his house, found him sitting on the ground frightfully cut about the face, and though still alive, unable to speak; the door of the house was open, but no marks of violence could be discovered; the police, however, found two parangs near the wounded man, evidently flung away by his assailants, which have since been identified as belonging to two Malays who have absconded. The sixth victim was a Kling, who, in a street fight, received a blow on the head, from the effects of which he died unexpectedly in the hospital, without having made any dying declaration. The seventh murder happened at Mount Erskine: a cooly, in the course of an altercation with his master, killed him with a blow from his axe; the murderer was apprehended, but committed suicide whilst in confinement. The eighth occurred at the Hindoo burial ground, near the sepoy lines; two convicts were stationed in a hut in charge of some Government stores required for the repairs of the neighbouring weir; one of them, while under the influence of liquor, murdered his companion for the sake apparently of a few dollars; he was tried and convicted. The ninth arose out of a quarrel: two Malays, uncle and nephew, had a dispute about some land, the former struck the latter several times with a stick, upon which he ran into the house, seized a kriss, and on being again struck, stabbed his assailant, he then fled across the frontier; an application has been made for his surrender. In the tenth instance a prostitute, residing in Queen-street, George Town, was discovered by the police lying on her bed in an upper room with her throat cut, none of her property had been taken away, and it is evident that the murderer must have been actuated by a spirit of jealousy or revenge. The last case was that of a Chinaman found dead under suspicious circumstances at Bagan Ajam, his death was attributed to a severe beating, of which the body bore the marks; two persons were arrested on this account, but the grand jury threw out the Bill against one, and the petty jury acquitted the other.

Perjury.

45. There were seven cases of perjury brought forward by the police; two of these were dismissed by the magistrate, of the remaining five three convictions were obtained.

Piracy.

46. There have been only three cases of piracy reported, all of a trifling nature.

Rape.

47. Out of the four cases reported three were sent up for trial; two were for abusing children under the age of five years; in both the criminals, who were Chinese, were convicted; in the third case the prisoner, a Malay, was acquitted.

MALACCA.

Breaches of Trust.

48. The cases of breach of trust have generally occurred owing to persons entrusting others with jewellery to dispose of for them without taking any receipt or requiring the presence of witnesses, thus giving great encouragement to commit this crime.

Larceny.

49. A great number of the larceny cases reported have been trumped-up charges, and the accused parties have been discharged. The following may be considered a specimen of this class:—Two brothers-in-law, residing in adjoining houses, having had a dispute, and one having been absent from home at Pulo Besar, on his return accused the other of having entered his house, destroyed papers, deeds or bonds, and stolen property to the value of 1,000 dollars; although search was immediately made no traces of the missing property could be discovered, and a second search subsequently made proved equally unsuccessful. About eight or nine days after the defendant was arrested on a warrant issued on the complaint of the accuser, and the house was again searched, and property of trifling value found on the roofs of both houses; still later, articles worth about 300 dollars were discovered, scattered about on the ground in their rear, and on the neighbouring plantain trees. The bill against the accused was ignored by the grand jury. There is only one other case deserving of remark,—a British subject, whilst in the Moar territory, stole a boat and timber belonging to a resident of that country, and having brought the stolen property to Malacca, disposed of them at Poongore, and then absconded. The owner of the property having

having lodged his complaint, the delinquent was traced and delivered up on the usual requisition by his Highness the Tumongong, in whose territories he had taken refuge; he was tried under the provisions of Act I. of 1849, convicted, and sentenced to 10 years' transportation.

Manslaughter.

50. There have been two cases of manslaughter, and one in which a verdict was found of justifiable homicide. Of the former, the first occurred at Sebattoo. Two Chinamen were suspected of stealing fowls, and accused by the owner of the theft, upon which they were annoyed and struck him. A few days after he died from rupture of the spleen caused by the blows received. One of the offenders was arrested and sentenced to 18 months' imprisonment in the house of correction. A warrant has been issued against the other, but he has hitherto eluded capture. The second was that of a Chinaman who had long been ill, and was placed by three of his tribe in the midst of a jungle to die, they not wishing his death to occur in their house; they have been arrested and are now awaiting trial. The latter took place under the following circumstances:—A police duffadar and peon, while on their night rounds, attempted to arrest two invalid convicts, suspected of stealing fowls; a struggle ensued, in the course of which one of the convicts stabbed the duffadar in two places with a knife; in return he struck him a severe blow with a stick, fracturing his skull, and thereby causing his death; both the duffadar and the peon, who were also injured in the affray, were taken to hospital; they have since recovered, and returned to their duty; the other convict escaped, and has not yet been identified.

Murder.

51. The murder cases, which have been numerous, may be generally divided into two classes, those committed on Malays, owing to a spirit of revenge or jealousy, the assassin flying immediately after the discharge of the fatal shot; and those in which Chinese hawkers are the victims, the incentive being the love of plunder. The first murder was perpetrated in the forest of Eana; a Malay returning with several others from Rambow, never reached his house; his companions could give no satisfactory account of him, and on search being made his skeleton was found in the forest. One man was arrested and brought to trial, but acquitted; warrants have been issued against three others, who have hitherto evaded the search of the police; no reason can be assigned for the murder. In the second instance a party of Chinese, who had been to trade across the frontier, were attacked by a gang of robbers a little beyond the boundary, and two of their number, one only being a British subject, brutally murdered; the corpse of the latter was brought in by his companions, who expressed themselves, however, unable to recognise the murderers. The third case occurred at Brissoe; a Malay whilst sitting with his child in his house, was killed by a shot fired from below through the bamboo flooring; although every effort has been made to discover the assassin, hitherto no clue has been obtained. The fourth was that of two Chinamen belonging to the crew of a large boat proceeding up the Kassang river; they had preceded their companions in a smaller boat; and no traces of them having been found when the latter reached Chin Ching, search was made, and the body of one of the missing men was discovered by his comrades floating in the river near Chin Ching, and that of the other subsequently by the police at Teloh Dalam. No information has been gained as to the murderers, the desire to secure the contents of the boat doubtless led to the crime. The fifth took place at Chin; a Chinese cooly, working on a plantation there, having killed his companion by stabbing him with a cooking knife; he was convicted, and sentence of death passed; but subsequently commuted to transportation for life. In the sixth the victim was a Malay, who was murdered at Layray; four men were arrested on suspicion, two were dismissed by the magistrate, and the other two acquitted on their trial at the sessions. The seventh took place at Malacca Pinda: a Malay, whilst sitting in his verandah, being shot from below; no cause for the deed has ever been discovered, and the murderer remains unknown. The eighth was the case of a Chinese hawker proceeding to Ayer Krem to purchase chillies; he was murdered *en route*; his skeleton was found in the jungle near Bukit Linghy; two Malays who had been seen in his company were arrested on suspicion, but on being brought to trial, they were acquitted. The ninth person murdered was a Chinese hawker, who was stabbed at Chirana Pootay, about a mile and a half from the boundary. From the evidence adduced before the coroner it appeared that the murderers were subjects of Rambow. A letter was addressed to the rajah, requesting their surrender, but the answer was to the effect that they could not be found; the frontier police are, however, on the watch for them, and they are likely to be apprehended. The tenth was the Punghooloo of Ayer Panus; he was shot whilst sitting in his house talking to his wife, who was also wounded, but has recovered; the house is surrounded on three sides with jungle, and although the neighbours immediately made a search for the culprit, he escaped undetected. The eleventh was another Chinese hawker, who, whilst passing along the jungle path between Soongie Oodang and Koondore, was attacked and plundered by five Malays; the murder was, however, witnessed by another Chinaman, and on his information three of the alleged guilty parties have been apprehended and committed for trial; warrants have been issued for the apprehension of the other two, who have not since been seen within our territories. The last case was that of a convict peon, who was murdered at Cape Rachado by his fellow convicts, who escaped into the Salangore country, and have not as yet been re-captured. A report was received of the murder of a fourth Chinese hawker in the jungle of Kamooning; up to the present, however, the missing body has not been found, and some persons who were arrested on suspicion have consequently been released on bail.

Perjury.

52. Of the five cases of perjury one was against a policeman for giving false evidence in a burglary case under investigation; he has been committed for trial at the next sessions.

Piracy.

53. The case of piracy occured off the coast of Lookoot. A Chinese boat, belonging to British subjects, was attacked, and eight Chinese said to have been killed by a party of Malays; three of their number having proceded to Malacca were recognised by one of the Chinamen who escaped, and the Tonze having been sent to Lookoot to make inquiries on the subject, three more were surrendered by the local authorities; owing, however, to the absence of the prosecutor and witnesses they have all been admitted to bail.

Slave-dealing.

54. The cases of slave-dealing have been four in number; the first was the disposal of a Jacoon girl who was enticed away from her house by one of her own tribe, and sold through the means of a Chinamen to another Chinaman for 14 dollars. About eight months afterwards she was discovered by her brothers, who brought the matter to the notice of the police; the parties concerned were committed for trial, the two men being sentenced to three years' imprisoment with hard labour, and the woman released, giving bail for good behaviour. The second and third were connected with the sale of a boy who was carried off from Tanjong. In the first instance two Malays were charged with having taken him to Delhie, where he was sold. This charge was dismissed, and subsequently another Malay was accused of having decoyed him from Delhie with intent to sell him elsewhere; he was, however, released, and eventually the lad was produced by the two men against whom the original complaint had been laid. The fourth is the case of a Malay boy, who was engaged as a sailor on board a prahu bound for Langat. The nakodah on his return reported that the prahu had been wrecked, and on being questioned by the boy's father denied that his son had accompanied him; whilst on being apprehended he stated that the boy had gone with him, but had run away at Langat; he has been duly committed for trial.

55. Although it is much to be regretted that at Malacca in so many serious cases the criminals have escaped detection, in the present state of the country, even were the police force much stronger than it is, such a result could hardly be prevented, it being almost impossible to obtain early information as to occurrences taking place along the different by-paths through the jungle, or to institute a pursuit with any great hope of success, even on occasions when timely notice of a crime may be afforded.

SECTION II.—REVENUE.

PART I.—LAND.

1. Under the Budget system recently introduced, many items of receipts, formerly entered under this head, have been transferred to other columns of accounts, and the entries in the following comparative Table of the land revenue collected at the different stations in the Straits Settlement consequently vary from those recorded in last year's Report:—

	1860-61.	1861-62.	
	Rs.	*Rs.*	*Rs.*
Singapore	54,474	56,501	Increase, 2,027
Penang	58,171	32,521	Decrease, 25,650
Malacca	8,049	12,169	Increase, 4,120
TOTAL *Rs.*	1,20,694	1,01,191	Decrease, 19,503

2. At Singapore the value of land has been materially depreciated, owing to the depressed state of commerce, and there have, therefore, been but few sales in the land department; the only town lands disposed of have been 201 lots on building leases along River Valley Road, realising the sum of 2,393 rupees, with an annual quit-rent of two dollars for each lot; whilst in the country 3,664 acres have been sold for 18,804 rupees. No desire is now manifested by the Chinese squatters to take out grants for the land in their possession, and coercive measures, under present circumstances, might only have the effect of driving them from the island.

3. The

3. The great falling off in the collections at Penang is attributable partly to the abandonment of many of the small estates in the interior of the island, consequent on the destruction by disease of the nutmeg plantations, and partly to the expiration of numerous leases dated in 1840 and 1841; the terms of the new agreement being yet under consideration. Although the arrears of quit-rent for former years have been somewhat reduced, they still amount to upwards of 15,000 rupees in Prince of Wales's Island, and 8,000 rupees in Province Wellesley.

4. At Malacca increased expense on account of the additional establishment has been more than covered by the increased revenue collected, there being a clear gain over last year's collection of 864 rupees, notwithstanding the falling off in the income from permits to open tin mines, and from cutting papers and registering fees.

5. The arrears, as shown by the Returns on the 1st May, amounted to 19,962 rupees; they are principally due from the residents in Nanning. Efforts have been made to recover as much as possible, but the poverty of the people is a great obstacle to their success. In many cases rents have not been collected for nearly 20 years, and the accumulations have consequently become too heavy to admit of their being cleared off rapidly; but by avoiding having recourse to harsh measures and practising due forbearance, there is reason to hope that a very large portion will eventually be realized. In some few instances where, owing to the deaths of the original grantees, and the land having been allowed to revert to jungle, there appeared little probability of the liquidation of the Government demand, the arrears have been remitted.

PART II.—MISCELLANEOUS (REVENUE).

1. Under this heading are included the sums collected on account of Pawnbrokers' fees, the tin and brick kiln farms, and the tenths on timber, granite, and coral. The following Table shows the realizations during the years 1860–61 and 1861–62:—

	1860-61.	1861-62.	
	Rs.	*Rs.*	*Rs.*
Singapore	18,956	18,839	Decrease. 117
Penang	3,751	4,460	Increase. 709
Malacca	20,913	15,475	Decrease. 5,438
TOTAL *Rs.*	43,620	38,774	4,846

2. At Singapore there has been but little variation; the slight excess at Penang is owing to the system recently introduced at that station of granting leases to cut timber within certain defined limits and under certain restrictions upon Government land; the decrease at Malacca is attributable solely to the reduction in the amount received for the farm of the Royalty on tin consequent on the departure of a large number of the miners from Kassang to the neighbouring state of Soongie Ujong. There can be little doubt that, to admit of the mines being profitably worked, operations should be conducted on a larger scale than at present, and with the aid of the appliances and machinery of Europe; hitherto the workings have been confined almost entirely to the surface, the Chinese miners not having the means of keeping their galleries clear from the water with which they are filled on their attaining any depth.

PART III.—EXCISE.

1. The receipts under this head are realized from the sale of the farms for the monopoly of retailing opium and spirituous liquors, and are exhibited in the subjoined comparative Table:—

	1860-61.	1861-62.	
	Rs.	*Rs.*	*Rs.*
Singapore	8,38,362	8,38,362	—
Penang	2,63,180	2,97,572	Increase. 34,392
Malacca	1,28,711	1,28,711	—
TOTAL *Rs.*	12,30,253	12,64,645	34,392

2. There has been no change as regards the amount received either at Singapore or Malacca, but at the former station the practice of selling the farms conjointly with those of the neighbouring native state of Johore has been abandoned.

3. At Penang there has been a considerable increase, owing principally to the advanced price paid for the Opium Farm.

PART IV.—TAXES.

1. The only assessed taxes are the sums levied under the operation of Act XXXII. of 1860 upon the interest payable upon Government Promissory Notes; they amounted as follows:—

	1860-61.	1861-62.	Increase.
	Rs.	*Rs.*	*Rs.*
Singapore	138	319	181
Penang	435	459	24
Malacca	146	332	186
TOTAL *Rs.*	719	1,110	391

PART V.—LAW AND JUSTICE.

1. This part embraces all sums paid as fees to the registrars of the Supreme Courts, Commissioners of the Courts of Requests, and sheriffs, as well as the proceeds of the sale of articles manufactured by the prisoners confined in the different houses of correction; they are noted in the Table below:—

	1860-61.	1861-62.	Increase.
	Rs.	*Rs.*	*Rs.*
Singapore	32,559	54,957	22,398
Penang	20,106	34,787	14,681
Malacca	5,447	9,775	4,328
TOTAL *Rs.*	58,112	99,519	41,407

2. The great increase at all these stations has arisen from the payment of the court establishment by fixed salaries in lieu of fees, so that in reality there has been no gain, the expenditure having increased in a proportionate degree.

PART VI.—MARINE.

1. This section includes all fees on port clearances and the registry of vessels, and sums debited to other Governments on account of coal supplied to their steamers. The receipts during the two past years were as follows:—

	1860-61.	1861-62.	
	Rs.	*Rs.*	*Rs.*
			Increase.
Singapore	2,437	3,096	659
Penang	8,819	21,947	13,128
			Decrease.
Malacca	23	- -	23
			Increase.
TOTAL *Rs.*	11,279	25,043	13,764

2. The increase at Penang is caused solely by a large quantity of coal having been supplied to Government steamers, a corresponding expense having been thereby incurred.

PART VII.—PUBLIC WORKS.

1. Under this heading are inserted light-dues, rent of markets, and Government bungalows. The total collections have been as follows:—

	1860-61.	1861-62.	Decrease.
	Rs.	*Rs.*	*Rs.*
Singapore - - - - - -	56,681	55,738	943
Penang - - - - - -	939	919	20
Malacca - - - - - -	172	138	34
TOTAL - - - *Rs.*	57,792	56,795	997

2. The above sums do not include light-dues paid at Indian ports. From returns received from Bombay and Madras, it appears that in the year 1860-61 the receipts at those Presidencies amounted to 6,374 rupees; no return has as yet been furnished by the deputy auditor and accountant general, Bengal.

PART VIII.—MISCELLANEOUS (GENERAL).

1. This section embraces all realizations from marriage and naturalization fees, sales of stores and Government presents, freight and hire of Government steamers, &c., on which account the following sums have been received:—

	1860-61.	1861-62.	Increase.
	Rs.	*Rs.*	*Rs.*
Singapore - - - - - -	9,430	16,289	6,859
Penang - - - - - -	178	9,467	9,289
Malacca - - - - - -	757	1,995	1,238
TOTAL - - - *Rs.*	10,365	27,751	17,386

2. At Singapore the increase has been occasioned by the discontinuance of the custom under which the medical subordinates attached to the different hospitals also performed the duty of purveyor; the diet required by the sick is now furnished by the commissariat, payment being made out of the hospital charges, the whole of which are entered in the column of receipts. At Penang there have been large payments as re-funds of salaries and advances to which the increase is to be attributed.

3. The total collections made in the Straits on account of the local Government are as follows:—

	1860-61.	1861-62.	Increase.
	Rs.	*Rs.*	*Rs.*
Singapore - - - - - -	10,13,040	10,44,104	31,064
Penang - - - - - -	3,55,582	4,02,135	46,553
Malacca - - - - - -	1,64,220	1,68,597	4,377
TOTAL - - - *Rs.*	15,32,842	16,14,836	81,994

but to these sums are to be added the amount received on account of post office stamps and collections, and the sale of convict gaol manufactures and deceased convicts' estates, as shown below:—

	1860-61.	1861-62.	Increase.
	Rs.	*Rs.*	*Rs.*
Singapore - - - - - -	71,198	1,15,326	44,128
Penang - - - - - -	12,619	13,282	663
Malacca - - - - - -	495	2,173	1,678
TOTAL - - - *Rs.*	84,312	1,30,781	46,469

Thus, as calculated in the statements of proper receipts and disbursements prepared, in accordance with the form now prescribed by the Resident Councillors at the different stations, it would appear that the undermentioned sums, showing an increase of 1,28,464 rupees over the receipts of the year 1860-61, may be considered as the revenue of the Straits Settlement during the twelve months constituting the official year 1861-62:—

	1860-61.	1861-62.	Increase.
	Rs.	*Rs.*	*Rs.*
Singapore - - - - -	10,84,238	11,59,431	75,193
Penang - - - - -	3,68,202	4,15,418	47,216
Malacca - - - - -	1,64,716	1,70,771	6,055
TOTAL - - - *Rs.*	16,17,156	17,45,620	1,28,464

SECTION III.—EDUCATION.

1. At Singapore the institution has continued to maintain its high character; the average daily attendance has been 194, or 22 in excess of the number during the previous year. The number of boarders on the foundation has increased from five to eight, and the progress of the pupils, as tested at the general examination, has been in every respect satisfactory—seven scholarships, varying in value from three dollars to seven dollars per mensem, were awarded. The building has been placed in a proper state of repair.

2. The girls at the school attached to the institution are reported to have made fair progress in their studies; the number on the rolls is 36, with a daily average attendance of 30 scholars.

3. The inmates of the Malay Mission School number 55, 42 boys and 13 girls, all boarders. In addition to acquiring a fair knowledge of English and Malay, the boys are instructed in some useful occupation, such as printing, book-binding, &c., and the girls in plain and fancy needlework, so that in after-life they may have no difficulty in procuring a livelihood.

4. The attendance at the Malay school in Campong Glam has been extremely irregular, and the average daily number of students is only 15. The school-house, a thatched building, was pulled down under the orders of the Municipal Commissioners, and for some time past the school has been held in the verandah of a house rented for the purpose; a new school-house will, however, be shortly erected in a more suitable locality than the old one.

5. The school at Teluk Blangah has been long in a declining state; under the patronage, however, of his Highness the present Tumongong, and his brother Inchi Wan Abdul Rahman, there is reason to hope that it will rapidly improve; the house is now being placed in good repair, a new master has been engaged, and already the names of 63 lads have been placed on the rolls.

6. Of the schools not connected with Government, one of the most deserving of notice is the school at Tanjong Paggar, established and maintained at the sole cost of Mr. Guthrie, the proprietor of the land in the neighbourhood of the village. The number of names enrolled is 57, viz.: 48 Malays and nine Chinese, and the average daily attendance is 45; 14 only learn English, and the remainder are taught the first simple rules of arthmetic, and to read and write in the vernacular. During the time of their attending school the boys make good progress, but being chiefly the children of poor parents, they are generally withdrawn at an early age to enable them to aid towards their own support.

7. The Free School at Penang has on its lists the names of 304 pupils, furnishing an average daily attendance of 212, a great improvement upon the preceding year; considering the early age at which they relinquish their studies, the lads obtain a fair general knowledge of the ordinary branches of education. The staff of instructors is numerically inefficient; the time of the head master, who is well qualified for his post and painstaking, being occupied in attending to classes, the charge of which should be entrusted to a competent assistant, so as to enable the elder boys to derive the full benefit of his able tuition.

8. At the Vernacular Branch School at Glugore the pupils number 50, with an average attendance of 28; the instruction is confined to imparting a knowledge of reading and writing in the vernacular, and of the simple rules of arithmetic.

9. The scholars, numbering 60, at the Protestant Mission School, are chiefly Eurasians or Chinese; they are all boarders, and only allowed to vist their homes once in the course of the year; they appear to have made fair progress in their studies.

10. The

10. The result of the examination of the students at the Christian Brothers' School was not quite so satisfactory as usual; this falling off may, however, be attributed to the departure of the former able head master and to the ill health of his successor.

11. Much credit is due to the Christian sisters for their charitable exertions in the cause of education; the profits derived from the tuition of the better class of their pupils are entirely devoted to the maintenance of the orphans, 93 in number, that have been placed under their charge.

12. At Malacca the Free School still labours under the disadvantage of having no head master, as, although there is a numerous attendance, the funds of the institution do not admit of a sufficient remuneration being offered to secure the services of a competent person.

13. Miss Williams' School has been removed to the new building, which is centrically situated, and apparently well adapted for the required purpose; as the scholars are almost all children of an early age, the teaching is at present merely elementary.

14. A girls' school has recently been established under the direction of the Sisters of the Order of the Holy Infant Jesus; the education is almost entirely gratuitous, though in cases where the pupil can afford to pay, a monthly fee of two dollars is charged. The establishment, which maintains a large number of orphans, is supported by the labour and industry of the sisters and orphans of the convent, aided by contributions from the sister institution at Singapore.

SECTION IV.—PUBLIC WORKS.

1. At Singapore, the alterations to the old police office having been completed, it has been rendered in every way suited for the purpose for which it is required; in addition to meeting the requirements of the Commissioner of Police, ample accommodation being afforded to the magistrate and the Commissioner of the Court of Requests, whose courts are located in the two wings of the main building. Three new substantial police stations have been erected on the coast of the Old Straits for the reception of the additional police paid by the opium farmer. The former police station, in the Rochore district of the town, which was destroyed by fire, has been replaced by a structure of less inflammable materials; material alterations and repairs have been executed to the China town and Ellenborough markets. The canal through Balastier estate forming the main line of drainage for a large district, has been cleared and enlarged. On the road to Changhie, bridges have been constructed to facilitate the drainage of the inner lands and admit of its passage to the sea; two timber platform bridges have been erected on the Kranjee road, and a new line of road has been almost opened between Serangoon and Shanghie; this last work has been much needed for police purposes. A few necessary alterations have been made to the Lunatic Asylum and Pauper Hospital, and, in connection with the latter institution, a small hospital has been built for the reception of lepers. In the convict lines, the buildings for the steam saw mill have been completed, and the machinery put up. Considerable improvements have been effected to the ventilation of the different magazines, they were urgently required, it having been found that, owing to their excessive dampness, the powder in store rapidly deteriorated. Pending the receipt of final orders, relative to the disposition of the buildings in Fort Canning, a portion of the large building, ordered to be used as a hospital, has been partitioned off so as to admit of its being converted as a temporary measure into a guard-room. The sea wall has progressed satisfactorily.

2. At Tanglin 10 permanent barracks, with out-offices, the hospital, main guard, canteen, officers' mess ronm, and subalterns' quarters are ready for occupation. The lighthouse at Cape Rachado is rapidly approaching completion.

3. At Penang the additional storey to the main range of buildings in Her Majesty's gaol has been nearly completed; verandahs have been added to both wings of the Court House; new police stations have been erected at Ayer Etam and Batu Kawan, and a third at Tanjong Tokong has been commenced. An upper storey has been added to the Court House at Bukit Tamboon, as well as to the Police Hospital at Butterworth. A wooden bridge has been thrown over the Tibing Tingee River, and the abutments for the new bridge over the Jooroo River have been built. These last works are both of considerable importance, being on the main line of road leading to the southern division of Province Wellesley. The new convict lines and overseer's quarters in the north division of the province have been nearly finished. A verandah and covered way, connecting the building with the out-offices, have been added to the Native Infantry Hospital, and the necessary works have been undertaken for supplying the garrison of Fort Cornwallis with pure drinking water; a large portion of the masonry of the dam thrown across the stream near Scotland estate for the purpose of directing a sufficient supply of water towards the tanks near the Sepoy barracks, having been carried away, the weir and wing walls have been reconstructed. Some progress has been made in the construction of the new line of road between Jawee and Nebong Tubal, and of the bridges on the road between Telloh Ayer Tawar and Permatang Bindhari, as well as in the improvement of the main road between the ferry at Bukit Tamboon and Jawee.

 4. At

4. At Malacca several additions have been made to Her Majesty's gaol, which has now been rendered complete in every respect. The building formerly used as a gaol has been altered and improved, and is at present occupied as a house of correction. Two new stations have been built for the accommodation of the frontier police at Poolow and Batang, Malacca, and the old police station at Karbow has been renewed. The handsome iron bridge over the Malacca river, the liberal gift of Mr. Tan Kim Seng, has been duly opened. A bridge has been thrown across the Sree Malacca canal, and 13 platform bridges laid down on the road to Aloor Gadjah. A new line of road has been opened between Kassang and Batang, Malacca, so as to enable the police on the frontier to receive, if necessary, support from the former station, and also to afford access to an apparently rich district. The ground for the new cemetery at Bukit Sarinday has been cleared, and a suitable covered entrance constructed. The channel of the Duyong river has been nearly cleared. The New Harbour lantern has been placed in position, and displays to seaward a brilliant light, reported to be visible at a distance of 15 miles.

5. Consequent on the retirement of the late able chief engineer, Lieutenant-colonel Collyer, the Supervising Officer of Public Works in the Straits Settlement has been made a chief engineer of the 3d class, and appointed secretary in the Public Works Department.

SECTION V.—MARINE.

1. Consequent on the arrival from China of the small steamers "Tonze" and "Mohr," the three sailing gunboats, attached to the different stations in the Straits Settlement, have been thrown out of employment; two of them have been sold, and the third retained under the charge of the master attendant at Singapore, with the view to her being manned temporarily to meet any emergency that might occur owing to the absence of the steamer "Hooghly," or to her being in any way disabled (a not unfrequent occurrence, her boilers being nearly worn out), and consequently prevented from putting to sea.

2. The "Tonze" has been attached to the station of Malacca, and the "Mohr" to Penang; both steamers have performed good service during the year, and the diminution of petty piracy along the coast may, in a great measure, be attributed to their presence. In addition to ordinary political and police duties, the "Tonze" has been employed in conveying stores and provisions to the light-vessel on the North Sands and to the Cape Rachado Lighthouse, and has been found most useful. Although ill-fitted to face the monsoon in the China Sea, and from their want of accommodation not suited for the transport of troops, these vessels are well adapted for the work which they are called upon to perform within the Straits of Malacca, as, owing to their light draught of water, they can cross the bars that exist at the mouths of all the rivers of the Peninsula, and penetrate for miles into the interior; thus depriving the crews of native boats of all hope of eluding pursuit by seeking shelter, as formerly, in the nearest river whenever there was a prospect of their being apprehended for the commission of piratical acts.

3. The shipping offices at Singapore and Penang have continued to give satisfaction, and hitherto there has been no complaint against them either from the owners or agents of vessels, or from the seamen seeking employment. At Singapore, owing to the dulness of trade for some time, the business at the shipping office was extremely slack, the amount realised by fees not being sufficient to meet the payment of the full salaries authorised for the officials attached to the establishment; latterly, however, there has been a great improvement in this respect, and the annual account shows a balance to credit of $ 203.44, or *Rs.* 447. 9.

4. At Penang the collections at the shipping office have never yet covered the authorised amount of disbursements, and the shipping master has consequently been always underpaid; but at this port also a favourable change has taken place of late, and it is probable that the return for next year may exhibit a surplus.

Orders have been issued for the laying down of a buoy to mark the position of the "Charybdis Rock," and also for placing a sign-board on Balayer Point to give warning of the existence of the reef at the western entrance of New Harbour at Singapore.

SECTION VI.—FINANCIAL.

1. The subjoined comparative tables show the actual disbursements made from the local treasuries during the year 1861–62. They include, each under its proper head, every item of local and general expenditure defrayed from the funds at the command of the Resident Councillors at the three stations; but contain no account of disbursements made by the Bombay Government on account of Straits convicts transferred to that Presidency; by the Madras Government on account of military charges; by the Supreme Government on account of stationery and other articles supplied to public departments, or by the Home Government on account of pensions to retired officers and pay to officers on leave:—

	Rs.
Singapore	57,030
Penang	42,586
Malacca	14,372
Labuan	8,399

2. The small sailing gun-boats having been disposed of as soon as practicable after the arrival of the steamers "Tonze" and "Mohr," each station is now debited only with the disbursements of the steamer actually attached; thus the annual cost of the "Hooghly," instead of being, as heretofore, evenly divided between the three stations, is entered solely in the Singapore accounts; one-third of the expenditure on account of the Governor and his establishment, of the surveyor-general, and of pensions granted to retired civil officers residing in the settlement, is charged against each station, whilst the amount of the salaries of the Honourable the Recorder of Singapore (with his establishment) and of the Registrar to the court is distributed in equal proportions between the two stations of which his division is composed.

3. The floating light-vessel "Torch" being attached to Malacca, the whole of her expenses (9,128 rupees) are debited against that station, although the receipts at the Treasury on account of Straits lights do not amount to more than 100 rupees.

4. The only items of local expenditure that materially vary from those of last year are those recorded under the heads of marine at Penang, and land revenue and police at Malacca, as already noted in Section II. The first-named charge has arisen from the purchase of coal for the use of steamers belonging to other governments, for which re-payments are duly made; the two latter have been occasioned by the increased rate of salaries granted to the surveyor and his department, and the establishment of the Frontier Police Force.

5. Consequent on the reduction in the strength of the regiments of Madras Native Infantry stationed in the Straits, the military charges debited to the general government of India have been considerably diminished.

6. The disbursements on account of the Imperial Government have been confined to the payment of expenditure required for the maintenance of the naval coal depôt, and of pensions to pensioners of the Ceylon Rifle Regiment, and merely the amount expended under these heads, excluding the heavy advances made on account of the China expedition in 1860–61, is consequently entered in the comparative table showing the sums disbursed during the two years.

SECTION VII.—POLITICAL.

1. Continual disturbances, detrimental to our commerce, having taken place along the Pahang Coast, owing to an attempt on the part of Inchi Wan Ahmud, a younger brother of the Bandaharah, to seize upon the Provinces of Quantan and Endow, which he alleged had been bequeathed to him by his father, and both parties having sought the countenance of the British Government, with the view of preserving the peace of the Peninsula, which might otherwise have been endangered, it was deemed advisable to adopt measures for ensuring a speedy settlement of the question at issue, and the Governor accordingly personally visited Pahang, and offered his mediation; the Bandaharah having signified his assent to the terms proposed, they were communicated to Inchi Wan Ahmud, who, however, declined to accept them; he was, therefore, informed that his pretensions to authority over the districts claimed could not be recognised, and that any interference with the interests of British trade would be promptly resented; the neighbouring chiefs were, at the same time, warned against rendering him any assistance or support; this warning had the desired effect; Inchi Wan Ahmud speedily retired from the positions he had occupied, and the sea-board of Pahang has been subsequently free from any attack on the part of his adherents.

2. The Sultan of Tringanu, whilst *en route* to his own country from Galle, whither he had proceeded with the intention of continuing his pilgrimage to Mecca, having, on the occasion of his interview with the Governor, requested that the influence of this Government might be exerted, in order to secure the return of some of the ladies of his family temporarily residing at Pahang, the necessary communication on the subject was duly made to the Bandaharah, and the wishes of the Sultan at once complied with.

3. The prime minister of Siam, together with some members of the Royal Family, visited the different stations in the Straits Settlement, and were received with due courtesy.

4. Several disputes having occurred between British subjects and those of Johore, owing to some misconception as to the extent of the Tumongong's jurisdiction, the attention of his Highness was called to the necessity for respecting the rights of the British Government; subsequently a piracy attended with murder having been committed on a British boat off Pahang, a village on the Johore Coast, and the criminals not having been given up, the Tumongong inflicted a heavy fine upon the residents of the village, which was duly paid to the surviving sufferers and the heirs of the deceased men, as compensation for the losses they had sustained. The Tumongong died on the 31st of January 1862, and was succeeded in the sovereignty of Johore by his eldest son his Highness Inchi Wan Abu Bakar.

5. Continued

5. Continued complaints having been received respecting the refuge afforded in Quedah to the armed bands, by which so many of the gang robberies in Province Wellesley had been committed, a letter was addressed to the Rajah on the subject, pointing out the obligation he was under of adopting measures to prevent the violation of British territory, and the evil to himself likely to ensue in the event of this obligation being lightly regarded. Since the receipt of this communication, the Quedah authorities have duly co-operated in maintaining the peace of the frontier, and gang robberies have ceased.

6. Several British subjects, Chinese, residing at the mines in Laroot, having been expelled with the loss of all their property, owing to an attack made upon them by a rival society supported by the chief in charge of the district, the Sultan of Perak was called upon to cause an investigation to be held into the charges preferred against his officer, and to afford redress to those persons who might be proved to have suffered from his misconduct; whilst fully acknowledging the justice of the demand, and promising that the desired inquiry should be instituted, the Sultan for months refrained from taking any steps in the matter; eventually, in April last, on the urgent remonstrance of the Government against any further delay, the Laximana was deputed to Laroot; this chief recognised the claims of the greater number of the complainants, and awarded equitable compensation. The Laroot authorities, however, refused to abide by his decision, and he was compelled to appeal for assistance in enforcing his decree to his colleague the British Commissioner. After due warning, the Laroot and Sepatang Rivers were blockaded by the three Straits Government steamers, the blockade was efficiently maintained, and shortly after the close of the official year was attended with perfect success.

SECTION VIII.—MILITARY.

1. Colonel Shubrick has assumed the command of the troops of the Straits, vacated by the removal of Brigadier Babington to a brigade command in the Madras Presidency.

2. Consequent on the late changes in the Madras army, several officers, many of high rank, have been appointed to do duty with the corps at Singapore and Penang; the strength of the European artillery has varied but little from that of last year; in that of the native troops a still further reduction has taken place, and they only muster 1,470 of all ranks.

3. The judicious arrangements with regard to cooking the men's dinners and supplying them with wholesome liquor made by Lieutenant Colonel Hervey, commanding 40th Regiment, Madras Native Infantry, have continued to produce a beneficial effect, and in this corps there has been but little sickness. In the 20th Regiment, Madras Native Infantry, also, although the admissions into hospital were at one time numerous, latterly the amount of disease has not been much in excess of that ordinarily existing in continental stations.

4. The barracks in Fort Canning having been completed, they have been occupied by the European artillery, formerly located in the buildings on Pearl's Hill, which are now undergoing alterations with a view to their conversion into an Arsenal and Commissariat storeroom.

5. During the drill season the attendance on parade of the Singapore Volunteers has been satisfactory; owing, however to the unsafe condition of the butt, there has been no annual practice. At Penang the volunteers have not attended drill with as much regularity as could be wished, but most of the members of the corps have devoted a good deal of time and attention to target practice, and the shooting generally has been very creditable.

SECTION IX.—MISCELLANEOUS.

PART I.—AGRICULTURE.

1. At Singapore, although the amount of the monthly subscriptions does not admit of operations on a large scale, the Agricultural and Horticultural Society is making fair progress; a large portion of the ground made over to the society for a public garden has been laid out with great taste, and two shows have been held for the exhibition of agricultural and horticultural produce. The display of flowers included some rare orchids; amongst the vegetables there were a few specimens of peas, cabbages, asparagus, and Jerusalem artichokes, but the show in this respect was not very encouraging; amongst other produce there were some fine cocoa pods, sugar cane, and a small quantity of cotton and arrowroot.

2. At all the convict detached posts, and at several of the police stations, nurseries of useful and ornamental trees and shrubs have been established, and considerable progress has been made in planting avenues of trees along the most frequented roads.

3. In the Island of Penang disease still continues its ravages amongst the nutmeg plantations, and hardly one has remained unscathed; they are consequently rapidly giving way to plantations of cocoanut and other fruit trees.

4. The rice crop for the past year, both in the island and Province Wellesley, has been abundant, and the out-turn of some of the sugar estates closely approximates to that of the plantations in the best West Indian islands; the yield of tapioca also has been very large; indeed the abundance with which this article has been poured into the home market has seriously affected the market rates, and it will be necessary, as far as possible, to reduce the cost of production to admit of the producer receiving a fair remuneration for his labours.

5. The cultivation of cotton has been commenced at two estates in the southern division of the province; at present the measure can merely be considered as experimental, but the report on the muster forwarded to England was very favourable.

6. Owing in a great measure to the want of space at the different police stations, and to the want of breadth in most of the old roads in the province, but little has been done in carrying out the order with respect to the propagation of trees and shrubs; a nursery has, however, been formed at the new convict lines at Bukit Meniah.

7. At Malacca the rice crop was very poor; this may be attributed partly to the destruction caused by locusts, and partly to the fact that owing to the dread of a repetition of the murrain and inundations of past years the proper season for planting was allowed to pass by before agricultural operations were commenced; fortunately the murrain has not re-appeared amongst the cattle, though the disease still exists in the neighbouring State of Rambow.

8. The cultivation of cotton has been introduced with tolerable success in various parts of the country, and coffee has also been tried by several persons. Experience shows that in transplanting the seedlings or shoots of the coffee shrub the shelter of larger trees is necessary, whereas if a plant be removed with a stem about half an inch in diameter, all the branches and roots cut off, leaving only about six inches of stem from the taproot, and placed with about an inch of stem protruding in a hole one foot in diameter, and previously well manured, it will grow well and bear any amount of exposure.

9. Attempts have been made to rear Europe flowers and vegetables, but hitherto with but little success; the seeds are either destroyed by insects, or the plants prove weakly and rarely come to maturity.

10. Tapioca has been extensively planted; the average yield from 100 square yards being about nine piculs, producing one picul of pure tapioca, of which the market price is at present two dollars. A project is now being carried out for extracting oil from the seed; should it prove successful, the cultivation of the plant ought to prove more remunerative. Of late the attention of the villagers has been much given to the formation of cocoanut plantations; a small quantity of salt placed round the nut when planted, or round the root of the tree when it is of about two years' growth, is supposed to strengthen the plant and improve the flavour of the fruit.

11. At most of the police stations small nurseries and gardens have been formed, but hitherto, consequent on the numerous changes that have taken place amongst the police force, they have not flourished as well as could be wished.

12. The long expected Land Act having been passed, ere long possibly many of the present holders of land on commutation deeds will take advantage of the option now given of becoming freehold proprietors, and be thus induced to take a deeper interest than heretofore in the progress of agriculture.

PART II.—SURVEY.

1. The amount of work performed in this department, as detailed in the Return annexed, is, as usual, creditable.

2. At Singapore and Penang considerable exertions have been made to induce squatters to take out the necessary grants, and to recover purchase-money due by grantees. At Malacca, consequent on the introduction of the provision of Act XXVI. of 1861, the Survey establishment has been employed principally in preparing surveys of land occupied by squatters, whose applications for purchase have been duly registered.

3. With reference to Section VII. of Act XXVI. of 1861, the Surveyor General and the Government surveyor, Malacca, have been appointed Commissioners for the survey and measurement of land at Malacca.

4. The Native Assistant Surveyor in charge of Penang Hill having been detected in taking money from the Chinese squatters, upon whom he had been directed to serve notices

notices to appear at the Land Office, was dismissed from the service of Government. The assistant surveyor in Province Wellesley has been permitted to resign his appointment.

PART III.—MUNICIPAL.

1. At at all three stations in the Straits Settlement there has been a marked increase in the receipts of the municipalities, the amount of which is shown in the following comparative Table of receipts and disbursements:—

RECEIPTS.

	1860-61.	1861-62.	INCREASE.
	Dollars.	*Dollars.*	*Dollars.*
Singapore	99,146	113,038	13,892
Penang	55,622	57,983	2,361
Malacca	13,720*	14,648*	928
TOTAL DOLLARS	168,488	185,669	17,181
OR RUPEES	3,70,673	4,08,471	37,798

DISBURSEMENTS.

	1860-61.	1861-62.	INCREASE.
	Dollars.	*Dollars.*	*Dollars.*
Singapore	87,128	111,706	24,578
Penang	54,855	55,788	933
Malacca	13,970	14,346	376
TOTAL DOLLARS	155,953	181,840	25,887
OR RUPEES	3,43,096	4,00,048	56,951

SINGAPORE.

1. The undermentioned gentlemen have formed, with the two official members, the Municipal Board at this station.

William Henry Read, Esq.
Samuel James Gardner Jellicoe, Esq.
Charles Hercules Harrison, Esq.

2. The following disbursements were made by the Commissioners:—

Police.

	Dollars.
Expenditure in maintenance of police force, including magistrate's establishment	42,026
Contingent charges	1,070

Establishment.

Commissioner's official establishment	6,461
Contingent charges	1,627

Conservancy.

Fixed salaries	2,315
Contingent charges	725

New Works.

Roads and bridges, including special repairs to Campong Java road	[illegible]37

Maintenance

* Including the annual payment of 9,000 rupees made by Government.

Maintenance of existing Works.

	Dollars.
Roads	22,792
Bridges	727
Landing places	426
Drainage	735

Miscellaneous.

Sweeping and cleansing the town	8,936
Lighting the town	2,478
Watering the town	938
Interest on loans	6,270
Ordinary contingent expenses	3,743
TOTAL	*Drs.* 111,706

3. The most satisfactory feature in the municipal accounts is the great increase that has taken place in the assessment on houses, the amount entered under that head being 8,936 dollars in excess of the sum received in 1860–61, showing that, although there has been of late a reduction in rents in some quarters, it has been more than counterbalanced by the general enhanced value of house property.

4. There has been a considerable decrease in the assessment on land owing to the abandonment of several pepper and gambier plantations in the interior of the island.

5. The new works completed during the year most deserving of notice are Kim Sing's road with its substantial bridge over the river, Chancery-lane, and D'Almeida's road, all useful lines of communication.

6. All the old roads have been put into a state of excellent repair, and lines of young trees planted along several so as to form cool and shady avenues. Final arrangements have been made for putting up the new iron bridge across the Singapore river, and the work is now in progress.

7. Towards the close of the year a civil engineer arrived from India to take charge of the municipal works; his attention has been directed to the preparation of plans and estimates for the proper drainage of the town.

PENANG.

1. The Board, in addition to the usual official members, was composed of the following gentlemen, the first of whom only was nominated by election, the two latter having been appointed on failure of acceptance of office by elected Commissioners :—

James Lamb, Esq.
John James Erskine Brown, Esq.
George Scott, Esq.

2. The disbursements during the year have been as follows :—

Police.

	Dollars.
Maintenance of police force, &c.	33,360
Pensions	81

Establishment.

Commissioner's official establishment	4,726
Commission and contingencies	974

Charges General.

Aqueduct department	2,105

Conservancy.

Fixed salaries	1,766

Road Department.

Fixed salaries	4,950
Boat establishment	2,222
Cart establishment	1,935
Contingencies	1,350

Province Wellesley.

	Dollars.
Salaries	406
Commission and contingencies	1,913
Total	*Drs.* 55,788

3. The excess in receipts in Prince of Wales's Island over those of last year amounted to 3,745 dollars, principally to be attributed to an increase in the police fines and fees, and to the rent of the new market.

4. In Province Wellesley the falling off, aggregating 1,384 dollars, arose in a great measure from the arrears caused by the resignation of one of the collectors, and the delay in the appointment of a successor.

5. The conservancy duties of the town have been performed by a hired establishment under the orders of an overseer, the Commissioners having declined to renew the former contract. The new arrangement appears to answer well.

6. The landing places have been generally improved, but the attention of the Commissioners has been chiefly devoted to the improvement of the water supply; several tanks have been added, and others altered, so as to adapt them more to the convenience of the public.

MALACCA.

1. Consequent on the failure of election, the undermentioned gentlemen were appointed members of the Municipal Board:—

John Henry Velge, Esq.
Thomas Neubronner, Esq.
A. A. De Wind, Esq.

2. The following detailed statement shows the disbursements made by the Commissioners:—

Police Department.

	Dollars.
Fixed salaries	11,184
Contingencies	109

Assessment Department.

Fixed salaries	1,206
Contingencies	375

Conservancy and Public Works.

Fixed salaries	386
Contingencies	1,086
Total	*Drs.* 14,346

3. In the assessment on houses there has been an increase of 357 dollars, and the tax on carriages and horses has also yielded a similar additional sum, a sign of the gradually increasing prosperity of the settlement.

4. The funds at the disposal of the Commissioners do not admit of their making extensive improvements; in the course of the year, however, the road at Tranquerah from the first to the second bridge, as well as a portion of the Mallim road, has been thoroughly re-made and macadamized, and the road from Cooboo to Gajah Berang re-opened; the bridge near the Cooboo police station being built by convict labour.

5. The appearance of the town is being gradually improved by the substitution of tiled for attap roofs under the operation of the Municipal Act (105 houses having been altered during the past 12 months), and the government having contributed towards the purchase of cemeteries beyond the limits of the town, intermural interments have been prohibited.

PART IV.—GAOLS AND HOSPITALS.

SINGAPORE.

1. The grounds attached to the general hospital and lunatic asylum have been tastefully laid out with shrubs, flower beds, and grass plots, which gives them a cheerful and pleasing appearance; measures have also been adopted for providing these institutions with

with a due supply of pure drinking water from wells sunk in the neighbouring sandy ridge, though, owing to the percolation of the surface water through the conduit, the desired object has not hitherto been fully obtained, the defects in the masonry are now in course of being remedied. For the use of the shower and plunge baths erected during the year a sufficient supply of water is furnished from the wells sunk immediately in the rear of each of the main buildings.

2. The prevalent diseases in the general hospital have been fever, bowel complaints, and venereal affections; the total number of admissions 786, and of casualties 42, amongst the latter 23 Europeans. At the lunatic asylum the average number of patients has been 119; 43 have been discharged cured, and 17 have died; of these last 12 deaths were caused by cholera, which broke out in the asylum in a very malignant form about the end of March, no less than 41 of the inmates having been attacked.

Tan Tock Sing's hospital has been duly occupied by the Chinese pauper sick; the number of admissions during the year has been 1,018, and of deaths 289. With a view to preserving, as far as possible, the cleanliness of the wards of the main building, a small shed has been erected in its rear for the reception of incurable leprous cases; the average number of its inmates has been 20. In this hospital there were 10 cases of cholera, they were all in the last stage of the disease when brought in for treatment, and died soon after admission.

3. No sickness of any moment has occurred in Her Majesty's gaol. With the object of improving ventilation, as well as of enabling the warders to exercise a better supervision over their charges, iron gratings have been substituted for the panel doors leading from the different wards into the inner galleries.

4. Although the convicts have been a good deal exposed during the year working on the sea-wall, the number of admissions into hospital has been only 1,097, and of deaths 62, equal to a per-centage of nearly 2·93 to strength; this small amount of sickness and mortality is attributed by the senior surgeon to the improvement made in the lines during the past three years; to the more substantial diet now issued to the prisoners, and to the efficient sanatory regulations strictly enforced by the superintendent. The prevailing diseases have been as usual fever, diarrhœa, and rheumatic affections, consequent on the nature of the work on which the men have been employed; there have been several cases of ulcers, but not one of hospital gangrene; there were also some severe cases of disease of the eyes caused by injuries to the cornea from the effects of lime or small pieces of granite; all these, however, did well. There were 14 admissions and 7 deaths from cholera, these were all brought in from outside, not a single case having occurred within the lines, although the disease existed epidemically for upwards of a month in various parts of the town. A work-shed has been added to the hospital in which patients suffering from ulcers and trifling ailments are employed in picking oakum; the monotony of the work prevents malingering, whilst the proceeds are devoted to the purchase of hospital comforts for the more serious cases.

5. The House of Correction having been overcrowded of late, increased accommodation has been afforded by railing off a portion of the convict lines, rendered available by the decrease in the number of convicts, consequent on the Straits having ceased to be a penal settlement. The average number of local prisoners has been 276; there have been only 12 deaths amongst them; these were all old emaciated Chinese with their constitutions thoroughly broken down by dissipation before they entered the gaol.

6. The prisoners have been generally employed upon the different public works in progress, and in the manufacture of rattan chairs, baskets, &c.; the value of their labour being calculated at 8 annas per diem for artificers, and 4 annas for Coolies, may be estimated at 20,655 rupees, whilst the cost of their maintenance during the year has been 15,284 rupees.

PENANG.

1. The number of patients treated in the general hospital has been 256; there have been 29 deaths, the principal diseases have been fever, bowel complaints and ulcers; there were no less than 61 cases of wounds and injuries, of which five proved fatal. Shutters have been put up to some of the lower windows, and some trifling additions made to the stock of furniture. The wards are now most comfortable; the grounds attached to the building have been kept in good order.

2. The inmates of the lunatic asylum have numbered 71, out of whom four have died. Some improvements, much needed, have been effected to the male and female wards.

3. Extensive repairs having been required to the buildings composing Her Majesty's gaol, the opportunity was taken of adding, at comparatively small expense, an upper storey to the main range, not only thereby improving its appearance, but materially increasing the power of the warders to exercise a watchful supervision over the prisoners under their charge. The average number of persons in confinement during the 12 months has been 53, of whom only six have been on the sick list.

4. The

4. The average strength of the convicts has been 1,125, of admissions into hospital the number has been 813, and of deaths 30, giving a ratio of mortality equivalent to 2·66 per cent. Fevers, bowel complaints, and ulcers have been the diseases most prevalent; many admissions have been from trifling ailments caused by the employment of the men in the primitive jungle and swamps in Province Wellesley.

5. Increased accommodation having been much required at the hospital at Butterworth, an upper storey has been added, and the building is now well suited for the purpose to which it has been appropriated; out-offices, however, are still needed to render it complete.

6. The average number of prisoners in the House of Correction has been 106, there have been 115 admissions into hospital. The sick are chiefly the beggars of the place, men suffering from chronic diseases, and taken up by the police as vagrants. The solitary casualty was that of a prisoner belonging to this class, an emaciated Chinese opium smoker, who never performed a day's work during the whole period of his confinement.

7. The value of the labour of the local prisoners, at the rate of 3*a*. 6*p*. per man, has been calculated at 6,263 rupees; the expenditure on their account has been 5,966 rupees.

8. A slight increase has been sanctioned to the salary of the keeper of this prison.

MALACCA.

1. The number of admissions into the general hospital has been 161, and of deaths 29. The prevailing diseases have been fevers, dropsy, rheumatic affections, and ulcers; of wounds and injuries there have been 30 cases, two proving fatal. Consequent on the dampness of the lower floor, caused, it is supposed, by the walls having become impregnated with salt when the building was originally used as a salt godown, the Chinese patients have been removed into a vacant ward in the upper storey.

2. The prisoners in Her Majesty's gaol have been transferred to the new building at Bundar Ellier; it is spacious and well arranged; a suitable establisment of warders, &c., has been attached.

3. There have been 644 admissions and 10 deaths in the convict and House of Correction hospital; a very large proportion of the patients have been suffering from fever contracted in the interior; diseases of the lungs, bowel complaints, rheumatic affections, and ulcers have also prevailed, and there have been 66 cases of wounds and injuries. The average daily number of sick has been 26, and the ratio of mortality to strength 1,069.

4. Although there has not been a single case of beri-beri in any of the civil hospitals, there have been several admissions under this head from the small detachment of Sepoys located at the station; these last have consequently been attributed by the medical officer to attempts to malinger; there being no diagnostics of this disease until the patient has arrived almost at the last stage, it is one most easily feigned.

5. The inmates of the House of Correction have been removed to the buildings formerly used as Her Majesty's gaol, which have been altered and improved for their accommodation. The total number of prisoners in confinement during the year has been 428, estimated at the rate of 12 cents per diem for each man; the value of their labour may be taken at 3,523 rupees, whilst the cost of their maintenance has been 3,092 rupees.

PART V.—CONVICTS.

1. On the 30th April 1862 the convicts at this station numbered 2,055, viz., 1,935 males and 120 females; of the former 339 of the first class reside out of the lines on ticket-of-leave, many being employed as private servants; of this class not a single man has been brought before the police throughout the year.

2. During the past 12 months there have been 131 casualties; of these 101 were carried off by disease, two were murdered, 20 absconded, seven were released (the period of their sentence of imprisonment having expired), and one received a free pardon; the number of additional convicts admitted into the lines during the same period is shown in the following Table:—

Received from Ceylon - - - - - - -	10
Transferred from Malacca - - - - - - -	2
Re-apprehended - - - - - - - -	1
Total - - -	13

3. The large number of casualties entered under the head of absconded proceeds from an emeute that occurred amongst the detached party employed on the works at Cape Rachado; 17 of the gang rose in the night upon their petty officers, murdering one and severely wounding three others, and then effected their escape through the Lookoot territories in the direction of Salangore; up to the close of the year they had succeeded in evading detection. Subsequently, however, information has been received of the re-

capture of nine of their number, and the supposed death of seven, leaving only one unaccounted for. On this occasion the petty officers, themselves convicts, appear generally to have behaved well.

4. The health of the convicts has, as usual, since the introduction of the new scale of diet, been remarkably good.

5. A garden has been established at the invalid barrack on Balestier estate; this gives occupation to weakly men, for whom it might be otherwise difficult to find suitable employment, whilst there is reason to hope that in time the arrangement will prove economical by obviating the necessity for the purchase of vegetables. Already, although it has only been introduced within the last three months, 850 lbs. of various descriptions of vegetables have been supplied for the use of the convicts in the lines.

6. The printing press has been found to answer; the Straits Government Gazette has been regularly printed, and all work connected with the different Government offices throughout the whole settlement duly executed at this establishment.

7. The total expenditure in the convict department, including a share of the salaries of the superintendent and assistant superintendent, has been 1,25,099 rupees, whilst the estimated value of manufactured articles and convict labour, at the ordinary rates of 8 annas per diem for skilled artisans, 4 annas for able-bodied, and 2 annas for weakly labourers, has been 1,76,475 rupees, leaving a balance of 51,376 rupees in favour of the State.

8. The Manufacture Account exhibits a balance to credit of 25,028 rupees, the disbursements having amounted to 41,988 rupees, whilst the articles manufactured are valued at 67,016 rupees. At present all materials supplied to the Public Works Department are duly charged for, though at rates far below those ruling in the market, and all expenses incurred debited to the Convict Department.

PENANG.

1. The number of convicts at this station on the 30th April was 1,089, of whom 89 were women and 146 prisoners of the first class.

2. The casualties during the year were 85,—57 from disease, 24 escaped, three released on the expiration of their term of imprisonment, and one transferred to the civil power.

3. The number of men that have absconded is unusually large; in almost every instance the desertions have taken place from the convict body employed in Province Wellesley. This may, in a great measure, be attributed to the temptation held out by the vicinity of the frontier, in the neighbourhood of which they must often necessarily be employed; but it cannot be denied that there must, in some instances, have been great neglect of duty on the part of the convict peons in charge of the gangs from which escapes have occurred.

4. The health of the prisoners has been generally good.

5. The total disbursements for the support of the Convict Establishment, including half the staff salary of the executive engineer, who is *ex-officio* superintendent, have amounted to 68,588 rupees, whilst the value of the convict labour has been estimated at 58,040 rupees, leaving a deficit of 10,547 rupees. This may be mainly attributable to a reduction having been made in the rates at which labour has hitherto been calculated, those now allowed being for artificers 7 annas, petty officers, orderlies attached to departments, and able-bodied coolies 3 annas 6 pie, and invalids 1 anna 9 pie per diem. These rates are less than those credited at Singapore, though possibly, in comparison with the difference in the rates paid for free labour at both stations, the calculation may be correct. Another cause that has led to this result is the diminution in the number of working convicts, whilst the expense of the establishment has remained almost unaltered, no corresponding reduction in its strength having been as yet feasible.

MALACCA.

1. The strength of the convict body at this station on the 30th April was 514, of whom 37 were of the first class.

2. During the year there have been 16 deaths, three transfers to other stations, and 10 discharges, whilst 41 convicts have been received from Ceylon.

3. The convicts generally have been well conducted, and no complaints have been received against any of the gangs working in the interior; several petty larcenies, however, having occurred in the town of Malacca, suspicion attached to a body of invalids permitted to reside outside the lines; the indulgence was withdrawn from several of their number, and the larcenies have subsequently ceased.

4. The health of the prisoners has been good, no case of cholera having occurred in the lines, although the disease prevailed in the town.

5. The outlay on account of the convicts has been 36,514 rupees, and the value of their labour, estimated at *Rs.* 12. 9. 4. per mensem for mechanics, *Rs.* 6. 13. 10. for orderlies and labourers, and *Rs.* 3. 6. 11. for feeble men, may be taken at 41,550 rupees, giving a surplus to the benefit of Government of 5,036 rupees.

6. At

6. At all three stations a suitable scale of labour has been established, and measures adopted for its enforcement, so that the State may receive the legitimate return for its present outlay on convict establishments.

PART VI.—COMMERCE.

1. From the annexed Tabular Statements of the Imports and Exports of the three stations in the Straits Settlement, it is shown that the value of the imports into Singapore during the past year amounted to 55,725,104 rupees, and of the exports to 49,615,529 rupees.

2. In comparison with the returns of 1860-61, there has been a falling-off in imports, chiefly from Great Britain, Europe generally, and North America, to the extent of 2,401,776 rupees; actually the decrease has been greater, as owing to the enforcement of Regulation 3 of 1833, the value of the imports by the Calcutta, China and Java steamers have latterly been duly registered, which was not the case in former years. Of exports there has been an increase to the value of 7,736,781 rupees, the total amount shown being 49,615,529 rupees; but this increase, for the reason stated above, is more apparent than real, except as regards exports to Cochin China; the establishment of the French settlement of Saigon having led to a considerable extension of our trade in that quarter.

3. The commerce of Singapore has doubtless suffered materially from the unsettled state of affairs in the United States of America, and from the rebellion in China; but its retrogression may be principally attributed to the opening of several new ports in China, and other places to the eastward, so that Singapore has ceased to be the great port of transhipment, either for native produce or Europe goods. Vessels from England now pass through without breaking bulk, whilst the native trade is naturally attracted to the nearest marts, by resorting to which it is saved from the expense and exposure of a long voyage.

4. The Malayan Peninsula and the West Coast of Borneo still, however, offer a fair field for commercial enterprise, and provided the tranquillity of the former is preserved, and the piracy by which the latter has been so long devastated fully suppressed, our trade in both directions may be confidently expected to rapidly expand.

5. The value of the imports at Penang is stated to have been 16,887,434 rupees, and of the exports 20,363,653 rupees; as regards the former, the falling off from last year is hardly perceptible, whilst as respects the latter it may be entirely attributed to the almost total cessation of trade with America; a temporary cause which, it is hoped, may ere long be removed.

6. When compared with the returns for 1859-60, the report of the trade of this station is certainly most favourable, and even in comparison with those of 1860-61, it can hardly be said that there has been any decline; for, at the expiration of the year, owing to the dearth of shipping in harbour, a large quantity of produce was in store awaiting the arrival of freight for transmission to England, whilst the decrease in the imports from Great Britain fully compensated by the increase in those from Madras, may be accounted for by the market having been previously overstocked with piece-goods, so that there was little demand for fresh importations.

7. There has been a marked improvement in the trade of Malacca, the value of the imports having amounted to 4,512,099 rupees, and of the exports to 3,535,745 rupees, showing an increase in the former of 355,698 rupees, and in the latter of 589,508 rupees over the returns of 1860-61.

8. There has been a considerable decrease in the quantity of tin shipped at this port; this has been occasioned by the diminution in the produce of the mines at Soongie Ujong, owing to the disturbances alluded to in the Administration Report for last year, and also by the depreciation in the value of the article, the price of tin having fallen from 30 dollars to 26 dollars per picul.

9. In opium there has been an increase, both as regards exports and imports; in the station itself the consumption of the drug is less than formerly, but a greater quantity is now needed for the supply of the inhabitants of the neighbouring native states.

10. Consequent on the failure of the crops, there was a large importation of rice during the year, whilst, as regards tiles, formerly largely exported to Singapore and Penang, at the remunerative rate of from 40 dollars to 45 dollars per lakhsa, there is now no demand even at 18 dollars and 20 dollars. There are no other points connected with the commerce of Malacca requiring special notice.

(signed) *Orfeur Cavenagh*, Colonel,
Governor of the Straits Settlement.

Singapore, 10 July 1862.

APPENDICES to the ANNUAL REPORT on the ADMINISTRATION of the STRAITS SETTLEMENT, for the Year 1861–62.

APPENDIX, No. I.

A RETURN of the Number of CIVIL and CRIMINAL CASES in the Court of Judicature of Prince of Wales's Island, Singapore and Malacca, and of the Fees received during the Official Years 1860–61 and 1861–62.

Conclusion - 153

CHAPTER XVIII.

COORG DISTRICTS.

ANNUAL REPORT on the ADMINISTRATION of the COORG DISTRICTS, during the Year 1861-62.

SECTION I.—CIVIL JUSTICE.

Description of civil courts.

1. THERE are four descriptions of civil courts in Coorg, viz., the Superintendent's Court, the Durryaft Cutcherry Court, and the Courts of Soubedars and Parputtigars; and one Cutwall having the power of a Parputtigar.

Superior courts. Small cause courts.

2. The Superintendent's and the Durryaft Cutcherry Court may be considered the superior courts, and the remainder, viz., eight Soubedars' Courts, and 28 Parputtigars' Courts, as small cause courts.

Jurisdiction of superior and small cause courts.

3. The Parputtigar has jurisdiction in real and personal property, debt, damages, and other civil wrongs up to 100 rupees. The Soubedar in the same manner up to 200 rupees. The Durryaft Cutcherry Court up to 3,000 rupees; and the Superintendent from 3,000 rupees up to any amount.

Appeal how lies.

4. In suits not affecting land, an appeal lies from the Parputtigar's Court to the Soubedar, and from the Soubedar a special appeal to the Durryaft Cutcherry, from whence there lies a species of irregular appeal to the Superintendent; but in the case of landed property, after the special appeal to the Durryaft Cutcherry, there is an extra special appeal to the Superintendent, and again an additional extra special appeal from his decision to the Judicial Commissioner of Mysore.

Decrease in civil business.

5. There is a considerable falling off in civil work this year as compared with last year, viz., a grand total of 674 original suits instituted in the year against 1,044 original suits filed the year previous, showing a total decrease of civil business in all the courts of 370 cases. This decrease is apparent in all the courts but the Superintendent's, where there is an increase by one case over the previous year; but is noticeable chiefly in the Small Cause Courts, and is, I believe, to be accounted for by the introduction, in the month of August last, of stamp rules, viz., Act No. XXXVI. of 1860.

The cause.

Previous to this, fees in lieu of stamps were levied in the Durryaft Cutcherry and Superintendent's Courts; but no fees or costs of any description were leviable in Parputtigars' and Soubedars' Courts. This imposition of fees in cases previously exempted, together with a difficulty experienced by comparatively uncivilized people in mastering the provisions of the Act, will, I think, sufficiently account for the decrease of business in the lower courts, and also account for the lesser number of cases filed in the Durryaft Cutcherry Court; for although fees were previously leviable in that court, yet they were only imposed after deciding the suit, a delay which rather encouraged improvident or litigious suitors, who are now compelled to pause and think before filing a suit, as the institution fee stamp has to be purchased before filing the suit. Again, some suitors hoped to, and perhaps did escape, by alleged or real poverty, absconding, or making away with their property, from paying the fee subsequently imposed upon them; the collecting of which also gave courts and soubedars extra and seemingly unnecessary labour, so that the introduction of stamp rules will, I think, operate most beneficially, and be a fair and litigation-discouraging tax on suitors of all classes in all the courts.

Cases pending at close of year.

6. Including suits instituted in the year, and those pending from the year previous, there were 61 cases pending at the close of this year against 102 cases remaining undecided at close of the year previous, which is nearly the same result as last year, considering the greater number of suits instituted in that year.

Cases how disposed of.

7. Out of the total number of 715 cases disposed of in the year (made up of suits pending in the previous and those instituted during the past year), 637 cases were decided in favour of plaintiff, and 78 cases in favour of defendant; the proportion of decisions in favour of plaintiff being 89·09 against 86·90 the previous year.

Appeal suits, filed, decided, and pending.

8. In addition to the above, 715 original suits were decided during the year, 163 appeal cases were filed against 274 appeal suits for the year previous, and 24 appeal cases remain

as pending this year against 21 appeals remaining undecided for the year previous, which is an unfavourable comparison; both original and appeal business having been less this year. And out of the 160 appeal cases settled in all during the year (made up of the appeals instituted during the year, and appeals remaining from last year)—

In 74 cases the decree of the lower court was confirmed.
In 37 cases it was modified.
In 44 cases it was reversed.
2 cases were sent back for re-investigation, and
3 cases were transferred to the revenue file.

Total - - 160

Centage of appeals on original decrees.

9. The number of appeals during the year bear a proportion of near 22¾ per cent. to the number of original suits decided during the same period, being an improvement over the preceding year, when the proportion of appeals was close upon 28 per cent.

Average duration of appeals, and amount litigated in appeal.

10. The average duration in each case of appeal was 18 days against 10 days for the previous year, and the total amount of value in litigation in the 163 appeal cases filed during the year was 12,379 rupees, giving nearly an average of 76 rupees in each appeal suit.

Average duration of original suits.

Amount litigated.

11. The average number of days occupied in the disposal of each original suit was 19 days, whilst the average last year was but 14 days. The total value of property litigated was *Rs.* 67,850. 8. 9. against *Rs.* 41,105. 14. 7. for the previous year. The average amount litigated in each suit was *Rs.* 57. 3. 11. against *Rs.* 41. 11. 8. for the year previous. Of the above amount in the 715 cases decided, *Rs.* 47,111. 15. 7. was decreed to be due, and *Rs.* 6,186. 9. 1., or about 11½ per cent. was disallowed. The proportion of suits to population is about one suit to 175 persons, and descending to further particulars, it gives about the sum of *Rs.* 1. 11. as litigated by each inhabitant.

Court cost or fees.

The sum imposed as fees on suitors in the Superintendent's and Durryaft Cutcherry Courts amounts to *Rs.* 746. 13. 11.; of this sum *Rs.* 690. 5. 9. was recovered, leaving a balance of *Rs.* 56. 8. 2. to be recovered.

Suit by what courts decided.

12. The Table below shows by what courts and in what proportions the civil work of the year has been carried on:—

CLASS OF COURTS.	Original Suits decided.	Appeal Suits decided.	Total Original and Appeal Suits decided.
Superintendent's Court - - - - - -	1	56	57
Durryaft Cutcherry Court - - - - -	30	50	80
Soubedars' Courts - - - - - -	267	54	321
Parputtigars' Courts - - - - - -	417	- -	417
TOTAL - - -	715	160	875

Classification of original suits.

13. The 715 original suits disposed of during the year, and the 61 cases remaining in arrears at the end of the year, are classified as follows:—

NATURE OF SUITS.	Decided.	Remaining.
I.—Suits affecting Land:		
Merasy rights - - - - - -	—	—
Landed property - - - - - -	12	10
House property - - - - - -	12	1
Mortgages - - - - - - -	2	—
TOTAL - - -	26	11
II.—Personal Suits:		
Debts - - - - - - - -	558	39
Division of property - - - - -	14	3
Personal property - - - - -	27	—
Cattle - - - - - - -	13	1
Security - - - - - - -	36	3
Wages - - - - - - -	28	—
Caste disputes - - - - - -	—	—
Damages - - - - - - -	13	4
TOTAL - - -	689	50
	26	11
GRAND TOTAL - - -	715	61

Suits

Suits affecting division of property may be considered as mixed suits, so that the proportion of suits for landed property to personal suits is about 4 per cent.

Classification of suits in appeal.

14. The 160 appeals disposed of during the year, and the 24 appeal suits remaining pending at the close of the year, are classified as follows:—

NATURE OF SUITS.	Decided.	Remaining.
I.—Suits affecting Land:		
Merasy rights	1	—
Landed property	26	8
House property	5	2
Mortgages	1	—
TOTAL	33	10
II.—Personal Suits:		
Debts	85	8
Division of property	4	2
Personal property	15	1
Cattle	11	—
Security	4	—
Wages	6	1
Caste disputes	—	—
Damages	2	2
TOTAL	127	14
	33	10
GRAND TOTAL	160	24

Civil debtors.

15. There were in all four civil debtors imprisoned for debt during the year. None, however, remained in confinement at the end of the year as for a longer period than 19 days, the average of imprisonment being 10 days, having all of them satisfied their creditors, and obtained their release.

Judicial.

16. The amount realized by the sale of stamps, since their introduction into the district up to the end of April 1862, was 3,691 rupees, but I am unable to ascertain how much of this stamp paper was used strictly in judicial proceedings and pleadings.

General remarks.

17. The numerical results detailed above, though not quite satisfactorily contrasting with the previous year, yet on the whole do not appear to be unfavourable.

SECTION II.—CRIMINAL JUSTICE.

PART I.—PENAL STATISTICS.

Criminal statistics

18. The criminal statistics of 1861-62 will be found tabulated in the annual statement on the subject, which accompanies. The filling up of column 3, viz. "Total Crimes, the Perpetrators of which have not been apprehended," seems to have been misunderstood, as this column appears as a blank, and it is now too late to call for the requisite information from the talooks and rectify the error. For the same reason column 1, viz. "Total Crimes, the commission of which has been brought to notice," will also be incorrect.

Superior and subordinate criminal courts, and their powers.

19. The superior and subordinate criminal courts are presided over by the same officials as dispense civil justice. Neither Parputtigars, Soubedars, nor the Durryaft Cutcherry Court have independent jurisdiction of their own in criminal cases. Parputtigars and Soubedars cannot decide upon the simplest case of theft; but in petty offences, such as assault, using abusive language, being drunk, and the like, they have the power to fine up to five and 10 rupees respectively, and only in the case of default in payment can they imprison, viz., up to 10 and 14 days respectively. Similarly the Durryaft Cutcherry Court can inflict a fine up to 20 rupees, or in default to award up to two months' imprisonment; and the Durryaft Cutcherry can only take up and try such criminal cases as are referred to them by the superintendent, when they can award punishment up to two years' imprisonment, subject, however, to the superintendent's approval and confirmation. The superintendent has power to fine to the extent of 30 rupees, and imprisonment for seven years. Sentences requiring a severer punishment can only be awarded by the Judicial Commissioner of Mysore.

CHAP. XVIII. Coorg Districts.

Abstract of Crime.

20. The table below is an abstract of the usual annual statement, altered to show the state of crime for the year under review, and which includes eight cases pending from the previous year, as also to exhibit a comparison of the same with the year previous; but owing to the error before noticed, the table has reference only to traced or discovered crime.

No.	CRIME.	1860-61.	1861-62.	Increase.	Decrease.
1	Murder	-	1	1	—
2	Manslaughter	1	1	—	—

26	Breach of Abkarry rules	1	-	-	1
	TOTAL	47	70	35	12
	NET INCREASE	-	-	23	—

Review of the above.

21. The prisoner in the single murder case was charged with murdering his wife by strangling her. He was, however, acquitted of the charge, and the evidence tended to prove it was no murder, but that the deceased had committed suicide by hanging herself. The prisoner in the manslaughter case was also acquitted. His wife charged him with purposely striking her and her child with a stick, the blow of which caused the death of the latter; but it seemed, rather, that in a quarrel with each other the mother fell, and thus caused the death of the child. In the case of infanticide, the court only brought the prisoner in as guilty of the concealment of the birth of her child, which was born dead, under extenuating circumstances. The prisoner charged with rape was also acquitted of the charge, and convicted only of a drunken assault. The two cases of wounding with a knife were not serious. In the forgery case, also, the prisoners were ultimately acquitted by the Judicial Commissioner. Robbery has increased by three cases, but there have been no highway robberies during the last year. The remaining cases do not call for any particular remark; nor does the net increase, viz. 23, in the category of crimes, seem to require further notice than what can be observed on the face of the above table; and though there is an increase by 17 in thefts, they were not, however, of a serious nature.

Petty offences.

22. The number of minor or petty offences has increased by 143, viz., 820 offences against 677 for the year previous.

Average of crime to population.

23. Assuming the total population of Coorg to be 118,352 souls, the number of cases of crime ascertained to have been committed will bear a proportion to the population as follow:—Those crimes which are detailed in paragraph 20, as 1 to 1,690 souls; and petty offences, as 1 to 144; the total of crime and offences giving an average of one offence to 133 souls.

Systematised crimes.

24. I believe it may fairly be alleged that there is nothing like organized crime in Coorg. Wuddurs, and some particular sects of jungle tribes, appear to be the chief perpetrators of crime. Regular cattle lifting seems also unknown, and it has before been noticed that there have been no gang robberies last year.

Stolen property.

25. The value of property stolen is computed at *Rs.* 1,161. 14. 9.; of which sum *Rs.* 793. 8. 5., or about 68 per cent., was recovered. The year previous, *Rs.* 756. 10. 10. was stolen, and *Rs.* 306. 4. 5., or 40 per cent., recovered, which tells favourably for the year under report.

26. Eight

Criminal work.

26. Eight criminal cases remained undisposed of at end of the previous year, and 13 cases remained undisposed of at end of this year. The criminal work disposed of during the year may thus be classified, and the per-centage of convictions shown as follows :—

Classification of Crimes and Offences.	Number of Crimes.	Number of Prisoners.	Number Convicted.	Number Released.	Per-centage of Convictions.
Crimes against the person - -	17	59	44	15	74
Crimes against property - -	53	124	72	51	58
TOTAL - - -	70	183	116	66	63
Minor offences - - - -	820	1,297	1,173	124	90
GRAND TOTAL - - -	890	1,480*	1,289 A	190 B	87

Courts awarding punishment.

27. The statement below shows by what courts the above prisoners were convicted or released, as also the number of criminal cases disposed of by the several criminal courts.

DESCRIPTION OF COURTS.	Convicted.	Released.	Number of Cases.
Tried by Superintendent with Punchayet, and sentenced by Judicial Commissioner - - - - - - -	- -	1	1
Tried by Durryaft Cutcherry and Soubedars, and sentenced by Superintendent - - - - - - - -	131	66	88
Tried and sentenced by Durryaft Cutcherry, with approval of Superintendent - - - - - - -	48	44	51
Tried and sentenced by Soubedars, being minor offences -	422	28	280
Tried and sentenced by Parputtigars, being minor offences -	677	49	470
TOTAL - - -	1,278	188	890

N. B.—The total of 1,278 and 188 amounts to 1,466, to which if be added the discharged prisoner will make 1,467, as shown above by the asterisk.*

Detail of punishments.

28. The nature of the punishments inflicted during the year are shown in the accompanying Table :—

PARTICULARS of PUNISHMENTS for 1861-62.

	Number.
Hanged and transported - - - - - - - - -	—
Imprisonment for 20 years and under 7 years - - - - - -	—
Imprisonment for 5 years - - - - - - - -	2
Imprisonment for 3 years - - - - - - - -	—
Imprisonment for 2 years - - - - - - - -	9
Imprisonment for 12 months and under - - - - - -	8
Imprisonment for 6 months - - - - - - - -	8
Imprisonment for 3 months - - - - - - - -	20
Fined - - - - - - - - - - - -	1,117
Flogged - - - - - - - - - - - -	—
Dismissed - - - - - - - - - - - -	2
Fined, or imprisoned up to 14 days in default, in lower courts - -	92
Total - - -	1,258
Required to furnish security - - -	20
GRAND TOTAL - - -	1,278

Flogging.

Flogging, as a punishment for crime, is not sanctioned in Coorg.

29. Two

* If from 1,480 be deducted 1 prisoner discharged, totals of A and B will amount to 1,479.
From 1,480 prisoners 13 must be deducted, as being concerned in more cases than one, thus leaving a balance of 1,467 prisoners.
A. In the same manner, 11 must be deducted from 1,289, leaving 1,278 prisoners.
B. For the same reason, deduct 2 from 190, leaving 188 prisoners.

CHAP. XVIII. Coorg Districts.

Government servants punished.

29. Two servants of Government were dismissed, after criminal trial, during the year, viz.:—

1 Gaol darogah.
1 Gaol mutsuddy.

Casualties.

30. The following statement exhibits the casualties for the year under report, and comparison of the same with the year previous:—

	1860-61.	1861-62.	Increase.	Decrease.
Suicides	4	4	—	—
Accidental deaths	30	25		5
Total	34	29		5
Net decrease				5

Criminal fines.

31. The total criminal fines for the year under report, amount to *Rs.* 2,787. 13. 3.

General remarks.

32. The introduction hereafter of the penal code will, I think, cause a more correct classification of crime, especially for the purpose of comparison. The year under review appears an ordinary one as regards crime, and the general result detailed above may perhaps be considered satisfactory.

PART II.—POLICE.

No regular police establishment.

33. There is no regular separate police establishment in Coorg, the ordinary routine duties of police being performed by the Peon establishments attached to the several cutcherries or courts. Their total number, which includes duffadars, dalayets, peons and colcars, and the establishment attached to the coffee hálut and forest departments amounts to 258, and their total monthly cost to 906 rupees.

Jummah ryots perform various police duties.

34. There is a class, however, of the Coorg population called jummah ryots, at present 3,771 in number, who, in return for a comparatively light assessment, and the privilege of claiming uncultivated land under certain restrictions and conditions to, it would appear, an indefinite extent, upon "jummah" tenure (a word which signifies "birthright," and invests the holder with a certain limited proprietary right in the land), owe and acknowledge a sort of feudal service to the State. In the former rajah's time, this feudal tenure extended to the training in and use of arms for actual military service, whilst in various other ways the jummah ryots were at the disposal of the State. Latterly, however, their services have only partially been availed of in escorting prisoners and treasure to the Sudder station, and generally assisting the cutcherry establishments in arresting offenders, keeping guard over them, and such like duties, as well as in various revenue and miscellaneous matters. Within my short experience I have seen large numbers of these ryots turn out armed to apprehend a sepoy who had escaped from military custody, and on another occasion a jummah ryot seized a yerrawar lurking in the jungles, which led to the apprehension of two of his accomplices, and all three were subsequently convicted of robbery.

Their cost.

It is difficult, and perhaps unadvisable, to estimate the cost of these jummah ryots. They hold 8,59,405 butties of land, for which they pay an assessment to Government of *Rs.* 45,217. 6. 11. Captain Le Hardy calculated that a jummah ryot, on an average, paid from 19 to 25 per cent. of the gross produce of his farm to Government. Besides, it would take many years before their lands would realize much more by any other mode of assessment, supposing their jummah rights were not indefeasible.

Their privileges.

Captain Martin writes, that their "privileges cannot be commuted simply for an immunity from such (*i. e.* police) duties, as they are dependent upon long established and irrevocable rights;" and to continue quoting from Captain Martin's letter, as explanatory of the head of police—"It may be said that there is no directly paid establishments for police purposes in Coorg. The police of the country are, and have been from time immemorial, the jummah ryots, who, from the circumstance of their enjoying certain privileges above their fellows, are required to perform the service of police."

Their duties and efficiency.

"These ryots are summoned at a moment's notice in any numbers, and from their local knowledge, their training to arms, their habits and characters, and from the peculiar nature of the country, no body of police could be conceived more thoroughly efficient, either for detective purposes or for the suppression of disturbances, while at the same time they are perfectly inoffensive to the peaceful inhabitants of the country. It is no hardship to them to perform such services, and no system could be devised which would afford more comfort and confidence to the people."

Village police.

35. The statement below shows the remuneration to village potails and inferior village servants, either in ready money or remissions in assessment. The duties of these potails

and

and village servants are much the same as in other parts of India, so that a moiety of the total cost is properly chargeable to the police.

REMUNERATION.

No.	NATURE OF REMUNERATION.	Rs.	a.	p.
139 (*a*)	Potails enjoying land on joree tenure, assessed at - -	1,811	12	10
340 (*b*)	Potails drawing money allowance of nine pie per four rupees of revenue collected - - - - - - - -	1,334	1	7
479	Total of potails—Total of remuneration being - - -	3,145	14	5
93	Coolwadies, or village servants, enjoying land free of rent, amounting to - - - - - - - - -	497	2	-
131	Coolwadies, or village servants, enjoying land on joree tenure, assessed at - - - - - - - -	355	12	1
224	Total of Coolwadies—Total remuneration being - -	852	14	1
703	GRAND TOTAL of potails and coolwadies - - GRAND TOTAL of remuneration being - - - -	3,998	12	6

(*a*) These are potails beyond the barriers of Coorg; they hold lands mostly proportioned to the size of village, and amount of collections. Their office is hereditary, and they enjoy, in addition to the above, a few local, and, it is believed, voluntarily paid perquisites, the most valuable being donations on occasions of marriages in the village. Remarks on remuneration.

(*b*) These are potails within the barriers, drawing a money allowance on the amount of the collections realized from their respective villages, and who enjoy no other perquisites. Their office is not hereditary, being elected by the people, subject to circar confirmation.

It will be noticed from the total number of coolwadies that more than half the villages of Coorg have no other village official than the potail, whose remuneration, particularly in villages within the barriers, is but scant.

36. The pay of the stipendiary peons is not commensurate with the great increase in the rate of wages in these parts, and which must eventually prove a drawback to their efficiency. Their number too might perhaps be advantageously increased, on looking at the increasing population in towns and their growing importance; a system of town police might be found to prove beneficial to the interest of the communities of some of the most thriving towns. Stipendiary peons: Town police.

37. The stipendiary peons are too few in numbers, and comparatively too unimportant to give rise to complaints against them by the inhabitants of the country. Reasons have been shown above accounting for the popularity of the jummah ryots; and the general working and efficiency of the police, as at present constituted, will be better gathered and appreciated from a perusal of the criminal statistics than from any detailed observations. General remarks.

PART III.—GAOLS.

38. In all, 80 prisoners were received into the Sudder gaol during the year, the daily average being 56. The year previous the daily average was 40 prisoners. Gaol report.

39. The Table below is a comparative statement of gaol expenditure for last year and the year previous:— Gaol expenditure.

ITEMS.	1860-61.			1861-62.			Increase.			Decrease.		
	Rs.	a.	p.	Rs.	a.	p.	Rs.	a.	p.	Rs.	a.	p.
Permanent gaol establishment and guards.	1,236	-	-	1,230	15	4	-	-		5	-	8
Contingent gaol guards - - -	251	-	6	334	11	8	83	11	2	—		
Total cost of dieting - - -	949	10	10	1,121	10	3	171	15	5	—		
Total cost of clothing - - -	60	3	-	104	14	-	44	-	-	—		
Total cost of country medicines and hospital charges.	3	10	2	37	9	11	33	15	9	—		
Total - - -	2,500	8	6	2,829	13	2	334	5	4	5	-	8
Net increase - - -	-		-	-		-	329	4	8	—		
Average annual cost of prisoners per head.	62	8	2	50	8	6	—			—		
Net decrease in annual cost - -	-		-	-		-	-		-	11	15	8

Though the total expenditure is in excess of last year, yet it has been only in necessary items, consequent on the increased number of prisoners; and the total comparison of

CHAP. XVIII. Coorg Districts.

expenditure to number of prisoners will be seen to be very favourable for the year under review.

Average cost of each prisoner.

40. The form below is a detail of each prisoner's actual cost yearly to the State, already treated of generally in the preceding paragraph :—

ITEMS.	Average Yearly Cost per Head.											
	1860-61.			1861-62.			Increase.			Decrease.		
	Rs.	*a.*	*p.*	*Rs.*	*a.*	*p.*	*Rs.*	*a.*	*p.*	*Rs*	*a.*	*p.*
Average cost of permanent gaol establishment and guards.	30	14	9	21	15	9	-		-	8	15	-
Average cost of contingent gaol guards	6	4	5	5	15	7	-		-	-	4	10
Average cost of dieting - - -	23	11	7	20	-	7	-		-	3	11	-
Average cost of clothing - - -	1	8	-	1	13	10	-	5	10	—		
Average cost of country medicines and hospital charges.	-	1	5	-	10	9	-	9	4	—		
Total - - -	62	8	2	50	8	6	-	15	2	12	14	10
Net decrease - - -	-		-	-		-	-		-	11	15	8

Comparison of same with the previous year.

It will be seen from this that the average cost of each prisoner per head per annum has been reduced from *Rs.* 62. 8. 2. to *Rs.* 50. 8. 6., and that the improvement is to be noticed under all the heads except medicines and clothing. The increased cost here seems owing to more attention being paid to the comforts of the sick, and not from an increase of sickness, the rate being more favourable for the year under report, viz., a per-centage of 2·75 sick against 3·56 for the previous year. The decrease in diet is owing to certain gaol provisions being cheaper last year than the year previous, especially in the matter of paddy, where, owing to the greater cheapness last year, the saving in this item of diet alone, computing at the former year's prices, is about *Rs.* 2. 12. per head. And there being a greater number of prisoners over which to divide the cost of gaol establishment, and permanent and contingent gaol guards, will explain the favourable decrease under those respective heads.

Cost of feeding and guarding prisoners.

41. The above form thus shows that the cost of physicking, feeding and clothing each prisoner has been *Rs.* 22. 9. 2.. whilst the cost of looking after and guarding him was *Rs.* 27. 15. 4.; but this latter charge will proportionately diminish as prisoners increase, and seems to be the only one susceptible of a decrease; and it is necessary to observe here

Military guard.

that, in addition to the ordinary gaol guards there is also a military guard stationed at the gaol, the presence of which doubtless tends to the safe custody and good conduct hitherto characterising the working of the gaol.

Health, &c. of prisoners.

42. The number of deaths in gaol during the year was two, or 3·37 per cent.; the year previous there was but one death among the prisoners, being 2·50 per cent. The sickness too has been slight both last and previous year, averaging in both years under 4 per cent., or, as before stated, 2·75 per cent. last year against 3·56 the previous year. The total of sickness and death is 6·32 against 6·06.

Prisoners' work, or how employed.

43. There are no gaol manufactures, neither is industrial or educational instruction afforded. The prisoners were chiefly employed in keeping the gaol and cutcherry grounds clean, repairing roads in the vicinity of Mercara, cutting and bringing in fuel, and leaf platters for their own use, making charcoal (a considerable quantity of which is used in the cutcherry to preserve the records and papers from the great damp in the monsoon), and also, among other minor works, in planting and watering a small roadside avenue of trees.

Value of prisoners' labour.

44. The value of prisoners' labour here, where wages are high, even if taken at half the rate of that of an ordinary free labourer, will give an average of about 30 rupees as the yearly value of each prisoner's labour.

Miscellaneous prison particulars.

45. The Table below gives a few miscellaneous particulars regarding the 80 prisoners of last, and the 43 prisoners of the year previous.

YEAR.	Sex of Prisoners.				Total.	Previous Convictions.	First Convictions.	Total.	Who can read and Write.	Ignorant Prisoners.	Total.	Per-centage of previous Convictions.	Per-centage of reading and writing Prisoners.
	Men.	Women.	Boys.	Girls.									
1860-61 - -	37	6	-	-	43	2	41	43	2	41	43	4·65	4·65
1861-62 - -	75	5	-	-	80	6	74	80	16	64	80	7·50	20·00

The

The per-centage of previous convictions is rather heavy for the year under report, but four out of the six previously convicted prisoners were concerned in one case, viz., of serious assault when under the influence of liquor, having been convicted of an almost similar offence under similar circumstances the year previous. These four persons can also read and write; so could four in the forgery case, three in a case of swindling, and one in cattle stealing, which makes up 12 out of the above 16; but altogether the inferences to be deduced from the per-centages are to be regretted, as indicating the prevalence of crime amongst those who should know better.

Escapes.

46. One prisoner, whilst occupied in out-door labour, effected his escape, but was recaptured the same day.

General remarks.

47. The conduct of the prisoners has been generally good, and there has been no infringement of gaol regulations brought to notice.

SECTION III.—REVENUE.

PART I.—LAND REVENUE.

Jummabundee settlement.

48. The Jummabundee settlement of the year under report was commenced on the 21st October 1861, and concluded on the 30th March 1862.

Nature of land tenure.

49. The tenure of land in Coorg is somewhat peculiar and singular for India, so I beg to transcribe, as far as the 74th paragraph, some interesting particulars on the subject, gathered from Captain Le Hardy's Jummabundee Report for 1834-35.

Arable land, how divided.

50. The whole of the arable land of Coorg is divided into farms, averaging in extent, according to the nature of the land, from 25 and 70 butties* to 1,500 butties of wet land, besides a large quantity of high land bearing no assessment, attached to the farms. This unassessed dry land is divided into two classes, called "banay" and "barakay;" the former term being applied to high forest land, from which the farm is supplied with firewood, manure, grass, &c.; the barakay is a low, swampy, inferior description of soil on which the cattle are turned out to graze. This banay and barakay compose the greater portion of most farms. Though seldom more than a small garden patch of vegetables and plantains adjoining their houses was cultivated by the Coorgs in former times, the other castes planted small patches of chilies and tobacco; but now a considerable portion of the banay is everywhere planted with coffee, plantains and oranges, the cultivation of which is still extending.

Banay and barakay.

Jummah tenure.

51. Although all jummah ryots enjoy the privilege of claiming land to an indefinite extent upon the jummah tenure of five rupees per 100 butties of wet land, with its accompanying banay and barakay, they can only hold it upon those terms after being invested with the proprietary right to the soil by payment of a nuzzur of rupees, 10 per every 100 butties; this is termed "nuzzur kanakay," and the amount has to be paid to Government in three yearly instalments, besides paying down a fee of one rupee at the time, called "guttee jummah" fee, guttee meaning a lump of earth. In return each jummah ryot receives a handful of the soil of the land he applies for, and a formula of words is spoken, intimating that he has received the hereditary proprietary right of the land, with the banay and barakay attached. In the same way when a jummah ryot wishes to give up his farm, he brings a handful of earth taken from the soil of his farm and lays it down before the superintendent, and thereby intimates that he has resigned his farm, and all his rights thereto. Land cannot be taken on jummah tenure except in entire farms, and on paying rent for the uncultivated as well as cultivated wet fields of which they are composed. When part of a farm only is taken the portion occupied is invariably held by jummah as well as sagoo ryots, on sagoo tenure, and is assessed at 10 rupees per 100 buttees; on which terms most jummah ryots cultivate pieces of land in addition to their hereditary estates, which latter, as before-mentioned, are assessed at five rupees per 100 butties of land.

Jummah tenure.

52. No remission is ever made from the assessment of ryots holding land on jummah tenure, except in any very extreme cases of calamity. They may, however, claim remissions when the produce of their land has been so meagre as to render it advantageous to them to hold their estates on sagoo tenure, viz., paying 10 rupees per 100 butties for the quantity of land actually cultivated, instead of five rupees per 100 butties for the whole farm.

Jummah ryots.

53. Jummah ryots have also a right to be assessed on the same terms as sagoo ryots, when owing to the want of means, less than half the land of which their estates are composed has been cultivated. Jummah ryots also pay dhooly batta and house-tax.

Sagoo tenure and sagoo ryots.

54. Sagoo tenure at 10 rupees per 100 butties was the assessment originally fixed by Veerajainder on the whole of the arable wet land within the barriers of Coorg. But the aborigines of the Coorg caste have never paid this amount of rent, except under peculiar circumstances, or if found guilty of the commission of heinous crimes, when they were at that time disfranchised and disgraced by being transferred to the second class of sagoo ryots. Sagoo tenure is only applicable to inhabitants of other castes, who, not being deemed

* For an account of the Coorg butty, *see* page 713.

CHAP. XVIII. Coorg Districts.

deemed qualified to carry arms in the service of the rajah, were called upon to pay the full amount of this tax. This class of sagoo ryots were, however, in the rajah's time, required to perform all other services not of a military nature. These ryots also pay dhooly batta and house-tax.

Sagoo ryots, 2d class. This class now abolished.

55. Sagoo ryots of the second class paid 12 rupees for 100 butties, and were exempt from the payment of dhooly batta, but paid house-tax. This class does not at present exist, having been transferred in 1835 to the first class. Originally most ryots holding under sagoo tenure were of the first class; but in Veerajáinder's time being transferred to this class from the first, or in other words, paying 12 instead of 10 rupees per 100 butties, minus the dhooly batta tax, exempted the ryot so transferred from the performance of many services to the then State; consequently the majority of ryots come into this class. Latterly however, the circar service seems to have increased, so that the distinction was lost sight of, and both classes of sagoo ryots appear to have had to perform the same duties.

Sagoo tenure continued.

56. Lands under sagoo tenure have also attached to them the banay and barakay referred to in paragraph 50. Sagoo ryots pay only for the fields which they actually cultivate, and they are considered entitled to a remission of part of the rent of such lands as may have yielded a scanty crop. This, however, may be considered the ancient custom, as the practice now is, and seemingly very properly so, only to grant remissions in extreme cases.

Oomlee tenure.

57. Land is held on oomlee tenure at three different rates, viz., 3, 2½, and 1 rupee per annum per 100 butties. Estates were granted on these terms as a reward for service, the possessors, however, having to pay the same demands as jummah ryots in respect to dhooly batta and house-tax.

Land free of tax.

58. Persons holding land free of tax are exempted from the payment of all other circar demands, and they are allowed to sub-let their lands, but only on the common sagoo tenure, viz., 10 rupees per 100 butties, without imposing dhooly batta or house-tax.

Above tenures relate to land within the barriers.

59. The foregoing tenures are applicable to the whole of the country within the barriers of Coorg, including Kiggutnaad, but they do not affect Yelloosaweraseemay, or the small patch of country at the foot of the ghauts.

Yelloosaweraseemay land tenure.

60. The whole of this talook is, in the same manner as lands within the barriers of Coorg, divided into vergas or farms, which are composed of wet and dry lands, in about equal proportions. The assessment being supposed to be regulated at 1-6th of the estimated produce of the former, commuted into a money-rent of 5 butties of paddy per 4 rupees.

Ryots of Yelloosaweraseemay.

61. The ryots of Yelloosaweraseemay are divided into two classes, one consisting of the original inhabitants, by whom the greater part of the land is held direct from Government; the other is for the most part composed of emigrants and poorer description of ryots, who hold the land on "warum" tenure, *i. e.*, sharing the gross produce with the landlord; but

Sub-letting.

this sub-letting is at variance with the older customs of Coorg.

Proportion of dry arable attached to wet land.

62. The proportion of dry arable land attached to a piece of paddy ground, assessed at 16 rupees, varies from 1 to 2½ cawnies, and the value of its gross produce, consisting generally of raggee, horse gram, or ginjely seed, is estimated at from 4 to 9 or 10 rupees. This portion is never assessed, except when taken for cultivation without the wet land, in which case it is held from the circar on "warum" tenure.

Grazing and forest land.

63. Waste, grazing, and forest land is not, as within the barriers of Coorg, attached to estates; but is considered as common to the village to which it belongs.

Pay house tax, but not dhooly batta.

64. The ryots of Yelloosaweraseemay talook are not called upon for dhooly batta, but they pay house tax.

Dry land within and beyond the barriers.

65. Excepting a few fields, there is no assessed dry land within the barriers of Coorg, dry cultivation prevailing only in Nunjarajputten, Ramasawmy Canaway, and in the northern part of Yelloosaweraseemay, where there is a scarcity of water for the purpose of irrigation. Its extent in these talooks is calculated at about 13,000 cawnies, assessed at about *Rs.* 7,478. 1. 10., the greater part of which has been brought under cultivation since the assumption of British rule.

Assessments how calculated.

66. The assessment here is calculated at about 1-5th to 1-6th of the gross produce, and the ryots cultivating these dry lands, which produce the same nature of crop as in Mysore, are the worst off in Coorg. The chief reason being that they each cultivate but very small patches of land, though here and there several families cultivate in common a large portion.

Coomaree land.

67. Coomaree cultivation is prohibited in Coorg; raggee is sometimes sown, looking like coomaree cultivation, but it is only preparatory to planting coffee the succeeding year.

Joree land.

68. A large quantity of land has been alienated to the office of the potails of Yelloosaweraseemay and Nunjarajputten, and for maintenance of religious establishments in all parts of Coorg, half the assessment of which has been relinquished by the circar.

Within the barriers, land enjoyed under this tenure differs very little from that which is held by jummah ryots. The amount paid to the circar is the same; it cannot be sub-let, and

and if left uncultivated, it is like jummah land, at the disposal of the district officers, and it may be given by them to ryots desirous of cultivating it on sagoo tenure. The difference in the latter case is, that when so disposed of, half of the assessment is paid to the circar, and the other moiety to the establishment to which it belongs. Another point in which it differs from jummah land is that no assessment is paid for cultivated portions of it. The holders of joree land in Yelloosaweraseemay are allowed to sub-let it on warum tenure, and in that talook the greater part of it is so disposed of.

Dhooly batta.

69. Ryots cultivating less than 25 butties of land pay no dhooly batta; from 25 to 50 butties they pay 3-4ths putta butties of paddy; and from 50 and upwards 1½ putta butties of paddy, excepting in Guddynaad and Yeddavanaad, where they pay 3-40ths of a putta buttie for each rupee of assessment.

Dhooly batta is not paid in Yelloosaweraseemay and Nunjarajputten, excepting in four villages. Neither was it paid by second class sagoo ryots when that class existed.

House tax.

70. The whole of the cultivating classes of the Naads to the south of the Harringhy river, and of Soorlabeemoothnaad to the north of it, pay house tax at the rate of 9 *a.* 7 *p.* per family, and the same amount is paid in the remaining divisions of Coorg by all classes, except pariahs, who in Yelloosaweraseemay, Nunjarajputten, Guddynaad, and Yeddavanaad, pay only half that sum. Merchants and other classes pay according to their caste or trade.

Proportion of gross produce paid to circar.

71. In calculating the proportion of gross produce paid by the different descriptions of ryots in Coorg, one is very apt to exaggerate the total gross produce, so that the following rough calculation is merely given to show the relative advantages enjoyed by each class of ryot. A jummah ryot pays, with dhooly batta, which in no case can exceed 1 ½ putta butties of paddy, valued now at 2 ½ rupees, about 15 per cent. of his gross produce to Government; he also pays house tax, 9 *a.* 8 *p.* A sagoo ryot within the barriers, including dhooly batta, pays in the same manner from 25 to 30 per cent. of his gross produce to Government; he also pays house tax. The sagoo ryots of Yelloosaweraseemay talook are, I believe, in a better condition than the sagoo ryots within the barriers, though those who cultivate as sub-renters to them are necessarily not so; and last of all come the ryots cultivating dry lands, who, for the reason stated in paragraph 66, appear to be the worst off.

By jumma ryots.

By sagoo ryots.

Coorg farms.

72. A Coorg cannot sell his farm, nor even sub-let it, without the permission of the circar, and then it can only be sub-let on warum tenure for a limited number of years, so that, excepting the permission to resign the farm to Government, a Coorg's property in his land may be considered unalienable.

Joint families.

73. In former times several farms constituted one estate, cultivated by the several members of one large family, living under the same roof; but of later years instances occasionally occur of relations dividing the family property and taking separate farms. This, however, can only be done by the consent of all parties; for, according to law or usage, any individual separating himself from the family in opposition to the general wish, can claim no share of the common stock. He is viewed as an outcast by the remainder, and is left to depend entirely on his own resources and industry for the means of livelihood. The most aged is generally regarded as the master of the house; the estate is registered in his name, and the whole of the family property, as well as the services of its inmates, are considered as being at his disposal.

Beginning of division.

74. The Rajahs appear to have rather encouraged, than otherwise, separation of families, probably as a means of decreasing the practice of polyandry, (N. B., this practice is now denied by the Coorgs, but I believe a Coorg may raise up seed to his brother's widow), as well as with the view of extending cultivation. The generality of the Coorgs, however, still view any deviation from this ancient custom with the greatest abhorrence, considering the separation of brothers (under which denomination is comprised the whole of the males of each generation being under the same roof, however distant their connexion), or their forming independent connexions, as the most serious calamity that can possibly befall a family. But estates do appear now to be sometimes divided into their separate farms, and these farms again are occasionally sub-divided amongst the several members of the same family. My information on this point, however, is not satisfactory, and time will not permit of looking further into the question; but I believe former Superintendents have set their faces against sub-division, and issued orders on the subject conformably to what would appear to be the old Coorg custom; and when the evils of sub-division of land, terminating eventually in minute partitions in other parts of India, are considered, perhaps the ultimate condition of the Coorg is bettered by the restriction.

Evils of sub-division.

Retrospect.

75. The above is mostly gathered from Captain Le Hardy's Report altered slightly to bring it down to the present time, and though the sketch is necessarily imperfect, owing to my short residence and personal unacquaintance with particulars, yet I have ventured to give it, and risk some inaccuracies, rather than not attempt some description of the singular and interesting tenures of Coorg, so different to those generally existing in Southern India and the Dekkan. A Coorg's house, nestled on a hill side, partially concealed by plantain, orange, and coffee trees, with his paddy land below, his forest above, and wild scenery around, presents a picturesque and striking scene, may soon become

civilized enough to resist the baneful influence of his increasing prosperity and growing vice, and learn to look upon the retention of his patrimonial acres and education of his children as a sacred duty dearer to him than easily begotten money.

Principles of settlement.

76. The principles of settlement, and the mode of ascertaining the reason for and method of granting remissions are, I think, what may be called, for want of a better name, ryotwarry.

Number of talooks, naads, and villages.

77. The following statement shows the number of talooks, their subdivisions into naads, and the subdivisions of the latter into villages:

No.	NAMES OF TALOOK.	Naads.	Villages.	Khan Villages.	Jagheer Villages.	Uninhabited Villages.	TOTAL.
1	Mercara talook - - -	7	57	57	- -	- -	57
1	Paddynacknaad talook -	5	55	55	- -	- -	55
1	Yeddanacknaad talook - -	3	49	49	- -	- -	49
1	Kiggutnaad talook - -	4	63	63	- -	- -	63
1	Nunjarajputten talook -	5	115	105	3	7	115
1	Yelloosaweraseemay talook	3	168	167	- -	1	168
6	- - - - TOTAL - - -	27	507	496	3	8	507

Boundary settlement.

78. I believe there are no disputes regarding village boundaries; both village and naad boundaries having been settled, defined, and recorded in the former Rajah's time, and the "shisht" account, signed by the Rajah's Lingarajendar and Dodda Veerajainder, were referred to, and enabled the settlement of certain isolated disputes that occurred some years back. These shisht accounts are very complete, entering into full details, and will prevent a fertile source of disputes hereafter when land becomes more valuable.

Nature and sources of irrigation.

79. Although wet cultivation forms the chief agricultural element in Coorg, still it is altogether independent of artificial means of irrigation. The paddy land being situated in valleys or hollows between hills, is, in addition to the heavy rains, well supplied with water from mountain and hill streams, and rivulets, the courses of which, or of their minor streams, are dammed up, when necessary, with temporary erections, to raise the level of the water. These dams are of the narrowest and simplest description, and cost nothing beyond a small expenditure of labour in their construction.

Cultivated and cultivable wet land, area, and assessment.

80. The extent of land at present under wet cultivation is estimated at about 21,23,044 butties, assessed at *Rs.* 1,30,156. 5. 7., and about 3,15,658¾ butties is estimated as waste wet land; but for want of water about a lac of butties only is capable of being cultivated. The assessment on which would be about the sum of 10,000 rupees.

Artificial irrigation.

81. There are, however, I am told, five cuttays or small anicuts, erected of brick, with stone aprons, in two different localities of Coorg, where the nature of the country admits of artificial irrigation. Four of these cuttays were erected under native and one since British rule, and have been repaired subsequently, but are understood not to be in very good repair at present.

The following Table will give short particulars of this description of irrigation:—

NAME of TALOOK.	NAME of CUTTAY.	Number of Butties at present Irrigated.	Assessment upon the same.	Number of Butties waste, but susceptible of Irrigation.	Assessment, if Cultivated.
			Rs. a. p.		*Rs. a. p.*
Nunjarajputten	Cheggali Cuttay -	7,475	544 - -	3,756½	375 10 -
Ditto - -	Igoor Cuttay - -	8,911¼	582 10 10	3,192½	319 4 -
Ditto - -	Yelakanoor and Hoshully Cuttays.	9,351¼	749 12 -	1,113¾	111 6 -
Mercara - -	Uthimugala Cuttay -	8,318¾	579 14 -	2,815	281 8 -
	TOTAL - - -	34,056¼	2,456 4 10	10,877¼	1,087 12 -

The

The irrigated cultivated land is thus divided:—

	Butties.	*Rs. a. p.*
Enam land - - - - -	4,603	—
On sagoo tenure - - - -	20,437½	2,043 12 –
On jummah „ - - - -	4,217½	210 14 –
On oomlee „ - - - -	1,130	23 4 10
On jodee „ - - - -	3,567½	178 6 –
TOTAL - - -	34,056½*	2,456 4 10

Three reasons are assigned for there being so much waste, viz., that some of the lands are of a higher level than the existing irrigation channels. That population is but scant in those localities, which is accounted for in the third reason, viz., the extreme unhealthiness of some of the localities. The men being prostrated with fever and spleen disease, and the women bearing few or no children, those that are born seldom living beyond childhood.

Proposed anicuts or cuttays.

82. In 1854 the then Superintendent of Coorg advocated the construction of an anicut across the Lutchmunteertha River, in Kiggutnaad talook; and two more across two nullahs in Yelloosaweraseemay talook, by which means a considerable quantity of land now lying waste might be brought under cultivation. As coffee cultivation extends, the consumption of rice and other grains will be much greater, so that any increase of the quantity of land brought under wet cultivation will be very beneficial.

Cultivated and cultivable dry land, area, and assessment.

83. It is difficult to arrive at the area in acres of dry cultivation; but the present assessment on dry culture only amounts to *Rs.* 9,713. 9. 6; and an extent of land calculated to yield an assessment of but *Rs.* 1,134. 2. 10., is said to be the only cultivable dry waste land remaining. This, however, does not include forests, hills, and jungles.

Cultivating ryots and puttahs.

84. The number of cultivating ryots who have lands of their own, is given below at 11,272; but, by a statement prepared in the office, it would appear that other 7,649 persons are also mostly engaged in agricultural pursuits, giving a total of 18,921 resident persons occupied either directly or indirectly in tilling the soil.

CULTIVATORS.	1861-62.	1860-61.	Increase.
Jummah ryots - - - - -	3,553	0	0
Sagoo „ - - - - -	6,535	0	0
Oomlee „ - - - - -	347	0	0
Ryots cultivating dry land - - -	837	0	0
TOTAL - - -	11,272	11,208	64

It is not customary in Coorg to grant a paothee or puttah to each ryot, but only a general puttah for the whole village. This general puttah, and a memorandum under the talook authorities' seal is the ryot's title to the land; but jummah ryots hold for each vurga or farm a neeroopa or sunnad under the seal and signature of the Commissioner of Mysore, or of the former Rajahs.

85. The

* So in original.

CHAP. XVIII. Coorg Districts.

Rent-roll.

85. The subjoined statement is an approximate rent-roll for the district:—

RATE OF ANNUAL PAYMENT.	Number of Ryots.	Total Rent.	Average Payment of each Ryot.
		Rs. a. p.	*Rs. a. p.*
From 1 to 10 rupees - - - -	6,444	33,400 6 11	5 2 11
„ 10 to 20 „ - - - -	2,881	43,630 10 3	15 2 3
„ 20 to 30 „ - - - -	1,027	25,494 5 8	24 13 2
„ 30 to 40 „ - - - -	454	15,229 10 7	33 8 8
„ 40 to 50 „ - - - -	224	10,266 8 1	45 13 3
„ 50 to 75 „ - - - -	173	10,574 5 5	61 1 11
„ 75 to 100 „ - - - -	51	4,398 2 5	86 3 9
„ 100 to 150 „ - - - -	18	2,049 11 5	113 13 11
TOTAL - - -	11,272	1,45,045 12 9	12 13 10

In a similar average made for one of the Hyderabad Assigned Districts, the total was *Rs.* 20. 12., and the difference between the sum and *Rs.* 12. 13. 4. in some measure represents the difference of assessment, which is much lighter here. There are ryots, it is believed, who pay more than 150 rupees on the whole of their holdings; but which being situated in different talooks have been assessed separately on the individual.

The next form gives the same result, with particulars of the several classes of ryots:—

DESCRIPTION OF RYOTS.	Number.	Total Amount of Assessment.	Average Rate of Payment.
		Rs. a. p.	*Rs. a. p.*
Jummah ryots - - - - - -	3,553	45,211 15 11	12 11 7
Sagoo „ - - - - - -	6,535	84,424 14 9	12 14 8
Oomlee „ - - - - - -	347	6,902 14 4	19 14 3
Ryots cultivating dry land - - -	837	8,505 15 9	10 2 7
TOTAL - - -	11,272	1,45,045 12 9	12 13 10

N.B.—In all the above averages the house tax has been included, viz., *Rs.* 6,757. 11. 10., which distributed over the total number of ryots, viz., 11,272, gives an average payment for each ryot under this head of 9 *a.* 7 *p.* and a fraction.

Talookwar rent-roll.

86. Below is given the same average for each of the talooks, and which may be taken as a fair criterion of their present condition as regards agriculture, Kiggutnaad being the best agricultural talook, and Nunjarajputten and Yelloosaweraseemay talooks the poorest:—

No.	TALOOKS.	Number of Ryots.	Total Assessment.	Average Payment of each Ryot.
			Rs. a. p.	*Rs. a. p.*
1	Mercara - - - - -	1,278	16,641 7 8	13 — 4
1	Paddynacknaad - - - -	1,372	17,945 — 7	13 1 3
1	Yeddavanaad - - - - -	1,598	32,364 13 3	20 4 —
1	Kiggutnaad - - - - -	1,357	35,069 8 —	25 13 5
1	Nunjarajputten - - - -	2,987	17,441 12 8	5 13 5
1	Yelloosaweraseemay - - -	2,680	25,583 2 7	9 8 8
6	TOTAL - - -	11,272	1,45,045 12 9	12 13 10

87. And

87. And the following will serve to give an idea of the extent in butties of each ryot's holding :— Average holding of each ryot.

EXTENT OF HOLDING.	Number of Ryots.	Number of Butties.	Average Holding, in Butties, of each Ryot.
From 15 to 50 butties - - - - -	3,221	130,096½	40
„ 50 to 100 „ - - - - -	2,397	232,933½	97
„ 100 to 200 „ - - - - -	2,549	486,670	190
„ 200 to 400 „ - - - - -	1,505	558,262½	370
„ 400 to 800 „ - - - - -	522	346,797½	664
„ 800 to 1,000 „ - - - - -	177	167,213¾	944
„ 1,000 to 1,500 „ - - - - -	50	68,141¼	1,362
„ 1,500 to 1,800 „ - - - - -	9	14,345	1,593
„ 1,800 to 2,000 „ - - - - -	1	1,961½	1,961½
„ 2,000 to 2,916 „ - - - - -	3	6,786	2,262
„ 3,000 to 4,000 „ - - - - -	1	3,741¼	3,741¼
TOTAL - - -	10,435	20,16,948¾	193*

The total of butties given here excludes jagheer, service, and charitable enams, &c., and does not refer to dry lands, or ryots cultivating them. The dry land measurement differing so that it is difficult to estimate it.

88. The season for the year under report was a most favourable one. Crops of all descriptions came to maturity at the proper time, and in general yielded an abundant harvest. Rice, the staple product of the country, produced a plentiful crop, except in one locality, where high freshes of the Cauvery partially washed away some paddy fields, and necessitated a small remission. The coffee crop was favourable in some localities and unfavourable in others; but on the whole the yield was a good one. The cardamom crop, though good, was not so favourable as the year previous. And the few dry cereals, such as raggy, horse gram, and buller, and the small quantities of tobacco, mustard and oil seeds, grown to the east and north of Coorg, also produced a very fair out-turn. Season.

89. The south western monsoon generally sets in about the latter end of May, and continues up to the end of September, and sometimes into the middle or end of the following month. The rains during the season under report were most plentiful and seasonable. The total rain fall having been no less than 210 inches, whilst the fall in an average year is but from 160 to 180 inches. The natives assert that the monsoons are not so heavy now as they used to be, and ascribe the cause to the vast clearance of forest land on account of coffee cultivation. This is most likely the case, yet the experience of the fall of last year tends in a measure to disprove it. Fall of rain.

90. The season generally has been healthy throughout, both for man and cattle. Cholera and small-pox were prevalent in but few villages. The chief mortality having been from fever and other diseases. The number of deaths is given below :— Sanitary state of the district.

Persons who died of cholera - - - - - - - -	150
„ of small-pox - - - - - - -	53
„ of fever, dysentery, ague, and other diseases	3,377
Total - - -	3,580

The year previous the total number of deaths was given at 3,506. There is a typhoid or low type of fever prevalent among the inhabitants resident in low marshy situations, one of the fatal signs of which is a blackened state of the tongue. Cases of this kind are of frequent occurrence, and often prove fatal. The cause of the disease is assigned to malaria, though a better acquaintance with the disease and cure is very desirable; fever being the depopulating and labour-strickening evil of the country. Maggots in the nostrils, prostrating the patient and often ending fatally, is another fearful disease comparatively unknown to medical science. If the fevers of Coorg could be systematically treated by medical practitioners, incalculable benefits would be conferred on the inhabitants. Much individual suffering would be averted, families would then multiply, and more emigrants be attracted to the place. No murrain has prevailed among cattle. In this respect I believe the country has enjoyed an immunity for some years back, whilst formerly large numbers of cattle were annually swept away by disease.

91. The prospects of the approaching season are at present favourable, and though but slight showers of rain have as yet fallen, and a fall of about 115 inches is still due, yet they have fallen timely, and there is the general expectation of a mild but good monsoon. In consequence 25,361¼ additional butties of waste wet land have been taken up by the ryots. Considerable quantities of Government and other land still continue to be taken up Future prospects.

* So in original.

CHAP. XVIII. Coorg Districts.

up by Europeans and Natives for the cultivation of coffee. The prospects of coffee in the coming season are promising, and the same may be said with regard to cardamoms. In short the state of the country is, and promises still more so to be, one of continued, though perhaps unequally divided, prosperity.

Prices of grain, &c.

92. The Table below shows the selling prices in the four principal marts of Coorg, of its chief indigenous grains and other agricultural products, as well as a comparison of the same with the year previous :—

NAME of TOWN.	Year.	Merchants' Retail Selling Price per Rupee, in Seers of 80 Rupees weight.					Wholesale Selling Price per Candy of 20 Maunds of 27½ lbs. each.	
		Paddy.	Rice, 1st sort.	Rice, 2d sort.	Raggy.	Horse gram.	Coffee.	Cardamoms.
Mercara -	1860-61	50	14	18	38	22	From 110 rupees to 125 rupees.	From 900 rupees to 1,000 rupees.
	1861-62	52	15	20	38½	20		
Veerajenderpett	1860-61	45	14	16	28	25		
	1861-62	53	16	17	29	19		
Fraserpett -	1860-61	40	14	17½	51	33		
	1861-62	46	14	18	53	20		
Soamawarpett -	1860-61	62½	14	21¼	40½	31		
	1861-62	60	14	23	45	19½		

Paddy and rice, it will be observed, are selling at cheaper rates this than last season, which is owing to the greater yield, and to more land having been taken up ; but more particularly to there having been a less heavy demand for rice on the Malabar coast, where also there was a plentiful harvest. Still, however, looking at the full crop, prices (which have risen most considerably, looking back only for a period of five years) have been most remunerative to the grower in this chief product of the country. On the other hand it will be noticed that horse gram, which is mostly imported, has risen very much in value, and this rise in price has happened in almost every article of import for Mysore and neighbouring countries. Oils, ghee, sugar, chillies, betel-leaves, areca-nuts and cocoa-nuts have all risen very considerably in price, and seemingly in accordance with the rise of prices perceptible all over Southern India, which, though it affects fixed incomes, is not felt by the large mass of the population, viz., the labouring and working classes, as the wages of labour have risen more than in proportion to the rise in prices. As a set off also against the above, the price of coffee has risen nearly 25 per cent. in value, and I calculate that the profits to growers in this enhanced price alone amounts to above 3 lacs of rupees.

Coffee.

Cardamoms.

The price realized by cardamoms in the year under report has reached the highest figure yet known, viz., from 900 rupees to 1,000 rupees per candy, being an increase in price of about 12½ per cent., and thus fully, if not more, than compensating the growers for the decrease in quantity of this season's crop. It has been well remarked by a known English writer on Coorg, that a good cardamom ground or garden is a mine of wealth to its possessor, and this saying is being in a measure verified, cardamoms are getting scarcer, and consequently dearer, as coffee cultivation extends into its limits, and as the Coorg cardamom is very much esteemed on account of its superior colour and aroma, the fortunate holders of unexpired portions of cardamom leases, who have not been induced to sell or otherwise part with them, will realize still larger profits next and succeeding years.

Remission.

93. The following Table shows the amount and particulars of remissions made at the last jummahbundee :—

TALOOKS.	For Losses incurred by Fire.	For failure of Crops from want of Water.	For Loss of Crops by Floods.	Total Remissions.
	Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*
Nunjarajputten - - - -	6 7 –	27 7 –	- -	33 14 –
Yelloosaweraseemay - - -	- -	2 10 5	- -	2 10 5
Paddynacknaad - - - -	45 6 –	- -	19 14 –	65 4 –
Yeddavanaad - - - - -	12 – –	- -	- -	12 – –
TOTAL - - -	63 13 –	30 1 5	19 14 –	113 12 5

The total amount of remissions granted the year previous was *Rs.* 181. 8. 3. The decrease being *Rs.* 67. 11. 10. The principle of remissions is liable to abuse, and sometimes countenances carelessness, and here where the soil is so fertile and assessment light, remissions

remissions do not seem necessary as a general rule. The amount of remissions is gradually decreasing, and doubtless the ryots will become more provident. Yet, perhaps, it is still too early to discountenance remissions when judiciously granted, as in the case of floods and fire, &c.

94. The following table exhibits the gross and net land revenue with particulars, and a comparison of the same with the previous year:— Gross and net land revenue.

Particulars of Land Assessment.	1860-61.	1861-62.	Increase.	Decrease.

95. Of the *Rs.* 6,814. 13. 4. net increase in wet cultivation, but *Rs.* 57. 1. 6. is an actual increase, the remaining *Rs.* 6,757. 11. 10. being amount of house-tax collected from cultivators and included in the land revenue, whilst formerly it was placed under the head of moturpha. The *Rs.* 57. 1. 6. real increase represents the higher rate of assessment now chargeable on wet land, which was given out on easy terms (or on cowl) when first taken up as waste for cultivation. Particulars of increase and decrease in wet cultivation.

The increase of *Rs.* 1,267. 3. in dry cultivation has been realised as follows:— In dry cultivation.

Rs. *a.* *p.*	
967 15 1	owing to increased cultivation.
299 3 11	from higher rate of cowl.
Total - - - 1,267 3 –	assessment as mentioned above.

The

* So in original.

In collections in kind.

The increase of *Rs.* 38. 11. 7. in dhooly batta is owing to increased cultivation. The decrease of *Rs.* 279. 1. 1. in koomary is owing to the cultivation having been prohibited. The decrease of *Rs.* 130. 14. 8. in value of other grain collections in kind arises from a decrease of warum cultivation, or bhuttaye, in Yelloosaweraseemay talook.

In deductions.

The decrease of *Rs.* 532. 3. 11. in reductions is on waste or cowl land brought under cultivation, and now falling into full assessment, as explained already; but it appears incorrect charging on land revenue the full amount of assessment of lands not at present due, and then deducting the same again, minus that portion of the cowl assessment actually collected; and that the more correct way would be only to charge the amount which falls in every succeeding year, and omit altogether the lump sum which is only due hereafter.

The decrease of *Rs.* 67. 11. 10. in remissions explains itself, and the increase of *Rs.* 24. 2. 5. in the remuneration paid to potails is accounted for in the increased collections, out of which they are paid their per-centage; though the debiting the land revenue for this item in the manner shown in the form appears hardly necessary.

Net increase in land revenue.

96. Deducting from the net increase of *Rs.* 8,345. 14. 7., as shown in paragraph 94, the sum of *Rs.* 6,757. 11. 10., apparent increase, by the bringing in of house-tax collected from cultivating ryots under the head of land revenue, there is left but the sum of *Rs.* 1,588. 2. 9., as representing the actual increase of land revenue last year as compared with the year previous. And apart from the consideration of jungle and forest land cultivation, the land revenue of Coorg appears to have almost reached its limit, and to be not susceptible of much further extension.

What the falling in of cowl lands will give in succeeding years is shown in the following table. This, and perhaps some 10,000 rupees more for extended wet, and two or 3,000 rupees more for increased dry cultivation, is apparently the greatest limit the land revenue of Coorg, as at present constituted, can reach; though irrigation works, &c., will necessarily bring a further increase.

Full Assessment of the Waste Land at present given out on easy Terms of Cowl.	Particulars showing in what Yearly Proportions the Cowl Assessment falls in as it becomes due.											
	1861–62.	1862–63.	1863–64.	1864–65.	1865–66.	1866–67.	1867–68.	1868–69.	1869–70.	1870–71.	1871–72.	1872–73.
Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*
9,822 7 –	532 3 11	1,752 13 5	3,461 15 2	4,881 7 1	6,797 1 4	8,133 14 3	9,010 14 11	9,229 – 4	9,250 7 10	9,269 6 8	9,282 5 8	9,290 3 1

97. The progressive yearly increase in the land revenue derivable from new waste lands brought under cultivation on cowl assessment, is shown in the above table; and upon which full assessment is now charged in the accounts, with subsequent corresponding deductions, as alluded to in paragraph 95. This cowl revenue may not keep pace with the figures shown in the statement from subsequent relinquishing of the lands, and such like causes, or other land now under cultivation may be abandoned for it, but yet the table on the whole will not be far from the actual increase.

Miscellaneous or extra sources of revenue.

98. Subjoined is a comparative statement of the total of extra sources of revenue for this and the previous year, showing net increase of *Rs.* 60,224. 15. 7.

	1860–61.	1861–62.	Increase.	Decrease.
	Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*
Miscellaneous, or extra revenue.	1,32,426 1 3	1,92,651 – 10	60,224 15 7	—

The net increase would be more by *Rs.* 6,757. 11. 10., if we consider that amount in house-tax collected from cultivators, transferred from this head to land revenue. Particulars of this increase will be given hereafter in a separate statement of the extra sources of revenue.

General revenue result under all heads.

99. Below is given a statement of the revenue under all heads, which shows a net increase of *Rs.* 68,570. 14. 2. in favour of the year under report:—

	1860–61.	1861–62.	Increase.	Decrease.
	Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*
Land revenue - - -	1,51,231 10 5	1,59,577 9 –	8,345 14 7	—
Extra sources of revenue -	1,32,426 1 3	1,92,651 – 10	60,224 15 7	—
Total - - - *Rs.*	2,83,657 11 8	3,52,228 9 10	68,570 14 2	—

The

The inelasticity of the land revenue has been explained before; but nearly one-third of the above extra revenue is realised from cardamoms and coffee. The nature of cardamom cultivation obliges the present system in lieu of a land tax, so that in a measure the revenue realised from cardamom grounds may be considered as land revenue; as also a certain proportion of the coffee haulut, as being raised from untaxed land.

Total demand, collection, and balance for the year under report.

100. The amount of demand of all sources of revenue for the year under report is *Rs.* 3,52,228. 9. 10., of which the sum of *Rs.* 2,72,208. 10. 7. was collected within the year, leaving a balance of *Rs.* 80,019. 15. 3. (against *Rs.* 75,101. 8. 5. similarly uncollected in 1860-61) remaining uncollected at the end of the official year. The greater part of this sum has since been collected.

Collection and balance of the previous year.

101. A sum of *Rs.* 75,101. 8. 5. being the amount of revenue remaining uncollected at the end of the year previous, was also collected within the year under report, leaving a balance of *Rs.* 1,367. 14. 1. still uncollected, chiefly on account of cardamom tax. Measures will be taken to prevent an occurrence of similar delay in future.

Irrecoverable balances.

102. There will be no irrecoverable balance for the year under report, or for the year previous; but a sum of *Rs.* 122. 4. 1., an uncollected and irrecoverable balance on account of cardamom tax for the year 1856-57 still appears in the accounts, and for the striking off of which permission from the Government of India will shortly be solicited.

Uncollected balances accounted for.

103. To account for the seemingly heavy balance remaining uncollected at end of the year, it is necessary to state that, with the exception of the Nunjarajputten and Yellooseweraseemay talooks, in all other parts of Coorg, two out of three total kists, or instalments by which the land revenue is payable, do not fall due until after the expiration of the year. And two cardamom kists, and a proportion of coffee haulut, and abkarry also, is not paid within the year. It is calculated that about 70,000 rupees and odd, out of the *Rs.* 3,52,228. 9. 10. total revenue of the past year, was not due till after the expiration of the year. Though on a judicious apportioning of the time for the ryot paying his kist rests in a great measure his prosperity, and I am aware that a former Superintendent advocated the present period of payment of kists, yet it would simplify the accounts if measures could be devised for collecting the bulk of revenue, if not all of it, within the year itself.

Coercive process.

104. No coercive measures, either of distraint or sale, were resorted to in the collection of the revenue.

Tuccavee.

105. No tuccavee, or advance to cultivators, was made during the year.

PART II.—MISCELLANEOUS OR EXTRA SOURCES OF REVENUE.

Statement of extra sources of revenue.

106. The following Table gives particulars of the extra revenue under all heads for the year under report, and a comparison of the same with the previous year:—

ITEMS.	1860-61.			1861-62.			Increase.			Decrease.		
	Rs.	*a.*	*p.*	*Rs.*	*a.*	*p.*	*Rs.*	*a.*	*p.*	*Rs.*	*a.*	*p.*

				Deduct decrease			9,737	2	—			
				Net increase		*Rs.*	60,224	15	7			

CHAP. XVIII. Coorg Districts.

Reports on the above abkarry.

107. With the exception of a sum under 1,000 rupees, the remaining abkarry revenue is derived solely from the sale of spirituous liquor. The climate and country favour the consumption of strong drink, and it is feared that drunkenness is on the increase, which will require every precaution, and a strong hand to keep down. The manufacture and wholesale sale of the liquor is a Government monopoly, or under amanie management, which is better perhaps than farming the revenue, and thus making the contractors directly and pecuniarily interested in increased consumption, and sometimes in encouraging other vices and crimes growing out of drink. This amanie management doubtless causes some part of the present increase in the profits, which would otherwise go to the farmer, and further by the check to the practice of interdicted private distilleries. The illicit manufacture of rice-arrack being prevalent at one time, and still I believe occasionally resorted to, and the increase will be further accounted for in the growing prosperity of the country and inhabitants, and the additional number of emigrants and liquor-consuming coolies attracted to the country owing to increased coffee cultivation.

Opium. The same remarks apply generally to the increase in opium and other drugs.

Coffee. The increase in coffee indicates an extended cultivation and export of this important article of commerce.

Cardamoms. As the cardamom forests are leased out for a period of years on the same yearly rent, the revenue will remain much the same till the expiry of the present leases, viz. in 1865–66. The present decrease is partly owing to coffee haulut having been substituted for cardamom rent; in one or two instances where exported coffee grown on cardamom jungle has been charged, an amount in haulut equal to or exceeding the cardamom rent whereby the latter rent ceased on the imposition of the former. The decrease from this cause is 266 rupees, and the remaining decrease of *Rs.* 1,105. 0. 3. is in the amount realised by the sale of Government cardamoms, viz., such as are picked in isolated unleased localties, or have been zufted as encroachments upon Circar land, or such like causes; but *Rs.* 1,279. 6. 7. has been realised from these sources, the remaining revenue arising from cardamom rent.

Sandalwood. The increase under the head sandalwood is more apparent than otherwise, there having been no sales the previous year.

Jungle produce. This head comprises resin, areca-nuts, pepper, tamarinds and sandal chips; and the increase is owing to a better season for this description (excepting sandalwood chips) of produce.

Nuzzer kanikay and guttee jummah fees. The decrease here is owing to less land having been taken up on jummah tenure; this decrease, however, is a gain rather than loss, as on jummah tenure 5 rupees per 100 butties only would be realised, whilst on sagoo tenure it is double that amount.

Moturpha. As shown in paragraph 95, *Rs.* 6,757. 11. 10. of the decrease in moturpha is owing to this amount having been transferred to the head of land revenue. The remaining decrease has been caused by remissions in moturpha to persons paying income tax.

Shop tax on market days. The increase in tax on market stalls indicates the thriving state of the seven large weekly bazars held in various parts of Coorg.

Income tax. The working of the income tax has become better understood; this and payments in 1861–62 of the tax due in 1860–61, as well as increased profits, will account for the increase under this head.

Sale of judicial stamps. This was the first year of the Act coming into operation, or rather stamps were not supplied with the commencement of the operation of the Act, so that these sales do not represent those of a whole year, but only nine months. As the Stamp Act Rules become more widely known and enforced, this will become a very fertile, unobjectionable, and increasing source of revenue.

Judicial funds. The increase here requires no comment.

Petty contracts. Comprise bees' wax, honey, turmerick, resin, yellow and red bark dyes; and the increase is ascribable to the same causes as given for the increase in jungle produce.

Fee on stamping cloth. The remaining heads do not appear to call for particular remark, excepting that the fee on stamping cloth made by weavers of the Nunjarajputten and Yelloosaweraseemay Talooks appears to be an objectionable and worrying tax; and for these reasons, as well as owing to the small amount realised, and to the poverty of the weavers from whom the tax is collected, I would respectfully advocate its abolition.

Review of the above. 108. Deducting *Rs.* 26,942. 11. 3., sale of sandalwood, and *Rs.* 3,711. 7. 6., sale of judicial stamps, total *Rs.* 30,654. 2. 9. (as not admitting of a fair comparison with the year previous) from the net increase in extra revenue of *Rs.* 60,224. 15. 7., as above shown, it leaves a balance of *Rs.* 29,570. 12. 10., to which if be added the house tax transferred to land revenue, viz. *Rs.* 6,757. 11. 10., the total and *bonâ fide* increase of extra revenue this year compared with last is *Rs.* 36,328. 8. 8. I submit this as a most hopeful and encouraging sign. The extra revenue this past year has overtopped the land revenue; and with the present equitable and popular system of administration, the check to crime, and the growing prosperity of the country, it is expected that the elasticity of the extra revenue will become year by year yet more apparent, and settle the question (seeing how the present

present light assessment of Coorg has acted beneficially on the extra revenue) so far as Coorg is concerned, that the resolution of the Government of India concerning the sale of "Waste Lands" in "perpetuity discharged from all prospective demand on account of land revenue. And the permission to redeem the existing land revenue by the immediate payment of one sum equal in value to the revenue redeemed" will not only immensely add to the resources, productions and prosperity of the country, by attracting capitalists to the soil, and encouraging present proprietors to work and expend on their own, but as a natural sequence will also still further increase the extra sources of revenue.

Salt.

109. The increased and increasing consumption of sea salt, in the profits it gives to the Madras Government as a monopoly, ought not to be lost sight of in treating of extra revenue. Comparatively little, if any, earth salt is consumed in the district, so that the consumption of sea salt here, where the labouring classes are well paid, and can afford to consume as much as they like, is very considerable, and would add largely and increasingly to the extra revenue of the district, if the profits arose here; and the large exports of coffee from Coorg help indirectly to cheapen the cost of transit of sea salt into the Mysore country and interior, as the bandies that carry coffee to Cannanore and Mangalore mostly bring back a return load of salt.

PART III.—LOCAL FUNDS.

Local funds.

110. There appear hitherto to have been no funds set apart in the district for municipal purposes and local requirements. Under paragraph 4 of the Commissioner's Circular, No. 174, dated 12th May 1862, on the subject now treated of, it may be possible to create a small municipal fund for sanitary and other requirements of the town which contributes the funds. The creation of a municipal element of this sort will be very advisable.

For municipal purposes.

For general district requirements.

111. Regarding the second description of local funds alluded to in the above paragraph of the Commissioner's Circular, viz., for general district requirements, as no income is derivable here from plough tax or ferry funds, the sole source to look to for the creation of this fund will be "sale of stray cattle."

Sale of stray cattle, and fines on cattle trespassing, amounted for the past year to *Rs.* 1,168. 11. 6. If sanction is accorded, this sum will be appropriated for the purposes contemplated, and this amount, with the 950 rupees expected revenue from the same source for 1862–63, will enable a fair start to be made. A fund of this sort has been much wanted in Coorg. Coffee planters, sometimes at their own expense, make good roads leading up to their various estates, which, with their assistance and these funds, might be very advantageously extended to the next village, or to meet a neighbouring road; and though the fund is small, and much could not be done in each year, yet if yearly a few miles of bandy road, or even bullock track, were made, a jungle stream bridged, or a well dug, or travellers' chuttrum erected, the aggregate of benefit in a few years would be great.

PART IV.—MISCELLANEOUS.

Enams and cash payments.

112. The Statement below will serve to give an approximate idea of the nature and extent of land alienations, or enams, as also cash payments, with particulars under each head:

PARTICULARS.	Religious. Estimated Amount in Rupees.	Charitable. Estimated Amount in Rupees.	Service. Estimated Amount in Rupees.	TOTAL. Estimated Amount in Rupees.
	Rs. *a.* *p.*	*Rs.* *a.* *p.*	*Rs.* *a.* *p.*	*Rs.* *a.* *p.*
Kham - - - -	1,006 5 –	- -	- -	1,006 5 –
Rooson jagheer or joree -	3,949 7 2	13 4 –	2,172 12 11	6,135 8 1
Free jagheer - - -	1,023 6 5	4,244 – 5	5,983 4 –	11,250 10 10
TOTAL - - -	5,979 2 7	4,257 4 5	8,156 – 11	18,392 7 11
In Cash - - -	13,890 3 10	- -	1,334 1 7	15,224 5 5
GRAND TOTAL - -	19,869 6 5	4,257 4 5	9,490 2 6	33,616 13 4

Centage of same on gross land revenue.

The per-centage of the above to the gross land revenue, under the head Service, is not heavy, neither does it appear so under the head Charitable; but religious endowments show a heavy centage on the gross land revenue. Of the *Rs.* 9,490. 2. 6. service grants, para. 35 shows what amount goes to village potails and coolwaddies, viz., *Rs.* 3,998. 12. 6.

CHAP. XVIII. Coorg Districts.

Approximate statement of gross income to all landlords.

113. The statement below shows approximately the gross income on land from all sources, with detail of village expenditure of every landlord in the district. And this may be taken as a rough statement of the total land resources of Coorg.

APPROXIMATE STATEMENT of GROSS INCOME to all Landlords of COORG, for 1861–62.

Distribution of Revenue.		Amount of different Details.	Total of Items.
		Rs. a. p.	*Rs. a. p.*
Net Government land revenue to be collected and realized for 1861–62, up to 30th April 1862		1,59,577 9 –	
Remuneration to Village Officers, &c., from 507 Villages:	*Rs. a. p.*		
Amount to potails	3,145 14 5		
Amount to coolwaddies	852 14 1		
		3,998 12 6	
Amount to ferry-men	13 8 –		
Amount to carpenters	5 – –

Proprietary profits on joree lands	13 4 –		
		9,729 14 6	
Proprietary profits in cardamom grounds to jummah ryots		9,460 – –	
			2,30,324 4 9
TOTAL Gross Land Rental of Coorg		*Rs.*	2,30,324 4 9

Works of public utility executed by private individuals.

114. I am unable to get prepared in time a return of works of public utility executed by private individuals at their own expense, but the expenditure under this head for the year under report is, I am told, almost nothing. A small well or two dug, or a hut for the accommodation of native travellers, is the most, I believe, that has been done in this way by private individuals.

Slavery.

115. The question of slavery in Coorg attracted the attention of the authorities very shortly after the assumption of British rule. The first attempt at emancipation was made with the predial and disposable slaves attached to the former rajah's punnays or estates. Some of these slaves, after emancipation, took up lands on their own account, and one or two are now well-to-do cultivators; others accepted work as free labourers; whilst others, it is believed, through the agency of a converted Coorg and Dr. Moegling, became Christians, and settled down at Almanda, in Coorg, where they form the nucleus of an interesting rising Christian village. Some of these Christians were subsequently induced to leave the settlement and work elsewhere. Laziness was the motive, as they thought by becoming Christians they would be relieved from work. Thus the good-for-nothing ones have been weeded out, and the working men left. The emancipation of these punnay slaves doubtless bettered the condition of the remaining slaves, numbering some 4,000 at present, attached to private vurgas or farms. They are not termed slaves, but "jummah aloo," jummah servants. The more sensible of the Coorgs understand their uncertain position as regards claiming ownership over these men. Their labour is precious; coffee planters are ready to hire or succour them, and other Coorgs are not unwilling to inveigle them away from their masters. The result is an increasing disposition and necessity to care for, if not actually to be kind to them. Some masters may be harsh, and ill treat their slaves, and the Coorg talook authorities may sometimes connive at bringing back runaways; but slowly and surely is their condition bettering, and it may perhaps be safely left to time, to increased intercourse with independent Europeans, and the timely interference of the Superintendent whenever requisite, and, more than all, to the master's self-interest, gradually but effectively to eradicate the evils of slavery. Slave, in the hereditary character implied in the offensive word slave, the "aloo mugga," servant's son, of the Mysore country, is not very different from the "jummah aloo" of Coorg, save the bondage in the former case is concealed under the form of bonded debt. Here it is open, and value

of

of labour and growing public opinion will as effectually make free the one as the other. There is no immorality connected with the present relation of master and jummah servant, and many slaves have their patches of coffee cultivation, and realize the profits for themselves, their masters doing all they can to attach them to the soil.

Miscellaneous revenue business.

116. A considerable amount of miscellaneous revenue business was transacted during the year. Indeed questions concerning breach of contracts, coffee lands, and coffee cultivation, become every day more frequent and troublesome, involving conflicting claims and rights, in proportion as the limits of available cultivable coffee land diminish and applicants increase.

SECTION IV.—EDUCATION.

State of education.

117. Education seems but little to have been attended to in Coorg till up to a very recent period, viz., in 1857, when the Anglo-vernacular school, established at Mercara in 1856, by Dr. Moegling, received, on the late Commissioner, Sir Mark Cubbon's recommendation to the Supreme Government, a liberal grant in aid. This grant is still continued to school, which, besides being the only educational establishment of its kind, enjoys, under the management of the present head master, Mr. Richter, the confidence of the Coorgs and Government officials, and is in a flourishing condition, which augurs well for its future working, when through more extended Government support and greater interest evinced in education by the inhabitants themselves, it will be able to enlarge its sphere of action.

Education in the Anglo-vernacular school.

118. The education afforded in the Anglo-vernacular school is sound and practical, and a plan has been lately submitted for not only affiliating the vernacular school to it, but making it, in a measure, supply the place of a normal school, to train up and send out qualified teachers, as also to properly instruct the 20 vernacular schoolmasters, who at present receive a small monthly pittance from Government. If the project is sanctioned, education, under Mr. Richter's able supervision, promises to make its first stride in Coorg.

Depôt for school books.

In connexion with the Anglo-vernacular school is a depôt for school-books and stationery, and which is the circulating medium for two Canarese publications, 13 copies of which are subscribed for by the scholars alone.

Attendance at Anglo-vernacular school.

119. There are two drawbacks at present to a better attendance of scholars at this school. The first being, that the Coorgs do not as yet appreciate education so far as not to grudge the payment of a small school fee. The second is the detached nature of the villages and the few families that live in Mercara. Time, self-interest, and insisting upon candidates for Government employ, possessing a fair amount of elementary education, will doubtless soon tend to remove the first difficulty; whilst for the second a good remedy, and which is already being taken up in some parts of India, has been proposed by Mr. Richter, viz., the establishment of a boarding-house in the vicinity of the school. It will be left to the Superintendent to impress upon the Coorgs the necessity of educating their children, and to expose the absurdity and ignorance of some of their ideas, viz., that they have got on very well without education, and so will their children, who will get "spoilt" by learning English; and, further, to point out that they cannot hope to be so generally employed in Government service if they do not keep up in some measure with the times; and it is expected that the more sensible and enlightened Coorgs will subscribe to the erection of a boarding-house under their own control, to which, with scarcely any extra expense to themselves, they may send their children from distant villages (now debarred from any education) to be boarded and educated at the school. At present it may be said that those Coorgs only receive education in the Anglo-vernacular school whose parents or friends reside at Mercara. Eventually, with a small endowment, indigent children might also be clothed and boarded here, and educated at the school gratuitously: and I do not think it chimerical to state that a properly supervised boarding school of this sort, with healthy recreation, sound teaching, and separated awhile from the baneful influences of their own homes, will give the scholars a healthy rivalry and tone which must lead to good results.

Proposed boarding house.

No female scholars.

120. The usual prejudice and indifference to the education of girls seems also to exist here. The wife of the head master is very anxious to secure some scholars, and would give them her best attention. It is trusted that something may be devised to get together some girl scholars, whose education is as important as that of their brothers. I am told, however, that there are some Coorg and other girls under instruction in private vernacular schools.

Attendance at Anglo-vernacular school.

The average daily attendance in the Anglo-vernacular school has been 79 scholars last year, against 85 for the year previous.

Vernacular or indigenous schools.

121. The state of indigenous education will be shown by the table below, which shows a decrease of scholars; but as hitherto little or no control has been exercised over these schools, the above figures may be taken as only giving approximately the numbers; the attendance being most irregular and fluctuating throughout the year, not only from the usual agricultural and feast-day interruptions, but also from the indifference alike of parents,

parents, pupils and teachers; and thus education languishes for want of that first fair start, which, in a country like this, can only be effected by Government encouragement, sympathy, and support:

YEAR.	SCHOOLS.			SCHOLARS.		
	Canarese.	Persian School at Mercara.	Total.	Male.	Female.	Total.
1861 - - -	24	1	25	595	- -	595
1862 - - -	24	1	25	589	- -	589

Primitive system of education.

122. The education afforded in these schools is of the usual primitive and unsatisfactory kind; no books are used; caligraphy and spelling varies with each schoolmaster, a tedious burdening of the memory with tables and sentences, winding up with the reading and writing of urzees of the description used generally in the Talook and Sudder Cutcherries. Nothing is made attractive in the whole course of study; no other nor higher object inculcated or thought of than the increased chances of pecuniary gain to the possessor of a small smattering in reading, writing, and accounts.

Status of village schoolmasters.

123. And the status of the village schoolmaster is at present very low, and when it is known that 20 out of the 24 schoolmasters attached to the vernacular schools receive only a monthly pittance from Government of $2\frac{1}{2}$ rupees, less by about half than what the commonest cooly receives as wages for his labour, no wonder will arise at vernacular education being what it is.

Four now in training.

124. But four out of the above 20 schoolmasters are now in training under Mr. Richter, at the Anglo-vernacular school, who, when they have passed a satisfactory examination, will resume their village duties on a proposed increased salary of seven rupees per month; four other schoolmasters will then be taken in hand, and similarly rewarded, provided they pass the prescribed examination, and the same course followed with the others. Such is what has been recommended, and what it is trusted will be sanctioned. A satisfactory beginning will then be made, the schools and masters will be brought under proper supervision, and the character of both will be raised in the eyes of the people (a subject of much importance as regards the master, who will be much more looked up to and respected as being a fairly paid and recognized Government official), and the system of teaching will become more systematic and rational.

Private vernacular schools.

125. In addition to the before-mentioned 24 Canarese vernacular schools, there are also about 21 private schools located in the principal towns and naads of the district, supported by the inhabitants, and the average attendance in these schools may be reckoned at from between 357 to 400 scholars daily. The course of instruction here is much the same as that noticed above in the case of the other vernacular schools.

Endowed school at Fraserpett.

126. A vernacular school exists in Fraserpett, established and endowed by General Fraser with the sum of 250 rupees, for which a soucar at Mercara allows interest of 3 rupees, which goes for the master's salary. The attendance in this school has been from 15 to 20 scholars daily.

Evening lectures.

127. A small but encouraging sign to those interested in education is the fact that some of the older pupils of Mr. Richter, who have left school, attend the evening lectures kindly and gratuitously given by that gentleman, which serves to keep up the remembrance of studies, too apt to be forgotten in their uneducated homes.

General remarks.

128. The concern which all seem to partake in these interesting and frank people, the Coorgs, has perhaps led me to leave other castes in the background; but of course the schools will be open to and are meant for all, and the Coorg will not be always the most forward to take advantage of them. Drunkenness, is, I fear, a prevailing and increasing vice among the Coorg population; and such is their present increasing material prosperity, ushered in since British rule, that it would appear to be a duty owing to them, to give them that education without which their increased comforts and comparative wealth promise to debase and prove a snare rather than an advantage to them.

Again, education is advancing with such rapid strides elsewhere that some corresponding efforts ought to be made here; and the codification of civil and criminal laws and procedures, stamp and income acts, and the like, all point out that if the people are to know the laws they live under, and what are their rights, if Government wish to have a better description of public servant, taken from the people themselves, and if the inhabitants are to make a better use of their increasing prosperity, and bear better the contact with Europeans, now fast gaining in numbers, then must the cause of education be taken up in Coorg, and its progress watched as carefully as its revenue or any other department of the State.

SECTION V.—PUBLIC WORKS.

PART I.—ROADS AND BRIDGES.

Project for new roads.

129. A comprehensive project for further opening up the interior of Coorg, and making additional roads to the coast and Mysore country has lately been submitted to the Commissioner in letter No. 628, dated 31st May 1862, to the Secretary's address. The road at present under construction from Coodlypett to Mercara will be a great boon. All the existing main lines of road are bandy roads; but it is sometimes made a matter of complaint that the Great Ghaut trunk roads to Mangalore and Cannanore are not always in good repair, particularly in the rainy weather. It is a novel, as well as encouraging feature, the ready manner in which both Native and European planters have lately come forward to contract for keeping portions of the Great Ghaut roads in repair, as also to construct parts of the Mercara to Coodlypett road. Here, where labour is generally difficult to be procured in the pouring rains, and but little work, without strict supervision, is done by coolies at that time of the year, a contract system undertaken by persons well supplied with labour, and who are the most interested as having a stake in the province, in keeping the road in thorough repair, will prove very beneficial, and independent of profit by timely attention to repairs, a healthy rivalry will arise between the various contractors, and I may add Government engineers also, as to the state of repair of their respective portions of road.

Existing main lines.

The contract system.

Cross roads.

130. As noticed before, no cross roads have as yet been made from local funds, owing to their hitherto non-existence. Mr. Mann, though, has in one respect, partially supplied the deficiency, for he has made a fair bandy road of about nine miles in length, leading to the Coorg Coffee Company estates, and which the general public already avail themselves of. This road opens out a large tract of country, where hitherto there has been no road whatever, and which, if continued towards Soolea, in the Canara district, as contemplated by Mr. Mann, will be a shorter cut by some 15 or 17 miles to the port of Mangalore. Under certain restrictions and conditions this last road is one where a Government grant-in-aid might be afforded. Other proprietors have also made various smaller roads leading to their estates, more or less helping to open out the country, and deserving, in some cases, of being taken up and extended. In fact, in the matter of communications, the coffee planters of Coorg have evinced both public spirit and forwardness.

PART II.—CANALS AND IRRIGATION.

131. This subject has already been treated of in paragraphs 79 to 82, but there may be some other feasible tank or other anicut projects, which the professional eye of an engineer might notice, and the construction of which, with the consequent clearance of jungle, might tend to make the marshy country more salubrious.

PART III.—CIVIL AND PUBLIC BUILDINGS.

132. A suitable post office would seem to be required at Mercara, instead of the present insignificant rented building. The gaol is inconveniently situated, and the accommodation is not nearly enough.

SECTION VI.—POST OFFICE.

133. The general post lines work well, and so does the anchay; by a new arrangement Mercara is now in direct anchay communication with Hassan, the Munzerabad coffee country, and Nuggur.

SECTION VII.—ELECTRIC TELEGRAPH.

Telegraph communication with Mangalore wanted.

134. The extension of the line from Mercara to Mangalore would be a boon to the trading interest here. All messages from Mangalore have to be despatched by post to Mercara, and thence sent on to their destinations. Independent of the advantages to the Mangalore people by the extension, the European settlers and others here, especially those connected with coffee, rice, and cardamom transactions, would make frequent, and I think a paying use of the line, and *vice versâ*, and without this line the traders and settlers of this province labour under a great disadvantage from want of prior shipping intelligence, and the rise and fall of prices on the coast.

SECTION VIII.—RAILWAY.

135. The extension of the Madras Railway line to Beypoor as a natural consequence benefits Coorg; Mercara being about 168 miles distant from Beypoor, *viâ* Tellicherry and Calicut; and a traveller to Madras might also pick up rail, *viâ* Mysore, Chamrajnuggur, and the Hassanoor Ghaut, at the Avanashe station, in the Coimbatur district, distant about 182 miles from Mercara, and am not certain but that this latter route, if open throughout, would not be the preferable one during the rains.

SECTION IX.—FINANCE.

Total expenditure of district.

136. The following Table particularises the total expenditure, ordinary and extraordinary, for the year under report:—

PARTICULARS.	1860-61.	1861-62.	INCREASE.	DECREASE.
ORDINARY:	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*

EXTRAORDINARY;				
Department Public Works	11,536 5 1	14,646 10 –	3,110 4 11	—
GRAND TOTAL	1,13,647 7 –	1,21,098 14 4	7,451 7 4	—

137. The increase shown in judicial contingent charges is owing to the increased cost for dieting, clothing, &c., the gaol prisoners, who averaged 16 more this than the year previous (*see* paragraph 38). The actual increase owing to this cause is nearly double the increase now shown, so that in reality there has been a decrease effected generally in general judicial contingent charges. The main items of increase in revenue charges are superintendent's pay and coffee haulut establishment, owing, as regards the superintendent, to his staff corps salary also being included this year in civil charges. Two extra shroffs were temporarily sanctioned for the coffee haulut establishment, whose salaries amount to 86 rupees; and taking these additional items of expenditure into account, it will be seen that under this head also there has been in reality a slight decrease. The increase in miscellaneous charges can also be satisfactorily accounted for. The expenses on cutting and collecting the sandal-wood sold this year amounted to *Rs.* 663. 6. 10.; and whilst formerly the commissariat department at Hoonsoor furnished carriage for the superintendents cutcherry dufters, office tents, &c., for four months, and charged accordingly, the cattle have now been sent here, and their keep is chargeable the whole year round. The increase from this cause is *Rs.* 818. 13. 2. And whilst formerly the commissariat department paid the Government allowance of 600 rupees a year for the dieting of paupers in civil dispensary, &c., it is now paid by the civil department, and the extra charge under this head this year, and not appearing last year, is 600 rupees; total, *Rs.* 2,082. 4.

Increase in judicial charges accounted for.

Increase in revenue charges.

Increase in miscellaneous charges.

These are extra charges for the year, so that there has been no real increase upon last year's charges, but the reverse. The decrease in pensions to ex-Rajah's family is owing to one of the members having died. The increase of 1,190 rupees in pensions, on account of the Canara insurrection, is owing, that whilst formerly these pensions were payable half-yearly, they are now paid quarterly, and the above 1,190 rupees represents the additional quarterly payment that has come into this year's accounts. The superannuation pension is a fresh charge altogether, viz., pension to the late treasurer. I am unable to give particulars of the increase in the public works expenditure, but it is doubtless owing to the construction of the new line of road from Mercara to Coodlypett.

Increase in pension, and also decrease.

Increase in public works.

138. The Table below gives the same particulars in another form, and although there is an increase of *Rs.* 4,341. 2. 5. in ordinary or controllable expenditure, yet for the reasons shown in the preceding paragraph, and, independent of those reasons, looking at the net increase in the revenue of the district, the increase in ordinary charges does not appear disproportionate. The increased expenditure in the Public Works Department is perhaps a matter of congratulation:—

Abstract statement of expenditure.

General results.

Particulars.	1860-61.	1861-62.	Increase.	Decrease.
ORDINARY.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*

139. The financial results, therefore, leave a sum of *Rs.* 2,31,129. 11. 6. in favour of receipts or actual surplus for the year under report, whilst the surplus for the year previous was but *Rs.* 1,70,010. 4. 8.

Financial result.

Actual surplus.

140. Next year there is every probability of a similar, most likely greater, surplus, whilst the exceptional causes increasing ordinary charges will not operate, and which it is trusted will admit of some small increased expenditure in additional establishment, and increased pay to a portion of the present English department, which is short-handed and over-worked.

Expected surplus next year.

English department wants an increase.

SECTION X.—POLITICAL.

141. The following, though scarcely having any political significance, may appropriately come in under the above head. At the former rajah's palace in Nacknaad, the scene of barbarous atrocities shortly before the last rajah's deposition, situated about 20 miles from Mercara, resides Neelamajee, daughter of Mullay Ursur, of Hormulnaad, a distant relative of Dodda Veerajender, but whose family is now altogether extinct; and an illegitimate granddaughter of Dodda Veerajender, named Neelamma Neelamajee, after her conversion to Mahomedanism, became one of Tippoo Sultan's wives, and after the taking of Seringapatam by the British she came to reside at Nacknaad, and was supported

Neelamajee, Tippoo Sultan's wife.

CHAP. XVIII. Coorg Districts.

ported by her relatives the then rajahs. Since the deposition of Veerajainder she has been maintained by a monthly pension from the British. Neelamajee must now be upwards of 90 years of age.

Devamajee and Chennabassapah.

In addition to Neelamajee, at Appagolla, in Koinherry Naad, reside Davamajee and her husband, Chennabassapah. Devamajee is the sister of the late deposed rajah, and her husband, though a lingayat, was formerly a Coorg, though of no particular family, and poor. He was made a lingayat by Lingarajender, who married him first to one daughter, and after her demise married him again to another daughter of his, viz., the present Devamajee. These are the Devamajee and Chennabassapah, who in 1832 fled the Coorg country to save their honour and lives, and sought the protection of Mr. Casamajor, Resident of Mysore. The rajah demanded the restoration of the fugitives; the request was not complied with; they had revolting tales to tell, which led to inquiries, and a visit from the Resident to Coorg, ending in open rebellion on the part of the rajah, and the taking possession of his country in 1834. Devamajee and Chennabassapah enjoy a jagheer, and are also in receipt of a pension from the British. They have one son, about 11 years of age, and three daughters; one of them, widow of a Canara poligar, now resides with her parent, and the other two daughters are married to a pensioned poligar residing in Bangalore. One only, I believe, has a daughter, aged but a few months. Chennabassapah possesses no influence among the Coorgs.

SECTION XI.—MISCELLANEOUS.

POPULATION.

Population statistics.

142. The population returns give a grand total of 118,352 souls, being less by 328 persons than the year previous. The decrease is thus accounted for:—

			Souls.
Persons leaving Coorg numbered			8,184
Persons emigrating into Coorg			6,843
		Decrease being	1,341
Births for 1861–62	4,593		
Deaths for 1861-62	3,580		
Increase of births over deaths	1,013	Deduct	1,013
		Net decrease	328

The deaths give a per-centage of 3 to the population. The per-centage of births is about 3¾ to the population.

But from 130,000 to 140,000 souls is supposed to be the more correct census for Coorg, and this will slightly, and perhaps more correctly, modify the averages regarding litigation and crime to population, given in paragraphs 10, 11, and 23. The Table below may not prove uninteresting:—

PARTICULARS.	CENSUS.			Per-centage of Increase from 1839 to 1861–62.
	1839.	1856.	1861–62.	
Coorgs	17,096		23,341	37
Other castes	64,341		95,011	49
TOTAL	81,437	111,890	118,352	43

Which shows that in 22 years the Coorgs have increased by 37 per cent., and other castes in about the same proportion, the remaining increase of 12 per cent. being perhaps safely ascribable to emigration.

EMIGRATION.

143. Numbers of Mysore and Wynaad people, chiefly of the jungle tribe, yearly migrate to Coorg, and chiefly into the Kiggutnaad talook, for the purpose of assisting in harvesting the extensive rice crops, after which they return to their own homes. A constant stream of coolies and labourers may be said to be entering and leaving Coorg at all times of the year, connected with the numerous coffee estates scattered over the country. But few of these coolies remain for good in the district, or beyond the working seasons; but, altogether, though paragraph 142 shows an actual emigration from the district, I think this either to be incorrect or exceptional, and that Coorg, from coffee cultivation and other causes, annually receives a slight addition to its population from emigrants settling in the country.

AGRICULTURE.

Rice culture.

144. The usual primitive but generally successful system of agriculture obtains here as in other parts of India. The only plough cultivation worthy of notice is that of rice, and though the bullocks are wretched, and the implements used very simple, yet rice lands are generally manured and carefully prepared for the seed. This, and a naturally fertile soil, and

and exemption from drought (which places the agricultural community here in a far better and safer footing than their brethren on the plains) generally results in a very good rice crop, which, after deducting for home consumption, leaves a large margin for export. The value of the rice crop last year may be estimated at not less than 15 lakhs of rupees. Plantains and oranges are considerably exported from Coorg. The cardamom of Coorg is much esteemed "on account of its aroma, which is much superior to those raised in gardens in Mysore and elsewhere. An account of this singular branch of jungle horticulture is given in the Coorg memoirs. In the forests leased out for cardamom cultivation the steepest declivity of the hills are chosen for cardamom grounds. The steep must face west, or, still better, north, for the east wind and the sun are noxious. On the higher edge of the chosen ground, one of the largest trees is selected for the operation of shaking the ground. The slope below to a length of 250 or 350 feet, according to the height of the tree, is cleared of brushwood, thorns and weeds. This done, a platform is erected between the mountain side behind the tree and its stem, at a height of about 12 feet. The tree is cut, which falls from the height of its trunk down the mountain slope, top foremost, carrying with it in the great crash a number of smaller trees, and rushing on a long way towards the valley below. The sound of the tree striking the earth resembles the discharge of cannon, or a peal of thunder. The ground trembles, and the work is now done for the present. Within three months, cardamom plants show their heads, as fern do on newly cut ground, all over the space shaken by the fall of the great tree. They rise during the first showers of the monsoon, and grow to a height of two or three feet in the first rainy season. The ground is then once more carefully cleared of weeds, thorns and small bushes, which may have sprung up during the monsoon. The cardamoms must not be disturbed. The garden is left alone again for a year. In the month of October of the second year after the felling of the tree, and in the 20th month of the plantation, the stocks have reached man's height. A party sets out to clear the whole ground thoroughly the third time. After six months' more, in April, the fruit-bearing small branches shoot forth from the bulk, they are covered with clusters of beautiful lion-mouthed blossoms, and afterwards with oval triangular capsules. Other five months pass, when, in October, the first crop is gathered. The first full harvest, however, is collected only a year afterwards. The harvest continues good for six or seven years. When the crops begin to decline, another large tree must be cut down on the plantation. The whole business from, as it appears to the Coorg, the seedless springing up of the plants to the gathering of the crop is strangely mixed up with superstitions. Thus are spicy cardamoms grown in Coorg glens never penetrated by the sun's rays during the cloudless winter, or the gloomy monsoon."

Plantains, oranges, and cardamoms.

145. The revenue derived from cardamom plantations, according to the memoirs, is stated in the rajah's time to have been 80,000 rupees annually. At the onset of British rule the revenue at one time was but 4,000 rupees; in 1855–56 it was *Rs.* 7,781. 7.; from 1856–57 up to the present time, with slight variations, the revenue averages nearly the same (the forests having been leased out for a term of 10 years, which expires in 1865–66, viz., from 27,000 to 29,000 rupees and upwards yearly. It is hazardous to state how or for what term of years these forests* will again be leased out, seeing radical changes may be effected before then; but if again leased out similarly as now, a sum of *Rs.* 7,846. 7. 11. will have to be deducted from the present cardamom revenue, as being the rent of forest, where permission has been accorded to plant coffee. This, however, will only be changing the head of revenue, and the amount, under coffee cultivation, will most likely increase. If cardamom forests are again similarly leased out, it is estimated, from the growing value of cardamoms and competition for coffee lands and other causes, that the rise in the leases will be about 70 per cent. Already several leaseholders of cardamom forests have realized considerable sums in transferring their leases to others for coffee cultivation purposes. A rough guess gives the value of last year's cardamom crop at about two lakhs of rupees. The cardamom leases are all held by natives, with the exception of a few lately made over, for a consideration, to Europeans for coffee cultivation.

Cardamoms continued.

* Cardamom forest leases.

146. The following Table will serve to illustrate how, from small beginnings, coffee cultivation has grown to dimensions which, with the present rise in prices, promise in a few years to eclipse every other description of revenue in Coorg, save abkarry, which grows and increases with the cultivation of coffee:—

Coffee cultivation.

YEAR.	REALIZATIONS FROM COFFEE HAULUT.											
	From Europeans.			From Natives.			TOTAL.			Yearly Increase.		
	Rs.	*a.*	*p.*	*Rs.*	*a.*	*p.*	*Rs.*	*a.*	*p.*	*Rs.*	*a.*	*p.*
1857–58	136	1	4	11,447	12	1	11,583	13	5	—		
1858–59	460	15	7	16,254	10	4	16,715	9	11	5,131	12	6
1859–60	1,944	9	6	25,997	3	2	27,941	12	8	11,226	2	9
1860–61	2,797	3	1	29,302	15	1	32,103	2	2	4,161	5	6
1861–62	3,369	6	11	35,075	14	10	38,445	5	9	6,342	3	7
TOTAL	8,708	4	5	1,18,081	7	6	1,26,789	11	11	26,861	8	4

Even as regards the native coffee, it will be seen that its extended cultivation could not have commenced much before the first advent of Europeans. European cultivation is yet in its infancy; and but one estate in full bearing, giving a crop that will justify favourable

anticipations as regards other estates. In the course of a very few years more there is no doubt, under present circumstances, that the European cultivation and yield will come up to, if not overtake, the present native coffee returns, whilst native cultivation may also be expected to go on increasing in about the same or perhaps a greater proportion than it now does.

Coffee statistics.

147. As the haulut charged on coffee amounts to four annas per maund, a rupee of revenue under the head of coffee haulut may be taken as representing a cwt. of exported coffee. As little coffee, perhaps not more than 400 maunds, or 100 cwts., is consumed within the district, the amount shown in the Table in the preceding paragraph may be taken as the total production of coffee in the province. Coorg then exported last year 38,445 cwts., or 1,922 tons of coffee, worth on the spot some 8½ lakhs of rupees, on the coast some 11 lakhs, and in the English market some 15 lakhs of rupees. It is hardly possible to give even approximately the number of acres under coffee cultivation at present, as great part of it is grown on the banay of jummah and sagoo land, considered as already taxed, and a further portion is unsurveyed cardamom jungles; but a rough statement prepared in the office of coffee cultivation in other localities, save the above, viz., in pysaree or sircar jungles, show that about 49,460 butties, or 2,964 acres (the dry land butty is here calculated at six acres per 100 butties) of land, have been taken up by Europeans, of which 15,800 butties, or 948 acres of land, are at present cultivated; and that about 174,715 butties, or 10,302 acres of land have been taken up by natives, of which about 8,025 butties, or 480 acres of land are at present under cultivation. These latter figures show that under the present coffee rules, with no land tax, holders of land ought to be required to cultivate the same, under certain penalties if necessary, within a certain number of years. European planters now hold *Rs.* 5,111. 10. 11. of cardamom forest, the greater portion of which is planted with coffee not yet in bearing; 6½ cwts. per acre is considered a fair yield in Ceylon, and one European planter's estate in Coorg is supposed to have yielded about six cwts. per acre last year; but taking three cwts. as the average yield all round per acre, it shows that about or under 13,000 acres of land are at present cultivated with coffee, returning *Rs.* 38,445. 5. 9. to Government, and from nine to 15 lakhs of rupees to the grower, according to where the coffee is sent; 65,000 acres of wet land may be said to be under rice cultivation, returning to Government *Rs.* 1,30,156. 5. 7., and to the growers 15 lakhs of rupees, whilst cardamoms paid *Rs* .27,964. 9. 10. to Government, and returned two lakhs of rupees to the cultivators. As five times more land is under rice than coffee cultivation, in the same proportion the revenue to Government from rice cultivation ought to be some 1,90,000 rupees and odd, still the charge on coffee cultivation, in a land-tax point of view, is somewhat proportionate to the tax on paddy lands, whilst the same extent of land under coffee will produce a crop valued at nearly five times the amount as if sown with paddy. Coffee production in Coorg is now within, I believe, one-twentieth of what it is in Ceylon. Of the 38,445 cwts. of coffee exported this year, 27,000 cwts. or more was shipped at Cannanore, in the Malabar district. This exportation, I believe, is sometimes confounded with and placed to the credit of the Wynaad and Malabar planters, who are stated to have exported 73,915 cwts. in 1860-61.

FORESTS AND ARBORICULTURE.

148. There are extensive forests in various parts of Coorg abounding in teak, blackwood, ebony, honnay, and other valuable timber. Poon trees, used as ship spars, are also comparatively abundant; as also sandal-wood in the lower table lands of the district. The forests of Coorg have never been systematically worked or conserved, the consequence being wastage, pillage, and loss of timber sale revenue to Government. On account of the nature of the country the difficulty of getting and putting out timber is great. Poon spars, for this and other reasons, are standing comparatively valueless in the forests, which, if transported to Bombay, would fetch upwards of 1,000 rupees each; but as the subject of an efficient forest conservancy for Coorg is now engaging the Commissioner's attention there is no need of entering here into further particulars under this head.

MINING.

149. There are no discovered mines in the district, nor is iron manufactured.

SURVEY.

150. A survey establishment in connexion with the fee simple and waste land rules is shortly expected to be granted to Coorg.

DISPENSARY.

151. The nuuber of patients treated in the civil dispensary is given in the Table below. The prevailing diseases during the year were fevers, bowel complaints, rheumatism and catarrh.

PARTICULARS.	Remained from last Year.	Admitted in 1861-62.	TOTAL.	Died.	Average Daily Number of Sick.
In-patients - -	1	73	74	16	2¾
Out-patients - -	14	957	971	- -	13
TOTAL - -	15	1,030	1,045	16	—

The inconvenient and distant locality of the dispensary diminishes in a great measure its utility, particularly in the rains, or else there would be a larger number of patients to show. A plan will be separately submitted for removing the dispensary into the Pettah, when no doubt it will be much more resorted to. Independent of medicines, the annual cost to Government of this institution is 1,440 rupees, but the benefits the dispensary affords are great, particularly to low land coolies and emigrants, who are so liable to be stricken down by the fever and other prevailing diseases of Coorg.

VACCINATION.

152. The vaccination returns for the year under report, as also those for the year previous, are as follows:

	Number Vaccinated.	Successful.	Failures.
Total number vaccinated in 1861-62 - - -	1,874	1,707	167
Ditto - - - - - in 1860-61 - - -	1,708	1,516	192
	166		

which shows an increase by 166 over the previous year's number, and a smaller percentage of failure. The prevalence of small-pox in a few villages of Coorg for the year under report has been noticed in paragraph 90.

CONCLUSION.

153. It is feared that this Report will be found somewhat sketchy and superficial in its details; and it is hoped that any inaccuracies and shortcomings will be excused on the ground of short time of being in charge. I am indebted for much information to the intelligent manager, Ragavachary. The English office and Mr. Ball have performed their duties satisfactorily. The head and naib sheristadars, M. Appachoo and K. Appiah, are diligent in the performance of their duties, and the departments over which they respectively preside have generally given satisfaction.

Superintendent's Office, Fraserpett,
30 June 1862.

Commissioner.

ON THE COORG BUTTY.

It is difficult to give a clear idea of the extent of a butty of wet land, a butty not being a land measure, but one of capacity, holding 80 seers; and as fields were assessed according to the nature of the soil, a small but fertile field of say an acre might yield 100 butties of paddy, and be called 100 butties of wet land, and pay assessment as such; whereas in another locality, or even in neighbouring fields, double or, perhaps, treble the extent of land would only yield the same quantity, viz., 100 butties of paddy, which also would be called 100 butties of land, and pay assessment accordingly. The mode of ascertaining the number of butties of paddy each field yielded was this: the whole field was first surveyed, and the extent of land ascertained; a 16 feet square of this field was then (with a bamboo stick, 16 feet in length, called "aluttee ghuz" or "aluttee khole," viz., measuring yard or khole) demarcated at harvest time, and the number of seers of paddy produced on the square was measured out and ascertained, and the whole field was then charged with the same proportion of crop as the square produced. It follows, therefore, that a given number of butties of land is not decisive as to the real extent of the land, unless the quality of the field is known, *i. e.*, how many seers were originally fixed as the yield for each square of 256 feet. There are seven different qualities of fields ascertained, or supposed to produce 8, 10, 12, 14, 16, 18, and 20 seers respectively on each square of 256 feet; therefore 100 butties of land may be taken to represent a land measurement of from one to six acres, according to quality; the average calculation would be about three acres, or safer to reckon, about two acres to every 100 butties.

I am indebted to Mr. Ritcher for this information.

In temporary charge of Coorg.

Abstract Statement of Receipts and Disbursements for the Official Year 1861-62.

RECEIPTS.	Amount for 1862–63.*	DISBURSEMENTS.	Of 1862–63.*
	Rs. a. p.		*Rs. a. p.*
Cash Balance	2,41,987 15 9	A. Allowance, Refunds, and Drawback	—

CHAPTER XIX.

BRITISH BURMAH.

CONTENTS.

SECTION I.—INTRODUCTION.

	Paras.
Formation of the Province of British Burmah	1
Geographical position and extent	2
Principal sea-ports	2
Arracan—physical aspect	3
Pegu and Martaban—physical aspect	4
Tenasserim—physical aspect	5
People belonging to the Indo-Chinese family	6
Social status of the people	7
Hill cultivation	8
Foreign settlers at the sea-port town	9
Scope of the present Report	10
Reference to Appendix (A.)	11

SECTION II.—JUDICIAL.

CIVIL JUSTICE.

Fewer suits than in the previous year	12
Cause of diminution in suits	13
Value of stamps filed as compared with amounts litigated	14
Number of cases instituted	15
Number of cases pending	16
Working of the Civil Courts	17
Average duration of suits	18
Administration of civil justice generally efficient	19
Complete information called for as to the year 1862	20

SECTION III.—CRIMINAL JUSTICE.

Number of persons apprehended on criminal charges, and how disposed of	21
Under trial, or committed to sessions at close of the year	22
Examination and detention of witnesses	23
Committed to sessions, and how disposed of	24
Number of appeals	25
Administration of criminal justice satisfactory	26

SECTION IV.—POLICE.

New constabulary established	27
Frontier posts of Pegu occupied	28
Nature and position of frontier posts	29
Police established throughout the country	30
Composition of the police	31
Village police	32
Police in Tenasserim	33
Villagers armed in frontier districts of Pegu	34
Reference to Statement (E.)	35
Crime during 1861	36
Reference to Returns and Appendix	37
A diminution of violent crime during 1861	38
Difficulty in defending the northern frontier against banditti	39
Increase in thefts and culpable homicides	40
Number of persons concerned in crimes	41
Number of conviction to arrests, and of property stolen and recovered	42
Diminution of crime	43
Municipal funds	44

SECTION V.—GAOLS.

Two gaols abolished in Pegu	45
Table of cost per prisoner, mortality, and escapes	46
Mortality	47
Cost per prisoner	48
Escapes	49
Labour	50
Cost of maintenance	51
Financial results	52
Daily average number of prisoners	53
Value of convict labour to Public Works Department	54
Excellent management of the Moulmein gaol	55
Convict guards	56
Convicts under sentence of transportation to be sent to Port Blair	57

SECTION VI.—REVENUE.

General result of the year's revenue	58
Crops raised without irrigation	59
Increase of cultivation in Pegu	60
Increase of cultivation in Tenasserim	61
Decrease in Arracan	62
Export of grain	63
Land revenue settlement	64
Operations during the year	65
Settlement for 10 years	66

CAPITATION TAX.

Rate of capitation tax increased	67

FISHERIES.

Method of taxing fisheries	68

SALT.

Duty, how levied	69

FOREST PRODUCE.

Forest produce	70

EXCISE.

Excise	71

SEA CUSTOMS.

Increase in amount of sea customs	72

INLAND CUSTOMS.

Increase in inland customs	73
Reference to Section XI. Marine	74

TIMBER.

Timber revenue	75

STAMPS.

Stamps	76

INCOME TAX.

Income tax	77

SECTION VII.—EDUCATION.

PEGU.

Government school at Rangoon	78
Karen high school and others	79
Toungoo schools	80
Toungoo village schools	81
Henzadah schools	82
Prome schools	83
Bassein schools	84
Village schools	85
Burmese female schools	86
Schools maintained by Catholic mission	87

TENASSERIM.

Moulmein schools	88
Schools for the Propagation of the Gospel Society	89
Other schools	90

CHAPTER XIX.

Chap. XIX. British Burmah.

BRITISH BURMAH.

ANNUAL REPORT on the Administration of the Province of British Burmah, for the Year 1861–62.

SECTION I.—INTRODUCTION.

Formation of the province of British Burmah.

1. On the last day of January 1862 the three maritime provinces of India beyond the Ganges, which had been conquered from the Burmese Empire, were united under one local administration, and called British Burmah. These provinces comprised the ancient kingdoms of Pegu and Arracan, with the long line of sea-coast, known as Tenasserim. The two last of these were acquired by treaty after the war of 1825–26. Pegu was occupied and retained consequent on the war of 1852.

Geographical position and extent.

Principal sea-ports.

2. The Province of British Burmah lies along the eastern shore of the Bay of Bengal, extending from the mouth of the Nâf Estuary, in about 20° 50′ north latitude, to the Pak-chan river, in about 10° 50′. It possesses a direct line of sea-coast of not less than 900 English miles, and a total area of 90,000 square miles. Each division possesses one principal sea-port, that is to say, Tenasserim has Moulmein; Pegu, Rangoon; and Arracan, Akyab. The first and last mentioned have risen entirely under British rule. Rangoon was founded by Alompra, the Burmese conqueror of Pegu, and was peopled by the inhabitants of the ancient capital, who were brought away for that purpose.

Arracan—physical aspect.

3. Arracan, the most northern division of the province, is separated to the eastward from Pegu and Upper Burmah by a range of mountains, which attains at its greatest elevation about 7,000 feet. The range runs nearly parallel with the line of sea-coast, and gradually lowers towards the south. The northern portion of the country has a large area of alluvial soil in the lower course of the river Kuladen and its numerous confluents. The breadth of the land there, from the sea-shore to the water-shed, mountains, is from 80 to 90 miles. A large portion of the country is hilly, covered with forest, and difficult of access. The water-shed range, separating Arracan from Pegu, extends southerly, and between that range and the sea-shore, for a length of nearly 200 miles, as far as a point of land near Cape Negrais, the country is a mere narrow strip of land. For the last 150 miles the hills seldom exceed 500 feet elevation. That portion of Arracan was united with Pegu when the latter was occupied by the British.

Pegu and Martaban —physical aspect.

4. Pegu and Martaban lie in the valleys of the Irrawaddy and Sitang rivers. These valleys, bounded east and west by mountain ranges, are narrow in the upper portions, but expand at the delta of the Irrawaddy into a magnificent alluvial region, penetrated by a vast number of tidal creeks, and extending over 10,000 square miles.

Tenasserim, its physical aspect.

5. Northern Tenasserim is bounded to the west by the last 100 miles of the course of the great river Salween. This river, without a delta, and with passless rapids 100 miles from its mouth, which bar the ascent of boats to Central Asia, is joined at Moulmein by two streams, which facilitate communication with the interior. The breadth of land from the sea-shore to the central mountain range, which divides the province to the eastward from Siam, is about 80 miles. This space is gradually narrowed to 40 miles at the southern extremity in 11° of north latitude. There is no river of importance southward of the mouth of the Salween. The interior of the country is a wilderness of hills, thickly wooded, running in a general north and south direction, with long narrow valleys.

The people belong to the Indo-Chinese family.

6. Throughout the whole country the people belong to various branches of the Indo-Chinese family. They probably have come down, at a remote period, from the plateau of Central Asia by the courses of the Salween and of the eastern confluents of the Irrawaddy. The most advanced race is the Burmese, which, at the period of the British conquest, possessed the ruling power over the whole country. The Arracanese are of the same race as the Burmese, have the same name, and speak the same tongue, but have been isolated

isolated for many generations by their geographical position. The other tribes are the Mon or Talain, the ancient people of Pegu, also the Karen, Khyeng, Kamee, and other mountain races, which need not be enumerated. These tribes all have a general resemblance to each other; and as their dialects differ, the Burmese language, which is the mother tongue of three-fourths of the people, serves as a means of communication one with another.

Social status of the people.

7. The social condition of the people throughout the three divisions is generally similar. Everywhere in the plains the occupied land is an allodial possession. The estates on the average do not exceed eight to ten acres. The agriculture is rude, but the fertility of the soil is exuberant; there is only one grain crop in the year, and one cereal; rice is cultivated almost exclusively. The laws of inheritance and of marriage, the religious faith and the superstitious practices, the traditions, the feelings, the sympathies and the prejudices are generally alike among the people in the plains. But the hill tribes have not been won over to Bhudism; they have no idols and no priesthood; they still retain the ancient worship of the deities of the woods, the hills, and the streams; their languages are unwritten. Many of them are gradually settling in the plains, as the Karens commenced doing ages ago. All the tribes, as a general characteristic in the ordinary affairs of life, are frank, truthful, and hospitable. They have plenty of food and clothing, with reference to the climate. Whether in the hills or plains, the houses of the peasantry, built of bamboo, have the floors raised on platforms, and never placed on the ground.

Hill cultivation.

8. On the hills the people practise the barbarous mode of tillage called toungya, which consists in clearing a fresh patch of forest each season and burning the timber on the ground. They change their village sites at uncertain intervals, as the soil of the surrounding country becomes exhausted; while such wandering habits last, their condition cannot be materially improved. The remoter hill tribes are still in a savage state of isolation and independence, save in the district of Toungoo, where the ameliorating influence of education and Christianity has wrought an entire change. Even the wilder among the hill tribes, however, grow cotton, and weave cloth of strong texture and various colours.

Foreign settlers at the sea port towns.

9. At the principal sea ports Europeans and foreign Asiatics have settled in considerable numbers. Their knowledge, enterprise, and capital have opened out markets for the timber, the rice, the petroleum, and other products of the country which could not have been accomplished under the native government. The people generally, since the British conquest, have acquired a considerable amount of personal property. The small landed proprietors are independent and prosperous. The high rate of wages for a common day labourer, from six to eight annas a day, nine pence to a shilling, shows that the condition of the labouring classes is comfortable. Yet, among the Burmese and other indigenous people there is no class that can be called wealthy.

Scope of the present report.

10. In the present Report the result of the judicial and police administration of the three divisions for the year 1861, and that for revenue and general affairs up to the end of April 1862, have been combined. But as the divisions were not during the whole period subject to one local authority, and the various statements and returns were not always rendered in the same forms, the means for strict and close comparison do not exist. The present Report, however, will serve as an index for comparison between the several divisions in future Reports upon British Burmah.

Reference to Appendix A.

11. In Appendix A. will be found a tabular statement of the area, population, and revenue of each division of the province.

SECTION II.—JUDICIAL.

CIVIL JUSTICE.

Fewer suits than in the previous year.

12. The number of civil suits, original and appellate (both regular and miscellaneous) instituted in the several courts of the province during the past two years was as follows:

	1860.	1861.
Appeals and original suits - -	33,494	21,990
Miscellaneous - - - -	16,370	11,627

showing a decrease of 11,504 appeals and original suits, and 4,743 miscellaneous cases. This decrease, which is nearly uniform in all three divisions, is owing to the Stamp Act, which did not come into operation until June 1860, affecting, therefore, only the latter half of that year, whereas its effects have been felt during the whole of 1861.

Cause of diminution.

13. As stated in last year's Report, this diminution of suits is not to be attributed to any defect in the working of the courts, or falling off in the prosperity of the people. It has simply relieved the courts and the people from much hasty and vexatious litigation, to which the former excessive cheapness of legal proceedings offered every temptation.

Value of stamps filed as compared with amounts litigated.

14. In Pegu the cost of stamps filed in the several suits is in appeals 6 per cent., in original suits not quite 7 per cent. of the amount, or value of the property litigated. In Arracan it is in appeals 16 per cent., in original suits 8¾ per cent. The Stamp Law being the same in each province during the year, it is not apparent why there should be this difference, especially in the cost of stamps in appeals. This point is being inquired into.

Number of cases instituted.

15. In Table B. of the Appendix will be found a complete statement of the number of remaining suits pending from last year, instituted during the year, and pending at the close of the year in each division of the province.

Number pending.

16. The number of cases pending at the close of 1860 and 1861 respectively, is as follows:—

	1860.	1861.
Appeals and original suits - -	665	565
Miscellaneous - - - -	194	219

being 2·6 per cent. of the original suits and appeals, and 1·3 of the miscellaneous cases instituted during the year.

Working of the civil courts.

17. Table C. of the Appendix shows the comparative working of the Civil Courts in the two divisions of Pegu and Arracan. Owing to different forms having been in use in the three provinces before they were united into one, it has not been practicable to complete this statement by adding a similar return from Tenasserim.

Average duration of suits.

18. The average duration of cases has not been excessive. There are only two cases which have been long on the file, one in Pegu and one in Arracan; the reason for their remaining undisposed of is in each case satisfactorily accounted for, and the delay has been owing to causes beyond the control of the court.

Administration of civil justice generally efficient.

19. The administration of civil justice in the province generally has been efficient and satisfactory. Each of the Commissioners reports very favourably of his district and subordinate judges. That substantial justice is afforded by the several courts the paucity of appeals is a convincing proof. Of 1,314 decisions passed by the Deputy Commissioners of the eleven districts into which British Burmah is divided, only 62 or 5 per cent. are appealed against, and in a large majority of these appeals the original decree was confirmed. The appeals from the subordinate courts to the Deputy Commissioners, in like manner, bear a very small ratio to the number of decisions, and in these the decree of the court below is more frequently confirmed than modified or reversed.

Complete information called for as to the year 1862.

20. The information regarding the administration of civil justice in the courts of British Burmah during 1861 is not so full as desirable; but attention has been called to this want in order that the returns for 1862 may be complete.

SECTION III.—CRIMINAL JUSTICE.

Number of persons apprehended on criminal charges, and how disposed of.

21. In the Appendix will be found a statement marked D., showing the number of persons apprehended on criminal charges, and how they were disposed of. That portion of the statement will be remarked on under the police section. In this section the information, which refers to the working of the Criminal Courts, will alone be considered.

Under trial or committed to Sessions at close of the year.

22. The number of prisoners remaining under trial or committed to the sessions at the close of the year was 215, or ·08 per cent. of those brought to trial.

Examination and detention of witnesses.

23. Twenty-one thousand five hundred and eighty-six witnesses were examined, of whom 17,358, or four-fifths, were not detained more than one day. In this respect the divisions of Tenasserim and Arracan leave nothing to be desired. Pegu does not appear so favourably, but in this division the undue detention of witnesses is confined to the districts of Bassein, Myanoung, and the town of Rangoon, in the order in which they are named. The detention of witnesses in the Bassein district was noted as excessive in last year's report; and though considerable improvement is manifest during the year under review, it is not creditable that this district should be again distinguished from all the other districts of the province by the length of time witnesses are kept waiting before they are examined and discharged.

24. The

24. The committals to the Sessions Courts, and the manner in which they were disposed of, are shown below:— Committed to Sessions, and how disposed of.

DIVISION.	Committed to Sessions.	Convicted.	Acquitted.	Died or Escaped.	Pending.
Pegu - - - -	73	48	12	4	9
Tenasserim - - -	73	55	17	- -	1
Arracan - - -	70	57	13	—	—
	216	160	42	4	10

25. Out of all the sentences passed by the Deputy Commissioners of the several districts, only 123 were appealed against with the following result:— Number of appeals.

DIVISION.	Instituted.	Confirmed.	Modified or Reversed.	Pending.
Pegu - - - - - -	23	17	3	3
Tenasserim - - - - -	37	27	10	—
Arracan - - - - -	63	38	25	—
	123	82	38	3

Nothing can prove more satisfactorily that the sentences passed by the Deputy Commissioners in charge of districts and the town magistrates are generally sound and just.

26. The Commissioners of the several divisions report very favourably of the manner in which the several officers under them have discharged their magisterial functions, and the administration of criminal justice throughout the province is satisfactory. Administration of criminal justice satisfactory.

SECTION IV.—POLICE.

27. Early in the year 1861 the organization of the police in Pegu, on the plan recommended by the police commission, which was subsequently embodied in Act V. of 1861, was commenced. The duty was entrusted to Captain H. T. Duncan as Inspector General. He began with the district of Prome, which, from being a border district, liable to the attacks of banditti from the Burmese territory, required early attention. New constabulary established.

28. There were at that time two lines of posts along the frontier, extending from the Arracan hills on the west to the central ridge on the east, which divides the valley of the Irrawaddy from that of the Sittang. The more important of the posts were garrisoned by men of the Pegu Light Infantry. As the plan on which the police was to be embodied rendered it necessary to disband that battalion, those men who volunteered to enter the constabulary were enrolled therein, and at once, with others who were transferred from the former police corps, were stationed in the frontier posts. These men were all armed with muskets as being liable to attacks by armed parties from without. Frontier posts of Pegu occupied.

29. The front line of posts, facing to the north, is situated close on the border. It consists of eighteen stockaded posts, about eight miles apart from each other. The second line of posts is about 15 miles in rear of the advanced line; it consists of 10 posts. None of the posts on the Prome frontier have less than 20 men. Each communicates daily with the posts on its flanks. The superior officers constantly patrol along the lines. Nature and position of frontier posts.

30. After the more important object of posting men at the frontier stations had been completed, police posts were gradually established in such other parts of the Prome district as the nature of the country and the dangers to be guarded against rendered requisite. The duties of the gaol guards, the court-house guards and the treasuries were taken, and the municipal police of the towns was brought under the same discipline in every respect as the Government force. Police established throughout the country.

31. The police is composed mainly of Burmese, who are the only men fit for service on the frontier and in the interior. In the sea-port towns and cantonments natives of India are chiefly employed, as being more likely to understand those with whom they are brought in contact. Captain Duncan, the Inspector General, observes as to their qualities:— Composition of the police.

qualities :—" The marauding bands who cross our northern frontier are well armed and bold in their attacks, but the police have shown no reluctance to encounter them, even when considerably outnumbered."

Village police.

32. The village police remains as it was before, but much reduced in number. It works in communication with the constabulary. In each hamlet, where deemed necessary, an inhabitant receives the title of Kyedengyee. He is appointed by the district officer. He is exempted from payment of capitation tax, and is bound to report to his immediate superior, the goung, all crimes occurring within his hamlet. The goung is a paid village or parish constable. He works in close communication with each adjoining police post. He has under him an average area of 80 square miles. Both of these village policemen are found to be of the greatest use to the constabulary, and are, as a body, respected by the people.

Police in Tenasserim.

33. It will not be necessary to describe the introduction of the constabulary into each district or division of British Burmah. It will suffice to record that by the end of August the work was accomplished in Pegu, and the Inspector General proceeded to carry out the same plan in Tenasserim. The north eastern portion of that division, where only a river forms the boundary with the Shan States subject to Siam, required careful attention. There the incursions of banditti were frequent, chiefly with the object of plundering timber dealers proceeding into the forests with specie to carry on their work. They also attacked such villages as seemed likely to yield plunder. By the end of the year the work of that part, and down the long line of coast to the southward, was accomplished.

Villagers armed in frontier districts of Pegu.

34. In the districts near the frontier it has been found desirable to allow some of the villagers to possess fire-arms for their own defence ; but great care has been taken to allow this privilege to well-known men. The arms are paid for by the recipients, and a register is kept of them. The owners are not allowed to dispose of the arms without sanction. Many villagers have shown themselves well worthy of the confidence reposed in them.

Reference to Statement E.

35. In Statement E. of the Appendix will be found a statement showing the full strength and cost of the police in two divisions of British Burmah. That of Arracan has not been added, as the police was not formed there until the middle of the year 1862. The return shows a force of 4,401 men of all ranks in the regular police; 217 boatmen and 670 village police. The annual cost is 9,71,003 rupees, exclusive of the Inspector General.

Crime during 1861.

36. Having described the existing police force, the next point will be to narrate the amount and nature of crime, and the success which has been obtained in preventing it, or in discovering the perpetrators during 1861.

Reference to Returns and Appendix.

37. In Appendix F. will be found a statement of the number of crimes ascertained to have been committed in each division during the last two years. The former classification of crime has been retained, but in future, one suited to the penal code of India will be adopted. In Statement D., as showing the working of the police, the number of persons arrested, convicted and acquitted, with the value of property stolen and recovered, are shown. The two documents together will fairly illustrate the state of crime and the efficiency of the police in British Burmah.

A diminution of violent crime during 1861.

38. A reference to Appendix F. will show that in 1861 there has been a diminution in violent crime compared with what occurred in 1860. Still not less than 67 crimes, which involved murder or wounding with intent to murder, were committed. This is a very large number to occur in a population of about a million and three quarters of souls. But it must be remembered that the majority of the worst crimes were perpetrated by armed bodies who crossed into British territory to plunder, and in Arracan the plunderings committed by large bodies of armed men are the wars of hill tribes, either among themselves or attacks upon villages in the plains. But the number of simple murders within the province, without the accompaniment of plunder, shows a terrible disregard of human life.

Crimes of the First Class of Atrocity, or all attended with Murder, or with wounding with intent to murder.

Year.	Number.
1860 - - -	78
1861 - - -	67
Less - -	11

Difficulty in defending the northern frontier against banditti.

39. On the border of Pegu, notwithstanding the numerous posts and the vigilance of the guards, the country is so rugged, so thinly inhabited, and so covered with jungle, that it is easy for armed parties to enter at various points, by twos and threes, penetrate within the line of stations, and unite at an appointed spot for attack, without being perceived by patrolling parties.

Increase in thefts and culpable homicides.

40. While in crimes there has been a decrease, yet in ordinary thefts there has been an increase, except in Arracan. It is probable that, under the new police, petty thefts are more fully reported than formerly. The number of cases of culpable homicide is large, being 28 against 17 of the previous year, and shows the readiness with which quarrels and disputes among these people are followed by blows, which too often prove fatal.

Number of persons concerned in crimes.

41. Throughout the province, in 1861, there were 31,500 persons supposed to be concerned in crimes of every description ; of these, 25,401 were arrested, of whom 9,159 were acquitted, and 15,912 convicted. The rest were otherwise disposed of, or were still under trial at the close of the year. In future years, the number of persons concerned in heinous and in petty offences will be separately shown.

42. The

42. The proportion of convictions to arrests for the two years, omitting fractions, is 64 and 62 per cent. respectively, and the amount of property stolen was 2,96,809 rupees in the former year, against 2,16,346 rupees in the latter; that recovered being 72,852 rupees and 52,909 rupees, being nearly 24 per cent. for each year. Number of convictions to arrests, and of property stolen and recovered.

43. On the whole there has been a marked decrease in crime, especially in violent crime, during the year; but no satisfactory explanation has ever been given of the strange variation in the amount of crime in British Burmah. Up to the year 1858, crime had much diminished in Pegu. During that year gang robbery especially prevailed, after having been effectually controlled in the two or three preceding years, when the disturbances, consequent on the year 1852, had subsided. Since 1858, crime has gradually diminished, and, with the new police arrangements, it is hoped will be put down, as far as is possible in a country, nine-tenths of which is covered with jungle, and affords such facilities for gangs of robbers to lurk in. Diminution of crime.

44. The sums raised for municipal objects, including police, in each division during the year, were as follows:— Municipal funds.

	Rs.
Pegu - - - - - - - - - -	92,414
Tenasserim - - - - - - - - -	37,370
Arracan - - - - - - - - -	—
Rs.	1,29,784

SECTION V.—GAOLS.

45. The total number of gaols existing in the province during the year was 13, but of these, two in Pegu, namely those at Henzadah and Mengyee (Tharrawaddy), were abolished during the year. The convicts were transferred to Rangoon. Two gaols abolishe in Pegu.

46. The following Table shows the cost for each prisoner, the mortality, and the escapes in each gaol of the province during the year 1861 :— Table of cost per prisoner, mortality and escapes.

Divisions.	GAOLS.	Average Daily Number.	Number of Deaths.	Rate per Cent. of Deaths to Average Strength.	Total Cost per Prisoner.	Number of Escapes.	Number of Re-captures.	REMARKS.
					Rs. a. p.			
Pegu	Rangoon	803	20	2½	71 2 11	8	3	
	Bassein	294	10	3½	66 9 7	1	3	
	Prome	216	16	7	85 3 1	4	2	
	Henzadah	283	17	5	63 14 5	6	6	Gaol abolished, 11 Sept. 1861.
	Mengyee	170	2	1¼	76 7 2	5	3	Gaol abolished, 6 Aug. 1861.
	Toungoo	142	21	17	92 12 8	9	9	
	Total	1,908	86	6	76 – –	33	26	
Tenasserim	Moulmein	1,510	113	14	57 1 8	53	43	
	Shoay Gyeen	78	5	6	95 3 11	17	1	
	Tavoy	259	–	–	77 3 7	–	–	Returns defective.
	Mergui	292	20	6	68 8 2	25	19	
	Total	2,139	138	6¼	74 – –	95	63	
Arracan	Akyab	380	30	7·90	49 9 3	3	1	
	Ramree	296	23	7·77	54 13 –	—	—	
	Sandoway	225	16	7·11	39 12 3	–	2	
	Total	901	69	7⅔	48 – –	3	3	
	GRAND TOTAL	4,048	293	6¾	69 – –	131	92	

47. The rates of mortality among prisoners in all the gaols of the Pegu division are lower than they were last year. The rates are excessive in none but the Toungoo gaol. Five died of small pox, and the medical officer, Dr. Gordon, remarks, "that the prisoners were generally healthier than the inhabitants of the town." In the gaols of the other division the rates are all moderate, except at Moulmein. In that gaol there are a large number of life prisoners, and many are kept in out-gaols for the purpose of being near to their work. A larger number of deaths might, therefore, be expected than in gaols where the convicts are all sentenced to stated terms of imprisonment, and are all within one enclosure. Mortality.

48. There has been a general decrease in the cost of maintenance for each prisoner. In some gaols the decrease has been very great.

Cost per prisoner.

In the gaols of the Arracan division the cost is lower than in any of the other gaols. A good deal has yet to be done in the Pegu division, and also in the Shoay Gyeen gaol, for the reduction of expense on account of prisoners.

Escapes.

49. The number of escapes from the gaols of the Pegu and Arracan divisions is not large. In the Tenasserim division, the large number of escapes from the Moulmein gaol is said to be owing to the prisoners having heard that they were to be transferred to the Andamans. Most of those who escaped were recaptured.

Labour.

50. Owing to the high price of common labour in British Burmah, it is generally more profitable to employ the convicts outside than inside the gaol walls. Only a very small proportion of them are employed on the manufactures which can be carried on within the gaol walls. This description of work was carried on with much success in the gaols of Arracan.

Cost of maintenance.

51. The following Statement shows the gross cost of maintenance of each gaol, with the exception of two, of which returns are wanting, and the value to Government, or the municipal authorities, of the labour obtained from the working convicts, *i. e.*, the actual cash profit derived from the gaol manufactures, and the value of the other labour performed by the convicts for Government, for which cash was not required, calculating the daily hire of a convict at three-fourths of that of a free labourer :—

Divisions.	1. GAOLS.	2. Total Cost of Maintenance.	3. Actual Cash Earnings.	4. Value of Labour supplied to Government not paid for.	5. Total Value of Labour.	REMARKS.
		Rs.	*Rs.*	*Rs.*	*Rs.*	
Pegu	Rangoon	56,871	2,811	56,138	58,949	Only the value of the labour of those convicts who are employed by Government in other departments than the gaol, is included in column 4. The value of labour of those employed as gaol servants, or in other offices connected with the gaol, is excluded.
	Bassein	19,650	—	22,989	22,989

	GRAND TOTAL — *Rs.*	2,76,564	35,186	1,12,244	2,52,948	

Financial results.

52. The gross financial results of the year, exclusive of the two small gaols of which the returns are wanting, therefore, were as follows :

	Rupees.
Gross cost of maintenance	2,76,564
Value of labour	2,52,948
Balance against Gaols	*Rs.* 23,616

Daily average number of prisoners.

53. The average daily number of prisoners in the gaols was 4,948, the average annual cost per prisoner, therefore, is only *Rs.* 55. 14. 3.

Value of convict labour to Public Works Department.

54. At Rangoon and Moulmein the great majority of the labouring prisoners were employed by the Public Works Department. The value of the labour performed by them was estimated by that department as follows :

	Rupees.
Rangoon	35,408
Moulmein	71,156
Total	*Rs.* 1,06,564

Excellent management of the Moulmein Gaol.

55. The gaol of Moulmein, under the superintendence of the executive engineer, Captain J. G. R. Forlong, was a model as regards the use to which the labour of the convicts

convicts out of doors was turned; the general discipline maintained, and the economy of expenditure. In all the gaols discipline has been maintained as far as is practicable when convicts go outside the walls to work, and as much work as possible has been exacted from them.

Convict guards.

56. The system of employing convicts, instead of hired peons, as guards over prisoners has been largely introduced into the Pegu gaols during the year, and has met with success. The convict warders have portions of their sentences remitted for good behaviour. Colonel Fytche, the Commissioner of the Tennasserim Division, states on this subject, as regards the Moulmein gaol:

"The convict police have been found more efficient than the free police, and with very few exceptions faithful to the trust imposed upon them. The guards in the interior of the gaol are entirely composed of convict peons. The free police are distributed amongst the guard of convict gangs working outside the gaol, and are useful more as spies than guards."

Convicts under sentence of transportation to be sent to Port Blair.

57. Orders have been received for all transported convicts at Moulmein to be transferred to the Andaman Islands. This measure will be carried out when the season admits of the men being shipped for a sea voyage.

SECTION VI.—REVENUE.

General result of the year's revenue.

58. The year 1861–62 has been a prosperous one for each Division of British Burmah. Plentiful harvests have been accompanied by an increasing trade; and though the amount of annual taxation falls on each person about double what it does on the people of any other British possession in the East, yet there is no symptom of the burden being generally too great, although partial alleviation is in some instances desirable. The amount demand of revenue for the two past years, omitting fractions, has been as follows:—The amount for each Division, shown separately, will be found in the Statement of the Appendix marked (J).

	1860–61.	1861–62.
	Rupees.	*Rupees.*
1. Land	26,14,152	26,56,710
2. Capitation	14,60,519	17,33,035
3. Fisheries	4,77,055	5,06,568
4. Salt	95,830	73,704
5. Forest Produce	6,893	9,073
6. Excise	8,43,608	7,90,115
7. Sea Customs	11,86,192	14,33,312
8. Inland Customs	5,78,971	5,31,769
9. Port Dues and Marine Receipts	1,90,523	2,85,863
10. Timber	5,46,842	6,84,297
11. Fines and Fees	1,74,493	1,47,362
12. Unclaimed Property	9,517	5,789
13. Postage Stamps	40,875	40,793
14. Stamps in Civil Suits	52,243	2,42,591
15. Income Tax	2,14,341	3,33,907
16. Karen Chiefs' Tribute	3,874	3,874
17. Miscellaneous	30,997	48,886
TOTAL *Rs.*	86,26,925	96,27,648

Land to the amount of 16,097 rupees was sold in the town of Rangoon.
Ditto 466 „ in Bassein.
Ditto 3,884 „ in Moulmein.
Ditto 98 „ in Mergui.
Ditto 478 „ in Akyab.

These sums are not included in the regular revenue.

The following was the demand for local taxes :—

	1860–61.	1861–62.
	Rupees.	*Rupees.*
Municipal	1,30,269	1,29,784
Bazars	79,614	67,768
Ferries	17,638	19,503
Rent on Town Lots	63,323	56,978
Cattle Pound Fund	4,915	4,804
Convict Labour Fund	1,60,855	10,700
Revenue Record Fund	-	24
Tulabana Fund	-	484
TOTAL *Rs.*	4,56,644	2,90,045

LAND REVENUE.

Crops raised without irrigation.

59. In British Burmah the annual grain crop is dependent solely on the fall of rain for its growth, and failing which the cultivator has no resource. This is somewhat hazardous; but in the greater part of the country the cultivators generally keep grain in reserve to the following year. The rain has never been known to fail, though some seasons, especially in Upper Pegu, are more favourable than others. The past season was, on the whole, a good one; but there was not a sufficiency of rain in the northern portion of the Prome district.

Increase of cultivation in Pegu.

60. In Pegu the greatest increase of cultivation occurred in the district of Rangoon. In Myanoung, which is the name of the combined districts of Henzadah and Tharawaddy, a serious loss occurred from the bursting of a large embankment mentioned in last year's report as having been built to keep out the inundation of the Irrawaddy.

In Tenasserim.

61. In Tenasserim there was an increase, due partly to extension of cultivation, and partly to more careful measurement of the area cultivated.

Decrease in Arracan.

62. In Arracan there was a decrease of land revenue, owing to a murrain among the cattle, which caused much land to be left fallow.

Export of grain.

63. The land revenue is mainly dependant upon the export of grain. The quantity sent away from each division is shown as follows :—

	Tons.
Pegu	216,144
Tennasserim	30,705
Arracan	106,830
Total	353,679

Land Revenue Settlement.

64. During the quarter the arrangements for the settlement of the land revenue were carried on in the districts of Rangoon and Bassein under the direction of Captain McMahon. As has been explained in former reports, the object is two-fold :—First, to fix rates per acre on each queng or block of land having well known boundaries; and second, to settle with the cultivators the annual revenue payments for 10 years, instead of the annual re-assessment heretofore prevailing.

Operations during the year.

65. The field work for the year commenced on the 22d November 1861 and closed on the 10th May 1862. The operations extended over country containing 9,400 square miles, within which area 131,000 acres were assessed. More might have been accomplished had the cultivated lands been less scattered, but they were much further apart from each other than the lands assessed in former years. The result of the revision of previous rates per acre has been, that on 687 quengs the rates per acre have been increased; on 132 quengs the rates have been decreased; and the rates on 278 acres have remained unaltered. The net increase of annual assessment in consequence of the season's operations will be 35,800 rupees.

Settlement for 10 years.

66. With reference to leases, or a settlement of land revenue for 10 years, the year's operations cannot be termed successful. The inhabitants of 40 village tracts, representing 7,600 cultivated acres of land, paying annually 14,800 rupees to Government, have accepted leases. Fifteen separate cultivators, possessing 794 acres, paying annually 312 rupees, have also taken leases. But that is a small proportion of the whole area visited and assessed. The prejudice or opposition to the leases still continues strong in the Rangoon district. In that of Bassein the cultivators were found less determined in their opposition.

CAPITATION TAX.

67. The rate of capitation tax was increased 25 per cent. in Pegu and Tenasserim in consideration of the license and tobacco taxes not being imposed, and also on account of the income tax not being extended beyond the chief towns. The present rate of capitation tax in Pegu is five rupees per annum for a married family. This amount, there is no doubt, is now more readily paid by the people than was the rate of four rupees when the tax was first imposed in 1853. The increased amount collected partly arises from the increased population. In some of the towns, where a considerable non-Burmese population exists, a tax upon the area of houses has been substituted for the capitation tax.

Rate of capitation tax increased.

FISHERIES.

68. The nature of this item of revenue has been explained in former reports. The lakes, fens, and ponds are rented out within defined limits for a fixed annual sum to the villagers in the vicinity. Licenses are granted to applicants at fixed rates for the right to work nets and other implements used in fishing on the sea coast and in the rivers and navigable streams. The greater part of the fish caught is made into fish paste, for sale in the interior. No revenue is raised on fisheries in Arracan.

Method of taxing fisheries.

SALT.

69. A small duty is levied on the manufacture of salt. A fixed rate for the year is placed on the vessels used throughout the season for boiling the brine. As the people pay a capitation tax, the amount of duty on the manufacture of this mineral is not rated higher than about three per cent. on the value thereof. The rates of duty, however, have hitherto varied in the different divisions of British Burmah, and it will now be necessary to equalise them. The amount realised from this source of revenue varies considerably in different years. In Pegu and Arracan there has been a decrease during the past year. In Tenasserim there was a slight increase.

Duty how levied.

FOREST PRODUCE.

70. In this are included the sums paid to Government for the right to collect bees' wax and edible birds' nests, found in caves on islets off the coast.

Forest produce.

EXCISE.

71. Under excise are included the abkaree collections, being fees on distilleries and licenses to sell liquor; also net profit on the sale of opium.

Excise.

SEA CUSTOMS.

72. The increase has been considerable, arising chiefly from the large export of rice from Pegu and Arracan. In the Appendix will be found Tabular Statements, marked G., H., I., giving full details of the trade and customs duty. The duty realised on account of sea customs, including fines and confiscations during the year, has been 144,500 *l.* The total value of the trade for the year by sea was as follows:—

Increase in amount of sea customs.

	Rs.
Imports - - - - - - - - - -	2,62,55,849
Exports - - - - - - - - - -	2,88,56,079
TOTAL - -	*Rs.* 5,51,11,928
	or, £. 5,511,192

INLAND CUSTOMS.

73. Inland customs exist only in the Pegu division. In the year under review there was a fair increase arising from the augmented export of salt, salted fish, and grain. The total amount collected was 61,900 *l.*

Increase in inland customs.

74. Port dues and marine receipts are explained in Section XI., Marine.

Reference to Section XI., Marine.

TIMBER.

75. The revenue arising from timber consists of fees derived from the issue of permits to work in the Government forests; the price paid on logs brought down from the Government forests by permit-holders; the price realised by sale of timber brought down by the forest department; the duty on foreign timber brought within the British territory, and duty on timber from forests owned by private persons. These sources of revenue are more particularly explained in Section XVII., Forests. But the timber revenue department in the Tenasserim division is a distinct office, where duty is levied on timber, whether from British or foreign forests, as passed from the bonded station for sale, or otherwise. The sum collected on this account at Moulmein during the year amounted to 2,87,412 rupees. This large amount arises from the vast quantity of foreign teak timber brought down, amounting to 106,432 logs.

Timber revenue.

Stamps.

STAMPS.

76. There is a steady increase in stamps used in civil suits and for law papers.

INCOME TAX.

Income tax.

77. The income tax is limited in British Burmah to the chief towns. The amount yielded appears sufficient to show that excessive concealments do not take place, but that, on the whole, incomes and profits are fairly taxed.

There are no other items of revenue which call for special remark.

Waste land not yet sold.

No land has yet been sold under the Resolution of Government, dated the 17th October 1861.

SECTION VII.—EDUCATION.

Pegu Government School at Rangoon.

78. IN the report of last year on Pegu, it was stated that the Government school at Rangoon was not in a satisfactory state. The classes were examined by the committee at the close of the term of 1861. The report states that no improvement had then taken place. There were 29 scholars.

Karen High School and others.

79. The Pegu High School at Kemendine, near Rangoon, for Karens, under the charge of Mrs. Vintor, had an average of 110 pupils during the year. At a public examination at the close of the year they acquitted themselves satisfactorily. The first class study English. There are in connexion with this school 25 village schools for elementary instruction, having 350 scholars.

A separate school for Pwo Karens is under the care of the Rev. Mr. Brayton. It has an average attendance of 50 scholars, and, though lately established, is making good progress.

A theological institute, for the instruction of Karens who are designed for the ministry, may also be noticed here. The principal is the Rev. Dr. Binney. The study is designed to be biblical and theological only, but in some cases a previous elementary course of instruction is necessarily given. There were 57 students during the past year.

Toungoo schools.

80. At Toungoo, the Karen Young Men's Normal School has progressed favourably. It had an average of 70 pupils during the session. A powerful telescope, given by Government to the institution, was received during the year, and has been turned to good account. The Karen Female Institute is superintended by Miss E. Mason; had from 40 to 50 young women students. Their progress was satisfactory.

Toungoo village schools.

81. One hundred and thirty-five village schools were in operation in the mountains during the year, having 2,186 scholars. On the progress of the course of education among the mountain Karens, the Rev. Dr. Mason remarks as follows:—"Judging the Karens by their deeds, there is no lack of interest in the work of education. Their contributions for the two boarding schools in town amount to 1,488 rupees, and their contributions in money to their teachers in the jungles were upwards of 1,100 rupees. Besides this, they brought in 450 rupees this year towards the erection of a dwelling-house on the institution grounds for the American or European teacher of the young men's school."

Henzadah schools.

82. At Henzadah, the Rev. Mr. Thomas, in consequence of sickness in the district, reduced the Karen Normal School in the town, and commenced some schools in the interior of a higher order than heretofore. The benefits of more advanced education were given to a greater number of pupils, but they could not be so thoroughly superintended as if all had been assembled at the town. There were in all 90 scholars instructed through the Karen language. In addition to the studies of former years, surveying with the prismatic compass has been commenced last year.

Prome schools.

83. In Prome, four elementary schools, having 100 scholars, have been established, under the care of the Rev. Dr. Kincaid. Burmese and Khyengs are chiefly taught.

Bassein school.

84. At Bassein there is a very flourishing school under the Rev. Mr. Beecher, having 97 scholars in the vernacular department, and 108 in the Anglo-Karen department. This school has no grant-in-aid yet. It well deserves one.

Village schools.

85. In the interior there were 25 village schools, with 611 scholars; also a Pwo Karen high school, with 78 pupils, under the care of the Rev. Mr. Van Meter, and 109 of the same race in village schools.

Burmese female school.

86. The school maintained in Rangoon by the Burmese Female School Society contains 20 pupils. They are taught, through the Burmese language, in elementary knowledge, and sewing and weaving.

Schools in Pegu maintained by the Catholic Mission.

87. From the Right Rev. Bishop Bigandet, the following information has been derived regarding the schools of the Catholic Mission in Pegu. A boys' school at Rangoon has an average daily attendance of 125. The boys are chiefly Eurasians and Burmese. The instruction is through the English language, but Burmese is also taught. There is likewise a girls' school, having 35 pupils. Schools have been established in the interior of the

the district of Rangoon, Bassein, and Myanoung. These are chiefly for the instruction of Karens. They contain altogether 120 pupils. The boys' school at Rangoon is especially deserving of a grant-in-aid, which it is hoped will soon be given.

Tenasserim—Moulmein schools.

88. In Tenasserim, there is a Government school at Moulmein, which the Commissioner reports "has been falling off in the number of pupils for some years past, and it has been recommended that it be abolished altogether, and grants-in-aid bestowed upon the schools attached to the different missions and private schools." The average number of pupils attending throughout the year was 61.

School of the Propagation of the Gospel Society.

89. A school maintained by the Society for the Propagation of the Gospel exists at Moulmein; it was established in 1859, and during the past year has been under the direction of Mr. E. Marks. The school had 285 pupils, chiefly Burmese and Talaings; all pay a school fee; there are 40 boarders. The instruction is given almost entirely in English. The school has been very successful. The progress it has made, and the consideration in which it is held by the people of the country are very creditable to the management of Mr. Marks, and of those who preceded him; it well deserves a grant-in-aid.

Other schools.

90. The other schools at Moulmein are a boys' and a girls' school under the American Baptist Mission, having 70 and 40 pupils respectively; these are chiefly Burmese and Talaings. A boys' school of 135, and a girls' school of 70 under the Catholic Mission, and a Church of England Orphanage with 20 pupils. In all these institutions the education given is plain and useful. Grants-in-aid, it is hoped, will be bestowed on them when funds are available.

Arracan Government schools.

91. In Arracan there are two Government schools,—one at Akyab and one at Kyouk Phyoo. The former contained during the year 107 paying pupils; they are taught in English and Burmese; they all pay schooling fees. The head master is Mr. Fell. The Commissioner reports favourably on the school. At the Kyouk Phyoo School there were 71 pupils studying English and Burmese; there is no first or head class to this school; the boys, it is stated, having left, and no others being sufficiently advanced to rise into that class. The master is a Mr. de Costa.

Means for vernacular education in the interior.

92. On the whole the means for giving a sound education to the masses of the people in British Burmah are, as compared with their numbers, not inadequate. There is ample scope for the beneficial extension of grants-in-aid from Government to the schools maintained by the several missions in the province, and such aid will probably lead to more schools being established. There are no existing means for carrying out a general plan of vernacular education in the interior by direct Government agency, and the best substitute for such a plan will be that of supporting the village schools already established by missionaries, in which a sound elementary education is imparted.

SECTION VIII.—PUBLIC WORKS.

Accounts, how rendered.

93. THE accounts of the Public Works Department in British Burmah have only been made up for the two divisions of Pegu and Tenasserim. The Arracan Public Works Accounts for 1861-62 are included for that year in the Bengal disbursements.

Total outlay.

94. The total Imperial outlay during the year on public works, including an advance of 94,056 rupees made to local funds, has been 14,16,354 rupees, in addition to which 34,954 rupees have been defrayed from local resources, and convict labour has been given to the value of 75,096 rupees, forming an aggregate total of 15,26,404 rupees.

Budget allotment not exceeded.

95. The budget cash allotment for Pegu was 11¼ lakhs of rupees, of which 11,48,855 rupees were drawn; and for Tenasserim 2¼ lakhs, of which only 1,72,200 rupees were required owing to reductions effected. No money has been drawn within the year from the 1 per cent. income tax assignment, the allotment having been received too late to be turned to profitable account within 1861-62. It will be used in the current year 1862-63.

One per cent. income tax assignment not spent.

MILITARY.

Military works.

96. The total outlay on military works and repairs has been 8,52,451 rupees, of which 6,12,393 rupees have been expended on new works.

Fortifications.

97. At Thayetmyo the north and south guard-houses to the redoubt have been constructed. At Toungoo the redoubt is not yet completed owing to restrictions on expenditure and the withdrawal of the sappers. At both these frontier stations arrangements have been made for placing the Government treasure within the redoubts.

Accommodation for troops.

98. At Rangoon the barracks for the European Artillery and Infantry have been shingle-roofed as a precaution against fire; also the accommodation has been similarly extended so as to provide for a full regiment, and three large shingle-roofed barracks have been built for the married families. At Thayetmyo temporary accommodation has been completed for a wing of European infantry, as also for the Artillery Driver Company, and

for their married families. The temporary barracks at Meeaday have been removed and re-erected at Thayetmyo, and stables and other minor buildings have been erected for the artillery. At Toungoo the European infantry barracks have been shingle-roofed, and many of the minor buildings improved. At Moulmein the barracks have been adapted for the accommodation of the married families of the Pegu Sapper Battalion. The outlay upon new works for accommodation for troops has been 3,76,412 rupees.

Ordnance.

99. At Rangoon the arsenal buildings in progress last year have been completed. A guard-house has been built for the magazine; iron verandahs have been put round the general store-room, and the enclosure wall of the arsenal is in progress. At Thayetmyo a gun-shed, laboratory, workshop and forge, a second magazine, and an ordnance godown have been built. At Toungoo the ordnance godown in the redoubt has been all but completed, and the magazine quite so. At Moulmein a magazine guard-room has been built. Total ordnance outlay for new works 1,27,090 rupees.

Commissariat.

100. At Thayetmyo the commissariat depôt has been completed. This fine block of permanent buildings has altogether cost 1,14,265 rupees. A fire at Thayetmyo would have cost Government three times that sum in the value of commissariat stores. At Toungoo a bakery and some minor buildings have been constructed. Total commissariat outlay for new works 50,579 rupees.

CIVIL BUILDINGS.

Outlay on civil buildings.

101. The outlay on civil buildings and repairs has been 2,42,249 rupees.

Court houses.

102. At Henzadah the court-house has been shingled. At Myanoung court-house accommodation has been provided by purchase, and by the conversion to that purpose of the buildings of the late Pegu Light Infantry. The new court-house at Moulmein has been well advanced towards completion, and that at Mergui is in progress. A circuit house has been provided at Moulmein by purchase. Outlay on new works 67,550 rupees. A new court-house is in progress at Kyouk Phyoo, not included in the above expenditure.

Gaols.

103. At Bassein the gaol surrounding wall has been completed. At Rangoon two new wards have been built for debtors and females; also a gaoler's house and gate guard-room. At Tavoy a gaol was commenced but postponed; and at Moulmein gaol work-sheds have been built, and several other minor works. Outlay, 59,725 rupees. Six new temporary wards were also completed in the Akyab gaol in the early part of the year.

Customs.

104. For the Customs Department nothing has been done during the year beyond the re-roofing of the Moulmein Custom-house.

Ecclesiastical. General.

105. At Rangoon, Trinity Church, in the town, has been commenced, and the construction of a permanent post-office is in progress.

WORKS OF PUBLIC IMPROVEMENT.

Total outlay.

106. The total outlay on works of public improvement has been 2,89,587 rupees.

Municipal.

107. At Rangoon a commencement has been made upon the permanent surface drainage works for the town, and iron tramways have been laid down for the conveyance of earth for filling in low ground. At Rangoon 38,472 rupees, and at Moulmein 33,891 rupees have been spent in the repairs and maintenance of the town roads, besides numerous minor works executed. At Bassein the bazar has been completed, and bazars have been ordered for Prome, Thayetmyo, Shoay Gyeen and Toungoo, and one is in progress in Mergui.

Marine.

108. The Dalla Dockyard has had its store godown completed, and the guardhouse gate and surrounding wall have been constructed. A new marine office is in progress at Moulmein, and extensive works in connexion with a new harbour jetty and sea-retaining wall have been in progress at Akyab.

Agricultural.

109. A large embankment, termed the Anouk Pek bund, has been constructed in the Henzadah District to protect land from inundation. About 15,000 acres of cultivation are thus protected.

Communications.

110. The mountain road leading from Prome into Arracan has been cleared, repaired and improved, as have also the roads from Prome to Poungday and to Meeaday. The road from Moulmein towards Yey has been opened out for upwards of 20 miles, a branch road has been constructed to Mopoon, a road made to Tongwine, and another nearly completed from Oboo to Nanutay. Roads have been projected towards the Shan frontier from Moulmein. The total amount expended on the improvement of communications has been 1,17,010 rupees.

ESTABLISHMENTS.

Arrears of office work brought up.

111. Great progress has been made in the adjustment of arrears of Public Works Accounts; 1,314 bills, aggregating 43,24,340 rupees, have been prepared, and Executive Engineer's accounts, including unadjusted arrears from 1859-60, have been passed to the amount of 29,21,912 rupees.

112. The

Cost of establishments.

112. The cost of establishments in the Public Works Department has been 229,367 rupees, or 15 per cent. on the total expenditure, or nearly 17¾ per cent. on the net expenditure.

Services of officers.

113. The Chief Engineer notices with approbation the services of the undermentioned Officers:—

Assistant to the Chief Engineer, Lieutenant S. T. Trevor.
Deputy Controller of Accounts, Major F. N. Smith.

Executive Engineers.

Captain G. de P. Falconnet, at Thayetmyo.
Captain E. Leeds, Rangoon Cantonment.
Captain J. M. Williams, Rangoon Town.
Mr. P. Magrath, Division of Roads.

SECTION IX.—POST OFFICE.

Lines of post office communication.

114. The post-office communication from Eastern Bengal to Arracan is maintained by land as far as Akyab. From thence the mails are carried by boat to the southern portion of Arracan. From Calcutta mails are conveyed fortnightly by steamer to Akyab, Rangoon, and Moulmein. There is no land mail between Arracan and Pegu; it has been tried, and was abandoned as expensive and slow. From Rangoon mails are conveyed fortnightly up the Irrawaddy by steamers, and to the frontier station of Toungoo by boats on the Sittang River. From Moulmein there is a land mail to Shoay Gyeen on the Sittang River, and the mails there meet those from Rangoon going to Toungoo. The southern stations on the Tenasserim coast receive their mails by steamer from Moulmein monthly.

Post office chiefly used by foreign residents.

115. In British Burmah almost the only persons who use the post office are the foreign residents, that is, Europeans and Indians. The receipts are slowly increasing.

Number of covers received and despatched.

116. The following are the statistics from the chief post offices of Tenasserim and Arracan. No returns have been received for Pegu:—

	Total Covers Received during 1861-62.	Total Covers Despatched during 1861-62.
Moulmein - - - - - -	97,499	82,280
Akyab - - - - - -	61,144	84,435
Total - - -	1,58,643	1,66,715

SECTION X.—ELECTRIC TELEGRAPH.

Line connecting British Burmah with Bengal.

117. No addition has been made to the lines since last year. The frequent stoppage of communication by the deep sea cable between Akyab and Kyouk Phyoo shows the necessity of seeking a land route by which to lay the wire to Prome, instead of the present line, which crosses one broad bay and a wide arm of the sea.

Line to connect Rangoon and Moulmein.

118. A line to connect Rangoon with Moulmein has been sanctioned by Government, and will be proceeded with when the season permits. It will be a land line from Shoay Gyeen.

SECTION XI.—MARINE.

Marine of British Burmah.

119. The marine establishments of the province consists of two sea steamers, the "Nemesis," of 110 horse-power, and the "Pluto," of 90; they are attached to the divisions of Tenasserim and Arracan respectively. For the coast service of Arracan also there are two schooners and four row-boats. For the Pegu division there is the Irrawaddy flotilla, which will be more particularly described below.

Port establishments and rules.

120. The port establishments at Moulmein, Rangoon, Bassein and Akyab consist of buoy vessels, several boats, one light-ship at Rangoon, and a light-house at Akyab. These are under the immediate orders of the master attendant or harbour master of each

port. The pilots at the several ports receive licenses, after examination. All vessels entering any of the ports pay dues at the rate of four annas a ton of the ship's burden. At Rangoon, where the outlay to benefit the port is greater than elsewhere, the dues amount to six annas a ton. A tonnage rate of two annas was imposed on vessels entering the port of Amherst, by Act VIII. of 1861.

Irrawaddy flotilla.

121. The strength of the Irrawaddy flotilla during the year consisted of two steamers and two troop-boats kept running, two steamers and a troop boat laid up, and one steamer kept in reserve with a reduced establishment for any such emergency.

Cost of the flotilla and dockyard for the year.

122. In Appendix (K.) will be found the total expense of the flotilla and dockyard at Rangoon for the year ending the 30th April 1862. The cost of each was—

	Rs.
Flotilla - - - - - - - -	1,44,373
Dockyard - - - - - - - -	55,199
Total - - - *Rs.*	1,99,572

The expenditure thus shown includes everything incurred on account of pay of all ranks, for stores and repairs of the vessels of the flotilla, together with the cost of establishment for the dockyard, and for office contingencies.

Disbursements not belonging to the marine of British Burmah.

123. The following sums are not included in Statement (K.) as having been incurred on account of British Burmah, because they pertain to other Governments, or only indirectly to British Burmah, and the proportion to be debited against that province cannot yet be fairly ascertained. These sums are 10,544 rupees on account of the Alguada Reef light-house, 9,655 rupees for Bengal, Bombay, and other vessels, and 58,000 rupees for coal and pilotage to ships of the Indian navy and of the Bengal marine. A considerable portion of this expenditure is undoubtedly on account of the military charges of British Burmah, not for marine requirements.

Receipts, actual and *pro formâ*.

124. Taking the above sum of 1,99,572 rupees as the actual expenditure on account of the Irrawaddy flotilla and dockyard as far as relates to British Burmah, the following are the offsets for the year:—

	Rs.
(I.)—Cash earnings of the flotilla for freight, passage and towage - - - - - - - - - -	55,048
(II.)—Fines and refunds - - - - - - - -	513
(III.)—*Pro formâ* credits on account of transport of troops, commissariat and ordnance stores - - - -	1,02,055
(IV.)—Cash collections for work done in the yard for private persons, hire of dock, &c., and actually collected during 1861-62 - - - - - - - - -	55,538
(V.)—*Pro formâ* credits for wages of artificers employed on repairs of vessels belonging to the Indian navy, the Bengal Presidency, &c. - - - - - - - -	16,393
Total - - - *Rs.*	2,29,547

This shows then, on the whole, a small profit of 29,975 rupees on the transactions of the flotilla and dockyard, not including wear and tear, and cost of buildings.

Receipts and disbursements on account of ports in Pegu.

125. As regards the ports of Pegu, the receipts and disbursements have been as follows:—

PORTS.	Receipts.	Disbursements.
	Rs.	*Rs.*
Rangoon* - - - - - - -	60,072	44,940
Bassein - - - - - - -	7,393	12,555
Total - - - *Rs.*	67,465	57,495

showing an increase in the receipts of nearly 100 per cent. over the previous year. The increase is owing to the greater number of vessels which arrived during 1860-61. The port dues claimable on Government vessels in the ports of Pegu, and not collected, amounted to 4,488 rupees.

126. The

* Including wharfage.

126. The following Table exhibits the numbers and tonnage of vessels which arrived and departed during the year:— Vessels arrived and cleared out at ports in Pegu.

PORTS.	DESCRIPTION.	ARRIVALS.		DEPARTURES.	
		Number of Vessels.	Tonnage.	Number of Vessels.	Tonnage.
Rangoon	Private vessels	438	157,472	429	137,787
	Government vessels	19	16,252	19	16,052
Bassein	Private vessels	83	29,606	83	29,571
	Government vessels	—	—	—	—
	Total	540	203,330	531	183,410

During the year the sum of 5,174 rupees was received on account of wharfage, for vessels unloading at the main wharf at Rangoon.

127. In Statement (K.) will be found the cost of the marine department in Tenasserim. The steamer "Nemesis" is employed to communicate with the stations on the southern coast, and also with Port Blair. The cost of her establishment, stores, and expenses, is estimated as amounting to 50,000 rupees during the past year. Tenasserim steamer "Nemesis."

128. The receipts and disbursements of the Moulmein Port Fund were as follows:— Moulmein Port Fund—receipts and disbursements.

	Rs.
Receipts	36,541
Disbursements	19,052

There has been a considerable increase in the receipts during the past year, and the balance against the fund is now trifling; when the new light-house on Double Island is completed, the cost of that building and the establishment will have to be debited against this fund.

129. The cost of the steamer "Pluto," including establishment and fuel, during the year, amounted to 44,694 rupees; the amount for stores is not given separately. The several boats of the flotilla cost, including everything, for the year 25,275 rupees. To balance these charges, the cash receipts on account of private freight and passengers by the steamer amounted to 26,890 rupees, and the *pro formâ* credit for conveyance of Government freight and passage by steamer amounted to 8,505 rupees. The steamer, therefore, paid her expenses within 10,000 rupees. Steamer "Pluto" on Arracan coast.

130. The receipts and disbursements in the fund were as follows:— Port funds.

	Rs.
Receipts	25,155
Disbursements	11,436

The vessels which arrived and departed during the year were—

PORTS.	DESCRIPTION.	ARRIVALS.		DEPARTURES.	
		Number of Vessels.	Tonnage.	Number of Vessels.	Tonnage.
Akyab	Private vessels	239	117,177	234	114,458
	Government vessels	2	638	1	238
Kyouk Phyoo	Private vessels	11	665	13	1,044
	Government vessels	2	530	2	530
	TOTAL	254	119,010	250	116,270

SECTION XII.—FINANCIAL.

131. A reference to Statement (J.) of the Appendix will show that the total amount of demand for imperial revenue in the province of British Burmah, on account of 1861-62, amounted in round numbers to 96¼ lakhs of rupees, or 962,700 *l.* Amount demand on account of the year.

132. By reference to Statement (K.) of the Appendix it will be seen that the expenditure on account of the civil administration during the same period was in round numbers 40 lakhs. The whole of the expenditure on account of the military establishments during the Expenditure for civil administration and all other departments.

the year has not yet been ascertained, but the following is believed to be a close approximation to the actual amounts:—

Artillery.	*Rs.*
One horse battery complete	1,95,000
Two reserve companies	1,40,000
Mountain train howitzers, ponies	5,000
Total	*Rs.* 3,40,000

Infantry.	
Two European regiments	14,00,000
Three native infantry regiments	9,30,000
One local corps	2,00,000
Total	*Rs.* 25,30,000

Staff	2,00,000
Ordnance, commissariat and medical departments	1,30,000
Cattle	1,93,000
Total	*Rs.* 5,23,000

or, in round numbers, 34 lakhs of rupees. The only remaining item of expenditure is the Public Works Department, which in 1861–62 expended in Pegu and Tenasserim 15,26,000 rupees. To this sum has to be added about one lakh for Arracan; and the whole expenditure of British Burmah is shown to be in round numbers as follows:—

	Rs.
Civil administration	40 lakhs.
Military „	34 „
Public works „	15¼ „
Ditto for Arracan	1 „
Total	*Rs.* 90¼ lakhs.

Miscellaneous expenditure.

This leaves about six and a quarter lakhs of rupees for the expenditure in the electric telegraph, the Post Office, the geological survey, the mail steamers, and the steamers employed in the relief of troops; the disbursements on those accounts cannot be estimated here.

Financial condition satisfactory.

133. The financial condition of British Burmah, however, may be considered as satisfactory.

SECTION XIII.—POLITICAL.

Burmah.

134. No event of importance has occurred in the intercourse with the Government of Burmah.

Karenee.

135. The Karenee States have had the usual petty disturbances among themselves.

Siam.

136. The Commissioner of Tenasserim reports that the Shan States, tributary to Siam, continue to show a friendly desire to suppress robbery and cattle-stealing on the border.

Yunan.

137. No certain information has been received relative to the state of affairs in Yunan. But the absence of caravans of traders shows that the country is still disturbed.

SECTION XIV.—MILITARY.

Great reduction in the strength of the troops composing the Pegu Division.

138. In the Report for last year on Pegu it was stated that considerable reduction had been made in the native infantry force, and in the artillery of the Pegu division. The whole of the proposed reductions have now been carried out. The strength of the regular troops, European and native, now in British Burmah, amounts to 2,232 of the former, and 3,305 of the latter, or a total of 5,537, not including officers. The force is larger than it will be eventually; as the death vacancies in the Pegu sapper battalion will not be filled up, and the battalion will be replaced by a regiment of native infantry one-third less in number.

The

The strength of the regular troops in the Pegu division at the close of the year 1860 was 2,373 Europeans and 9,405 natives, or a total of 11,778, not including officers.

Pegu Light Infantry and Arracan battalion.

139. The Pegu Light Infantry has been finally broken up, and the Arracan battalion is now in course of being disbanded.

Meeaday abandoned.

140. Consequent on these reductions the Fort of Meeaday, on the left bank of the Irrawaddy, and six miles from the frontier, has been abandoned, and the defences have been dismantled. The troops on that part of the frontier are concentrated at Thayetmyo, on the right bank of the Irrawaddy, three miles below Meeaday.

Arracan battalion disbanded.

141. The final disbandment of the Arracan battalion may be noticed here, though the measure was not completed until after the close of the year. This was a light infantry corps, raised during the first Burmese war in 1824. It was composed of Arracanese, and latterly with a portion of Munipoorees and men of adjoining hill tribes. The battalion has done good service in the hill warfare of Arracan, a country where regular troops have great difficulty in moving. On the occupation of Pegu the corps was brought round to be employed in subduing those portions of the country where partisan chiefs carried on a desultory but harassing war. In such jungle skirmishes the commanding officer, Captain H. Barry, was killed, but the battalion did its duty well and quieted the country; some of the men have been drafted into the constabulary, and the native officers and non-commissioned officers have received pensions or gratuities.

SECTION XV.—POPULATION.

The rural population numbered yearly.

142. Throughout British Burmah a census of the whole population is taken yearly at the time that the rolls for the capitation tax are made out. This census does not extend to those towns where a house-tax is levied in lieu of the poll-tax; but the population of the towns is numbered at intervals, and the total number of people, as shown in the annual statements, is believed to be substantially accurate.

Population of each division.

143. Of the three divisions of British Burmah Pegu is by far the most populous, and has made the most rapid progress within the last three years. This is shown by the following figures:

DIVISION.	Total Number of Souls in		
	1859.	1860.	1861.
Pegu	948,371	1,041,340	1,150,189
Tenasserim	-	332,542	371,402
Arracan	-	-	376,306
TOTAL	948,371	1,373,882	1,897,897

In Pegu the large increase is to be attributed to the immigration which set in steadily from the Burmese territory four years ago, and which still continues.

Various races in British Burmah.

144. The various races in the country are as follows:—

RACES.	Divisions of			TOTAL.
	Pegu.	Tenasserim.	Arracan.	
1. European and their descendants	1,252	1,146	164	2,562
2. Burmese, including Arracanese and Talaings.	886,264	211,594	301,329	1,399,187
3. Karens	184,006	100,358	62	284,426
4. Shans and Tounghoos	24,892	18,144	3,892	46,928
5. Chinese	2,001	8,118	135	10,254

TOTAL	1,150,189	371,402	376,306	1,897,897

In addition to the Karens herein entered, there are mountaineers of that race in the district of Toungoo numbering 62,326 souls.

CHAP. XIX. British Burmah.

Numbers of both sexes.

145. The numbers of both sexes were as follows:—

Men	574,178
Women	552,666
Boys	404,733
Girls	366,320
TOTAL	1,897,897

These returns do not include the population within the military cantonments.

SECTION XVI.—AGRICULTURE.

Experimental cotton cultivation.

146. The experimental cultivation of cotton has been continued by Dr. Brandis. The seed used was of two kinds, New Orleans and Sea Island, both raised in Pegu. The first yielded 120 lbs. of cleaned cotton per acre; the second, being longer in arriving at maturity, was withered by the heat of the early summer sun, and produced very little. The New Orleans variety appears well suited to the climate, but to induce Burmese peasants to cultivate it is an object rather to be hoped for than expected.

Variety of tobacco from Bengal.

147. The Rungpore variety of tobacco has been successfully introduced into Pegu.

Tea plantation.

148. A tea plantation has been commenced in the district of Akyab by Mr. A. L. M'Millan. The quantity of land under cultivation is not stated.

SECTION XVII.—FORESTS.

Teak forests formed in three divisions.

149. The forest regions of British Burmah brought under regular administration lie in the divisions of Pegu and Tenasserim; for teak timber, though known in Arracan, is not in sufficient quantity to be worth preserving. The teak forests of Pegu and Tenasserim are arranged in three grand divisions, marked out by the courses of the main rivers and their tributaries. Each grand division is placed under the control of a deputy superintendent, and is subdivided into sections, which form convenient groups for working and watching the tracts where the trees grow.

Forests worked by private enterprise.

150. During the year 1861-62 the principal feature of administration has been the further development of the plan of working the forests by means of private enterprise, instead of by direct Government agency. But the results of that plan are not yet apparent.

Salween Division.

151. In the Salween or Tenasserim division the plan does not appear to have been so successful as was hoped, from the results of the system in the previous year. In 1860, not less than 11,714 logs were brought down by the permit holders, but in the past year only 2,105. It is considered this resulted from the discontent of the Karen inhabitants of the Shoay Gyeen forests, who had been superseded as permit holders, and would give no assistance to those who succeeded them. It is understood, however, that they have since worked willingly.

Sittang Division.

152. Permits were issued in the Sittang division last year, and the plan has worked well in 1861-62. The holders brought down 6,748 logs.

Irrawaddy Division.

153. In the Irrawaddy division the timber brought down by the permit holders was not much, but arrangements for future years were made, as follows:—All forests, except those of the Tharawaddy section, and a portion of the southern section, which were reserved to be worked by Government, were made over to permit holders. The terms for the southern forests were competition by tender for the amount to be paid on account of permit fee, and a payment of 10 rupees for each log of full size brought out; a proportional payment being made for undersized logs. The permit holder only to fell trees killed and marked by the Forest Department, and the permit to hold good for three years. The Eastern Prome forests were disposed of in like manner, but for a term of six years. The forests west of the Irrawaddy were dealt with on a different principle. They are poor, and would not bear the expense necessary to preserve them; they were, therefore, offered on a lease for 12 years; the lessee to girdle for himself, and to pay, on the timber he brought out, the amount he had tendered to give for his annual lease. The price to be paid for each full-sized log was seven rupees, and three and a half for each under-sized. Tenders were not made for all groups of the western section, but such as were made were accepted, and the remaining groups have been allotted for shorter terms.

Amount received during the year for permits.

154. The amount derived by permit fees during the year has been—

	Rs.
Salween Division	22,835
Sittang Division	14,030
Irrawaddy Division	24,600
TOTAL	*Rs.* 61,465

155. Considerable

Works for improving communication with the forests.

155. Considerable progress has been made during the year in opening out streams by blasting rocks which obstructed the channels. In the upper part of the Pegu River a succession of rocks, extending for 10 miles, was thus removed. This work has been carried on not only at spots near to each other, but at places hundreds of miles apart,—a circumstance to be remembered when estimating the difficulties to be overcome, and the value of the work accomplished. Numerous streams have also been cleared of jungle and drift timber which obstructed them. Similar work has been carried on by one of the permit-holders, Mr. W. Wallace. Thus some hundreds of square miles of forest, hitherto sealed up by nature, have been opened to the axe of the forester.

Various operations in the Forest Department.

156. The young trees in the forest have been preserved and protected as far as possible. The teak plantation at Prome is reported to have progressed favourably. The number of trees girdled during the year in the three divisions has been 24,201. Useful timber of other kinds than teak, to the amount of 658 tons, has been brought down. A collection of such timber has been made and catalogued, and experiments to test their strength have been commenced.

Number of logs yielded.

157. The total yield of teak timber by the forests during the year has been as follows:—

	Number of Logs.
By Contractors and the Forest Department	20,436
By Permit-holders	9,236
Total	29,672

The whole of the above-mentioned logs have been delivered at the timber depôts.

Number of logs brought from beyond the British frontier.

158. Not less than 96,366 logs of teak were brought from foreign states down the Salween River. Down the Irrawaddy and Sittang Rivers 9,879 logs were brought.

Financial result.

159. The last point to be noticed is the financial result of the year; the expenditure has been—

	Rs.
Works	1,86,614
Maintenance	52,778
Establishment	82,942
Total	*Rs.* 3,22,334

This sum is the *bonâ fide* forest expenditure. In the Timber Revenue Department at Moulmein 13,000 rupees were expended in establishments, which, added to the above sum, = 3,35,334 rupees, as shown in Statement (K). The amount actually realised during the year by sale of timber-permit fees, and various items, was 3,96,885 rupees, thus showing a profit of 74,000 rupees. But a good deal of this expense has been incurred on account of timber not yet brought into account, and the department has now on hand 54 elephants, of which 12 were purchased during the year. To the above sum, realised on account of the forests, has been added the sum of 2,87,412 rupees, collected on account of timber revenue at Moulmein, and the total will be 6,84,297 rupees, as shown in Statement (J).

The total quantity of timber sold by the department during the year amounted to 14,912 logs; the prices realised were on the average about one-third less than for similar timber in the previous year. Thus, from the state of the timber market, no adequate increase has accrued to the income of the department, though the quantity of timber sold has been augmented 80 per cent.

The superintendent, Dr. Brandis.

160. The energy, skill, and excellent administration of the Superintendent, Dr. Brandis, have been conspicuous during the year. He reports favourably of the management of his deputies, Mr. H. Leeds and Lieutenant W. J. Seaton, and also of Mr. W. C. Graham, in charge of a section of the Prome forests.

SECTION XVIII.—TOPOGRAPHICAL SURVEY.

PEGU.

General sketch of work done during the year.

161. The operations of the year commenced with mapping out the results of past surveys, and, as this progressed, surveyors were despatched to make good gaps and deficiencies that appeared in the process of plotting. Later in the season the superintendent was engaged in surveying a portion of the Yoma or central range of hills for about 50 miles to the north of Rangoon, and afterwards in surveying the lower portion of the chain of the Arracan hills, forming part of the Bassein district, and lying between the 16 and 17½ degrees of north latitude.

Field work.

162. The field work done during the year comprised 87 miles of traverse, 37 of river triangulation, 185 of river survey, 407 of detached linear survey, and an area of about 4,000 square miles.

Mapping.

163. The two maps compiled in the previous year formed two sheets of a series of six into which it was proposed to divide the province; but these sheets were found to require re-construction. In re-casting them they have been re-projected as two sheets of a series of four into which it is now proposed to divide the province. Of these one sheet is intended to be published in July; and the second will, it is hoped, be published in December next.

Establishment and cost.

164. The establishment during the year consisted, besides the superintendent, of 10 native surveyors, one artificer and one writer. The cost was 17,726 rupees during the year, exclusive of the military pay of the superintendent, giving for the year an average of *Rs.* 4. 6. per square mile.

Completion.

165. It is stated by the superintendent that he anticipates being able to complete the survey by the 1st May 1864.

TENASSERIM.

Survey operations in the Tenasserim Division.

166. In the Tenasserim Division the only survey in progress has been a partial one in the Amherst District; it is carried on by townships; it has been more or less in progress since 1857, and about 1,000 square miles have been surveyed. The establishment has also been employed on a variety of miscellaneous work, such as surveying forest grants, &c. The monthly cost is only 650 rupees at a maximum, and 508 rupees monthly during the recess.

ARRACAN.

No survey during the year in Arracan.

167. In the Arracan Division no survey operations have been carried on during the past year, the establishment having been withdrawn to the Chittagong District. In Arracan the district of Akyab has had its survey completed, and those of Ramree and Sandoway remain to be surveyed.

SECTION XIX.—VACCINATION.

More extensively practised than heretofore.

168. Dr. Graham, the deputy inspector general of hospitals, reports that during the past year vaccination has been more extensively practised and with greater success in Pegu than heretofore. The following is the Table of the results:

STATIONS.	Europeans, including East Indians.	Natives of India.	Natives of Burmah.	Successfully.	Unsuccessfully.	Unknown—failed to attend again.	Gross Total Vaccinated.
Moulmein	57	165	94	271	45	-	316
Shoay Gyeen	13	52	31	96	-	-	96
Toungoo	44	26	1,226	1,027	5	264	1,296
Thayetmyo	30	7	125	154	8	-	162
Rangoon	70	7	23	82	2	16	100
Total	214	257	1,499	1,630	60	280	1,970

No cases at Henzadah or Prome were successful. It is noticed by nearly every medical officer that the Burmese do not place much reliance on vaccination as a protection against small-pox. Inoculation is extensively practised by Burmese medicine men.

SECTION XX.—HOSPITALS AND DISPENSARIES.

Pegu—Rangoon Dispensary.

169. In Pegu two dispensaries are maintained partly by public subscriptions and partly by Government; one of them is at Rangoon, and one at Thayetmyo. The former institution was not in a satisfactory state last year; it has, however, considerably improved in 1861-62. The number of patients has very much increased, and the expenses, which were far too high, have been much reduced; 1,118 out-patients, and 230 in-door, were treated during the year. The institution is now in a satisfactory state.

Thayetmyo.

170. At the Thayetmyo Dispensary 690 out-door, and 70 in-door patients were treated. The funds of this institution are small, but they are turned to the best account.

171. The

171. The Moulmein General Hospital is an institution well maintained and well administered; it is chiefly useful as a hospital for the treatment of European seamen, but it also receives natives, and large numbers of out-door patients are relieved. The funds are derived partly from Government, and partly from the paying patients, and partly from public donations, but the last-mentioned are not extensive. Tenasserim—Moulmein General Dispensary.

172. During the past year 382 Europeans and 766 Asiatics were admitted into and treated in the hospital; at the same time not less than 5,944 out-door patients were treated. The Commissioner observes in his report, "This very useful institution has fully sustained its character during the past year under the very able and zealous management of the civil surgeon Dr. Marr. He reports most favourably of the assistant apothecary Mr. d'Roza." Number of patients.

173. The hospitals and dispensaries maintained in Arracan are a general and seamen's hospital at Akyab, and charitable dispensaries in connexion with the usual civil hospitals. The Seamen's Hospital at Akyab is supported by a monthly donation from Government of 327 rupees, and an allowance from the port fund of 120 rupees; the patients also pay. The hospital does not appear to be of that degree of use to seamen resorting to Akyab, which the amount of expenditure would lead us to expect. During the past year only 37 patients were admitted. Arracan—Akyab.

174. At the dispensary of Akyab 276 in-door patients were treated, and 1,980 out-door. At Kyouk Phyoo 239 in-door and 299 out-door. There is nominally a dispensary at Sandoway; but being within the gaol inclosure, few patients resort thereto. Dispensaries.

SECTION XXI.—MISCELLANEOUS.

175. The geological survey proceeded during 1861-62 under the direction of Mr. W. F. Blanford. The portion of country examined was that portion of the district of Bassein which lies between the Bassein river and the mountains of Arracan. The rocks are described as "beds of sandstone, shale, and occasionally of limestone belonging to the nummulitic series." Limestone was found at several localities; the most important lie to the south of the town of Bassein, and of these, the richest are near the village of Thamandewa. The rock is described as "inexhaustible, the quality good, and access thereto easy." No traces of petroleum were met with. Strings of lignite of small thickness and trifling extent occasionally occur. "The coal supposed by some to exist in the neighbourhood of Dalhousie is only an instance of these deposits." Geological survey.

176. The cantonment garden at Rangoon continues under the direction of the Assistant Commissary General, Major Harris, to fulfil the objects for which it was established by the Most Noble the Marquis of Dalhousie, and to extend its usefulness. Rangoon Cantonment Garden.

177. During the past year 150 soldiers of the 68th Light Infantry worked at plots within the portion of the ground allotted to a kitchen garden. They raised during the season—very short in the latitude of Rangoon—not less than 41,000 lbs. of vegetables. These are partly purchased by the commissariat and partly sold by the men themselves. The commanding officer reserves permission to work in the garden as a reward to the best behaved men. Work done therein.

178. A bed of aluminiferous shale has been discovered by Dr. Brandis in the Zoonzaleng district of the district of Martaban. It is doubtful, however, whether this will be of practical value. Aluminiferous shale.

179. A deposit of Galena ore has been discovered in the Tavoy District on a small stream running into the Tenasserim river. The spot is difficult of access, and the Deputy Commissioner, Major Stevenson, was unable to reach it during the present year on account of the lateness of the season, so that particulars regarding the position of the ore are still wanting. Galena ore.

180. The local administration has been deprived during the year by death of the services of Mr. C. M. Crisp, a gentleman for several years resident at Rangoon, and who rendered essential service to General Godwin during the operations which terminated in the capture of the stockaded portion of the Burmese force round the great pagoda at Rangoon. Since the close of the year also, the Chief Commissioner has heard with regret of the murder of Lieutenant C. M. Halhed, while on duty on the Toungoo frontier, by a band of robbers from the Burmese territory. Death of Mr. C. M. Crisp, and murder of Lieutenant Halhed.

181. British Burmah was visited during 1861 by the Inspector General of Hospitals, Madras Presidency. His report will, no doubt, contain his observations on British Burmah generally; but the Chief Commissioner cannot allow this opportunity to pass without recording his grateful thanks for the many useful suggestions received from Dr. D. M'Pherson on sanitary subjects as regards the gaols, the hospitals, the towns, and the general welfare of the inhabitants. Visit of the Inspector General of Hospitals.

SECTION XXII.—CONCLUSION.

Officers of the local administration.

182. The Chief Commissioner desires to return his best thanks to the officers of the local administration of British Burmah for their services during the past year. To the Chief Engineer, Captain C. D. Newmarch, Secretary in the Public Works Department, the Chief Commissioner is much indebted for the efficient state of that department in every respect. To Captain H. Nelson Davies, his secretary, the Chief Commissioner conveys his best thanks.

The following officers also the Chief Commissioner desires to bring to notice for the efficient manner in which each has done his duty :—

Commissioners.

Lieutenant Colonel A. Fytche.
Major T. P. Sparks.
Major G. Verner.

Inspector General of Police.

Captain H. T. Duncan.

Superintendent of Forests.

Dr. D. Brandis.

Deputy Commissioners.

Major S. R. Tickell.
Major R. D. Ardagh.
Major J. P. Briggs.
Lieutenant Colonel D. Brown.
Major F. W. Ripley.
Captain E. J. Spilsbury.
Captain M. N. S. Lloyd.
E. O'Riley, Esq.
Major J. J. F. Stevenson.
Captain H. A. Browne.
F. Shepperd, Esq.
Lieutenant W. P. Harrison.
H. W. Beddy, Esq.
Major E. M. Ryan.

Assistant Commissioners.

Captain C. P. Hildebrand.
Lieutenant A. G. Duff.
F. J. Fallon, Esq.
Captain R. C. Breda.
Major R. F. Leigh.
G. Hough, Esq.
Lieutenant C. W. Street.
Captain E. B. Sladen.
J. Macrae, Esq.
Lieutenant W. W. Pemberton.
Lieutenant C. E. Watson.
Lieutenant W. C. Plant.

Extra Assistant Commissioners.

G. E. Barr, Esq.
C. Phillips, Esq.
J. Hind, Esq.
De Courcy Ireland, Esq.
Moung Khaing.
Moung Sheve Hlan.

Settlement Officers.

Captain A. R. M'Mahon.
J. Treacy, Esq.
Lieutenant W. Munro.

Superintendent, Irrawaddy Flotilla.

Captain A. Brooking.

Collectors of Customs.

R. S. Edwards, Esq.
W. Twemlow, Esq.
C. P. Brown, Esq.
D. F. Lonsdale, Esq.

Master Attendants.

Lieutenant F. W. Aylesbury, I. N.
Captain J. C. Harton.
Captain W. Porter.

Medical Officers.

Dr. G. Marr.
Dr. J. E. Dickinson.
Dr. J. Cowie.
Dr. J. Davis.
Dr. J. Heffernan.
Dr. J. Hook.
Dr. J. M. Donally.
Dr. H. G. Gordon.

The officers of the police force who deserve special notice are—

Captain J. Duval.
Major B. Ford.
J. B. Doyle, Esq.
Lieutenant C. T. Hill.
Lieutenant J. Lowndes.
Lieutenant J. C. Middleton.
Lieutenant W. G. Grove.
Captain C. Coote.
Captain S. C. Montgomery.
Lieutenant W. G. Hughes.
Lieutenant C. A. Mackenzie.
Lieutenant F. S. FitzPatrick.

Rangoon, 14 July 1862.

APPENDICES to the REPORT on the Administration of Province of BRITISH BURMAH, for the Year 1861–62.

APPENDIX (A.)

STATEMENT of the AREA, POPULATION, CULTIVATION, and REVENUE of BRITISH BURMAH, for 1861–62.

1. DIVISION.	2. Area in Square Miles.	3. Population, Number of Souls.	4. Number of Townships.	5. Area of Cultivation.	6. Land Revenue.	7. Capitation Tax.	8. Customs, including Fines, Confiscations, &c.	9. Fisheries.	10. Abkaree, including Opium.	11. Miscellaneous Taxes and Receipts.	12. Grand Total of Revenue.	13. REMARKS.
				Acres.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*
